BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 080006-WS

In the Matter of:

WATER AND WASTEWATER INDUSTRY ANNUAL REESTABLISHMENT OF AUTHORIZED RANGE OF RETURN ON COMMON EQUITY FOR WATER AND WASTEWATER UTILITIES PURSUANT TO SECTION 367.081(4)(f), F.S.
_____/

PROCEEDINGS: HEARING

BEFORE: CHAIRMAN MATTHEW M. CARTER, II
COMMISSIONER LISA POLAK EDGAR
COMMISSIONER KATRINA J. McMURRIAN
COMMISSIONER NANCY ARGENZIANO
COMMISSIONER NATHAN A. SKOP

DATE: Thursday, October 23, 2008

TIME: Commenced at 9:30 a.m.
Concluded at 1:35 p.m.

DATE: Thursday, October 23, 2008

PLACE: Betty Easley Conference Center
Room 148
4075 Esplanade Way
Tallahassee, Florida

REPORTED BY: MARY ALLEN NEEL, RPR, FPR

VOLUME 2

Pages 160 - 258

DOCUMENT NUMBER-DATE
10178 OCT 28 08

APPEARANCES:

(As heretofore stated.)

P R O C E E D I N G S

(PROCEEDINGS CONTINUE IN SEQUENCE FROM VOLUME 1.)

CHAIRMAN CARTER: Mr. Friedman, you're recognized.

MR. FRIEDMAN: We call back to the stand, so to speak, Pauline Ahern.

CHAIRMAN CARTER: Ms. Ahern.

THE WITNESS: Good afternoon.

CHAIRMAN CARTER: Oh, yeah, good afternoon. It is afternoon, isn't it?

Commissioners, while Ms. Ahern is coming, just for planning purposes, what I would like to do is, maybe we can truck on for at least an hour and see how far we get, and at that point in time, we'll maybe look for a good breaking point, and do that at that point in time. But I think we can kind of truck on for at least another hour here. That will hopefully give us some perspective, because what we have now, we're pretty much into the rebuttal portion of the case.

Oh, I didn't see the surrebuttal. We'll get through it.

Mr. Friedman.

Thereupon,

PAULINE M. AHERN

was called as a rebuttal witness on behalf of Utilities, Inc. and, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. FRIEDMAN:

Q. Ms. Ahern, would you state your name, please.

A. It's Pauline M. Ahern, A-h-e-r-n.

Q. Ms. Ahern, you were previously sworn, were you not?

A. Yes, I was.

Q. In connection with this proceeding, did you prefile any rebuttal testimony?

A. Yes, I did.

Q. And in connection with that testimony, did you prefile an appendix and Exhibits PMA-2 through PMA-28?

A. Yes.

Q. Do you have any changes or corrections to your testimony?

A. I have one correction to the testimony. On page 21, line 2, the third word says "basis," and it should say "basic."

Q. Any other changes other than that?

A. No.

Q. Ms. Ahern, if I were to ask you the questions in the rebuttal testimony, would your responses be the

same as in your rebuttal testimony?

A. Yes, they would.

MR. FRIEDMAN: I would ask that Ms. Ahern's testimony be inserted into the record as though read.

CHAIRMAN CARTER: The prefiled testimony of the witness will be entered into the record as though read.

REBUTTAL TESTIMONY OF PAULINE M. AHERN, CRRA

I. INTRODUCTION

Q. Please state your name, occupation and business address.

A. My name is Pauline M. Ahern and I am a Principal of AUS Consultants. My business address is 155 Gaither Drive, Suite A, Mt. Laurel, New Jersey 08054.

Q. Are you the same Pauline M. Ahern who previously submitted direct testimony in this proceeding?

A. Yes, I am.

Q. Have you prepared exhibits which support your rebuttal testimony?

A. Yes, I have. They have been marked for identification as Exhibit (PMA-2)__ through (PMA-28)__.

II. PURPOSE

Q. What is the purpose of this testimony?

A. The purpose of this testimony is to rebut certain aspects of the direct testimony of James A. Rothschild, witness for the Office of the Public Counsel (OPC) on behalf of the Citizens of the State of Florida regarding his recommended changes to the current leverage formula as well as his recommended base common equity cost rate to be utilized in the leverage formula. Specifically, I will address OPC Witness Rothschild's erroneous assumption that the cost rate of common equity must move in tandem with interest rate levels; his suggested changes to the leverage formula, including his misinterpretation of the Modigliani / Miller principle; his unnecessary assumption that the debt cost rate must change as the level of debt in the capital structure changes; and his rejection of the Florida Public Service Commission's (FL PSC) recommendation of

the addition of a bond yield differential, private placement premium and small utility risk premium as well as a flotation cost adjustment to the base common equity cost rate to be applied in the leverage formula; his reliance upon retention growth plus reinvestment growth (BR + SV) in his application of the Discounted Cash Flow Model (DCF), and his application of the Capital Asset Pricing Model (CAPM). Finally, I will present a common equity cost rate analysis which demonstrates that the results of the leverage formula are reasonable for establishing a return on common equity for water and wastewater utilities in Florida.

III. SUMMARY

Q. Please summarize your rebuttal testimony.

A. My testimony describes the errors contained in the direct testimony of OPC Witness Rothschild with regard to the reasonableness of the leverage formula applied to the return on common equity of water and wastewater utilities in the state of Florida. In doing so, my testimony explains how the assumption made by OPC Witness Rothschild that the cost of common equity must move in tandem with the movement in interest rates is fundamentally correct if all else is equal, but in reality is incorrect due to the multiple factors that affect the common equity cost rate.

My testimony also explains why OPC Witness Rothschild is theoretically correct in assuming that the debt cost rate should change with the company's common equity ratio but will demonstrate why it is reasonable for the debt cost rate to remain constant for the entire spread of common equity ratios.

In addition, my testimony will demonstrate OPC Witness Rothschild's misinterpretation of the Modigliani / Miller principle and his subsequent misapplication

of the principle to the overall cost of capital for water and wastewater utilities.

Further, my testimony will also explain why it is necessary for the addition of a bond differential, private placement premium, a small utility risk premium, as well as a flotation cost adjustment to the common equity cost rate to be applied in the leverage formula.

I will also explain why OPC Witness Rothschild's DCF method of retention growth plus reinvestment growth (BR + SV) is flawed and should be disregarded in this proceeding and I will demonstrate how OPC Witness Rothschild's CAPM analysis is not really a CAPM analysis, and should also be disregarded.

Finally, I will demonstrate the reasonableness of the leverage formula with regard to the common equity cost rate of water and wastewater utilities in the state of Florida by an independent analysis of four cost of capital models; the DCF, CAPM, Risk Premium Model, and the Comparable Earnings Model applied to the market data of a proxy group of six AUS Utility Reports water companies and the Florida PSC Natural Gas Index.

IV. OPC WITNESS ROTHSCHILD'S ASSUMPTION REGARDING COMMON EQUITY COST RATE AND INTEREST RATE LEVELS

Q. On page 6, lines 9-15 of his direct testimony, OPC Witness Rothschild asserts that, since interest rates have fallen between the 2001 leverage finding by the FL PSC and the current 2008 update to the leverage formula, that "one should be highly confident that the cost of equity has also dropped." Please comment.

A. Theoretically, OPC Witness Rothschild is correct, providing that all else is equal, meaning that all other capital market and economic conditions and factors which affect

investors' expected return rate on common equity capital, are identical in 2008 to those prevailing in 2001. However, all else is not equal. When the 2001 leverage formula was developed by the FL PSC Staff in the summer of 2001[1], the United States (U.S.) had not yet experienced: 1) the terrorist attacks of September 11, 2001 and their aftermath, including the continuing wars in Afghanistan and Iraq; 2) the recent run-up of energy prices and their effect on both the U.S. and world economies; 3) the recent mortgage and subsequent housing and credit crises in both the U.S. and the world; 4) the current weak U.S. economy which is facing a potential recession; 5) the current unemployment rate which is the highest in five years; 5) rising interest rates; and 6) the increased riskiness of the utility industry as evidenced by rising betas.

As can be gleaned from pages 1 and 2 of Exhibit (PMA-2)__ which show the Blue Chip Financial Forecasts (Blue Chip) of August 1, 2001 (used by FL PSC Staff in its 2001 leverage formulation) and September 1, 2008 (the most recently available), the consensus of 50 economists relative to Gross Domestic Product (GDP), a measure of the strength of the U.S. economy, indicates that the expected growth in the economy was greater in 2001 than currently in 2008. The August 1, 2001 Blue Chip shows an expected consensus average growth in GDP of 3.0% for the six quarters ending with the fourth quarter 2002 in contrast to currently expected growth in GDP of 1.5% for the six quarters ending with the fourth quarter 2009 based upon the September 1, 2008 Blue Chip. Likewise, expected inflationary pressures are greater in 2008 than they were in 2001, as the consensus Blue Chip expected inflation as measured by the GDP price

[1] See Attachment A to Order No. PSC-01-2514-FOF-WS issued December 24, 2001 which presents FL PSC Staff's leverage formula analysis based upon market data from the summer of 2001.

deflator was 2.0% for the six quarters ending with the fourth quarter 2002 compared with currently expected inflation of 2.5% for the six quarters ending with the fourth quarter 2009 as can be gleaned from the information shown on pages 1 and 2 of Exhibit (PMA-2)__ . The contrast in the GDP price deflator is even more pronounced for the third quarter 2001 relative to the third quarter 2008, as the August 1, 2001 Blue Chip consensus shows the GDP price deflator at 2.0% for the third quarter 2001 compared with 3.1% shown in the September 1, 2008 Blue Chip for the third quarter 2008. Similarly, another measure of inflation, the Consumer Price Index (CPI), also shows that expected inflation is currently greater in 2008 than in 2001. As can also be gleaned from the information shown on the August 1, 2001 Blue Chip, the CPI was expected to average 2.4% for the six quarters ending with the fourth quarter 2002 in contrast to the September 1, 2008 Blue Chip from which can be gleaned an average 3.0% expected CPI for the six quarters ending with the fourth quarter 2009. And, as with the GDP price deflator, the August 1, 2001 Blue Chip indicates a significantly lower expectation for CPI, 2.4% for the third quarter 2002 than the 5.7% shown for the third quarter 2008 shown in the September 1, 2008, Blue Chip.

Contributing to and evidence of the stressed U.S. economy and increasing inflationary pressures are the run-up in oil prices since 2001 as well as the highest U.S. unemployment rate in five years. Exhibit (PMA-3)__ demonstrates quite dramatically how U.S. oil prices have skyrocketed exponentially since 2001. In the summer of 2001, when the FL PSC prepared the 2001 leverage formula, oil cost approximately $25 per barrel in the U.S. The most recent price of a barrel of oil, August 29, 2008, was approximately $110, down from a high of about $134 in mid-July 2008. Since the U.S.

economy is heavily energy dependent, the high current price of oil has a significant impact on both GDP and the CPI. Further evidence of an economy under greater stress in 2008 than in 2001 is shown on Exhibit (PMA-4)__ which shows the Bureau of Labor Statistics reporting the U.S. unemployment rate of 6.1% in August 2008, the highest level in five years and in stark contrast to an unemployment rate of 4.9% in August 2001.

In addition, interest rates, as evidenced by Moody's A-rated public utility bond yields, are currently rising and expected to continue to rise, while interest rates were declining in 2001 as shown on Exhibit (PMA-5)__. Also, although the August 1, 2001 Blue Chip indicated expected rising interest rates over the six quarters ending with the fourth quarter 2002, the expected increase was, on average, smaller than the increase in interest rates currently anticipated by the September 1, 2008 Blue Chip for the six quarters ending with the fourth quarter 2009. For example, as shown on page 1 of Exhibit (PMA-2)__ , the August 1, 2001 Blue Chip, the 30-year U.S. Treasury bond was expected to fall from 5.66% on June 29, 2001 to 5.6% in the third quarter 2001 and then to rise 24 basis points to 5.9% by the fourth quarter 2002; the Aaa corporate bond was expected to rise from 7.17% on June 29, 2001 to 7.8% in the third quarter 2001 and then to rise 13 basis points by the fourth quarter 2002 and the Baa corporate bond was expected to fall from 7.98% on June 29, 2001 to 7.8% in the third quarter 2001 and then to rise 20 basis points by the fourth quarter 2002. In contrast, based upon the current September 1, 2008 shown on page 2 of Exhibit (PMA-2)__, the 30-year U.S. Treasury bond was expected to fall from 4.66% on July 25, 2008 to 4.6% in the third quarter 2008 and then to rise 44 basis points to 5.1% by the fourth quarter 2009; the Aaa

corporate bond was expected to fall from 5.78% on July 25, 2008 to 5.7% in the third quarter 2009 and then to rise 32 basis points by the fourth quarter 2009; and the Baa corporate bond was expected to fall from 7.27% on July 25, 2008 to 7.1% in the third quarter 2008 and then to rise 13 basis points by the fourth quarter 2009. Clearly, the magnitude of the expected rise in current interest rates is greater than that expected in 2001.

In addition, the currently expected total return on the stock market is higher in the next 3-5 years than it was in the summer of 2001. Exhibit (PMA-6)__ contains the Value Line Investment Survey (Value Line) Summary & Index cover sheets from August 3, 2001 and August 29, 2008. Page 1 shows that the expected price appreciation was 70% in August 2001 which translates to 14.10% per annum ((1.70^{25}) - 1) which, when added to the dividend yield of 1.90%, equates to a forecasted annual total return rate on the market as a whole of 16.09% as of August 3, 2001. In contrast, page 2 shows that the expected price appreciation was recently 75% on August 29, 2008, which translates to 15.02% per annum ((1.75^{25}) - 1) which, when added to the dividend yield of 2.30%, equates to a forecasted annual total return rate on the market as a whole of 17.32% as of August 29, 2008.

Regarding the stock market itself, the volatility of the Russell 2000 Index, which is comprised of small-cap securities including the majority of the gas distribution companies (LDCs) in the FL PSC Natural Gas Index as well as the majority of publicly traded water utilities, shown on Exhibit (PMA-7)__, indicates that the small-cap market is currently more volatile than in 2001. Exhibit (PMA-7)__ shows the volatility of the Russell 2000 Index for the twelve months ended June 30, 2001 and June 30, 2008 in

Columns 1 and 2, respectively, as measured by the coefficient of variation of the weekly closing index. The coefficient of variation, a standard measure of volatility and, hence, risk, for the twelve months ending June 30, 2001 was 5.27%, significantly lower than the 6.99% coefficient of variation in the weekly closing index of the Russell 2000 Index for the twelve months ending June 30, 2008. The data indicates that recent capital markets, especially for small cap companies such as the LDCs in Staff's Natural Gas Index and most water companies, have been more volatile and hence more risky than those prevailing in 2001.

This increased market volatility is also evident in the upswing in betas, a measure of systematic or non-diversifiable risk, for all AUS Utility Reports industries; electric, gas distribution and water companies, shown on Exhibit (PMA-8)__. The charts on page 1 plot the average adjusted betas as published by Value Line annually for the years 2000 through 2007 as well as June 2008. The charts on page 2 plot the average unadjusted betas for the same time periods. It is clear from the information on both pages that not only have the average betas of each utility group increased since 2000, the betas of the water utility industry exhibit the greatest increase, approaching those of the electric and gas distribution industries. The difference in the average beta of the FL PSC Staff's Natural Gas Index confirms the data presented on Exhibit (PMA-7)__. The average beta of the Index in the summer of 2001 was 0.61[2] while the average beta of the Index in 2008 is 0.87[3].

---

2 Order No. PSC-01-2514-FOF-WS, Attachment A, p. 28.

3 Memo to: Office of Commission Clerk (Cole), from: Division of Economic Regulation (Springer, Maurey, Bulecza-Banks) / Office of the General Counsel (Hartman), re: Docket No. 080006-WS – Water and wastewater industry annual reestablishment of authorized range of return on common equity for water and wastewater utilities pursuant to Section 367.081(4)(f), F.S., Attachment 1, Page 4 of 6.

In view of all the foregoing, it is clear that the current economic and capital market environment is not equivalent to that of 2001. In fact, in my opinion, it is more risky and there is no basis to assume that the cost rate of common equity must have declined since 2001 just because interest rates have declined.

V. OPC WITNESS ROTHSCHILD'S SUGGESTED CHANGES TO THE LEVERAGE FORMULA

Q. OPC Witness Rothschild summarizes his recommended changes to the leverage formula currently in effect on page 13, lines 7-16 of his direct testimony. Please comment.

A. OPC Witness Rothschild suggests three changes to the leverage formula. They are:

1. Calculate the cost of common equity for a natural gas index but using his applications of the DCF and CAPM.

2. Calculate the cost of debt for a natural gas index based upon its bond rating.

3. Calculate an overall cost of capital (OCC) based upon the average capital structure ratios of the natural gas index.

I will address OPC Witness Rothschild's first suggestion later in this testimony when I address his applications of the DCF and CAPM. On page 13 of his direct testimony, OPC Witness Rothschild appears to be recommending no change in the leverage formula regarding suggestions two and three. However, this is far from the case.

Q. How is OPC Witness Rothschild's suggestion for deriving the debt cost rate different from the current FL PSC methodology?

A. The current FL PSC leverage formula holds the debt cost rate constant over a common equity ratio range of 40% to 100% as noted on page 3 of its May 8, 2008 memo to the

Office of Commission Clerk (Cole). However, OPC Witness Rothschild recommends that the debt cost rate also be changed as the debt ratio changes. On page 25, OPC Witness Rothschild notes that, in theory and consistent with the Modigliani / Miller principle which provides the basis for the leverage formula, the debt cost rate is a function of the debt ratio with debt cost rising as the debt ratio rises. While theoretically valid, once again OPC Witness Rothschild is assuming that all else is equal. However, in my opinion, the FL PSC's assumption that the debt cost rate is constant over a common equity range of 40% to 100% is reasonable.

Q. Why is holding the debt rate constant over such a broad common equity range reasonable?

A. It is reasonable for two reasons. First, the revenue requirement formula under which utilities are regulated provides that the regulated utility will be compensated for prudently incurred operation and maintenance expenses, depreciation, taxes and a return on its investment, comprised of a senior capital (debt and / or preferred stock) component and a common equity component. The revenue requirement formula ensures that the regulated utility will receive sufficient earnings to compensate it for the expenses it incurs to service both its debt and preferred stock obligations. To that end, it is typical, in the rate base / rate of return paradigm, to utilize the embedded cost of senior capital in the derivation of the allowed overall rate of return. The embedded cost of senior capital is a function of many factors, including but not limited to the timing of the various issues of senior capital, the capital market conditions at the time of issuance, the credit / bond rating (or equivalent in the case of private placements) of the regulated utility at the time of issuance, and the level of issuance costs and any premia / discounts

at the time of issuance.

Second, the bond rating process itself indicates that bond ratings are not simply and exclusively a function of debt ratios, especially historical or point in time debt ratios. In November 2007, Standard & Poor's (S&P) published its electric, gas, and water utility ratings rankings lists in a framework consistent with the manner in which it presents its rating conclusions across all other corporate sectors. As S&P stated[4]:

> Incorporating utility ratings into a shared framework to communicate the fundamental credit analysis of a company furthers the goals of transparency and comparability in the ratings process.
>
> * * *
>
> The utilities rating methodology remains unchanged, and the use of the corporate risk matrix has not resulted in any changes to ratings or outlooks. The same five factors that we analyzed to produce a business risk score in the familiar 10-point scale are used in determining whether a utility possesses an "Excellent," "Strong," "Satisfactory," "Weak," or "Vulnerable" business risk profile.

Pages 1 through 9 of Exhibit (PMA-9)__ describe the utility bond rating process. S&P's new business risk/financial risk matrix is shown in Table 1 on page 11 of Exhibit (PMA-9)__, while financial risk indicative ratios for utilities are shown in Table 2 on page 12. Notwithstanding the metrics published in Table 2, S&P states:

> Note that even after we assign a company a business risk and a financial risk, the committee does not arrive by rote at a rating based on the matrix. The matrix is a guide – it is not intended to convey precision in the ratings process or reduce the decision to plotting intersections on a graph.

As shown on Exhibit (PMA-28)__, page 12, the average S&P bond rating

[4] Standard & Poor's – Ratings Direct – "U.S. Utilities Ratings Analysis Now Portrayed In The S&P Corporate Ratings Matrix", November, 30, 2007, p. 2.

(issuer credit rating), business risk profile and financial risk profile of the six AUS Utility Reports water companies is A (A), Excellent and Intermediate, while the average for the FL PSC Staff's Natural Gas Index A/A- (A), Excellent and Intermediate.

The current leverage formula assumes that if the Florida water and wastewater utilities had bonds which were rated, they would be rated Baa3 by Moody's which is equivalent to a BBB- by S&P. As discussed above, the bond rating process is comprehensive, both qualitative and quantitative and does not focus exclusively on the debt ratio. On page 11 of Exhibit (PMA-9)__, Table 1, the Business Risk/ Financial Risk matrix indicates that utilities with a BBB- rating and a Weak business risk profile would likely have a Modest financial risk profile and those with a Strong business risk profile would likely have an Aggressive financial risk profile. The range of financial risk indicative ratios published by S&P on November 30, 2007 are shown on page 12 of Exhibit (PMA-9)__. The total debt to total capital indicative ratios for utilities with a Modest financial risk profile range from 25% to 40%, while those with an Aggressive financial risk profile range from 45% to 60%. It is clear, then, that utilities with BBB- bond ratings by S&P (and Baa3 by Moody's) could have debt ratios ranging from 25% to 60% and still maintain the BBB- (Baa3) bond rating.

In view of the foregoing, it is therefore reasonable to hold the debt rate constant over the common equity range of 40% to 100% in the leverage formula.

Q. How is OPC Witness Rothschild's suggestion for deriving the overall cost of capital (OCC) different from the current FL PSC methodology?

A. The current FL PSC leverage formula holds the after income tax OCC constant as the common equity ratio changes. In contrast, OPC Witness Rothschild recommends that

the before income tax OCC be held constant. On page 22, lines 1- 14 of his direct testimony, OPC Witness Rothschild correctly summarizes the Modigliani / Miller principle stating that "Modigliani and Miller showed that if it were not for income taxes and bankruptcy risk, the capital structure selected by a company would have no impact on the overall cost of capital." However, by holding the before income tax OCC constant, OPC Witness Rothschild has demonstrated the exact opposite, namely, that differing amounts of debt and equity in the capital structure have absolutely no impact on the revenue cost of capital. OPC Witness Rothschild has assumed a before income tax OCC of 10.61% (see page 12 lines 17-22 and Exhibit No. ___JAR-4, pages 1 and 2.) However, this violates the Modigliani / Miller principle. Using the information shown on Exhibit No. ___(JAR-4), I have produced Exhibit (PMA-10)__ which derives the debt cost rates and common equity cost rates for each of the equity ratios shown on page 3 of Exhibit No. ___(JAR-4). On the left half of the schedule, I have held the before income tax OCC constant at OPC Witness Rothschild's recommended 10.61%, while on the right side of Exhibit (PMA-10)__, I have held the after income tax OCC or 7.71% constant. The before income tax OCC when multiplied by rate base represents the revenue cost of capital, e.g., a before income tax OCC of 10.61% equates to $10.61 which must be recovered from ratepayers for each $100 of rate base. It is clear from the left side of Exhibit (PMA-10)__, that no matter what the common equity ratio, 100.00%, 40.00% or something in between, that by holding the before income tax OCC of 10.61% constant, the revenue cost of capital will be $10.61 / $100 rate base. In other words, various capital structure ratios have no impact on the revenue cost of capital because no matter what the common equity ratio, 100.00% or 40.00%, ratepayers will

be paying $10.61 per $100 of rate base. Hence, holding the before income tax OCC constant demonstrates that capital structure is irrelevant, contrary to the Modigliani/Miller principle when income taxes are taken into account, and provides no incentive to maintain a reasonable capital structure because there is no change in the revenue cost of capital, i.e., the rates recovered from ratepayers, as the common equity ratio changes as discussed below.

As OPC Witness Rothschild states in lines 7-9 on page 23 of his direct testimony, "[i]t is because investor owned water and wastewater companies do have to pay income taxes that the overall cost of capital becomes too high if a company uses an excessive percentage of common equity in the capital structure." It is precisely for this reason that it is necessary to hold the after income tax OCC constant, as is assumed by the current FL PSC leverage formula, because then the revenue cost of capital will vary with varying capital structure ratios. On the right half of Exhibit (PMA-10)__, it is clear that the before income tax OCC rises as the common equity ratio rises in contrast to OPC Witness Rothschild's constant after income tax OCC as the common equity ratio rises. For example, at a 40.00% common equity ratio, the before income tax OCC is 10.19% and the revenue cost of capital is $10.19 per $100 of rate base and rises to 12.55% at a 100.00% common equity ratio for a revenue cost of capital of $12.55 per $100 of rate base. The revenue cost of capital rises as the equity ratio rises, holding the after-income tax OCC constant, consistent with the Modigliani / Miller principle upon which the FL PSC leverage formula is based. Hence, OPC Witness Rothschild's recommendation that the before income tax OCC be held constant in the leverage formula should be rejected in this proceeding, because as OPC Witness Rothschild states on lines 9-12 of

his direct testimony: "[t]he Commission should be concerned that a company prudently do what it can to lower its income tax expenses. Investors might not care if these taxes are paid for by ratepayers, but the Commission should care that ratepayers not be charged incomes taxes that a company could reasonably have avoided." Continuing to hold the after income tax OCC constant in the FL PSC leverage formula accomplishes this goal.

Q. Do you have any comments on OPC Witness Rothschild's example of how his proposed leverage formula would be used for water utilities?

A. Yes, I do. On page 14, line 15 through page 16, line 3, OPC Witness Rothschild presents his suggestion for the application of his proposed leverage formula to water utilities. Curiously, in his example, he has correctly held the after tax OCC constant. However, his example is not accurate for three reasons. First, OPC Witness Rothschild's calculation on lines 7-10 on page 15 of his direct testimony incorrectly uses a debt cost rate of 7.63%, when he has stated, correctly, on line 22 on page 14, that the debt cost rate should be 7.36%. Second, contrary to his own adjustment of common equity cost rate for changes in the common equity ratio, he has applied his recommended 9.40% common equity cost rate which is applicable to a common equity ratio of 49.12% to a common equity cost ratio of 46.37%. The correct common equity cost rate to be applied to a 46.37% common equity ratio based upon the leverage formula and OPC Witness Rothschild's common equity cost rate of 9.40% is 9.60% as derived in the top half of Exhibit (PMA-11)__. Third, on lines 16 and 17 of page 15 of his direct testimony, OPC Witness Rothschild says that he calculated a debt cost rate applicable to a 65% common equity ratio by "taking the difference between this

company's ER of 65% and the comparative group's ER of 53.63% and multiplying this difference by 0.0197%." While a correct characterization of his suggested calculation in general terms, OPC Witness Rothschild actually took the difference between a common equity ratio of 65% and the comparative group's total debt ratio of 53.63% (line 9 on page 15 of his direct testimony). The correct calculation would have taken the difference between a common equity ratio of 65% and the comparative group's common equity ratio of 46.37%.

The bottom half of Exhibit (PMA-11)__ correctly shows the calculation of OPC Witness Rothschild's example for a water utility with a common equity ratio of 65% correctly using the 9.60% common equity cost rate applicable to a common equity ratio of 46.37% and the correct debt cost rate of 7.36% derived in the top half of Exhibit (PMA-10)__.

VI. OPC WITNESS ROTHSCHILD'S ASSERTION OF AN IMPROPER COST OF EQUITY CHANGE

Q. Do you agree that the 2008 leverage formula calculation reflects an "improper cost of equity change".

A. No. On pages 16-21 of his direct testimony, OPC Witness Rothschild asserts that the prime reason for what he terms the "improper cost of equity change" since the 2001 adoption of the current leverage formula is due to the FL PSC Staff's CAPM calculation. His main criticism of the FL PSC Staff's CAPM calculation is its derivation of the market return used to develop the market equity risk premium. The FL PSC Staff utilizes a quarterly DCF model for approximately 650 dividend paying Value Line companies using Value Line's five-year projected growth in earnings per

share (EPS) and dividends per share (DPS). While it is true that the quarterly model differs in application from the two-stage growth model the FL PSC Staff utilizes for the Natural Gas Index, the resulting market return 12.20% is reasonable relative to the arithmetic mean total market return for the years 1926-2007 as published by Morningstar's Ibbotson SBBI – 2008 Valuation Yearbook – Market Results for Stocks, Bonds, Bills, and Inflation – 1926-2007 (SBBI) of 12.3% which is appropriate for cost of capital purposes as will be discussed subsequently in relation to OPC Witness Rothschild's so called "CAPM" calculation. Given that both ratemaking and the cost of capital are prospective, it is also reasonable to assess an expected market return when developing the market return used in the CAPM. As previously discussed, the current Value Line expected total market return 3-5 years hence is 17.32%. Therefore, the 12.20% expected market return used by the FL PSC Staff is conservative.

Although the current 12.20% expected market return used by the FL PSC Staff is higher than that used in the 2001 leverage formula, 10.89%, it is my opinion that the 10.89% understated the expected market return in 2001 when compared with a 13.0% SBBI arithmetic mean total market return for the years 1926-2000 and the Value Line expected total market return in August 2001 of 16.09%. This is especially true given a currently less stable economic environment, the current potential for an economic recession, worsening economic indicators, and rising interest rates as discussed previously.

Q. On lines 9-11 on page 20 of his direct testimony, OPC Witness Rothschild claims that "the DCF method using short term earnings and dividends to compute growth is currently materially overstating the cost of equity." Please comment.

A. To evaluate whether or not either the simplified, single-stage growth or quarterly versions of the DCF model using what OPC Witness Rothschild characterizes as "short-term" growth in EPS and DPS "currently materially" overstates the cost of common equity as claimed by OPC Witness Rothschild, I calculated DCF cost rates using both versions of the DCF for the companies in FL PSC Staff's Natural Gas Index. The results are shown on Exhibit (PMA-12)__. As shown in column 6 on page 1, the quarterly DCF results in an average common equity cost rate of 8.58% and a median of 8.65% and the simplified DCF results in an average common equity cost rate of 8.63% and a median of 8.60% as shown in column 5. Both of these results are below the two-stage growth DCF results for the Natural Gas Index of 9.68% derived on page 3 of Attachment 1 to Staff's May 8, 2008 memo and used in conjunction with its CAPM results in the current calculation of the leverage formula. In fact, both DCF results are lower than OPC Witness Rothschild's own DCF results of 9.42%-9.43% for the Natural Gas Index shown on Exhibit No. ___(JAR-2), page 1. Hence, OPC Witness Rothschild provides no basis for his generalization the "the DCF method using short-term earnings and dividends to compute growth is currently materially overstating the cost of equity".

VII. COST OF EQUITY ADDERS

Q. OPC Witness Rothschild states on page 29 of his direct testimony that he believes that the four cost of common equity adders provided for in the 2001 Order and utilized by the FL PSC in the current 2008 leverage formula are inappropriate. Do you agree?

A. No. It is entirely appropriate to include the bond yield differential, the private placement premium, the small-utility risk premium and a flotation cost adjustment in

the derivation of the leverage formula.

Q. Why is it appropriate to add a bond yield differential to the cost of common equity in the leverage formula?

A. It is appropriate to include the bond yield differential in the cost of common equity calculation in the leverage formula because the bond yield differential reflected in the debt cost rate only compensates bond holders for the increased riskiness inherent in Baa3 public utility bonds relative to the riskiness inherent in A rated public utility bonds. I have previously demonstrated that it is neither necessary nor appropriate to change the debt cost rate as common equity ratios change. Consequently, there is no mechanism in the leverage formula to compensate common equity holders for the increased risk to which they are exposed for investing in the common shares of utilities with Baa3 rated bonds.

In addition, to not reflect the bond yield differential in the common equity cost rate is in contradiction to OPC Witness Rothschild's own testimony that the cost of common equity and interest rates move in the same direction and in approximately the same magnitude as he states on page 9, lines 1-4 of his direct testimony. Based upon his testimony on page 9, as the debt cost rate rises from 6.08%, the A-rated public utility bond yield, to 7.36%, the Baa3-rated public utility bond yield, or 128 basis points (1.28%), the common equity cost rate of 9.40% applicable to the 49.12% average common equity ratio of Natural Gas Index (see Exhibit No. ___(JAR-8), page 1) should rise approximately 128 basis points as well, to 10.68% (10.68% = 9.40% + 1.28%). Instead, OPC Witness Rothschild has assumed that the 9.40% common equity cost rate is equally applicable to a utility whose bonds are rated Baa3 by Moody's as it is to a

utility whose bonds are rated A2 by Moody's. Such an assumption is contrary to financial theory.

Moreover, financial theory indicates that there is an inverse relationship between the level of interest rates and equity risk premia. Exhibit (PMA-13)__ is an excerpt from Roger A. Morin's New Regulatory Finance concerning equity risk premium determinants. Dr. Morin presents a number of academic studies which demonstrate this inverse relationship, concluding that the equity risk premium falls as interest rates rise by an average of approximately 51 basis points (0.51%). The equity risk premium assumed by OPC Witness Rothschild for a utility whose bonds are rated A2 by Moody's, with a debt cost rate of 6.08% and a common equity cost rate of 9.40% is 3.32% (3.32% = 9.40% - 6.08%). Given that financial theory indicates that as interest rates rise, the equity risk premium falls by approximately 51 basis points (0.51%), a debt cost rate of 7.36%, or 128 basis points (1.28%) above the 6.08% debt cost rate, indicates that the equity risk premium applicable to a utility whose bonds are rated in Baa3 by Moody's should be approximately 65 basis points (0.65%) lower than the equity risk premium applicable to a utility whose bonds are rated A2 by Moody's. Since, the equity risk premium implicit in OPC Witness Rothschild's recommended common equity cost rate of 9.40% relative to a debt cost rate of 6.08% is 3.32%, this means that the implicit equity risk premium relative to a utility whose debt cost rate is 7.36% would be 2.67% (2.67% = 3.32% - 0.65%). However, by assuming that the 9.40% common equity cost rate is equally applicable to a utility with a debt cost rate of 7.36%, an equity risk premium of 2.04% (2.04% = 9.40% - 7.36%) is implied. A lower equity risk premium of 2.04% relative to a higher debt cost rate of 7.36%, compared

with a 3.32% equity risk premium relative to a lower debt cost rate of 6.08%, is at odds with the ~~basis~~ basic financial precept of risk and return, where investors demand greater compensation for assuming greater risk. Financial theory indicates that the equity risk premium, given 9.40% common equity cost rate and 6.08% debt cost rate adjusted to reflect a 7.36% debt cost rate should be 2.67%, 63 basis points (0.63%) greater than the equity risk premium implied in OPC Witness Rothschild's recommendation that his 9.40% common equity cost rate is applicable to a utility with a debt cost of 7.36%.

Q. Why is it appropriate to add a private placement premium to the cost of common equity in the leverage formula?

A. It is appropriate to include the private placement premium in the cost of common equity calculation in the leverage formula because investors in such debt demand compensation for the lack of liquidity relative to large, readily saleable publicly traded debt. Privately placed debt is typically held to maturity and does not, by definition, have a public market in which it is traded. Consequently, holders of privately placed debt therefore require a higher return than holders of publicly held debt and this higher return premium must also be reflected in common equity cost rate.

Q. Why is it appropriate to add a small-utility risk premium to the cost of common equity in the leverage formula?

A. It is appropriate to include the small-utility risk premium in the cost of common equity calculation in the leverage formula because size is a factor which affects business risk and must be reflected in the common equity cost rate in the leverage formula.

Q. Please explain why size has a bearing on risk.

A. Smaller companies are less capable of coping with significant events which affect sales,

revenues and earnings. The loss of revenues from a few larger customers, for example, would have a greater effect on a small company than on a much larger company with a larger customer base. The individual water and wastewater utilities within the FL PSC's jurisdiction are small regulated utilities. The ultimately allowed overall costs of capital and fair rates of return applied to those companies must reflect the impact of their small size on common equity cost rate. Size is an important factor which affects common equity cost rate, and the Florida water and wastewater utilities, including Utilities, Inc. on a consolidated basis are significantly smaller than the average company in the Natural Gas Utility Index whose market data are utilized in the leverage formula based upon market capitalization.

Table 1

	Market Capitalization(1) ($ Millions)
Ten Natural Gas Utilities In the Leverage Formula Natural Gas Index	$2,152.391
Utilities, Inc.	$356.392
Florida Water & Wastewater Utils.	$5.662
Utilities, Inc. Florida Subsidiaries	$6.518

(1) From page 1 of Exhibit (PMA-14)__.

I have also made a study of the market capitalization of the ten LDCs in the FL PSC's Natural Gas Index, Utilities, Inc., all Florida water and wastewater utilities filing 2007 Annual Reports to the FL PSC as well as the Florida operating subsidiaries of Utilities, Inc.. The results are shown on page 1 of Exhibit (PMA-14)__ which summarizes the market capitalizations as of August 29, 2008.

None of the common stock of Utilities, Inc. the Florida water and wastewater utilities nor Utilities, Inc.'s Florida subsidiaries is publicly traded. Consequently, I have assumed that if their common stocks were publicly traded, their common shares would be selling at the same market-to-book ratio as the ten LDCs in the Natural Gas Index, or 225.0% at August 29, 2008. Hence, the market capitalization of Utilities, Inc. is estimated at $356.392 million, of the Florida water and wastewater utilities is estimated at $5.662 million and that of the Florida subsidiaries of Utilities, Inc. is estimated at $6.518 as of August 29, 2008. In contrast, the market capitalization of the average LDC in the FL PSC Staff's Natural Gas Index was $2.152 billion on August 29, 2008. It is conventional wisdom, supported by actual returns over time, and a general premise contained in basic finance textbooks, that smaller companies tend to be more risky causing investors to expect greater returns as compensation for that risk.

Q. Does the financial literature affirm a relationship between size and common equity cost rate?

A. Yes. Exhibit (PMA-15)__ is an excerpt from Eugene F. Brigham's Fundamentals of Financial Management in which he states[5]:

> A number of researchers have observed that portfolios of small-firms have earned consistently higher average returns than those of large-firms stocks; this is called "small-firm effect." On the surface, it would seem to be advantageous to the small firms to provide average returns in a stock market that are higher than those of larger firms. In reality, it is bad news for the small firm; what *the small-firm effect means is that the capital market demands higher returns on stocks of small firms than on otherwise similar stocks of the large firms.* (italics added)

Q. What small-utility size premia are indicated by comparison of the size of Utilities, Inc., the Florida water and wastewater utilities and the Florida operating

[5] Eugene F. Brigham, Fundamentals of Financial Management, Fifth Edition, The Dryden Press, 1989, p. 623.

subsidiaries of Utilities, Inc. relative to the Natural Gas Index used in the leverage formula?

A. They are 265 basis points, or 2.65%, relative to Utilities, Inc. and 428 basis points, of 4.28%, relative to the average Florida water and wastewater utility as well as the Florida subsidiaries of Utilities, Inc. These premia is based upon data contained in Chapter 7 entitled, "Firm Size and Return" from SBBI. The determinations are based on the size premiums for decile portfolios of New York Stock Exchange (NYSE), American Stock Exchange (AMEX) and NASDAQ listed companies for the 1926-2007 period and related data shown on Exhibit (PMA-14)__. The average size premium for the 5th and 6th deciles between which the LDCs in the Natural Gas Index fall has been compared to the average size premium for the 9th and 10th decile between which Utilities, Inc. falls and the 10th decile in which all of the Florida water and wastewater utilities as well as the Florida subsidiaries of Utilities, Inc. fall, if their common stock were traded and sold at the August 29, 2008 average market/book ratio of 225.0% experienced by the ten LDCs in the Natural Gas Index. As shown on page 1 of Exhibit (PMA-14)__, the size premium spread between the ten LDCs in the Natural Gas Index and Utilities, Inc. is 2.65% and between the ten LDCs and the average Florida water and wastewater utility and the Florida operating subsidiaries of Utilities, Inc. is 4.28%. The 50 basis point leverage formula small-utility size premium is therefore an extremely conservatively reasonable estimate of the magnitude of an adjustment needed to reflect the business risk differential between Utilities, Inc., the Florida water and wastewater utilities and the Florida operating subsidiaries of Utilities, Inc. and the Natural Gas

Index.

Q. On page 32, at lines 14-21 of his direct testimony, OPC Witness Rothschild references a chart on Exhibit No. ___(JAR-3). Do you have any comment on this chart?

A. Yes. Exhibit No. ___(JAR-3) shows no such chart. Therefore, I believe OPC Witness Rothschild's reference is to the charts shown in Exhibit No. ___(JAR-7). OPC Witness Rothschild's statement that "the data indicates [sic] that if a small company has a lower beta it would also have a lower expected return and thus there is no reason for a small company to require a higher return just because of its size" is an apparent reference to the fact that the average beta of the FL PSC Staff's Natural Gas Index is either 0.87 or 0.88 (depending upon whether one is using the Staff's calculation or OPC Witness Rothschild's) relative to the betas of the ten deciles represented by the charts on Exhibit No. ___(JAR-7). However, such a comparison is a mismatch because the 0.87 or 0.88 average beta is calculated over a recent five-year period and the betas for the ten deciles shown on Exhibit No. ___(JAR-7) are calculated over an 82 years period, i.e., 1926-2007. Such a comparison is incorrect. Exhibit (PMA-16)__ is an excerpt from SBBI which compares betas for the 82 years with those derived over the five years ending December 2007 for each decile. Substantial differences are obvious. For every decile, except for the largest two deciles, i.e., 1 and 2, the long-term betas are substantially greater than those over the recent five years. It is also clear from page 2 of Exhibit (PMA-16)__ that the betas calculated over a recent five-year period are higher for the smallest deciles, the $8^{th} - 10^{th}$, than they are for the larger deciles.

Q. Do you have any additional comments regarding OPC Witness Rothschild's

rejection of a small-utility risk premium?

A. Yes. As stated previously, it is the common equity portion of the jurisdictional rate bases of the Florida water and wastewater utilities to which the common equity cost rate set in this proceeding will be applied. Therefore, the return on common equity must reflect the risks which the shareholder / shareholders in the regulated utility bear and thus require in order to invest in the utility. As discussed previously as well, one of those risks is that of small size. And it is the use to which invested capital is put which gives rise to the risk and the risk-appropriate rate of return. Hence, each utility operating in Florida should be evaluated on a stand-alone basis. To do otherwise would be discriminatory and confiscatory. It is a generally-accepted financial principle that the risk of any investment is directly related to the assets in which the capital is invested. The PSC must focus on the risk and return on common equity investment in rate base for any utility under its jurisdiction, because it is each utility's rates which will be set based upon the leverage formula determined in this proceeding and its is each individual utility's rate base which serves its ratepayers.

The risk or investment in each Florida water and wastewater utility is independent of the ownership or loaners of that capital. It is a basic financial principle that it is the use of the funds invested which gives rise to the risk of the investment, not the source of those funds. As Richard A. Brealey and Stewart C. Myers state in Principals of Corporate Finance (see Exhibit (PMA-17)__):

> *The true cost of capital depends on the use to which the capital is put.* (italics in original)
>
> * * * *
>
> Each project should be evaluated at its own opportunity cost of capital;

the true cost of capital depends on the use to which the capital is put.

Hence, each water and wastewater utility operating within the jurisdiction of the FL PSC must be viewed on its own merits. Therefore, the specific risk of investment in each utility, including its small size and greater financial risk, relative to the Natural Gas Index utilized to estimate the leverage formula is most important in order to establish an appropriate common equity cost rate. As Bluefield[6] so clearly states:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; . . .

Bluefield is clear then that it is the "risks and uncertainties" surrounding the property employed for the "convenience of the public" which determines the appropriate level of rates and not the source of the capital financing that property. In this proceeding, the properties employed "for the convenience of the public" are the rate bases of the Florida water and wastewater utilities. Therefore, it is the total investment risk of each water and wastewater utility and their respective rate bases that are relevant.

In view of all the foregoing, the 50 basis point small-utility size premium included in the leverage formula is conservatively reasonable and should be accepted in this proceeding.

Q. Why is it appropriate to add a flotation cost adjustment, or "financing costs adder" to use OPC Witness Rothschild term, to the cost of common equity in the

---

6 Bluefield Water Works Improvement Co. v. Public Serv. Comm'n, 252 U.S. 679 (1922).

leverage formula?

A. It is appropriate to include a flotation cost adjustment in the cost of common equity calculation because there is no other place in the revenue requirement formula previously discussed in which to recover the costs of common equity financing. Just as using the embedded cost of senior capital to set the authorized rate of return typically includes the necessary costs of issuances which raise the effective cost rate to maturity of senior capital above its stated coupon or dividend rates, a flotation cost adjustment must be added to the cost of common equity cost rate in order to adequately provide for the recovery of the necessary costs of issuing new common equity.

VIII. OPC WITNESS ROTHSCHILD'S APPLICATION OF THE DCF AND CAPM

A. Discounted Cash Flow Model

Q. Please comment upon OPC Witness Rothschild DCF analysis.

A. OPC Witness Rothschild's DCF application utilizes the sustainable growth methodology for determining the growth rate component. He calculates sustainable growth for each company "by solving for the Future Expected Return on Book Equity multiplied by the Retention Rate" and then adding "an allowance for growth caused by the sale of new common stock above book value." (lines 10-13 on page 46 of his direct testimony) and by estimating "the future expected return on book equity by reviewing the return on book equity published by Value Line, and considering that forecast in the context of historic actual returns on equity." (lines 17-19 on page 46 of his direct testimony.) On Exhibit No. ___(JAR-2), page 1, it is clear that the return on equity (ROE) utilized in OPC Witness Rothschild's growth rate analysis is based upon five-year expectations by Value Line and the return on equity necessary to achieve Zack's

growth (presumable in five-year projected growth in earnings per share). His allowance for growth caused by the sale of new common stock above book value was also based upon five-year forecasts as is evident from lines 5-8 on page 47 of his direct testimony. Hence, OPC Witness Rothschild's sustainable growth methodology is both a short-term forecast and inconsistent with his own testimony on page 18, lines 16-18 where he states that "[a]s I have argued for decades, these historical to short-term future five-year growth rates are NOT the kind of growth rate applicable for use in the DCF formula because they are not long-term sustainable growth rates." Moreover, his sustainable growth methodology is inherently circular.

OPC Witness Rothschild is correct when he states in lines 17-20 of page 44 of his direct testimony: "[t]he cost of equity is the return investors expect to receive on their investment at market price, while the return on equity used to compute growth is equal to the return investors expect a company will be able to earn on its book value at the time the DCF computation was being made." However, his exclusive reliance upon the sustainable growth method is circular because it relies upon an expected ROE on book common equity which is then used in a DCF analysis to establish a common equity cost rate related to the market value of the common stocks. Thus, the resultant allowed ROE on book common equity is lower than the expected ROE used to derive the allowed ROE. Exhibit (PMA-18)__ is an excerpt from Roger A. Morin's book New Regulatory Finance which states the following regarding the sustainable growth method:

> There are three problems in the practical application of the sustainable growth method. The first is that it may be even more difficult to estimate what b, r, s and v investors have in mind than it is to estimate what g is they envisage. It would appear far more economical and expeditious to use available growth forecasts and obtain g directly instead of relying on four

> individual forecasts of the determinants of such growth. *It seems only logical that the measurement and forecasting errors inherent in using four different variables to predict growth far exceed the forecasting error inherent in the direct forecast of growth itself.*
>
> *Second, there is a potential element of circularity in estimating g by a forecast of b and ROE for the utility being regulated, since ROE is determined in large part by regulation. To estimate what ROE resides in the minds of investors is equivalent to estimating the market's assessment of the outcome of regulatory hearings.* Expected ROE is exactly what regulatory commissions set in determining an allowed rate of return. In other words, the method requires an estimate of return on equity before it can even be implemented. *Common sense would dictate the inconsistency of a return on equity recommendation that is different than the expected ROE that the method assumes the utility will earn forever.* For example, using an expected return on equity of 11% to determine the growth rate and using the growth rate to recommend a return on equity of 9% is inconsistent. *It is not reasonable to assume that this regulatory utility company is expected to earn 11% forever, but recommend a 9% return on equity. The only way this utility can earn 11% is that rates be set by the regulator so that the utility will, in fact, earn 11%....*
>
> Third, the empirical finance literature discussed earlier demonstrates that the sustainable growth method of determining growth is not as significantly correlated to measures of value, such as stock price and price/earnings ratios, as other historical measures or analysts' growth forecasts. *Other proxies for growth such as historical growth rates and analysts' growth forecasts outperform retention growth estimates.* (italics added)

In view of the foregoing, it is clear that OPC Witness Rothschild's application of the DCF is circular and ignores the basic principle of rate base /rate of return, namely, that the cost of equity which will be authorized in this proceeding will be applied to the jurisdictional book value rate bases of the various water utilities within the PSC's jurisdiction and become the allowed future earned return on book common equity, i.e., the expected ROE component of the sustainable growth method.

B. Capital Asset Pricing Model

Q. Please comment upon OPC Witness Rothschild's "CAPM".

A. OPC Witness Rothschild claims that he utilizes a CAPM. However, his application is not the application of the CAPM. In CAPM theory, the Security Market Line (SML) is a line that demonstrates the relationship between risk and return as measured by beta and the required rate of return for individual securities.[7] OPC Witness Rothschild's charts on Exhibit No. ___(JAR-7) show lines that do not represent the SML. Instead, he has merely plotted the compound annual returns from 1926 through 2007 for each of 10 portfolios of common stocks based upon size related to the betas of those deciles. The SML has its origin at the risk-free rate, i.e., the intercept, whereas OPC Witness Rothschild estimates an intercept that he claims to be the risk-free rate.

Q. The graphs on Exhibit No. ____(JAR-7) plot the compound returns for ten deciles based upon size from 1926 – 2007 related to the betas for the ten deciles calculated over the same 1926 – 2007 period. Please comment.

A. A comparison of five-year betas with those calculated from 1926-2007, i.e., 82 years, is incorrect. As discussed previously, Exhibit (PMA-16)__ compares betas for the 82 years with those derived over the five years ending December 2007 for each decile. Substantial differences are obvious. For every decile, except for the largest two deciles, i.e., 1 and 2, the long-term betas are substantially greater than those over the recent five years. Drawing inferences from compound returns and rolling 82-year betas to impute a return related to current five-year betas is a mismatch. Moreover, basing such an

[7] Eugene F. Brigham, Fundamentals of Financial Management, 5th Ed., The Dryden Press, 1989, p. 129.

analysis upon compound, or geometric, returns is not appropriate for cost of capital purposes.

Q. Why is the geometric mean return inappropriate when estimating the cost of capital?

A. The arithmetic mean return is appropriate for cost of capital purposes precisely because it captures the effect of changing economic conditions on risk premia over time. Because historical total returns and equity risk premium spreads differ in size and direction over time, the arithmetic mean provides insight into the variance and standard deviation of returns. The prospect for variance, i.e., standard deviation, captured in the arithmetic mean, provides the valuable insight needed by investors and rate of return analysts alike to estimate the expected risk of stocks. Absent such insight, investors cannot meaningfully evaluate prospective risk.

As noted on pages 77 through 83 of SBBI, shown in Exhibit (PMA-19)__, the arithmetic mean calculated over a very long period of time is the correct mean to use when estimating the cost of capital. SBBI[8] states:

> The equity risk premium data presented in this book are arithmetic average risk premia as opposed to geometric average risk premia. The arithmetic average equity risk premium can be demonstrated to be most appropriate when discounting future cash flows. For use as the expected equity risk premium in either the CAPM or the building block approach, the arithmetic mean or the simple difference of the arithmetic means of stock market returns and riskless rates is the relevant number. This is because both the CAPM and the building block approach are additive models, in which the cost of capital is the sum of its parts. The geometric average is more appropriate for reporting past performance, since it represents the compound average return.

[8] Id., p. 77.

> The argument for using the arithmetic average is quite straightforward. In looking at projected cash flows, the equity risk premium that should be employed is the equity risk premium that is expected to actually be incurred over the future time periods. Graph 5-3 shows the realized equity risk premium for each year based on the returns of the S&P 500 and the income return on long-term government bonds. (The actual, observed difference between the return on the stock market and the riskless rate is known as the realized equity risk premium.) There is considerable volatility in the year-by-year statistics. At times the realized equity risk premium is even negative.

As Ibbotson Associates[9] states in their 1999 Yearbook (see Exhibit (PMA-20)__:

> The expected equity risk premium should always be calculated using the arithmetic mean. The arithmetic mean is the rate of return which, when compounded over multiple periods, gives the mean of the probability distribution of ending wealth values....Stated another way, the arithmetic mean is correct because an investment with uncertain returns will have a higher expected ending wealth value than an investment which earns, with certainty, its compound or geometric rate of return every year....*Therefore, in the investment markets, where returns are described by a probability distribution, the arithmetic mean is the measure that accounts for uncertainty, and is the appropriate one for estimating discount rates and the cost of capital.* (italics added)

Ex-post (historical) total returns and equity risk premium spreads differ in size and direction over time. This is precisely why the arithmetic mean is important as it provides insight into the variance and standard deviation of returns. This prospect for variance, as captured in the arithmetic mean, provides the valuable insight needed by investors to estimate future risk when making a current investment. Absent such valuable insight into the potential variance of returns, investors cannot meaningfully evaluate prospective risk. If investors relied upon the geometric mean of ex-post spreads, they would have no insight into the potential variance of future returns because

[9] Ibbotson Associates, Stocks, Bonds, Bills and Inflation - 1999 Yearbook, pp. 157-158.

the geometric mean relates the change over many periods to a constant rate of change, thereby obviating the year-to-year fluctuations, or variance, *critical to risk analysis*.

The arithmetic mean return is appropriate for cost of capital purposes precisely because it captures the effect of changing economic conditions on risk premia over time. Because historical total returns and equity risk premium spreads differ in size and direction over time, the arithmetic mean provides insight into the variance and standard deviation of returns. The prospect for variance, i.e., standard deviation, captured in the arithmetic mean, provides the valuable insight needed by investors and rate of return analysts alike to estimate the expected risk of stocks. Absent such insight, investors cannot meaningfully evaluate prospective risk.

The financial literature is quite clear on this point, that risk is measured by the variability of expected returns, i.e., the probability distribution of returns. Exhibit (PMA-21)__ is an excerpt from Weston and Brigham[10] who provide the standard financial textbook definition of the riskiness of an asset when they state:

> The riskiness of an asset is defined in terms of the likely variability of future returns from the asset. (emphasis added)

And Morin[11] states on page 133 (see Exhibit (PMA-22)__):

> The geometric mean answers the question of what constant return you would have to achieve in each year to have your investment growth match the return achieved by the stock market. The arithmetic mean answers the question of what growth rate is the best estimate of the future amount of money that will be produced by continually reinvesting in the stock market. It is the rate of return which, compounded over multiple periods, gives the mean of the probability distribution of ending wealth. (emphasis added)

---

[10] J. Fred Weston and Eugene F. Brigham, Essentials of Managerial Finance, 3rd Ed., The Dryden Press, 1974, p. 272.

[11] Roger A. Morin, New Regulatory Finance, Public Utility Reports, 2006, p. 133.

In addition, Brealey and Myers[12] note (see Exhibit (PMA-23)__):

> The proper uses of arithmetic and compound rates of return from past investments are often misunderstood. . . Thus the arithmetic average of the returns correctly measures the opportunity cost of capital for investments. . . *Moral*: If the cost of capital is estimated from historical returns or risk premiums, use arithmetic averages, not compound annual rates of return. (italics in original)

As previously discussed, investors gain insight into relative riskiness by analyzing expected future variability. This is accomplished by the use of the arithmetic mean of a distribution of returns / premia because it takes into account all of the returns / premia, hence, providing meaningful insight into the variance and standard deviation of those returns / premia.

Q. Can it be demonstrated that the arithmetic mean takes into account all of the returns and therefore, that the arithmetic mean is appropriate to use when estimating the opportunity cost of capital?

A. Yes. Exhibit (PMA-24)__, which consists of three pages, graphically demonstrates this premise. Page 1 charts the returns on large company stocks for each and every year, 1926 through 2007 from SBBI. It is clear from looking at the variation of these returns that stock market returns, and hence, equity risk premia, vary.

The distribution of each and every one of those returns for the entire period from 1926 through 2007 is shown on page 2. There is a clear bell-shaped pattern to the probability distribution of returns. The arithmetic mean of this distribution of returns takes into account all of the returns in the distribution and thus the potential variance

[12] Richard A. Brealey and Stewart C. Myers, Principles of Corporate Finance, The McGraw-Hill Companies., Inc., 1996, pp. 146-147.

and standard deviation likely to be experienced in the future when estimating the rate of return based upon such historical returns. In contrast, page 3 of Exhibit (PMA-24)__, demonstrates that when the geometric mean is calculated, only two of the returns are taken into account, namely the initial and terminal years, which, in this case, are 1926 and 2007. Based only upon those two years, a constant rate of return is calculated by the geometric average. That constant return, when represented graphically, would be a flat line over the entire 1926 to 2006 time period which is obviously far different from reality, based upon the probability distribution of returns shown on page 2 and demonstrated on page 1.

In view of all the foregoing, it should be clear that the arithmetic mean long-term historical risk premium takes the standard deviation of returns which is critical to risk analysis into account. The geometric mean is appropriate only when measuring historical performance and should not be used to estimate the investors' required rate of return.

Q. On page 50 at line 22 through page 51, lines 4 of his direct testimony, OPC Witness Rothschild states that the average beta for the natural gas index, 0.88, indicates that the non-diversifiable risk for the LDCs is 88% of the average, with average risk implied as the risk of the market whose beta is 1.00 by definition. Please comment.

A. OPC Witness Rothschild is incorrect. Beta accounts for very little of total risk. Beta is a measure of market or systematic, non-diversifiable risk and not of non-systematic, company-specific or diversifiable risk. Exhibit (PMA-25)__ shows the R-squared (R^2), or coefficient of determination, of the betas for a proxy group of six AUS Utility

Reports water companies (which will be discussed subsequently) and the Florida PSC natural gas index. As shown, the average R^2 is approximately .19 for the water companies and .31 for the LDCs, which indicates that beta accounts for only about 19% and 31% of total risk for the two groups, respectively, with the remainder or 81% and 69%, being company-specific, diversifiable risk. Page 4 of Exhibit (PMA-25)__ shows the distribution of R^2 for the approximately 5,000 companies included in SBBI. It is clear from Graph 6-4, that most of the 5,000 companies have R^2 of less then 0.30

Q. What is the significance of the R^2, or coefficient of determination statistic?

A. It is an indication of the percentage of the total risk of a stock attributable to non-diversifiable risk. In other words, for the two groups, the non-diversifiable risk is equal to about 19% and 31% of their total risk, respectively, and not 88% as suggested by OPC Witness Rothschild.

Q. Does the academic literature substantiate that the coefficient of determination, or R^2, which represents that portion of a company's risk that is non-diversifiable and not its beta?

A. Yes. Exhibit (PMA-26)__ is an excerpt from Jack Clark Francis' book Investments: Analysis and Management which shows clearly on pages 3 and 4 that the coefficient of determination represents systematic, or non-diversifiable risk. As explained previously, for the group of water utilities and LDCs, respectively, that is equal to approximately 19% and 31% and not 88%.

Q. Did OPC Witness Rothschild calculate an equity risk premium in his "CAPM" analysis?

A. No. He never calculated an equity risk premium which is an integral component of the

CAPM formula. He merely deducted the interest rate on long-term inflation indexed U.S. Treasury Bonds from a spot yield on 30-year U.S. Treasury Bonds to estimate the expected rate of inflation with which to reduce the 1926-2007 returns for companies with an average beta of 0.88. In addition, he did not begin his analysis with a risk-free rate, i.e., the intercept and first component of the CAPM formula. Hence, his so-called "CAPM" is not really a CAPM.

Q. OPC Witness Rothschild cites SBBI as comparison with his CAPM results. Please comment.

A. The 9.66% return discussed by SBBI is based upon a geometric mean return. As discussed previously, OPC Witness Rothschild's use of the geometric mean is incorrect for cost of capital purposes. Exhibit (PMA-27)__ contains the pages from SBBI in which the Ibbotson-Chen supply model is discussed. It is very clear from the information shown on pages 5 and 6 of Exhibit (PMA-27)__, that the 9.66% equity return is based upon the geometric mean which includes an equity risk premium of 4.24% "on a geometric basis." Also, on page 7, SBBI states:

> The supply side equity risk premium calculated earlier is a geometric calculation. An arithmetic calculation, as mentioned earlier in the chapter, is most appropriate when discounting future cash flows. For use as the expected equity risk premium in either the CAPM or the buildup approach, the arithmetic calculation is the relevant number.

On page 7 of Exhibit (PMA-27)__, SBBI also shows the conversion of the 4.24% geometric mean equity risk premium to an arithmetic mean equity risk premium. The conversion results in an arithmetic mean equity risk premium of 6.23% which is 1.99 percentage points greater than the geometric mean of 4.24%. Hence, an increase of equity risk premium of 1.99% and SBBI's emphasis upon the arithmetic mean for cost

of capital estimation purposes, a properly derived common equity cost rate using the Ibbotson-Chen method is 11.67% (9.66% + 1.99%). This implies a CAPM cost rate applicable to the LDCs with an average beta of 0.88 of 10.92% (11.67% - 6.23% = R_F,, of 5.44%. And, 5.44% + 0.88 * (11.67% - 5.44%) = 10.92%, thereby confirming the gross inadequacy of OPC Witness Rothschild's so called "CAPM" cost rate.

IX. REASONABLENESS OF THE FL PSC STAFF'S LEVERAGE FORMULA

Q. Are the results of the FL PSC Staff's leverage formula reasonable ?

A. In view of all of the foregoing, it is my opinion that the results of the FL PSC Staff's leverage formula are reasonable. In my direct testimony in this proceeding I stated at lines 18-21 on page 2 that "based upon my experience as an expert witness on rate of return in numerous rate proceedings (see Exhibit (PMA-1)__ accompanying my direct testimony) and current capital market conditions, it is my opinion that the results of leverage formula are reasonable for establishing a return on equity for water and wastewater utilities in Florida." Exhibit (PMA-28)__ provides an analysis of the cost rate of common equity utilizing the applications of the DCF, Risk Premium Model (RPM), CAPM and Comparable Earnings Model (CEM) which I typically include in testimony on rate of return in the numerous rate proceedings listed on Exhibit (PMA-1)__ accompanying my direct testimony. A description of my application of these models is provided in Appendix A accompanying this rebuttal testimony. It is clear, especially from the DCF results and the CAPM results for both the proxy group of Six AUS Utility Reports water companies and the Florida PSC Natural Gas Index, that the DCF cost rate of 9.68% and CAPM cost rate of 11.40% are reasonable, if not conservative, prior to giving consideration to the bond yield differential, the private

placement premium, the small-utility risk premium and adjustment for common equity ratio. And as stated in the Hope decision[13]:

> Under the statutory standard of 'just and reasonable' it is the result reached, not the method employed which is controlling... It is not theory but the impact of the rate order which counts. If the total effect of the rate order cannot be said to be unjust and unreasonable, judicial inquiry under the act is at an end. The fact that the method employed to reach that result may contain infirmities is not then important.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

[13] Federal Power Commission v. Hope Natural Gas Co., 320 U.S. 591 (1944).

BY MR. FRIEDMAN:

Q. Ms. Ahern, would you give a brief summary of your rebuttal testimony, please?

A. Yes, I will. Mr. Chairman, Your Honors, my rebuttal testimony will rebut certain aspects of the direct testimony of OPC witness James Rothschild. Specifically, I will address his recommended changes to the current leverage formula and the recommended base common equity cost rate of 9.4 percent which he proposes.

I will also describe that the reasonableness of the current leverage formula as applied to the average water and wastewater utility in Florida, explaining how Mr. Rothschild's assumption that the cost of common equity must move in tandem with the movement in interest rates is incorrect, given the multiple factors that affect the cost of equity over and above interest rate levels.

I will also explain why although Mr. Rothschild is correct in his application of the Modigliani/Miller principle, assuming that the debt cost rate should change as common equity cost rate changes, staff's assumption of a constant debt cost rate over the entire range of common equity ratio is reasonable.

I also will demonstrate that holding the

before income tax overall rate of return or cost of capital constant across of range of common equity ratios of 40 to 100 percent is theoretically incorrect and results in the same revenue cost of capital regardless of the common equity ratio.

I also will address the necessity for staff's adders, the bond yield differential, the private placement premium, the small utility premium, and although not an adder, after the cost of equity is determined, staff's flotation cost adjustment to both the DCF and the Capital Asset Pricing Model. And I will also address the flaws in his applications of the DCF and CAPM.

And finally, I will demonstrate the reasonableness of the results of the 208 application of the leverage formula based upon an independent analysis of the cost of common equity for water and wastewater utilities.

That concludes my summary. Thank you.

MR. FRIEDMAN: I have no other questions.

CHAIRMAN CARTER: Mr. Friedman, is she ready for cross-examination?

MR. FRIEDMAN: Yes, Mr. Chairman.

CHAIRMAN CARTER: Mr. Beck, you're next.

MR. BECK: Thank you, Mr. Chairman.

CROSS-EXAMINATION

BY MR. BECK:

Q. Good afternoon, Ms. Ahern.

A. Good afternoon.

Q. Could I ask you please to turn to your exhibit accompanying your rebuttal testimony, and specifically Exhibit PMA-28?

A. Yes.

Q. Page 11 of PMA-28.

A. Yes, I'm there.

Q. Okay. This exhibit shows one of the models that you've used to determine cost of equity; is that correct?

A. To determine the reasonableness of the leverage formula's results, yes.

Q. Is this not a model to estimate the cost of equity?

A. Yes, but it I'm not recommending a cost of equity in this proceeding.

Q. Let me go through the lines of the exhibit to determine the process that's used. Line number 1 is the prospective yield on AAA-rated corporate bonds; is that right?

A. Correct.

Q. And then number 2 makes an adjustment to that

to develop line number 3; is that correct?

A. Correct.

Q. Okay. And then you have another line, line 4, for another adjustment that leads you to line 5, which is the adjusted prospective bond yield; is that correct?

A. Correct.

Q. And to that, you add the equity risk premium in line 6?

A. Correct.

Q. To develop the risk premium derived common equity cost rate?

A. Correct.

Q. Okay. So line 7 is the sum of lines 5 and 6; is that right?

A. Yes.

Q. And again, line 5 is directly related to line 1, which is the yield on corporate bonds, AAA-rated; is that right?

A. Correct.

Q. Okay. Now, suppose that the yield on AAA-rated corporate bonds was 6.87 rather than 5.87 percent as shown in your exhibit. Are you with me?

A. Yes.

Q. Okay. If that were to go up 1 percent, what would be the relationship -- what would happen to the

return on equity?

A. Well, all else equal, assuming that the equity risk premium would also remain the same, the equity risk premia on line 6, and assuming that the spreads between corporate debt and A-rated utility bonds remained the same, and assuming that the bond ratings were the same, your math would be correct.

Q. That the cost of equity would go up with the --

A. If you add 100 basis points to line 1, it would flow through and add 100 basis points to line 7, assuming that none of the other items changed.

Q. And likewise, if we reduced line 1 by 100 basis points, then the cost of equity would decrease as well, would it not?

A. Correct, all else equal.

Q. Let me ask you to turn to page 19 of your rebuttal testimony.

A. Okay.

Q. Okay. And on lines 8 through 9, you state, "I have previously demonstrated that it is neither necessary nor appropriate to change the debt cost rate as common equity ratios change." Do you see that?

A. Correct, given the context of the leverage formula, yes.

Q. Could you turn to page 2, lines 18 through 20?

A. Yes.

Q. There you say that OPC witness Rothschild is theoretically correct in assuming that the debt cost rate should change with the company's common equity ratio; is that right?

A. That's the beginning of that sentence, but it continues to say that I will demonstrate why it is reasonable to hold the debt rate constant.

Q. But on page 19, you said it's not appropriate to do so, to change the cost of debt as the common equity rate changes, did you not?

A. Yes, but I think that's just semantics, I think based on the testimony where I do demonstrate that it is not necessary because it is typical in utility rate cases to hold the debt rate constant at an embedded debt cost rate. I've testified in numerous cases, and Mr. Rothschild has testified in numerous cases, and I believe you will find that in almost all utility rate cases, the debt cost rate is considered to be an embedded debt cost rate.

The debt cost rate is not strictly a function of the debt ratio, as Mr. Rothschild would have us believe, or I should say the debt cost rate related to a bond rating is not solely a function of the debt ratio.

There are many factors that go into the bond rating process. There are many factors that go into any given company's embedded cost rate.

Q. Ms. Ahern --

A. It could be the timing of their issuances -- if I may continue, I'm trying to show why it is not necessary and it may not appropriate, given the typical ratemaking principles of allowing rates of return, total rates of return based on embedded debt cost rates.

You also may have a company with an A bond rating that could have a common equity ratio that goes anything, from 40 to 100 percent. Just because it's -- I think the average in Mr. Rothschild's analysis is 49.12. The proxy companies have an average A bond rating.

But some of these companies -- let me look at his exhibit. If you look on Exhibit JAR-8 and you look at the line that he shows there, some of the companies -- there's a company with an A- with a 44.4. There's a company with a BBB which has a higher common equity ratio, and based on his presumption, that should not be. And the reason it isn't is because the bond rating process is very comprehensive, and the debt ratio is not the sole determinant of the bond rating, and therefore, the debt ratio is not the sole determinant of the debt

cost rate.

Q. Okay. So, Ms. Ahern, taking your testimony on page 19 that we took and then at page 2, I take it that you feel it's not appropriate to do what is theoretically correct, and that is to assume that the debt cost rate should change with a company's common equity ratio.

A. Given the context of the leverage formula in ratemaking, correct. I said it, and I stand by it.

MR. BECK: Thank you. That's all I have.

CHAIRMAN CARTER: Thank you, Mr. Beck. Commissioners, anything further? Staff?

MS. HARTMAN: No further questions.

CHAIRMAN CARTER: Thank you. Mr. Friedman.

MR. FRIEDMAN: I have no redirect.

CHAIRMAN CARTER: Thank you very kindly. Okay. Let's look at the exhibits.

MR. FRIEDMAN: We would move Ms. Ahern's Exhibits 15 through -- that have been marked for identification 15 through 42.

CHAIRMAN CARTER: Mr. Beck.

MR. BECK: No objection.

CHAIRMAN CARTER: No objection. Show it done.

(Exhibit Numbers 15 through 42 were admitted into the record.)

CHAIRMAN CARTER: Okay. Now we have -- let me flip over. I need to turn to another page here.

Okay. That completes your rebuttal case.

MR. FRIEDMAN: That's correct, Mr. Chairman.

CHAIRMAN CARTER: Staff, anything further on rebuttal?

MS. BRUBAKER: Not with regard to this witness, but we do note that there is surrebuttal for Mr. Rothschild.

CHAIRMAN CARTER: Okie-dokie. That's a technical term.

Well, thank you, Ms. Ahern. Let's move on then and move into surrebuttal.

MR. BECK: Thank you, Mr. Chairman. The citizens recall James A. Rothschild.

CHAIRMAN CARTER: Mr. Rothschild.

Thereupon,

JAMES A. ROTHSCHILD

was called as a surrebuttal witness on behalf of the Citizens of the State of Florida and, having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. BECK:

Q. Mr. Rothschild, you're the same James A. Rothschild who is sponsoring surrebuttal testimony in

this case; is that correct?

A. Yes.

Q. And you had some changes, or did you have changes and corrections that were filed ahead of time to your surrebuttal testimony?

A. Yes.

Q. Do you have any other changes or corrections to make to your surrebuttal testimony?

A. No.

Q. With those changes, if I were to ask you the same questions here today, would your answers be the same?

A. Yes.

MR. BECK: Mr. Chairman, I move Mr. Rothschild's surrebuttal testimony into the record.

CHAIRMAN CARTER: The prefiled surrebuttal testimony will be entered into the record as though read.

BY MR. BECK:

Q. Mr. Rothschild, you also have a number of exhibits to your surrebuttal testimony which you marked JAR-12 through 14 and have identified in the staff's exhibit list as Exhibits 43 through 45 for identification; is that correct?

A. Yes.

SURREBUTTAL TESTIMONY

OF

James A. Rothschild

Q. ARE YOU THE SAME JAMES A. ROTHSCHILD WHO FILED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes.

Q. WHAT IS THE PURPOSE OF THIS SURREBUTTAL TESTIMONY?

A. The purpose of this surrebuttal testimony is to respond to the rebuttal testimony filed by Ms. Ahern in this proceeding.

I. RELATIONSHIP BETWEEN COST OF EQUITY AND INTEREST RATES

Q. ON PAGE 1 OF HER TESTIMONY, MS. AHERN SAYS THAT YOU MADE AN "ERRONEOUS ASSUMPTION THAT THE COST RATE OF COMMON EQUITY MUST MOVE IN TANDEM WITH INTEREST RATE LEVELS." PLEASE RESPOND.

A. In addition to making the quoted statement on page 1 of her testimony, Ms. Ahern further elaborates on this in a section that starts on page 3, line 16 of her testimony. In this section, Ms. Ahern attempts to cast doubt on the statement about the relationship between interest rates and the cost of equity by saying that

the cost of equity and the cost of debt only move together if all else is equal. She then lists things like the war with Afghanistan and Iraq, the recent run-up in energy prices, mortgage and credit crisis, etc. that make 2001 and 2008 different.

First, I'd like to start by correcting a mischaracterization of my testimony made by Ms. Ahern. What I said in my direct testimony was that the cost of equity proposed for use in these proceedings was based on a cost of equity determination that was 1.33% higher than the cost of equity found appropriate by this commission in 2001 and that:

> Between the 2001 leverage formula finding made by this Commission and Staffs updated determination of the findings in that prior decision, long-term U.S. treasury interest rates dropped by about 0.95%. As stated earlier, with such a large drop in long-term interest rates, one should be highly confident that the cost of equity has also dropped. An increase in the computed cost of equity in the face of such a large drop in interest rates should be carefully analyzed. It is a strong indication that something must be wrong with the underlying computations that develop the leverage formula. Later in this testimony I will show that the difference this improper result from the updated leverage formula is primarily due to severe deficiencies in the approach to the CAPM that has been used to develop the leverage formula.

[Rothschild direct, page 6]

Therefore, an objective reading of my direct testimony shows that I pointed out that since the cost of debt dropped substantially between 2001 and 2008, it was "... a strong indication that something must be wrong with the computation..." Ms. Ahern's conclusion that I somehow said, "... the cost rate of common equity must move in tandem with interest rate levels..." is a mischaracterization of my testimony. (Ahern rebuttal, page 2).

Q. ON PAGES 5-7 OF HER REBUTTAL TESTIMONY, MS. AHERN IDENTIFIES VARIOUS DIFFERENCES BETWEEN THE CAPITAL MARKETS IN 2001 AND 2008. PLEASE COMMENT.

A. When examining any two points in time, there are always differences in the capital markets. However, the reason people look to interest-based equity costing methods such as CAPM or risk premium is because any impact of these differences is felt in both the equity markets and the bond markets. Ms. Ahern has not provided any reason why any of the differences in the capital markets would have had any difference in their impact on bond returns compared to stock returns let alone changes that would be so largely different in impact between the cost of bonds and the cost of common equity that it would have caused one to see a substantial increase in cost while the other to see a substantial decrease.

Further, the above actual quote from my testimony shows that, in contrast to Ms. Ahern's random observations that were not tied in any way to a different impact on bonds than stocks, I not only showed that there was such a substantial inconsistency between the change in Staff's computation of the cost of equity and the actual change in the cost of debt between 2001 and 2008, but I also explained why. I showed that the inconsistency between the indicated change in the cost of equity and the cost of debt between 2001 and 2008 was due to an identifiable error in the old leverage formula result. See page 6 to 9 of my direct testimony in this case.

Q. DOES MS. AHERN RELY ON AN ANALYSIS THAT ASSUMES THE COST OF EQUITY AND INTEREST RATES MOVE IN TANDEM?

A. Yes. In addition to Ms. Ahern's misrepresentation of my testimony, it is additionally strange that she took the position of arguing against the position that interest rates and the cost of equity move in tandem because both her CAPM and her risk premium methods are specifically tied "IN TANDEM" to changes in interest rates. Therefore, her answers from these methods do, in fact, have results that change in tandem. Therefore, her testimony regarding the rejection of the concept that interest rates and the cost of equity move in tandem is really rebuttal to her suggested cost of equity procedures and not my overview observation.

II. RELATIONSHIP BETWEEN COST OF DEBT AND LEVEL OF COMMON EQUITY IN THE CAPITAL STRUCTURE

Q. IN YOUR DIRECT TESTIMONY, ON PAGE 11, YOU RECOMMEND TO THE COMMISSION THAT THE DETERMINATION OF HOW THE COST OF EQUITY CHANGES WITH CHANGES IN THE LEVEL OF COMMON EQUITY IN THE CAPITAL STRUCTURE SHOULD CONSIDER THAT THE COST OF DEBT CHANGES WITH CHANGES IN THE LEVEL OF COMMON EQUITY. DOES MS. AHERN AGREE?

A. No. On pages 9-10 of her rebuttal testimony, while she agrees with me that both "… in theory and consistent with the Modigliani/Miller principle which provides

the basis for the leverage formula, the debt cost rate is a function of the debt ratio with debt cost rising as the debt ratio rises." But, in spite of her acknowledgement of how the Modigliani/Miller principle works, she still goes on to argue for rejecting this important principle and instead irresponsibly testifies that it is somehow reasonable to make the "... assumption that the debt cost rate is constant over a common equity range of 40% to 100%...[1]"

Q. COULD MS. AHERN PROVIDE ANY LOGICAL BASIS FOR HER RECOMMENDATION TO REJECT THE MODIGLIANI/MILLER PRINCIPLE?

A. No. She attempts to criticize me on page 10, line 6, for being wrong because I had been assuming "... that all else is equal." A close examination of the situation shows that her criticisms are completely hollow. Indeed, the entire premise behind the leverage formula in the first place is that the leverage formula only makes sense to use if the cost of capital to water and wastewater companies remains the same from company to company --- in other words, the leverage formula is only expected to apply if all the relevant factors that bring rise to the desire to use the leverage formula are in fact equal.

Rather than merely assign the same cost of capital to all water and wastewater utilities, the concept behind the leverage formula starts out by recognizing that companies use different capital structures. Because companies use different capital structures, even if the overall cost of capital were the same from company

[1] See page 10, lines 7-8 of Ms. Ahern's Rebuttal Testimony

to company, the cost of equity will be different because of variations in the capital structures actually used. In other words, two water companies that both have the same business risk will have different financial risk if they use different capital structures. The Modigliani/Miller principle tells us that as the percentage of common equity goes up, financial risk goes down such that both the cost of debt and the cost of equity go down. It also tells us that before considering taxes and bankruptcy risk, the sum of the weighted cost of equity and the weighted cost of debt (i.e. the overall cost of capital) remains the same. This is specifically why the derivation of the leverage formula, whether done by Staff or by me, assumes that the cost of capital would remain the same irrespective of changes in the capital structure of a Florida water or wastewater company. It then first determines an overall cost of capital for a theoretical water or wastewater company that is using a capital structure containing 40% common equity and 60% debt. It then holds this overall cost of capital constant while computing the cost of equity that would be necessary to hold the overall cost of capital constant. While the actual cost of equity is the desired input into the leverage formula starting point, rather than using the actual embedded cost of debt of the comparative companies, the cost of debt that is used for the starting point is the current rate that it would cost to obtain debt. Using the current cost of equity and current cost of debt is correct for this computation because it is current cost rates that have relevance in the capital structure interplay as expressed in the Modigliani/Miller principle. Both Ms. Ahern and I agree that the current cost of debt should be used as the starting point, but where Ms. Ahern goes wrong is

when she argues for deviating from the Modigliani/Miller principle by failing to model for anticipated changes in the cost of debt that are expected to occur in response to changes in capital structure.

Q. CAN YOU PROVIDE AN EXAMPLE THAT PROVES WHY MS. AHERN IS WRONG?

A. Yes. Assume there are two different water companies that both start brand new regulated water utility businesses, call them Company A and Company B. Assume that Company A when it goes into business starts with a capital structure made up of 40% common equity and 60% debt and does so at a time when the Florida PSC has determined the cost of equity applicable to a water company with 40% common equity in the capital structure is 9.50%. Since such a company is a new company, debt that is actually issued would be issued at a rate equal to the current cost of debt consistent with its bond rating so that if the cost rate on BBB rated debt were 6.0%, the company would be able to issue debt for about 6.0%. Since the Florida PSC uses this 40% equity and 60% debt capital structure and uses the current cost of equity and cost of debt, the overall cost of capital allowed to this Company A would be computed as follows:

Type of Capital	Amount	Cost Rate	Weighted Cost
Common Equity	40%	9.00%	3.60%
Debt	60%	6.00%	3.60%
Totals	100%		7.20%

In the above example, before addressing the income tax expense issue, the overall cost of capital that would both be allowed to Company A and would likewise be held constant when quantifying the leverage formula is the 7.20% overall cost of capital. So far, based on the hypothetical situation, Ms. Ahern and I would see it the same way. Now, to show what happens if Ms. Ahern's bad advice to hold the cost of debt constant were to be used, consider the following. If Company B came along at the same time Company A did, was also a new start-up water company in Florida, but had a capital structure containing 65% common equity and 35% debt, Ms. Ahern's incorrect recommendation to violate the Modigliani/Miller principles and hold the cost of debt constant would result in the following determination of the cost of equity for Company B:

Type of Capital	Amount	Cost Rate	Weighted Cost
Common Equity	65%	7.846%	5.10%
Debt	35%	6.00%	2.10%
Totals	100%		7.20%

In the above example, if Ms. Ahern's incorrect method of holding the cost of debt constant were used to determine the overall cost of capital to allow to Company B, the allowed return on equity in order to think the overall cost of capital was being kept at 7.20% would be an allowed return on equity of 7.846%. Yet, as we know both from the Modigliani/Miller principles and real world observations,

Company B that was identical to Company A but for capital structure would be able to issue debt at a lower interest rate than Company A. While the actual amount of the reduction in interest rates will vary depending upon financial conditions prevailing at the time, it is reasonable to assume for purposes of this exercise, that Company B could issue debt at a cost rate of 5.50% at a time when Company A could issue debt at a cost rate of 6.00%[2] Look what would really happen to Company B. Although it would be allowed a cost of capital of 7.20%, it would only experience the following cost of capital:

Type of Capital	Amount	Cost Rate	Weighted Cost
Common Equity	65%	7.846%	5.10%
Debt	35%	5.50%	1.93%
Totals	100%		7.03%

The effect of this would be for Company B to earn more than the intended 7.846% cost of equity because rates would have been set to provide Company B with a return on capital of 7.20% instead of 7.03%. In fact, as shown below, with a 65% equity/35% debt capital structure, actual cost of debt of 5.50% and allowed overall cost of capital of 7.20%, Company B would earn a return on equity of 8.11%, which is 0.264% higher than the 7.846% that would have been intended

[2] One could quibble about whether or not the reduction in the cost of debt would be 0.50%, or a slightly different number. But, for purposes of this example, the key factor that cannot be responsibly rebutted is that the cost of debt to startup Company B would be less than for startup Company A.

by the Commission.

Type of Capital	Amount	Cost Rate	Weighted Cost
Common Equity	65%	8.11%	5.27%
Debt	35%	5.50%	1.93%
Totals	100%		7.20%

In other words, if the Commission were to adopt Ms. Ahern's bad advice and as a result misuse the Modigliani/Miller principles, it would be using a methodology that would provide a windfall gain to investors in the form of a higher return on equity than the Commission would have intended.

Q. ON PAGE 10 OF HER REBUTTAL TESTIMONY, MS. AHERN ATTEMPTS TO DEFEND HER POSITION BY SAYING THAT WHEN DETERMINING THE OVERALL COST OF CAPITAL, IT IS TYPICAL FOR THE COMMISSION TO USE THE EMBEDDED COST OF DEBT IN THE COMPUTATION OF THE OVERALL COST OF CAPITAL. DOES THIS SOLVE THE PROBLEM?

A. No, not at all. In the above example, the embedded cost of debt and the new cost of debt were the same, yet by making the mistake of failing to change the cost of debt when deriving the leverage formula resulted in providing an inadequately small downward adjustment to the cost of equity. The bottom line is that to get the right answer, both the expectation of the lower cost of debt must be modeled

into the determination of the leverage formula and then when computing the overall cost of capital for the subject company both the cost of equity derived from the leverage formula that is consistent with the subject company's capital structure and the actual embedded cost of debt of the subject company must both be used.

Q. OF WHAT RELEVANCE ARE MS. AHERN'S COMMENTS ON PAGE 11 OF HER REBUTTAL TESTIMONY THAT "BOND RATINGS ARE NOT SIMPLY AND EXCLUSIVELY A FUNCTION OF DEBT RATIOS...."

A. Once a decision is made to use the leverage formula approach and to base that on the principles of Modigliani/Miller, these comments by Ms. Ahern are irrelevant. The entire basis for using the leverage formula approach in the first place is to allow one cost of equity determination to be applied to all water and wastewater companies in proceedings where the leverage formula use is not challenged by either the Company or other parties. As is correctly noted on page 11 of Ms. Ahern's rebuttal testimony, in addition to considering financial parameters that are a function of the capital structure, Standard & Poor's does consider business risk. A company with an excellent business risk rating would be likely to have a lower cost of debt for any given capital structure than a company with a weak business risk position. However, the relevance of that factor would come into play on whether or not the leverage formula result is or is not applicable to the company in question. It would have absolutely nothing to do with how to determine the leverage formula or any of the results obtained from the formula.

III. B X R APPROACH TO DCF

Q. DOES MS. AHERN COMMENT ON YOUR APPROACH TO THE DCF METHOD IN THIS PROCEEDING?

A. Yes. Starting on page 28 of her rebuttal testimony, she provides a discussion of my recommended DCF approach. On page 29, she claims that my recommended approach to the DCF method is based on the short-term forecasts she thinks I have advised against. Additionally, she claims that the approach I have used is somehow circular. She is wrong on both counts.

Q. PLEASE COMMENT ON MS. AHERN'S CLAIM THAT YOUR APPROACH VIOLATES YOUR ADVICE ON THE USE OF SHORT-TERM FORECASTS.

A. On page 29 of her testimony, Ms. Ahern provides a quote from page 18, lines 16-18 of my direct testimony. I will repeat the quote she provided, and will highlight that section in bold, but will also provide material from my direct testimony that appeared immediately before and immediately after that quote so it can be put into proper context:

> While the CAPM method is also dependent upon a DCF result to compute the risk premium, growth in the implementation of the DCF method is not based on the two- stage approach, but is instead computed by Staff by averaging the five year growth rate in dividends and earnings forecast by Value Line (based on over 600 companies) to occur between the average of the three most recent historical years and a three year period a few years into the future.

As I have argued for decades, the historical to short-term future five-year growth rates are NOT the kind of growth rate applicable for use in the DCF formula because they are not long-term sustainable growth rates. Growth rates from any base period are subject to distortion depending on how atypical the three-year average base period is compared to what is expected for the future. Value Line itself apparently knows better than to use these growth rates in a DCF method, because when it advises investors what total return to expect for the future, it does NOT add these growth rates to the dividend yield as it would if it believed these growth rates to be a credible DCF approach. Therefore, I am not surprised that the results of such an inherently flawed approach to the DCF would result in vastly inconsistent results when comparing the computational results from 2001 to 2008.

Putting the portion of my testimony that Ms. Ahern quoted into its proper context shows that her criticisms are totally without foundation. I was, am, and will be opposed to the use of short-term, five-year earnings per share and/or dividends per share growth rates in a constant growth form of the DCF model because these growth rates are purely and simply unsustainable growth rates. However, determining what growth rate is sustainable by determining what future expected return on book equity is anticipated by investors can produce a sustainable growth rate. This approach of applying the "b x r" approach to quantify future sustainable growth was used both in the Staff report when it applied the DCF method and in my testimony.

Q. PLEASE COMMENT ON MS. AHERN'S CLAIM THAT YOUR APPROACH TO THE DCF METHOD IS SOMEHOW CIRCULAR.

A. In making this statement, Ms. Ahern shows her fundamental misunderstanding of the DCF method. She apparently has lost sight of the fact that DCF stands for "Discounted Cash Flow". The basic principle behind the DCF method is to find

the discount rate (cost of equity) that equates the future expected cash flows to the current stock price. Ms. Ahern should know that future cash flows that investors will receive would come from future dividends until such time as an investor sells the stock. At the time the stock is sold, the investor receives proceeds from the sale of the stock and a corresponding one-time cash flow from the sale of the stock. Both the dividends and the future stock price a company will receive are highly dependent upon the level of earnings a company will achieve. The level of future earnings a regulated utility will earn, and therefore the cash flow investors will expect to receive, are directly related to how high of an earned return on equity a commission gives a company the opportunity to earn. Therefore, Ms. Ahern should know that any accurate approach to the DCF method must recognize that the results of regulation are what is a key determinant to what future cash flows will be. This is true whether future cash flows are measured by quantifying growth through use of the b x r (or retention rate times future expected return on book equity) method, or if it is based on quantifying earnings per share growth or dividends per share growth.

Q. **ARE B X R GROWTH RATES MORE OR LESS SUSCEPTIBLE TO CHANGES IN THE ALLOWED RETURN ON EQUITY THAN B X R GROWTH RATES?**

A. Five year earnings per share growth rates of the kind used by Ms. Ahern are far more susceptible to a change in the allowed return on equity than b x r growth rates. Here is why. Assume a company that in the past has been allowed to earn a

return on equity of 9.25% convinces a commission to increase its authorized return on equity to 9.75%. Such a change, if it were accompanied by other ratemaking computations that result in investors changing future expectations for return on equity actually increasing from 9.25% to 9.75% would result in an increased expectation in earnings per share. How much the increase in earnings per share would be is easy to estimate. If investors expected a company to earn $2.00 per share five years from now when it earned the 9.25% return on equity, the earnings expectation would have to change from $2.00 to approximately $2.11 ($2.00 x 9.75/9.25)[3]. Now, if a company in which investors were expecting $2.00 in earnings per share five years from now had investors who were expecting a 5% per year earnings per share growth rate over the next five years when earnings per share expectations were at the $2.00 level, then earnings per share at the beginning of the five year period would have to be $2.00/((1.05)^5), or $1.567. Or, said another way, $1.0567 grown at a compound rate of 5% for 5 years becomes $2.00. Now look what happens to the computation of the growth rate if the allowed return on equity is increased from 9.25% to 9.75% and there is a corresponding increase in future expected return on book equity. Even though we said the DCF method that obtained an indicated cost of equity of 9.75% based upon a 5% earnings per share growth rate when investors were thought to expect future earnings per share of $2.00, the higher earnings that would result from the

[3] This computation is approximate rather than exact because higher earnings in the year prior to the fifth year would be added to book value if dividends were not increased. The higher book value would mean earnings per share would be that much higher by the fifth year, making the earnings per share required to produce the 9.75% earned return on equity a bit higher than the $2.11 I've shown. However, I have not included this effect to make the computations easier to follow without hurting the integrity of the example.

now higher allowed return on equity would produce a new growth rate of 6.13% (the compound rate of growth required for $1.567 to grow to $2.11 in 5 years). Therefore, if it were somehow felt to be circular because a change in the future expected earned return on equity from 9.25% to 9.75% would increase the b x r growth rate, it would be just as circular to rely upon a five-year earnings per share growth rate because it, too, would increase in response to investors' changed earnings expectations.

Q. ARE YOU THEN SAYING THAT BOTH B X R AND A FIVE –YEAR EARNINGS PER SHARE GROWTH RATE COMPUTATION ARE CIRCULAR?

A. No, actually neither is circular. Remember that the DCF method is implemented by finding the discount rate that equates the current stock price with investor's future cash flow expectations. As long as the stock price and the future expectations of investors are measured from the same point in time, there is no circularity in either method. Actually, the proper mathematical term for factors such as this where one influences the other is an iteration. Even those of us who may not be familiar with this mathematical term do iterations all the time. For example, if a room is cold we increase the setting of the thermostat. The thermostat turns on a furnace until it gets information that the temperature has risen and it no longer needs to have the furnace on. A sailboat captain sailing a compass course turns the boat to one direction to get back on course and then turns the wheel straight again once arriving to the desired course.

Q. IF NEITHER THE B X R METHOD NOR THE FIVE YEAR EARNINGS PER SHARE METHOD HAS ANY CIRCULARITY, DOES THAT MAKE IT ACCEPTABLE TO USE THE FIVE YEAR EARNINGS PER SHARE COMPUTATION AS AN INICATOR OF FUTURE EXPECTED GROWTH IN THE CONSTANT GROWTH FORM OF THE DCF MODEL?

A. No. The constant growth form of the DCF model only has mathematical integrity if the best estimate for the future expected level of growth in earnings, dividends, book value, and stock price all share the same growth rate as the best estimate of what is expected for the future. This is not to say that they would actually grow at the same rate, but it does mean that investors have no basis for thinking any one is likely to grow more rapidly than another.

The b x r method is merely a way that estimates future expected growth in a way that is sustainable. It is not susceptible to beginning or ending point errors like 5-year growth rates are, and it provides an estimate of growth that is equally credible for earnings per share, dividends per share, book value per share, and stock price per share. This is why it is the only approach to the constant growth form of the DCF model that is mathematically derivable.

Q. WHY IS IT SO IMPORTANT TO USE A GROWTH RATE IN THE CONSTANT GROWTH FORM OF THE DCF MODEL THAT IS EQUALLY REPRESENTATIVE OF WHAT INVESTOS EXPECT FOR

FUTURE EARNINGS PER SHARE, DIVIDENDS PER SHARE, BOOK VALUE PER SHARE, AND STOCK PRICE PER SHARE GROWTH?

A. While the reason constant growth is required as the input into the constant growth form of the DCF model could be shown mathematically by illustrating the algebraic derivation of the constant growth form of the DCF model, there is a simple example that readily shows the deficiency of using five year earnings per share growth as an indicator in an environment of non-constant growth.

The constant growth form of the DCF model recognizes that the total return received by investors is the sum of the dividend yield and a future expected growth rate. Given this, consider what happens if growth rates are unequal:

1. If dividends grow less rapidly then earnings, but stock price grows at the same rate as dividends, then the dividend yield declines. Yet, the constant growth form of the DCF model has no mechanism to quantify the impact of a declining dividend yield on the future expected total return. Hence, in this scenario, the constant growth DCF result looses meaning.

2. If earnings grow more rapidly than dividends, then the retention rate keeps increasing. Other things being equal, a higher and higher retention rate causes earnings per share growth rate to become higher and higher. Yet, the constant growth form of the DCF model has no mechanism to quantify the impact of an increasing growth rate on the expected total return investors expect to receive.

3. If stock price is expected by investors to grow more rapidly than dividends, then the dividend yield would be expected to go down. Yet, there is no mechanism in the constant growth form of the DCF model to accurately compute the impact of such an expected change. The same but opposite effect would occur if stock price were expected to grow less rapidly than dividends.

IV. CAPM ANALYSIS

Q. WHAT DOES MS. AHERN SAY ABOUT YOUR CAPM ANALYSIS?

A. Ms. Ahern discusses my CAPM method starting on page 31 of my testimony. The first thing she claims is that my CAPM is somehow not a CAPM method because "(I)n CAPM theory, the Security Market Line (SML) is a line that demonstrates the relationship between risk and return as measured by beta and the required rate of return for individual securities."

Q. IS THAT A VALID CRITICIZM OF YOUR APPROACH TO CAPM?

A. No. The graph on page 2 of Exhibit No. ___ (JAR-7) is specifically the development of the Security Market Line that was quantified by showing the actual relationship between earned returns and betas for all of the roughly 1,000 companies included in the Ibbotson Associates (Now IBES Morningstar) 2008

Yearbook.

Q. SINCE YOU DID PROVIDE THE SML, WHAT BASIS DID MS. AHERN USE TO CLAIM YOU DID NOT CREATE THE SML?

A. Ms. Ahern did what I would call loophole rebuttal. She found a textbook source that happened to define the SML as the very same relationship I graphed, but happened to use the word "... individual securities..." in the definition. Never mind that the SML shown in my graph shows the very same relationship, Ms. Ahern created a phantom difference anyhow. The data that I used was aggregated by Ibbotson Associates by compiling the average betas for each company in the group and the average returns earned by each group. In other words, the data does include the impact of each individual company.

Q. MS. AHERN ALSO SAYS ON LINES 10-11 OF PAGE 31 OF HER TESTIMONY THAT "THE SML HAS ITS ORIGIN AT THE RISK-FREE RATE, I.E., THE INTERCEPT, WHEREAS OPC WITNESS ROTHSCHILD ESTIMATES AN INTERCEPT THAT HE CLAIMS TO BE THE RISK-FREE RATE. IS THIS A PROBLEM?

A. No. By CAPM theory, the relationship between beta and cost of equity is supposed to be linear. Therefore, if the true relationship were actually linear, extending the least squares line as defined by the actual historical SML were indeed the true relationship, the line projection would pass through the intercept at the risk free rate. In other words, whether I had actually used some externally determined risk free rate or the risk free rate defined by the data, the results would

have been essentially identical. As I stated on page 54 of my direct testimony "(t)he most accurate risk free rate to use with the analysis is the one that is defined by the data itself. This way, the true historical actual relationship between beta and the cost of equity is maintained." I go on to explain on page 55 of my direct testimony that "(t)he compound annual return actually achieved by investors in US. Treasury Bills from 1926-2007 was 4.70%, or only 25 basis points higher than the result consistent with the actual return versus actual beta data used in my CAPM analysis. This small difference is an excellent confirmation of the integrity of the CAPM theory." So whether I had obtained the risk free rate by directly using the average U.S. Treasury Bill return from 1926 to 2007 or used the derivation of the risk free rate as implied by the data, the difference would have been slight.

Q. IS THE SHORT-TERM TREASURY RATE THE CORRECT RATE TO USE AS A RISK FREE RATE?

A. From the perspective of the SML, it is the only security that has a beta at or very near zero. A longer-term treasury would be incorrect to plot at the intercept because its beta is above zero. It is also reasonable to use short-term treasuries as a proxy for the risk free rate IF AND ONLY IF the actual treasury yield over a long period of time is used. At any given spot point in time, the yield on risk free treasuries is often distorted due to factors such as whether the U.S. Federal Reserve is artificially increasing interest rates to slow down the economy or is artificially decreasing interest rates to stimulate the economy.

Q. IS MS. AHERN'S INCORRECT CLAIM THAT YOU DID NOT BASE YOUR CAPM ON AN SML THE ONLY UNFAIR CRITICISM OF YOUR CAPM SHE MADE?

A. No. On page 31 of Ms. Ahern's testimony, she claims that I was incorrect to compare the Value Line 5 year betas to the betas calculated from 1926-2007, i.e. 82 years. Once again, it is Ms. Ahern that is incorrect. She is wrong because she ignored the point I explain on page 55 of my direct testimony. On lines 9-10 of page 55, I am asked the question "DO THESE HISTORICAL ACTUAL RETURNS FROM 1926-2007 AUTOMATICALLY EQUATE TO THE COST OF EQUITY". My answer was "(n)o". I go on to explain that I specifically adjusted the data obtained from 1926-2007 to make it applicable to the current financial environment.

Q. DID MS. AHERN STILL MORE INCORRECT CRITICISMS OF YOUR CAPM APPROACH?

A. Yes. In spite of the detailed explanation of the correctness of using the compound, or geometric average to quantify historical actual returns on pages 51 to 52 of my direct testimony, Ms. Ahern has not yet given up on her invalid argument about the arithmetic average.

Ms. Ahern's try at using the arithmetic average is an old trick that has been used by unscrupulous investment advisors for years. Attached to this testimony is an

article entitled "Financial Advisers and Fuzzy Math[4]" which explains that the arithmetic method is an invalid approach to quantifying returns that has been used specifically to overstate actual investment returns.

Additionally, I have attached to this testimony an article entitled "The Difference in Averaging[5]" from Value Line that correctly explains that the arithmetic method overstates returns while the geometric averaging method is the correct method.

Furthermore, Ms. Ahern must know that if the SML is computed using arithmetic average returns instead of geometric returns, the resulting line is no longer linear and the zero beta intercept result is way above the risk free rate. All of this merely provides additional proof of what should already be obvious: the arithmetic average of historical returns is an invalid method of quantifying historical actual returns. It serves to mislead investors or analyses based upon those results.

Q. ON PAGE 38 OF HER TESTIMONY, MS. AHERN CLAIMS THAT THE 9.66% RETURN DISCUSSED BY SBBI IS BASED UPON GEOMETRIC MEAN RETURNS. IS THIS A CORRECT DESCRIPTION OF WHAT SBBI HAS REALLY SAID?

A. No. Ms. Ahern is misrepresenting her source. On page 57 of my direct testimony, I provide a full in-context quote from SBBI. What the complete quote

[4] See Exhibit No.___(JAR-13)
[5] See Exhibit No.___(JAR-14)

shows that in the opinion of SBBI, assuming historical inflation rates the future expected return on equity is 9.66%. As explained in that quote, this 9.66% is the same answer whether the geometric or arithmetic averaging method is used.

Q. ON PAGE 32 OF HER REBUTTAL TESTIMONY, MS. AHERN SAYS THAT "THE ARITHMETIC MEAN RETURN IS APPROPRIATE FOR COST OF CAPITAL PURPOSES PRECISELY BECASUSE IT CAPTURES THE EFFECT OF CHANGING ECONOMIC CONDITIONS ON RISK PREMIA OVER TIME." IS THIS CORRECT?

A. No. The arithmetic mean is inappropriate for cost of capital purposes and even if someone wanted to use arithmetic means to capture the effect of changing economic conditions that is way beside the point of any analysis that anyone has or generally does propose in the context of a CAPM analysis. Ms. Ahern's statement is also wrong because simply knowing the arithmetic average says absolutely nothing about how risky an investment may be. For example, if the arithmetic average return over 6 years was 10.0%, merely knowing this does not provide any information if the 10% annual average return was obtained from an investment that earned exactly 10% in each of the six years, or from an investment that earned 0% in 3 years and 20% in three years, or if the 10% average return was earned in any one of a number of different ways. In fact, merely knowing that the arithmetic average return averaged 10% for six years is such a misleading number that it does not even tell anyone if there was a total profit or total loss over the six years.

Q. HOW COULD A SIX-YEAR ARITHMETIC AVERAGE RETURN OF 10% BE MEASURED IF AN INVESTOR EXPERIENCED A LOSS OVER THE SIX YEARS?

A. Suppose an investor started out with an investment of $100 and incurred a loss of 90% in the first year. Such an investor would have an investment value of only $10 after the end of the first year. Then, assume the investor proceeded to earn a return of 150% in the second year. If this happened, the $10 balance at the end of the first year would become $25 at the end of the second year. Further assume that this investor then proceeded to exactly break even in the remaining 4 years. Such an investor would have started with an investment of $100, ended up with an investment of only$25, for a net loss over the six years of $75. Yet, the arithmetic average of the returns over the six years would be (-90%+150% +0% +0%+0%+0%+0%)/6, which equals an annual average return rate of 10%.

A measurement technique that could come to a conclusion that the average annual return on an investment that declined from $100 to $25 over six years was somehow actually a positive return of 10% is seriously wrong.

Q. IF KNOWING THE ARITHMETIC AVERAGE IN AND OF ITSELF SAYS NOTHING ABOUT EITHER THE RISKINESS OF AN INVESTMENT OR EVEN WHETHER OR NOT AN INVESTMENT WAS PROFITABLE, IS THERE ANY BASIS AT ALL FOR MS. AHERN'S CLAIM THAT

ARITHMETIC AVERAGES PROVIDE INSIGHT INTO VARIANCE AND STANDARD DEVIATION OF RETURNS?

A. While Ms. Ahern's comments about the potential use of arithmetic returns to get an estimate of risk are irrelevant because they have not even been proposed as the way to quantify risk, it could be possible to use arithmetic returns to measure risk. Actually, for that matter, one could use time interval geometric returns as a measure of risk also[6]. If one wanted to compute the variability of annual returns, one could do this by examining the variation in annual returns over a number of years. However, this fact is in no way connected with what method properly quantifies actual returns that were earned. Among the key facts Ms. Ahern improperly ignored are that a) the variability of returns that could be computed from arithmetic returns ARE NOT AND SHOULD NOT be used to quantify risk in the CAPM. Instead, risk is independently quantified from betas. Betas are computed by regressing the weekly percentage change in a stock price compared to the weekly percentage change in a broad stock index. Betas are NOT computed from the arithmetic average of anything. Therefore, Ms. Ahern's defense of the use of the arithmetic average because annual percentage change data could be used to get some insights into risk is a very strange argument indeed.

[6] By "time interval" geometric returns what I mean is geometric return comparisons for multi-year periods, such as a series of geometric returns over a string of 5-year periods. Actually, annual arithmetic returns are nothing but geometric returns over one year, since arithmetic returns could be computed over any time period. For example, an annual arithmetic return is nothing but the geometric result of monthly arithmetic returns, monthly arithmetic returns are nothing but geometric monthly returns from daily arithmetic returns, etc.

Q. ON PAGE 37 OF HER TESTIMONY, MS. AHERN DISCUSSES THE RELATIONSHIP BETWEEN BETA AND THE COEFFICENT OF DETERMINATION. PLEASE COMMENT.

A. On page 37 of her testimony, Ms. Ahern criticizes my use of beta because "... beta is a measure of market or systematic, non-diversifiable risk and not of non-systematic, company-specific or diversifiable risk." What Ms. Ahern fails to explain is that the entire premise behind the CAPM method in the first place is that the only kind of risk for which investors are rewarded is precisely this non-diversifiable risk that is quantified by beta, not by R2.

The Nobel laureate William Sharpe, one of the originators of the Capital Asset Model explains in one of his textbooks the following regarding beta, market risk and return:

> Market risk is related to the risk of the market portfolio and to the beta of the security in question. Securities with larger betas will have larger amounts of market risk. In the world of the CAPM, securities with larger betas will have larger expected returns. Therese two relationships together imply that securities with larger market risks should have larger expected returns.
>
> Non-market risk is not related to beta. This means that there is no reason why securities with larger amounts of non-market risks should have larger expected returns[7].

Q. DOES MS. AHERN PROVIDE A FINANCIAL SOURCE THAT SHE CLAIMS SUPPORTS HER MISCONCEPTION ABOUT THE CORREC

[7] Sharpe F. William, Investments fifth edition, 1995, p.277.

RISK MESUREMENT TO USE?

A. Yes. On page 37, she references Investments: Analysis and Management by Jack Clark Francis. She includes three pages from that book in her Exhibit (PMA-26).

Q. DOES THE SOURCE MS. AHERN HAS PROVIDED HAVE THE SAME MISCONCEPTION ABOUT HOW TO USE THE CAPM THAT MS. AHERN HAS?

A. No. On the contrary. Her source correctly recognizes that it is beta, not r squared that measures the non-diversifiable risk. This source also correctly recognizes that in order to experience the non-diversifiable risk, investors need to invest in portfolios of stocks in contrast to making an investment that is concentrated in only a few securities. However, this source in no way contradicts the use of beta with CAPM.

The message is simple. If one accepts the principles of the CAPM method, then one accepts, as I do, the generally accepted concept that investors are only rewarded for taking non-diversifiable risks. Yes, those investors who want to assume greater risk by not diversifying can (and do) take on larger risks. But, those larger risks in aggregate average out (some investors do very well, while others do very poorly). Because they average out, risks created through an investor's failure to diversify add nothing to the cost of equity. Because they add nothing to the cost of equity, in the process of balancing the interests of investors and ratepayers, the Commission must ignore these non-diversifiable risks.

V. BOND DIFFERENTIAL, PRIVATE PLACMENT PREMIUM, SMALL UTILITY RISK PREMIUM, FLOTATION COST ADJUSTMENT

Q. DOES MS. AHERN TAKE A POSITION ON YOUR RECOMMENDATION TO EXCLUDE COST OF CAPITAL ADDERS FOR THE BOND DIFFERENTIAL, PRIVATE PLACEMENT PREMIUM, SMALL UTILITY RISK PREMIUM AND FLOTATION COST ADJUSTMENT.

A. Yes, Ms. Ahern expresses her disagreement with what I have explained is the correct position on these issues. However, it should first be pointed out that she has failed to put this disagreement in the proper context. She failed to note that the net result of my recommendation to exclude various additions to the cost of equity computation but at the same time make an addition to the cost of equity that had not been contemplated by the Commission produces a much smaller difference in the end result. As I testified on pages 28-29 of my direct testimony:

> The 2001 Order allows for additions to the cost of equity computed from the comparative gas companies for:
>
> Bond Yield Differential
> Private Placement Premium
> Small-Utility Risk Premium
> Financing Costs
>
> All the above adders are inappropriate. However, one adder which is actually

larger than any of the other ones and was omitted but should have been included in the second stage of the DCF model is the increment to growth caused by sales of new common stock above book value. After excluding the four above-listed improper additions to the cost of equity and adding the impact of sales of new common stock above book value, the results of the DCF method as applied to the comparative gas companies changes from the 9.68% obtained by Staff to the 9.42% to 9.43% shown on my Exhibit JAR-2.

Q. HAS MS. AHERN PROVIDED SPECIFIC REBUTTAL TO THE TESTIMONY YOU PROVIDED ON PAGES 29 AND 30 OF YOUR DIRECT TESTIMONY THAT EXPLAINS WHY THE PROPOSED BOND DIFFERENTIAL IS INAPPROPRIATE?

A. On page 19 of her rebuttal testimony, Ms. Ahern incorrectly states that "(i)t is appropriate to include the bond yield differential in the cost of common equity calculation in the leverage formula because the bond yield differential reflected in the debt cost rate only compensates bond holders for the increased riskiness inherent in Baa3 public utility bonds relative to the riskiness inherent in A rated public utility bonds." In the typical style that Ms. Ahern has frequently used in her rebuttal testimony, she is completely wrong because she has only considered part of the story. The starting point for the leverage formula is the overall cost of capital for the comparative gas companies that was computed using the actual cost of equity for the comparative group and the cost of debt as it would currently be if these companies issued debt today. Then, this overall cost of capital is held

constant when determining what cost of equity and cost of debt would be applicable to a capital structure containing an alternative level of common equity. See page 15 of my direct testimony. By holding the overall cost of capital constant, the cost of equity goes up when the common equity ratio goes down and goes down when the common equity ratio goes up. This accounted-for change in the cost of equity is exactly the same as the change in the cost of equity concurrent with expected changes in the bond rating. Therefore, if a separate adder were made as Ms. Ahern suggests, this would be entirely unfair because it would represent a double-count of the effect.

Q. ON PAGE 19 OF HER REBUTTAL TESTIMONY, MS. AHERN CLAIMS THAT IN YOUR COMPUTATIONS ON EXHIBIT NO. ____ (JAR-8), (PAGE 1) YOU HAVE "ASSUMED THAT THE 9.40% COMMON EQUITY COST RATE IS EQUALLY APPLICABLE TO A UTILITY WHOSE BONDS ARE RATED BAA3 AS IT IS TO A UTILITY WHOSE BONDS ARE RATED A2 BY MOODY'S. IS SHE CORRECT?

A. No. Ms. Ahern is misrepresenting my testimony. The leverage graph works by starting with the computation of an overall cost of capital at a starting-point capital structure. Then, the cost of equity that is required to keep the overall cost of capital constant is computed. The result of these computations is that the cost of equity applicable to capital structures with a lower percentage of common equity have a higher cost of equity and capital structures with a higher percentage common equity have a lower cost of equity.

Q. DOES MS. AHERN PROVIDE ANY REBUTTAL TO YOUR EXPLANATION OF WHY IT IS INAPPROPRIATE TO MAKE AN ADDITION FOR PRIVATE PLACEMENT PREMIUM OR FINANCING COSTS?

A. No, instead of providing any rebuttal to my arguments, she just explains that she would like to have a private placement premium. She provides no evidence that a private placement premium even exists. On page 31 of my direct testimony, I explain why the private placement premium is inappropriate, and provide a paper prepared on behalf of the Federal Reserve of San Francisco that explains that a private placement premium is improper. Ms. Ahern's testimony adds nothing of substance to the issue.

As for flotation costs, I cover that topic on page 32 to 33 of my direct testimony. Once again, Ms. Ahern's rebuttal testimony does not address the issues I presented. Therefore, her discussion on the topic adds nothing of substance to the issue.

Q. **STARTING ON PAGE 23 OF HER TESTIMONY, MS. AHERN ARGUES IN FAVOR OF A SMALL UTILITY RISK PREMIUM. PLEASE RESPOND.**

A. In her testimony, Ms. Ahern presents a quote from a textbook published in 1989 that claimed to believe in a small-firm premium. It is extremely important to note

that the quote she provided talks about small firms in general and does NOT talk about whether or not the small firm effect would or would not be applicable to utility companies. What Ms. Ahern failed to note is that since 1989, data showing that whatever risk small firms have in comparison to large firms is already expressed in the firms beta. In other words, small firms on average have higher betas than large firms. This is a very important distinction because it means that whatever effect on risk that is brought about by size, it is already captured by beta. It also means that since regulated utility companies do not have unusually high betas, if there is a small firm effect it is offset by other risk reducing characteristics inherent in utility companies. It only makes sense that the risks typically faced by small firms would not be replicated for a regulated public utility. An unregulated small firm is more likely to have one or only a few key products that could be subject to obsolescence, or could be vulnerable to attack from a larger and more powerful competitor. However, regulated water and wastewater utility companies need not fear competition because they have the protection of territorial monopolies and because they have products that have no chance of becoming obsolete.

VI. REASONABLENES OF END RESULT

Q. ON PAGE 39 OF HER TESTIMOMY, MS. AHERN IS ASKED A QUESTION ABOUT THE REASONABLENESS OF THE FL PSC

STAFF'S LEVERAGE FORMULA. PLEASE RESPOND.

A. Ms. Ahern answers this question by stating that the 9.68% DCF result and the 11.40% CAPM result are both reasonable. I agree that the 9.68% DCF result is reasonable, although it could be improved slightly. However, the 11.40% CAPM result is not reasonable. It is a much higher result than is justified by the current interest rate environment could possibly justify, how much higher this result is than a reasonable DCF result further reinforces the inaccuracy of an arithmetic average based CAPM. Consider that this 11.40% is higher than the approximately 11.00% interest rate AIG has been forced to pay on its emergency financings that were provided for it to avert bankruptcy.

VII. PROBLEM WITH FORMULA IMPLEMENTATION

Q. **DID MS. AHERN CORRECTLY IDENTIFY AN INADVERTENT TRANSPOSITION OF NUMBERS IN YOUR TESTIMONY?**

A. Yes. On page 15 of her rebuttal testimony, she identified an inadvertent number reversal in a hypothetical example that I had prepared. The hypothetical example was supposed to have used a debt cost of 7.36%, but the number 7.63% was entered in its place. That item should be fixed. Following is the correction:

Marginal Cost of Investor Capital

Average Water and Wastewater Utility

Capital Component	Ratio	Marginal Cost Rate	Weighted Marginal Cost
Rate Common Equity	46.37%	9.40%	4.36%
Total Debt	53.63%	7.36%	3.95%
Total	100.00%		8.31%

Because the above was only an illustration of a hypothetical example, the correction has no impact whatsoever on any of the recommendations in my testimony.

VIII. DR. MORIN

Q. MS. AHERN CITES DR. ROGER MORIN AS AN AUTHORITY ON COST OF CAPITAL. IS DR. MORIN AN INDEPENDENT AUTHORITY ON COST OF CAPITAL?

A. Dr. Morin is a company-sponsored cost of capital witness who has testified on behalf of utility companies in hundreds of cases.

Q. HAVE YOU HAD THE OPPORTUINTY TO PERFORM A DETAILED ANALYSIS OF ANY OF THESE COST OF CAPITAL TESTIMONIES FILED BY DR. MORIN?

A. Yes, on numerous occasions. I have exposed many flaws in Dr. Morin's cost of capital testimonies. For example, I have included as JAR-12 in this testimony a

copy of an evaluation of Dr. Morin's testimony that I filed in a Nova Scotia Power case a few years ago.

Q. HOW DID THE COMMISSION IN NOVA SCOTIA RULE?

A. In Nova Scotia Power Incorporated's 2005 rate case the Nova Scotia Utility and Review Board said the following in its decision:

> The Board believes that an ROE of 9.50% to 9.60%, as recommended by Mr. Rothschild and Mr. Gorman respectively, fairly represents an appropriate ROE. The ROE of 11.2%, as recommended by Dr. Morin, is, in the opinion the Board, too high given the current economic climate[8].

VIIII. CONCLUDING REMARKS

Q. IS THERE ANYTHING YOU WOULD LIKE TO SAY IN CONCLUSION?

A. Yes. The concept of a leverage formula as a way of streamlining the rate proceedings for the numerous water and wastewater companies in Florida is a creative, innovative approach. For it to work in a way that is fair to both investors and ratepayers this must be done properly. To do this properly requires a relatively sophisticated understanding of finance. My direct testimony in this proceeding has correctly identified numerous problems with the earlier attempts at the leverage graph computation. Specifically, the earlier leverage graph formula was overly simplistic because it incorrectly failed to consider that not only does the cost of equity change as the percentage of common equity in the capital

[8] Nova Scotia Utility and Review Board Decision in case NSUARB-NSPI_P-881, page 79

structure changes, but the cost of debt changes as well. Also, the original formula incorrectly failed to consider that the real-world impact of income taxes is a critical part of the proper dynamic in capital structure selection. Completing the task of appropriate implementation of the creative, innovative leverage graph approach requires that these items be fixed.

My direct testimony shows the appropriate method to deal with the critical problems with the leverage formula so it can truly accomplish what was initially intended.

Q. DOES THIS CONCLUDE YOUR SURREBUTTTAL TESTIMONY?

A. Yes.

BY MR. BECK:

Q. Would you please provide a summary of your surrebuttal testimony?

A. Yes. I'll just make it very brief and say that anything that I felt was a substantive comment made by Ms. Ahern in her rebuttal testimony is covered in this testimony. I would encourage and stress that anybody who has any inkling to think that Ms. Ahern has made a point in her rebuttal testimony, to please read the surrebuttal that I've done. I think the answers put the material in context and that if there's any lingering questions about them, of course, please ask, and I'll be happy to discuss it further.

The only thing I would add is that the concept of the -- it is true that just because you know the capital structure doesn't necessarily mean you know for sure what the bond rating is. There is variation. But in order to use the whole concept of a leverage formula, one has to deal with an average response. You can't have it both ways. You can't have absolute precision and have a -- and use a leverage formula. The leverage formula is a great approach. It's a very practical approach, and as I discussed earlier, has the safety valves on an individual company by company basis.

And with that, I would encourage everybody who

has any doubts about the surrebuttal to please ask.

MR. BECK: We tender Mr. Rothschild for cross-examination.

CHAIRMAN CARTER: Thank you, Mr. Beck. Mr. Friedman.

MR. FRIEDMAN: No questions.

CHAIRMAN CARTER: Staff.

MS. HARTMAN: No questions.

CHAIRMAN CARTER: Commissioners, anything from the bench? Mr. Beck.

MR. BECK: We haven't used our hour yet. No, I have no questions. I have no questions. Thank you.

CHAIRMAN CARTER: I was beginning to like you.

Let's deal with the exhibits shown on the list, Commissioners. Mr. Beck moves Exhibits 43 through 45; is that correct?

MR. BECK: Yes, sir.

CHAIRMAN CARTER: Any objections? Any objection, Mr.Friedman? Mr. Beck is moving Exhibits 43 through 45.

MR. FRIEDMAN: No objection.

CHAIRMAN CARTER: Without objection, show it done.

(Exhibits Number 43, 44, and 45 were admitted into the record.)

CHAIRMAN CARTER: Staff, anything further in surrebuttal?

MS. HARTMAN: Nothing further.

CHAIRMAN CARTER: Thank you, Mr. Rothschild. Staff, let's deal with concluding matters.

Commissioners, before I go to staff for concluding matters, anything further from the bench?

Hearing none, staff, our concluding matters, or procedures, concluding matters or concluding procedures.

MS. HARTMAN: We would note that the transcript is due October 28th and briefs are due November 7th.

CHAIRMAN CARTER: Okay. Anything further from either of the parties. Mr. Beck, anything further?

MR. BECK: No, sir.

CHAIRMAN CARTER: Mr. Friedman?

MR. FRIEDMAN: Nothing further.

CHAIRMAN CARTER: Just one final thing just for the record. Just in case, out of a tremendous abundance of caution, for the record, staff's Exhibits 1 and 2 have been entered without objection; right? No objection from the parties?

MR. BECK: That's correct.

CHAIRMAN CARTER: So show those entered. Let

me just take a moment to look over here to make sure, staff, that we've got all of these exhibits included. I notice that we've got Exhibits 1 and 2 which were staff exhibits, and without objection, show those in. Exhibit 3 was Pauline Ahern's exhibit stipulated by the parties, including then for Mr. Rothschild, Exhibits 4 through 14 entered in without objection. On rebuttal, Ahern Exhibits 15 through 42, without objection, entered into the record. On surrebuttal for Rothschild, Exhibits 43 through 45 entered in without objection. Exhibit 46, which is the staff's exhibit, the compilation of the -- I call it the WAW utilities. Without objection, show it done. Exhibit 47, which is the Rothschild deposition entered in.

Are there any further concluding matters from the parties? Let me go to the parties first before I got to staff. Have we covered all the exhibits?

MR. BECK: Yes, sir.

MR. FRIEDMAN: Yes, sir.

CHAIRMAN CARTER: Staff, any further concluding matters?

MS. HARTMAN: Nothing.

CHAIRMAN CARTER: Anything further from the bench?

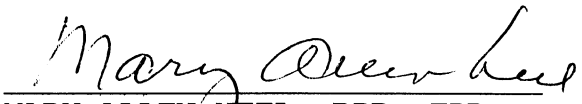
Thank you, Commissioner Argenziano.

COMMISSIONER ARGENZIANO: Thank you.

CHAIRMAN CARTER: Thank you. And with that, Commissioners, we are adjourned.

(Proceedings concluded at 1:35 p.m.)

CERTIFICATE OF REPORTER



STATE OF FLORIDA:

COUNTY OF LEON:

I, MARY ALLEN NEEL, Registered Professional Reporter, do hereby certify that the foregoing proceedings were taken before me at the time and place therein designated; that my shorthand notes were thereafter translated under my supervision; and the foregoing pages numbered 1 through 257 are a true and correct record of the aforesaid proceedings.

I FURTHER CERTIFY that I am not a relative, employee, attorney or counsel of any of the parties, nor relative or employee of such attorney or counsel, or financially interested in the foregoing action.

DATED THIS 28th day of October, 2008.

Expectations And Credibility

In theory, stock prices are based on the "present value" of expected future company cash flows. Therefore, we try to obtain accurate estimates of future financial performance. But remember, these are just estimates. Since we cannot really know what will happen tomorrow, we evaluate estimates critically by seeking clues that help us distinguish between normal versus excessive degrees of uncertainty.

Estimates In Context

Below are the present consensus revenue and EPS estimates. Notice whether analysts expect recent year-to-year growth trends to persist, or are forecasting sharp improvement or deterioration. The sharper the predicted change, the greater the level of uncertainty in the forecast. (GAAP = Generally Accepted Accounting Principles)

	Revenue ($mil)					GAAP Earnings Per Share ($)				
	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total
FY Ending 12/2005	49.8	110.3	68.1	59.7	238.1	0.22	0.57	0.72	0.28	1.57
FY Ending 12/2006	64.4	63.0	75.2	66.0	268.6	0.34	0.36	0.32	0.31	1.33
FY Ending 12/2007	72.3	79.2	75.8	74.0	301.4	0.40	0.42	0.44	0.36	1.61
FY Ending 12/2008	68.9	80.3	86.8 E	81.3 E	316.2 E	0.30	0.53	0.59 E	0.42 E	1.74 E
FY Ending 12/2009	68.4 E	80.5 E	92.6 E	90.0 E	333.2 E	0.25 E	0.53 E	0.68 E	0.50 E	1.90 E

Confidence In Estimates

The range of estimates can be measured by standard deviation. The narrower the range (the lower the standard deviation compared to the "mean" estimate) and/or the greater the number of analysts, the more definitive the expectations. Note, too, the extent to which company expectations are consistent with or diverge from those for industry and/or market.

Long Term Growth Rate				Near Term Growth Rate		
Mean	# of Estimates	Standard Dev.		Mean	# of Estimates	Standard Dev.
4.0	1	0.00	AWR	7.8	4	5.09
9.1	2	1.19	Industry	(1.1)	3	9.30
12.3	5	2.86	S&P 500	11.1	11	6.90

Reasonableness

Look at the tables below to see if analysts are expecting the company to accomplish more than it has accomplished in the past. Such things can and do happen. But the stronger the predicted future (compared to the past), the greater the burden of proof on the part of those issuing the estimates.

Annual Growth	EPS (%)	Sales (%)
5 year Estimate	4.0	NA
2008 Estimate	7.5	4.9
Last 5 years	3.8	7.6
Last 3 years	10.9	9.6
Last Year	21.2	12.2
Trailing 12 Months	12.7	2.2

Quarterly Growth	EPS (%)	Sales (%)
12/08 qtr. Estimate	20.0	9.8
09/08 qtr. Estimate	25.5	NA
06/08 qtr.	27.8	1.3
03/08 qtr.	(25.0)	(4.6)
12/07 qtr.	2.9	11.6
09/07 qtr.	14.6	NA

Analyst Recommendation Trends

Difference of opinion is normal, so don't demand unanimity. Look for ratings clusters in a part of the best-to-worst scale and at Mean Rating scores. Also important is whether analyst sentiment is improving or declining over time.

	Buy (Value 1)	Outperform (Value 2)	Hold (Value 3)	Underperform (Value 4)	Sell (Value 5)	Mean Rating
As of 8/28/08	2	0	2	0	0	2.00
As of 4 Weeks ago	3	0	1	0	0	1.50
As of 8 Weeks ago	3	0	1	0	0	1.50
As of 12 Weeks ago	3	0	1	0	0	1.50

1.00 = Best
5.00 = Worst

EPS Estimate Accuracy

Assess the extent to which analysts are accurateand have a handle on the earning trends bycomparing Estimates to Actual figures (which mayomit various charges/credits included in GAAPresults). The Actual figures are the ones that aremost comparable in accounting method to the Estimates. (GAAP = Generally Accepted Accounting Principles)

Quarter	Estimate	Actual	GAAP
06/08 qtr.	$0.41	$0.46	$0.53
03/08 qtr.	$0.31	$0.30	$0.30
12/07 qtr.	$0.32	$0.35	$0.36
09/07 qtr.	$0.46	$0.47	$0.44
06/07 qtr.	$0.40	$0.36	$0.42

03/09 qtr.

Annual EPS Estimate Revisions

Since estimates address an unknowable future, revision (often prompted by company guidance) is to be expected. Investors are usually happy when analysts are scrambling to chase reality upward. So increases in estimates tend to spark strong share price performance. The reverse is usually true when estimates are falling.

Expectations And Credibility

In theory, stock prices are based on the "present value" of expected future company cash flows. Therefore, we try to obtain accurate estimates of future financial performance. But remember, these are *just estimates*. Since we cannot really know what will happen tomorrow, we evaluate estimates critically by seeking clues that help us distinguish between normal versus excessive degrees of uncertainty.

Estimates In Context

Below are the present consensus revenue and EPS estimates. Notice whether analysts expect recent year-to-year growth trends to persist, or are forecasting sharp improvement or deterioration. The sharper the predicted change, the greater the level of uncertainty in the forecast. (GAAP = Generally Accepted Accounting Principles)

	Revenue ($mil)					GAAP Earnings Per Share ($)				
	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total
FY Ending 12/2005	114.0	123.1	136.8	122.9	496.8	0.15	0.17	0.21	0.17	0.71
FY Ending 12/2006	117.9	131.7	147.0	136.8	533.5	0.13	0.17	0.21	0.19	0.70
FY Ending 12/2007	137.3	150.6	165.5	149.1	602.5	0.13	0.18	0.22	0.19	0.71
FY Ending 12/2008	139.3	150.8	175.4 E	167.4 E	633.0 E	0.11	0.17	0.25 E	0.20 E	0.73 E
FY Ending 12/2009	150.3 E	163.8 E	187.4 E	177.7 E	684.5 E	0.15 E	0.20 E	0.27 E	0.22 E	0.85 E

Confidence In Estimates

The range of estimates can be measured by standard deviation. The narrower the range (the lower the standard deviation compared to the "mean" estimate) and/or the greater the number of analysts, the more definitive the expectations. Note, too, the extent to which company expectations are consistent with or diverge from those for industry and/or market.

Long Term Growth Rate				Near Term Growth Rate		
Mean	# of Estimates	Standard Dev.		Mean	# of Estimates	Standard Dev.
8.3	3	1.70	WTR	2.7	9	2.61
9.1	2	1.19	Industry	(1.1)	3	9.30
12.3	5	2.86	S&P 500	11.1	11	6.90

Reasonableness

Look at the tables below to see if analysts are expecting the company to accomplish more than it has accomplished in the past. Such things can and do happen. But the stronger the predicted future (compared to the past), the greater the burden of proof on the part of those issuing the estimates.

Annual Growth	EPS (%)	Sales (%)
5 year Estimate	8.3	NA
2008 Estimate	2.5	5.1
Last 5 years	4.1	13.3
Last 3 years	3.8	10.9
Last Year	1.9	12.9
Trailing 12 Months	(3.2)	5.8

Quarterly Growth	EPS (%)	Sales (%)
12/08 qtr. Estimate	7.3	12.3
09/08 qtr. Estimate	11.4	6.0
06/08 qtr.	(5.6)	0.1
03/08 qtr.	(15.4)	1.4
12/07 qtr.	0.0	8.9
09/07 qtr.	4.8	12.6

Analyst Recommendation Trends

Difference of opinion is normal, so don't demand unanimity. Look for ratings clusters in a part of the best-to-worst scale and at Mean Rating scores. Also important is whether analyst sentiment is improving or declining over time.

	Buy (Value 1)	Outperform (Value 2)	Hold (Value 3)	Underperform (Value 4)	Sell (Value 5)	Mean Rating

Annual EPS Estimate Revisions

Since estimates address an unknowable future, revision (often prompted by company guidance) is to be expected. Investors are usually happy when analysts are scrambling to chase reality upward. So increases in estimates tend to spark strong share price performance. The reverse is usually true when estimates are falling.

Annual EPS Estimate Revisions

Since estimates address an unknowable future, revision (often prompted by company guidance) is to be expected. Investors are usually happy when analysts are scrambling to chase reality upward. So increases in estimates tend to spark strong share price performance. The reverse is usually true when estimates are falling.

There is currently not enough data available to use to display annual EPS estimate revisions.

HEARING EXHIBIT 00000120

Expectations And Credibility

In theory, stock prices are based on the "present value" of expected future company cash flows. Therefore, we try to obtain accurate estimates of future financial performance. But remember, these are just estimates. Since we cannot really know what will happen tomorrow, we evaluate estimates critically by seeking clues that help us distinguish between normal versus excessive degrees of uncertainty.

Estimates In Context

Below are the present consensus revenue and EPS estimates. Notice whether analysts expect recent year-to-year growth trends to persist, or are forecasting sharp improvement or deterioration. The sharper the predicted change, the greater the level of uncertainty in the forecast. (GAAP = Generally Accepted Accounting Principles)

	Revenue ($mil)					GAAP Earnings Per Share ($)				
	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total
FY Ending 12/2005	912.0	431.0	1,725.0	993.0	2,718.0	1.13	0.31	1.64	0.84	2.48
FY Ending 12/2006	1,044.0	436.0	434.0	707.0	2,621.0	1.41	0.24	0.46	0.60	2.72
FY Ending 12/2007	973.0	467.0	369.0	685.0	2,494.0	1.31	0.39	0.17	0.86	2.73
FY Ending 12/2008	1,012.0	444.0	436.9 E	792.1 E	2,705.1 E	1.17	(0.14)	0.32 E	0.93 E	2.81 E
FY Ending 12/2009	905.5 E	NA E	NA E	NA E	2,673.7 E	1.29 E	NA E	NA E	NA E	2.82 E

Confidence In Estimates

The range of estimates can be measured by standard deviation. The narrower the range (the lower the standard deviation compared to the "mean" estimate) and/or the greater the number of analysts, the more definitive the expectations. Note, too, the extent to which company expectations are consistent with or diverge from those for industry and/or market.

Long Term Growth Rate				Near Term Growth Rate		
Mean	# of Estimates	Standard Dev.		Mean	# of Estimates	Standard Dev.
6.5	2	0.50	ATG	3.2	5	1.53
9.6	3	2.19	Industry	11.4	5	12.08
12.3	5	2.86	S&P 500	11.1	11	6.90

Reasonableness

Look at the tables below to see if analysts are expecting the company to accomplish more than it has accomplished in the past. Such things can and do happen. But the stronger the predicted future (compared to the past), the greater the burden of proof on the part of those issuing the estimates.

Annual Growth	EPS (%)	Sales (%)
5 year Estimate	6.5	NA
2008 Estimate	3.0	8.5
Last 5 years	8.4	23.2
Last 3 years	6.1	10.8
Last Year	0.3	(4.8)
Trailing 12 Months	(25.6)	(2.8)

Quarterly Growth	EPS (%)	Sales (%)
12/08 qtr. Estimate	7.9	15.6
09/08 qtr. Estimate	88.2	NA
06/08 qtr.	(25.0)	(4.9)
03/08 qtr.	(10.8)	NA
12/07 qtr.	43.3	(3.1)
09/07 qtr.	(63.0)	NA

Analyst Recommendation Trends

Difference of opinion is normal, so don't demand unanimity. Look for ratings clusters in a part of the best-to-worst scale and at Mean Rating scores. Also important is whether analyst sentiment is improving or declining over time.

	Buy (Value 1)	Outperform (Value 2)	Hold (Value 3)	Underperform (Value 4)	Sell (Value 5)	Mean Rating
As of 8/28/08	3	1	4	0	0	2.13

Annual EPS Estimate Revisions

Since estimates address an unknowable future, revision (often prompted by company guidance) is to be expected. Investors are usually happy when analysts are scrambling to chase reality upward. So increases in estimates tend to spark strong share price performance. The reverse is usually true when estimates are falling.

HEARING EXHIBIT 00000125

Expectations And Credibility

In theory, stock prices are based on the "present value" of expected future company cash flows. Therefore, we try to obtain accurate estimates of future financial performance. But remember, these are just estimates. Since we cannot really know what will happen tomorrow, we evaluate estimates critically by seeking clues that help us distinguish between normal versus excessive degrees of uncertainty.

Estimates In Context

Below are the present consensus revenue and EPS estimates. Notice whether analysts expect recent year-to-year growth trends to persist, or are forecasting sharp improvement or deterioration. The sharper the predicted change, the greater the level of uncertainty in the forecast. (GAAP = Generally Accepted Accounting Principles)

	Revenue ($mil)					GAAP Earnings Per Share ($)				
	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total
FY Ending 12/2005	308.8	153.7	106.7	341.4	910.5	1.43	0.04	(0.31)	0.94	2.11

FY Ending 12/2009	NA E	NA E	NA E	NA E	981.2 E	1.73 E	0.14 E	(0.28) E	1.19 E	2.72 E

Confidence In Estimates

The range of estimates can be measured by standard deviation. The narrower the range (the lower the standard deviation compared to the "mean" estimate) and/or the greater the number of analysts, the more definitive the expectations. Note, too, the extent to which company expectations are consistent with or diverge from those for industry and/or market.

Long Term Growth Rate				Near Term Growth Rate		
Mean	# of Estimates	Standard Dev.		Mean	# of Estimates	Standard Dev.
4.3	3	1.70	NWN	(6.9)	5	2.64
9.6	3	2.19	Industry	11.4	5	12.08
12.3	5	2.86	S&P 500	11.1	11	6.90

Reasonableness

Look at the tables below to see if analysts are expecting the company to accomplish more than it has accomplished in the past. Such things can and do happen. But the stronger the predicted future (compared to the past), the greater the burden of proof on the part of those issuing the estimates.

Annual Growth	EPS (%)	Sales (%)
5 year Estimate	4.3	NA
2008 Estimate	(6.9)	(9.8)
Last 5 years	11.3	10.0
Last 3 years	14.0	13.4

Reasonableness

Look at the tables below to see if analysts are expecting the company to accomplish more than it has accomplished in the past. Such things can and do happen. But the stronger the predicted future (compared to the past), the greater the burden of proof on the part of those issuing the estimates.

Annual Growth	EPS (%)	Sales (%)
5 year Estimate	NA	NA
2008 Estimate	7.7	(3.0)
Last 5 years	22.1	10.8
Last 3 years	2.3	8.6
Last Year	12.9	0.3
Trailing 12 Months	(1.0)	(3.1)

Quarterly Growth	EPS (%)	Sales (%)
12/08 qtr. Estimate	2.6	1.3
09/08 qtr. Estimate	NA	1.7
06/08 qtr.	(72.7)	(0.6)
03/08 qtr.	28.7	(8.9)
12/07 qtr.	10.3	2.5
09/07 qtr.	NA	146.9

Analyst Recommendation Trends

Difference of opinion is normal, so don't demand unanimity. Look for ratings clusters in a part of the best-to-worst scale and at Mean Rating scores. Also important is whether analyst sentiment is improving or declining over time.

Annual EPS Estimate Revisions

Since estimates address an unknowable future, revision (often prompted by company guidance) is to be expected. Investors are usually happy when analysts are scrambling to chase reality upward. So increases in estimates tend to spark strong share price performance. The reverse is usually true when estimates are falling.

HEARING EXHIBIT 00000130

Expectations And Credibility

In theory, stock prices are based on the "present value" of expected future company cash flows. Therefore, we try to obtain accurate estimates of future financial performance. But remember, these are just estimates. Since we cannot really know what will happen tomorrow, we evaluate estimates critically by seeking clues that help us distinguish between normal versus excessive degrees of uncertainty.

Estimates In Context

Below are the present consensus revenue and EPS estimates. Notice whether analysts expect recent year-to-year growth trends to persist, or are forecasting sharp improvement or deterioration. The sharper the predicted change, the greater the level of uncertainty in the forecast. (GAAP = Generally Accepted Accounting Principles)

	Revenue ($mil)					GAAP Earnings Per Share ($)				
	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total
FY Ending 12/2005	912.0	431.0	1,725.0	993.0	2,718.0	1.13	0.31	1.64	0.84	2.48

Confidence In Estimates

The range of estimates can be measured by standard deviation. The narrower the range (the lower the standard deviation compared to the "mean" estimate) and/or the greater the number of analysts, the more definitive the expectations. Note, too, the extent to which company expectations are consistent with or diverge from those for industry and/or market.

Long Term Growth Rate				Near Term Growth Rate

Confidence In Estimates

The range of estimates can be measured by standard deviation. The narrower the range (the lower the standard deviation compared to the "mean" estimate) and/or the greater the number of analysts, the more definitive the expectations. Note, too, the extent to which company expectations are consistent with or diverge from those for industry and/or market.

Long Term Growth Rate				Near Term Growth Rate		
Mean	# of Estimates	Standard Dev.		Mean	# of Estimates	Standard Dev.
4.5	4	1.12	GAS	(16.0)	6	4.79
9.6	3	2.19	Industry	11.4	5	12.08
12.3	5	2.86	S&P 500	11.1	11	6.90

Reasonableness

Look at the tables below to see if analysts are expecting the company to accomplish more than it has accomplished in the past. Such things can and do happen. But the stronger the predicted future (compared to the past), the greater the burden of proof on the part of those issuing the estimates.

Annual Growth	EPS (%)	Sales (%)
5 year Estimate	4.5	NA
2008 Estimate	(19.0)	16.7
Last 5 years	0.7	10.9
Last 3 years	20.7	5.1
Last Year	4.0	7.3
Trailing 12 Months	(1.1)	16.2

Quarterly Growth	EPS (%)	Sales (%)
12/08 qtr. Estimate	(37.5)	17.1
09/08 qtr. Estimate	(55.6)	9.8
06/08 qtr.	47.5	NA
03/08 qtr.	(2.2)	19.6
12/07 qtr.	(5.4)	9.7
09/07 qtr.	(17.9)	4.0

Analyst Recommendation Trends

Difference of opinion is normal, so don't demand unanimity. Look for ratings clusters in a part of the best-to-worst scale and at Mean Rating scores. Also important is whether analyst sentiment is improving or declining over time.

Quarterly EPS Estimate Revisions

Annual EPS Estimate Revisions

Since estimates address an unknowable future, revision (often prompted by company guidance) is to be expected. Investors are usually happy when analysts are scrambling to chase reality upward. So increases in estimates tend to spark strong share price performance. The reverse is usually true when estimates are falling.

HEARING EXHIBIT 00000135

Expectations And Credibility

In theory, stock prices are based on the "present value" of expected future company cash flows. Therefore, we try to obtain accurate estimates of future financial performance. But remember, these are just estimates. Since we cannot really know what will happen tomorrow, we evaluate estimates critically by seeking clues that help us distinguish between normal versus excessive degrees of uncertainty.

Estimates In Context

Below are the present consensus revenue and EPS estimates. Notice whether analysts expect recent year-to-year growth trends to persist, or are forecasting sharp improvement or deterioration. The sharper the predicted change, the greater the level of uncertainty in the forecast. (GAAP = Generally Accepted Accounting Principles)

	Revenue ($mil)					GAAP Earnings Per Share ($)				
	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total	Mar 31st	Jun 30th	Sep 30th	Dec 31st	Year Total

The sharper the predicted change, the greater the level of uncertainty in the forecast. (GAAP = Generally Accepted Accounting Principles)

	Revenue ($mil)					GAAP Earnings Per Share ($)				
	Dec 31st	Mar 31st	Jun 30th	Sep 30th	Year Total	Dec 31st	Mar 31st	Jun 30th	Sep 30th	Year Total
FY Ending 9/2005	623.4	1,541.6	343.3	278.5	2,163.3	0.88	2.51	(0.15)	(0.21)	2.16
FY Ending 9/2006	902.9	1,064.4	346.9	323.6	2,637.9	0.93	1.17	(0.01)	(0.15)	1.94
FY Ending 9/2007	733.0	1,119.9	467.5	325.7	2,646.0	0.92	1.29	0.26	(0.27)	2.19
FY Ending 9/2008	751.6	1,020.0	464.6	331.2 E	2,566.4 E	0.95	1.63	(0.01)	(0.33) E	2.35 E
FY Ending 9/2009	761.7 E	1,037.7 E	470.3 E	NA E	2,614.2 E	0.99 E	1.58 E	0.08 E	(0.36) E	2.36 E

Confidence In Estimates

The range of estimates can be measured by standard deviation. The narrower the range (the lower the standard deviation compared to the "mean" estimate) and/or the greater the number of analysts, the more definitive the expectations. Note, too, the extent to which company expectations are consistent with or diverge from those for industry and/or market.

Long Term Growth Rate				Near Term Growth Rate		
Mean	# of Estimates	Standard Dev.		Mean	# of Estimates	Standard Dev.
NA	NA	NA	WGL	18.2	4	1.68
9.6	3	2.19	Industry	11.4	5	12.08
12.3	5	2.86	S&P 500	11.1	11	6.90

Reasonableness

Look at the tables below to see if analysts are expecting the company to accomplish more than it has accomplished in the past. Such things can and do happen. But the stronger the predicted future (compared to the past), the greater the burden of proof on the part of those issuing the estimates.

Annual Growth	EPS (%)	Sales (%)	Quarterly Growth	EPS (%)	Sales (%)
5 year Estimate	NA	NA	12/08 qtr. Estimate	2.6	1.3
2008 Estimate	7.7	(3.0)	09/08 qtr. Estimate	NA	1.7
Last 5 years	22.1	10.8	06/08 qtr.	(72.7)	(0.6)
Last 3 years	2.3	8.6	03/08 qtr.	28.7	(8.9)
Last Year	12.9	0.3	12/07 qtr.	10.3	2.5
Trailing 12 Months	(1.0)	(3.1)	09/07 qtr.	NA	146.9

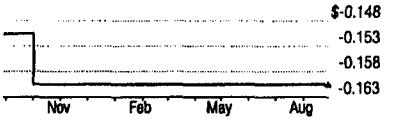
Analyst Recommendation Trends

Difference of opinion is normal, so don't demand unanimity. Look for ratings clusters in a part of the best-to-worst scale and at Mean Rating scores. Also important is whether analyst sentiment is improving or declining over time.

	Buy (Value 1)	Outperform (Value 2)	Hold (Value 3)	Underperform (Value 4)	Sell (Value 5)	Mean Rating
As of 8/28/08	0	0	3	1	0	3.25
As of 4 Weeks ago	0	0	3	1	0	3.25
As of 8 Weeks ago	1	0	2	1	0	2.75
As of 12 Weeks ago	1	0	3	1	0	2.80

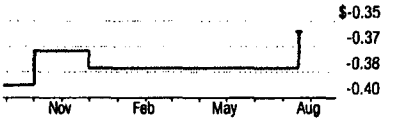
Bar Chart Key
12 Wks ago 8/28

Mean Rating
1.00 = Best
5.00 = Worst



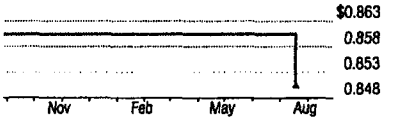
EPS Estimate Accuracy

Assess the extent to which analysts are accurateand have a handle on the earning trends bycomparing Estimates to Actual figures (which mayomit various charges/credits included in GAAPresults). The Actual figures are the ones that aremost comparable in accounting method to the Estimates. (GAAP = Generally Accepted Accounting Principles)



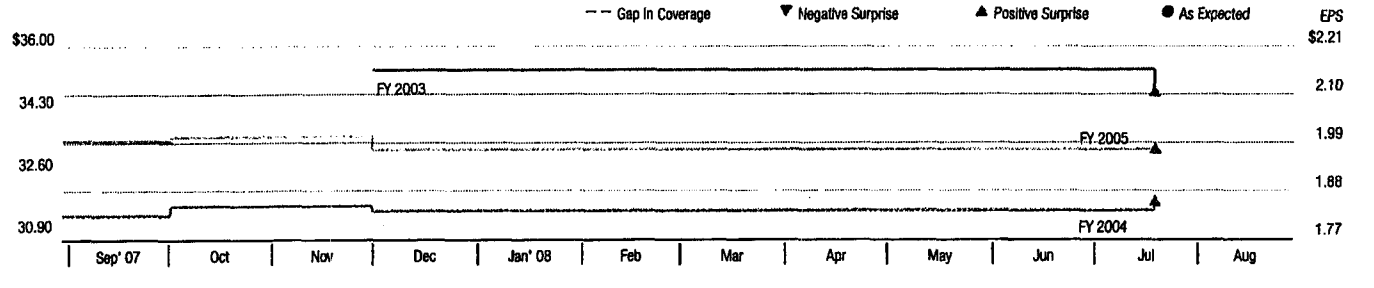
Quarter	Estimate	Actual	GAAP
06/08 qtr.	$0.14	$0.06	($0.01)
03/08 qtr.	$1.41	$1.66	$1.63
12/07 qtr.	$1.05	$0.96	$0.95
09/07 qtr.	($0.35)	($0.31)	($0.27)
06/07 qtr.	$0.01	$0.22	$0.26

Quarterly EPS Estimate Revisions



09/08 qtr.

12/08 qtr.



03/09 qtr.

Annual EPS Estimate Revisions

Since estimates address an unknowable future, revision (often prompted by company guidance) is to be expected. Investors are usually happy when analysts are scrambling to chase reality upward. So increases in estimates tend to spark strong share price performance. The reverse is usually true when estimates are falling.

HEARING EXHIBIT 00000152

Issuer Ranking:

U.S. Investor-Owned Water Utilities, Strongest To Weakest

Standard & Poor's Ratings Services considers all rated U.S. water companies to have excellent business profiles, which reflects the supportive regulatory environments, monopolistic market positions, a mostly residential customer base, and relatively low operating risk compared with other utilities. Many rated water companies also have modest non-regulated segments, which primarily provide operational and consulting services to water and wastewater facilities. Despite tight margins and low cash flow generation, these non-regulated operations pose limited incremental risks to the company's consolidated credit profile. In addition to the complimentary nature of the utility's non-regulated segment to its regulated operations, the risks are mitigated as the water company's operating and capital costs are passed-through to the facility's owner and the facility owners are usually highly rated counterparties such as municipalities or the U.S. military. As a result, ratings in the U.S. investor-owned water utility sector continue to display significant stability. The most significant differentiating factor for these companies has been financial performance, particularly the level and stability of cash flows.

The following list contains Standard & Poor's ratings, outlooks, and business and financial profiles for U.S. investor-owned water companies. This list reflects the current ratings and outlooks as of August 4, 2008. It also reflects several alterations in how each company's credit profile is portrayed and how it is ranked in the list. First and foremost, utility business risk and financial risk profiles are now communicated through the Standard & Poor's corporate ratings risk matrix (see the article "U.S. Utilities Ratings Analysis Is Now Portrayed In The S&P Corporate Ratings Matrix," published Nov. 30, 2007 on RatingsDirect). Second, the rankings in each rating/outlook grouping (e.g., BBB+/Stable/--) are based on relative business risk instead of on overall credit quality, so that you can compare Standard & Poor's assessment of a utility's business risk with its like-rated peers.

A Standard & Poor's rating outlook assesses the potential direction of an issuer's long-term debt rating over the intermediate to longer term. In determining a rating outlook, consideration is given to any changes in the economic and/or fundamental business conditions. An outlook is not necessarily a precursor of a rating change or future CreditWatch action. "Positive" indicates that a rating may be raised; "negative" means a rating may be lowered; "stable" indicates that ratings are not likely to change; and "developing" means ratings may be raised or lowered.

Utility business profiles can be categorized as "excellent," "strong," "satisfactory," "weak," or "vulnerable" under the credit ratings methodology applied to all rated corporate entities at Standard & Poor's. To determine a utility's business profile, Standard & Poor's analyzes the following qualitative business or operating characteristics typical of a utility: markets and service area economy; competitive position; operations; asset concentration; regulation; and management. Issuer credit ratings, shown as long-term rating/outlook or CreditWatch/short-term rating, are local and foreign currency unless otherwise noted. A dash (--) indicates not rated.

For the related industry report card, please see "Industry Report Card: U.S. Investor-Owned Water Companies Stay Out Of Hot Water," published on July 9, 2008.

HEARING EXHIBIT 00000156

Issuer Ranking:

U.S. Natural Gas Distributors And Integrated Gas Companies, Strongest To Weakest

Standard & Poor's Ratings Services expects credit quality of U.S. natural gas local distribution companies (LDC) to remain generally stable over the next year. Near-term challenges relate to current high gas prices and the expectation of higher prices during the upcoming winter heating season, management of capital investment programs, and the potential for declining returns on equity as decoupling (the protection of a utility's financial performance when variations in weather or customer conservation reduce total throughput) is granted. We expect these trends to lead LDCs to file rate cases requesting enhanced rate-design related to declining retail gas consumption driven by energy efficiency, demand destruction caused by rising commodity costs, and cost recovery for infrastructure replacement. For the utilities, the increased rate-case activity raises regulatory risks because the rate hikes needed to recover infrastructure costs and other capital investments may strain the ability and willingness of consumers (and regulators) to pay.

The following list contains Standard & Poor's ratings, outlooks, and business and financial profiles for U.S. natural gas distributors and integrated gas utilities. This list reflects the current ratings and outlooks as of Aug. 7, 2008.

Utility business risk and financial risk profiles are now communicated through the Standard & Poor's corporate ratings risk matrix (see the article "U.S. Utilities Ratings Analysis Now Portrayed In The S&P Corporate Ratings Matrix," published Nov. 30, 2007 on RatingsDirect). In addition, the rankings in each rating/outlook grouping (e.g., BBB+/Stable/--) are based on relative business risk instead of on overall credit quality, so that you can compare Standard & Poor's assessment of a utility's business risk with its like-rated peers.

A Standard & Poor's rating outlook assesses the potential direction of an issuer's long-term debt rating over the intermediate to longer term. In determining a rating outlook, consideration is given to any changes in the economic and/or fundamental business conditions. An outlook is not necessarily a precursor of a rating change or future CreditWatch action. "Positive" indicates that a rating may be raised; "negative" means a rating may be lowered; "stable" indicates that ratings are not likely to change; and "developing" means ratings may be raised or lowered.

Utility business profiles can be categorized as "excellent," "strong," "satisfactory," "weak," or "vulnerable" under the credit ratings methodology applied to all rated corporate entities at Standard & Poor's. To determine a utility's business profile, Standard & Poor's analyzes the following qualitative business or operating characteristics typical of a utility: markets and service area economy; competitive position; operations; asset concentration; regulation; and management. Issuer credit ratings, shown as long-term rating/outlook or CreditWatch/short-term rating, are local and foreign currency unless otherwise noted. A dash (--) indicates not rated.

For the related industry report card, see "Industry Report Card: U.S. Natural Gas Distribution Companies' Credit Quality Declines Modestly; Rate Cases Granting Lower ROEs," published on July 10, 2008.

The annual returns for the S&P 40 Public Utility Index was calculated in conformance with the methodology set forth in the Ibbotson & Sinquefield studies. This is:

"Designating common stocks as m, we form monthly returns by

$$R_{m,t} = \left[(P_{m,t} + D_{m,t})/P_{m,t-1}\right] - 1$$

where $R_{m,t}$ is the common stock total return during month t; $P_{m,t}$ is the value of the S&P Composite Index at the end of the month t; and $D_{m,t}$ is the estimated dividends received during month t and reinvested at the end of month t."

The annual calendar returns are formed by compounding the monthly returns.

The workpapers and supporting data for the S&P 40 Public Utility Index are attached. The following provides an example of the procedure used to calculate a single monthly return for the S&P 40 Public Utilities. The January 1985 income return is the result of the January 1985 monthly dividend of 0.5434 (0.0860 January 1985 yield x 75.83 January 1985 average index value = 6.5214 ÷ 12) divided by December 1984 month-end index value of 75.89, or 0.0072 as developed from the data provided. The January 1985 capital appreciation is the result of the month-end January 1985 index value of 77.13 expressed in terms of the December 1984 month-end index value of 75.89, or 0.0163 (77.13 ÷ 75.89 - 1). The total return for a single month is the sum of the income yield, 0.0072 for January 1985, and capital appreciation yield, 0.0163 for January 1985, or 0.0235 for January 1985. Stated in terms of the formula shown above, the January 1985 monthly return is:

$$0.0235 = \frac{77.13 + 0.5434}{75.89} - 1$$

The annual returns for the Long-Term Corporate Bonds were taken directly from the Ibbotson & Sinquefield studies, copies of which have been attached.

The annual returns, R_T, are formed by compounding the monthly returns according to the following formula:

$$R_T = \left[\prod_{t=1}^{12} (1 + R_t) \right] - 1$$

where R_t is the monthly return. For the S&P 40 Public Utilities, the 1985 annual return reflecting monthly compounding is calculated as:

$$0.3305 = (1.0235 \times 1.0194 \times 1.0362 \times 1.0207 \times 1.0606 \times 1.0279 \times \times 0.9573 \times 1.0181 \times 0.9479 \times 1.0638 \times 1.0522 \times 1.0694) - 1$$

STANDARD & POOR'S

CURRENT STATISTICS

Statistical Service

March 2008

The Standard & Poor's 500

This issue contains a complete twelve month record of the Daily High, Low and Close of the Standard & Poor's Stock Price Indices. Also a twelve month record, by weeks of these indices by GICs sub-industry.

Your Statistical Service should contain...

Issue	Pages
Current Statistics, dated March 2008	1-40
Current Statistics, dated January 2008	1-40

Basic Statistics:

Banking & Finance	1-23
Production & Labor	27-72
Income & Trade	95-125
Transportation	201-213
Agriculture Products	215-228
Security Price Index Record 2006 Edition	1-495

Note To Subscribers:

This issue will be the final monthly issue of Current Statistics. We will commence publishing quarterly updates, beginning with the June, 2008 issue.

Reference to the January 2008 (white) should be retained. March 2008 (yellow) should be retained.

Base period is December 30, 1994=100, except for groups otherwise noted: (1) 1941-43=5; (2) 1982=100. ME is month end.

STANDARD &POOR'S

CURRENT STATISTICS

Statistical Service

May 2007

The Standard & Poor's 500

This issue contains a complete twelve month record of the Daily High, Low and Close of the Standard & Poor's Stock Price Indices. Also a twelve month record, by weeks of these indices by GICs sub-industry.

Your Statistical Service should contain...

Issue	Pages
Current Statistics, dated May 2007	1-40
Current Statistics, dated January 2007	1-40

Basic Statistics:

Banking & Finance (2/03)	1-23
Production & Labor (2/99)	27-72
Income & Trade (7/95)	95-125
Transportation (6/98)	201-213
Agriculture Products (5/05)	215-228
Security Price Index Record 2006 Edition	1-495

Reference to the January 2007 (white) should be retained. May 2007 (yellow) should be retained.

Base period is December 30, 1994=100, except for groups otherwise noted: (1) 1941-43=5; (2) 1982=100. ME is month end.

STANDARD &POOR'S

CURRENT STATISTICS

Statistical Service

December 2006

The Standard & Poor's 500

This issue contains a complete twelve month record of the Daily High, Low and Close of the Standard & Poor's Stock Price Indices. Also a twelve month record, by weeks of these indices by GICs sub-industry.

Your Statistical Service should contain...

Issue	Pages
Current Statistics, dated December 2006	1-40
Current Statistics, dated January 2006	1-40

Basic Statistics:

Banking & Finance (2/03)	1-23
Production & Labor (2/99)	27-72
Price Indexes (5/94)	73-90
Income & Trade (7/95)	95-125
Building (3/95)	131-144
Energy: Electric Power & Fuels (2/97)	155-170
Metals (10/97)	179-194
Transportation (6/98)	201-213
Agriculture Products (5/05)	215-228
Security Price Index Record 2006 Edition	1-495

Reference to the January 2006 (white) should be retained. The Current Statistics dated December 2006 (white) and December 2006 (yellow) should be retained.

EDITOR'S NOTE—*All information contained herein is copyrighted in the name of Mergent, Inc. and none of such information may be copied or otherwise reproduced, repackaged, further transmitted, transferred, disseminated, redistributed or resold, or stored for subsequent use for any such purpose, in whole or in part, in any form or manner by means whatsoever, by any person without Mergent's prior written consent.*

All information contained herein is obtained by Mergent, Inc., from sources believed by it to be accurate and reliable. Because of the possibility of human and mechanical error as well as other factors, however, such information is provided "as is" without warranty of any kind. NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY INFORMATION IS GIVEN OR MADE BY MERGENT IN ANY FORM OR MANNER WHATSOEVER. Under no circumstances shall MERGENT have any liability to any person or entity for (a) any loss or damage in whole or in part caused by, resulting from, or relating to, any error (negligent or otherwise) or other circumstance involved in procuring, collecting, compiling, interpreting, analyzing, editing, transcribing, transmitting, communicating or delivering any such information, or (b) any direct, indirect, special, consequential or incidental damages whatsoever, even if MERGENT is advised in advance of the possibility of such damages, resulting from the use of, or inability to use, any such information.

Moody's® and the related logo are marks owned by Moody's Investors Service, Inc. Such marks have been licensed for use by MERGENT, which is not affiliated with Moody's Investors Service, Inc.

The Moody's credit ratings and other opinions contained herein are, and must be construed solely as, statements of opinion and not statements of fact or recommendations to purchase, sell or hold any securities. NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S INVESTORS SERVICE, INC. OR MERGENT IN ANY FORM OR MANNER WHATSOEVER. Each rating or other opinion must be weighed solely as one factor in any investment decision made by or on behalf of any user of the information contained herein, and each such user must accordingly make its own study and evaluation of each security, and of each issuer and guarantor of, and each provider of credit support for, each security, that it may consider purchasing, holding or selling.

Pursuant to Section 17(b) of the Securities Act of 1933, Moody's Investor Service, Inc. hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Services, Inc. for the appraisal and rating services rendered by it fees ranging from $1,000 to $1,500,000

Notes: Moody's® Long-Term Corporate Bond Yield Averages have been published daily since 1929. They are derived from pricing data on a regularly-replenished population of nearly 75 seasoned corporate bonds in the US market, each with current outstandings over $100 million. The bonds have maturities as close as possible to 30 years; they are dropped from the list if their remaining life falls below 20 years, if their ratings change. Bonds with deep discounts or steep premiums to par are generally excluded. All yields are yield-to-maturity calculated on a semi-annual basis. Each observation is an unweighted average, with Average Corporate Yields representing the unweighted average of the corresponding Average Industrial and Average Public Utility observations. Because of the dearth of **Aaa** -rated railroad term bond issues, Moody's® **Aaa** railroad bond yield average was discontinued as of December 18, 1967. Moody's® **Aaa** public utility average suspended from Jan. 1984 thru Sept. 1984. Oct. 1984 figure for last 14 business days only. The Railroad Bond Averages were discontinued as of July 17, 1989 because of insufficient frequently tradable bonds. The July figures were based on 8 business days.

Because of the dearth of Aaa rated public utility bond issues, Moody's Aaa public utility bond yield average was discontinued as of December 10, 2001.

Note: October 2002 figures have been adjusted.

Note: January 2003 figures have been adjusted

Notes: Moody's® Long-Term Corporate Bond Yield Averages have been published daily since 1929 They are derived from pricing data on a regularly-replenished population of nearly 75 seasoned corporate bonds in the US market, each with current outstandings over $100 million The bonds have maturities as close as possible to 30 years; they are dropped from the list if their remaining life falls below 20 years, if their ratings change. Bonds with deep discounts or steep premiums to par are generally excluded All yields are yield-to-maturity calculated on a semi-annual basis Each observation is an unweighted average, with Average Corporate Yields representing the unweighted average of the corresponding Average Industrial and Average Public Utility observations Because of the dearth of Aaa -rated railroad term bond issues, Moody's® Aaa railroad bond yield average was discontinued as of December 18, 1967. Moody's® Aaa public utility average suspended from Jan 1984 thru Sept. 1984 Oct. 1984 figure for last 14 business days only The Railroad Bond Averages were discontinued as of July 17, 1989 because of insufficient frequently tradable bonds The July figures were based on 8 business days.

Because of the dearth of Aaa rated public utility bond issues, Moody's Aaa public utility bond yield average was discontinued as of December 10, 2001

Note: October 2002 figures have been adjusted

Note: January 2003 figures have been adjusted

Notes: See Moody's® Bond Survey for a brief description and the latest published list of bonds included in the averages. Because of the dearth of Aaa®-rated railroad term bond issues, Moody's® Aaa railroad bond yield average was discontinued as of December 18, 1967. Moody's® Aaa public utility average suspended from Jan. 1984 thru Sept. 1984. Oct. 1984 figure for last 14 business days only. The Railroad Bond Averages were discontinued as of July 17, 1989 because of insufficient frequently tradable bonds. The July figures were based on 8 business days. Because of the dearth of Aaa rated public utility bond issues, Moody's Aaa public utility bond yield average was discontinued as of December 10, 2001.

Note: October 2002 figures have been adjusted.

Note: January 2003 figures have been adjusted.

Notes: See Moody's® Bond Survey for a brief description and the latest published list of bonds included in the averages Because of the dearth of Aaa -rated railroad term bond issues, Moody's® Aaa railroad bond yield average was discontinued as of December 18, 1967 Moody's® Aaa public utility average suspended from Jan 1984 thru Sept. 1984. Oct 1984 figure for last 14 business days only The Railroad Bond Averages were discontinued as of July 17, 1989 because of insufficient frequently tradable bonds The July figures were based on 8 business days
Because of the dearth of Aaa rated public utility bond issues, Moody's Aaa public utility bond yield average was discontinued as of December 10 2001
Note: October 2002 figures have been adjusted
Note: January 2003 figures have been adjusted

* Moody's Long-Term Corporate Bond Yield Averages have been pubished daily since 1929. They are derived from pricing data on a regularly-replenished population of nearly 100 seasoned corporate bonds in the US market, each with current outstandings over $100 million. The bonds have maturities as close as possible to 30 years; they are dropped from the list if their remaining life falls below 20 years, if they are susceptible to redemption, or if their ratings change. Bonds with deep discounts or steep premiums to par are generally excluded. All yields are yield-to-maturity calculated on a semi-annual basis. *Each observation is an unweighted average, with Average Corporate Yields representing the unweighted average of* the corresponding Average Industrial and Average Public Utility observations. For a complete listing of the bonds, see Moody's Credit Perspectives Quarterly Supplement, August 5, 1996. Contact: Amit Agrawal

Advance Auto Parts dates back to 1932, when founder Arthur Taubman purchased a small chain of home and auto supply stores in Roanoke, Virginia. During the 1970s, the company stopped selling home appliances and turned all of its attention to the automotive parts business. In November, 2001, Advance acquired publicly held Discount Auto Parts. This merger established the firm as a leader in the automotive aftermarket, and it paved the way for Advance to become a public company. Its shares began trading on the NYSE on November 29, 2001.

BUSINESS: Advance Auto Parts, Inc. is the nation's second-largest retailer of auto parts and accessories. It operates more than 3,290 stores in 40 states, Puerto Rico, and the Virgin Islands (under the *Advance Auto Parts*, *Advance Discount Auto Parts*, *Discount Auto Parts*, and *Western Auto* trade names). The company serves both the do-it-yourself and the professional installer markets. It also has a small wholesale business, which it currently plans to divest. Acquired Western Auto Supply Co., 11/98; Discount Auto Parts, 11/01. Has approximately 25,500 full-time employees. Offs. & Dirs. own 2.5% of common stock (4/08 proxy). Pres. & CEO: Darren R. Jackson. Inc.: DE. Addr.: 5673 Airport Road, Roanoke, VA 24012. Tel.: 540-362-4911. Internet: www.AdvanceAutoParts.com.

Advance Auto Parts, behind new CEO Darren Jackson, is on a roll. (Mr. Jackson took over the top spot at the firm late last year.) The company got off to a strong start in 2008, despite headwinds from high gas prices and the increasingly chilly retail climate. In fact, share net of $0.86 for the March interim was $0.08 ahead of our estimate and 21% above the year-earlier mark, thanks to successful efforts to keep overhead costs in check and to an improvement in same-store sales, especially on the commercial, or *do-it-for-me* (DIFM), side of the business. A healthy expansion of the gross margin, a byproduct of lower supply chain and logistics expenses and the ongoing pricing power within the parts industry, was also a big plus for the bottom line. Looking ahead . . . **We expect results to remain solid through the balance of 2008 and well into next year.** Momentum should continue to build across the commercial business, as Advance broadens its product assortment (it is making an effort to stock higher-quality, more-recognizable brands), beefs up its salesforce, and aggressively targets large garages with a national presence (versus smaller mom-and-pop shops). Moreover, the economically sensitive do-it-yourself (DIY) operations, which have been struggling lately (DIY comps fell 3% during the first quarter), ought to pick up a bit in the near term. The DIY segment will probably benefit from greater parts availability and store-level productivity enhancements. In addition, market-share advances, mostly at the expense of AutoZone, are likely, in our view.

Margins should widen moderately over time. Though Advance's operating margin still lags AutoZone's by a significant degree, we believe that the profitability gap will narrow in the years ahead, with the help of category management activities and further efficiency gains in the areas of logistics and procurement. Margins will also get a lift, we think, from the company's plans to open smaller, more cost-effective units going forward.

This timely issue possesses decent upside potential out to 2009-2011. Patience will probably be required here, however, given the lack of enthusiasm for retail stocks these days.

Justin Hellman *August 8, 2008*

(A) Fiscal year ends on the Saturday nearest the end of December.
(B) Earnings based on diluted shares outstanding. Excludes nonrecurring losses: '01, $0.30; '02, $0.29; '03, $0.32. Next earnings report due mid-August.
(C) In millions, adjusted for stock splits.
(D) Quarterly dividend initiated in 2/06. Payments typically made in April, July, October, and January.
(E) Quarterly share net does not sum to year-end total in '07 due to rounding.

BUSINESS: AllianceBernstein Holding L.P., formerly Alliance Capital Management, was originally formed in 1987 as a successor to ACMC, a subsidiary of AXA Financial, with the purpose of providing investment management services to institutional investors. The partnership is one of the largest investment advisers in the US, providing investment management services and research directly to institutional clients and through broker-dealers to individual clients. Alliance Capital acquired Sanford C. Bernstein Inc., 10/00. Has 5,580 employees. AXA, AXA Financial, and its subsidiaries own about 60.1% of units and a 1% general partnership; CEO: Lewis A. Sanders; Inc.: DE. Addr.: 1345 Avenue of the Americas, NY, NY 10105. Tel.: 212-969-1000. Internet: www.alliancebernstein.com.

AllianceBernstein continues to report weak results. Total revenue declined about 8% during the second quarter of 2008. This reflects a 10% decline in assets under management during the quarter. Much of the reduction was caused by market depreciation, resulting from the pullback in the financial markets in the U.S. and internationally. Moreover, investor inflows for the last 12 months contributed only about $3 billion to assets under management, which is relatively little. Modest investor inflows into the institutional and private client segments were offset by outflows from the retail unit.

Nonetheless, operating expenses declined about 8% during the second quarter. Alliance has done a good job reducing compensation costs and spending on promotion and marketing efforts. This more than offset higher administrative costs, associated with the opening of offices. Taxes also increased, due to different international accounting methods.

AllianceBernstein will probably continue to expand internationally. At the end of June, about 40% of customers were domiciled outside of the United States. The opening of a substantial London office in 2006 has helped attract many of these clients. We expect Alliance to open offices in other international locations. However, this assumes the financial markets begin to firm up a bit.

The business outlook has become less favorable. We are lowering our earnings estimates by $0.30 per diluted share for 2008. This reflects the partnership's weak second-quarter results, and ongoing declines in the financial markets. We are also reducing our earnings estimate by $0.55 for 2009.

These untimely units have pulled back about 17% in price since our May report. Investors are probably concerned about Alliance's earnings outlook, given that the business is largely dependent on the performance of the financial markets. Still, our current projections indicate that this issue holds worthwhile total return potential for the next 3 to 5 years. The dividend, while lower than it once was, still provides a substantial yield, and should supply some downside support for these units.

Adam Rosner *August 22, 2008*

(A) Diluted net inc. per unit. Excl. gain/(loss): '00, (19¢); '03, ($1.11). Excl. merger-related amortization. Qtly. figs. in '06 do not sum due to rounding. Next egs. report late Oct. (B) Partnership distributes all avail. cash flow. Historically distributions paid in late Feb., May, Aug., and Nov.
(C) In mill., adj. for split.
(D) Includes amort. of sales commissions in '03. (E) Limited partnership pays minimal taxes. (F) Includes all partnership distributions.

BUSINESS: Applied Biosystems Group (formerly PE Biosystems Group) is the main portion of Applera Corp. (formerly PE Corp. and, before that, Perkin-Elmer Corp.). (Applera includes Celera Genomics, NYSE: CRA.) Applied Biosystems develops, markets, and supplies instruments, reagents, software, and related services to the life science industry and research community. Foreign business: 56.5% of 2007 sales. R&D: 9.7%. Employs 5,530; Officers/directors own 4.6% of stock; Primecap Management, 12.1%; Goldman Sachs, 9.1%; Axa/AllianceBernstein L.P., 4.3%; (9/07 proxy). Chairman, President: T. White. Incorporated: Delaware Address: 301 Merritt 7, Norwalk, CT 06851. Telephone: 203-840-2000. Internet:www.appliedbiosystems.com.

Applied Biosystems has entered into a merger agreement with Invitrogen Corp. In June, it was announced that the two companies would be combined, with Invitrogen purchasing all of the outstanding stock of Applied Biosystems for $38 a share in cash and Invitrogen stock. The total cost would be approximately $6.7 billion. The deal was approved by the boards of directors for both companies, and has already passed the waiting stage of the Federal Trade Commission in the U.S. (The review from the European regulatory commissions will follow.) The closing of this deal is expected to occur by the end of the calendar year. Nevertheless, investors should note that neither our estimates nor our projections will reflect this possible merger until it has been finalized. Meanwhile,

The company finished a record-breaking fiscal year (ended June 30th). Earnings advanced 25%, partially on the strength of revenue gains and better margins. Applied was helped by the favorable impact from currency translations, as well as solid contributions from the Asia/Pacific region. Fourth-quarter sales from the PCR/Applied Genomics segment rose 15%, with the DNA Sequencing division gaining 9%. Also adding to the top and bottom lines were sales of the *SOLiD* sequencing platform, with the *SOLiD 2.0* next-generation upgrade debuting in May. Demand for this product increased by 10% in the June interim, and will likely remain strong over the next few quarters. Thus, we have raised our share-net estimate for fiscal 2009 by a nickel, to $1.85.

Strong demand and better margins should bolster earnings growth over the next 3 to 5 years. Contributions from the Consumables and Services divisions have been rising steadily, and should continue to bolster the bottom line. Also, tighter controls over R&D and employee-related expenses will likely lead to wider margins over the 2011–2013 stretch.

The Timeliness rank of Applied Biosystems has been suspended. The stock rose close to our 3- to 5-year price band following the news of the merger, and probably will be affected more by merger developments than by fundamentals in the near term.

BUSINESS: ABM Industries is the largest, publicly traded facility services contractor in the United States. Company performs air-conditioning, elevator, engineering, janitorial, lighting, mechanical, landscaping, parking, and security services for commercial, industrial, and institutional customers. Foreign sales (mostly Canada) about 5% of total. Depr. rate: 14.3%. As of 11/30/07, had about 107,000 employees, incl. 30,000 from OneSource acq. (Nov. '07). Off./dir. own about 15.6% of stock; T. Rosenberg Trust, 9.8%; Kayne Anderson, 7.5%; Wells Fargo, 7.3%; Franklin, 7.2%. (2/08 Proxy). Chairman: Maryellen Herringer. President/CEO: Henrik Slipsager. Inc.: DE. Address: 160 Pacific Ave., Suite 222, San Francisco, CA 94111. Tel.: 415-733-4000. Internet: www.abm.com.

ABM Industries' integration of acquired OneSource is progressing well. Revenue growth at the acquiree is proving to be a little better than we expected. We now we look for top-line contributions during the first 12 months to approach $900 million. This, combined with good cross-selling opportunities, which stands to build momentum after the integration is complete, should give extra lift to the top line. Cost-cutting measures, aimed primarily at eliminating merger-related administrative redundancies, are going well, too. In the April period, this action likely resulted in a boost to earnings by a penny or two. The quarterly benefits should ramp up to a nickel, or more, starting in fiscal 2009 (begins November 1st).

Core businesses seem on track for a solid fiscal 2008. ABM's sales team appears to be inking a decent number of deals, despite a weak economy. January-quarter revenues rose 4.2%, notwithstanding the contributions from OneSource. We believe this relatively solid showing is a result of strong outsourcing demand, which usually picks up during down cycles. Based on good order activity, combined with revenues from acquisitions, we look for the top line to rise 33%, to nearly $3.8 billion this fiscal year, with more moderate growth likely in fiscal 2009.

Share earnings stand to rise nicely. Rising volume, higher average selling prices, and cost-cutting actions, should widen the operating margin by 60–70 basis points in fiscal 2008. Higher tax and interest expenses (from the additional debt used to pay for OneSource) will act as somewhat of a drag. Still, share net ought to advance a solid 33%, to $1.30, this fiscal year. Additional efficiency-enhancing measures stand to give further lift to the bottom line in fiscal 2009.

Acquisitions will likely play an important role in growth strategy. A very fragmented market should provide plenty of buyout opportunities in the coming years. This augurs well for long-term margin expansion, too, since the company would benefit from economies of scale.

Neutrally ranked ABM Industries stock has appeal. The capital gains potential over the pull to 2011–2013 is above average.

Warren Thorpe — *June 6, 2008*

(A) Fiscal year ends October 31st. Quarterly 2002 and 2003 figures were restated to reflect the acquisition of Lakeside and the sale of elevator operations, respectively. (B) Diluted earnings 1998 and thereafter; basic 1997 and earlier. Excludes nonrecurring gains: '92, 9¢; '01, 50¢; '07, 5¢. Next earnings report due early Sept. (C) Dividends historically paid early February, May, August, and November. (D) Includes intangible assets of $276.7 million, or $5.69/share, at 10/31/07. (E) In millions, adjusted for stock splits.

BUSINESS: American Capital Strategies, Ltd. is the largest U.S. publicly traded alternative asset manager with $12 billion in capital resources under management. It invests in management and employee buyouts, private equity buyouts, and early stage and mature private and public middle-market companies (companies with sales between $10 million and $750 million). It provides senior and mezzanine (subordinated) debt and equity to fund growth, acquisitions, recapitalizations, and securitizations. Has about 485 employees. Officers and directors own 2.6% of common (4/08 proxy). Chairman, President & CEO: Malon Wilkus. Inc.: DE. Address: 2 Bethesda Metro Center, 14th Floor, Bethesda MD 20814. Telephone: (301) 951-6122. Internet: www.americancapital.com.

American Capital Strategies posted respectable second-quarter results, even though the investment climate was mostly favorable. The alternative asset manager reported net operating income (NOI) of $0.71 in the June interim, which was well below the year-earlier figure. The decline was mostly due to the alternative asset manager's limited access to new capital. Book value also decreased owing to the deterioration of market multiples. Along this same line, ACAS recorded $264 million in net unrealized investment losses, which reduced net assets.

Prolonged economic sluggishness would likely present a considerable headwind. The portfolio's credit quality is mixed, as nonaccruals rose meaningfully in the second quarter. However, the underlying barometers were largely unchanged, which is encouraging. Still, we expect the value of the portfolio to continue its steady decline in the second half of 2008 and in the beginning of 2009. Consequently, we believe the firm will have a difficult time expanding its bottom line in the coming 12 months, even though it recycles a hefty amount of capital through sales and repayments that could be used to invest at today's more attractive levels.

We are growing concerned about the firm's ability to cover the dividend, but are leaving our payout projections unchanged at this juncture. Management believes ACAS will continue raising the quarterly payout incrementally thanks to $500 million (company estimate) of taxable income it will roll into 2009, and its ability to produce portfolio gains. However, the potential for realized losses increases as economic weakness persists. In addition, the disparity between operating income and the dividend is steadily growing. We estimate the aforementioned spillover dividend will fall between $450 million and $475 million. However, in the firm's corner is the fact that management could choose to reduce expenses, and the current portfolio has plenty of potential for gains.

This untimely issue is only suited for high-yield investors willing to take on quite a bit of risk. If the economic weakness persists until mid- to late-2009, ACAS may well have no choice but to revise its dividend policy.

Erik M. Manning *August 22, 2008*

(A) Total int., dividend, fee, and other income. (B) Diluted net operating income. Excludes net realized gains (losses) on investments and net unrealized appreciation (depreciation) of investments. Figures may not sum due to change in share base. Next earnings report due early November. (C) Dividends historically paid in January, April, July and October. ■ Dividend reinvestment plan available. May not match array due to additional divs. paid on top of quarterly payouts. (D) In millions. (E) At fair value.

BUSINESS: Alcon Inc. is a global medical specialty company that develops, manufactures, and markets pharmaceuticals, surgical equipment and devices, and consumer eye care products to treat diseases and disorders of the eye. The company sells products in over 180 countries. Has two primary business segments: Alcon U.S. (48% of 2007 sales) and Alcon International (52%). Has three products segments: pharmaceutical (41% of 2007 sales), surgical (45%), and consumer eye (14%). As of 12/31/07, company had about 14,500 empls. Nestle owns 52.2% of common stock; Novartis owns 24.8% (as of 7/3/08). Chairman, CEO, Pres.: Cary Rayment. Inc.: Switzerland. Addr.: Bosch 69, P.O. Box 62, Hunenberg, Switzerland. Tel. 800-400-8599. Internet: www.alconlabs.com.

Alcon posted strong results in the first half of 2008. Revenue over the first two quarters advanced 17%, while share-net surged 23%, as compared to last year. All three business segments posted strong results, particularly the Surgical division, where sales improved 21%, to $1.37 billion. This was largely driven by strong global demand for Alcon's intraocular lenses. Meanwhile, sales at the Pharmaceutical division gained more than 15%, as robust demand for glaucoma products led to a 27% jump in their sales. The Consumer Eye Care group, ACL's smallest division, posted a respectable, but relatively smaller gain of 10%, which was largely the result of strong international sales, as U.S. sales improved less than 4%.

Strong International growth and related currency gains continue to boost performance. Although revenue gains from the U.S. have been solid, superb International results have driven ACL's recent performance. Indeed, U.S. sales have advanced only 6.5% this year compared to a 27% increase overseas. As of recently, the revenue split had been pretty even between the two markets. However, a faster international growth rate, and expansion into newer regions should result in even larger contributions from these markets in the coming years.

Novartis has purchased an initial 25% stake in Alcon from Nestle. The deal is a two-step transaction, with Novartis acquiring the rest of Nestle's 77% equity stake between 2010-2011. There are many *potential positives to the new ownership*, which is a much more strategic fit. Meanwhile, management has placed share repurchases on hold following the transaction, and will be accumulating cash for the near future. We look for larger dividend payouts as a result of the excess cash.

Management has stated that it expects the tax rate over the next few years to be in the low teens. This is due *to tax benefits from international operations* and shared-service centers abroad.

These shares are ranked to outperform the broader market in the coming year. Yet, despite our expectations of solid results and continued global expansion, these shares offer below-average gains over the 3-to 5-year period.

Joel Schwed *August 29, 2008*

FY '07 revenue by service: Consulting/systems integrations, 60%; outsourcing, 40%. Officers & directors own less than 1% of common; two companies own 13.2% of Class A common. (12/07 Proxy). Has about 146,000 employees. Chairman & CEO: William D. Green. Incorporated: Bermuda. Address: 22 Victoria Street, Hamilton HM12, Bermuda. Telephone: 441-296-8262. Internet: www.accenture.com.

Accenture shares have ascended to the top of our Timeliness Ranking System. The company's forte is management consulting and technology outsourcing. Because of the current tumultuous market backdrop, profits at ACN have been rising handsomely as corporations seek help in reshaping themselves to accommodate mostly unfavorable demand patterns. In fact, rampant downsizing (layoffs and cost-cutting) stemming from *the credit crunch has led to a windfall* of new revenues for the company. And this momentum shows no sign of slackening.

The investment community has yet to factor in all of the positives here. The stock's price has not risen much in the past three months despite a strong corporate showing, subsequent upwards earnings revision, and increasingly glowing prospects. It's now trading at less than 15 times our projected earnings over the next 12 *months, a nice discount from* our expected P/E ratio out to 2011-2013. With that, its appreciation potential over that span is worthwhile. Further, the company has a pristine balance sheet and has developed a leadership position in the information technology services going up against titans such as IBM.

We are boosting our earnings estimates for fiscal 2008 and 2009. (Years end August 31st). As other companies scramble to improve productivity and profitability, *ACN will likely rake in fat profits.* Accordingly our per-share figures are higher by a nickel and a dime, respectively, to $2.65 and $3.00. These numbers could run up even more if share repurchases are ramped up faster than we are factoring. ACN's strong cash flow has led to management retiring shares at a rapid clip over the majority of fiscal 2008.

Economic concerns are warranted, but Accenture seems to be navigating the stormy seas successfully. *The ongoing* economic adversity has many taking a glass-half-empty stance, but ACN's bookings have not shown any signs of heading south. As this report headed to press, there had been no deal delays or cancellations to speak of. And we do not see the picture changing barring a sustained global downturn, which, of course, is not in our most recent economic outlook.

Erik M. Manning *August 22, 2008*

(A) Fiscal years end August 31st. Revenues include reimbursements. (B) Diluted earnings per Class A share. Excludes nonrecurring items: '01, d$1.37; '02, d35¢; '04 d1¢; '05, 10¢; '06, d27¢. Quarterly figures may not sum due to rounding. Next earnings report due late Sept. (C) '01 figures are pro forma. (D) Thru '01, ACN was organized as a partnership. Net income is before distributions to partners. (E) Includes Class A & Class X shares. Class A's have one vote; receive dividends. Class X's have one vote; do not receive dividends.

BUSINESS: Affiliated Computer Services, Inc. provides business process outsourcing (BPO), and information technology (IT) outsourcing solutions to federal, state, and local governments. The company also provides services to commercial businesses, healthcare providers, and telecommunications companies. ACS provides federal, state, and local governments with child support payment processing, electronic toll collection, welfare verification, traffic violation processing, loan processing, and human resources services. Has ab't. 68,000 employees. Off. and directors own about *11.1% of common stock (4/08 proxy)*. President & CEO. Lynn Blodgett. Inc.: DE. Address: 2828 North Haskell Avenue, Dallas, TX 75204. Tel.: 214-841-6111. Internet: www.acs-inc.com.

Affiliated Computer Services finished fiscal 2008 with relatively healthy results (year ended June 30th). Total revenues advanced about 6% during the fourth quarter. A good portion of the increase was due to the addition of new customers, as well as contributions from acquisitions, which offset less robust same-store results. Business at the commercial segment, which represents about 60% of the top line, remained strong, offsetting a sluggish performance at the Government unit.

The company continues to expand its customer base. During the fourth quarter, Affiliated Computer added new business, which should provide about $201 million in annual recurring revenue. This business should contribute about $690 million in revenue over the next few years. Moreover, the company reports that it currently has a substantial business pipeline, and plans to continue expanding its sales force.

Affiliated should be able to keep its operating margin wide. Efficiency should improve, thanks to the use of incentive-based compensation methods, and the addition of offshore service centers and labor. Operating expenses in fiscal 2008 were a bit high, due to the integration of acquisitions, and efforts to enter the government healthcare sector. We expect earnings to advance about 10%-15% annually, on average, for the next few years.

Elsewhere, finances remain healthy. The company had about $462 million in cash at the end of the year. The long-term debt level is sizable, owing largely to the six large acquisitions that the company completed during the past year. However, it has only about $47 million in debt due in the year ahead. The company will also probably be selling some of its less profitable businesses to raise capital or make purchases.

These shares are ranked to outperform the year-ahead market. Moreover, our projections indicate the issue offers good appreciation potential for the next 3 to 5 years. However, results have been heavily dependent on ongoing acquisitions, which adds *some risk for shareholders.*

Adam Rosner *August 22, 2008*

(A) Diluted earnings. Fiscal year ends June 30th. Excludes nonrecurring gains: '00, $0.17; '04, $1.27. '05, $0.07. Qtly. Egs. may not sum due to rounding. Next earnings report due late Oct.
(B) Includes intangibles. In 2007: $3093.8 million, or $31.07 per share.

BUSINESS: Analog Devices, Inc. makes linear, mixed-signal, and digital integrated circuits for real-world signal processing applications. Sold to OEMs (original equipment manufacturers) for incorporation into equipment and systems for computer, communications, industrial, instrumentation, military/aerospace, and consumer electronics applications. Foreign business: 74% of sales in '07. R&D: 20.7% of sales. '07 depr. rate: 7.4%. Has 9,600 employees. Officers and directors own 4.1%; Capital Research & Management, 10.8%; T. Rowe Price, 10.8%; UBS Glbl Asset Mngmt, 9.7% (2/08 proxy). Chmn.: R. Stata. President & CEO: J. Fishman. Inc.: MA. Address: One Technology Way, P.O. Box 9106, Norwood, MA 02062-9106. Telephone: 781-329-4700. Internet: www.analog.com.

Analog Devices turned in solid top- and bottom-line growth in its fiscal second quarter (ended May 3rd). Revenues were up 6% over the same period a year ago. Notably, robust demand from the industrial end market, which accounts for half of total sales, drove a 10% increase in the segment. Further, sales to the communications sector, which makes up a quarter of the total, rose 20% on strong orders for high-performance products used in wireless base stations and in other networking infrastructure. Given the diverse customer base in these markets, and the opportunity for continued growth, especially in China and other parts of Asia, we expect the momentum in these segments to continue at least into the next fiscal year. **However, sales to the consumer end market showed a slight decline.** Based on the recent uncertain conditions, the relatively small 2% dip over the year-ago quarter is not too bad, although we will continue to keep an eye on this segment, which represents 20% of revenues. Any weakness may be offset by the company's focus on producing high-performance products that go into higher-end cameras and TVs, which can charge more of a premium. **The company has been favorably adjusting its product mix.** It recently divested some lower-margin lines, which reduced its exposure to the more volatile markets of PCs and low-end handsets, and is consolidating its wafer fab facilities in Ireland. Through its relationship with Taiwan firm TSMC, Analog plans to increase capacity for its MEMS products to meet expected demand, and the increased scale should lower unit costs.

Analog Devices continues to maintain a strong balance sheet, with nearly $1.2 billion in cash, and no debt. This has allowed it to increase its quarterly dividend. In the May quarter, it also repurchased 5.8 million shares, or about 2% of the outstanding total. In addition, we would not be surprised by an acquisition or two to further enhance the company's offerings. **Shares of ADI are ranked to outperform the year-ahead market.** Also, although the company has navigated the current environment fairly well, we project only average appreciation potential for the issue over the next 3 to 5 years.

William Kuo *July 11, 2008*

(A) Fiscal year ends on Saturday closest to October 31st.
(B) Fully diluted earnings. Excludes nonrecurring charges: '98, $0.21; '01, $0.19; '02, $0.26; '05, ($0.18); '06, $0.05. Excl. disc. ops: '06, $0.85. Next earnings report due early Aug.
(C) Dividends historically paid in mid-March, June, September, and December.
(D) Includes intangibles. In '07: $303.6 mill., $1.00/share.
(E) In millions, adjusted for stock splits.

BUSINESS: Archer Daniels Midland Co. is in the business of procuring, transporting, storing, processing, & merchandising agricultural commodities & products. It is one of the world's largest processors of oilseeds, corn, and wheat. Fiscal 2007 revenue mix: oilseed and corn processing, 44%; ag. services, 45%; other prods., 11%. Foreign sales: 46% of total in fiscal 2007. Fiscal 2007 depreciation rate: 4.4%. Has about 27,300 employees. Officers/directors own 3.3% of stock; Barclay's Global Invest. 10.7%; State Farm Auto Insurance Co., 8.9% (9/07 proxy). Chairman: G. Allen Andreas. President & CEO: Patricia Woertz. Inc.: Delaware. Address: 4666 Faries Parkway, Box 1470, Decatur, Illinois 62525. Telephone: 217-424-5200. Internet: www.admworld.com.

Archer Daniels Midland stock has declined dramatically since our May report, owing to the effects of bad weather. The worst flooding in the U.S. Midwest in 15 years is apt to materially impact results over the next several quarters. Persistent rain in the region has delayed corn plantings, which stands to hurt this year's crop. Indeed, the USDA is predicting a 25-year low for the 2009 harvest season. This bodes ill for U.S. ethanol production, which depends on corn as a key input. ADM suspended production at the Cedar Rapids ethanol processing plant because flooding-related rail problems left it unable to ship materials in or out of its facility. While the resulting constrained capacity has driven up ethanol prices (24% this year, to $2.60/gallon), the price of corn has risen that much more (61%, to $5.85/bushel). So although we have raised our top-line expectations, higher input costs will probably squeeze the unit's margins for now.

Speculation of future changes to U.S. biofuel policies will also probably contribute to share volatility. The recent legislation mandates biofuel usage of 9.0 billion gallons starting this year, with steadily increasing floors approaching 36 billion gallons by 2022. The rising cost of producing ethanol and the effect the industry is having on agricultural commodity prices may lead to an adjustment of the above quotas. Indeed, the Environmental Protection Agency is currently considering making changes to the U.S. Renewable Fuels Standard. As the largest U.S. biofuel producer, ADM stands to be strongly affected.

Meanwhile, the market for oilseeds processing seems relatively bright, thanks to strong global demand for protein meal and vegetable oil. Capacity utilization remains high and appears well balanced with end demand. Weather conditions in Brazil and Europe have been good, which suggests a good crop this year. **These neutrally ranked shares have wide capital gains potential over the 3- to 5-year horizon.** Still, investors should be prepared for additional near-term volatility, as a number of factors are in play. Those who are fairly risk averse may want to wait for the dust to settle.

BUSINESS: Allergan, Inc. is a drug and medical device company. Drugs treat eye (46% of 2007 sales), neuromuscular (31%), and skin disorders (3%). Medical devices include breast and facial implants (13%) and LapBand obesity implant (7%). Important drugs: Alphagan P, Lumigan, and Betagan for glaucoma; Botox/Botox Cosmetic for muscle spasms, strabismus, and facial wrinkles; and Restasis for dry eyes. Foreign business: 34% of sales. '07 depr. rate: 19.4%; R&D, 18.2% of sales. Acq'd Inamed, 3/06; spun off Amer. Med. Optics 6/02. Has 6,770 employees. Off. & dir. own 1.7% of stock; FMR, 11.3%; UBS, 8.6% (3/08 Proxy). Chmn. & CEO: D.E. Pyott, Inc.: DE. Addr.: 2525 Dupont Dr., Irvine, CA 92612. Tel.: 714-246-4500. Internet: www.allergan.com.

We have raised our 2008 earnings outlook for Allergan by $0.30 a share, to $2.60, thanks to the strong results of its ophthalmic pharmaceuticals business. The company achieved 22% sales growth from these lines in the first quarter, and its market share is now at a record 29.5% in the U.S. Allergan's *RESTASIS* treatment for chronic dry eye and *COMBIGAN* eye drops for intraocular pressure related to glaucoma have performed especially well. ***BOTOX's* sales growth is slowing,** though. While top-line results were still strong at 18% year over year in the first quarter, the company could not match the 24% increase achieved in the fourth quarter of 2007. Sluggish domestic sales, a reflection of weak consumer spending, were the main cause of the slowdown. Luxury items, such as cosmetic pharmaceuticals, are likely to remain under pressure until the U.S. economy begins to recover from the current slump, likely sometime next year. The international business has maintained its high-growth rate, however, and *BOTOX* has been able to maintain its 85% global market share despite new competition.

Use of *BOTOX* for the treatment of chronic headache remains an important growth opportunity. The randomized double-masked portion of Phase III studies has been completed, and new data from the headache program is likely to be released by the end of this summer. Sales of a *BOTOX* headache treatment could eventually reach $500 million annually if approved, helping to kick-start the growth of the brand, though release of the product is not likely before 2009. **The price of these shares has fallen about 13% since our April report,** due largely to Allergan's exposure to the slowing domestic luxury cosmetic pharmaceuticals market. Growth from abroad and the company's other product offerings should more than offset the impact of challenges in the cosmetic pharmaceuticals sector, though. As a result, these shares possess wide appreciation potential to 2011–2013. This issue should appeal to more-conservative investors as well, due to its high Safety rank. However, Allergan stock is likely to only keep pace with the market in the year ahead.

Albemarle was incorporated in Virginia in November of 1993 and was a wholly-owned subsidiary of Ethyl Corporation. On February 28, 1994, Ethyl spunoff to its common shareholders all of the outstanding shares of Albemarle, including Ethyl's olefins and derivatives, bromine chemicals, and specialty chemicals businesses. Since that time, Albemarle has been a publicly traded company on the New York Stock Exchange under the ticker ALB.

BUSINESS: Albemarle Corp. is a manufacturer of chemicals that are additives to or intermediates for plastics, polymers and elastomers, agricultural compounds, and pharm. The company currently operates through its polymer additives (37% of Q1 '08 sales), catalysts (41%), and fine chemicals (22%) divisions. ALB's polymer chemicals business produces a broad range of chemicals, including flame retardants, polymer curatives, and antioxidants. Has approximately 4,130 employees. Officers and directors own about 5.8% of common stock (3/08 proxy). Chief Executive Officer & President: Mark Rohr. Chairman: William Gottwald. Inc.: Virginia. Address: 330 South Fourth Street, P.O. Box 1335, Richmond, VA. 23219. Telephone: 804-788-6000. Internet: www.albemarle.com.

Albemarle registered a 14% share-net improvement during the June quarter on a year-to-year basis. Operating profit increased by 5% for the interim, to $77.8 million, thanks to strong results at the company's Catalysts and Fine Chemicals business segments. This helped to offset relatively subpar results at the Polymer Additives unit. This division was hurt by increased raw material costs, though improved brominated flame retardant sales, better pricing, and a more profitable product mix helped to lessen the damage.

Despite margin concerns and a lackluster domestic economy, Albemarle should post positive bottom-line comparisons over the second half of this year. During its second-quarter conference call, management stated that raw material cost inflation will climb by $220 million relative to last year, with most of this amount occurring during the latter half of 2008. However, in the past, Albemarle has been able to pass along higher raw material costs to its customers. That said, we still look for a modest decline in the operating margin this year, as the company appears unlikely to recoup all of the cost inflation. Demand for Refinery Catalysts should remain strong, thanks to regulations mandating cleaner fuels and an increased percentage of sour crudes being processed by refiners. We look for the Polymer Additives unit to continue to benefit from solid fundamentals in the electronics industry, which should help offset the slumping automotive and construction markets. The Fine Chemicals division should benefit from economies of scale, due to improved plant utilization. Also, Albemarle will continue to focus on augmenting its presence in promising emerging markets, such as the Middle East and Asia.

We look for annual earnings growth in the mid-teens range over the pull to 2011–2013. The company's cash flow will likely remain strong, which puts it in a lucrative competitive position for the long run.

Albemarle shares are now ranked favorably for year-ahead relative price performance. Total return potential for the 3- to 5-year pull is worthwhile at the current valuation.

Allied Capital was formed by the December 31, 1997 merger of Allied Capital Corporation, Allied Capital Corporation II, Allied Capital Commercial Corporation, Allied Capital Advisers, and Allied Capital Lending Corporation. Immediately following the merger, the new entity, which was previously four investment funds and an investment adviser, became known as Allied Capital Corporation. Over the last five years, the company has raised about $900 million of equity capital to fuel its growth.

BUSINESS: Allied Capital Corp. is the nation's largest business development company, primarily invests in middle-market private firms, offering long-term investment capital mainly through mezzanine debt (73% of its portfolio, 12/07) and equity financing (27%). With the sale of its commercial mortgage-backed securities business in 5/05, it ceased participation in the real estate capital markets. Allied is a regulated investment company that is not subject to corporate taxation. Holdings are concentrated in consumer, business, and financial services. Has about 170 empl. (12/07). Off./dir. own 9.0% of stock (3/08 Proxy). Chmn./CEO: William Walton. Inc.: Maryland. Address: 1919 Pennsylvania Avenue, NW Washington, D.C. 2006-3434. Tel.: 202-721-6100. Web.: www.alliedcapital.com.

Allied Capital should rebound nicely over the long term. ALD stock has sold off significantly since our May report, likely owing primarily to the sizable share loss posted in the June quarter and investor concerns that such losses will persist. This deficit was wholly attributable to an $0.86 noncash, unrealized mark-to-market adjustment against the private equity portfolio. Allied is required to adjust the valuations of its investments every quarter based on those companies' operating margins. It is our belief that the vast majority of these firms are among the leaders in their respective markets and are run by very capable management teams. Since the current operating environment is very difficult, however, it is not surprising that these companies have experienced a decline in operating profits. Because it is very possible that the U.S. economy could worsen in the coming quarters, so too could Allied post additional unrealized investment losses. For the most part, however, we expect most of the portfolio companies to recover next year and beyond.

One positive is that the current credit crisis is presenting an ample supply of potentially high-return investment opportunities. During the first half, the company cycled $600 million in assets yielding roughly 8.0% into assets that we believe will yield close to 17%.

Managed funds are generating strong income. Allied now has $5.0 billion under management. The Unitranche Fund, which accounts for more than two-thirds of this unit, is proving to be a success. We estimate that this business will enjoy an internal rate of return somewhere in the range of 15%–20%.

The dividend may hold for now. We believe that spillover income from 2007 and the current taxable income level in 2008 is sufficient to sustain the current payout through to the end of 2009, after which maintenance may be more problematic. If a cut were to occur, it would most likely be temporary, in our opinion.

Although this stock remains untimely for the six to 12 months ahead, Allied stock has noteworthy 3- to 5-year appeal. Indeed, we think these shares have very good recovery potential for the patient long-term investor.

Warren Thorpe *August 22, 2008*

BUSINESS: Apartment Investment & Management Company (AIMCO) is a real estate investment trust (REIT) that acquires, owns, and operates apartment properties. As of December 2007 the company owned or managed about 1,256 properties containing about 203,040 apartment units located in 46 states, including District of Columbia and Puerto Rico. Primary markets: DC, CA, MA, IL, FL, PA, TX, AZ. Officers and Directors own about 9% of common stock, proxy (3/08). Chairman and Chief executive officer: Terry Considine. Vice President: Thomas M. Herzog. Address: AIMCO Stanford Place 3, 4582 South Ulster Street Parkway, Suite 1100, Denver, Colorado 80237. Telephone 303-757-8101. Internet Address: www.aimco.com.

Apartment Investment & Management Co.'s results remain mixed. Revenue advanced about 5% during the first quarter of 2008, helped by improved rental rates. Also, occupancy rose to about 95% during the period, helping to lift the top line. Although administrative costs declined, total expenses rose about 9%, owing to higher depreciation and interest expense. As a result, GAAP earnings per share remained weak during the quarter. Funds from operations (FFO) which excludes these noncash expenses, advanced modestly. We are reducing our FFO estimate for 2008 by $0.05 per share, and by $0.10 per share for 2009 at this time.

Elsewhere, the redevelopment pipeline is progressing well. At the end of March, AIMCO had 61 properties under renovation, including 15 affordable properties that provide tax credits. The total investment required to complete these projects will likely be about $896 million. AIMCO has invested $522 million in its renovation pipeline so far, including $86 million during the most recent quarter.

AIMCO did not make any acquisitions during the first quarter. However, it sold four properties for proceeds of $8 million, after the repayment of debt and property transaction costs. The REIT will likely be making some acquisitions in 2008, mostly in Seattle, San Francisco, and New York.

The debt level has risen a bit further. Total debt-to-capital was about 83% at the end of March, which is higher than for other REITs. AIMCO also has a moderate amount of debt due this year. However, we expect there will probably be some refinancing. Further, AIMCO has made some small share repurchases. It bought back about 5.1 million shares during the March quarter. But we don't expect significant repurchases, given the REIT's high debt level.

These neutrally ranked shares have declined slightly in price since our April report. The issue offers investors a healthy dividend yield. Nonetheless, we don't expect any distribution increases this year. Moreover, our current projections indicate that AIMCO stock offers below-average appreciation potential for the 3- to 5-year horizon.

BUSINESS: American Greetings Corporation is the second-largest U.S. producer of greeting cards (63% of 2007 sales). Also markets giftwraps and accessories (15%), and other items (22% including candles, giftware items, party goods, calendars). Licensing characters (Strawberry Shortcake, Care Bears). Acquired: Gibson Greetings, 3/00; Collage Designs, 2/05. Sold Acme Frame, 8/97; Wilhold, 6/97; M & D Balloons, 2/02.; Magnivision, 9/04. Fgn sales 15.6% of '05 total; adv. costs, 2.7%. Has 18,800 employees. Officers & Directors own 3.6% of common; Three funds own 28.8% of class A shrs. (5/08 proxy). CEO Zev Weiss. Pres. Jeffrey Weiss. Inc.: OH. Address: 1 American Rd., Cleveland, OH 44144. Tel.: 216-252-7300. Internet: www.americangreetings.com.

American Greetings' "investment in cards" strategy in now complete. Two years ago, management initiated a program to generate growth by improving the company's core greetings cards business and converting retail partners to scan-based trading (SBT). Since then, the social expression marketer has spent more than $100 million to improve the design, production, display, and promotions of its products. Specifically, costs were incurred for new fixtures and the removal of old products at retail outlets. In addition, there were expenses associated with information system improvements and installation services. Although the program hurt sales and operating margins over the last two years, the restructuring leaves the company leaner and better positioned to generate margin and earnings expansion in the years ahead.

We look for top- and bottom-line growth in fiscal year 2008 (ends February 28th). Revenue should get a boost from positive momentum in the company's international operations and from the acquisition of Web Shots and PhotoWorks. However, we note that uncertain economic conditions in the U.S. may well pose challenges. Operating margins should get a boost from the conclusion of the aforementioned "investment in cards" initiative. Earnings will also likely be supported by a lower share count. Management has $52 million remaining under the current share-repurchase authorization. Overall, we look for a high single-digit share-earnings expansion.

American Greetings' balance sheet is healthy. The company had almost $125 million in cash and cash equivalents at the end of fiscal 2007. Also, the debt level has been reduced over the last two years. Currently, the debt-to-total capital ratio stands at 21%, compared to 28% two years ago.

Shares of American Greetings are ranked below average for relative price movement for the next year. The recent restructuring should return operating efficiency to levels not seen for years. Also the aforementioned acquisitions hold considerable potential. However, investors seem to have discounted much of this in the share price.

2008					

BUSINESS: Amgen Inc. uses biotechnology to develop and manufacture human therapeutic agents in the areas of hematology, oncology, and inflammation. Important products: *Aranesp/Epogen* (25%/16% of 2007 sales) for anemia related to cancer chemotherapy and chronic kidney failure; *Neulasta/Neupogen* (29%), a stimulator of the immune system, and *Enbrel* (22%) for rheumatoid arthritis; other (8%). Int'l business: 19% of 2007 sales. 2007 deprec. rate: 12.7%; R&D, 22% of sales. Acq'd Immunex 7/02, Tularik 8/04. Has 17,500 employees. Officers & directors own less than 1% of stock (3/08 Proxy). Chairman & CEO: K.W. Sharer. Inc.: Delaware. Address: One Amgen Center Drive, Thousand Oaks, CA 91320. Telephone: 805-447-1000. Internet: www.amgen.com

Top-line growth at Amgen has sputtered of late. The company has felt the effects of the FDA's decision to limit use of some of its products as well as reduced pricing leverage. Most notably, sales of *Aranesp* fell by 25% during the first quarter as much of the oncology sector has reduced dosage for the product. Also, sales of *EPOGEN*, prescribed for anemia due to kidney problems, declined 11%.

And there may be some more problems on the horizon. The FDA has launched an investigation looking into the possible link between TNF-inhibitor-based drugs, such as Amgen's *Enbrel*, and cancer in children. *Enbrel*, a rheumatoid arthritis combatant, makes up almost a quarter of Amgen's top line. We are not too concerned at this time, however, given that rheumatoid arthritis typically occurs in adults rather than children and the prospects of a new therapy (see below).

That said, we've lifted our bottom-line estimate to account for moderating costs. Research and development expenses declined by almost 20% year-over-year during the first quarter, reflecting lower staffing and trial costs. Production expenses also fell modestly. We believe these expenses should moderate even further moving forward. For the full year, we target earnings of $4.00 a share, which would be 20% advance above 2007's tally.

Amgen's pipeline remains healthy, despite the aforementioned red flag. It has made significant progress with a new drug that treats rheumatoid arthritis. Results from a Phase II trial showed a noticeable decrease in symptoms. Too, the company remains on track with Phase III of its denosumab program. This drug may be useful in treating oesteoporosis and other cancer related skeletal problems. Amgen also started Phase III trials for *Vectibix* in treatment for 1st and 2nd line colorectal cancer.

These shares hold above average appreciation potential out to 2011–2013, following a price decline of 45% since early 2007. Despite recent setbacks at the top line, and potential complications with *Enbrel*, Amgen ought to post solid profit advances over the next 3 to 5 years, given the prospects of its arthritis and cancer related therapies.

Andre J. Costanza June 20, 2008

(A) FY end March 31 of following year through 1990; thereafter, calendar-year basis.
(B) Primary EPS through 1996; diluted thereafter. Excludes nonrecurring gains/(losses): '94, (10¢); '96, 1¢; '97, (9¢); '99, 3¢; '01, (15¢); '02, ($2.60); '04, (40¢); '05, (2¢); '06, ($1.03); '07, (53¢). Next earnings report due late July.
(C) Includes intangibles. In 2007, $14.6 billion, $13.43/share. (D) In millions, adjusted for stock splits.

Combined Insurance of America, founded in 1919, incorporated as Combined International (CI) in 1979. Three years later, CI merged with Ryan Insurance Group, a company founded in 1964 by Patrick G. Ryan. In 1987, the company changed its name to Aon Corporation. Its acquisition of Netherlands-based Hudig Langeveldt in 1991 marked the beginning of the company's evolution into what is now the world's second-largest insurance broker.

BUSINESS: *Aon Corporation is a holding company whose subsidiaries operate in two segments: Risk and Insurance Brokerage Services and Consulting. Clients include corporations, professional organizations, and governments. Acq'd Gil y Carvajal, 2/98; Le Blanc de Nicolay, 5/98; A.L.S., 8/98. Sold Combined Insurance Company of America, 4/08; Sterling Life, 4/08. Has about 42,500 employees.* Chmn: Patrick G. Ryan. President and Chief Executive Officer: Gregory C. Case. Off. & dir. own 8.2% of comm. (incl. Ryan's 7.1%); Southeastern Asset Mgmt., 10.2%; State Street Bank and Trust Company, 5.9%; Lord, Abbett & Co., 5.4% (4/08 Proxy). Inc.: DE. Addr.: 200 E. Randolph St., Chicago, IL 60601. Telephone: (312) 381-1000. Internet: www.aon.com.

Aon Corporation's second-quarter results were below our expectations. Earnings from continuing operations came in at $0.55 a share, a dime below our forecast. However, there is considerable noise in this number, as a result of a lower-than-expected tax rate, restructuring charges, and currency translation adjustments in the interim.

Nonetheless, the company's core businesses are performing relatively well, overall. Internal revenue growth within the insurance brokerage segment increased 2% in the June period, besting most of Aon's peers. We expect this trend to continue, and even ramp up at a brisker pace sometime in 2009, once the broader economy begins to rebound and the company's recent restructuring efforts start to bear fruit. Margins should expand going forward, as well, owing to expense management and cost-cutting spurred by the restructuring efforts.

However, Aon does face a number of headwinds. Growth is being crimped by increased competition, which has led to pricing pressure on commercial property casualty insurance. Additionally, sluggish economic growth is taking a toll, and leading to slower insured exposure growth. Too, the consulting business was a relative underperformer in the recently completed quarter, mainly because difficult economic conditions are reducing demand for the group's services.

Aon completed the sale of two businesses in the June interim. Indeed, Combined Insurance Company of America and Sterling Life Insurance were both divested in the period. We like the moves, as they should allow management to focus its attention on the company's core operations.

Investors may find better selections elsewhere. Although we expect the company to deliver solid earnings growth over the pull to 2011-2013, the issue's current price appears to discount much of the upside, leaving it with little share-price appreciation potential three to five years hence. Indeed, the stock already trades within our Target Price Range. In the year ahead, these shares are pegged to perform in tandem with the broader market averages (Timeliness: 3).

BUSINESS: Apache Corp. explores and produces natural gas, crude oil, and natural gas liquids in the United States, Canada, Australia, Argentina, Egypt, and the North Sea. 2007 production: 86 million barrels of oil and natural gas liquids; natural gas, 560,000 million cubic feet (Mmcf). Revenues by commodity in 2007: natural gas, 46%; oil, 52%; natural gas liquids (NGL), 2%. Proved reserves at 12/31/2007: oil and NGL, 1,061 million barrels; natural gas, 7.5 Tcf. '07 depr. rate was 5.6%. Has about 3,520 employees. Officers & directors own 1.1% of common stock (3/08 proxy). President, CEO & COO: G. Steven Farris. Chairman: Raymond Plank. Inc.: DE. Address: 2000 Post Oak Blvd., Suite 100, Houston, TX 77056-4400. Telephone: 713-296-6000. Internet: www.apachecorp.com.

Apache's second-quarter earnings were boosted by higher oil prices. Greater worldwide demand for energy has vastly improved the pricing environment for the company. Despite little change in production rates sequentially, revenues advanced over 20%. The oil price run-up helped boost earnings per share to a record high of $4.28. But a recent dip may well cause quarterly share net to fall sequentially through the end of the year. Even with the falling valuation of oil, the bottom line will still likely advance over 70%, year-to-year, during 2008.

Disruptions to activity in the field have restrained capacity of late. In western Australia, Apache's main petroleum pipeline burst, which led to a production shutdown within the region. The rupture is likely to keep production in a dormant state until late August, when output should return to around 60% of capacity, slowly building up until early December, when Apache expects it to return to full functionality. This shock to the supply chain has led many energy customers in this region to seek out alternative sources for fuel and energy. This shift away will likely have long-term ramifications with regard to demand in the region. Closer to home, Hurricane Dolly moved through the Gulf of Mexico, leading the company to shut in roughly 56 million cubic feet of natural gas daily. Production within the Gulf was up and running in full by the end of July. By 2009, a probable 10%–15% gain in production levels should offset a moderate further price dip for crude oil.

Investors looking for a play on renewed strength in oil prices may want to look at Apache. Recent earnings gains, bolstered by more-efficient production methods throughout most of the company's fields, have led to its attaining our Highest (1) rank for Timeliness. Moreover, its level of undeveloped holdings should allow it to boost output to meet rising worldwide demand for fuel.

Apache seems well positioned to increase its earnings by double digits annually over the next 3 to 5 years. With its growing presence in emerging energy markets in Egypt and South America, longer-term prospects appear promising for this oil and gas producer.

Christopher T. Wells *August 15, 2008*

BUSINESS: Anadarko Petroleum Corp. explores for and produces oil & natural gas in the U.S. Also has an active int'l exploration & development program. Operations include gas gathering and processing. Proved reserves 12/31/07: liquids, 2.39 billion bls.; gas, 8.79 Tcf. 5-year avg. worldwide finding cost: $8.13/bbl. versus industry average: $7.95/bbl. 5-year average reserve replacement ratio: 627%. '07 daily prod.: liquids, 114.3 mbbls.; gas, 1.311 bcf. Employs about 3,870. Stock owners: Off. & Dirs., less than 1.0%; Clearbridge Advisors, 8.8%; Barclays Global, 4.8%; Neuberger Berman, 5.8% (4/08 proxy). Chairman: R.J. Allison Jr. Pres. & CEO: Jim Hackett. Inc.: DE. Addr.: 1201 Lake Robbins Dr., The Woodlands, TX 77380. Tel.: 832-636-1000. Web: anadarko.com.

We look for Anadarko's production tally to be slightly higher in 2008. Increasing demand for domestic off- and onshore drilling activity should enable APC to produce 209.5 million barrels of oil equivalent (mmboe) this year, about 1% higher than last year. Reserves are liable to be up 10%, to 225 mmboe, since the company is garnering a great deal of success from its high-density drilling program in its Uinta Basin properties (Utah).

The top and bottom lines will probably sink, though. Sales are liable to fall due to a reduction in volume from the divestiture of assets, as well as lower gathering, processing, and marketing revenue. Gas sales are likely to be up 20%, but oil & condensate volume is liable to fall about 75%. Meantime, the rising cost of finding and developing oil in tight-bed methane and other unconventional sites is likely to keep a lid on margin expansion. Additionally, taxes, depreciation and amortization expenses associated with the Kerr-McGee and Western Resources acquisitions continue to pressure profits.

Anadarko has gained access to a more promising field. The petroleum company's exploration efforts have met with little success outside of Algeria and the Gulf of Mexico in the last few years. This has led to higher F&D costs. Recently, however, Anadarko appears to be involved in a field with far more possibilities. This is the Jubilee territory in Ghana, which could hold 800 million to 1.45 billion barrels of oil, of which APC has a 26% stake. An extension of this area into Sierra Leone also exhibits great promise.

Profits should recover to near 2007 levels over the next few years, spearheaded by increased domestic drilling, realization of the Kerr and Western assets potential, and the aforementioned Jubilee stake. We are targeting production volume of 224 mmboe and 233 mmboe in 2009 and 2010, respectively. Although dry hole and F&D costs will probably continue to rise, interest expense should diminish, as debt is paid down with robust cash flow.

This good-quality issue looks more attractive than it did three months ago, thanks to the price pullback. However, the lack of a meaningful dividend limits its 3- to 5-year total return potential.

The company was formed in 1957 under the name Ceridian Corporation. Previously, it was a publicly traded company with two core businesses: the Comdata business, which was a human resource service business, and the radio audience measurement business. On March 2001, Ceridian completed a spin-off of the Comdata business. Ceridian became a separately traded company and changed its name to Arbitron Inc. (Comdata eventually changed its name back to Ceridian, and trades as CEN.)

BUSINESS: Arbitron, Inc. is a media and marketing research firm that serves radio, broadcast television, cable companies, advertising agencies, and advertisers in the US, Mexico, and Europe. Arbitron's core businesses are measuring network and local market radio audiences; surveying the retail, media and product patterns; and providing application software used for analyzing media audience and marketing information data. Has 1,620 employees. '07 depreciation rate: 13.6%. Neuberger Berman Inc., 15.2%; Abrams Capital, LP. owns 13.2% of common stock; officers and directors, 4.1% (4/08 proxy). CEO and Pres.: Stephen B. Morris. Inc.: DE. Address: 142 W. 57th St., New York, NY 10019-3300. Telephone: 212-887-1300. Internet: www.arbitron.com.

Investor sentiment towards Arbitron has improved markedly since our last report. Indeed, these shares are up almost 14% since February, 2008. This is partially attributable to a surprisingly strong first quarter. As expected, revenue expanded approximately 6%, to $94 million, over the year-ago period. Cost containment was the major reason for the stellar performance in which earnings advanced more than 10%, to $0.57 a share. Also, Wall Street has reacted favorably to comments about the resumption of work toward the commercialization of the Portable People Meter (PPM). The introduction of the device (used to measure radio, television, and cable audience usage) into new markets was delayed after certain customers voiced concerns about the accuracy of the product.

In spite of the solid first quarter, management did not raise the company's 2008 earnings-per-share guidance of $1.30-$1.44. This was due to an elevated level of costs that the company has taken into account, particularly in the second quarter. Additionally, we expect earnings to be hampered by additional expenses to recruit panelists associated with the rollout of PPM into more geographical markets. We look for considerable share-net advances, beginning in the fourth quarter of the current year, assuming PPM gains traction.

The company should continue to repurchase shares. Late last year, Arbitron's board of directors authorized a buyback initiative of up to $200 million. As of March 31, 2008, the company had purchased more than one million shares for roughly $46 million. Inasmuch as we expect the company to generate cash flows in excess of its operating needs, this trend should continue in the years ahead, albeit at a more moderate pace.

These shares are ranked to track the broader market over the next six to 12 months. By the end of this decade, we expect Arbitron's PPM technology to become the most widely used multimedia measurement source. This should lead to considerable annual earnings-per-share gains out to 2011-2013. However, investors seem to have discounted much of these advances.

Arch Chemicals, Incorporated was formed on February 8, 1999 via a spin-off of Olin's specialty chemicals business. Holders of Olin common stock as of February 1, 1999 received one Arch Chemicals common share for every two shares of Olin common stock held in a tax-free transaction. Approximately 22,960,000 shares were distributed as a result of the spin-off. Chase Manhattan Bank served as the underwriter for the transaction.

BUSINESS: Arch Chemicals is a specialty chemicals manufacturer. The company's principal businesses are in water treatment chemicals and performance products chemicals. In addition to the range of products offered, the company also provides semiconductor manufacturers with chemical management services, including inventory management and distribution. Research & Development equals 1.4% of 2007 revenues. Has about 2,670 empls. Officers & directors own 2.0% of common stock; T. Rowe Price Associates, 12.0%; Synder Capital, 5.9%; Barclays Global Investors, 5.6%; Michael W. Cook Asset Management, 5.3% (3/08 Proxy). Chrm & CEO: Michael Campbell, Inc.: DE. Address: 501 Merritt 7, Norwalk, CT 06851. Tel.: 203-229-2900. Internet: www.archchemicals.com.

Arch Chemicals is off to a good start this year. The company has been performing well despite the continued weakness in the U.S. housing and construction markets. Top- and bottom-line gains in the first quarter stemmed from solid results at the company's industrial biocides and water products businesses. Those units experienced increased volumes and widening margins. Meanwhile, ARJ's wood protection business has been doing well as positive contributions come from the recent buyout of the Australian-based Koppers-Arch joint venture. However, declining domestic demand has offset the bulk of those gains. And the performance products segment posted lackluster results, as well. Record oil-based raw material costs have been the main detractor from this division's profits. ARJ has been in the process of raising prices to offset the heightened costs, but market conditions have been limiting the company's ability to recover their full impact.

We have reduced our second-quarter earnings estimate by a dime. The decreased expectations for the June interim ought to stem from the continued slowdown in the domestic economy and rising raw material costs. However, the company has many efficiency initiatives in the works, which may offset those negatives as the year progresses. Treatment products will likely remain the dominant contributor to revenues and earnings. Meanwhile, performance products probably lagged in the second quarter, as this unit's margins were likely hurt by rising propylene costs. However, decent gains in the second half of 2008 may result in the estimated 11% share-net advance.

In 2009, the top and bottom lines ought to increase 6% and 12%, respectively. Revenue benefits should stem from this year's solid momentum, product pricing hikes, and product introductions. Meanwhile, efficiency initiatives, such as the new manufacturing facility in China and the European margin improvement plan will probably lead the way for margin expansion. But, at present,

These shares offer below-average appreciation potential for the pull to 2011-2013. And they are ranked 3 (Average) for year-ahead price performance.

BUSINESS: Arrow Electronics, Inc. is a global distributor of electronic components and computer products to industrial and commercial customers. Has over 225 selling locations and 15 distr. centers in 53 countries and territories. Semiconductor and computer products account for 68% and 32%, resp., of sales. Geographic sales: Americas, 54%; Europe, 31%; Asia/Pacific, 15%. Acquired: Richey Elec. & Bell Inds., '99; Wyle Electronics, '00; IED, '03; Diswaay, '04; DNS, '05. '07 depr. rate: 7.9%. Has about 12,800 empls. Off./dir. own 2.8% of stock; FMR Corp., 12.6%; Mutuelles AXA, 10.5%; Wellington Mgmt., 9.6% (4/08 proxy). Chmn.: Daniel Duval. COO & Pres.: Michael J. Long. Inc.: NY. Addr.: 25 Hub Dr., Melville, NY 11747. Tel.: 516-391-1300. Internet: www.arrow.com.

Arrow Electronics is currently navigating through a difficult operating environment, which will likely hurt its 2008 earnings. In fact, first-quarter share net declined slightly year to year, and we expect further shortfalls for the rest of 2008. This is due in part to economic weakness, leading to subdued spending by Arrow customers. The top line increased about 15% during the quarter, partially because of strong business segments, such as global components, offsetting weaker ones like the server segment, and growth in some foreign regions. Too, a recent acquisition contributed to the gain. But our full-year sales estimate is for a meager advance of some 2.5%, because we do not expect these favorable contributions to be as significant. Management is anticipating sales weakness in the remainder of 2008 and further difficulty in 2009. But we forecast an earnings rebound because of cost-cutting initiatives.

Acquisitions continue to be on the agenda for the company. Even though management is adjusting its cost structure in order to spend more prudently, it is still making strategic takeover investments for long-term growth. In fact, its buyout of Logix, a French-based technology company, was completed recently. Arrow also has three other acquisitions in the works, aimed at complementing its components business, which grew as a percentage of sales by 8% in 2007. Such moves would allow geographic expansion in underexplored markets, such as India, and would likely be accretive to earnings further out, once integration costs subside.

Synergistic efforts will likely bolster earnings too. The company recently extended its distribution contract with Red Rocket, a manufacturer of ultraminiature high-efficiency power supplies, which are in high demand in many technological products. Too, the company has expanded its relationship with ARM. Arrow will incorporate more of ARM's technological systems and intellectual property.

This untimely issue has limited 3- to 5-year appreciation potential. We expect only modest earnings gains for the 2011-2013, haul and therefore we do not find this stock particularly appealing at this juncture.

BUSINESS: AvalonBay Communities, Inc. is a real estate investment trust (REIT) focusing on the management and development of high-end residential apartment complexes. The majority of communities and luxury properties are located in Northern and Southern California, as well as the Northeastern and Mid Atlantic United States. As of December 2007, AvalonBay had a direct or indirect interest in 184 communities with a total of 52,746 units. AvalonBay is the surviving entity from the merger of Avalon properties, Inc. with and into Bay Apartments Communities, Inc. *Chairman and Principal Executive Officer:* Bryce Blair. Address: 2900 Eisenhower Avenue, Suite 300 Alexandria, Virginia 22314. Telephone: (703) 329-6300. Internet: www.avalonbay.com.

AvalonBay began 2008 with healthy results. Funds from operations (FFO) rose about 12% during the March quarter, helped by contributions from the property portfolio and newly completed development projects. Revenue increased about 10% during the period, thanks to higher rental rates and a slight improvement in the occupancy level. Occupancy was about 96.5% during the March quarter, which is relatively healthy. Much of the improvement largely reflects strengthening demand in northern California and Seattle.

The development pipeline should make positive contributions. At the end of March, AvalonBay had about $2.2 billion in new development in progress. This represents about 22 projects, containing about 7,000 new apartment units. The company also reported that its development costs are close to budget. Although raw material costs will probably remain high, this should be offset by more-attractive labor rates. AvalonBay is also currently spending about $80 million to redevelop about eight apartment communities.

AvalonBay will likely make some property sales, as well. We expect proceeds from the sale of about $900 million in real estate this year to provide some of the capital needed for development efforts. The REIT also has a healthy debt-to-capital level, and access to partnership financing, if necessary.

Nonetheless, the business environment remains mixed. Results will probably be hurt by a weaker economy and higher unemployment levels. However, rising mortgage rates and declining home purchases should help lift demand for apartment rentals. Consequently, we are leaving our FFO estimates unchanged for 2008 and 2009.

***These shares* are ranked 3 (Average) for Timeliness.** Nonetheless, the issue still trades at a price-to-FFO multiple that is higher than that of other REITs. The issue also offers a relatively low dividend yield, despite recent distribution increases. Moreover, our current projections indicate this stock holds somewhat below-average appreciation potential for the next 3 to 5 years.

BUSINESS: Avon Products, Inc. is one of the world's leading manufacturers and marketers of cosmetics, fragrances, skin care, toiletries, fashion jewelry, apparel, lingerie and accessories, home, gift and decorative items. These items are sold in 114 countries. Marketing is conducted by 5.4 million sales representatives worldwide. Foreign operations account for roughly 78% of sales and 80% of earnings. Has 42,000 employees(6,100 in the U.S.). '07 depreciation rate: 7.3%. Capital Research and Management controls 14.4% of com. stock; Fidelity, 9.2%; officers & directors 1.5% (3/08 Proxy). Chairman and CEO: Andrea Jung. Inc.: New York. Address: 1345 Ave. of the Americas, New York, NY 10105. Tel.: 212-282-5000. Internet: www.avon.com.

Avon's 14% first-quarter revenue increase is not likely to be duplicated again this year. More than half of the increase came from currency benefits, the rest from internal growth. Most of the gain occurred in Latin America with an exceptional 30% improvement in Brazil, and a 9% gain in Mexico, where a turnaround is in progress. However, we don't expect surging Latin American gains to continue as comparisons get tougher and regional strategic spending moderates. The company also saw strength in most of its other developing and emerging markets.

We're maintaining our share-earnings estimates for this year and next. Greater emphasis on higher-margined skin care lines, substantial cost savings from restructuring, product-line simplification (PLS), and strategic sourcing (SSI) should bolster profits. Good momentum in most markets will help offset softness in the North American market (25% of sales). **Restructuring, PLS, and SSI savings could total $390 million pretax during the 2008-2009 period.** That includes $70 million from restructuring efforts, and $160 million apiece from PLS and SSI. PLS' initial $40 million benefit will come in 2008's second half as the company's new brochures eliminate marginal items (in terms of sales and profitability). SSI will help Avon control rising input costs.

Fragrances are sweetening Avon's sales. The company aims to continue benefiting from celebrity and designer alliances catering to the mass prestige market. Its Christian La Croix franchise is now contributing $100 million to sales. It hopes to duplicate the La Croix success by partnering with Emanuel Ungaro. On the celebrity front, the company will launch a fragrance endorsed by actor Patrick Dempsey that it hopes will emulate Yankee Derek Jeter's success in the men's arena. Another tie-in is Bond Girl 007. The new fragrances will debut in 2008's final quarter.

This stock has good 3-to 5-year total return potential. Its appeal derives from a combination of restructuring savings and emerging/developing market exposure. A nearly two-billion-dollar share-buyback program and an increasing dividend stream are other pluses.

AutoZone was founded in 1979 under the name AutoShack. In 1984, Kohlberg, Kravis, and Roberts (KKR) bought out the company for $596 million. It changed its name to AutoZone, Inc. In 1988. In Jan., 1991, Goldman Sachs led an offering of 14,950,000 shares of common stock to the public at $5.75 per share (adjusted for stock splits). As a result of various secondary offerings, KKR's stake fell to 44% in December, 1993. In December, 1991, the company changed its incorporation from Delaware to Nevada.

BUSINESS: AutoZone Inc. is the largest auto parts and accessories retailer in the U.S. Operates 4,162 stores in the U.S. and Mexico (as of 5/3/08). About 64% are owned, 46% leased. Most popular store sizes are 5,400 and 6,600 sq. ft. Offers commercial delivery to repair shops, and diagnostic and repair software through ALLDATA. Acq'd. Auto Palace, 2/98; Chief Auto Parts, 6/98; 100 Pep Boys Express stores, 10/98. Sold TruckPro, 12/01. Has sbt. 55,000 emplys. '07 depr. rate: 4.7%. ESL Partners, L.P. own 33.9% of common shs.; State Street Bank and Trust, 5.4%; D.E. Shaw & Co., 5.2%; off. & dir., 2.3% (10/07 Proxy). Chmn., Pres. & CEO: William C. Rhodes III. Inc: NV. Address: 123 S. Front St., Memphis, TN 38103. Tel.: (901) 495-6500. Internet: www.autozone.com.

AutoZone's same-store sales are under pressure from high prices at the pump. *Note that the fiscal 2008 fourth-quarter (year ends August 30th) sales comparison will be helped by an extra week.* Despite the benefits of sales and marketing initiatives, that measure has been running about flat. Elevated gas costs hinder miles driven, and thus vehicle breakdowns, as well as cutting into discretionary purchases. However, our belief is that the economic slump will assist sales as do-it-yourselfers repair autos, rather than purchasing new ones or flying. Also, store openings should support low single-digit percentage revenue growth. Still, based on weaker sales, we have lowered our fiscal 2009 share-net estimate to $11.05.

Product margin improvements are likely to persist. The pace of gross profit expansion may well slow though. Gains are arising from the optimization of its good/better/best product lines, supply chain efficiencies, more direct importing, and increased sales of proprietary brands. However, the impact of these factors may be offset somewhat by higher costs for oil-based offerings and other commodities. Meantime, SG&A expenses will likely still trend upward as a proportion of sales, partly because of a recent minimum wage hike. Rent costs are rising, due to an increased number of leased, versus owned, stores. We look for a modest widening of the operating margin next fiscal year.

A reorganization of the commercial operation is under way. Management is targeting improved efficiency in its commercial sales organization. Same-store sales to professional mechanics have been on the upswing, thanks to added parts availability and improved customer service. We like the long-term profit growth potential for this business, given that AutoZone only has about 1.5% of the market at this time.

AutoZone shares are timely for year-ahead performance. Out to 2011-2013, we anticipate ongoing store expansion in the 4%-5% range annually. A return of same-store sales gains, along with share repurchases, ought to buoy healthy earnings advances. At the current quote, the stock's long-term appreciation potential is below the *Value Line* norm, though.

Damon Churchwell August 8, 2008

(A) Fiscal year ends last Saturday in August. Fourth quarter is sixteen weeks. Fiscal years 2002 and 2008 include 53 weeks. (B) Primary earnings through 1997, diluted thereafter. Fiscal earnings do not sum due to changes in diluted shares. Excl. nonrecurring losses: '01, $0.84; '05, $0.05. Next earnings report due mid-September (C) Includes intangible assets: Fiscal 2007, $302.7 mill.; $4.59 per share. (D) In millions, adj. for stock split. (E) Gross and operating margins for fiscal 2003 and beyond reflect the adoption of EITF Issue 02-16.

Bed Bath & Beyond was incorporated in New York in 1971, following the opening of its first two stores under the name "bed n bath." It adopted the larger "superstore" format in 1985, and chose the name "Bed Bath & Beyond" in 1987. On June 11, 1992, BBBY sold 37.0 million shares in an initial public offering through a syndicate led by Goldman Sachs, for $1.07. Shareholders sold an additional 64 million shares in a secondary offering on August 16, 1993. All data adjusted for subsequent splits.

BUSINESS: Bed Bath & Beyond Inc. sells a broad range of competitively priced name brand domestics (47% of sales) and home furnishings (53%), incl. bed linens, towels, cookware, and housewares. Has about 881 stores nationwide (a/o 3/1/08). Most new units are averaging just under 35,000 sq. feet in size; several are 60,000 and above. Comparable store sales increased .8% for the three months ended 5/31/08 versus a 1.6% rise for same period last year. Has about 35,000 empls., incl. part-timers. Off./dir. own 6.6% of shares; T. Rowe, 13.6%; FMR, 8.8% (6/08 proxy). Co-Chair: Warren Eisenberg & Leonard Feinstein. Pres. & CEO: Steven Temares. Inc.: NY. Address: 650 Liberty Avenue, Union, NJ 07083. Tel.: 908-688-0888. Internet: www.bedbathandbeyond.com.

Bed Bath & Beyond had a rough start to fiscal 2008 (year ends February 28, 2009). On the bright side, sales increased 6% in the May interim thanks to a larger store base this year. However, economic and housing woes have caught up to the home improvement chain. Indeed, the company reported earnings of only $0.30 a share versus $0.38 a year earlier, reflecting weak customer traffic and higher operating costs.

Margins have been narrowing. The gross margin and operating margin for Bed Bath & Beyond declined during the first quarter. Higher markdowns and inflated energy costs have contributed to the pinch. Also, consumers have been purchasing lower-end merchandise, which has hurt the product mix. Difficult operating conditions are likely to persist for the remainder of this year, leading to a likely 15% dip in the bottom line from fiscal 2007. The housing market may continue to deteriorate, which would present some problems for BBBY beyond this fiscal year, as well.

The company will likely continue to increase its store base at a healthy pace. In fiscal 2008, Bed Bath & Beyond plans to open 50 units to 55 units in the U.S. and Canada. The company has a long-term goal of roughly 1,300 units within the U.S. It has also explored other international regions recently, such as Mexico. These opportunities will become critical to growth as the chain approaches saturation domestically.

Management will likely accelerate growth of newer concepts. It plans to open 12 Christmas Tree Shops this year. This concept has shown significant progress in its early stages. Similarly, the company will likely increase expansion for its recently acquired buybuyBABY chain, which is having success in the Northeast despite its relatively small store base.

We believe Bed Bath & Beyond will fare better down the road. Greater market share should lead to wider profits over the 3- to 5-year time frame. We think that the recently deflated quotation provides a good entry point for long-term accounts. In the meantime, the stock is positioned to mirror the broader market in the coming six to 12 months.

Garrett Sussman *August 8, 2008*

(A) Fiscal year ends on Saturday nearest February 28th of the following calendar year. (B) Diluted shares. Next earnings release due late September. (C) In millions, adjusted for stock splits. (D) Store count includes Harmon Stores and Christmas Tree Shop Stores; acquisitions made in 2002 and 2003, respectively. In 2007: Harmon Stores, 40; Christmas Tree Shop, 41.

The Brink's Company (formerly The Pittston Company) consists of Pittston BAX (formerly Pittston Burlington Group), and Pittston Brink's (armored car and home security). The Services (PZS) Group was created in July 1993. In January of 1996, shareholders of the Services Group voted to divide its shares into two separately traded stocks; Pittston Brink's Group (PZB) and Pittston Burlington Group (PZX). In January of 2000, all the group's shares were exchanged to form one stock; Pittston Co. (PZB). On May 5, 2003, the company changed its name to The Brink's Co. (BCO).

BUSINESS: The Brink's Company (formerly the Pittston Company) consists of armored car and money processing operations (Brink's Inc.), and home security services (Brink's Home Security). The company was formed through the amalgamation of its BAX (PZX), Brink's (PZB) and Minerals (PZM) groups in 1/00. International revenues and operating profits were 62% and 68% of the 2007 total, respectively. Has about 57,600 employees. Nominees, officers and directors own 6.2% of stock; FMR, 15.0%; MMI Investments, 8.4%; Steel Partners, 8.0%; employee benefit trust, 6.8%; BlackRock, Inc., 5.0% (3/08 proxy). Pres., Chairman & CEO: Michael T. Dan. Inc.: VA. Address: 1801 Bayberry Court, P.O. Box 18100, Richmond, VA 23226. Tel.: 804-289-9708. Internet: www.brinks.com.

The Brink's Company's first-quarter 2008 results were inflated by currency conversion activity. Management was rather vague about the details of the currency conversion operations in Venezuela, simply noting that there were $35 million in one-time revenues recognized in the first quarter. These activities are expected to generate some additional revenues in the second and third quarters as well. Management notes that that the boost is the result of a specific currency conversion effort that is exclusive to Venezuela. Although we do not typically include nonrecurring items in our actual results, we believe that this activity is related to a regular part of Brink's business that proved extraordinarily profitable because of a currency change that is being implemented by the Venezuelan government. On an apples-to-apples basis (ex. the currency conversion gain), we believe share net was about $0.85 for the quarter.

Strong showings from international operations have improved performance. The company's Latin American business has benefited from robust demand of late. Indeed, a broader and more balanced revenue base has developed, thanks to greater business being generated from countries Brazil, Argentina, Chile and Colombia. This, coupled with the ongoing strength from Venezuelan operations, augurs well for profit growth over the long term. Meanwhile, global services in the Asia/Pacific region also boosted the top line. We believe the international cash handling business will likely continue to be enhanced by investments in information technology, which have improved results from products such as *CompuSafe* and *Virtual Vault*. Too, management remains focused on increasing margins by culling nonprofitable businesses.

The Brink's Home Security spinoff should unlock additional value for stockholders. The division boasts higher margins than the larger holding company. It is plausible that once the two entities are separated, BHS will command a higher multiple because of its consistent revenue growth and lighter cost structure.

This timely stock is decent choice for momentum investors.

BUSINESS: Black & Decker manufactures and services power tools and accessories (73% of 2007 sales) for the prof'l and do-it-yourself markets. Also sells building products (16%), fastening and assembly systems (11%). Brand names: *Black & Decker, DeWalt, Dustbuster, Toast-R-Oven, Emhart, Kwikset,* and *Price Pfister.* Sold PRC, 1995. Divested household appliance and recreational products divisions, 6/98. International sales: 35% of 2007 total. Has approximately 25,500 employees. *Officers & directors* own 6.5% of common stock (3/08 proxy). Chairman, President, and Chief Executive Officer: Nolan D. Archibald. Incorporated: Maryland. Address: 701 East Joppa Road, Towson, Maryland 21204. Telephone: 410-716-3900. Internet: www.blackanddecker.com.

Black & Decker's recent performance is nothing to write home about. The company's top and bottom lines continue to feel the effects of a rather difficult business environment, as demand for tools and home improvement products has dropped significantly in North America, while commodity costs continue to increase. Thankfully, Black & Decker's developing markets have offered a much-needed counterbalance of late, with Latin America and Asia responsible for a lion's share of the good news. BDK is set to release second-quarter results immediately after we go to press with this issue. Nevertheless, we expect Black & Decker to report earnings of about $1.41 a share for the June interim, on roughly a 4% year-over-year drop in sales. As a result, we have pared our year-end share-net estimate by $0.35, to $5.35 a share, on a 4% top-line decline.

Prospects for the coming year are a bit brighter. During the last few months, the company has taken a number of steps to cut costs, including reducing its headcount, decreasing manufacturing overhead, and reorganizing the management structure of its Power Tools and Accessories segment. And going forward, management is poised to roll out more aggressive cost-reduction plans, especially in the power tools segment, given current demand for its products. Although this is good news for BDK's margins, such moves are not likely to be able to completely offset the challenging economic climate that we envision over at least the next couple of quarters. Therefore, we look for the company to post earnings of about $5.65 a share in 2009, down from our earlier call of $6.10, on roughly a 2% dip in sales.

Despite the tough times, Black & Decker's balance sheet is in great shape. Indeed, the company finished off the first quarter with $255.4 million in cash, after having spent $133.6 million to repurchase just over 2.0 million shares of its outstanding stock.

Black & Decker stock offers worthwhile appreciation potential through the early years of the next decade. However, the issue currently carries a Timeliness rank of 4 (Below Average), thereby making it an unappealing choice for momentum-driven investors.

Beckman Instruments was founded in 1934 by Dr. Arnold Beckman and became a publicly traded company in 1952. It merged with SmithKline Corp. in March 1982 to form SmithKline Beckman. On November 4, 1988, 16% of Beckman stock was sold in a public offering. In July 1989, the remaining closely held Beckman shares were distributed to holders of SmithKline Beckman as part of a transaction involving the merger of SmithKline Beckman with Beecham Group to form SmithKline Beecham. Beckman Coulter is now an independent company.

BUSINESS: Beckman Coulter, Inc. makes laboratory instruments and related products. Divisions include clinical diagnostics (83% of 2007 sales) and biomedical research (17%). Products include centrifuges, chromatographs, spectrophotometers, nuclear counters, systems that detect and quantify various substances in blood, urine, and other fluids, and reagent supplies. Acquired Coulter Corp. on 10/97. R&D: 9.9% of '07 sales; Int'l sales, 48%. '07 depr. rate: 12.2%. Off./dir. own 2.0% of stock; Wellington Mngmnt., 13.5% (3/08 Proxy). Has approximately 10,500 employees. Chairman: John P. Wareham; Pres. & CEO: Scott Garrett. Inc.: Delaware. Address: 2500 Harbor Blvd., Fullerton, CA 92634. Telephone: 714-871-4848. Internet: www.beckmancoulter.com.

We look for Beckman Coulter to post a solid double-digit earnings advance in 2008. Throughout the year, the company's fortunes ought to benefit from impressive demand for its clinical diagnostic offerings. Indeed, during the most recent interim, this division's recurring revenue, which is comprised of supplies, test kits, service, royalty revenue, and operating-type lease payments, was up 14.1% year over year, while instrument sales increased by 25%. And we expect more good news over the balance of the year, as new product introductions, such as the Auto-Mate 600 Sample Processor and three additional work cells, help lift the top and bottom lines. Separately, the company's ongoing lean six sigma program, combined with recent restructuring activities, should help margins. All told, BEC ought to report earnings of about $3.60 a share in 2008, on approximately a 13% top-line improvement.

The company recently inked an agreement to buy out its U.S. royalty obligation to Nephromics LLC. The licence is for tests related to the detection, monitoring, and risk assessment of preeclampsia, a leading cause of maternal death. What's more, BEC obtained rights to acquire the worldwide diagnostics assets of Nephromics. The new tests, which should be useful in diagnosing preeclampsia, are being developed for use on the company's UniCel DxI and Access immunoassay systems and its UniCel DxCi chemistry-immunoassay work cells, and should be set for production by the end of next year.

Beckman Coulter's ongoing share-repurchase program ought to help boost earnings. During the second quarter, Beckman Coulter bought back approximately 1 million shares of its outstanding stock for about $68.7 million, leaving roughly 1.5 million shares available for repurchase under the current authorization.

Neutrally ranked Beckman Coulter stock offers rather uninspiring appreciation potential through 2011-2013. Much of the strong top- and bottom-line growth we envision over that period seems to be discounted by the issue's current quotation.

BUSINESS: Baker Hughes Inc. provides products and services for the drilling, evaluation, completion, and production of oil and gas wells. Has eight divisions: Hughes Christensen (drill bits); INTEQ (drilling systems); Baker Atlas (well logging); Baker Oil Tools (completions systems); Centrilift (pumps); Baker Petrolite (specialty products); Baker Hughes Drilling Fluids; and ProductionQuest (recovery maximization). In 2007, foreign revs. were 64% of total; R&D was 2.2% of revs. Employs 35,800. AXA Assurances owns 10.2% of stock; Capital Research, 6.9%; Dodge & Cox, 6.2%; Cap. World, 5.4%; T. Rowe Price, 5.3% (4/08 Proxy). Chairman & CEO: Chad Dealon. Inc.: DE. Addr.: 2925 Allen Parkway, Ste. 1200, Houston, TX 77027. Tel.: 713-439-8600. www.bakerhughes.com.

Baker Hughes is chugging along at a pretty good pace. Second-quarter earnings rose 25% on an 18% revenue advance. Margins held steady in the drilling and evaluation segment, but declined, as expected, in the production and completion sector, due to seasonal factors. Comparisons were helped by stock repurchases. The company is now authorized to buy back $1.25 billion worth of stock.

The pickup in business should accelerate in the second half of 2008. The year started slowly, with weak conditions in Canada and a balanced domestic market. But the big earlier advance in oil and natural gas prices has encouraged producers to spend more. Horizontal drilling at new shale fields has provided a surge in orders, too. Moreover, some of the rigs that drilling customers have been building should start hitting the water by the fourth quarter. We estimate a 15% share earnings advance in 2008, with good momentum heading into 2009.

Profits should set another record next year. Customers will be taking delivery in 2009 of more of the drilling rigs they have been having built. That means extra equipment available to service. In addition, one area that has gained special promise is Mexico, where the company has agreed to provide the support for 15 offshore wells. In all, we figure share earnings will advance 14%-15% in 2009.

Expansion plans are coming to fruition. New or expanded facilities continue to be opened near where large-scale drilling is taking place around the globe. Capital spending remains elevated as a result, but the payoff stands to be increased earning power down the road. One challenge to the boom is retaining trained personnel, given that some staff members have been recruited by customers. But that's a side effect that the company can live with, provided it brings along new personnel.

The stock is now ranked 2 (Above Average) for Timeliness. Good earnings growth in the coming months should provide support for the shares. But the stock could be held back if the feeling becomes that global economic progress is slowing, thus crimping oil demand. The issue's inability to break out of its trading range in 2008 may partly reflect this.

Robert Mitkowski, Jr. *August 15, 2008*

BUSINESS: Bio-Rad Laboratories manufactures and sells products used in two major business segments: Clinical Diagnostics produces test kits and equipment used in diagnosing and monitoring diseases (57% of '07 sales); Life Sciences products are used to separate and analyze complex chemicals (43%). Is the world's leading producer of BSE (mad-cow disease) tests. Non-U.S. sales, 66% of '07 total. Has approximately 6,400 employees. Officers & directors own 16.6% of A shares, 90.6% of B shares; Ariel Capital Management, 12.4% of A; TimesSquare Capital, 5.4% of A (3/08 proxy). President & Chief Executive Officer: Norman Schwartz. Incorporated: DE. Address: 1000 Alfred Nobel Drive, Hercules, CA 94547. Telephone: 510-724-7000. Internet: www.bio-rad.com.

Bio-Rad Laboratories appears to be firing on nearly all cylinders these days. Share earnings at the marketer of life-science research and clinical diagnostic products jumped 68%, to $1.61 a share, in the June quarter, on 33% higher revenues of $452.4 million. The strong top-line performance reflects the addition of DiaMed (acquired 10/07), as well as favorable currency effects. Notwithstanding BSE (mad-cow disease) test kits, the company's legacy products also appear to be selling well. The revenue strength, coupled with good cost control and a surprisingly low tax rate, resulted in sharply higher-than-expected bottom-line results. Indeed, we were looking for share net of just $0.99, based largely on the assumption that DiaMed-related integration and intangible amortization costs would severely limit earnings progress.

We've raised our 2008 share-net estimate by $0.85, to $4.70, to reflect Bio-Rad's strong June quarter as well as a more positive stance toward the back half of the year. The $4.70 call represents a 24% increase over the $3.78 that the company earned in 2007. Importantly, Bio-Rad should continue to have good success, holding the line on certain expenses and leveraging key costs. In the June quarter, for example, selling, general & administrative costs rose 23% ($146.6 million), sharply below the 33% rise in overall revenue.

We look for share earnings to increase 13% or so, to $5.30, next year. Major new products should continue to gain market traction. The prospect of a larger BioPlex 2000 installed base is particularly encouraging, as it should drive sales of high-margined BioPlex-related consummables. To that end, the company recently introduced Epstein Barr Virus test panels for use on BioPlex, and has more than 15 other multiplex reagent kits in development for the system. Meanwhile, Bio-Rad's reliance on a BSE business characterized by weak pricing and declining sales ought to lessen, as well.

Bio-Rad shares are ranked 2 (Above Average) for year-ahead price performance. Nimble investors may want to ride this issue's strong share-price and earnings momentum. Buy-and-hold accounts should look elsewhere for now.

Nils C. Van Liew *August 29, 2008*

(A) Primary earnings through 1996, basic thereafter. Excludes nonrecurring gains/(losses): '99, ($0.90); '00, $1.26; '03, ($0.38); '04, ($0.43); '05 2Q, $0.25; '06 3Q, ($0.12). Next earnings report due late Oct.
(B) In millions, adjusted for stock splits.
(C) Share price data for Bio-Rad Class A shares only. Class B shares have 10x voting power of Class A, Class B shareholders elect 75% of board of directors.
(D) Quarterlies don't sum to total due to rounding.

Belo Corp. was organized in 1926 as the successor to a newspaper publishing business that began operations in 1842. The company went public in December 1981 with an offering of 15,662,680 shares at $2.88 each. On 11/15/83, Belo sold 17.6 million shares of common stock at $4.52 a share to help finance its acquisition of Corinthian Broadcasting Corp. Both offerings are split-adjusted.

BUSINESS: Belo Corp., a television broadcasting company, owns and/or operates 20 stations, and 12 websites associated with these stations. It also owns three cable news channels and has ownership interests in another seven. TV stations reach about 14% of the U.S. population and include affiliates of all five major networks. 2007 revs. (operating profits, before spin off): Television Group, 49% (84%); Newspaper Group, 51% (42%); other, less than 1% (d26%). Has about 7,800 employees. Officers and directors hold about 88% of 'B' shares (4/08 proxy). Chairman, President, and Chief Executive Officer: Robert W. Decherd. Incorporated: Delaware. Addr.: 400 South Record Street, Dallas, TX 75202. Tel.: 214-977-6606. Internet: www.belo.com.

Belo Corp.'s bottom line for the second quarter improved slightly on an *adjusted* year-over-year basis. Investors should note that share net in 2007 for the second quarter and six-month period, respectively, were $0.23 and $0.38 (excluding contributions for the recently spun off A.H. Belo). Lackluster revenues were a result of lower advertising revenues during the June interim. Notably, contributions from the automotive industry declined 10% from last year. Total spot revenues pulled back over 6%, due to weakness in both local and national advertising markets. Offsetting these losses were a rise in political advertising and gains from the Internet division (representing 4% of total revenues). The retransmission segment showed rapid growth, and should add about $30 million to the top line this year. Looking ahead,

The company should close out the year on a strong note. Cost-cutting efforts, including a hiring freeze and staff reductions, should benefit margins in the latter half of the year. Another factor that may bolster the top and bottom lines is the probable bump in cyclical advertising, as the upcoming elections should boost political advertising revenues, and the Olympic Games in August are likely to add approximately $50 million to revenues this year, from four of the company's NBC-affiliated stations.

Belo Corp is investing in its Internet division to boost earnings growth. In an effort to strengthen its growing Web advertising division, the company has made a multi year agreement with Response Logix Inc., a producer of Internet-based automotive advertising management systems. This should help the bottom line over the next few years.

The 25% decline in share price since our May review may make this stock interesting for patient investors. The company is positioning itself to take advantage of any upturn in the weakened economy. With the earnings growth we project over the 2011–2013 horizon, Belo Corporation has appealing appreciation potential.

This issue's Timeliness rank remains suspended due to Belo's short history as an independent entity.

BUSINESS: BMC Software, Inc. develops, markets, and supports data and application management software targeted at IBM's database and data communication systems (mainframes) and the open-systems computing environment. Company growth has historically been supplemented with strategic acquisitions. FY 2008 (ended 3/31/08) license revenue mix: Mainframe Serv. Mgmt., 31.9%; Enterprise Serv. Mgmt., 68.1%. License fees: 37.4%; Services and Maintenance: 62.6%. R&D: 12% of sales. Empl.: 5,800 at 3/31/08. Stock owners: Five fin'l inst., 39.0%; Off. & dir., 2.7% (5/08 Proxy). Chrmn.: Garland Cupp. President & CEO: Robert E. Beauchamp. Inc.: DE. Address: 2101 CityWest Boulevard., Houston, TX 77042-2827. Tel.: 713-918-8800. Internet: www.bmc.com.

BMC Software's revenues should advance nicely in the fiscal year ending March 31, 2009. Most of the increase seems set to arise from the Enterprise Service Management segment (ESM), since Mainframe Service Management (MSM) will likely track even to modestly forward versus the performance recorded in the previous 12-month period. The progress at ESM in the last couple of years has been a function of the customer acceptance of BMC's Business Services Management (BSM) strategy. Although our sense is that BSM will continue on its successful path, the sharp increase in revenue growth envisioned this year will most likely be due to the recent acquisition of BladeLogic.

Despite the expansion at ESM, BMC's mainframe business remains the larger contributor to operating earnings and cash flow. True, overall revenues are greater at ESM, but the profit margin at MSM is much wider (even after excluding purchase-related intangibles from ESM). From a shareholder perspective, then, one needs to balance the potential for growth at ESM against the mature, but much more profitable, MSM. At this juncture, things appear to be going BMC's way. However, we note that BladeLogic was only recently folded into the company's operating structure, and the relative strength of the global business environment remains an open question. Still, BMC is managing its operating expenses well, and should be able to cope with a decline in business activity should the sluggish macroeconomic environment begin to take a toll on the software industry.

BMC shares are favorably ranked for Timeliness. Our earnings presentation (GAAP) suggests a flattish performance this year, with growth returning in the next 12-month period. Meanwhile, we estimate that the company's operating margin is likely to expand this year, but the growth rate associated with cash flow is likely to be lower than associated with revenues. Accordingly, new commitments to the stock are probably best made after careful consideration and by those with a near-term horizon. And, despite the recent pullback in price, the shares are not a bargain and long-term investors can probably find better opportunities.

BUSINESS: Bob Evans Farms, Inc. operates, as of 4/27/07, 579 family-style restaurants in the East, Midwest, and Southwest. Operates 115 Mimi's restaurants (acq'd 7/04) primarily in western states. Also manufactures and distributes sausage and other food products under the Bob Evans Farms and Owens Farms brand names. Has plants in OH (3), MI, IL, and TX (2). Rests. accounted for 84% of '06 sales; 80% of op. profits; food products: 16%; 20%. Owns all plants and most restaurants. 2006 depr. rate: 5.1%. Has about 51,000 employees. Offs. & dirs. control 2.7% of common; Ariel Cap'l, 8.7%; Dimensional Fund, 7.7% (8/07 Proxy). Chmn. & CEO: Steven A. Davis, Inc.: DE. Address: 3776 S. High St., Columbus, OH 43207. Tel.: 614-491-2225. Internet: www.bobevans.com.

Bob Evans Farms continues to generate decent same-store sales at its flagship chain. "Comps" at *Bob Evans* have risen for seven consecutive quarters, including a gain of 1.5% in the April quarter. (Earnings for the period weren't scheduled to be released until after we went to press.) The growth has been driven by pricing, rather than traffic, but, with customers facing a cloudy economic backdrop, it still represents a solid achievement.

The company is having a tougher time at *Mimi's*. Same-store sales here declined over 5% in the April quarter, the casual-dining concept's worst performance since it was acquired in 2004. A new management team is working on several initiatives to boost sales, including adding new items to the menu and upgrading product development efforts. Some factors, though, such as the weak economy in markets (California, Florida, Arizona, and Nevada) where the chain has a large presence, are beyond management's control.

The food products division has been the key profit driver of late. Powered by solid sales gains and wider operating margins, segment earnings rose 68% over the first three quarters of fiscal 2007. (The fiscal year ended April 25th.) Meanwhile, weak sales trends at the *Mimi's* chain, combined with higher commodity costs, have kept restaurant earnings in neutral. More-balanced division contributions seem likely in fiscal 2008, when we look for share net to advance 13%-15%, to $2.00. Our estimates assume that efforts to improve results at *Mimi's* begin to gain traction. On the other hand, the food products segment seems unlikely to get the same boost from declining hog costs, especially relative to pricing trends for many other food commodities.

Current store development plans lean heavily on *Mimi's*, which accounted for all but two of 19 units opened in fiscal 2007. The chain's struggles could force a reevaluation of this strategy. Management will likely provide details on its 2008 capital-spending plans shortly.

These shares are an unexciting selection at the moment. The stock is ranked to perform in line with the year-ahead market, and appreciation potential to 2011-2013 is below average.

Robert M. Greene, CFA *June 6, 2008*

BUSINESS: Popular, Inc. is a bank-holding co., which offers financial services. Its principal subsidiary is Banco Popular, which operates primarily in Puerto Rico, with over 300 branches and 478 ATMs. Banco Popular North America has nearly 135 branches throughout The U.S. Banco Popular and its subsidiaries offer auto leasing, mortgages, personal loans, and information processing. Acquired GM Group, Inc., 6/99; Centro Finance, 5/00.; E-Loan, 11/05. Net loan losses, 1.31% of avg. loans in '07. As of 6/30/08 loan loss reserve 2.47% of loans. Non-perf. loans, 3.49% of tot. loans. Chrmn, Pres & CEO: Richard L. Carrion. Inc.: Puerto Rico. Addr.: Popular Center Building, 209 Munoz Rivera Ave. Hato Rey, Puerto Rico 00918 Phone: 787-765-9800. Internet: www.bpop.com.

Popular, Inc.'s results have weakened further. Net interest income declined about 9% during the second quarter of 2008, largely due to the sale of low-margined loans and assets. Average loans slipped about 15% during the quarter, as a result of these sales. Some of the reduction in loans was offset by a wider net interest margin. Improved profitability largely reflects a lower interest-rate environment, as well as an improved asset mix.

Credit quality continues to hurt profits. Net chargeoffs rose to 1.76% of loans during the second quarter, compared with 1.16% a year ago. Much of the increase was due to rising defaults at the commercial, construction, and consumer lending segments. Consequently, Popular has boosted its provision for loan losses to 163% of net chargeoffs, compared with 125% in the year-ago period. We expect the bank's credit quality to remain weak for a while, given the challenging economy and declining real estate market.

Meanwhile, Popular continues to restructure its business. In an effort to devote more of its resources to the Puerto Rican banking market, Popular will probably sell additional assets in the United States. The bank has raised capital by issuing $400 million of 8.25% preferred stock. Proceeds will be used to improve liquidity and to expand some divisions.

Some additional cost-cutting measures should also help the bottom line. Operating expense declined about 4% during the second quarter. The recent discontinuation of the North American mortgage and E-LOAN businesses has lowered professional fees and promotional expenses. Nonetheless, there will probably still have to be further cost reductions. We have reduced our earnings estimates by $0.40 per diluted share for 2008, and by $0.45 for 2009, at this time.

These shares have declined in rank to 4 (Below Average) in Timeliness. This reflects the weak earnings performance in the most recent quarter. Our projections indicate the stock offers good total return potential for the 3- to 5-year horizon. However, the issue's current dividend yield is considerably higher than usual, and the payout may be reduced if profits do not improve.

Adam Rosner *August 22, 2008*

BUSINESS: BRE Properties, Inc., formerly BankAmerica Realty, is a real estate investment trust specializing in income-producing multifamily properties. Owns 21,808 units in California, Arizona, Washington, and Colorado. Portfolio at 12/31/07: real property, 99%; mortgages and other, 1%. Major sources of 2007 Net Operating Income by market: Los Angeles/Orange County, 25%; San Diego, 20%; San Francisco, 18%; Seattle, 14%; other, 23%. Officers and directors own 3.5% of outstanding stock; Deutsche Bank AG, 10.3%; Cohen & Steers, 8.7%; LaSalle Investment Mgmt., 8.4% (3/08 Proxy). Org.: DE. Pres. & CEO: Constance B. Moore. Address: 525 Market Street, San Francisco, CA 94105. Telephone: 415-445-6530. Internet: www.breproperties.com.

BRE Properties is holding its own despite the economic crunch. Net operating income (NOI) will likely increase 4%–5% this year, buoyed by newly developed properties coming on line, and continued occupancy stabilization efforts. Indeed, occupancy levels averaged 94.3% in the March quarter—versus 93.3% in the year-ago period—and should hold steady at 94%–95% for the remainder of 2008. Further, we expect same-store market rents to advance 4%–5% this year, which should give revenues a slight boost.

The company's portfolio is still a mixed bag. BRE's holdings in San Diego, San Francisco, and Seattle are doing well, thanks to solid local fundamentals and the lack of oversupply evident in more hard-hit markets. Indeed, the rash of overbuilding that helped cripple the economy is on display in Phoenix and several California markets, including Orange County, Sacramento, and the Inland Empire region. And, as demand for single-family homes vanished, many of the troubled properties have been converted into rentals, pushing first-quarter rent concessions (throw-ins to lure renters) to 3.7 days rent, up from 3.0 days in the prior year.

Funds from operations (FFO) ought to make solid progress this year, and next. In all, revenues will likely edge up 1%–2% in 2008, before possibly increasing 5%–6% in 2009. And, FFO may advance 5%–7% in each of the next two years.

BRE has several developments in the pipeline. The company is increasingly developing its own projects from the ground up, as opposed to buying existing properties. Although ground-up development typically provides higher returns than acquisitions, revenues and costs may be difficult to pinpoint in advance, which introduces an additional element of risk. BRE currently has seven properties in various stages of development, representing over 2,000 units at a projected cost of nearly $850 million. The parcels, located in Seattle, and in northern and southern California, should bear fruit in the 2010–2013 time frame.

The main attraction for neutrally ranked BRE stock is a solid dividend yield, making this a good selection for income-minded accounts.

Sharif Abdou July 18, 2008

(A) Fiscal year ends July 31st before 1996; calendar year thereafter.
(B) Starting in '06, net profit represents income from continuing operations, earnings per share represent net income available to common shareholders. Next egs. report due late July.

BUSINESS: Brown & Brown operates an insurance brokerage firm that markets property/casualty products and services to commercial, professional, and individual customers. The company's property insurance protects against physical damage to property and the resultant interruption of business caused by firestorm, windstorm, or other perils. Casualty insurance relates to legal liabilities, workers' compensation, commercial and private automobile insurance, and fidelity and surety insurance. Has about 5,050 empls. Off./ dir. own 20.5% of stock; J. Hyatt Brown, 15.3%; Ruane, Cunniff & Goldfarb, 8.0% (4/08 Proxy). Chairman and CEO: J. Hyatt Brown. Inc. Fl. Address: 220 South Ridgewood Ave., Daytona Beach, FL 32114. Telephone: 386-252-9601. Internet: www.bbinsurance.com.

Brown & Brown's June-interim results fell short of our expectations. The company posted share earnings of $0.29, which was $0.04 below our estimate and $0.08 below the prior year's tally. The effects of the softened insurance premium environment and the overall economic difficulties are being felt. Particularly, some property/casualty policies were renewed at rates 15%–30% less than expiring premiums. These reductions, along with greater competition and weakness in the retail segment, especially in Florida, led to a 2% decline in revenues. And if it not for acquisitions, Brown would have fared worse. Indeed, takeovers of small insurance companies continue to be the primary driver of top-line gains, with the insurer closing 25 deals so far this year.

We expect earnings to rebound 8% in 2009, to $1.30. Insurance rates across most segments of the industry will likely remain pressured in the year ahead, especially as competition intensifies. Thus, we anticipate minimal growth of commissions and fees. As a result, additional acquisitions will likely be pursued to boost revenues. All told, given Brown's history, we have factored in a small amount of takeovers into our estimates.

Prospects over the 3- to 5-year time frame are healthier. The top and bottom lines should advance at a low annual double-digit pace over this period, assuming synergies are realized through the insurer's consolidation strategy. There are many small indemnity businesses in the U.S. that are potential takeover targets. Furthermore, our outlook for a brighter economic picture in the years ahead augurs well for investment income.

This equity has trended downward over the past three months, and is ranked to underperform the broader market indices over the next year. Moreover, the selection's recovery potential over the 2011–2013 haul is tempered by the soft premium pricing environment and cloudy earnings visibility going forward. For now, we advise most investors to approach with caution. However, these shares may hold some appeal for conservative long-term portfolios, given their Above Average mark for Safety (2) and relatively moderate level of volatility.

BUSINESS: BorgWarner Inc. is a supplier of highly engineered components and systems for automotive powertrain applications. Products, sold to original equipment manufacturers, include four-wheel and all-wheel drive transfer cases, manual and automatic transmissions, clutches, and torque converters. Ford accounted for *12% of 2007 sales; Volkswagen, 15%; Daimler, 6%. Operates 62* facilities in 16 countries. Foreign operations were 65% of 2007 sales. Has about 17,700 employees. UBS AG owns 11.1% of common stock; AXA Financial, 5.2%; officers & directors, 1.5% (3/08 proxy). Chairman & CEO: Timothy M. Manganello. Incorporated: DE. Address: 3850 Hamlin Road, Auburn Hills, MI 48326. Telephone: 248-754-9200. Internet: www.borgwarner.com.

BorgWarner has gotten off to a good start in 2008. During the first quarter, the company reported year-over-year sales growth of 17%, with particularly strong expansion coming from Europe and Asia. Excluding the impact of foreign currency, international sales advanced 15%, while U.S. sales declined 4%, owing to lower U.S. auto production. Despite ongoing weakness in the U.S. market, the company continues to see strong demand for its product technologies that improve fuel efficiency, lower emissions, and provide better vehicle performance. These factors allowed share net to rise 27% from the year-ago period.

We are raising our 2008 top- and bottom-line estimates by $125 million and a dime, respectively, to $5.975 billion and $3.00 per share. We expect the Engine group to continue to be the primary driver of the advance, thanks to strong global demand for its turbochargers, engine timing, ignition, and emissions products. This should more than offset the likelihood of continued weakness in the U.S. auto market. We also anticipate solid gains from the Drivetrain division, which ought to benefit from increased demand for dual-clutch transmission and torque transfer products.

BorgWarner continues to expand its global footprint. The company recently announced that it plans to invest $125 million to increase its global turbocharger capacity by more than three million units over the next several years. This ought to help support new business awards in North America, Europe, and Asia. Management believes demand for these products should grow at a 40% clip over the next five years. The company is also opening manufacturing facilities in Germany and Mexico to serve the growing market for dual-clutch technologies.

We have raised the Timeliness rank for these shares to 2 (Above Average). Robust international demand, particularly for turbochargers, should allow for strong earnings gains over the next few quarters. However, over the coming 3- to 5-year period, these shares offer below-average appreciation potential at the current quote, and are, in fact, trading within our 3- to 5-year Target Price Range.

Jason Dalavagas *June 27, 2008*

BUSINESS: Boardwalk Pipeline Partners, LP, through its subsidiaries, engages in the interstate transportation, gathering, and storage of natural gas in the United States. Customers include local gas distribution companies, municipalities, interstate and intrastate pipelines, direct industrial users, electric power generators, marketers, and producers. The limited partnership owns and operates two natural gas pipeline systems with about 13,550 miles of pipeline, serving customers in 11 states. Boardwalk GP, LP serves as the general partner of the company. Loews Corp. owned 68% equity, as of 12/31/07. Has about 1,084 employees. CEO: Rolf A. Gafvert. Address: 3800 Frederica Street, Owensboro, KY 42301. Telephone: 270-926-8686. Internet: www.boardwalkpipelines.com.

Boardwalk Partners' top line increased moderately during the first quarter of 2008. Much of the strength was the result of a 15% advance in revenues at the mainstay Gas Transportation segment. Contributions at this segment, which account for nearly 90% of the top line, got a lift from the East Texas to Mississippi Pipeline Expansion project. This helped boost transportation volumes and improved rates considerably during the March quarter.

Meanwhile, other segments reported mixed results. Revenue at the Gas storage segment benefited from increased capabilities associated with the Western Kentucky Storage Expansion project. Elsewhere, results at the Parking and Lending segment declined considerably during the quarter, due to lower natural gas prices. Revenue at this segment, which is largely tied to natural gas prices, will probably remain weak for the remainder of 2008.

Nonetheless, the year-ahead outlook has weakend a bit. Although net income rose about 10% during the first quarter, earnings per diluted unit declined slightly, reflecting a larger number of limited partnership units outstanding. Ongoing equity issuances (see below) will probably hurt results for a while. We are dramatically reducing our earnings estimates for 2008 and 2009 at this time as a result.

Boardwalk will likely continue to expand its assets. The partnership's current expansion program represents a total investment of about $4.7 billion. Boardwalk has invested about $1.7 billion in these projects so far, and will likely complete the program by the first quarter of 2009. Boardwalk has announced that it will soon receive $700 million in equity financing from majority owner Loews Corp. sometime in the second quarter of 2008. It also has a $1 billion credit facility available. Elsewhere, Boardwalk has done a good job of managing its projects.

This relatively untested equity continues to exhibit choppy trading patterns. Still, our current projections indicate that this issue offers worthwhile total return potential for the next 3 to 5 years. The issue's dividend yield also remains attractive, and should provide some downward support, as well.

BUSINESS: CA, Inc. (formerly Computer Associates International, Inc.) develops, markets & licenses a broad array of software products for a wide range of mainframe and distributed systems. Acquired Legent Corp., August '95; Cheyenne Software, December '96; Platinum Technology, June '99; Sterling Software, March '00; Netegrity, Nov. '04. Has 13,700 employees. Officers & directors own less than 1% of stock; Walter Haefner/Carsal Holding AG, 24.3%; NWQ Investment Company, 11.1%; Hotchkis & Wiley Capital Mgmt., 9.4%; Private Capital Management, 7.1%; (8/08 Proxy). Chairman: William E. McCracken. Chief Executive Officer: John Swainson. Incorporated: DE. Address: One CA Plaza, Islandia, NY 11749. Telephone: 631-342-6000. Internet: www.ca.com.

CA, Inc. started fiscal 2008 (began April 1st) on a high note. The company's sales got a boost as it achieved solid performance at its subscription & maintenance and software divisions. However, its professional services segment posted flat results for the June period. In sum, the top line advanced approximately 6% for that interim. Meanwhile, the continued implementation of process improvements has augured well for expenses. Consequently, the company reduced costs by about 4%, and widened margins by 7%. In all, the bottom line increased 54% for the first quarter.

We look for the company to continue to do well as the year progresses. Sales ought to get a lift as total bookings increase at a mid-to-high single-digit rate. This trend should result from continual growth in the size of CA's licensing agreements. Meanwhile, the average life of its subscription & maintenance bookings will probably continue to rise. We believe efficiency initiatives will gain traction and further benefit margins. Therefore, we have raised our annual earnings estimate by a dime, to $1.30 a share.

CA's balance sheet continues to hold steady. The company has more than enough cash on hand to fund capital projects, as its working capital returned to positive territory last year, and it will likely report free cash flows of about $1.1 billion in fiscal 2008. Moreover, it has more than enough cash to service its debt obligations and will likely reduce that level in the years to come.

Next year, the New York-based software developer's bottom line ought to advance about 12%. The top line should climb at a nice clip. However, the majority of benefits bestowed on margins due to cost-cutting efforts will probably fall in fiscal year 2008. As a result, earnings advances next year may moderate a bit. But our estimates may prove conservative as new products like the recently released *Records Manager r12* gain acceptance.

These shares are indeed appealing. Our Timeliness Ranking System suggests they will outpace the broader market in the coming six to 12 months. And the issue currently offers above-average appreciation potential for the pull to 2011-2013.

Bryan Fong *August 22, 2008*

(A) Fiscal year ends March 31st of following year. (B) Primary earnings through fiscal '96, then diluted. Excludes gain (loss) from disc. ops.: '03, 10¢; '05, 1¢; '06, (1¢); nonrecurring charges: '84, 42¢; '95, $1.43; '96, $1.05; '97, 4¢; '98, $1.20; '99, $1.49; '03, 19¢; '04, 31¢. Next earnings report due late October. (C) Div'd. historically paid in March, June, Sept., and Dec. ■Div. reinvestment plan available. (D) Includes intangibles. In 2007: $5.4 billion, $10.41 a share. (E) In mill., adj. for splits. (F) Pro forma in '00.

BUSINESS: Cardinal Health, Inc. is a leading provider of products and services for the healthcare ind. Sales (op. profit) in '07: Pharma Distr. 87% (59%); Med. Prods.& Svcs, 9% (14%); Clinical Tech. & Svcs. 2% (17%); Med. Prods. & Tech., 2% (10%). Operates distrib. ctrs. serving the cont'l U.S. Acq'd Whitmire Distrib., 2/94; Humiston-Keeling & Behrens, 7/94; Medicine Shoppes, 11/95; Pyxis, 5/96; Owen Health, 3/97; R.P. Scherer, 8/98; Allegiance Corp., 2/99; Bergen Bruns., 8/00; Bindley Western, 2/01. '07 depr. rate: 9.1%. Has 43,500 empl. Dodge & Cox, 11.8%; Capital Research & Management, 9.1%; Off. & dir., 2.9% (9/07 Proxy). President & CEO: R. Kerry Clark. Inc.: OH. Addr: 7000 Cardinal Place, Dublin, OH 43017. Tel: 614-757-5000. Internet: www.cardinal-health.com.

Cardinal Health is in the midst of restructuring its various business segments. It recently announced plans to consolidate its businesses into two primary operating segments. The pharmaceutical, and medical product distribution segments will be grouped together, while the clinical, and medical products and technologies units will become one division. The distribution business accounts for the bulk of CAH's revenue at over $80 billion. However, this segment continues to face challenges, and is more of a mature, slow-growth business. Meanwhile, Medical Products and Technologies is rapidly expanding, and now accounts for around $5 billion in annual revenue. As part of the consolidation, the company will eliminate 600 jobs at an estimated cost of $63 million, but the restructuring should provide annual savings of around $90 million.

Management has decided to explore a spinoff of the Clinical and Medical Products unit following the recent consolidation. This would further the original goal of the restructuring effort to have two separate operating businesses with the ability to focus on each one individually. The plan was announced as the company reported earnings for the final period of fiscal 2008 (ended June 30th). Performance at the distribution division continued to decline in the period, as operating profit slid 15% due to continued losses from lower contract repricings, the ongoing DEA drug-diversion issue, and a further loss of small pharmacy business.

Recently issued fiscal 2009 share-net guidance of $3.80-$3.95, essentially flat with last year, was much lower than we had expected. The guidance reflects diminished profitability at Cardinal's core business, and a reduction in the pace of stock buybacks. Management expects problems to persist at the distribution division in the year ahead. The company plans to increase expenditures in fiscal 2009, with an additional $100 million planned for the products division.

These shares offer attractive long-term appreciation potential, assuming a turnaround at the distribution unit. However, earnings visibility is limited at present. Thus, investors may want to wait for some signs of improvement.

Joel Schwed *August 29, 2008*

(A) Fiscal year ends June 30th. Sales excl. pharmacy dist. ops. ($6.7 bill. in fiscal '02). (B) Dil. eps. BUSINESS: The Cheesecake Factory, Inc. operates 154 upscale casual dining restaurants (including 13 larger *Grand Lux Cafes*), featuring broad (about 200 items) menus. Open for lunch, dinner, and late night. Also runs limited-menu sites. Bakery (5.0% of sales to 3rd parties) produces 50 varieties of cheesecake and other baked goods for its own restaurants and other distributors. 2007 depreciation rate: 7.4%. Has about 32,300 employees. Officers/directors own 6.9% of common shares; Baron Capital Group, Inc., 10.6%; T. Rowe Price Associates, Inc., 6.8% (4/08 proxy). Chairman & CEO: David Overton. Incorporated: Delaware. Address: 26901 Malibu Hills Road, Calabasas Hills, California 91301. Telephone: 818-871-3000. Internet: www.cheesecakefactory.com.

Cheesecake Factory's first-quarter results were in line with our estimates. Share earnings fell about 13% on a year-over-year basis, while revenues increased approximately 10%. Overall, comparable-store sales declined 1.8% in the March interim.

The company is facing numerous headwinds. The current dining environment is rather difficult. Consumers are being squeezed by the likes of elevated energy prices, the slumping housing market, and weakening employment figures, causing them to rein in discretionary spending. Further, Cheesecake Factory's operating costs are rising, putting pressure on margins. Recently, food prices have been on an upward trajectory, owing to an increase in global demand. Additionally, minimum wage hikes have increased payroll costs.

Nonetheless, we project a moderate gain in share earnings this year. We are maintaining our 2008 forecast of $1.15. This represents an 11% increase over the year-earlier tally. Menu price increases, scaled-back expansion plans, and share repurchases should help support results this year.

Investors may want to wait before committing funds. The company is facing a difficult operating environment, and we see few signs of a near-term catalyst that would propel earnings growth beyond our current expectations. These shares are pegged to perform roughly in line with the broader market averages over the coming six to 12 months (Timeliness: 3). Earnings will probably grow at a moderate pace both this year and next, owing to challenging business conditions in the United States.

We think that the company will get a significant shot in the arm once the broader domestic economy rebounds. With only 154 stores open to date, Cheesecake Factory has ample room to expand its operations. Additionally, the company has a very strong brand name and a solid balance sheet. It has nearly $130 million in cash and equivalents in the bank and a modest debt-to-total capital ratio. Given the issue's recent quotation, it offers impressive share-price appreciation potential over the pull to 2011-2013, in our opinion.

BUSINESS: Cameron International Corporation manufactures pressure control equipment for oil and gas drilling, production, and transmission used in onshore, offshore, and subsea applications. Also manufactures gas turbines, centrifugal air compressors, integral and separable reciprocating engines, compressors and turbochargers. Customers include major and independent E&P's, drilling contractors, and chemical and petrochemical companies. 2007 depr. rate: 6.8%. Has about 15,400 empl. AXA Financial Inc. owns 11.3% of comm. stock; T. Rowe Price, 5.0%; officers & dir., 2.3% (3/08 proxy). Chrmn., Pres. & CEO: Sheldon R. Erikson. Inc.: DE. Addr.: 1333 West Loop South, Suite 1700, Houston, TX 77027. Tel.: 713-513-3300. Web: www.c-a-m.com.

Cameron International Corp. is performing very well. In the second quarter, earnings grew by over 27%, year over year, with revenues rising 30%. These gains reflected a 40% increase in top-line contributions from the Drilling Production Systems (DPS) segment, with sales of both the Valves and Measurement (V&M) and Surface Systems divisions rising 17%. Also, the volume of orders booked has continued to rise, notably in the D&P segment, which had its highest number of orders in the company's history this year. Subsea Systems order were also up 50%, bringing the year-to-date sum of subsea trees (an assembly of valves spools and fittings for oil wells, to prevent direct and control fluids from being released from the well) booked to 94. At this pace, tree orders should outpace last year's total of 111 by the end of the third quarter. As a result, we have raised our share-net estimates for 2008 and 2009 by a dime each, to $2.65 and $2.80 respectively.

New customers and the steadily increasing backlog should help continue this momentum over the next few years. In June, Petrobras made an agreement for the company to build 25 subsea trees, and this order should be completed by the end of 2009. This contract should add approximately $100 million to revenues over the next couple of years. Also, total backlog has grown sequentially, reaching $5.2 billion, a 30% increase from the prior year's period. This expansion will likely continue to boost this figure over the next few quarters, and should bolster both top- and bottom-line growth over the coming 3 to 5 years.

The company has continued to expand upon its production capabilities. An additional $70 million in capital expenditures was approved to be used to increase the overall capacity of the Malaysia subsea production facility. This would enable the plant to produce more than 200 subsea trees annually.

This stock holds our highest (1) rank for Timeliness. It should be noted, however, that the earnings growth that we project over the 2011–2013 horizon seems to have been discounted by the current quotation, giving these shares below-average appreciation potential.

John D. Burke *August 15, 2008*

BUSINESS: Casey's General Stores operates convenience stores in nine midwestern states, primarily in Iowa, Missouri, and Illinois. Stores sell gasoline and a broad selection of food (including freshly prepared pizza, donuts, hamburgers, etc.), beer and other beverages, and non-food items. As of 4/30/08, Casey's had 1,454 company-owned and 14 franchised locations. In fiscal 2007, gasoline accounted for 73% of net sales. Average retail sales per store were $3.3 million in 2007. Has 7,480 full time employees. Officers & Directors own 6.9% of common stock (8/07 Proxy). Chairman: Ronald Lamb. President/CEO: Robert J. Myers. Incorporated: Iowa. Address: One Convenience Boulevard., Ankeny, Iowa 50021. Telephone: 515-965-6100. Internet: www.caseys.com.

Casey's General closed out fiscal 2007 in good form (ended April 30th). Throughout the course of the fiscal year, the store chain witnessed a steady decline in the demand for gasoline (74% of sales), due to rising prices at the pump. The wholesale cost, meanwhile, climbed at a slower pace, allowing Casey a wider average margin of 13.9 cents a gallon, versus 10.4 cents in fiscal 2006.

The coming fiscal year, however, will likely be more challenging. Relative to fiscal 2007, we look for the gasoline environment to become increasingly more difficult for the store chain. While same-store sales comps will probably improve, we believe that the wholesale cost of gas will invariably rise, squeezing Casey's margin, likely in the range of 11.0 cents to 12.0 cents a gallon.

Inside sales should continue to do well. The store chain is enjoying strong demand for grocery, merchandise, and prepared food & fountain items. We think this favorable trend will continue as in-store traffic appears to be on the upswing, thanks to an increase in the number of offerings. Price hikes for fountain products and cheese items should provide additional lift to in-store receipts. Increasing margins on cigarette sales should also add to profitability measures.

Efficiency-enhancing actions should help to support margins. Measures, such as point-of-sale and scanning devices, promise to raise profitability levels. Additionally, the bottom line should benefit from bringing some credit card processing in-house.

Casey's continues to expand. We look for the company to open about 25 new stores this fiscal year. Management will also probably take advantage of acquisition opportunities as they present themselves. The deal pipeline is somewhat limited at the moment, though. Price multiples are a little steep, given the difficult gasoline selling environment.

This stock is untimely for six- to 12-month relative price performance. At the current price, CASY shares fairly reflect the good long-term profit growth that we project for the company. The capital gain potential over the pull to 2011–2013 is below average.

Warren Thorpe *August 1, 2008*

(A) Fiscal year ends April 30th of the following calendar year. Sales figures exclude royalty income and the revenues from franchised stores.
(B) Primary earnings through 1997; diluted thereafter. Excludes non-recurring loss: '04, 9¢. Next earnings report due mid-Sept.

BUSINESS: CBRL Group, Inc. operates 576 Cracker Barrel Old Country Store restaurants/gift shops in 41 states, mostly in the South and Midwest (5/28/08). Restaurants feature an old country store motif, along with adjoining/separate gift shops, which sell early American reproductions and food items. Nearly all units are company owned, and located along interstate highways. Restaurants accounted for 78.4% of '07 sales; gift shops, 21.6%. CBRL also had (now divested) 143 Logan's Roadhouse company-operated and 26 franchised units. Has about 64,000 empls. Off./dir. own 6.1% of stock (10/07 proxy). Pres. & CEO: Michael A. Woodhouse. Inc: TN. Addr.: P.O. Box 787, 305 Hartmann Drive, Lebanon, TN 37088-0787. Tel.: 615-444-5533. Internet: www.cbrlgroup.com.

CBRL Group is struggling these days. The company, operator of the family-oriented Cracker Barrel Old Country Store restaurant chain, will probably post solid share-net advances in fiscal 2008 (ends August 1st) and fiscal 2009, thanks to aggressive stock buybacks and moderate unit development. But same-store sales remain on the soft side (restaurant comps rose just 0.2% during the April interim), even with the benefit of menu pricing growth in the mid-single digits. And the company's profit margins continue to be weighed down by runaway commodity cost inflation (spot prices for everything from eggs and produce to dairy products are rising), higher minimum wage rates in a handful of key states, and increased advertising spending related to a new, national television campaign.

Management is working hard to boost customer traffic . . . The new television spots, a departure from past media efforts that combined radio ads with billboard promotions, should help CBRL to build brand awareness and reach out to a wider customer base. Additionally, we believe that restaurant-level operational improvements will be a positive for traffic trends over time. In particular, the company intends to enhance speed of service by simplifying its menu and kitchen operations and by having more of its employees work during peak dining hours.

. . . but operating metrics are unlikely to improve much in the near term. Though the new sales initiatives may pay off down the road, we expect customer counts to erode further in the coming quarters against a very difficult business backdrop. Notably, despite management's plans to target new venues, most CBRL units are still located along interstate highways. This makes the concept quite vulnerable to high gasoline prices, which have already started to have an impact on driving habits across America. Commodity cost pressures, meanwhile, will probably persist for a while, notwithstanding a more comprehensive hedging strategy recently adopted by the company.

These shares are an Average (3) year-ahead choice. We advise most investors to stay on the sidelines until the chain's operating environment begins to warm up.

BUSINESS: Cabot Corp. produces carbon black (employed in the production of rubber, plastics, inks), fumed silica (applications include rubber and adhesives), tantalum (used to make electronic capacitors, semiconductors, integrated circuitry, and others), and cesium formate (drilling fluids). Divested Cabot Oil & Gas, 3/91; Cabot Safety, 7/95; TUCO, 10/96; Cabot Microelectronics, 9/00; Cabot LNG, 9/00. '07 depreciation rate: 5.3%. Has about 4,300 empls. Off. & dir. own 2.6% of stock; State Street Bank and Trust, 9.3%; SPO Advisory, 15.1%; SAC Capital Associates, 6.8% (1/08 Proxy). *Chairman: Kennett F. Burnes. Pres. & CEO: Patrick Prevost. Inc.:* DE. Address: Two Seaport Lane, Suite 1300, Boston, MA 02210. Telephone: 617-345-0100. Internet: www.cabot-corp.com.

The first half of fiscal 2008 (year ends September 30th) was a challenge for Cabot Corp. Rising raw material costs hurt profitability early this year. Moreover, the company had to deal with a lag in some of its supply contracts, which hurt CBT's performance. Given the difficult start to fiscal 2008, we believe share net will likely decline, year over year, to $1.70. However,

The company posted good results in its third quarter. Indeed, Cabot was able to post solid results in its June period despite some of the aforementioned challenges. Strong growth in emerging markets helped offset weakness in the U.S. and Western Europe. Notably, rubber black profits tripled due to effective pricing for these products. All told, Cabot registered a 29% increase in sales to $840 million, which resulted in a 39% year-over-year rebound in earnings, to $0.43 a share.

The second-half earnings momentum should continue in fiscal 2009. The company remains committed to developing opportunities in foreign markets, which should help drive growth over the coming years. In fact, CBT just signed a joint venture agreement to build facilities in Dubai and China. Management has also been reworking Cabot's business of late. Namely, the company has been looking to eliminate underperforming projects (it closed its Superior MicroPowder project in the third quarter) and has trimmed its workforce. These strategies should help the bottom line rebound from its overall disappointing performance in fiscal 2008.

The long-term picture is encouraging. Specifically, Cabot will probably continue to develop its business in low-cost regions such as Asia and South America. What's more, we believe the recent problems are behind the company. Accordingly, we are forecasting double-digit earnings advances over the 3- to 5-year pull.

These shares are ranked to track the broader market for the coming six to 12 months. The ongoing lag in some of CBT's supply contracts and the volatility of raw material prices add risk to this equity in the near term. However, venturesome investors may be interested in this stock thanks to its improved 3- to 5-year prospects.

Richard Gallagher *August 15, 2008*

(A) Fiscal year ends September 30th.

BUSINESS: Coca-Cola Enterprises Inc. is the world's largest soft drink bottler. Accounts for about 75% of all bottled & canned Coke products sold in U.S. and Canada. Ops. in 46 states; Washington D.C., Belgium, Canada, France, Luxembourg, the Netherlands, and the U.K. Acq'd ABGB, 2/97; Coke Canada, 9/97; Coke New York, 1/98. Product mix: Coca-Cola and other Coke soft drinks (63%), flavored soft drinks (24%), bottled water, isotonics, and juices (13%). '07 depr. rate: 6.8%. Has about 73,000 emps., Coca-Cola Co. owns 34.7% of com.; Lord Abbett & Co. 10.5%; Barclay Global Investors 7% (4/08 proxy). CEO and President: John Brock. Inc.: Delaware. Addr.: 2500 Windy Ridge Parkway, Atlanta, GA 30339. Telephone: 770-989-3000. Internet: www.cokecce.com.

Coca-Cola Enterprises suffered a large $5.3 billion noncash impairment charge during the second quarter. Excluding the loss of $6.52 a share, earnings were the same as the prior-year period. The charge occured as CCE had to make its yearly assessment of its North American franchise license intangibles. Although the decline in the bottler's intangible assets was big, it will not directly affect the company's ability to generate cash at this time. At this juncture, we do not expect a repeat of such expenses for the rest of the year. Nonetheless, CCE's short-term prospects seem less than bright for the next few quarters.

Problems will continue to challenge the company. Although revenues increased 4.7% in comparison to the year-ago period, the performance was partially due to favorable currency gains. Volume growth, both here and abroad, was uninspiring, especially in CCE's 20-ounce sparkling beverages and water segments. Also, operating margins were, and will likely remain, burdened by escalating commodity costs. Although Coca-Cola Enterprises' oil and sugar hedges have somewhat softened the blow, aluminum costs continue to be challenging. Accordingly, rising input costs, coupled with tightened consumer spending, will likely temper earnings growth for the foreseeable future. **CCE will seek to counter its problems in several ways.** In order to offset rising raw material costs, prices should increase after Labor Day. This will not likely be good for consumers, as incomes are dwindling. Also, restructuring efforts are set to continue. While we believe such moves will somewhat lessen margin erosion, pressures will not likely abate soon.

Investors may want to wait and see the outcome of the company's 120-day assessment. Indeed, the 30% decline in share price since our May report indicates that confidence is waning, a situation not likely being helped by CCE's decision to suspend its share-buyback plans for now. **This untimely issue offers wide capital appreciation potential for the 3- to 5-year timeframe.** Nonetheless, the current challenges and the uncertainties regarding their effective solution suggests caution is warranted.

BUSINESS: Crown Holdings, Inc., formerly Crown Cork & Seal, is the leading supplier of packaging products, such as: metal food, beverage, aerosol, and plastic or polyethylene (PET) containers, to consumer marketing companies around the world. 2007 sales breakdown: metal beverage, food, and other packaging, 98%; plastic containers and closures, 1%; other products, 1%. Foreign business: 66% of '07 sales. Operates 141 plants located in 41 countries. Has about 21,800 employees. Officers & directors own about 3.0% of stock (3/08 Proxy). Chairman, President & CEO: John W. Conway. Incorporated: Pennsylvania. Address: One Crown Way, Philadelphia, PA 19154-4599. Telephone: 215-698-5100. Internet: www.crowncork.com.

Crown Holdings continues to benefit from an improving global climate. Sales climbed around 9% in the first quarter, with about 75% being generated outside the U.S. The company has built up a formidable international network in recent years, and is now starting to cash in. The global beverage can markets are holding strong, with Asia and the Middle East experiencing significant surges. Crown should prosper further once the Beijing Olympics begin and beverage advertising kicks into high gear.

Strong pricing persists. Elevated raw material costs are being passed through aggressively, limiting their impact on the bottom line. Meanwhile, a favorable global supply/demand environment augurs well for Crown to successfully initiate further increases in the latter half of the year.

The company is spending for growth. Crown already allocated $500 million for share repurchases. Capacity expansion also remains a priority, such as a new beverage can plant under construction in Morocco. Although the proactive approach to creating shareholder value is a plus, Crown continues to maintain a highly leveraged balance sheet. Some debt reduction seems necessary for the company to add strength and stability to its capital structure.

Momentum-driven investors may find the stock of interest. Indeed, the issue has been on a slow and steady rise since mid-January, as strong first-quarter results only reinforced investor confidence. All told, in the three months since our last review, CCK's share price is up over 9%. The stock is ranked 2 (Above Average) for year-ahead price performance.

Out to 2011-2013, these shares offer below average appreciation potential. We have raised our 3- to 5-year projections to coincide with the elevated level of growth we believe will begin in 2009. That said, Crown does face a number of challenges, including its debt-laden balance sheet. Too, the stock holds a low score for Earnings Predictability.

Clear Channel Communications was founded in 1972 by then President and Chief Executive Officer, Lowry Mays. In 1984, the company went public via an IPO headed by Paine Webber. The company acquired Broad Street Communications, a broadcasting firm with radio stations in three mid-size markets, in 1984. Currently, Clear Channel owns and/or programs both radio and television stations in markets throughout the United States.

BUSINESS: Clear Channel Communications, Inc. owns and/or programs more than 717 radio stations (50% of 2007 revs.) and 896,000 billboards (47%). Also owns a media representation firm, and other support businesses (3%). Acq. More Group Plc, 6/98; Jacor Comm., 5/99; SFX Entertainment (concert promotion) and AMFM, 8/00; Spun off 10% of outdoor ad operations, 11/05; and live entertainment business, 12/05. Sold Television Station Group, 3/08. Has 28,900 employees. Off. & dir. own 8.4% of common stock; Highfields Capital Management LP, 7.7%; UBS, 5.8% (4/08 proxy). President: Randall Mays. CEO: Mark P. Mays. Inc.: TX. Address: 200 East Basse Road, San Antonio, TX, 78209. Telephone: 210-822-2828. Internet: www.clearchannel.com.

Clear Channel's pending sale to private investors will likely fall through. It appears that the buyout group led by Thomas H. Lee Partners has failed to reach terms with the banks that have agreed to finance the deal. Clear Channel was to be sold for $39.20 per share in cash. However, given the recent weakness in the radio business and declining prices of media stocks, this valuation looks inflated. In addition, the tight credit market has caused many banks to incur losses, reducing their willingness to take on additional risk. As such, financing for leveraged buyouts is now more difficult to obtain. Clear Channel is filing suit against six banks claiming that they are purposely causing the deal to break down.

As a result, the company is deferring its April dividend payment. The deferment was initiated in response to a request by the buyout group, due to the delayed closing of the transaction. Historically, the company has declared a dividend on the last day of each quarter, with payment occurring on or before the 15th of the subsequent month. We think Clear Channel would reinstate the dividend in the event of a backout of the deal.

The radio operating environment is challenging. Local and national-based advertising sales are running lower, likely because of spending shifts to other mediums and the growing array of media outlets available to consumers. The average rate per minute is also under pressure, despite increased levels of shorter spots. These declines are being partially offset by increases in network, traffic, syndicated and online revenues.

Station sales are under way. Through February 13th, the company had sold 217 non core radio stations of a planned 448. It has also completed the sale of its Television Group, for $1.1 billion.

Revenues from Outdoor Advertising should continue to grow, albeit more slowly. As of early February, segment revenues were pacing up less than 4% year over year for 2008, compared with the 13% rise achieved in 2007. We look for gains both in the U.S. and internationally.

Clear Channel stock holds little appeal without a merger agreement. We recommend a wait-and-see approach.

BUSINESS: Cadence Design Systems, Inc. is a leading worldwide supplier of electronic design automation (EDA) software for integrated circuit and systems design and verification, principally in the semiconductor industry. The company's software tools enable engineers to design, analyze, place and route, and test IC's, circuit boards, multichip modules, and other electronic systems. R&D: 31% of 2007 revenue. Has approximately 5,300 employees. Officers & directors own about 4.3% of common stock. Franklin Resources, 10.3%; Lord, Abbett & Co. 6.7%. (3/08 Proxy). Chairman.: John B. Shoven. President & CEO: Michael J. Fister. Inc.: DE. Address: 2655 Seely Road, San Jose, CA 95134. Telephone: (408) 943-1234. Internet: www.cadence.com.

Cadence Design Systems made an offer to acquire Mentor Graphics. After failing to reach a private agreement, Cadence offered to pay $16 per share for Mentor Graphics in a transaction valued at about $1.4 billion. Mentor Graphics rejected the offer, and has retained advisers to consider its options. The acquisition, if finalized, would provide Cadence with advanced lithographic technology. Given the capital requirements, the company would likely have to increase its debt level to finance the purchase.

Meanwhile, Cadence reported weak results for the second quarter of 2008. The top line declined about 16%, due to a challenging environment for semiconductor manufacturers. Product sales, which account for about 59% of revenue, slipped 26% during the period, partly offset by modestly better results at the Service and Maintenance segments. We expect the company's top line to weaken further in the second half of 2008.

Moreover, certain expenses remain high. Despite lower sales, product costs rose dramatically during the recent quarter. Service costs also increased, offsetting top-line contributions. Elsewhere, research and development spending, which was about $120 million during the quarter, remains high. This probably reflects some upcoming product launches and software upgrades.

The profit outlook has weakened considerably. Cadence's bottom line declined dramatically in the second quarter. Moreover, we expect the company to post a loss of $0.25 per diluted share in the third period, followed by another considerable loss in the fourth quarter. As a result, we are now projecting a loss of $0.50 per diluted share for full-year 2008, and a loss of $0.35 for 2009.

These untimely shares have fallen dramatically in price since our May report. This probably reflects Cadence's disappointing second-quarter results and a challenging business outlook for both this year and next. Our current projections indicate that these shares offer good recovery potential for the next three to five years. However, this assumes that the semiconductor industry starts to pick up considerably.

BUSINESS: C.H. Robinson Worldwide, Inc. is one of the largest third-party logistics companies in North America. It is a non-asset based provider of multimodal and logistic solutions, and fresh produce sourcing. Has 218 offices in N. America, S. America, EU, and Asia. 6.5 mill. shipments in '07. Acquired Norminter (1/99); Vertex Trans. (8/99); Amer. Backhaulers (12/99); Trans-Consol. (8/00); Smith Terminal Trans. Svcs (1/02); FoodSource & Epic Roots (2/05); Hirdes Grp. & Bussini Trans. (9/05). Has 7,332 empls. Off. and dir. own 2.0% of stock; FMR, 9.0%; Morgan Stanley, 6.2%; Wellington Mgmt., 5.6%; TCW, 5.1%. (4/08 Proxy). Chrmn. & CEO: John Wiehoff. Inc.: DE. Addr.: 8100 Mitchell Rd., Eden Prairie, MN, 55344. Tel.: 952-937-8500. Internet: www.chrobinson.com.

Though strong, C.H. Robinson's March-quarter results were a bit below expectations. Share net came in at $0.50, a few pennies below our estimate. A narrower operating margin was the primary culprit, since the top line actually beat our estimate by 4%. Selling, general, and administrative (SG&A) expense rose more than 20%, reflecting costs incurred as a result of the company's expansion plans.

We've cut our bottom-line estimates for both this year and next by a nickel per share. SG&A expense should remain high throughout the year, as the company opens new offices and implements its expansion plans. (Note: Robinson's headcount at the end of March was 10% higher than a year earlier, and is continuing to rise). Thus, we lowered our operating margin estimate for this year by 30 basis points, to 7.1%. As a result, we expect share net to total $2.10 this year, 13% higher than last year's tally. Robinson earns good money even when the transportation segment is turning down. The company serves as an intermediary, receiving revenues from customers that need goods shipped, and then hiring a trucking operator to transport the cargo. The company's profits are derived from the difference between the prices received from customers and paid out to truckers. The spread usually widens when industry conditions are weak, since shipping providers, who are competing more fiercely for business, are willing to accept a lower price for their services. However, the rate that customers pay usually falls by a smaller amount. Share net should grow at a 17% clip next year, to $2.45, on revenues of $9.5 billion.

This stock is a good choice for momentum investors, in our view. CHRW carries our Highest (1) rank for Timeliness.

Long-term investors should hold off for now, though. The company should grow nicely over the next 3 to 5 years, but we believe this is already baked into the share price. The stock is up 16% since our March review and over 30% year to date. As a result, CHRW's capital appreciation potential falls below the *Value Line* median.

(D) Incl. intangibles. In 2007: $177.9 mill., $3.61/share. (E) In millions, adjusted for stock splits.

BUSINESS: CLARCOR Inc. has three operating groups: Engine/Mobile Filtration for transportation, mining, farm equipment (44% of '06 sales); Industrial/Environmental Filtration for construction, industrial machinery (47%); Packaging for consumer and industrial products (9%). Acquired Purolator/Facet 9/99; Total Filtration Services 6/01; Locker Filtration 6/02; Purolator EFP 9/04; Niagara 4/05; Martin Kurz 11/05; 80% of Shifa SA 3/07. Has about 5,500 employees. Off./Dir. own 5.9% of stock; GAMCO Investors, 5.1%; Columbia Wanger Asset Management, 8.4%; Neuberger Berman, 14.6% (2/08 proxy). Chmn, Pres. & CEO: Norman E. Johnson. Inc.: DE. Add.: 840 Crescent Center Drive, Suite 600, Franklin TN 37067. Tel.: 615-771-3100. Internet: www.clarcor.com.

CLARCOR posted mixed fiscal second-quarter results (year ends January 31st). On the bright side, share net for the period climbed 17% from a year ago, to $0.48. What's more, the top line advanced 14%. However, these gains were achieved primarily through acquisitions, and to a lesser extent, favorable currency effects. Excluding these contributions, revenues actually declined 2%. Particularly, domestic engine/mobile filtration sales were relatively flat, while packaging segment sales dropped 6%. Also, the bottom line was hurt by rising raw material costs, but some of these expenses were passed on to consumers.

We expect share earnings to rise 11% in fiscal 2009. International operations should continue to prosper from healthy demand and a weak U.S. dollar over the coming year. Specifically, based on current order patterns, management thinks that overseas freight tonnage movement will gradually increase going forward, thereby lifting filter sales to heavy-duty trucks. Meanwhile, industrial filter revenues will likely benefit further from greater demand in the oil & gas, aerospace, aviation fuel, and industrial liquid markets, and a reduction in shipping delays.

We project annual bottom-line gains of 10%–15% over the 3- to 5-year pull. We believe that by that time CLARCOR will achieve its cost savings goals from the current restructuring efforts. In addition, sales contributions from international operations have been on the rise, and may well be around 30% of total revenues within this time frame. Risks to our projections, though, include a sustained slowdown in key end markets such as the general industrial and trucking sectors, changes in environmental laws, and volatility in international operations.

These shares are ranked to mirror the year-ahead markets. And although they have inched down a bit since our April coverage, this was likely due to the near-term uncertainties in the company's domestic markets. Looking ahead, we think that successful integration of recently acquired companies will be necessary for the growth prospects we foresee in the next few years. That said, appreciation potential over the 2011–2013 haul is unexciting.

BUSINESS: Mack-Cali Realty Corporation is a real estate investment trust providing leasing, management, acquisition, development, construction, and tenant-related services for its portfolio. As of December 31, 2007, it owned or had interests in 294 properties (primarily office and office/flex buildings) totaling 33.7 million square feet, plus land for development of over 11 million square feet of commercial space, located primarily in the northeast United States. Officers and directors own 10.2% of common shares; Morgan Stanley, 14.4%; The Mack Group, 12.1%; Cohen & Steers, 11.7% (4/08 Proxy). Organized: Maryland. Chief Executive Officer: Mitchell E. Hersh. Address: 343 Thornall Street, Edison, New Jersey 08837. Telephone: 732-590-1000. Internet: www.mack-cali.com.

These are challenging times for Mack-Cali Realty Corporation. Difficult economic conditions are squeezing demand for office real estate. Competitive pressure has not helped matters, either. On the positive side, the REIT's portfolio remains well-leased (roughly 92% at present). That has been possible, in part, by a "proactive early lease renewal program", which has laddered maturities and minimized lease rollovers. What's more, Mack Cali's numerous tenants are of high quality and come from a variety of industries. Indeed, during the first quarter of this year, new agreements and/or renewals were signed with Aetna Life Insurance Company, Tyco Telecommunications, JPMorgan Chase Bank, and Montefiore Medical Center, to name a few. Nevertheless, 2008 funds from operations (FFO) per share may only approximate or be slightly lower than last year's figure. But FFO per share stands to increase a bit in 2009, to $3.60, assuming some improvement in the business climate.

We remain constructive about the REIT's 3- to 5-year prospects. Mack Cali holds a solid position in a number of markets in the Northeast, including central and northern New Jersey and Westchester County, New York. These areas ought to continue to benefit nicely from high barriers to entry (e.g., land to develop new properties is scarce, and the government approval process is lengthy). Furthermore, the company boasts a substantial amount of developable land near existing properties, providing the capability to meet clients' changing needs.

These shares offer a generous amount of current dividend income, which we think will be preserved in the present tough operating environment partly because of Mack-Cali's adequate finances. More increases in the payout seem plausible, too, supported by our 3- to 5-year projections.

The stock's performance has not been immune to the malaise afflicting the overall market, reflecting record oil prices (which have sparked fears of inflation). Consequently, these shares don't stand out for Timeliness. Long-term capital appreciation possibilities are not impressive, either.

Frederick L. Harris, III *July 18, 2008*

BUSINESS: CONMED Corporation is a medical technology with an emphasis on surgical devices and equipment for minimally invasive procedures and monitoring. Products serve clinical areas of arthroscopy (38.1% of '07 revenues), powered surgical instruments (21.5%), electrosurgery (13.3%), cardiac monitoring disposables (11.0%), endosurgery (8.5%), and endoscopic technologies (7.6%). They are used by surgeons and physicians in a variety of specialties. Has about 3,200 employees. Officers & directors own 5.7% of common stock; Dimensional Fund Advisors, 8.1% (4/08 Proxy). Chairman: Eugene R. Corasanti. President & CEO: Joseph J. Corasanti. Incorporated: NY. Address: 525 French Road, Utica, NY 13502. Telephone: 315-797-8375. Internet: www.conmed.com.

CONMED continues to impress. The medical device maker posted earnings of $0.43 a share in the second quarter, 23% better than last year, and well above the high end of guidance. Sales increased a better-than-expected 13%, to $193 million, with continued penetration abroad being largely responsible. Indeed, international sales surged 46%, while U.S. demand was far more muted. Earlier cost-cutting initiatives also played a role. Facility closures and the use of lean manufacturing procedures helped boost margins.

We've raised our full-year 2008 share-earnings estimate by a little more than a nickel, to $1.64. Top-line growth is likely to remain solid in the second half of the year, getting a boost from further penetration overseas, as well as the rollout of new products, particularly in the Arthroscopy and Endoscopic Technologies franchises. Margins will probably move a little higher, as the company raises its selling prices in order to keep up with soaring commodity prices. In all, we now look for the company to post 11% share-net growth in the second half of the year.

Margin expansion should help maintain double-digit share-net growth in 2009. Management has announced that there is more restructuring on the horizon, with additional manufacturing capacities being transferred to Mexico within the next year and a half. The lower overhead costs ought to help offset the higher input costs and boost margins.

Wall Street has taken notice. CONMED stock has jumped 20% since our May review and is currently trading near its all-time, split-adjusted high. Unfortunately, the current price already factors in a healthy portion of the price advances we envision out to 2011-2013 and, thus, the offering does not stand out for 3- to 5-year appreciation potential. We expect earnings growth will slow by early next decade, as a lack of investment in product development (the company only spends 4% of sales on R&D) takes a toll on the top-line growth rate and, possibly, the company's market niche. Acquisitions, which have become a staple as a means to fuel growth in recent memory, are unlikely based on the company's lack of financial flexibility at this juncture.

Andre J. Costanza *August 29, 2008*

A) Diluted earnings. Excludes nonrecurring gains (losses): '98, (22¢); '99, (8¢); '03, 41¢; (57¢); '05, (33¢); '07, 5¢. Quarterly earnings may not sum due to rounding. Next earnings report due late Oct.
(B) Includes intangibles. In '07: $488.7 million, $17.83 a share.
(C) In millions, adjusted for stock split.

BUSINESS: Comcast Corporation is the leading cable TV operator serving approximately 24.1 million subscribers in 39 states and Washington, D.C. Internet service has approximately 13.2 million subscribers; phone service, 4.6 million. Acquired Jones, 4/99; Lenfest, 1/00; AT&T Broadband, 11/02. Sold Comcast UK, 10/98; 57% stake in QVC 9/03. Has about 90,000 employees. Insiders own 5.0% Class A Special stock; 100% Class B stock. Dodge & Cox owns 11.4% of Class A; Microsoft, 7.2%; (3/08 proxy). Insiders hold voting control on 33.5% of total voting shares. Chairman, President & Chief Executive Officer: Brian L. Roberts. Incorporated: Pennsylvania. Address.: 1500 Market Street, Philadelphia, PA 19102. Tel.: 215-665-1700. Web: www.comcast.com.

Comcast began 2008 on a good note. Revenues continue to advance at a healthy pace, thanks to the proliferation of digital cable and high-speed Internet. More customers are choosing to combine these services, which augurs well for the cable industry. The company also has seen high growth in phone service connections, as more customers opt to use Comcast's digital voice service. This has more than offset losses at its circuit switch phone business, which will likely wind down by mid-2008. We believe that these trends should continue throughout the year, leading to double-digit top-line growth. Meanwhile, better operating leverage should widen margins for Comcast this year. We target earnings of $0.90 a share in 2008, which represents a 20% advance.

Subscription figures remain promising. Digital subscribers now constitute 65% of cable users, up from 55% over a year ago. This has led to more ordering of peripheral services such as digital video recorders (DVR) and HDTV. We believe that these numbers will rise as the airwaves convert to digital broadcasting. The deadline for channels to make the conversion is February, 2009. The company will also benefit from more sales of high-definition televisions, which require digital service to operate.

Improved video-on-demand service should benefit the company. This service, which enables users to purchase shows and movies, usually by paying a one-time or monthly fee, has become a popular viewing method for consumers, thanks to its ease and convenience. Comcast is increasing its selection to include more than 1,000 choices, making on-demand more appealing to a wider audience.

Comcast has healthy long-term growth prospects. The company should continue to thrive from a shifting cable structure over the next few years. Still, we remain cautious of stiffer competition as consumers gain the ability to choose between cable operators, which could pressure market share.

These shares are ranked Above Average for Timeliness (2). The stock also has wide price appreciation potential out to the 2011–2013 time frame.

BUSINESS: Compass Minerals International, Inc. engages in the production and marketing of inorganic mineral products in North America and the United Kingdom. It operates in two segments, Salt and Specialty Fertilizer. The Salt segment mines, processes, and distributes rock, evaporated, and solar salt. The Specialty Fertilizer segment produces and markets potash crop nutrients and industrial grade potash. Has 1588 employees. Neuberger Berman owns 13.9% of common stock; FMR Corp., 10.9%; officers and directors, 2.0% (4/08 Proxy). President & Chief Executive Officer: Angelo C. Brisimitzakis. Incorporated: Delaware. Address: 9900 West 109th Street, Suite 600, Overland Park, Kansas 66210. Telephone: (913) 344-9200. Internet: www.compassminerals.com.

Shares of Compass Minerals International have risen considerably in price over the past six months. The company turned in a strong performance for the first quarter. Revenues advanced about 44% in the recent period. The company experienced strong deicing sales, as a result of severe winter weather in southern Canada and the Great Lakes region. Compass Minerals also benefited from healthy demand for its sulfate of potash (SOP) specialty fertilizer products. Overall, share net increased roughly 85% in the recent interim. Favorable comparisons should continue in the coming quarters, and we anticipate an impressive bottom-line advance in the current year. Growth will likely continue in 2009, although perhaps at a more moderate pace.

Compass Minerals continues to raise prices. Subsidiaries North American Salt Company and Sifto Canada will increase prices for consumer and industrial products by $22 per ton, effective July 28th. This follows a $20-per-ton price hike at the beginning of June. The company will use the increased revenue to offset inflationary pressures and expand its operations. Elsewhere, subsidiary Great Salt Lake Minerals has increased the price of its SOP specialty fertilizer products by $75 per short ton, effective mid-June.

The Specialty Fertilizer segment should further benefit from favorable industry conditions. Healthy agricultural fundamentals are a result of economic growth from developing regions and interest in the production of biofuels. This, in turn, boosts fertilizer prices. We anticipate growth in SOP production at the company in the coming years, as Compass Minerals is investing in a multiphase project at the Great Salt Lake in Utah. It plans to upgrade its processing plant and improve its solar evaporation ponds at this location. The company will have an additional 100,000 tons of SOP capacity per year resulting from phase one by 2010.

These shares are favorably ranked in our momentum-based system. We anticipate solid share-earnings growth at Compass Minerals in the coming years. However, this appears to be discounted by the current quotation, and appreciation potential is below the *Value Line* median.

BUSINESS: Con-way Inc. (formerly CNF Inc.) provides freight transportation & services. Con-Way Freight and Transportation (70% of 2007 revs., 91% of op. inc.) owns a regional less-than-truckload carriers. Menlo Worldwide (30%, 9%) provides logistics and supply chain management. Owns Road Systems trailer manufacturing. Acquired Contract Freighters Inc. 8/07. Spun off Consolidated Freightways 12/96. Sold Menlo Forwarding 12/04; interest in Vector SCM joint venture 1/07. Has about 27,100 employees. Officers/directors own 2.3% of common; Invesco, 9.7%; FMR, 7.9% (3/08 proxy). Chairman: Dr. W. Keith Kennedy, Jr. CEO: Douglas W. Stotlar. Incorporated: DE. Address: 2855 Campus Drive, San Mateo, CA 94403. Tel.: 650-378-5200. Internet: www.con-way.com.

It's an uphill trek for Con-way's core less-than-truckload (LTL) service in the short run. The LTL business is challenged by a struggling economy, slowing demand, and cautious customers. Also, the company will have trouble keeping up with the unrelenting rise in diesel fuel costs. Fuel surcharges helped to offset that expense in 2007, but we think customers are going to push back this year. Con-way implemented a general rate increase in January, but even that is in danger, given competitive pricing pressures. In response to the competitive landscape, Con-way is streamlining its three regional LTL carriers into one operating structure. Rebranding expenses amounted to $3.7 million in the 2008 first quarter. That program should be completed this period. But we still look for a higher operating ratio over the balance of the year.

The acquisition of Contract Freighters Inc. (CFI) has gone surprisingly well, given the weak demand environment. Con-way purchased CFI in August of last year, gaining a solid foothold in the truckload sector. First-quarter 2008 revenues of $116 million and operating income of $10.3 million exceeded expectations. CFI has good synergy opportunities with Con-way's logistic subsidiary, Menlo, as well.

Menlo's profitability should improve in the second half of 2008. The segment's margins were compressed in the March quarter due to bad weather and integration costs in Asia. The unit executed two acquisitions there last year, which significantly increase global offerings and should pay handsome dividends as the consolidation is completed. Menlo will also begin to recognize revenue from a new Department of Defense contract in the second quarter. The company launched the first operating and management platform for this initiative late in the first quarter. Additional rollouts will take place through 2009.

Long-term investors should consider this stock. The company is facing cyclical weakness currently. However, it is well positioned for a rebound as the market improves, with an expanded global portfolio of transportation and warehousing offerings that should lead to higher returns.

Craig Sirois *June 6, 2008*

BUSINESS: *Coca-Cola Bottling Company Consolidated*, the second largest Coca-Cola bottler in the United States, produces and distributes carbonated and noncarbonated beverages, primarily the products of the *Coca-Cola Company*. It also distributes *Dr. Pepper*, *POWERade*, ready-to-drink *Nestea*, and *Frutopia* throughout most of its markets in southeastern U.S. Sparkling beverage products accounted for about 83% of 2007 sales. 2007 depreciation rate: 7.7%. Has about 6,800 employees. The Coca-Cola Co. owns 29.9% of common stock, J. Frank Harrison, III, 49.0% (3/08 proxy). Chairman. & CEO: J. Frank Harrison, III; President & COO: William B. Elmore. Inc.: DE. Address: 1900 Rexford Road, Charlotte, NC 28211. Telephone: 704-551-4400. Internet: www.cokebottling.com.

Market support for Coca-Cola Bottling has declined sharply since our May report. The 40%-plus descent suggests that investor confidence is easily shaken. Adding to the unease was the steep first-quarter share loss of $0.47. This, coupled with flat revenues, depicts a bottler that is facing stronger-than-expected headwinds from the domestic economy. We are a bit skeptical about June results (which were to be released after this issue was published), as the company's difficulties persist.

Lingering problems are showing no signs of near-term letup. Among the challenges are rising input costs and escalating fuel prices. To counter the heavier cost structure, COKE has raised prices. However, the hikes have not led to favorable consumer reception, as individual spending patterns are adapting to a troubled economy. In fact, volume declines in most of the company's beverage categories are an indication that people are spending less, even on well-known brands, like Coca-Cola.

The company, therefore, remains heavily reliant on its equity partner, The Coca-Cola Company. Coca-Cola's innovation, aquisitions, advertising, and promotional activity aid COKE. One example is the new *Full Throttle* drink that was recently introduced in the beverage maker's hydration segment. Distribution of the new 16-ounce can is mainly being done in the Southeast, which encompasses COKE's territory. This product can be accretive to COKE's future profits. Also, Coca-Cola Bottling signed an agreement with its equity partner regarding brand innovation and distribution arrangements. The agreement gives The Coca-Cola Company the option to purchase beverage brands owned by Coca-Cola Bottling, as the latter company occasionally does invest in brands independent of Coca-Cola.

This untimely stock holds respectable 3- to 5- year capital appreciation potential. Still, the issue is likely to appeal only to patient accounts.

Founded in 1938 and incorporated under Oregon law in 1961, Columbia Sportswear Company has grown from a small, regional hat distributor to a global leader in the active outdoor apparel industry. The company completed an initial public offering of 9,660,000 shares (including an over-allotment option of 1,260,000 shares) of its common stock on April 1, 1998, which net proceeds of approximately $106.9 million. Goldman, Sachs & Co., NationsBanc Montgomery Securities LLC, and PaineWebber Incorporated were the U.S. underwriters.

BUSINESS: Columbia Sportswear Company designs, manufactures, markets, and distributes active outdoor apparel, including outerwear (37% of '07 sales), sportswear (42%), rugged footwear (17%), and equipment/accessories (4%). As one of the largest outerwear manufacturers in the world and the leading seller of skiwear in the U.S., the company has developed an international reputation for quality, performance, functionality, and value. International business: 43% of '07 sales. Acquired Mountain Hardwear, 3/03. Has approximately 3,060 employees. All officers/directors own 65.9% of common (4/08 proxy). Pres. & CEO: Timothy P. Boyle (owns 43.5%). Inc.: Oregon. Addr.: 14375 NW Science Park Dr., Portland, Oregon 97229. Tel.: 503-985-4000. Internet: www.columbia.com.

Columbia Sportswear's bottom line has slipped into the red. Results for the seasonally slow June interim came in weaker than we had expected, with the apparel maker posting a net loss of $0.05 a share on a 3% revenue decline. Sales in the U.S. (down 18%) were especially disappointing, reflecting cautious spending on the part of consumers and Columbia's retail customers. Gross margins, meanwhile, were hurt by increased manufacturing costs and an uptick in markdown activity. In addition, the sluggish top line prevented the company from leveraging its investments in new marketing campaigns and technical-oriented product lines.

The turnaround from here will probably be gradual. We think that revenues will remain on the light side through the balance of 2008 at least, as Columbia's large retail clients, concerned about their own cost structures in the current economic environment, continue to manage their inventory positions quite conservatively. The company should also lose some market share in the U.S. to aggressive private labels, and encounter heightened competition from The North Face, especially in the core outerwear merchandise category. Below the top line, the near-term outlook is similarly gloomy. Indeed . . .

Pricing softness and heavy investment expenditures ought to squeeze the firm's operating margin in the coming periods. Aside from stepped-up advertising efforts and new product launches, Columbia plans to pour money into expanding its retail footprint. In particular, the company intends to open a series of first-line retail locations in metropolitan markets across the country. These stores, coupled with a growing base of outlet shops, should help the apparel maker to build brand awareness and better manage its inventory.

These untimely shares offer wide recovery potential to 2011-2013. Once business conditions on the home front improve, margins will likely rebound, and the company's new sales initiatives should begin to have a greater impact on the top line. Plus, we look for the international unit, which is still performing fairly well, to become more profitable and to grow in importance over the next few years.

BUSINESS: ConocoPhillips was formed on Aug. 30, 2002, when Phillips Petroleum acquired Conoco. It is an integrated oil and petrochemicals company with assets around the globe. Primary operating segments incl.: Exploration & Production (25% of '07 sales), Midstream (3%), Refining & Marketing (71%), Chemicals/Emerging Bus./Other (1%). Has 20% ownership stake in LUKOIL. Avg. worldwide production in '07: 1,857,000 boe p/d. Disc. future net cash flows of reserves: $67,162 mill. 2007 avg. realized crude price was $67.11. Has 32,600 employees. Off./dir. own less than 1.0% of common. Vanguard Fiduciary Treasury owns, 6.4% (4/08 proxy). Chairman/CEO: James J. Mulva. Inc.: DE. Addr.: Bartlesville, OK 74004. Tel.: 918-661-6600. Internet: www.conocophillips.com.

ConocoPhillips is on a roll. The integrated energy company posted stellar results for the first quarter. Earnings were up over 38% on a 33% revenue advance in the interim. And we believe that the company will post a double-digit share-net advance for 2008.

Higher realized oil and natural gas pricing has been a boon for business, and has been a windfall for upstream activities at its Exploration & Production (E&P) segment. Crude oil topped $133 a barrel in May, and this helped lift natural gas prices, especially in the U.S. Even with seasonal maintenance planned for the second quarter, these strong quotations should ensure solid continuum through midyear, at least.

Management is working to improve productivity and overall efficiency to keep its cost structure steady. Year to date, operating costs have been relatively stable. Still, the company's capital program is sizable, with a budget of approximately $15 billion. About 20% of its expenditures will be spent on its downstream segment. Initiatives, such as upgrading refineries, will bolster its Refining & Marketing unit, which posted less-than-ideal results as it fell in line with narrower industry margins and utilization rates. COP has partnered in several joint ventures, which should help broaden its global reach, as well. We like these moves, as they will help widen margins, and the leaner expense base will make the company sturdier for long-term growth.

The company has been putting its cash to good use. Share buybacks have been a key focus. COP repurchased $2.5 billion of shares during the March period, and paid $730 million in dividends. It has allocated another $10 billion to reduce its share count through the end of 2008, which augurs well for per-share results. Too, management may use available resources to help pay down long-term debt and improve the balance sheet.

These timely shares do not stand out for the long-term. On the earnings front, ConocoPhillips looks solid, still, we believe that this issue's explosive growth of recent years will likely start to moderate if advances in oil and natural gas pricing begin to slow.

BUSINESS: ChoicePoint Inc. provides decision-making intelligence, including risk management and fraud prevention to businesses, government agencies, and individuals. Its businesses are focused on four primary markets - Insurance Services, Business Services, Gov. Services, and Marketing Services. Sold Osborn Grp. (8/01); Commerical Specialists Assoc. (2/03). 2007 revenue segments: Insurance Services, 44%; Screening, 27%; Business Services, 19%; Marketing Services, 10%. Has about 5,000 employees. Baron Capital owns 12.1% of common stock; Oppenheimer, 7.0%; Off./dir. own 9.1% (3/07 proxy). Chmn. & CEO: Derek Smith, Inc.: GA. Addr.: 1000 Alderman Dr., Alpharetta, GA 30005. Tel.: 770-752-6000. Web: www.choicepointinc.com.

ChoicePoint is set to be acquired by Reed Elsevier. The two companies agreed to the acquisition in early 2008. Reed will pay $50 a share in cash to complete the deal, which equates to a total of roughly $4.1 billion. The offer, which was close to a 50% premium from pre-agreement trading levels, was approved by a wide margin by ChoicePoint shareholders.

Meanwhile, the Insurance Services segment continues to drive profits higher. Total revenue at the division increased by almost 14% during the recent March period. The company reported growth at all three subdivisions despite overall weakness in the domestic insurance and housing sectors. The profit margin at the segment slipped a little, but still exceeded 50%.

Screening demand has flattened a bit. This segment's top line rose only 1% during the first quarter as the job market faltered, resulting in fewer background checks than anticipated, particularly in the retail sector. The division's contribution to the bottom line was up only modestly as well. Growth here should pick up, though, as domestic economic conditions improve.

The Marketing Services segment has continued to struggle. This division was hurt markedly by the subprime credit crisis. First quarter revenue fell 29%, year over year. Reduced spending from financial services companies will continue to hurt business. The company may look to other segments, such as the retail and auto markets, to generate growth.

Expansion has stalled at ChoicePoint. The company has failed to grow within the information services field, which has led to unexciting profits over the past few years. Our 3- to 5-year outlook for the company, absent the Reed Acquisition, does not support much appreciation potential for the stock.

The stock's Timeliness rank is suspended due to the pending acquisition. The issue is trading slightly below the purchase price, which may interest investors looking for a quick 3%–4% return on investment. The transaction is expected to close later this summer.

Charles River Laboratories, founded in 1947, began trading on the NYSE on June 28, 2000, after completing an initial public offering of 14 million share at $16 a share. Co-writers of the offering were DLJ and Lehman Brothers. Subsequent equity financings were conducted in March, 2001, when the company sold 3.5 million shares at $19, and in July, 2001, when another 6 million shares were sold at $29 a share.

BUSINESS: Charles River Laboratories Int'l operates two divisions: Research Models & Services (RMS) (47% of 2007 sales, 62% of operating income) offers animal models, and transgenic, contract staffing, and vaccine services. Preclinical (53%, 38%), provides toxicology and drug metabolism testing, and pathology, interventional, and surgical services. Has 80 facilities in 15 countries. Foreign business acct'd for 50% of 2007 sales. 2007 depreciation rate: 5.3%. Has made many acquisitions, including Inveresk Research in 10/04. Has 8,000 employees. Officers & directors own 3.0% of stock; other major investors, 31.0% (3/08 Proxy). Chairman & CEO: *James C. Foster. Inc.: DE. Address: 251 Ballardvale St., Wilmington, MA 01887. Tel.: 978-658-6000. Internet: www.criver.com.*

In 2008, we look for Charles River to post a 18% share-net advance. The company performed well in the first half of the year, besting the year-earlier same-period results by over 22%. We expect steady growth to continue, as big pharma and drug companies seek to wring out costs savings by focusing on core compentencies such as drug discovery, while outsourcing testing and clinical trials. Plus, its Genetically Engineered Models and Services division, particularly its inbred and immuno-deficient mice, which better mimic human diseases, have been key drivers in sales growth. However, **The bottom line would likely be higher but for a few problematic issues.** In the June interim, the study mix shifted to a less favorable combination including more lower-margined services. There were also several timing issues, as old studies were completed, new studies did not come on-line as quickly as desired, and some slippage persisted. Too, duplicate costs continue at the company's Nevada facilities, as the new location is not yet at full utilization, delaying a reduction in usage and expenses of the old location. These issues will likely remain in the third quarter, but CRL does expect an improvement by yearend based on its backlog.

Tuck-in acquisitions are a key component of Charles River's growth strategy. The company recently signed an agreement with NewLab BioQuality AG, a German concern, that will likely boost Charles River's current clinical services offerings, especially in continental Europe. NewLab will offer consulting services to aid customers in meeting compliance of good manufacturing practice standards and develop testing programs. The $53 million all-cash deal is expected to close by the end of the third quarter, and will help enlarge the company's global presence.

Momentum investors may want to take note of CRL stock. Investors have ridden this stock to its 52-week high of late. It has climbed more than 25% since March. And, while these shares are timely for the year ahead, the potential returns are unappealing looking out to the 3- to 5-year horizon, as much of our projected earnings advances seem to be already reflected in the current quotation.

Mary Beth Wiedenkeller *August 29, 2008*

BUSINESS: Computer Sciences Corporation is one of the world leaders in the information technology (IT) and professional services industry. CSC helps its clients use IT more efficiently in order to improve their operations and profitability. The company offers a broad array of services to clients in the global commercial and government markets and specializes in the application of complex IT to achieve its customers' objectives. Has about 89,000 employees. Acquired Covansys, 7/07. Officers and directors own 1.0% of stock; Dodge & Cox, 14.3%; Barclays Global Investors, 7.6% (6/08 Proxy). Chairman, President & CEO: Michael W. Laphen. Incorporated: NV. Address: 2100 East Grand Avenue, El Segundo, CA 90245. Telephone: 310-615-0311. Internet: www.csc.com.

Computer Sciences got off to a decent start this fiscal year (began March 28th). June-quarter revenues climbed 16% (about 12% in constant currency), thanks mostly to the Business Service and Solutions (BS&S) group. This segment's top line grew some 39% (31% in constant currency). Share net was $0.79, down slightly from the year-earlier figure. (The 2007 figure also included $0.19 worth of one-time charges related to restructuring and an executive retirement agreement.) Higher interest, depreciation, and amortization expenses and inefficiencies linked to last year's purchase of Covansys were culpable for the lack of earnings growth.

The information technology (IT) company has also been busy drumming up new business. Orders reached $5.4 billion in the fiscal first quarter. Management said an additional $2.9 billion from previously unreported awards boosted the quarterly total across all three business lines. Notably, the Global Outsourcing Services (GOS) division, which focuses on winning mid-sized contracts worth less than $350 million, represents an estimated $2.9 billion of the total. The BS&S and North American Public Sector (NPS) segments both rung up $1.2 billion in new business in the June quarter, which also augurs well for the balance of 2008.

Our full-year share-earnings estimate remains unchanged at this time. We think the U.S. economy will remain fairly stagnant in the coming six to 12 months, while the global economy is expected to continue its slow and steady climb, overall. As a result, we expect more companies to call on CSC to help improve profitability, using advanced technology and outsourcing. This ought to lead to hefty top-line gains for the GOS division. The fact that this group focuses on the underserved mid-size niche also helps. We think the NPS segment will benefit from increased work from the Department of Defense, and the BS&S unit will likely continue firing on all cylinders.

This issue is not an overwhelmingly enticing selection at this time. It is ranked to perform on a par with the market in the coming six to 12 months, and long-term capital gains potential is modestly above average.

Erik M. Manning *August 22, 2008*

Cisco Systems was formed in 1984 by computer scientists from Stanford University to commercialize the technology used in developing a campus-wide network to integrate local networks of various computer systems. Its first multi-protocol routers were shipped in March 1986. On February 16, 1990, Morgan Stanley & Co. and Smith Barney, Harris Upham & Co. managed the initial public offering of 806.4 million shares at $.06 a share (adjusted for splits).

BUSINESS: Cisco Systems, Inc. is the leading supplier of high-performance internetworking products for linking local-area and wide-area networks of computer systems. Products include routers, LAN and ATM switches, dial-up access servers, and network management software. The Cisco IOS software platform ties these products together, delivers network services, and enables networked applications. Foreign business, 44.8% of revenues. R&D, 12.9% of revs. '07 deprec. rate: 13.5%. Has about 61,535 employees. Officers/Directors hold less than 1.0% of stock; Barclays, 5.0%. (9/07 proxy). Chairman & CEO: J.T. Chambers. Incorporated: California. Address: 170 W. Tasman Drive, San Jose, CA 95134-1706. Tel.: 408-526-4000. Internet: www.cisco.com.

Two of Cisco's three main segments posted good results in its fiscal third quarter (ended April 26th). Routing products (23.5% of 2007 sales) fared well, with that segment posting a 14% year-over-year revenue advance. High-end products, notably the CRS-1 Carrier Routing System, drove much of the growth. Advanced Technologies (27.4% of 2007 sales) also performed well, although its roughly 17% year-over-year surge was aided by the recent WebEx acquisition. Most product areas within Advanced Technologies grew about 10%.

The third, Switching, did not keep pace, growing just 3%, year over year. (Switching accounted for 42.3% of 2007 revenues. A fourth category, Other, made up the remaining 6.8%). Two factors worked against Switching during the quarter. First, many companies are reducing their capital budgets in response to the weakening domestic economy. Switching has been hit particularly hard by these cutbacks, as these products tend to sell when companies make expensive upgrades of their data networks. In addition, Cisco is in the process of rolling out a pair of new, high-end switchers, the *Nexus 5000* and *Nexus 7000*, and buyers may have been waiting for these units to become available. Moving forward, we expect the *Nexus* series to help Switching revenues, although the segment will likely grow at a slow clip until the broader market, and with it technology spending, improves.

These shares do not stand out for the year ahead (Timeliness: 3). The issue was flying high until November, when concerns about U.S. technology spending sent them tumbling. Based on the results from the Switching division, it appears that those concerns had some merit. Until the economy rebounds, earnings growth is likely to remain below Cisco's long-term goal of 12%–17%.

However, the 3- to 5-year picture is bright. Because of its size and the quality of its products, Cisco is better positioned to weather an economic downturn than are many of its competitors. Indeed, over the last 15 years, Cisco has managed to gain market share during every slowdown. We see little reason to doubt that this quality tech company will continue to prosper.

Christopher Robertson June 27, 2008

(A) Fiscal year ends on last Saturday in July (four 13-week quarters). (B) Diluted earnings. Excludes nonrecurring items: '98, (8¢); '99, (7¢); '00, (17¢); '01, (38¢); '02, (14¢); '03, (9¢); '04, (14¢). '01 includes $0.15 inventory writeoff. May not sum due to rounding. Next earnings report due early Aug. (C) In millions, adjusted for stock splits. (D) Long- and short-term investments accounted for within current assets beginning in fiscal 2006.

BUSINESS: Carlisle Companies Inc. is a diversified manufacturing and distribution firm. Construction Materials (47% of '07 sales) manufactures and sells rubber and thermoplastic polyolefin roofing systems. Industrial Components (28%) includes the tire and wheel business and power transmission belt line. Transportation Products (7%) is a specialty trailer operator. Specialty Products (6%) does on- and off-highway motion control systems. General Industry (Other) (12%) focuses on foodservice, wire and cable, and refrig. truck bodies. 2007 depr. rate: 8.7%. Off. & dir. own 3.9% of stock (2/08 Proxy). Chrmn., Pres. & CEO: David A. Roberts. Inc.: DE. Addr.: 13925 Ballantyne Corporate Pl., Suite 400, Charlotte, NC, 28277. Tel.: 704-501-1100. Web: www.carlisle.com.

Our expectations for Carlisle Companies have dimmed considerably. The company suffered a sizable setback in the March quarter when raw material cost increases and productivity problems at some tire and wheel plants undermined results. Share net came in at $0.45, or $0.20 lower than both we and the Street expected. Investors should note that this tally excludes a loss of $1.46 a share from aftertax impairment charges. Still, we have now reduced our 2008 earnings estimate by $0.40, to $3.00 a share, just 2% higher than 2007's level.

A similar earnings cut is reflected in our $3.35 EPS target for 2009. Our view for this year will likely remain downtrodden until some relief from increasing raw material costs surfaces. With that, passing on these costs to its customers will need to be done successfully. The construction materials sector is off to a solid start in that regard. Here, pricing increased by roughly 5% in the month of June. We anticipate further price hikes will be forthcoming.

The company's portfolio is entering a state of flux. Management has decided to divest the power-transmission and on- highway brake business. Although no deal was imminent as we headed to press, this entity will be reported as a discontinued operation beginning with the forthcoming second-quarter release. We will not be factoring this maneuver into our earnings presentation until it is completed, but we are estimating the deal for entities that had about $200 million in sales last year would generate in excess of $100 million in net cash. Elsewhere, Carlyle, a supplier of wire and cable systems for in-flight entertainment and cable assemblies for data networks, was acquired. It will be placed within the applied technologies group and nearly doubles the size of the company's Tensolite wire and cable business. Synergies here should aid margin expansion starting next year.

This equity has fallen out of favor (4: Below Average) in our Timeliness Ranking System. Our reduced bottom-line expectations and weakness in the stock's price of late assisted this descent. However, for the pull to 2011-2013, these shares offer above-average capital appreciation potential.

Capital Trust was created in July of 1997 through the acquisition and recapitalization of an existing public company. Following this, it commenced operations in the field of commercial real estate finance. It issued additional Class A shares in 1997, 2004, and 2006. In February of 2003, the board of directors approved a plan for the company to be taxed as a real estate investment trust.

BUSINESS: Capital Trust, Inc. operates as a real estate investment trust for federal income tax purposes. Specializes in originating and managing credit-sensitive structured financial products and makes investments for its own account, as well as for third parties through a series of investment management vehicles. Originated $2.5 billion of new loans and related investments during 2007. Has 53 employees. W.R. Berkley Corporation owns 17.6% of common stock; Vornado Realty, 6.5%; Neuberger Berman, 6.4%; all officers and directors, 8.1% (4/08 proxy). Chairman: Samuel Zell. Chief Executive Officer: John R. Klopp. Incorporated: Maryland. Address: 410 Park Avenue, 14th Floor, New York, NY 10022. Telephone: 212-655-0220. Internet: www.capitaltrust.com.

Capital Trust faces a challenging environment. Reflecting deteriorating conditions in the commercial real estate market (in this case, New York City office space leasing), the company took a $50 million loan loss reserve against its advance to the Macklowe organization. The writeoff fully eliminates its financial exposure to further deterioration and, beyond Macklowe, CT has only one ($12 million) nonperforming loan related to a southern California condo project (now in foreclosure). In a recent conference call, management noted that although it did not anticipate any further near-term provisions for losses, additional weakening of the economy would likely put further pressure on borrowers' ability to meet their obligations. Even after excluding the loss reserve as a nonrecurring item, second-quarter earnings came in at nearly half the prior-year total. Moreover,

Earnings comparisons will likely remain soft for the remainder of the year and into 2009. Reflecting the likelihood of continued difficulties in the real estate and capital markets, we've lowered our 2008 earnings estimates by $1.00 a share, suggesting about a 30% year-over-year decline. Prospects for a return to profit growth next year also look slim. We've reduced our 2009 share net estimate by $1.40, to $2.50.

The quarterly dividend will be cut by 25%, to $0.60 a share, effective the September interim. The move was made in light of lower interest income. Specifically, every 100-basis-point move in LIBOR impacts CT's annual earnings by about $5.3 million, or $0.25 per share. Reflecting the Fed's easing, LIBOR averaged 2.59% in the second quarter, roughly half the level throughout 2006 and 2007.

These untimely shares are best suited for more-venturesome investors. The stock's price has fallen about 40% just since our May report and, as a result, remains ranked to underperform the broader market averages for the coming year. We've also taken a more conservative view on longer-term earnings, reducing our 3- to 5-year outlook by about a third. Owing to the sharp pullback in price, however, the stock holds wide recovery potential over that period.

Mario Ferro *August 22, 2008*

As a subsidiary of Corning, Inc., Covance, Inc. acquired eight medium-sized businesses over a ten-year span to establish itself as a viable contract research organization. (CRO). In December 1996, Corning spun off Covance, Inc. to the public in a tax-free transaction. Subsequently, Covance was unable to consummate mergers due to an IRS rule that prohibits tax-free spinoffs from issuing stock. This rule expired on December 31, 1998.

BUSINESS: Covance, Inc., is one of the world's leading contract research organizations (CRO) and benefits from development outsourcing demand in the pharmaceutical industry. Sales breakdown in 2007: Early stage development (pre-clinical and early clinical), 47%; biomanufacturing, 4%; clinical phases II-III, 17%; central lab services, clinical packaging, and health economics services, 32%. Has offices in 21 countries and conducts clinical studies in 32 countries. 2007 depr. rate: 6.9%. Ernest Partners LLC owns 8.0% of stock; FMR Corp., 7.7%; Neuberger Berman, 5.9%; off. & dir. own 1.9% (3/08 Proxy). Chairman: C.A. Kuebler, CEO & President: Joe Herring. Inc.: DE. Addr.: 210 Carnegie Center, Princeton, NJ 08540. Tel.: 609-452-4440. Internet: www.covance.com.

Covance stock has held up well in a weak market since our April report. First-quarter results were slightly below expectations. Investors were somewhat perturbed by a decline in net new business wins ($11 million below expectations), and a book-to-bill ratio of only 1.14x, below the lowest estimate of 1.15x. Since then, however, these indices have improved markedly, and the stock recovered.

In 2008, we look for Covance to post 17% average annual earnings growth for the eighth-consecutive year. This is the primary reason this equity generally sells at a 12% premium to the CRO industry average. Share net may not climb at the rate it has in the last two years, though, due to an estimated $7 million decline in Early Development sales, which should be partially offset by a $3 million increase in Late Stage revenue, on the strength of Phase II/III and Central Lab business. Margins should hold up, due to lower SG&A expenses, as a result of cost-cutting.

Covance is rectifying capacity constraint in its Early Development (ED) operation. A lack of capacity in this segment is the reason revenues are falling. The company has been frantically trying to get facilities up and running. We look for a new toxicology plant to be on line at the time of publishing this report, which ought to allow for a pickup in ED revenue. Another tox plant in Virginia is due to come on line at yearend. Furthermore, the Chandler, Arizona preclinical facility is scheduled to open in 2009, and the Harrogate, UK. plant is on track for a late 2008 opening.

This might be a good time to add this timely issue to a well-rounded portfolio. Industry trends favor this company. Not only is it the co-leader in the preclinical tox testing and research-related arena, but it's the market leader in the Central Lab market. Large pharma and biotech entities, looking to keep their costs down, are increasingly entrusting Covance with a greater portion of their servicing needs. Moreover, we think Covance's recent agreement to form a 50/50 joint venture with China's leading R&D services operation, WuXi PharmaTech, is a long-term plus for the stock.

"Consumer Value Stores" began as a health and beauty aids chain in '63. It grew to 17 stores in '64. The first pharmacy opened in '67. In '69, the chain was sold to Melville, which aggressively expanded the operation, and coupled that with an aggressive acquisition strategy that included Revco and Arbor Drug. Melville restructured in '95, and changed its name to CVS on 11/19/96.

BUSINESS: CVS Caremark Corp. is the nation's foremost integrated services provider, combining one of the nation's leading pharmaceutical services companies with the country's largest pharmacy chain. It fills more than one billion prescriptions per year and has more than 6,245 locations in 40 states. New stores average about 11,500 square feet. Major acqs. include Sav-On and Osco (6/06) and Eckerd (8/04). Pharmacy (Rx) contributes abt. 68% of sales; 3rd-party, about 95% of Rx sales. Its PharmaCare business covers over 30 million lives. Has 200,000 employees. Off. & dir. own less than 1% of common stock (3/08 proxy). Chairman, Pres. & CEO: Thomas M. Ryan. Inc.: DE. Addr.: One CVS Drive, Woonsocket, RI 02895. Tel.: 401-765-1500. Web: www.cvs.com.

The union of CVS Caremark continues to move along without a hiccup. The nation's largest pharmacy provider posted earnings of $0.55 per share in the first quarter, 28% better than last year. Sales surged 62% and same-store comparisons improved 3.9%. Although tougher comps loom, given that the marriage was consummated last March, we believe that there is somewhere in the neighborhood of $700 million in cost savings to be realized this year, nearly double the original expectation. Thus, we've raised our 2008 and 2009 share-net estimates by $0.15 each to $2.45 and $2.85, respectively.

CVS stock has gotten some momentum behind it. It is up more than 10% since our March review and set a new all-time split-adjusted high. These shares are ranked 2 (Above Average) for Timeliness according to our momentum-driven ranking system and thus ought to outpace the broader market over the coming six to 12 months. That said,

We believe that the issue is still worth more than the current price tag. Despite the recent increase, the stock is trading at a price to earnings ratio of 17.4 times our 2008 earnings projection, well below our 2011-2013 forecast. CVS is the preeminent player in what we view as a very lucrative industry. It should continue to deliver strong earnings growth out to the 2011-2013 time frame, benefiting from an industry-leading position in a space with extremely healthy demographics. Investors may have been a bit cautious more recently, given news that New York Attorney General Andrew Cuomo was planning on taking legal action against the company for selling expired over-the-counter medicines and food products. We are not too concerned about the long-term ramifications, however.

The balance sheet adds to the company's long-term appeal. Although the Caremark purchase was capital-intensive, CVS is still financially flexible. With an expected $3 billion-plus in free cash flow generation this year, the company should be able to increase shareholder value via share repurchases, debt repayments, and/or dividend increases. Shareholders ought to benefit regardless of which avenue management decides to take.

BUSINESS: Corrections Corp. of America owns, operates and manages correctional facilities for federal, state and local governments. Provides inmate residential and transportation services. Offers rehabilitation and educational programs. Also offers healthcare, food and work & recreational services. Operates 65 facilities (41 company-owned) in 19 states and Washington, D.C., with a capacity of about 78,000. 2007 depreciation rate: 3.8%. Has 16,000 employees. Officers & directors own 5.4% of common shares outstanding; FMR LLC, 6.0% (4/08 proxy). Chairman: W.F. Andrews; President & Chief Executive Officer: J.D. Ferguson. Inc.: Maryland. Address: 10 Burton Hills Blvd, Nashville, TN 37215. Telephone: 615-263-3000. Internet: www.correctionscorp.com.

Corrections Corporation is on pace for solid top- and bottom-line gains this year, and next. The U.S. prison population is booming, and recently crossed a dubious threshold; for the first time, one in every 100 American adults is incarcerated. Too, the country's population of 18-to-24-year-old males — the demographic most likely to commit crimes — is on the rise. We believe CCA is well positioned to take advantage of these trends.

Higher utilization rates ought to give federal revenues a lift. Two facilities — The Stewart Detention Center in Georgia, and Florida's Citrus County Detention Facility — should feel the impact of higher compensated populations. Federal revenues may also benefit from swelling rosters at several other facilities.

Recent contract awards should bolster state revenues. Additional inmates at CCA's California, Arizona, and Florida facilities will likely mean higher management fees for the foreseeable future. However, some of the progress may be slightly offset by a lower headcount at the company's Washington, DC location.

The company plans to add nearly 7,000 beds by year's end. During the March period, average daily compensated population increased 6.1% from the prior year, a result of nearly 5,000 new beds coming on line over the past 12 months. And based on projected demand, CCA expects to bring 6,900 new beds into service during the remainder of 2008. Corrections also intends to expand total capacity at a forthcoming facility by 33%, to 2,232.

All told, revenues and earnings may advance 9%–10% and 18%–20%, respectively, each of the next two years. The operating margin has widened a bit, thanks to higher utilization rates and cost-cutting efforts. Too, CCA has made progress reducing ancillary costs, such as interest expense, which should benefit the bottom line.

Neutrally ranked Corrections Corporation offers wide appreciation potential over the long haul. With the overall U.S. population increasing, and the current malaise in the domestic economy, we should see a commensurate rise in demand for bed space in the years ahead.

Community Health Systems was formed in 1985 and incorporated in Delaware in 1996. In 1996 the stock was purchased by Affiliates of Forstmann Little & Co. The company went public on June 9, 2000, offering 18.75 million shares priced at $13.00 each. The IPO, which raised approximately $245 million, was underwritten by Merrill Lynch. A second offering of 10 million shares was completed on October 30, 2000.

BUSINESS: Community Health Systems engages in the ownership, leasing, and operation of general acute care hospitals in non-urban communities in the U.S. As of 12/31/07 it operated 115 hospitals in 27 states. Community Health is the largest non-urban provider in terms of facilities and second largest in terms of revenue in the U.S. Its hospitals offer a wide range of inpatient and outpatient medical services. Acq'd Pottstown Memorial, 7/03; Southside Regional, 8/03; Laredo Medical Center, 10/03, Triad, 7/07. Has about 59,000 full-time employees. Off./dir. own 5.6% of common; Franklin Mutual, 9.7%. (4/08 Proxy). Chairman, President & CEO: Wayne T. Smith. Inc. DE. Address: 155 Franklin Road, Suite 400, Brentwood, TN 37027. Telephone: (615) 373-9600. Internet: www.chs.net.

Community Health posted mixed results in the March interim. On a bright note, revenues for the period jumped 136%, year over year, to $2.7 billion primarily because of contributions from Triad Hospitals, which was acquired in 2007. The deal increased Community's hospital count by 45 units, to 115, from last year's first quarter, thereby helping to enlarge total admissions by 111%. In addition, on a same-store basis, the company was able to lift admissions and sales 3% and 6%, respectively, as results benefited from a strong flu season. Nevertheless, the soft pricing environment and a 140% jump in expenses offset the top-line gains, causing share earnings to decrease 11% from the prior year, to $0.54.

We project solid bottom-line advances for this year and next. The integration of Triad appears to be going well, and we expect its contributions to continue rising at a steady pace over the next few years. What's more, given historical trends, additional takeovers are likely to boost Community's earnings further. That said, investors should be aware of the effects larger bad debt expense would have on earnings. Indeed, this industrywide problem has already caused many medical service companies to reevaluate provisions for bad debts as uninsured admissions jump and as unpaid bills by some insured patients increase.

Community is well positioned for growth over the next 3 to 5 years. Although the balance sheet is highly leveraged, the company generates healthy cash flow. We think these funds will enable Community Health to expand coverage in new markets, recruit top physicians, enhance service offerings, and reduce the debt load in the coming years. These initiatives, along with greater in-patient volume and contributions from further acquisitions, will probably drive the low annual double-digit bottom-line gains we foresee over this time frame.

This stock has rebounded over 10% since our March review. And while it is only ranked to mirror the year-ahead markets, the equity offers wide appreciation potential over the 2011–2013 pull. All told, patient investors may find some appeal here over the long haul.

Randy Shrikishun *June 20, 2008*

(A) Diluted earnings. Excludes nonrecurring loss: '05, 23¢; '06, 42¢, '07, $1.35. Next earnings report due late July.

BUSINESS: Cytec Industries, Inc. is an industrial chemicals manufacturer of value-added specialty products. Surface Specialties (46% of 2007 sales) consists of coatings and resin products. Performance Chemicals (21%) includes water-treating and mining chemicals, and polymer additives. Engineered Materials (19%) primarily includes advanced composites and film adhesives. Building Block Chemicals (14%) includes acrylonitrile and melamine. '07 depreciation rate: 7.5%. Has about 6,800 employees. Officers & Directors own 5.0% of common shares; Barclays Global Investors, NA 5.2% (3/08 proxy). Chairman & CEO: David Lilley. Inc.: DE. Address: Five Garret Mountain Plaza, West Paterson, NJ 07424. Tel.: (973) 357-3100. Internet: www.cytec.com.

Cytec Industries continues to post good numbers, with earnings up 20% through the first two quarters. The bulk of this continues to be driven by the Engineered Materials segment. While only 20% of sales, it accounts for nearly half of the company's earnings (more below). Although customer inventory reductions will likely result in less robust earnings comparisons in the second half, the company should still show 10%–15% growth for the year. The uptrend is likely to be sustained in 2009, though perhaps moderating to the 5%–10% range.

Strong aerospace demand remains the major bright spot. Operating income for the Engineered Materials segment was up 28% in the half, to $86.4 million, reflecting strong growth from the large commercial aircraft and rotorcraft sectors. Sales of Cytec's composites are benefiting from both more planes being built and increased usage of the lightweight materials to offset soaring jet fuel costs. Moreover, management expects annual volume growth of over 10% in this business over the next five years, and capacity expansion is under way at Cytec's carbon fiber facility in South Carolina.

The company's other divisions are facing some challenges. On the plus side, Building Block Chemicals' operating earnings were up over 70% in the half, to $12.4 million, mostly due to selling price increases. Meanwhile, the Specialty Chemicals group continues to report volume growth, largely coming from the Asia/Pacific region. This is helping to offset weaker demand in the U.S. due to housing and automotive market declines. However, Cytec has not kept up with rapid increases in raw materials, energy, and freight costs. As a result, overall margins will be down for the year, but accelerated price increase initiatives should lead to improvement in the quarters ahead.

These neutrally ranked shares do not stand out at this juncture. Looking out over the next 3 to 5 years, continued strength in aerospace should help support double-digit annual earnings growth. However, the current quotation already factors in a good portion of these prospects, suggesting below-average appreciation potential out to 2011–2013.

BUSINESS: Developers Diversified Realty Corporation is a self-administered and self-managed real estate investment trust (REIT) which acquires, develops, redevelops, leases and manages commercial shopping centers. Developers Diversified Realty currently owns and manages over 740 retail shopping centers and development properties located in about 45 states, as well as Puerto Rico, and Brazil, containing about 163 million square feet of space. Has about 773 employees as of 12/07. Officers/directors own about 2.7% of common stock; Cohen and Steers, Inc. owns 8.0%, Vanguard Group, owns 7.6% (4/08 Proxy). Incorporated: Ohio. Address: 3300 Enterprise Parkway, Beachwood, Ohio 44122 Telephone: 216-755-5500. Internet: www.ddrc.com.

Developers Diversified Realty's property portfolio remains stable despite a more challenging environment. Although occupancy declined slightly, to 95.8%, during the March quarter, this level is still healthy given a weaker economy. Moreover, the top line advanced about 10% during the quarter, helped by contributions from recent property acquisitions and increased rental revenue. The company has managed to raise rents, particularly for new leases. Moreover, management has already renewed about 80% of leases due to expire this year, which should help stabilize results.

Meanwhile, expenses have increased, as well. Operating and maintenance costs rose about 35% during the quarter, due in part to acquired business. This offset slightly lower administrative costs. Elsewhere, operating income from the same-store property portfolio rose about 2%, which is a moderate advance.

We are leaving our funds from operations (FFO) estimates unchanged for 2008 and 2009. Earnings and FFO per diluted share declined during the first quarter. However, comparisons were difficult due to a tax benefit realized in the year-ago period. Excluding this benefit, FFO would have risen about 15% during the March quarter. We expect FFO in the second half of the year to benefit from increased transactional income.

The development pipeline will likely benefit from a less competitive real estate market. Management has identified opportunities for partnering with local developers that are currently in need of capital and management experience. Moreover, land and real estate prices are a bit less expensive, compared to a year ago. Elsewhere, the international property markets hold promise. Developers Diversified is currently working on deals in Brazil, Russia, and Canada.

These neutrally ranked shares have declined considerably in price since our April report. Investors are probably concerned about the REIT's mixed first-quarter results and a weaker economic outlook. Nonetheless, our current projections indicate that the issue offers worthwhile total return potential for the next 3 to 5 years.

BUSINESS: Dell Inc. is a leading global computer systems and services company. Markets via sales teams to corporate and institutional customers, as well as via the telephone and Internet. Geographic breakdown: Americas, 61% of fiscal '07 sales; Europe/Mideast/Africa, 25%; Asia/Pacific/Japan, 14%. Approximate sales mix in fiscal '07: desktop, 32%; mobility, 28%; software & peripherals, 16%; servers & networking, 11%; services, 9%; storage, 4%. R&D, 1.1% of '07 sales. '07 deprec. rate: 13.2%. About 88,200 empl. on 2/1/08. Michael Dell owns 10.14% of stock; all officers & directors, 10.7%; Southeastern Asset Mgt., 5.5% (10/07 Proxy). Chairman & CEO: Michael S. Dell. Inc.: DE. Address: One Dell Way, Round Rock, TX 78682. Tel.: 512-338-4400. Internet: dell.com.

Dell's unit volume rose 22% in the April quarter, and it gained share in a number of markets, supported by accelerated growth in emerging nations and the consumer business. Laptop computers and software and peripheral products did especially well. Margins declined due to a less favorable component cost environment and pressure on some product prices. Unusual income offset severance, facilities closure, and other unusual costs.

Management is cautious regarding the near-term outlook for sales in the U.S., where local governments and small/mid-sized business customers, as well as large companies, have become more conservative in their information technology spending. Dell expects the softness to continue in the seasonally weak summer months. But sales in emerging nations should continue to ramp up. Back-to-school sales typically boost the top line in the October interim, as do holiday sales in the January period. Even so, we expect year-to-year quarterly sales advances over the rest of the fiscal year to moderate. Top-line momentum should pick up beyond the current fiscal year, though growth may lag the pace enjoyed when Dell's sales base was smaller.

The company plans to reduce annual operating expenses by $3 billion over the next two years, in part by reducing the workforce by 8,900 employees. But the operations realignment is likely to entail some further severance expense, and we don't expect the offseting $0.06 a share of unusual positive items booked in the April quarter to recur. Still, stock repurchases ought to enhance share net.

A full turnaround will take time and may entail some risk. Dell must balance the need to invest in its businesses (to strengthen sales) with the need to cut costs. It's also too early to tell how recent fundamental changes in Dell's strategy are working out. These include its shift from relying on a direct-to-customer sales strategy to selling some consumer products through retail stores, and its shift from customizing many products to an expanded product line with a broader range of features and prices. Conservative investors may want to see how the changes play out before considering the stock.

BUSINESS: Dionex Corp., manufactures, markets, and services analytical instrumentation and related accessories and chemicals. Products are used to analyze chemical substances in the environment and in a broad range of industrial and scientific applications. Marketed by company force in U.S., Europe, Canada, & Japan. Foreign sales: 72% of total. R&D: 7.7% of sales. '07 depr. rate: 6.8%. Has 1193 employees. Off. & dir. own 5.1% of stock; Neuberger Berman, 14.8%; Royce & Assoc., 8.4%; Pictet Asset Mgmt., 7.5%; Aster Inv. Mgmt., 5.6%; Westfield Cap'l Mgmt., 5.2%; Barclays Global Inv., 5.2% (9/07 proxy). Chmn.: A. B. Bowman. Pres. & CEO: L. Braunschweiler. Inc.: DE. Addr.: 1228 Titan Way, Sunnyvale, CA 94085. 408-737-0700. Internet: www.dionex.com.

Dionex's management has issued relatively weak guidance for 2009's fiscal first quarter (year began July 1st). Heavy investments in the Asia/Pacific region are likely to cause earnings to remain relatively flat in the September period. The effect of these expenditures will likely diminish in subsequent interims, however. **We look for these outlays to boost results in the coming years.** Dionex has experienced broad-based growth in the Asia/Pacific region, particularly in China, India, and Korea. Indeed, this part of the globe now comprises about 30% of the company's sales. Expanded infrastructure and investment in these rapidly growing markets should continue to pay off in the form of increased sales and market share. **Additional investments in IT are also likely.** Dionex is on schedule to complete its North American IT and logistics platform toward the end of calendar 2008. The company then plans to roll out this system in Europe by the end of fiscal 2009. These upgraded systems and processes ought to boost Dionex's operating efficiency once they are completed. **We look for the pipeline to bear fruit in fiscal 2009.** Dionex launched a record number of new products over the second half of the past fiscal year. These additions have expanded capabilities that put Dionex's offerings at least on par, if not superior, in terms of speed and resolution to what has been introduced by its competitors thus far. Such product innovation is necessary for the company to maintain its leading position in the ion chromatography segment and to steal market share from its well-entrenched rivals in high-performance liquid chromatography. System performance is the main buying criteria for Dionex's customers. **These shares do not hold much appeal at the current quotation,** despite falling 5% in value since our May report. Uncertainty in the U.S. and European markets is likely to hamper sales of analytical instruments, particularly with pharmaceuticals companies struggling. As a result, the company's earnings growth is likely to slow in the coming years, limiting DNEX's 3- to 5-year appreciation potential. Too, Dionex stock is ranked to only keep pace with the market in the year ahead.

Jerry W. Gray Jr. *August 29, 2008*

(A) Fiscal year ends June 30th.
(B) Primary earnings through fiscal 1997; diluted thereafter. Excludes nonrecurring gains (losses): '95, 2¢; '96, 3¢; '99, (20¢); '01, (5¢).
Next earnings report due early Nov.
(C) Incl. intangibles. In 2007: $32.4 mill., $1.72 per share.
(D) In millions, adjusted for stock splits.
(E) Share earnings may not sum to total in due to rounding.

In Oct., 1993, Duke Realty Investments sold 28 million new shares at $11 each (adjusted for subsequent 2-for-1 split). Proceeds used to buy real estate and service businesses of Duke Associates, raising Duke's real estate portfolio, at cost, about five-fold. In July, 1999 Duke Realty bought (for stock) Weeks Corp., a REIT with similar holdings. The merged entity was called Duke-Weeks from 7/99 to 7/01 when present name adopted. Former Duke shareholders own about 72% of present entity.

BUSINESS: Duke Realty Corp (formerly Duke-Weeks) is a self-administered REIT and the largest of its kind. It was formed by the July, 1999 merger of Duke Realty and Weeks Corp. Invests mainly in office and industrial space in Midwest and Southeast. As of Dec. 31, 2007, owned 121 mill. sq. ft. carried at $6.4 billion. 92.7% of space leased; owns 7,700 acres of undeveloped land. Also provides construction and management services to third parties. Has 1,400 employees, about 10,000 shareholders. Off./dir. own less than 1.0% of stock; Barclays Global, 6.6%; Morgan Stanley, 6.5%; Vanguard Group, 6.0% (3/08 proxy). Chrmn. & CEO: Dennis C. Oklak. Address: 600 East 96th Street, Suite 100, Indianapolis, IN 46240. Telephone: 317-808-6000. Internet: www.dukerealty.com.

Duke Realty is facing the toughest real estate market in recent memory, due to a glut of supply, falling home prices, and financing that's harder to come by. Moreover, with consumer confidence waning and the threat of a recession looming, things will probably get worse before they get better. In addition, **Occupancy rates have slipped a bit,** down from 95% at the end of 2007 to 93% at the close of the March period, which may put a strain on margins. Case in point, although first-quarter revenues improved 5% from the prior year, net operating income (NOI) inched up 1.8%, as rising costs continue to outpace revenue growth. Consequently, **Duke will likely post mixed results this year, but may return to form in 2009.** The company's geographic transition from Middle America to higher-growth markets was poorly timed, as the rash of overbuilding that was common in up-and-coming markets left the Midwest relatively untouched. Indeed, occupancy rates and rents may remain flattish until year's end, but may bounce back in the second half of 2009. All told, revenues are on pace to increase 3%–4% in 2008, and could improve 4%–6% in 2009. Meanwhile, funds from operations (FFO) will probably suffer this year, although FFO may advance 5%–7% in 2009, contingent on the real estate market showing signs of life.

The company's development pipeline is solid. Nearly $2 billion of properties is in various stages of development, with expected returns in the 8%–9% range. These projects should bear fruit in the 2010–2013 time frame.

This issue remains untimely, due to unfavorable earnings comparisons in recent quarters and a languishing stock price. However, **Duke Realty shares offer a stellar dividend yield.** At 8.4%, the stock's payout outshines most of its peers' in the REIT group, and is well above the *Value Line median.* And, although troublesome now, the company's transition should pay off down the road, as the supply/demand seesaw in those markets eventually tips back into balance. Further, the stock's current price makes this a good entry point for patient, income-minded investors.

BUSINESS: *DRS Technologies, Inc. is a supplier* to the U.S. military, aerospace and defense contractors, government intelligence agencies, and international military forces. Segments: Command, Control, *Communications, Computers,* & Intelligence, 40% of '07 revenue; Reconnaissance, Surveillance & Target Acquisition 24%; Sustainment Systems, 15%; and Technical Services, 21%. Has about 10,200 employees. About 93% of 2007 revenue was from contracts for the U.S. government. Marsico Capital Management owns 6.4% of stock; FMR LLC, 6.9%; Officers & Directors 3.3% (5/08 10-K). Chairman, President, and CEO: Mark S. Newman. Inc.: DE. Address: 5 Sylvan Way, Parsippany, *NJ 07054.* Telephone: 973-898-1500. Internet: www.drs.com.

DRS Technologies has agreed to be acquired. In May, DRS announced that it had agreed to merge with Italian defense contractor Finmeccanica, S.p.A. DRS shareholders are to receive $81 in cash for each of their DRS shares, a total of some $5.2 billion, including the assumption of debt. That is a premium of 32% over the shares' average price during the previous 30 days. The shares' Timeliness rank has been suspended since they are trading on merger news, rather than fundamentals.

The proposed deal will face close scrutiny. It has been approved by the boards of both companies, but still must be endorsed by DRS shareholders. The acquisition also must be reviewed by antitrust authorities, the Committee on Foreign Investment in the United States, and the Defense Security Service. To help secure approval of the deal, the agreement calls for DRS to be operated as a wholly owned, stand-alone subsidiary under a Special Security Agreement with an independent board of directors composed mainly of U.S. citizens. The transaction is expected to close in the fourth quarter of 2008. Given the uncertainty, more-conservative accounts may want to sell their shares in the open market to lock in gains.

Meanwhile, things are going well on the operating front. Fiscal 2007 (ended March 31, 2008) was a good year for DRS. It signed new contracts worth a record $3.86 billion. At the end of the year, funded backlogs stood at $3.61 billion, up 19% from the level at the end of fiscal 2006, auguring well for the new year. Given DRS' focus on sensors and infrared technology, and its offerings aligned with the military's efforts to upgrade existing systems and modernize the armed forces, we think the company is well positioned to post good annual share-net gains in the years ahead. Note: In the first quarter of fiscal 2007 DRS had booked a $36.8 million pretax charge (56 cents a share) related to its thermal weapon sights program. However, following discussion with the staff of the SEC, the company removed the charge from that quarter, and booked it in the last quarter of fiscal 2006. In accordance with *Value Line* conventions, we will restate results for fiscal 2007, but won't revise the figures for fiscal 2006.

George A. Niemond *June 20, 2008*
