RE: Florida Power & Light Company's 2009 Status/Update Report on Storm Hardening/Preparedness and Distribution Reliability

Dear Ms. Cole:

Pursuant to Order No. PSC-06-0781-PAA-EI, I am enclosing for filing in the above docket Florida Power & Light Company's ("FPL's") status report and update of its *Storm Preparedness Initiatives*, which was filed in Docket No. 060198-EI on June 1, 2006. Consistent with Staff's request at its October 30, 2006 workshop, FPL has consolidated into the enclosed document the following additional information:

COM ____
ECR ____
GCL 2
OPC ____
RCP ____
SSC ____
SGA ____
ADM ____
CLK ____

(1) Wood Pole Inspection Report required by Order No. PSC-06-0144-PAA-EI, issued in Docket No. 060078-EI on February 27, 2006;
(2) Distribution Reliability Report required by Rule 25-6.0455, F.A.C.;
(3) a discussion of FPL's 2008 results and 2009 projected activities for storm hardening facilities; and
(4) a draft Internal Affairs presentation on storm readiness for the 2009 storm season.

If there are any questions regarding this transmittal, please contact me at 561-304-5639.

PIF 1 fmf

Sincerely,

John T. Butler

EXECUTIVE SUMMARY – FPL's MARCH 2, 2009 FILING

In 2008, FPL continued to take significant steps to strengthen its electric infrastructure and enhance its emergency response capabilities. FPL's March 2, 2009 filing contains details of many of these activities, providing results for 2008 and plans for 2009. FPL's filing contains 5 main sections: (1) Pole Inspections; (2) Reliability; (3) 10 Storm Preparedness Initiatives; (4) Hardened Facilities; and (5) 2009 Storm Readiness. Below are key highlights for each of the 5 sections:

POLE INSPECTIONS

Distribution – In compliance with FPSC pole inspection directives, FPL completed the second full year of implementing its eight-year distribution pole inspection program. In 2008, FPL completed inspections on approximately 1/8 of its poles (approximately 143,000 in total, of which nearly 132,000 were wood poles), evaluating the strength and loading of each pole. The cumulative total wood pole inspections completed, since beginning this first eight-year cycle in May 2006, is approximately 347,000, or over 1/3 of its eligible wood pole population. Costs for 2008, including the cost for inspection, reinforcement, replacement, pole stub removal and transfer of wood, as well as concrete poles totaled $39.9 million. Additionally, FPL has worked together with its joint pole owners to ensure that all joint poles are inspected. In 2009, FPL expects to complete inspection on 139,000 wood and concrete poles and expects total costs, including repairs, rehabilitation and replacements to be in the range of $32-$42 million.

Transmission – In 2008, FPL inspected over 16,000 structures or 25% of all transmission structures, exceeding the 16.7% annual FPSC inspection requirement. Inspection costs for 2008 were $1.4 million. In 2009, FPL plans to inspect at least 16.7% of its structures at an estimated cost of $1.8 -$2 million. Additionally, FPL expects to spend $14.8 - $16.0 million in follow-up work identified from the 2008 inspections.

RELIABILITY

Distribution – In 2008, FPL achieved its best-ever Distribution system reliability performance on record, as measured by SAIDI, SAIFI, CEMI-5 and MAIFIe. Additionally, FPL's overall distribution reliability, as measured by SAIDI was 8% better than FPL's 2007 performance (67.2 vs. 73.2 minutes) and 47% better than the 2007 EEI reported industry average of 126.1 minutes. FPL attributes this excellent performance to the combined effects of its proactive Priority Feeder and Lateral programs, its hardening and storm preparedness initiatives, and the deployment of its foundational comprehensive reliability programs. Reflective of its service reliability performance, FPL experienced an 8% reduction in the number of service related inquiries to the FPSC.

DOCUMENT NUMBER-DATE
01667 MAR-2 8
FPSC-COMMISSION CLERK

Transmission – On February 26, 2008, FPL experienced an outage event that had a negative impact on FPL's reliability indicators for 2008. Clearly an outlier, the event added approximately nine minutes to the SAIDI reliability indicator for 2008. Notwithstanding this outlier event, when FPL's transmission reliability indicators are viewed over the five year period of time from 2004 through 2008, FPL expects to remain in the top 25% in industry benchmarking studies, underscoring FPL's overall achievements in the area of Transmission and Substation reliability.

10 STORM PREPAREDNESS INITIATIVES

(1) Vegetation Trim Cycles – In 2008, FPL continued its three-year cycle for feeders and completed the second year of its approved schedule to implement a six-year cycle for laterals. After two full years, FPL is on plan for achieving its six-year average lateral trim cycle by 2013. Costs for 2008 totaled $57.9 million and costs for 2009 are estimated to be $68.3 million.

(2) Joint-use Audits – Approximately 20% of FPL's jointly used poles are audited annually. 2008 audit results continue to show that through FPL's joint-use processes and procedures, along with cooperation from joint pole owners and third-party attachers, joint-use facilities on the FPL system are being properly maintained.

(3) Six-year Transmission Structure Inspection Cycle – See Transmission pole inspection results/discussion on page 1.

(4) Hardening the Transmission System – In 2006, FPL began its Transmission hardening initiative by targeting replacement of single pole un-guyed wood structures. In 2008, FPL enhanced its hardening initiative to include replacement of all wood transmission structures. Additionally, FPL continues to reinsulate concrete structures to current design standards by replacing ceramic post insulators.

In 2008, FPL replaced 1,966 wood transmission structures (including 487 single pole un-guyed wood structures) through hardening, maintenance, relocations, and system expansion programs. FPL also replaced ceramic post insulators on 593 concrete structures.

In 2009, FPL forecasts replacement of 944 wood transmission structures and ceramic post insulators on 392 concrete structures.

(5) Distribution GIS – In 2008, FPL continued its efforts to better capture and store asset data for its distribution system. All pole inspection data is now loaded through automation. Also, joint-use and hardening data has been added to the GIS. Streetlight data is scheduled to be loaded into GIS in 2009.

(6) Post-Storm Forensic Collection/Analysis – FPL has plans, systems and processes that are in place and ready. Since no major storms impacted FPL's service territory in 2008, no forensic collection/analysis was required.

(7) Overhead vs. Underground Storm Performance – FPL has plans, systems and processes in place to capture OH vs. UG performance. Since no major storms impacted FPL's service territory in 2008, no analysis was required.

(8) Increased Coordination with Local Governments – In 2008, FPL continued its efforts to improve local government coordination. Activities included: conducting meetings with county emergency operations mangers to discuss critical infrastructure locations in each jurisdiction, enhancing its e-mail distribution process and network to target key messages to all governmental audiences and sponsoring workshops on community post-storm recovery at the Governor's Hurricane Conference and the National Hurricane Conference. Together, FPL's Community Outreach Teams and Customer Service Field Organization conducted over 250 community presentations in 2008, providing information on storm readiness and other topics of community interest.

(9) Collaborative Research on Hurricanes/Storm Surge – In 2007, collaborative research efforts led by the Public Utilities Research Center (PURC) resulted in greater knowledge of: vegetation management during storm and non-storm times; wind during storm and non-storm events; and hurricane and damage modeling towards further understanding the costs and benefits of undergrounding. These efforts continued during 2008 and are summarized in a report issued by the PURC on February 16, 2009 and included in this filing.

(10) Natural Disaster Preparedness/Recovery Plans – FPL's Storm Emergency Management Plan identifies emergency conditions and the responsibilities and duties of the FPL emergency response organization for severe storms. The plan covers the roles and responsibilities of key positions and includes FPL's overall severe storm emergency processes. These processes describe the planning activities, restoration work, public communications, coordination with government, training, practice exercises and lessons learned evaluation systems. The plan is reviewed and revised annually. A brief of the plan is provided in the Appendix.

HARDENED FACILITIES

In 2007, FPL began to implement the three-prongs of its approved 2007 – 2009 plan for hardening its distribution infrastructure: (1) applying extreme wind loading criteria (EWL) to critical infrastructure facilities (CIF); (2) applying incremental hardening to certain existing Community Needs feeders; and (3) implementing FPL's Design Guidelines, which apply EWL to the design and construction of all new overhead facilities, major planned work, relocation projects, and daily work activities. Additionally, FPL coordinates hardening planning and construction with all attaching entities.

In 2008, FPL's first prong, applying EWL to CIF, addressed 51 feeders serving 49 acute care facilities throughout its system. Also, 32 highway crossings on the Florida Turnpike, and 63 "01" switches were hardened to EWL. Additionally, FPL's second prong, applying Incremental Hardening, targeted 21 Community Projects or feeders that serve community needs such as grocery stores, gas stations and pharmacies and 4 feeders serving FPL's Martin and Sanford generating units. Finally, the third prong, FPL's Design Guidelines, were applied to all new construction and other construction activities described above. In 2008, FPL installed over 18,000 poles under this three prong approach including replacements from pole inspections. Total costs for the 2008 CIF and incremental hardening projects were $54.6 million.

FPL continues to promote overhead to underground conversions, completing two GAF tariff qualified projects in 2008, as well as other conversion projects.

In 2009, FPL plans are: (1) 69 feeders serving 18 acute care facilities, 26 hospitals, 35 911 facilities 1 EOC, 2 Police stations, 1 Fire station, 40 highway crossings, and 53 "01" switches will be targeted for EWL hardening; (2) 11 Community Project feeders are targeted for Incremental Hardening; and (3) Design guidelines will again be used for all new construction activities. Total costs for the 2009 CIF and incremental hardening projects are estimated to be $85-95 million.

STORM READINESS

FPL is well prepared for the 2009 storm season. In addition to all the activities to strengthen our infrastructure and be better prepared for storms described above, FPL will complete, by June 1, the following additional storm preparedness initiatives: vegetation trimming of feeders and laterals serving all top CIF's (e.g., hospitals, 911 centers, special needs shelters, police and fire stations, etc.); the annual company-wide hurricane dry-run exercise in May 2009; ensuring mutual assistance plans are in place; and implementing outage communications system improvements to provide more accurate estimated restoration times for customers.

POLE INSPECTIONS

Summary – Pole Inspections

Distribution

In May 2006, FPL implemented its eight-year cycle inspection program for all wood distribution poles consistent with Order No. PSC-06-0144-PAA-EI, issued in February 2006. In 2008, the second full year of implementation, FPL inspected 143,319 poles, of which 131,554 (12.5%) were wood poles, evaluated for strength and loading. Inspection results indicate that for the NESC Grade C standard, which is the standard adopted by most electric utilities in the United States, FPL's pole reinforcement and replacement rates continue to be significantly better than the industry average. Similar to 2007, overloading of poles was found to occur infrequently. As expected, pole reinforcement and replacement rates were lower in 2008 since the 2006 and 2007 pole inspections targeted a higher population of older poles. All poles identified for replacement in 2007 have been replaced. All poles identified for replacement in 2008 have been either replaced or are in the process of being replaced in 2009.

Transmission

In 2008, FPL replaced or reinforced 593 of the 593 transmission structures identified during the 2007 inspections. The actual cost for this activity was $14M. Also in 2008, FPL continued implementation of its six-year cycle inspection program for its transmission structures consistent with the Commission's order issued in February 2006. Last year, FPL inspected 25% of its transmission structures which exceeded the average six-year-cycle of 16.7%. FPL estimates a cost of $14.8 - $16M associated with replacing or reinforcing the work items identified during the 2008 inspections. These items are being scheduled into FPL's 2009 work plans.

Distribution

1. Description of the pole inspection program

FPL's eight-year cycle inspection program for all distribution poles requires targeting for inspection approximately 1/8 of the system annually; although, the actual number of poles may vary from year to year. To ensure coverage throughout its service territory, FPL has established nine zones, based on FPL's management areas and pole population, and annually performs inspection and pole remediation in each of these zones.

In November 2006, FPL signed a long term service agreement with Osmose Utility Services (Osmose), an industry leading pole inspection company, for the inspection of all distribution poles in its service territory. This long term agreement helps to stabilize pricing throughout the first cycle of the pole inspection program. In addition, Osmose utilizes mobile computing technology to record inspection data and to calculate strength and loading calculations. For the loading calculations, span lengths, attachment heights, and wire sizes are recorded in the mobile computer to determine whether the remaining pole capacity exceeds NESC requirements. This data is then transferred to FPL's graphical information system (GIS) management system. Pole locations inspected by Osmose are randomly audited by FPL to verify that inspections are completed and meet inspection standards.

Inspections include a visual inspection of all distribution poles from the groundline to the top of the pole to identify visual defects (i.e. woodpecker holes, split tops, decayed tops, cracks etc). If, due to the severity of the defects, the poles are not suited for continued service, the poles are not tested further and are reported and tagged for replacement. With the exception of CCA poles less than 16 years of age, if the pole passes the above ground visual inspection, wood poles are excavated to a depth of 18" (where applicable), sounded and bored to determine the internal condition of the pole. Poles encased in concrete or asphalt are not excavated but sound & bored to determine their internal condition. Osmose developed an inspection process for this condition called "Shell Boring" which was subsequently approved by the FPSC. All suitable poles receive external and/or internal preservative treatment. Strength calculations are performed on wood poles to determine compliance to the National Electrical Safety Code (NESC).

CCA poles less than 16 years in age are subject to a visual, sound and selective bore inspection, but not excavation. A bore inspection is performed if there is any decay indicated from the visual or sound inspection. To ensure that this exception will not compromise existing safety and storm hardening programs FPL will excavate a 1% sample of the CCA poles that would not normally qualify for full excavation.

Current NESC guidelines outlined by Table 261-1A section 26 require that poles meet the minimum of Grade C construction. Building to Grade C is the typical standard for the distribution utility industry. It is important to note that FPL's strength and loading

calculations are based on NESC Grade B construction standards as outlined by Table 261-1A section 26 of the NESC. This more stringent requirement results in additional poles to remediate that would have met the NESC requirements of Grade C construction.

FPL and AT&T work together to coordinate our pole inspection program. Of the poles where FPL is attached and does not own the pole, AT&T is the owner of approximately 95% of these poles. Both companies utilize Osmose as their inspection contractor, which will inspect all poles in a targeted area. This will help to ensure that all poles on the circuit will be inspected at the same time. Results of these inspections are shared between FPL and AT&T.

2. 2008 Accomplishments

In 2008, approximately 1/8 of our pole population (143,319 in total and 131,554 wood poles) was inspected throughout FPL's service territory in the second full year of the program. The inspections included visual, excavation, sound and bore, strength and loading calculations. For 2008, FPL's pole inspection program costs totaled $39.9M (includes costs for wood as well as concrete pole inspections/remediation).

3. Proposed 2009 Plan

For 2009, FPL's pole inspection program includes the inspection of approximately 1/8 of FPL's pole population. Consistent with the FPSC's recent approval of FPL's CCA pole exemption request, in 2009, FPL will discontinue excavation and perform selective sound and bore inspections on all CCA poles under 16 years of age. Visual inspections as well as load calculations will still be performed at all CCA poles, regardless of age. Also, FPL will sample 1% of the CCA poles that would not have been fully excavated under this exemption.

The current estimated cost for the 2009 pole inspection program is in the range of $32M - $42M (includes costs for wood as well as concrete pole inspections/remediation), based on the number of poles to be inspected and associated follow-up work.

4. NESC compliance for strength and structural integrity

The following methods are used by the vendor to determine NESC compliance for strength and structural integrity of FPL's poles.

Strength Assessment
On wood poles, a strength assessment is performed to determine compliance to the NESC standards for strength. The strength assessment is based on a comparison of measured circumference versus original circumference of the pole. The effective circumference is measured and data collected to ensure that the actual condition of the pole meets NESC requirements as outlined in Table 261-1A section 26 of the NESC. If the pole does not meet the NESC requirements, the pole will be reinforced or replaced.

Loading Assessment

On all poles, a loading assessment is also performed. This is based on a combination of field measurements, span length, attachment heights (including third-party attachments) and wire sizes based on FPL construction standards. If NESC requirements are not met, the pole will be reinforced, replaced or the attachments will be relocated.

5. Summary data and results of previous year's pole inspections

Florida Power and Light
Annual Wood Pole Inspection Report
(Reporting Year 2008)

a	b	c	d	e	f	g	h	i	j	k	l	m
Total # of Wooden Poles in the Company Inventory	# of Pole Inspections Planned this Annual Inspection	# of Poles Inspected this Annual Inspection*	# of Poles Failing Inspection this Annual Inspection	Pole Failure Rate (%) this Annual Inspection	# of Poles Designated for Replacement this Annual Inspection	Total # of Poles Replaced this Annual Inspection	# of Poles Requiring Minor Follow-up this Annual Inspection	# of Poles Overloaded this Annual Inspection	Method(s) V = Visual E = Excavation P= Prod S = Sound B= Bore R = Resistograph	# of Pole Inspections Planned for Next Annual Inspection Cycle	Total # of Poles Inspected (Cumulative) in the 8-Year Cycle To Date	% of Poles Inspected (Cumulative) in the 8-Year Cycle To Date
1,051,469 (1)	133,480	131,554	Grade C 1,346 Grade B & C 9,943	1.0 7.6	Grade C 884 Grade B & C 6,246	n/a Grade B & C 6,127	0 0	25 3,236	V, E, S, B V, E, S, B	126,388	346,569	34.4 (1)
If b - c > 0, provide explanation	The number of poles by type in each area being inspected is not known. The 133,480 was estimated based on the total wood and non wood poles planned and historical inspection data. At the end of the first cycle the number of wood poles planned for each year will be more accurate.											
If d - g > 0, provide explanation	Grade B & C - 3,697 of the poles failing inspection are reinforcement (not replacement) candidates. - The 6,127 poles replaced in 2008 include 2,828 poles pending from the 2007 Inspection Cycle and 3,299 poles from the 2008 Inspection Cycle. All remaining 2008 Inspection Cycle replacement candidates will be replaced by 12-31-09. Up to 107 of the poles replaced may have been concrete poles. - 3,494 poles were reinforced in 2008 (677 poles pending from the 2007 Inspection Cycle and 2817 poles from the 2008 Inspection Cycle. All remaining 2008 Inspection Cycle reinforcement candidates will be reinforced by 12-31-09.											
Description of selection criteria for inspections	FPL has determined that the most cost-effective approach for routing the work of the annual inspection program is by geographic location. These geographic locations will be prioritized using inputs such as age of pole, coastal exposure, population density, and critical infrastructure facility (CIF) customers (for example, hospitals, 911 centers, etc.). Inputs such as coastal exposure and population density generally follow the development patterns, which helps to naturally address the older pole population.											

(1) 1,051,469 is the total number of wood poles at the beginning of the eight year cycle, FPL expects to meet a target of 1,007,658 by the end of 2013 (1,051,469 / 96 months x 92 months). Total poles inspected May 2006 through 12/31/08 = (346,569 / 1,007,658) x 100 = 34.4%

In 2008, both FPL's reinforcement rate and replacement rate were less than 1% when the poles were compared to the NESC Grade C requirement. This is below the average of 2% and 3% respectively from a 2005 industry survey conducted by KEMA Inc.

Remediation is categorized into two groups (Level 1 and Level 2) in order to allow for scheduling and resource allocation.

Level one - these poles are considered unplanned work resulting from inspections. These poles are called into FPL operations personnel who decide on the time frame for completion, driven by customer (access to facilities) or grid (availability of safe electrical clearance of facility).

Level two - these poles are considered planned work resulting from inspections. They are to be completed by the end of the next calendar year.

6. The cause(s) of each pole failure for poles failing inspections, to the extent that such cause(s) can be discerned in the inspection. Also, the specific actions the company has taken or will take to correct each pole failure

The table below provides a summary of the pole inspection findings for the poles identified as poles needing remedy.

Inspection Type	Remediation Type	NESC Min. (Grade C)	FPL Requirement (Grade B - Higher Standard)	Total Remediation	Primary Cause(s)	Remediation Options
Visual	Restorable	12	n/a	12	Shell Rot	Pole to be strengthened by installing C-Truss
	Non-Restorable	287	n/a	287	Decay Top, Split Top, Wood Peckers, Excessive Cracking/Checking, Rotten But	Pole to be replaced with new pole.
Strength	Restorable	450	2492	2942	Shell Rot, Exposed Pocket	Pole to be strengthened by installing C-Truss
	Non-Restorable	572	2894	3466	Shell Rot, Decay Top, Split Top, Shell Rot, Woodpecker Holes, Rotten Butt, Heart Rot, Internal Decay	Pole to be replaced with new pole.
Loading	Restorable	0	743	743	Overloaded	Pole to be strengthened by installing ET Truss
	Non-Restorable	25	2468	2493	Overloaded	Pole will be evaluated to determine the most cost effective method to address the overloading. Options are: 1. Install intermediated pole(s). 2. Replace pole with a stronger class pole.

Transmission

7. Description of Pole Inspection Program

FPL performs climbing or bucket inspections on its transmission structures on a cyclical basis. Cycles are established based on the framing configuration (structural loading), transmission components, system importance, customer count, and inspection history for a transmission line section. Other economic efficiencies, such as multiple transmission line sections within the same corridor, are also incorporated.

In general, transmission line sections containing at least one wood transmission structure with cross-arms are inspected on a three- or four-year cycle. These inspections are performed on 100% of the structures for the entire transmission line section (from substation to substation).

Transmission line sections consisting entirely of concrete or steel structures, or wood structures without cross-arms are inspected on a six-year cycle. These inspections are performed on 100% of the structures for the entire transmission line section (from substation to substation).

Inspection Procedure

Inspectors assess the condition of various transmission structure components; including poles, insulators, cross-arms, cross-braces, foundations, bolts, conductor, overhead ground wire (OHGW), guy wires, anchors, and bonding. A general overview of these inspection procedures is outlined below:

Wood Pole Inspections

FPL performs a visual inspection on wood transmission poles from ground line to the pole top before any additional inspection work is completed. The visual inspection includes a review of the pole condition itself and any pole attachment conditions. If a wood transmission pole does not pass visual inspection, the pole is not tested further and is reported for replacement.

After passing visual inspection, wood transmission poles are sounded, starting at ground line and continuing up the length of the pole. If sounding around the ground line warrants further investigation, wood poles are bored to determine the internal condition of the pole. Bored poles are treated with an appropriate preservative treatment.

Concrete Pole Inspections

FPL performs detailed visual inspection on its concrete transmission structures. The detailed inspection incorporates an overall review of the structure condition and includes assessing for structural cracks, chips, exposed rebar, and rust. The inspection includes the condition of all transmission attachments, including insulators, guying, cross-braces, cross-arms, and bolts. If a concrete structure does not pass inspection, the pole is reported for repair or replacement.

Steel Pole Inspections

FPL performs a detailed visual inspection on its steel transmission structures. The detailed inspection incorporates an overall review of the structure condition, including foundations. The detailed inspection includes the condition of all transmission attachments, including insulators, guying, cross-braces, cross-arms, and bolts. If a steel structure does not pass inspection, the pole is reported for repair or replacement.

8. 2008 Accomplishments

In 2008, FPL inspected 16,126 transmission structures, including 4,908 wood structures and 11,218 concrete or steel structures. This represents approximately 25% of all FPL transmission structures. This exceeds the ~16.6% as outlined in the six-year inspection cycle of Order No. PSC-06-0781-PAA-EI dated September 19, 2006. FPL budgeted

$1.58M for inspection of its transmission line structures in 2008. At year-end, $1.44M was invested in these inspections. The reason for the slight variance was efficiencies gained by doing complete line sections.

9. Proposed 2009 Plan

In 2009, FPL is estimating between $1.8M - $2M for inspection of its transmission line structures. The 2009 plan targets the inspection of a number of FPL's transmission structures that will levelize inspection counts over the remaining three years of the six-year cycle and exceeds the outlined 16.7% inspection requirements of 10,702 structures. FPL does not budget or track expenditures based on structure materials.

FPL estimates approximately $14.8M - $16M in follow-up work identified from the 2008 inspections. FPL is integrating this work into its 2009 work plans.

10. NESC compliance for strength and structural integrity

The following methods are used during inspections for determining NESC compliance of strength and structural integrity of poles:

Strength Assessment
On wood poles, FPL performs a strength assessment to determine compliance to the NESC standards. The strength assessment is based on a comparison of measured circumference versus original circumference of the pole.

The effective circumference is measured and data collected to ensure that the actual condition of the pole meets NESC requirements as outlined in Table 261-1A section 26 of the NESC. If the pole does not meet the NESC requirements, the pole is reported for reinforcement or replacement.

Loading Assessment
FPL performs loading assessment on wood transmission poles with third-party attachments. This assessment is based on a combination of pole length, framing configuration, span length, attachment heights (including third-party attachments) and wire sizes based on FPL construction standards. If this loading does not meet NESC requirements, the pole is reported. Remediation may include reinforcement or replacement of the pole or relocation of the third-party attachments.

11. Explanation of the inspected pole selection criteria

Prior to 2006, FPL inspected its transmission facilities on a three-, four- or eight-year cycle. In 2006, FPL began transitioning those transmission line sections previously on an eight-year inspection cycle to a six-year cycle. FPL has prioritized additional inspections based on factors such as framing configuration (structural loading), transmission components, system importance, customer count, and inspection history

for a transmission line section. Other economic efficiencies, such as multiple transmission line sections within the same corridor, were also considered.

12. Inspection Summary Data for the Previous Year

Summarized in the following sections are the 2008 inspection results and causes by transmission structure materials:

Wood Transmission Structures

FPL performs inspection of its transmission facilities throughout the year. As condition assessments are completed, FPL prioritizes identified items in its work plan. FPL targets replacement of wood transmission structures and their associated components rather than repairing or reinforcing them. During 2008, FPL replaced 1,966 wood transmission structures through scheduled maintenance, relocations, reliability, and system expansion.

Florida Power and Light
Annual Wood Pole Inspection Report
(Reporting Year 2008)

a	b	c	d	e	f	g	h	i	j	k	l	m

Description of selection criteria for inspections	Prior to 2006, FPL inspected its transmission facilities on a 3, 4 or 8 year cycle. Beginning in 2006, those transmission line sections previously on an 8 year cycle will be transitioned to a 6 year inspection cycle. FPL has prioritized additional inspections based on factors such as framing configuration (structural loading), transmission components, system importance, customer count, and inspection history for a transmission line section. Other economic efficiencies, such as multiple transmission line sections within the same corridor, were also considered.											

* NOTE: 36 of the 581 structures designated for replacement in 2008 have been re-inspected to verify viability and are to be replaced as part of construction projects in 2009.

Concrete & Steel Transmission Structures

POLE INSPECTION REPORT Company: Florida Power & Light Summary of Concrete & Steel Transmission Pole Inspections Period: January 2008 thru December 2008			
Type of Inspection:		Concrete & Steel Transmission Structures Visual or Bucket	
Type of Pole:			
	Average Class:	Varies	
	Materials	Concrete & Steel	
	Average Vintage	1986	
	Installed Population as of 1/1/2008	40,612	
		Planned	Completed
No. of Inspections Planned & No. completed		6,742	11,218
Reason for Variance/Plan to Address Backlog		Storm and pre-construction mitigation patrols increased opportunity for inspections	
No. of inspected poles addressing a prior backlog		0	0
		No. of Structures	% of Inspection
No. of structures identified for reinforcement		0	0.0%
No. of poles identified for replacement		7	0.06%
No. of structures identified for a change inspection cycle		0	0.0%
No. of structures that required no change in inspection cycle or remediation		11,211	99.94%
No. of structures identified as overloaded		0	0.0%
No. of structures with estimated remaining life of less than 8 years		0	0.00%

In 2008, FPL inspected 26.2% of the concrete and steel transmission structures within its system.

13. Identified Inspection Items (by Cause)

Summarized in the following sections are the cause(s) of the identified transmission pole inspection items. FPL has also included specific actions that have or will be taken for each:

Wood Transmission Structures

Wood Transmission Structures					
Inspection Item	**Level 1**	**Level 2**	**Non-Priority**	**Primary Cause(s)**	**Remediation**
Ground-Line	11	273	152	Decay, Rot, Insects, Voids	Level 1 - Reinforce, Remediate, or Replace in year found Level 2 - Reinforce, Remediate, or Replace the following year Non-Priority – No action required
Above Ground-Line	13	330	365	Wood-Pecker Holes, Decay, Insects	
Overload (Third-party)	0	14	0	Third-party Attachments	
Total	24	603	517	Refer to the Above	

To help prioritize and to better plan for future years, FPL has established the following levels of inspection reporting:

- Level 1 Priority are identified as approaching the minimum NESC requirements and are considered unplanned work resulting from inspections. These poles are incorporated into current year work plans for reinforcement, remediation, or replacement. The timeframe for completion is driven by customer (access to facilities) or grid availability of safe electrical clearance of facility.

- Level 2 Priority are identified as approaching the minimum NESC requirements and are identified for reinforcement, remediation, or replacement as planned work by the end of the calendar year following inspection.

- Non-priority poles are identified as having reduction in capacity, but still above the minimum NESC requirements. When reported, these structures are documented but do not require specific action until next inspection.

Concrete & Steel Transmission Structures

Concrete & Steel Transmission Structures					
Inspection Item	**Level 1**	**Level 2**	**Non-Priority**	**Primary Cause(s)**	**Remediation**
Base of Pole (Identified for Replacement)	1	0	12	Corrosion	Level 1 - Reinforce, Remediate, or Replace in year found Level 2 - Reinforce, Remediate, or Replace the following year Non-Priority – No action required
Base of Pole (Identified for Repair)	2	4	6	Corrosion	
Total	3	4	18	Refer to the Above	

To help prioritize and to better plan for future years, FPL has established the following levels of inspection reporting:

- Level 1 Priority are identified as approaching the minimum NESC requirements and are considered unplanned work resulting from inspections. These poles are incorporated into current year work plans for reinforcement, remediation, or replacement. The timeframe for completion is driven by customer (access to facilities) or grid availability of safe electrical clearance of facility.

- Level 2 Priority are identified as approaching the minimum NESC requirements and are identified for reinforcement, remediation, or replacement as planned work by the end of the calendar year following inspection.

- Non-priority poles have structural deterioration, but still meet all of the NESC strength requirements. When reported, these structures are documented but do not require specific action until next inspection.

RELIABILITY

Summary – Reliability

Distribution – In 2008, FPL achieved its best-ever Distribution system reliability performance on record, as measured by SAIDI, SAIFI, CEMI-5 and MAIFIe. Additionally, FPL's overall distribution reliability, as measured by SAIDI was 8% better than FPL's 2007 performance (67.2 vs. 73.2 minutes) and 47% better than the 2007 EEI reported industry average of 126.1 minutes. FPL attributes this excellent performance to the combined effects of its proactive Priority Feeder and Lateral programs, its hardening and storm preparedness initiatives, and the deployment of its foundational comprehensive reliability programs. Reflective of its service reliability performance, FPL experienced an 8% reduction in the number of service related inquiries to the FPSC.

Transmission – On February 26, FPL experienced an outage event that had a negative impact on FPL's reliability indicators for 2008. Clearly an outlier, the event added approximately nine minutes to the SAIDI reliability indicator for 2008. Notwithstanding this outlier event, when FPL's transmission reliability indicators are viewed over the five year period of time from 2004 through 2008, FPL expects to remain in the top 25% in industry benchmarking studies, underscoring FPL's overall achievements in the area of Transmission and Substation reliability.

GENERAL

1. Discuss overall performance absent adjustments (Form 102).
FPL's overall unadjusted distribution reliability, as measured by SAIDI, was 120.5 minutes. This unadjusted performance includes approximately 53.3 minutes associated with tornados, wildfires, Tropical Storm Fay, planned interruptions, and other.

2. Describe the level of detailed reliability data the Company tracks.
FPL tracks the following reliability data associated with each individual interruption; customers affected, minutes out, cause of outage, percentage of customers partially restored, device affected by interruption and location of the device. All of the interruption data is compiled to calculate reliability indices which are tracked throughout the year. The reliability indices which FPL tracks include the following: SAIDI, SAIFI, CAIDI, MAIFI, MAIFIe, Lbar, CEMI-5, and CEMI-8.

3. Describe Company efforts to increase critical review of detailed reliability data.
Several daily reports are generated and distributed providing detailed information such as the previous day's interruptions by device, month-to-date and year-to-date reliability indices. FPL's distribution management team also conducts monthly reliability reviews of the programs, objectives and performance vs. the plan. On an annual basis, FPL reviews its performance and causes of interruptions to direct its reliability programs for continued performance. With the aid of advanced statistical applications, such as Minitab, FPL performs statistical analyses to identify reliability trends and measure program benefits.

In 2008, FPL launched the "Distribution Operational Model" to document the manner in which Distribution executes its core business processes. As best practices are identified they are standardized throughout the organization via the "Operational Model" portal. A wide range of reliability processes are also documented and uploaded in the portal to ensure consistent execution of best practices.

The "eDistribution Advanced Applications" portal, launched in 2007, contains detailed reliability information and is still in use. The portal's "Reliability Indicator Dashboard" updates daily with FPL's reliability performance for the different Regions and Management Areas, along with a mobile edition of Distribution Reliability Adhoc Reports allowing employees to monitor reliability performance through their Blackberry.

4. Describe the process used by your company to identify and select the level of detailed reliability data.
FPL's reliability data detail has been developed over the years based on industry practices as well as its own needs (see also FPL's response to question two above). Additional detail is identified externally (e.g. industry practice, regulators) or by FPL's internal needs.

5. Discuss adjustments.

Generation Events - None
Transmission Events- See response to Transmission Reliability Item No. 1
Distribution Events- See response to Distribution Reliability Item Nos. 11 & 13
Extreme Weather- See response to Distribution Reliability Item Nos. 7 & 10

6. Discuss adjusted performance.

Distribution - See response to Distribution Reliability Item No. 1.

EXTREME WEATHER

7. Include in the discussion, the type of weather event, strength (wind speeds/surge-flood levels), locations affected, source of meteorological information, and the performance of overhead and underground systems

Due to the nature of 2008 extreme weather events (i.e. minimal infrastructure damage), the performance of overhead vs. underground systems was not evaluated.

Extreme Weather Events	Strength (wind speeds/surge-flood levels)	Landfall Location	Management Regions Affected
Tornado in Brevard and Wingate	N/A	Cocoa Beach and Cape Canaveral in Brevard County and Fort Lauderdale in Broward County, Feb 12	Affected: Wingate, Brevard, Central Florida. Supported: Pompano, Gulfstream, North Dade.
Tornado in North Florida	N/A	Baker County, Feb 26	North Florida
Tornado	N/A	Sightings in Baker, Columbia, Nassau, and Suwannee Counties, Mar 7	Affected: North Florida. Supported: Brevard, Central Florida, Treasure Coast.
Fires in North Florida	N/A	May 11-14	Affected: Brevard, Central Florida. Supported: Treasure Coast.
Fires in Naples	N/A	Wildfires in West Central FL May30 & Jun2	Naples
Tornado	N/A	Hialeah in Miami-Dade county, Aug 14	West Dade
TS Fay	65 mph winds over FL	Aug 18 - Aug 24	Impacted all Areas on various days.
Tornado	N/A	Palm Bay in Brevard county, Nov 30	Affected: Brevard. Supported: Central Florida.

* Data Source: http://www.spc.noaa.gov/climo/reports
* Data Source: http://www.nhc.noaa.gov

8. Describe the Company's efforts to avoid or minimize, in terms of costs incurred and outage duration, any similar events in the future.

As a part of FPL's continuing improvement philosophy, FPL gathers critique information following each storm. During 2008, FPL experienced tropical storm force winds throughout our service territory and severe flooding in Central Florida associated with Tropical Storm Fay. We identified several process improvements associated with this event:

- FPL deployed a team of engineers and underground technicians to analyze, repair, and restore the facilities impacted by flooding in Brevard County. This repair process documentation was updated with more specific instructions that can be applied in future events. These include the steps necessary to prevent long term reliability impacts.

- We improved our ability to provide Estimated Times of Restoration (ETR) based upon the lessons we learned with the slow movement of Tropical Storm Fay.

- Based on Tropical Storm Fay's characteristics, we identified and implemented a new approach to the use of staging sites for external resources assisting with the restoration effort.

- Additionally, FPL's hardening and storm preparedness initiatives, most of which are discussed in this document, will help the restoration effort by minimizing damage to FPL's infrastructure.

9. If the method of deriving the weather exclusion is different from the method used for 2007, please explain the changes and provide the CMI and CI for 2008 using the prior method.

No changes were made to FPL's exclusion methodology.

10. Provide the 2008 service reliability data for each extreme weather outage event that is excluded from your Company's 2008 Annual Distribution Reliability Report pursuant to Rule 25-6.0455.

All data below provided in the Appendix.

A) Causation.
B) Date
C) CI
D) CMI
E) L-Bar
F) Repair Cost
G) Forensics

OTHER DISTRIBUTION ADJUSTMENTS

11. Discuss the Causation of each type of distribution event that resulted in customer outages.

Planned interruptions consistent with Rule 25-6.0455.

Causation	# of Outages	CI	CMI	LBAR
Planned Interruptions	8,846	122,760	13,283,418	131

12. Describe the Company's efforts to avoid or minimize any similar events in the future in terms of the level of costs incurred and outage duration.

FPL continually evaluates the need for planned crew and customer outages by determining if there are alternative work methods that could minimize or prevent an interruption. FPL also works with customers to schedule necessary outages (e.g. nights and weekends).

13. Provide the 2008 service reliability data for each distribution outage event that is excluded from your Company's 2008 Annual Distribution Reliability Report pursuant to Rule 25-6.0455.

All data below provided in the Appendix.

A) Causation.
B) Date
C) CMI
D) CI.
E) L-Bar
F) Repair Cost (N/A)

2008 ADJUSTED RELIABILITY CAUSES OF OUTAGE EVENTS

14. Five-Year patterns/trends in outage causation for each of the top 10 causes of outage events, including the frequency, duration, restoration time, cost incurred to restore service, remediation programs and remediation program costs.

		System Avg. Interruption (SAIDI)					Frequency (SAIFI)					Duration (CAIDI)				
Rank	PSC Cause Group	2004	2005	2006	2007	2008	2004	2005	2006	2007	2008	2004	2005	2006	2007	2008

See remediation programs and budget levels in FPL's response to Distribution Reliability Item No. 16.

Cost incurred to restore service by cause is not available. At the present time, FPL has no plans to be able to capture this information.

15. The process used to identify and select the actions to improve the performance in each of the top 10 causes of outages.

Annually, FPL evaluates its current reliability remediation programs and verifies their need and/or existence. In addition, FPL proposes new reliability remediation programs to improve its reliability performance concentrating on the highest cause codes and those cause codes that have shown trends needing attention.

16. 2009 activities and budget levels addressing each of the 10 causes of service outage.

In 2009, FPL has reliability programs aimed at reducing customer interruptions. These include:

Program	Program Description	2009 Budget (Millions)	Impact on which Cause Codes
Vegetation Mgmt	Integrated program designed to minimize tree and vine related interruptions.	$68.3	Vegetation, Unknown
System Expansion	Provide the necessary feeder capacity to serve all customers during normal and emergency periods, and install the infrastructure necessary to meet new loads.	$26.8	Remaining Causes
Cable Lateral	Reduce the number of direct buried lateral cable failures.	$12.6	Equipment Failure
Priority Feeders	Reduce the number of customers experiencing excess amounts of interruptions and momentaries by identifying and correcting feeders experiencing the highest number of interruptions and momentaries.	$11.8	All
Handhole Inspections	Inspection/Remediation of non-compliant conditions.	$3.7	Equipment Failure
Cable Feeder	Reduce the number of direct buried feeder cable failures and reduce customer interruptions.	$3.4	Equipment Failure
VAR Management	Install, relocate, maintain, and control distribution capacitor banks. This program will help maintain or improve power factor performance, improve system efficiency, reliability, and quality of service voltage to our customers.	$2.9	Remaining Causes
Overhead Line Inspection	Conduct a visual and infrared inspection of the OH feeder infrastructure, and thus reduce overhead interruptions.	$2.5	Equipment Failure, Vegetation, Other Weather, Other, Unknown, Lightning
Vault Inspections	Inspect vaults and Powell-Esco Switches. Program will mitigate vault interruptions and will help to identify any issues that need to be addressed before an interruption occurs.	$1.8	Equipment Failure
Customer Impact	Improve the infrastructure and reliability of a specific group of customers to address one of the following concerns: number of interruptions, customer dissatisfaction, and length of interruptions and high volume of repair.	$1.6	All
LF Switch Cabinets	Remove live front switch cabinets from the FPL system and reduce interruptions due to live front cabinets.	$1.6	Equipment Failure
Submarine Feeder Cable	Replace Submarine Feeder Cables based on failure history.	$1.3	Equipment Failure

(continued)

Program	Program Description	2009 Budget (Millions)	Impact on which Cause Codes
AFS	Maintain "smart" automated feeder switches. This will help mitigate the effects of feeder interruptions by isolating problematic areas and decreasing restoration time; making it a more reliable system based on model feeder configuration guidelines.	$1.2	All
Priority Laterals	Reduce the number of customers experiencing excess amounts of interruptions and momentaries by identifying and correcting Laterals experiencing the highest number of interruptions.	$1.2	All
Pad-mounted Transformers	The purpose of this program is to maintain pad-mount transformer security.	$10	Equipment Failure
OCR Replacement	Reduce the number of failures due to OCR equipment failures and maintain the OCRs.	$0.5	Equipment Failure
Wiredown	This program is part of the Regulatory compliance initiatives which addresses the FPSC requirement that a follow-up investigation occur on all 2nd occurrences of a wire down at the same location within a 24 month period.	$0.5	Equipment Failure
Network Revitalization	Replace equipment on the network system with an investment in network protectors and Fenwal fire protection elements.	$0.4	Equipment Failure
EEI Switch Cabinets	This program will proactively replace EEI Cabinets in order to enhance system operations and reliability.	$0.3	Equipment Failure
Cathodic Protection	This program addresses the improvement of the Cathodic protection and grounding of PILC cables by connecting the isolated neutral to the system neutral in manholes, vaults, and substations, and installing anodes inside the manholes and vaults entrance.	$0.2	Equipment Failure
Monk Parakeets	Reduce the monk parakeet population and nest building activities on distribution facilities.	$0.06	Animal

THREE PERCENT FEEDER LIST

17. Identify whether any feeders appear on the 3% listing more than once within a consecutive five-year period and any actions implemented to improve feeder performance.

12 of the 93 feeders on the 3% Feeder List have appeared more than once within a five year period.

See FPL's responses to Distribution Reliability Question numbers 16 and 18 for actions that FPL has taken to address these feeders.

18. The process used to identify and select the actions to improve the performance of feeders in the 3% feeder list, if any.

FPL continually evaluates these worst performing feeders and feeders on this list have been addressed by one or more reliability programs. As of 2008, and moving into 2009, the 3% Feeder List is now addressed through FPL's "Priority Feeder" program.

The Priority Feeder program addresses feeders based on a 12 MOE list of feeders ranked as worst performers based on their feeder interruptions, momentaries, number of customers served, and causes of interruptions. Once the Priority Feeders are identified, a reliability analysis, planning infrastructure review, and field condition assessment will take place all in collaboration with the many operations and centralized support groups.

In addition, in 2008, a new reliability engineering role was created in each area. Experienced distribution engineers within the areas make decisions locally on the scope and prioritization of work on their feeders. This accountability has expedited the release of reliability work into construction, decreasing the time to complete on improvements. Through the assistance of various personnel in different roles, each operations area now is responsible and accountable for the reliability performance of the feeders within its boundaries. With decision-making authority over their feeders, they can now be more proactive in analyzing, designing and executing reliability work, and can complete work faster.

19. 2008 activities and budget levels directed at improving feeder performance.

See response to Distribution Reliability Item No. 16.

REGIONAL RELIABILITY INDICES

20. Five-Year patterns/trends in each region's reliability for each index and on any overall basis.

(Note for all indices tables: Gulf Coast (GC) was split into Ft Myers (FM) and Naples (NA) in 2007)

Annual SAIDI performance for the Distribution unit and its regions:

Data	Region	2004	2005	2006	2007	2008
SAIDI	Boca Raton (BR)	61.5	77.8	74.7	68.3	53.8
	Brevard (BV)	80.8	63.3	55.4	69.8	75.7
	Central Dade (CE)	49.1	55.2	63.6	63.9	50.4

21. The process used to identify and select actions to improve the regional reliability trends.

See FPL's response to Distribution Reliability Item No. 3.

22. Discuss any 2009 projected activities and budget levels directed at improving regional reliability performance.

See FPL's response to Distribution Reliability Item No. 16. Each activity listed addresses equipment and devices at the management area level.

OVERHEAD – UNDERGROUND RELIABILITY

23. Describe the five year patterns/trends in reliability performance of underground systems vs. overhead systems.

The majority of FPL's customers are fed from circuits that are a hybrid of both overhead and underground. The methodology used to classify a customer as fed purely overhead is as follows: those customers served by a feeder with combined feeder and lateral overhead miles greater than or equal to 95% of the total primary miles. Then, to classify a customer as fed purely underground: the customers served by a feeder with combined feeder and lateral underground miles greater than or equal to 95% of the total primary miles. Hybrid customers are those served by neither 95% OH or UG, but rather by something in between. According to this methodology, FPL has 172 overhead feeders, 396 underground feeders and the remaining 2,530 feeders are hybrid. This methodology was applied for FPL's responses Distribution Reliability Item No. 23 & 26.

Five years reliability performance of underground, hybrid and overhead systems:

Data	Year	Hybrid	OH	UG	ALL
SAIDI	2004	68.4	119.0	36.5	69.7
	2005	69.0	111.2	34.6	69.6
	2006	74.7	105.8	34.3	74.3
	2007	72.9	118.0	35.2	73.2
	2008	67.4	103.3	33.0	67.2
SAIFI	2004	1.22	1.72	0.58	1.22
	2005	1.16	1.47	0.66	1.15
	2006	1.32	1.48	0.54	1.29
	2007	1.22	1.82	0.59	1.21
	2008	1.09	1.35	0.55	1.07
CAIDI	2004	56.0	69.3	63.1	57.3
	2005	59.3	75.6	52.6	60.4
	2006	56.5	71.5	63.4	57.8
	2007	59.8	64.7	60.0	60.3
	2008	61.9	76.7	60.1	62.9
LBAR	2004	180	171	221	179
	2005	211	152	229	204
	2006	207	186	276	205
	2007	212	198	275	211
	2008	200	186	250	199

Historically, the underground system has had a better SAIDI performance than overhead, driven by a better SAIFI. Also, the CAIDI associated with underground systems has performed in-line with overhead systems due to the nature of FPL's looped underground system which allows for sectionalizing during each restoration event. The metric where underground systems perform worse than overhead systems is Lbar, which accounts for the average minutes out per interruption.

24. Describe Company efforts to separately track the reliability of overhead and underground systems.

FPL continually monitors the ticket type associated to each interruption with the designation of either overhead or underground, which is determined by how the first customer that calls in about the interruption is served.

Due to the limitation of this designation, FPL also utilizes the actual equipment type that fails to determine the necessary performance of its overhead and underground systems. For example, FPL has equipment codes that relate specifically to its overhead system (disconnect switches, insulators, jumpers, wire) and underground system (cable, switch cabinets, elbow and terminators).

After storm events – FPL will perform the activities as described in Initiative 7, Section 7.3 of FPL's approved Storm Preparedness Initiatives in FPSC Order PSC-06-0781-PAA-EI.

25. Describe the process used by your company to identify and select the actions to promote underground distribution systems.

Governmental Adjustment Factor (GAF) – FPL's primary tool to promote underground conversions is its GAF tariff. The GAF's goal is to lower storm restoration costs to all customers by providing an incentive for government-sponsored conversions. Local governments are in the best position to guarantee the needed 100% customer service lateral conversion participation. Local governments are also best positioned to facilitate the construction through managing permitting, securing locations for the underground facilities, and the negotiations with other utility providers.

This FPSC approved tariff is a pilot program which must be reviewed by the Commission by October 2009. Through the end of December 2008, five municipalities have signed the GAF tariff agreement and moved forward with the project(s). Additionally, there were over 25 municipal requests for non-binding, order of magnitude estimates during 2008. FPL completed 2 government-sponsored conversion projects in 2008.

Local Community Presentations – FPL conducts numerous presentations with local community groups who are interested in exploring overhead to underground conversions.

Local Ordinances – There are local ordinances in effect in several counties in FPL service territory that require FPL to install facilities underground. In addition, several municipalities require the customer to bury any existing OH lines on or adjacent to their property when any major renovation is performed.

26. Provide Overhead and Underground Metrics.

See FPL's response to Distribution Reliability Item No. 23 for criteria.
CEMI-5 is not available by overhead and underground.
The miles below include only primary circuits (Feeders and Laterals).

2008 OVERHEAD:

Number of miles = 6,966
Number of customers = 234,017
Number of Customer Minutes Interrupted (CMI) = 24,173,847
Number of Customers Interruptions (CI) = 315,188

$$\text{L-Bar} = \frac{\text{Minutes of Interruption}}{\text{Total Number of Outages}} = \frac{1,944,043}{10,427} = 186$$

2008 HYBRID:

Number of miles = 52,721
Number of customers = 3,938,593
Number of Customer Minutes Interrupted (CMI) = 265,650,962
Number of Customers Interruptions (CI) = 4,288,170

$$\text{L-Bar} = \frac{\text{Minutes of Interruption}}{\text{Total Number of Outages}} = \frac{15,968,604}{79,950} = 200$$

2008 UNDERGROUND:

Number of miles = 2,762
Number of customers = 274,634
Number of Customer Minutes Interrupted (CMI) = 9,064,291
Number of Customers Interruptions (CI) = 150,908

$$\text{L-Bar} = \frac{\text{Minutes of Interruption}}{\text{Total Number of Outages}} = \frac{317,617}{1,270} = 250$$

RELIABILITY RELATED CUSTOMER COMPLAINTS

27. Describe the five year patterns/trends in reliability related customer complaints.

Service Interruption FPSC Inquiries/Complaints

2004 - 256
2005 - 415
2006 - 453
2007 - 400
2008 - 368

In 2008, FPSC service interruption related inquiries decreased by 8% from 2007. FPL notes that during 2003-2008, FPL added approximately 345,000 customers.

Note: Excludes inquiries/complaints associated with storm restoration efforts.

28. Describe Company efforts to correlate reliability related complaints with reliability indices for applicable feeder, lateral and sub region.
FPL addresses reliability complaints on a case by case basis. Lesson learned from issues and resolutions identified may be incorporated to our processes, if deemed appropriate. FPL also utilizes programs such as Customer Response and Priority Feeders / Laterals to address customer complaints. FPL has added a Risk Management tool that provides the capability to adjust the delivery ranking of our current reliability jobs based on reliability impacts including customer complaints.

29. Describe the process used by your company to identify and select systemic actions to improve reliability due to customer complaints. If no such program exists explain why.
See response to Distribution Reliability Item No. 28.

Transmission Reliability

1. **Reliability Adjustments Events (Transmission).**
   N/A

2. **Description of Reliability Programs.**
   The Transmission & Substation Reliability initiative is a two-fold program. The first part consists of on-going assessments and inspections of the transmission and substation system conditions and the associated mitigation work (as required). The second part consists of the following targeted reliability areas:

   Animals – Program to discourage and mitigate the effects of animal related events to the transmission & substation system. Animals include (but are not limited to) roosting & prey birds on transmission structures, squirrels, monk parrots, and raccoons.

   Equipment – Proactive replacement of both transmission and substation equipment reaching end of life. Items include (but are not limited to) insulators, overhead ground wire, distribution breakers, transmission breakers, switches, and substation regulators.

   Lightning – Items include bonding, grounding, and arrester installations.

   Foreign Interference – Outreach & awareness safety program to minimize the impact of foreign interference (such as cranes, balloons, diggers, sailboats, etc.) with electrical lines.

   Vegetation Management – FPL performs condition assessments of every transmission right-of-way with a qualified arborist. Performed every six months, these assessments include detailed prescriptions based on actual vegetation

conditions. As a result of these assessments, the schedules are established to complete the identified work. This work is prioritized and executed.

3. **Five Year Reliability Performance**

FPL's Transmission/Substation reliability duration performance for sustained outages (SAIDI) had improved during the 4 years from 2004 (3.38) through 2007 (3.01), but deteriorated in 2008 (13.80). The February 26, 2008 outage event resulted in an impact to the reliability indicator SAIDI of approximately nine minutes, which is approximately three times the SAIDI for all of 2007 caused by FPL's Transmission and Substation business unit.

FPL's Transmission/Substation reliability frequency performance for sustained outages (SAIFI) had improved during the 4 years from 2004 (0.413) through 2007 (0.230) but deteriorated in 2008 (0.516). The February 26, 2008 outage event also resulted in an impact to the SAIFI reliability indicator.

Over the past 5 years, FPL's Transmission/Substation reliability frequency performance for momentary outages (MAIFI) continues to improve. Since 2004, MAIFI has decreased from 1.15 (Dec 2004) to 0.83 (Dec 2008).

4. **Description of Company's Tracking**

FPL's Transmission/Substation department investigates all transmission and substation outages in order to identify root cause. Reliability performance is tracked using the following indicators:

SAIDI
SAIDI is the number of minutes (duration) the average customer is without power during a specific event lasting 1 minute or longer.

SAIFI
SAIFI is the number of times (frequency) the average customer experiences an interruption lasting 1 minute or longer (sustained).

MAIFI
MAIFI is the number of times (frequency) the average customer experiences an interruption lasting less than 1 minute (momentary).

5. Method of Program Selections

FPL's Transmission/Substation department utilizes historical reliability performance trends in program selection. System reliability metrics and associated root cause information are maintained and utilized in ensuring proper mitigation and reliability improvement projects are put in place to address areas of opportunity.

FPL has also implemented the following reliability improvement programs.

Substation Re-Insulation

In 2006, FPL updated the design standard for substation insulators to be made with resistive glaze (RG) coating. These insulators perform better in high contamination environments. This new design standard is being implemented at all new substations. Additionally, FPL has implemented a long term reliability plan to re-insulate selected existing substations in high contamination areas.

Substation Switches

In 2007, FPL implemented a long term replacement program for substation switches. FPL targeted those switch types that contributed to the increase of SAIDI in 2006.

Foreign Interference

During the first quarter of 2007, FPL's Transmission/Substation department initiated an outreach and awareness safety program to minimize the impact of foreign interference (such as cranes, balloons, diggers, sailboats, etc.) into electrical lines. Foreign interference of transmission lines was a key contributor to the increase of sustained event frequency (SAIFI) in 2006. FPL has continued development of this program and has expanded the community outreach to include crane companies, landscape companies, and other high risk groups.

6. Distribution Substation Inspections (2004 – 2008)

Summarized in the table below are the inspections completed at FPL's substations from 2004-2008.

Year	Substation Type*	System Population	Inspections Completed
2008	Transmission	94	278
	Distribution	486	726
	All	580	1,004
2007	Transmission	89	555
	Distribution	468	1,269
	All	557	1,824
2006	Transmission	88	770
	Distribution	454	2,473
	All	542	3,243
2005	Transmission	87	838
	Distribution	447	2,719
	All	534	3,557
2004	Transmission	86	824
	Distribution	447	2,519
	All	533	3,343

* Note: Substations containing both a transmission & distribution section are classified as transmission in the table above.

APPENDIX

ANNUAL DISTRIBUTION RELIABILITY REPORT 2008

SAIDI = System Average Interruption Duration Index

STORM PREPARATION INITIATIVES

Summary – 10 Storm Preparation Initiatives

1. **Establish a three-year distribution vegetation management cycle**

   In 2008, FPL continued its three-year cycle for feeders and completed the second year of its approved schedule to implement a six-year cycle for laterals. After two full years, FPL is on plan for achieving its six-year average lateral trim cycle by 2013. Additionally, all feeders serving critical customers were trimmed prior to peak storm season and mid-cycle (hotspot) feeder trimming was performed throughout the year to address specific circuits with faster growth rate vegetation. Costs for 2008 totaled $57.9 million and costs for 2009 are estimated to be $68.3 million.

2. **Conduct an audit of joint-use agreements**

   Approximately 20% of FPL's jointly used poles are audited annually. 2008 audit results continue to show that through FPL's joint-use processes and procedures, along with cooperation from joint pole owners and third-party attachers, joint-use facilities on the FPL system are being properly maintained.

3. **Initiate a 6-year transmission structure inspection program**

   In 2008, FPL continued its six year transmission structure inspection program by inspecting 4,908 wood structures and 11,218 steel or concrete structures or approximately 25% of all FPL transmission structures. For 2009, FPL plans to inspect at least 1/6 of its transmission structures.

4. **Develop a program for hardening the existing Transmission system**

   In 2006, FPL began its Transmission Hardening Initiative by targeting replacement of single pole un-guyed wood structures. In 2008, FPL enhanced its hardening initiative to include replacement of all wood transmission structures. Additionally, FPL continues to reinsulate concrete structures to current design standards by replacing ceramic post insulators.

   In 2008, FPL replaced 1,966 wood transmission structures (including 487 single pole un-guyed wood structures) through hardening, maintenance, relocations, and system expansion programs. FPL also replaced ceramic post insulators on 593 concrete structures.

   In 2009, FPL forecasts replacement of 944 wood transmission structures and ceramic post insulators on 392 concrete structures.

5. **Develop a distribution GIS information system**

   In 2008, FPL continued its efforts to better capture and store asset data for its distribution system. All pole inspection data is now loaded through automation. Also, joint-use and hardening data has been added to the GIS. Streetlight data is scheduled to be loaded into GIS in 2009. Costs for 2008 were $2,900,000 with work continuing into 2009 at an estimated cost of $403,000.

6 **Establish a post-storm forensic data collection and analysis program**

FPL has plans, systems and processes that are in place and ready. Since no major storms impacted FPL's service territory in 2008, no forensic collection/analysis was required.

7. **Conduct detailed analysis of overhead vs. underground reliability performance**

FPL has plans, systems and processes in place to capture OH vs. UG performance. Since no major storms impacted FPL's service territory in 2008, no analysis was required.

8. **Work actively with local communities to identify/address common concerns**

In 2008, FPL continued its efforts to improve local government coordination. Activities included: conducting meetings with county emergency operations mangers to discuss critical infrastructure locations in each jurisdiction, enhancing its e-mail distribution process and network to target key messages to all governmental audiences, sponsoring workshops on community post-storm recovery at the Governor's Hurricane Conference and the National Hurricane Conference. Together, FPL's Community Outreach Teams and Customer Service Field Organization conducted over 250 community presentations in 2008, providing information on storm readiness and other topics of community interest.

9. **Conduct collaborative research on effects of hurricane winds/storm surge**

In 2007, collaborative research efforts led by the Public Utilities Research Center (PURC) resulted in greater knowledge of: vegetation management during storm and non-storm times; wind during storm and non-storm events; and hurricane and damage modeling towards further understanding the costs and benefits of undergrounding. These efforts continued during 2008 and are summarized in a report issued by the PURC on February 16, 2009.

10. **Develop natural disaster preparedness and recovery plans**

FPL's Storm Emergency Management Plan identifies emergency conditions and the responsibilities and duties of the FPL emergency response organization for severe storms. The plan covers the roles and responsibilities of key positions and includes FPL's overall severe storm emergency processes. These processes describe the planning activities, restoration work, public communications, coordination with government, training, practice exercises and lessons learned evaluation systems. The plan is reviewed and revised annually. A brief of the plan is provided in the Appendix.

STORM PREPARATION INITIATIVE

(1)

Initiative 1 – Vegetation Management Trim Cycles

1. A complete description of the Company's vegetation management program (policies, guidelines, practices) for 2007 and 2008 in terms of both activity and costs.

The primary objective of FPL's distribution vegetation management program is to clear vegetation from the vicinity of distribution facilities and equipment in order to protect them and provide safe, reliable and cost-effective electric service to our customers. The program is comprised of multiple initiatives designed to reduce the average time customers are without electricity resulting from vegetation-related interruptions. This would include our preventive maintenance initiatives (planned cycle and mid-cycle maintenance), corrective maintenance (trouble work and customer service restoration efforts), customer trim requests, and support of our system improvement and expansion projects where we focus on long-term reliability by addressing vegetation that will impact new or upgraded overhead distribution facilities.

FPL follows the National Electrical Safety Code (NESC), American National Standards Institute (ANSI) A-300, and all other applicable standards while considering tree species, growth rates and the location of trees to our facilities when performing line clearing. Danger trees (leaning, structurally damaged, or dead) outside of the rights-of-way (ROW) which can not be effectively trimmed are candidates for removal. Consideration is given to tree species, location and requires customer cooperation and signed authorization.

FPL maintains its main distribution lines, called "feeders," on a three-year average trim cycle because it offers the optimal balance of reliability performance and vegetation clearing cost. The primary benefit of properly maintaining feeders is that each feeder serves a large number of customers, on average, approximately 1,500 customers.

On September 19, 2006, the Florida Public Service Commission (FPSC) issued Order No. PSC-06-0781-PAA-EI, approving FPL's six-year average lateral trim cycle. In 2007 FPL began to implement its plan to achieve a six-year average trim cycle for laterals by 2013. Laterals serve fewer customers than feeders. On average, a lateral serves approximately 35 customers.

In 2008 FPL continued to execute and meet its plans of maintaining a three-year average trim cycle for feeders and increasing laterals miles to reach a six-year average trim cycle for laterals by 2013. FPL continues to pursue the challenges associated with critical palm removals, customer refusals and hazard trees located outside the ROW.

Targeted trimming is also achieved through our "mid-cycle" program that addresses critical circuits. Tree species with widely varying growth rates exist along FPL's system. Often certain faster growing trees, and especially palm trees, need to be addressed before the next scheduled cycle trim date. FPL refers to this additional trimming, performed between normal trimming cycles, as mid-cycle trimming.

Customers often contact FPL with requests to trim trees around lines in their neighborhoods and near their homes. As a result of discussions with these customers and follow-up investigations, FPL either performs the necessary trimming or determines that the requested trimming can be addressed more efficiently by scheduling it along with normal scheduled cycle trimming.
Finally, a very important component of FPL's vegetation program is providing information to customers to educate them on our trimming program and practices, safety issues, and the importance of placing trees in the proper location, i.e., FPL's "Right Tree-Right Place" (RTRP) program. Vegetation management requires public cooperation to help remove customer barriers. RTRP is a public education program based on FPL's core belief that providing reliable electric service and sustaining our natural environment can go hand-in-hand and is a win-win partnership between the utility and customers.

	Cost	Miles Trimmed		
	(Millions)	Laterals	Feeders	Mid-Cycle
Actual				
2008	$57.9	2,078	4,262	5,418
Planned				
2009	$68.3	2,746	4,224	4,700

Note: Currently maintaining a three-year average trim cycle for feeders. On target to achieve a six-year average trim cycle for laterals by 2013 in accordance with approved implementation schedule.

2. Definitions of terms: danger tree, demand tree, spot trim and mid-cycle trim

Danger Tree – A tree beyond normal clearance specification that has high likelihood to fail and impact facilities. Danger tree failure can be associated with factors such as trees that are leaning, structurally damaged, dead and certain tree species.

Spot trim – Addresses a specific location vs. entire line segment through hot spot trimming. This includes trouble tickets or reliability related requests.

Demand Trim/Customer Trim Request (CTR) – Addresses tree conditions reported by a customer. FPL will inspect and, if trimming is required for safety or reliability, the necessary work is performed.

Mid-Cycle trim – Feeder patrol and hot spot trimming of individual tree-conductor conditions most likely to cause an interruption before the next scheduled trimming cycle.

These trees are fast growing species, often palms, and include trees identified as meeting removal criteria but removal has been refused by customers.

3. The criteria used to determine whether to remove a tree, replace a tree, spot trim, demand trim, or mid-cycle trim, etc.

Tree removal – Trees which can not be effectively trimmed to meet clearance specifications and ANSI A-300 are evaluated based on species and cost to remove. Palms are a primary removal candidate, especially on feeders.

Tree replacement – FPL does not have a tree replacement program. On a targeted and very limited basis, contribution toward replacement is considered.

Spot trim – Hot spotting to address a specific location based on reliability performance.

Demand trim – Tree meeting our existing Customer Trim Request criteria. See detail below in 12.

Mid-cycle trim – Addresses conditions that will become reliability concerns before the next scheduled cycle. These trees are fast growing species, often palms, and include trees identified as meeting removal criteria but removal has been refused by customers.

4. Provide an analysis of the cost and benefits of the Company's program vs. three-year trim cycle program

See Direct Testimony & Exhibits of: Manuel B. Miranda, filed December 20, 2006 (Docket No. 060198-EI).

5. Tree clearing practices in utility easements and authorized rights-of-way

FPL's line clearing practice is to pre-notify customers of scheduled maintenance activities. FPL will clear lines (within easements and outside of easements) to our clearance specifications to protect our facilities. Customers will be contacted for trees identified for removal. All tree removals require a Tree Work Authorization (TWA) signed by the tree owner prior to removal.

6.& 9. Relevant portions of utility tariffs pertaining to utility vegetation management activities within and outside easements and authorized right-of-ways

Within easement;

Rule 2.8 Access to Premises:
The duly authorized agents of the company shall have safe access to the premises of the customer at all reasonable hours for installing, maintaining and inspecting or removing company's property, reading meters, trimming trees

within the company's easements and right of way, and other purposes incident to performance under or termination of the company's agreement with the customer, and in such performance shall not be liable for trespass.

Rule 5.6 Unobstructed Access To Company's Facilities:
Company shall have perpetual unobstructed access to its overhead and underground facilities such as poles, underground cables, pad-mounted transformers and meters in order to perform repair and maintenance in a safe, timely and cost-efficient manner.

Utility Easements tariff 9.770 (see attachment 1)

Outside easements;

There are no specific utility rights to remove trees outside of Rights- of- Way (ROW). Through FPL's "Right Tree - Right Place" efforts, customer are informed and encourage to take responsibility and carefully consider the mature height of vegetation planted adjacent to power structures.

7. Tree removal practices for trees that abut and/or intrude into easements and authorized rights-of-ways

Trees identified for removal within an easement or ROW will involve customer contact and a signed Tree Work Authorization (TWA) by the customer authorizing the removal. If a removal TWA can not be obtained FPL will clear to the extent possible while complying with applicable line clearing standards and practices. In addition, FPL routinely communicates with local communities about the various issues concerning tree removals on residential property and in public ROW.

8. Tree clearing practices outside of easements and authorized rights-of-ways

FPL will clear, to the extent possible, any vegetation that encroach upon our facilities, to provide for adequate clearances while complying with applicable line clearing standards and practices.

10. Tree removal practices for trees outside of easements and authorized rights-of-ways

Trees outside an easement or ROW that are targeted for removal will involve customer contact and a signed TWA authorizing the removal. If a removal TWA can not be obtained FPL will clear to the extent possible while complying with applicable line clearing standards and practices.

11. Relevant portions of utility tariffs pertaining to customer vegetation management obligations as a term or condition of electric service

These General Rules and Regulations are a part of the Company's Tariff covering the terms and conditions under which Electric Service is supplied by the Company to the Customer. They are supplemental to the "Rules and Regulations Governing Electric Service by Electric Utilities" issued by the Florida Public Service Commission.
(See attachment 2)

Company tariffs;
Rule 5.5 Interference With Company's Facilities:

Customer should not allow trees, vines and shrubs to interfere with the company's adjacent overhead conductors, service wires, pad-mounted transformers and meter. Such interference may result in an injury to persons, or may cause the customer's service to be interrupted. In all cases the customer should request the company to trim or remove trees and other growth near the company's adjacent overhead wires, and under no circumstances should the customer undertake this work himself, except around service cables when specifically authorized by and arranged with the company.

Rule 2.9 Right of Way:

The customer shall grant or cause to be granted to the company and without cost to the company all rights, easements, permits and privileges which, in the opinion of the company are necessary for the rendering of service to the customer.

12. Company practices regarding customer trim request

Our Customer Trim Request (CTR) process has been referred to as a "demand trim", above. Customer requests located within FPL's line clearing responsibility and identified to be non-hazardous are redirected to scheduled maintenance. Customer requests are inspected and when through evaluation considered potentially hazardous they are immediately scheduled for clearing. If a condition is not potentially hazardous the inspector will advise the customer that work will be deferred to scheduled maintenance.

13. 2009 projected activities and budget levels

Budget	2009
Preventative Maintenance (Includes feeder, lateral, mid-cycle, vines & debris)	**$53.1 M**
Corrective Maintenance (Includes restoration & customer trim requests CTR)	**$12.7 M**
Other	**$ 2.5 M**
Total	**$68.3 M**

14. Include the requirements of applicable orders

Initiative 1
Three-Year Vegetation Cycle

Performance Metrics: Adjusted data includes only activities that are budgeted and included in the Company's vegetation management plan. Unadjusted data is to include all performance data including hurricane performance and all other vegetation caused outage events that the Company believes to be excludable pursuant to 25-6.0455, F.A.C. The difference between unadjusted data and adjusted data are the storm reliability performance metrics. Reports due March 2, 2009 should have both for the base year 2007 and the data for 2008. All variances from the Company's Program, if any, sholud be noted in this section of the report.

The tables below provide guidance for the data being sought by staff. If customer minutes of interruptions are not recorded or tracked, then provide an explanatory note and substitute whatever performance data is recorded.

Initiative 1
Three-Year Vegetation Cycle

Performance Metrics: **Adjusted data includes only activities that are budgeted and included in the Company's vegetation management plan. Unadjusted data is to include all performance data including hurricane performance and all other vegetation caused outage events that the Company believes to be excludable pursuant to 25-6.0455, F.A.C. The difference between unadjusted data and adjusted data are the storm reliability performance metrics. Reports due March 2, 2009 should have both for the base year (2007) and the data for 2008. All variances from the Company's Program, if any, shoulud be noted in this section of the report**

The tables below provide guidance for the data being sought by staff. If customer minutes of interruptions are not recorded or tracked, then provide an explanatory note and substitute whatever performance data is recorded.

(M) Next year projected budget includes R-1, Storm Secure, Staff (FMIP)

15. Support for continuation of the Company Program, rather than a Three-Year Cycle program, should be included in this section of the report. Include all tables and additional analysis supporting continuation of the Company Program in this section of the report

Since FPL is still in the early stages of implementing its three-year feeder / six-year lateral average line clearing cycles there is insufficient data to support any analyses at this time. However, nothing has changed to affect the initial rational for using a six-year average lateral trim cycle. Moreover, overall system reliability for 2008 was best on record for FPL. FPL continues to pursue the challenges associated with critical palm removals, customer refusals and hazard tress off the right away.

16. Local Community Participation

FPL routinely communicates with local communities about the various issues surrounding line clearing. The issues that are most often discussed are the method of trimming, clearances, notification and debris. In addition, FPL communicates by letter to customers whose neighborhoods will be affected by line clearing activities. These letters provide an overview of scheduled maintenance activities, a safety message and

customer contact number for more information. FPL's "Right Tree - Right Place" program is also an example of outreach to communities. The program provides customers with proper tree selections and appropriate set backs from power lines.

a) ROW tree clearing
FPL's line clearing practice is to pre-notify customers of scheduled maintenance activities. FPL will clear lines (within easements and outside of easements) to our clearance specifications to protect our facilities. Customers will be contacted when trees are identified for removal. All tree removals require a Tree Work Authorization (TWA) signed by the tree owner prior to removal.

b) Easement tree clearing
See response to 16 a., ROW tree clearing

c) Hard-to-access facilities
See response to 16 a., ROW tree clearing.

d) Danger trees not within ROW or within easements where the utility has unobstructed authority to remove the danger tree
Danger trees outside an easement or ROW that are targeted for removal will involve customer contact and a signed TWA authorizing the removal. If a removal TWA can not be obtained FPL will clear to the extent possible while complying with applicable line clearing standards and practices.

e) Trim-back distances
FPL will clear, to the extent possible, any vegetation that may encroach or is in conflict with our facilities to provide for adequate clearances while complying with applicable line clearing standards (National Electrical Safety Code, NESC) and practices (American National Standards Institute, ANSI).

17. Danger Trees

Danger tree failure can be associated with factors such as trees that are leaning, structurally damaged, dead and certain tree species. FPL performs a large number of tree removals, including danger trees, but FPL does not track danger trees separately.

a) Number of danger trees removed N/A

b) Expenditures on danger tree removal N/A

c) Number of request for removals that were denied N/A

d) Avoided CI with danger trees removed (estimate) N/A

e) Avoided CMI with danger trees removed (estimate) N/A

GENERAL RULES AND REGULATIONS FOR ELECTRIC SERVICE

INTRODUCTION

These General Rules and Regulations are a part of the Company's Tariff, covering the terms and conditions under which Electric Service is supplied by the Company to the Customer. They are supplementary to the "Rules and Regulations Governing Electric Service by Electric Utilities" issued by the Florida Public Service Commission.

1 SERVICE AGREEMENTS

1.1 Application for Service. Service may be obtained upon application. Usually all that is required is the service application, a form of identification acceptable to the Company, and the posting of a guarantee deposit.

1.2 Information Needed. To provide service promptly the Company will need the applicant's name, telephone number and address including the street, house number (or apartment number), or the name of the subdivision with lot and block numbers. The types of identification required upon application for service include a valid social security number, tax identification number, driver's license, birth certificate or any other form of identification acceptable to the Company. On new or changed installations, the Company will also need to know the equipment that will be used. The Company will advise the Customer as to whether the desired type of service is available at the designated location.

1.3 Agreement. Service is furnished upon acceptance of the agreement or contract by the Company. Applications are accepted by the Company with the understanding that there is no obligation to render service other than the character of service then available at the point of delivery. A copy of any written agreement accepted by the Company will be furnished to the applicant upon request.

1.4 Applications by Agents. Applications for service requested by firms, partnerships, associations, corporations, etc., shall be made only by duly authorized parties. When service is rendered under an agreement or agreements entered into between the Company and an agent of a principal, the use of such service by the principal shall constitute full and complete ratification by the principal of such agreement or agreements.

1.5 Prior Indebtedness. The Company may refuse or discontinue service for failure to settle, in full, all prior indebtedness incurred by any Customer(s) for the same class of service at any one or more locations of such Customer(s). The Company may also refuse service for prior indebtedness by a previous customer provided that the current applicant or customer occupied the premises at the time the prior indebtedness occurred and the previous customer continues to occupy the premises.

1.6 Discontinuance of Service. Service may be discontinued for violation of the Company's rules or by actions or threats made by a customer, or anyone on the customer's premises, which are reasonably perceived by a utility employee as violent or unsafe, after affording the Customer reasonable opportunity to comply with said rules, and/or the customer agrees to cease from any further act of violence or unsafe condition, including five (5) days written notice to the Customer. However, where the Company believes a dangerous condition exists on the Customer's premises, service may be discontinued without notice.

(Continued on Sheet No. 6.011)

STORM PREPARATION INITIATIVE

(2)

Initiative 2 – Joint-Use Pole Attachment Audits

FPL Overview

FPL administers annual on-going audits of its joint-use facilities (poles owned and attached to by FPL or telephone companies) and attachments to its facilities (CATV and telecommunication attachments). Approximately 20% of its service territory is audited annually, which means joint-use facilities are audited on a 5-year cycle. The purpose of these audits is to determine the number and ownership of jointly-used poles as well as the number and ownership of attachments on these facilities.

Additionally, as part of FPL's new pole inspection program, pole strength and loading tests are now performed that take these attachments into consideration. This is described more fully in FPL's pole inspection reporting requirements response.

Describe the extent of the audit and results pertaining to pole reliability and NESC safety matters. The intent is to assure the Commission that utilities know the status of their facilities and that reasonable efforts are taken to address pole reliability and NESC safety matters.

NESC safety audits are conducted by the FPSC. Apparent NESC variances are identified by FPSC auditors and recorded, investigated, and corrected if necessary. Additionally, as part of FPL's daily work activities, e.g., construction, maintenance, reliability initiatives, pole inspections, etc., NESC safety issues may be identified and corrected. While the FPSC variances are tracked, FPL does not track those activities completed as part of its daily activities.

a) Percent of system audited. Feeders: Approximately 20% **Laterals:** Approximately 20%

FPL does not specifically maintain/track its joint-use audits at this level of detail. See FPL's overview above.

b) Date audit conducted? On-going – See FPL's overview above.

c) Date of previous audit? On-going - See FPL's overview above.

d) List of audits conducted annually. Joint-use poles, attachments, strength/loading tests – see FPL's overview above and FPL's pole inspection reporting requirement response.

Suggested Alternatives: None.

Joint-Use Attachment Audits

JOINT-USE AUDITS **(A) Number of company owned distribution poles.** (FPL owned poles at 12/31/08)	1,147,339
(B) Number of company distribution poles leased. (Non-FPL owned poles)	234,725
(C) Number of owned distribution pole attachments. (FPL owned poles w/attachments)	772,084
(D) Number of leased distribution pole attachments. (Non-FPL owned poles w/attachments)	169,065
(E) Number of authorized attachments.	1,224,814
(F) Number of unauthorized attachments.	57
POLE INSPECTIONS – JOINT-USE POLES **(G) Number of distribution poles strength tested.**	92,088
(H) Number of distribution poles passing strength test.	Grade C - 89,457 Grade B - 84,195
(I) Number of distribution poles failing strength test (overloaded).	Grade C - 24 (0.03%) Grade B - 2,631 (2.86%)
(J) Number of distribution poles failing strength test (other reasons).	Grade C - 1,015 Grade B - 5,262
(K) Number of distribution poles corrected (strength failure).	N/A – see Note 2
(L) Number of distribution poles corrected (other reasons).	N/A – see Note 2
(M) Number of distribution poles replaced.	N/A – see Note 2
FPSC SAFETY AUDITS **(N) Number of apparent NESC violations involving electric infrastructure.**	582
(O) Number of apparent NESC violations involving third-party facilities.	145
Suggested Alternatives:	None

Notes: (1) NESC required standard = Grade C; FPL Higher Standard =Grade B;
(2) K, L, M not tracked at the Joint-use level.

State whether pole rents are jurisdictional or non-jurisdictional. If pole rents are jurisdictional, then provide an estimate of lost revenue and describe the company's efforts to minimize the lost revenue.

"Pole rent" revenues are jurisdictional. There are no lost revenues since back-billings for joint-use pole ownership true-ups as well as unauthorized attachments are made retroactively back to the date of the previous audit/true-up.

STORM PREPATATION INITIATIVE

(3)

Initiative 3 – Six-Year Transmission Structure Inspection Cycle

1. Description of Inspection Program

Please refer to FPL's response to item 7 – Description of Pole Inspection Program, in the Transmission section of the Pole Inspection Report for a description of FPL's six-year transmission inspection program. Included in FPL's response are inspection procedures for wood, concrete, and steel transmission structures.

2. 2008 Accomplishments

Transmission Line Inspections
Please refer to FPL response to item 8 – 2008 Accomplishments, in the Transmission section of the Pole Inspection Report for the 2008 accomplishments of FPL's transmission inspection program. Included in FPL's response are 2008 accomplishments for wood, concrete, and steel transmission structure inspections.

Substation Inspections
In 2008, FPL completed inspections in accordance with its procedures at 100% of its 486 distribution substations and 100% of its 94 transmission substations. A total of 726 inspections were completed at distribution substations and 278 inspections at transmission substations. The frequency of these substation inspections exceeded FPL's annual target.

3. Proposed 2009 Plans

Transmission Line Inspections
Please refer to FPL response to item 9 – Proposed 2009 Plan, in the Transmission section of the Pole Inspection Report for the 2009 projections of the transmission line inspection program at FPL.

Substation Inspections
In 2009, FPL budgeted $0.2M for the inspection of 100% of its transmission and distribution substations.

Appendix

Appendix 1: FPSC Table: Six-Year Transmission Inspection

Transmission Circuit, Substation and Other Equipment Inspections

	2008		2008		2009	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Total transmission circuits.	n/a	970	n/a	n/a	n/a	n/a
(B) Planned transmission circuit inspections.	161*	177	$1.58M*	$1.44M*	161	$1.8M to $2.0M*
(C) Completed transmission circuit inspections.	161*	177	$1.58M *	$1. 44M *	n/a	n/a
(D) Percent of transmission circuit inspections completed.	16.6%	18.2%	100%	91%	16.6%	100%
(E) Planned transmission substation inspections**	1,160	1,004	$0.3M	$0.1M	1160	$0.2M
(F) Completed transmission substation inspections**	n/a	1,004	$0.3M	$0.1M	n/a	n/a
(G) Percent trans. substation inspections completed**	100%	86%	n/a	36%	n/a	n/a
(H) Planned transmission equip. inspections (other equip)***	n/a	n/a	n/a	n/a	n/a	n/a
(I) Completed transmission equip inspections (other equipment)***	n/a	n/a	n/a	n/a	n/a	n/a
(J) Percent of trans. equip inspection comp (other equip)***	n/a	n/a	n/a	n/a	n/a	n/a

* FPL does not budget or track expenditures based on structure materials. As such, the dollar amounts shown in the table above represent all transmission structure inspections regardless of materials.

** Values shown for E, F, and G include both transmission and distribution substations. FPL does not budget or track these items separately.

*** Items H, I, and J are included within FPL transmission line and/or substation inspections.

Appendix 1 (Continued): FPSC Table: Six-Year Transmission Inspection

Non-Wood Transmission Structure Inspections

	2008		2008		2009	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Total non-wood transmission tower structures.	n/a	40,612	n/a	n/a	n/a	n/a
(B) Planned transmission tower structure inspections	6,742	11,218	$1.58M*	$1.44M*	7,097	$1.8M to $2.0M*
(C) Completed transmission tower structure inspections.	6,742	11,218	$1. 58M*	$1. 44M*	n/a	n/a
(D) Percent of transmission tower structure inspections completed.	16.6%	27.6%	100%	91%	16.6%	100%

* FPL does not budget or track expenditures based on structure materials. As such, the dollar amounts shown in the table above represent all transmission structure inspections regardless of materials.

Wood Transmission Structure Inspections

	2008		2008		2009	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Total number of wood transmission poles.	n/a	23,682	n/a	n/a	20,772	n/a
(B) Number of transmission poles strength tested. (CI)	3,931	4,908	$1.58M*	$1.44M*	3,605	$1.8M to $2.0M*
(C) Number of transmission poles passing strength test.	n/a	4,267	n/a	n/a	n/a	n/a
(D) Number of transmission poles failing strength test (overloaded).	n/a	14	n/a	n/a	n/a	n/a
(E) Number of transmission poles failing strength test (other reasons).	n/a	627	n/a	n/a	n/a	n/a
(F) Number of transmission poles corrected (strength failure).	13	13	$0.0M	n/a	14	n/a
(G) Number of transmission poles corrected (other reasons).	581	581	$0.0M	n/a	653	n/a
(H) Total transmission poles replaced.	594	1966**	$13.1M ***	$14.8M ***	667	$14.8M***

* FPL does not budget or track expenditures based on structure materials. As such, the dollar amounts shown in the table above represent all transmission structure inspections regardless of materials.

** The replacement quantities shown in the table above represents the total of transmission structures replaced not only through its condition assessment program, but also from relocations, proactive rebuilds, and system expansion.

*** The dollar amounts shown are only for FPL's condition assessment follow-up program.

STORM PREPARATION INITIATIVE

(4)

Initiative 4 – Hardening of Existing Transmission Structures

1. Description of Transmission Hardening Programs

Wood Structure Replacement Program
In 2006, FPL's began its Transmission Hardening Initiative by targeting replacement of single pole un-guyed wood structures. In 2008, FPL enhanced its hardening initiative to include replacement of all wood transmission structures over the next 25 to 30 years. Replacements will be performed as part of maintenance, hardening, relocations and system expansion programs.

Ceramic Post (CPOC) Transmission Line Insulators
In 2006, FPL implemented a comprehensive plan for replacing existing ceramic post insulators on concrete poles. These insulators are being replaced with FPL's current design standard for transmission structures of polymer post insulators. FPL is targeting an average replacement of 450 CPOCs per year to achieve complete replacement of these insulators over the next 10 to 15 years.

2. Method of Selection

FPL's method for selecting the ceramic post insulator replacement initiatives is based on performance during the 2004-05 storm seasons. The 2008 enhancement of FPL's wood transmission pole hardening initiative was based on evaluation of the overall adequacy of the original program to prepare the transmission infrastructure for future storms. FPL believes these revisions are a more effective overall hardening approach of the transmission infrastructure. Instead of upgrading only selected structures which could still leave that transmission line section vulnerable; replacement of all wood transmission structures will harden entire transmission line sections to current standards.

3. Prioritizing Programs with the Community

Being a network transmission system, FPL's first priority for work must be the overall system reliability and stability for the state of Florida. Prioritization also factors in proximity to high wind areas, system importance, customer counts, and coordination with other business unit storm initiatives. Other economic efficiencies, such as opportunities to perform work on multiple transmission line sections within the same corridor, are also considered. The Transmission Department also incorporates the Distribution Business Unit hardening plans for the communities into the Transmission prioritizations.

Going forward, the wood replacement program will focus on upgrading entire line sections to provide a more effective overall hardening of the system and to have a greater impact on overall system integrity.

4. 2008 Accomplishments

Wood Structure Replacement Program
In 2008, FPL targeted the replacement of 294 single pole un-guyed wood (SPUW) structures within the system. In 2008, FPL replaced 487 SPUW structures under the hardening program and other programs such as relocations, ampacity upgrades and system expansion. FPL replaced a total of 1966 wood transmission structures during the 2008 year. These structures were replaced with FPL's current design standards of round spun concrete poles.

Ceramic Post Transmission Line Insulators
In 2008, FPL targeted the replacement of ceramic post insulators on 445 transmission structures. In 2008, FPL replaced CPOC insulators on 593 transmission structures within the system. These insulators were replaced with FPL's current design standards of polymer posts.

5. Proposed 2009 Plans

Replacement of All Wood Transmission Structures
In 2009, FPL plans on replacing 944 wood transmission structures within the system. Structures will be replaced with FPL's current design standards. These wood structures shall be replaced during maintenance, relocations, system expansion, and hardening programs.

Ceramic Post Transmission Line Insulators
In 2009, FPL plans on replacing ceramic post insulators on 392 concrete structures within the system. These insulators will be replaced with FPL's current design standards of polymer post insulators. The estimated cost for this program is $1.3M.

Appendix

Appendix 1: FPSC Table: Transmission Hardening

Single Pole Un-Guyed Wood Transmission Structures

	2008		2008		2009	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Transmission structures scheduled for hardening.	294	487	$4.38M*	$4.28M*	n/a	n/a
(B) Transmission structures hardening completed.	294	487	$4.38M*	$4.28M*	n/a	n/a
(C) Percent transmission structures hardening completed.	100%	165%	100%	97.7%	n/a	n/a

In 2006, FPL's began its Transmission hardening initiative by targeting replacement of single pole un-guyed wood structures. In 2008, FPL enhanced its hardening initiative to include replacement of all wood transmission structures over the next 25 to 30 years. This year will be the last time FPL reports on the single pole un-guyed wood pole program as these structures will be incorporated in the enhanced initiative.

Replace All Wood Transmission Structures

	2008		2008		2009	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Transmission structures scheduled for hardening.	n/a	1966	n/a	n/a	944	$12M*
(B) Transmission structures hardening completed.	n/a	1966	n/a	n/a	944	$12M*
(C) Percent transmission structures hardening completed.	n/a	100%	n/a	n/a	100%	100%

Ceramic Post Transmission Line Insulators

	2008		2008		2009	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Transmission structures scheduled for hardening.	445	593	$1.8M	$1.6M	392	$1.3M
(B) Transmission structures hardening completed.	445	593	$1.8M	$1.6M	392	$1.3M
(C) Percent transmission structures hardening completed.	100%	133%	100%	89%	100%	100%

*Even though FPL has established budget items for both transmission hardening programs and will be able to track expenditures within these specific budget activities, it will not be able to separate costs for these types of improvement made within other normal business activities such as maintenance, relocations, proactive rebuilds, and system expansion.

STORM PREPARATION INITIATIVE

(5)

Initiative 5 – Distribution Geographic Information System (GIS)

5.1 Efforts Undertaken at FPL to Meet the Commission Initiative

Following are some of the key initiatives completed or undertaken during 2007, and 2008 and continued into 2009 that will enable FPL to meet the Commission's objective:

5.1.1 Distribution GIS Improvements – Post-Hurricane Forensic Analysis

1. Post Hurricane Forensic Analysis Tool:
FPL developed a mobile electronic inspection tool that randomly creates routes within the hurricane-force wind area. Field employees travel the routes collecting observed damage and documenting the cause of the damage. This field data is uploaded to a database for further analysis by our product engineers. This tool replaces the sampling methodology used in 2005 as stated in the June 1, 2006 Alternative FPL Proposal.

2. Mobile Storm Survey Tool:
FPL developed a mobile Storm Patrol Tool to route field employees along selected circuits and collect damage data along the circuit. This tool was piloted as part of the 2008 Storm Dry Run. It was determined from the results of the pilot that this tool is not cost effective to implement at this time.

5.1.2 Distribution GIS Improvements - Poles
During the last quarter of 2006 and all of 2007, FPL added field inspection data on 115,000 of its poles to the GIS system. During 2008, we added all remaining pole inspection records obtained during 2007 (99,000 poles) and those inspected during 2008 (estimated 142,000 poles).

The initial 2006-2007 load required extensive manual cross checking and correcting to ensure that the pole's physical location along with consistent, meaningful attributes were properly collected in the field and accurately loaded into our GIS base.

Many pole attributes are collected via inspections and are now populated in GIS; these include: Pole Height; Class; Treatment Type; Install Date; Owner; Manufacturer; Accessibility.

In addition, in 2008 FPL implemented a process "framework" to standardize and automate the loading of inspection data into GIS. This has greatly enhanced the timeliness of the pole inspection data loading process. Pole inspection data is currently being loaded on a weekly basis as it is received from Osmose.

5.1.3 Distribution GIS Improvements – Joint-Use Data

As of year end 2008, all Joint-Use data has been added to the GIS system. Joint-Use records are being updated as audits are completed and data is received from Alpine, our Joint-Use vendor.

5.1.4 Distribution GIS Improvements – Level of Hardening

Level of hardening has been added to the GIS system and all hardening facilities have been updated including the load calculation and hardening level.

5.1.5 Distribution GIS Improvements – Streetlights

The streetlight asset data had not been included in the GIS system; although some streetlight modeling has been completed. This project will move streetlight asset data and audit records into GIS. FPL actively audits streetlight assets in the field. The results of the audits are stored in an MS Access database. This project will move the audit data into GIS, while automating the future audit data gathering process, again through the new automated loading "framework".

The streetlight project is currently in the testing phase. The current plan is to have all streetlight data converted to our GIS by the end of second quarter 2009. Once the data has been loaded into our GIS there is a significant amount of data correction that will need to occur to ensure the accuracy of the streetlight attributes and location. FPL is currently estimating the man-hours required for cleanup efforts which will be based upon test results. Once the data is loaded we will utilize the inspection framework to load ongoing inspection results and an interface will be in place between our GIS and CIS systems to ensure ongoing accuracy.

Initiative 5
Geographic Information System (GIS)

Distribution OH Data Input

	Activity (2007)		2008	
	Goal	Actual	Goal	Actual
(A) Total number of system wide OH assets for input.*	N/A	2,725,800	2,780,300	2,729,127
(B) Number of OH assets currently on system.	N/A	2,005,800	2,780,300^	2,729,127**
(C) Percent of OH assets already on system.	75%	74%	100%	100%
(D) Annual OH assets targeted for input (goal). (% of new construction assets)	100%	100%	100%	100%
(E) Annual OH assets input to system (actual).	100%	100%	774,500^	723,327
(F) Annual percent of OH assets input.	100%	100%	100%	100%
Suggested Alternatives				

Distribution UG Data Input

	Activity (2007)		2008	
	Goal	Actual	Goal	Actual
(A) Total number of system wide UG assets for input.*	N/A	1,155,000	1,236,000	1,175,098
(B) Number of UG assets currently on system.	N/A	1,155,000	1,236,000	1,175,098
(C) Percent of UG assets already on system.	100%	100%	100%	100%
(D) Annual UG assets targeted for input (goal). (% of new construction assets)	100%	100%	100%	100%
(E) Annual UG assets input to system (actual).	100%	100%	81,000	20,098
(F) Annual percent of UG assets input.	100%	100%	100%	100%
Suggested Alternatives				

*Note: Asset counts above include most distribution overhead and underground assets. Assets excluded from counts above include distribution substation equipment and miles of overhead conductor/underground cable. Additionally, certain information, e.g., pole inspection results, while input and maintained in AMS, is also not reflected in asset counts.

**Note: Budget dollars are not allocated by type construction (underground and overhead dollars). Total 2007 AMS support budget was $2,800,000

^Note: 720,000 streetlight assets targeted for input into AMS during 2008 are now scheduled for 2009. However the majority of systems work was completed in 2008.

Note: Total project costs for three years were estimated at $6,300,000. 2008 was estimated at $4,300,000 with an actual of $2,900,000 with work continuing into 2009 at an estimated cost of $403,000.

STORM PREPARATION INITIATIVE

(6)

Initiative 6 – Post Storm Forensic Data Collection/Analysis – Overhead

1. **Has Forensics Team been established?**

   Yes.

2. **Have forensic measurements been established? If yes, please describe/provide.**

   Forensic measurements have been established and will be entered into portable field computers at forensic locations.

   At each forensic location:

   - Pictures are taken to show the specific damage and the surrounding area.
   - GPS Coordinate information is recorded
   - Completed data collection form, detailing information such as:
     - Pole specific information
     - Wire specific information
     - Framing and loading information
     - Tree conditions
     - Foreign attachments
     - Surrounding area characteristics
     - Debris conditions
     - Soil conditions
     - Wind Speed rating

3. **Has forensics database format been established?**

   The information captured from the portable field computers via FPL's mobile mapping and field automation software is uploaded into a Microsoft SQL server database.

4. **Describe/provide GIS and forensic data tracking integration**

   Storm track information is imported via shape file to FPL's mobile mapping and field automation software for identification of storm affected equipment. From the storm affected distribution pole population, the software then selects the desired random sample size for forensic team routing.

   FPL's mobile mapping and field automation software visually identifies the facilities to be patrolled and provides the tools needed to perform forensic work such as audit trail of route traveled and data collection forms.

5. **Describe/provide forensics and restoration process integration** (Established and documented processes to capture forensic data during a restoration process)

   General Forensic Process – Overhead Distribution
   - Obtain information on the storm path and responding wind bands.
   - Assigned teams to cover specific areas lying in the path of the storm.
   - Provide random sample and pre-determined route/track to each forensic team.
   - Utilize the "Tracking" or audit trail function in FPL's mobile mapping and field automation software to document areas patrolled.
   - Perform a forensic investigation at each damage location encountered that meets patrol criteria. Damage locations to include poles, wires or any other equipment that is damaged or that has caused a customer outage.
   - Utilize portable field computers to complete a data collection form for each observation.

6. **Describe/provide any forensic data sampling methodology**

   The random sample that is performed by FPL's mobile mapping and field automation software is a proprietary vendor process that is designed to select poles from the total GIS pole set (all distribution poles in the wind band area) without any consideration of pole attributes or specific pole location data. These random points are the basis for defining forensic team routes. Observations will be made on all damaged locations along the routes including poles, wires, and distribution equipment.

7. **Describe/provide forensic reporting format used to report forensic results to the Company and Commission**

   Forensic results will be categorized by equipment type and will show failure modes. For pole failures, FPL will provide information on NESC standard strength requirements and if criteria were met or not met.

8. **Forensic activities and costs incurred in 2008**

   Since no major storms impacted FPL's service territory in 2008, no forensic collection/analysis was required and no costs incurred.

9. **2009 projected activities and costs**

   In 2009, the forensic team will participate in the annual storm dry-run. Costs associated with the storm dry run are not tracked. Costs will be dependent on storm events and the subsequent deployment of the forensic teams.

STORM PREPARATION INITIATIVE

(7)

Initiative 7 – Overhead vs. Underground Storm Performance Data

Items a–j (all tables) – Though both system and district level data for these metrics are for the most part available during storms on a non-differentiated basis, they are not available for overhead and underground separately. The primary reason is that FPL's feeders are mostly overhead/underground hybrids. Therefore, FPL is not able to classify a large portion of the data required to calculate these metrics as either overhead or underground. Further, performing the calculations on a subset of data that could be differentiated could yield misleading results. Though not of direct concern for these tables, item b cannot be provided even on a non-differentiated basis because cause codes are not available during storms.

Item k (all tables) – Prospectively, equipment performance by type may be available from forensics depending on the specific characteristics associated with any given storm. Data gathering is highly dependant on the storm having sufficient intensity to result in a restoration lasting a number of days. Otherwise, there will be insufficient time for the forensics teams to collect adequate data. Additionally, depending on the nature of the storm, certain types of equipment may not be impacted. For example, there may be little flooding or storm surge. Or, a given storm's location may disproportionately impact areas with predominantly wood poles or front lot construction. In any case, results will only be statistically significant on system-level basis and, therefore, cannot be provided at a district level.

FPL Alternative Plan – FPL can fulfill the spirit of the requested set of metrics with alternatives that demonstrate the performance differences between the overhead and underground facilities during storms. As previously stated, because FPL's feeders are almost universally overhead/underground hybrids, differentiated performance would be difficult to determine. However, laterals are typically comprised of only a single type of construction so they will be used as a proxy for differentiated system performance. The relative performance results will be derived from two sources. First, forensic field data collection will be conducted during restoration using statistically valid random samples drawn daily for both overhead and underground tickets. Second, post-restoration analysis of available ticket comments will be performed, particularly for underground damage since problems with buried equipment may not be field-observable.

FPL Alternative Plan Metrics:

- **Relative proportion of infrastructure damaged:**
  - Percent of overhead circuits with damage relative to the total overhead circuits in the storm-impacted areas.
  - Percent of underground circuits with damage relative to the total underground circuits in the storm-impacted areas.

- **Count of facility damage observed by type (item k on a system level basis).** This will include an evaluation of statistical validity based on samples achieved (due to storm characteristics discussed previously).
  - Overhead – total quantities stratified by pole type, location on lot, etc. (as available)
  - Underground – total quantities stratified by cable construction method, etc. (as available)
- **Primary root cause of damage by type**. In those instances that can be determined through field observation or post-restoration ticket comments review.
- **Estimated repair time**. This will be interpolated by multiplying the observed damage counts by equipment type times the typical estimated construction man-hours required to repair.

Overhead (OH) Storm Data

Since no major storms impacted FPL's service territory in 2008, no analysis was required. However, FPL did activate its plan as a live test of our tools and processes during Tropical Storm Fay. The data was not statistically significant and, therefore, cannot be extrapolated as either a valid comparison of OH vs. UG performance or to represent FPL's system performance as a whole.

STORM PREPARATION INITIATIVE

(8)

Initiative 8.0 - Increased Utility Coordination with Local Governments

Overview

FPL's External Affairs organization consists of manager-level employees who are dedicated to meeting the needs of local governments and communities every day. These individuals interface with members of local governments and community leaders to identify and resolve issues of common concern to the company and the communities it serves. External Affairs is engaged with local governments on undergrounding, line clearing, joint-use of public rights-of-way, critical infrastructure, fuel/rate adjustments, storm-related and other day-to-day issues.

FPL also has dedicated Account Managers assigned to governmental accounts. These representatives provide customer service to government accounts and are available to assist with many of the issues that affect local governments including storm preparation, restoration and recovery. They are especially helpful to local governments on account issues such as billing, fuel costs, construction and service reliability.

In 2008, FPL established meetings with county emergency operations managers to discuss critical infrastructure locations in each jurisdiction. Agreed upon locations were factored into the company's storm restoration and capacity shortage plans. FPL also participated in Governor's Hurricane Conference and the National Hurricane Conference Workshops to exchange information with local government officials and community leaders on emergency management issues of interest to both parties. These workshops provided FPL with the opportunity to share its plans to improve service reliability and solicit input on how FPL and government agencies can better collaborate in emergency situations.

FPL maintains an External Response Team that consists of trained representatives who assist External Affairs in meeting the needs of local governments in times of emergency. This team of more than 80 personnel staff county Emergency Operations Centers (EOC's) and interface with local officials throughout the FPL service territory. By staffing EOC's, FPL is physically present to provide company updates to county and city officials, as well as, obtain information from the EOC to help FPL's restoration efforts.

Describe extra tree trimming and underground conversion projects implemented. Describe any special considerations or options local governments attempted to secure and the utility's response.

FPL meets with all Counties and Municipalities requesting information on line clearing and underground conversions. This includes working with local governments to establish language in applicable ordinances that encourage citizens to plant the right tree in the right place to avoid threats to overhead service. It also includes regular meetings and workshops with cities interested in converting from overhead to underground service. Discussions have included special considerations such as using

public rights-of-way and the use of underground switch cabinets. The company also meets with local governments to explain its efforts to enhance service reliability and provide information on hardening projects within their jurisdiction.

The External Affairs organization meets with local governments that express interest in converting overhead facilities to underground service and address their questions. As part of FPL's Storm Secure Initiative, FPL filed its GAF Tariff in February 2006 and it was approved as a pilot by the FPSC. Through the end of December 2008, five municipalities have signed the GAF tariff agreement and moved forward with their projects. Additionally, there were over 25 municipal requests for non-binding, order of magnitude, estimates during 2008.

Are the companies regarding the buildup to a potential hurricane (even when one does not ultimately develop) as an opportunity for a test or dry run which can form the basis for evaluating their storm preparation and response plans?

In addition to its corporate dry-run and unit-driven dry-runs, FPL takes every advantage to test its storm preparation and restoration plans to be well prepared for the potential event. Depending on the track of the storm, this may include the activation of its command center and the mobilization of employees to be properly poised to begin the restoration process. This provides an opportunity to evaluate plans, systems and communications to be even better prepared for the next event. FPL representatives also take part in county drills and exercises upon request and invites key government stakeholders and emergency managers to our annual storm dry-run.

What quantifiable indices (metrics), if any are the companies using to assess the effectiveness with which they began implementing initiative #8?

ONGOING PROGRAMS

a) Number of city/county liaisons initiated. External Affairs and Government Account Managers interface with City and County governments routinely to discuss storm-related and other issues of concern. The quantity of these interfaces and the unique situational dynamics of each issue make it administratively burdensome (nonproductive) to capture on an ongoing basis. FPL does keep track of the number of EOC's that are contacted, as well as the number that are staffed with company representatives.

b) Number of periodic communications initiated with cities/counties. External Affairs provides quarterly e-mail communications to City and County governments. The company has also established an on-line Government Update website that allows government officials to obtain the latest media releases and information on customer outages, estimated restoration times, FPL crew resources, outage maps and other information. Government account managers also communicate with cities and counties through monthly newsletters that address topics from energy conservation to storm preparation.

c) Number of restoration training and assistance programs conducted. External Affairs and other company units meet with local governments to discuss critical infrastructure locations and train on subjects such as how to handle and report downed power lines.

d) Number of city/county problem resolution plans. External Affairs and Governmental Account Managers interface with City and County governments routinely to discuss storm-related and other issues of concern. The quantity of these interfaces and the unique situational dynamics of each storm make it administratively burdensome (nonproductive) to capture on an ongoing basis.

STORM PREPARATION

a) Number of communication links and contingency plans established. FPL is prepared to support 27 County and 7 satellite EOC's should these locations be impacted by an emergency situation. The company can report on the number of direct links with EOC's activated during emergency conditions. FPL representatives are also available to meet one-on-one with emergency managers, city and county government officials as needed. The large area impacted by Tropical Storm Fay resulted in the need for FPL to staff 17 County EOC's over a one week period.

b) Number of operational contingency plans developed for emergency services. FPL met with 25 county EOC locations to obtain input on critical infrastructure locations within their jurisdiction. This critical infrastructure information was then factored into FPL's restoration and capacity shortfall plans. In addition, assigned FPL EOC representatives work with the counties to assist with emergency priorities and External Affairs Managers have open communications with Counties and Cities to address necessary contingencies. Counting the number of contingency plans would be administratively burdensome (nonproductive) and not a meaningful indicator.

c) Number of public communications plans developed prior to, during and after the storm. FPL develops communication plans for the media and all releases are shared with local governments. Number of plans is not a meaningful indicator, but counting the number of releases to local governments can be accomplished.

d) Number of city/county mitigation guidelines prepared and distributed. Same response as b) above.

Suggested alternative: Maintain and report on the number of EOC's in which FPL involvement is required, including number staffed and length of stay. This information can be easily captured and reported. In 2008, 17 County EOC's were staffed with FPL representatives over a one week period due to Tropical Storm Fay.

STORM RESTORATION

a) Number of emergency communication links maintained. FPL is prepared to support 27 County and 7 satellite EOC's if impacted by an emergency situation. The company has also established an on-line Government Update website that allows government officials to obtain the latest media releases and information on customer outages, estimated restoration times, FPL crew resources, outage maps and other information. In 2008, 17 County EOC's were staffed with FPL representatives over a one week period due to Tropical Storm Fay.

b) Number of priority emergency services restored. FPL is prepared to report on critical infrastructure locations restored on a daily basis. This information is provided on the Government Update website.

c) For each tropical storm, hurricane and other emergency event impacting the utilities service area, what community coordination actions did the utility pursue not otherwise in a) and b) above. In addition to outgoing communications and information provided by FPL EOC representatives, FPL External Affairs Managers are made available to interface with public officials to address their concerns.

ONGOING INITIATIVES

Communications Programs

FPL's External Affairs unit initiated Community Outreach Teams in 2007 to educate its communities on topics of interest including service reliability, energy conservation, storm readiness and power generation. This program helps address the informational needs of local community based organizations. The company's governmental account manager organization has also recently developed a system for tracking meetings with local government and business organizations and will have the capability of capturing the number of government meetings going forward. Over 250 community presentations were conducted in 2008.

NEW INITIATIVES

Government/Community Communications

In 2008, FPL enhanced its e-mail distribution process and network to target key messages to all governmental audiences. This network continues to be utilized to share breaking news and important updates to local state and federal public officials in a timely and consistent manner.

Local Government Outreach

In 2008, FPL sponsored workshops at the Governor's Hurricane Conference and the National Hurricane Conference to interface with government and community leaders on how to work together to bring communities back to normal after severe weather events. Local, State and Federal emergency responders also visited during our annual storm exercise where FPL emergency restoration plans were shared and discussed.

Government Update Website

FPL's External Affairs organization implemented a dedicated Government Update website that has been customized with the types of information that government leaders rely on to help with their recovery efforts. This site was enhanced for the 2008 storm season and was communicated to government users as significant weather events approached the FPL service area. The site contains company-wide and county-specific information that includes:

- Media alerts and releases
- Customer outage information and outage maps
- Maps of impacted areas
- Critical infrastructure facility (CIF) information
- Estimated time of restoration (ETR) information
- FPL staging site locations and available personnel resources
- Crew work location maps

STORM PREPARATION INITIATIVE

(9)

Initiative 9 – Collaborative Research on Hurricane Winds/Storm Surge

In 2007, collaborative research efforts led by the Public Utilities Research Center (PURC) resulted in greater knowledge of: vegetation management during storm and non-storm times; wind during storm and non-storm events; and hurricane and damage modeling towards further understanding the costs and benefits of undergrounding. These efforts continued during 2008 and are summarized in a report issued by the PURC on February 16, 2009 and included in this filing.

As discussed in the PURC report, Phase III of the undergrounding research area focused on developing a methodology to identify and evaluate the costs and benefits of undergrounding specific facilities in Florida. In May 2008, the project vendor delivered the Phase III model for utilities to begin testing and to address how to fill gaps in available model input data. FPL is testing the sensitivity of the model output to the 153 utility-specific input parameters, varying parameters one at a time, focused on identifying the parameters that cause the greatest variation in results. FPL is also evaluating the resources necessary to acquire the data necessary to accurately determine each of the input parameters. FPL expects to complete testing in 2009 with the data available. The data gaps previously identified by the PURC Team are being investigated.

Report on Collaborative Research for Hurricane Hardening

Provided by

The Public Utility Research Center
University of Florida

To the

Utility Sponsor Steering Committee

February 16, 2009

I. Introduction

The Florida Public Service Commission (FPSC) issued Order No. PSC-06-00351-PAA-EI on April 25, 2006 (Order 06-0351) directing each investor-owned electric utility (IOU) to establish a plan that increases collaborative research to further the development of storm resilient electric utility infrastructure and technologies that reduce storm restoration costs and outages to customers. This order directed IOUs to solicit participation from municipal electric utilities and rural electric cooperatives in addition to available educational and research organizations. As means of accomplishing this task, the IOUs joined with the municipal electric utilities and rural electric cooperatives in the state (collectively referred to as the Project Sponsors) to form a Steering Committee of representatives from each utility and entered into a Memorandum of Understanding (MOU) with the University of Florida's Public Utility Research Center (PURC).

The MOU has a term beginning March 1, 2006 and ending May 31, 2009, and may be renewed by mutual agreement of the Project Sponsors and PURC. In serving as the research coordinator for the Project outlined by the MOU, PURC manages the work flow and communications, develops work plans, serves as a subject matter expert and conducts research, facilitates the hiring of experts, coordinates with research vendors, advises the Project Sponsors and provides reports for Project activities. PURC's budgets for this work are in Appendix A.

The work in this effort began with a workshop in June 2006 at which utility managers and hazard research professionals discussed means to prepare Florida's electric infrastructure to better withstand and recover from hurricanes.[1]

[1] Presentations and the workshop report are available at http://www.cba.ufl.edu/purc/research/energy.asp under the heading "Hurricane Hardening Workshop."

The presentations and subsequent dialogue indicated interest in wind research, materials development and analysis, forensic analysis, cost-effectiveness of storm hardening options, joint-use loads, and the economics of undergrounding.

Based in part on the results of the initial workshop, the Steering Committee at its initial meeting identified four primary research areas, namely the economics of undergrounding, the measurement and analysis of hurricane winds at a granular level, best practices in vegetation management, and improved materials for distribution facilities. The Steering Committee decided to initiate research on the first two topics, to hold a workshop on the vegetation management topic, and to look to vendors to conduct research on improved materials. The Steering Committee continues to hold regular conference calls and meet on a regular basis, with the 2009 annual Steering Committee meeting held February 5, 2009 in Gainesville, FL.

This report summarizes the work completed on the Steering Committee's areas of focus, with detail about specific accomplishments and activities from March 2008 through February 2009.[2] Sections II through IV provide information on the undergrounding research, wind research, and vegetation management workshop respectively. The budgeted dollars shown for each project are allocated on a percentage basis to each of the Project Sponsors as outlined in the MOU. PURC's budgets for work completed in 2008 are listed as Appendix A. The Conclusion of this report provides an overall assessment of the collaborative research program to date, including operational and financial viability and future planning to the extent these items are not already covered in the other sections of this report.

II. Undergrounding

An important consequence of hurricanes is that they often cause major power outages, which can last for days or even weeks. These outages almost always lead to a public outcry for electric utilities to move overhead power lines under ground. To some it seems intuitive that undergrounding facilities should protect them from damage. However, research shows that this is not necessarily the case: while underground systems on average have fewer outages than overhead systems, they can sometimes take longer to repair. Furthermore forensic analyses of recent hurricane damage in Florida found that underground systems may be particularly susceptible to storm surge.

The purpose of the collaborate research on undergrounding is to address the lacuna in existing research on the economics and effects of hardening strategies, including undergrounding, so that service providers, regulators, and customers can make informed decisions about the desirability of undergrounding policies and specific undergrounding projects.

[2] Previous reports are available at http://www.cba.ufl.edu/purc/docs/report_PURC_Collaborative_Research_2007.pdf and http://www.cba.ufl.edu/purc/docs/report_PURC_Collaborative_Research_2008.pdf.

The initial project was divided into three phases. Phase I was a meta-analysis of existing research, reports, methodologies, and case studies.[3] Phase II examined specific undergrounding project case studies in Florida and included an evaluation of relevant case studies from other hurricane prone states and other parts of the world.[4] Phase III developed an *ex ante* methodology to identify and evaluate the costs and benefits of undergrounding specific facilities in Florida. Each phase of the project included tasks of data collection, analysis, and reporting. Although the primary focus is the impact of undergrounding on hurricane performance, this study also considered benefits and drawbacks of undergrounding during non-hurricane conditions.

The Steering Committee received the final deliverables on the Undergrounding project from the vendor Quanta Technologies[5] (formerly InfraSource Technology), including the final Phase III model. The final Phase III model was delivered on May 21, 2008 as the culmination of Phase III.[6]

The utility sponsors and PURC are currently testing the model for validity and robustness to ensure that it provides useful and reliable results. The testing culmination is scheduled for 2009. PURC and the utility sponsors are also working to fill information gaps for model inputs. Some historical data needed to examine the economics of undergrounding do not exist. These data needs have been identified and the utilities are putting in place procedures to gather or approximate the information that is needed.

Appendix A provides the 2008 budgets for this work.

III. Wind Data Collection

Appropriate hardening of the electric utility infrastructure against hurricane winds requires: 1) an accurate characterization of severe dynamic wind loading, 2) an understanding of the likely failure modes for different wind conditions, and 3) a means of evaluating the effectiveness of hardening solutions prior to implementation.

The Project Sponsors addressed the first requirement by contracting with the University of Florida's Department of Civil & Coastal Engineering (Department) to establish a granular wind observation network designed to capture the behavior of the dynamic wind field upon hurricane landfall. Through a partnership with WeatherFlow, the network plans were expanded to include permanent stations around the coast of Florida that capture wind, temperature, and barometric pressure data 24/7. In 2008 the opportunities for data collected on wind continued to expand this year with the addition

[3] The Phase I report is available at http://www.cba.ufl.edu/purc/docs/initiatives_UndergroundingAssessment.pdf.
[4] The Phase II report is available at http://www.cba.ufl.edu/purc/docs/initiatives_UndergroundingAssessment2.pdf.
[5] The Request for Proposal is available at http://www.cba.ufl.edu/purc/docs/initiatives_HHRequestProposal.pdf.
[6] The Phase III report is available at http://www.cba.ufl.edu/purc/docs/initiatives_UndergroundingAssessment3.pdf.

of 50 wind stations. Appendix B details the locations of the wind data collection sites and the dates of the hardened compact package deployment.

To address the second purpose of this project, namely to better understand the likely failure modes for different severe weather conditions, PURC developed a uniform forensics data gathering system for use by the utilities and a database that will allow for data sharing and that will match the forensics data with the wind monitoring and other weather data. The data gathering system consists of a uniform entry method that can be used on a tablet PC or entered onto the web once gathered by another means. Once a hurricane occurs and wind data is captured, forensic investigations of utilities infrastructure failure, conducted by the utility companies, will be overlaid with wind observations to correlate failure modes to wind speed and turbulence characteristics. Utility sponsors and PURC will analyze such data.

Investment in research collaboration reached outside of the State of Florida this year with expertise and resources invested in the states of Texas and Louisiana. PURC is reaching out to officials in those states to determine if synergies can be developed that will add information to the Florida research and economize on costs.

IV. Vegetation Management

The goal of this project was to improve vegetation management practices so that vegetation related outages are reduced, vegetation clearing for post-storm restoration is reduced, and vegetation management is more cost-effective. The initial Vegetation Management workshop was held March 5-6, 2007; based upon the success of the workshop, the Steering Committee decided to host the workshop again in 2009.

The second Vegetation Management workshop was held on January 26 & 27, 2009. The meeting hosted representatives involved with all aspects of vegetation management for two days in Orlando, FL. Based upon the success and collaborative benefits reaped from the initial workshop, this meeting once again brought together industry experts in the field of vegetation management within Florida utilities and afforded time to share best practices in a collaborative learning environment.

The workshop began with an introduction from Mr. Barry Moline, Executive Director of FMEA, and Dr. Mark Jamison, Director of PURC. Mr. Moline gave a brief overview of the events that led to the March 2007 workshop on vegetation management, and the work that was accomplished there. Dr. Jamison also welcomed the participants, introduced representatives from the FPSC and PURC in attendance, and offered a short discussion on the three other research initiatives of the steering committee: wind research, the economics of undergrounding, and forensics.
Representatives in attendance were then requested to deliver presentations on the status of their respective utility's vegetation management practices. Presentations included detail about trimming cycles, budgetary and staffing information, best practices, and other issues. Presentations were delivered by: Mr. Ken Lecasse of

Sumter Electric Cooperative, Mr. Barry Grubb of FP&L, Mr. Mark Brown from the City of Winter Park, Mr. Dennis Spellicy of Progress Energy, Mr. Luke DiRuzza of TECO, and Ms. Diana Gillman of Lee County Electric Cooperative.

After each presentation, participants engaged in question and answer sessions. The issues raised during the presentations and during the question and answer periods included: problems with hiring and retaining qualified crews, the usefulness of third party audits of vegetation management practices and crew performance, growing support for reliability-based vegetation management programs, the relationship between best practices for day-to-day reliability versus reliability for extreme weather events, data gathering to learn more about costs and reliability for undergrounding versus overhead line placement and the formulation of new best practices.

Mr. Devlin Higgins then delivered the FPSC staff presentation. The presentation discussed the severity of the 2004-2005 storm seasons and how the FPSC tried to learn from these events. This led the PSC to open dockets to discuss undergrounding, initiate the storm plan process, and review distribution construction standards. He reported that the FPSC has ten on-going initiatives, of which vegetation management is included, and that all investor owned utilities (IOUs), municipally-owned utilities, and cooperatives are on track in the third year of the program. In response, the volume of customer complaints is down and utility reporting is going well. He also pointed out that all reports to the legislature and other documents are on the FPSC website.

Mr. Higgins then answered questions on the criteria considered by the FPSC to evaluate trim cycles, the level of review given to utility reports, and the status of regulatory changes that might be introduced based on these reports. Finally, Mr. Higgins reminded the participants that utilities can always bring their concerns to the FPSC.

Mr. Moline's presentation addressed the development of public policy relevant to vegetation management and how utilities can work with the FPSC on these issues. He talked about how vegetation management tends to be a post-hurricane issue because that is when it is urgent and noticeable. Otherwise, the legislature is generally occupied with more pressing matters. He also talked about the difficulties that utilities and cities encountered when pursuing standards for vegetation management practices that would have improved uniformity across governmental and community organizations.

The last presentation of the day was from Mr. Ted Kury, Director of Energy Studies at PURC, who summarized the roundtable findings from the 2007 workshop. This presentation sought to frame the issues from the 2007 workshop and lay the foundation for the discussion of these, and other issues, on the second day of the workshop.

V. Conclusions

In response to the FPSC's Order 06-0351, IOUs, municipal electric utilities and rural electric cooperatives joined together and retained PURC to coordinate research on

electric infrastructure hardening. Costs have been incurred according to the funding schedule set by the Steering Committee. This year, costs incurred have been towards research in the initiatives of granular wind research, undergrounding research, vegetation management, and PURC's coordinating work. The Steering Committee is currently considering next steps in these research areas.

The benefits of the work realized from the time of the last report (March 2008) to the time of this report include increased and sustained collaboration and discussion between the members of the Steering Committee, greater knowledge of the determinants of damage during storm and non-storm times, greater knowledge and data from wind collection stations and post-hurricane forensics in the State of Florida, and increased state-to-state collaboration with others in the Atlantic Basin Hurricane Zone.

RESEARCH COORDINATION FOR ELECTRICITY INFRASTRUCTURE HARDENING

Phase V - commencing January 1, 2008 and ending June 30, 2008

Undergrounding Study			
Personnel			
	PURC Faculty	$ 11,200.00	
	Grad Student	$ 1,650.00	
	Administrative	$ 2,800.00	
			$ 15,650.00
Wind Study			
Personnel			
	PURC Faculty	$ 11,200.00	
	Administrative	$ 2,800.00	
			$ 14,000.00
Travel & Meetings			
	Steering Comm. Mtgs	$ 300.00	
	Tallahassee Meetings	$ 500.00	
	Forensics Workshop	$ 300.00	
			$ 300.00
Miscellaneous			
	Conference Calls		$ 2,500.00
Subtotal			$ 32,450.00
University Overhead (25%)			$ 10,816.67
Total			$ 43,266.67

Faculty Activities

Examining & editing reports on work plan for testing ex ante methodology

Investigating hurricane models

Performing background research on hardening issues

Drafting report for FPSC

Plan steering committee meeting for early 2008

Planning Forensics Workshop - spring 2008

Coordinating webinar for model testing

Organizing and managing weekly conference calls

Attending meetings with FPSC staff or sponsors

Managing PURC staff working on project

Graduate Student Activities

Participating in and taking minutes for weekly conference calls

Maintaining PURC work plan for overseeing projects

Administrative Activities

Proofreading all materials

Taking minutes on conference calls

Organizing conference calls and meetings

Developing all administrative documents, such as contact lists and invoices

Developing budgets

Financial management

Phase VI - commencing July 1, 2008 and ending December 31, 2008

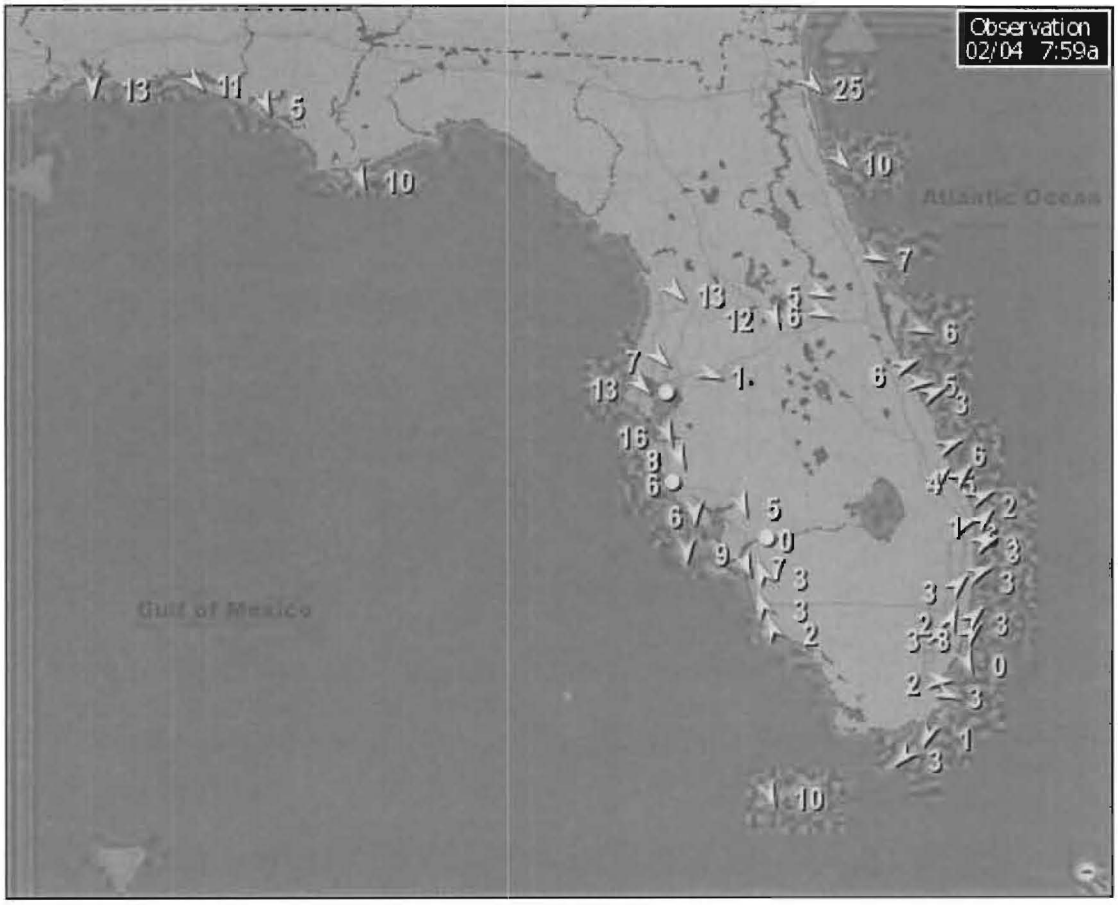

Undergrounding Study			
Personnel			
	PURC Faculty	$ 7,000.00	
	Grad Student	$ 3,960.00	
	Administrative	$ 2,800.00

Appendix B. Wind Stations

Testing the WeatherFlow instrumentation package for the fixed wind monitoring network

K. Gurley
2/12/2009

The Weatherflow (WF) instrumentation package was tested in a full-scale hurricane simulator facility located on the University of Florida Eastside Campus. This facility produces full-scale hurricane intensity winds and wind driven rain over a large enough cross section to immerse the entire WF instrumentation hardware package in these extreme conditions.

The purpose of these tests was to evaluate the performance of the WF instrumentation package when subjected to extreme wind and rain conditions similar to actual hurricane conditions. "Performance" includes the ability of the instrumentation package to collect and transmit data to the WF online data center during high wind and rain events, and the ability to physically withstand these conditions with no apparent damage.

The instrumentation package that was tested includes the anemometer (wind velocity measurement device), the pressure sensor, the two power supplies (mounted solar panel and battery pack), the data collection, data storage, and remote transmission (cellular modem) hardware, and the lightning rod. The batteries, data collection and storage, and cellular communication hardware are contained within a water tight casing. In actual field installation, this casing, anemometer, pressure sensor, solar panel, and lightning rod are mounted in close proximity to each other on either a concrete pole or existing communications tower. The relative orientation of these components to each other was accurately replicated during testing.

The specialized concrete pole to which this instrumentation package is mounted in actual field application was not tested for three reasons. 1) logistics and expense of properly installing the custom pole at the UF testing facility were prohibitive, 2) the wind field generated by the hurricane simulator is not wide / tall enough to properly envelop the entire pole in hurricane conditions (making any results of such a pole-resistance-to-wind experiment of little value for accurate performance evaluation), 3) the performance of concrete poles in hurricanes indicates that the expected performance of the Valmont poles (custom designed, constructed and installed for much higher winds than standard concrete poles) is of far less concern than the performance of the WF instrumentation package. That is, the WF instrumentation package is more vulnerable than the pole it is mounted to, and therefore represents the weakest link and the logical focus of testing.

Test procedure

The WF instrumentation package was mounted to the top of a 6' tall wooden pole that represents the concrete pole. The bottom end of the wooden pole was fixed within a metal sleeve, which was fixed to a heavy scissor lift beneath wind field. By design, the pole was thus impervious to the simulated hurricane winds and rain, and the WF instrumentation package was evaluated as it would have been mounted in an actual installation.

The sleeve housing the bottom of the mounting pole allowed for controlled 360 degree rotation of the pole, clamped into the desired position between tests. This allowed tests of the WF instrumentation package from all possible wind/rain approach angles (wind approaching the front face of the solar panel, the back face, the side, etc.).

A series of tests were conducted at wind approach angles from 0 degree (solar panel facing wind, through 235 degrees, at 45 degree intervals. Each test subjected the WF instrumentation package to simulated full-scale hurricane winds a rain for less than five minutes. The package was inspected for damage during and after each test. Twice, the water tight casing for the batteries, data storage and cellular hardware was opened between tests to inspect for water infiltration. Video was taken of each test, and numerous digital photographs were taken. Testing was conducted on June 20, 2008.

Testing results

Analysis of the testing video footage revealed very slight (expected) vibration of components during testing, but no large magnitude vibrations that would indicate potential problems with fatigue of components or their fasteners. No failures of any components occurred.

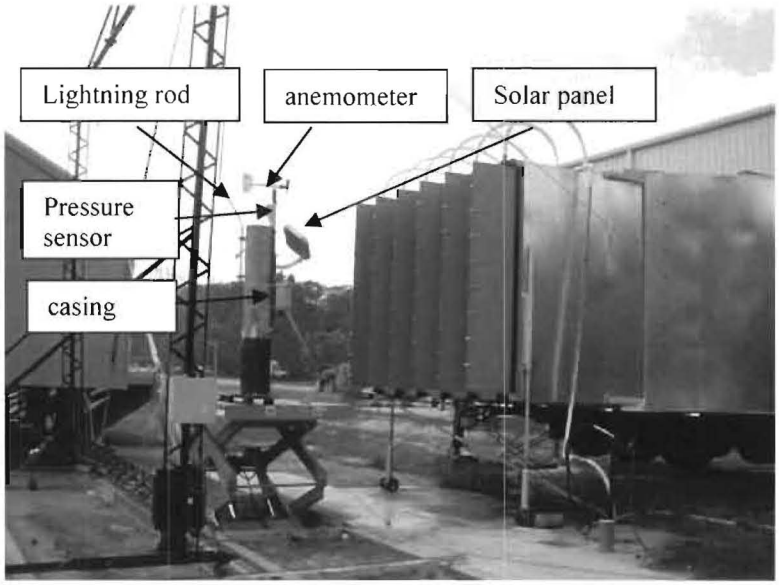

The data transmission of wind speed and pressure during testing was successful, indicating that the extreme conditions did not interfere with proper functioning of data collection and transmission.

No problems were found regarding water penetration of the water tight enclosure that contains the data storage, batteries, and data transmission hardware.

Summary and comments

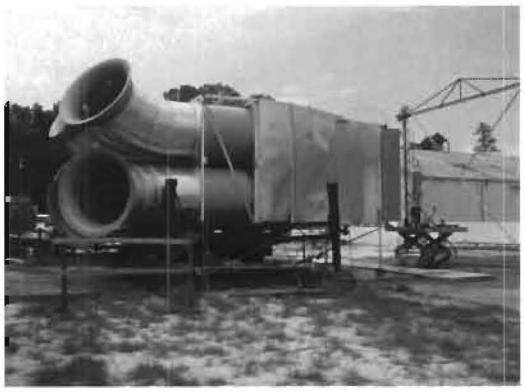

The results of the testing did not reveal any causes for concern regarding the proper functioning of the WF instrumentation package during high winds and heavy wind driven rain. While the testing cannot guarantee that the system will function as designed during an actual hurricane event, these results do suggest a high degree of likelihood of the survivability and functionality of the system.

STORM PREPARATION INITIATIVE

(10)

Initiative 10 – Natural Disaster Preparedness and Recovery Plans

FPL's Storm Emergency Management Plan identifies emergency conditions and the responsibilities and duties of the FPL emergency response organization for severe storms. The plan covers the roles and responsibilities of key positions and includes FPL's overall severe storm emergency processes. These processes describe the planning activities, restoration work, public communications, coordination with government, training, practice exercises and lessons learned evaluation systems. The plan is reviewed and revised annually. a brief of the plan is provided in the Emergency Management Plan section of this report.

.

Emergency Plan

Emergency Management Plan
Severe Storms Brief

TABLE OF CONTENTS

OVERVIEW and INTRODUCTION 3
SEVERE STORM 3
CRITERIA FOR ACTION 4
STORM ORGANIZATION 5
Key Responsibilities 5
DAMAGE ASSESSMENT 6
RESOURCE MANAGEMENT 6
COMMUNICATION 7
TRAINING, EXERCISES, AND DRILLS 7

OVERVIEW and INTRODUCTION

FPL's Emergency Preparedness Plan provides guidance in the response to emergency situations associated with natural disasters, such as named tropical storms and hurricanes, cold weather, and fires. The Plan identifies emergency conditions and delineates the responsibilities and duties of the FPL Emergency Response Organization. This summary is intended to provide a broad view of FPL's Emergency Preparedness Plan's overall emergency processes and its associated detailed procedures and standards on processes, systems, accounting, safe work practices, etc. The Emergency Preparedness Plan does not address ordinary day-to-day emergencies or established departmental procedures used to cope with such incidents.

The plan specifically provides information on several key aspects, such as, organizations for identifying, assessing and responding to emergency conditions, criteria for identification and classification of an emergency condition, notification and mobilization of FPL emergency response personnel, supporting external agencies (such as FPSC, EOC's, etc.), major commercial and industrial customers, communications (internal and external), etc.

In the case of an emergency, FPL would establish a command center and follow appropriate Incident Command System management concepts. When a hurricane or severe tropical storm threatens, or a situation such as a wild fire or cold weather event occurs, an appraisal of the situation is made by designated personnel and action taken in accordance with this plan. FPL Emergency Response Organization is notified and mobilized to manage operations, communicate with the public sector and private enterprise, as well as appropriate governmental agencies.

FPL's goal is to restore normal service when the emergency is over in a safe, expeditious, and effective manner, while ensuring system integrity and minimizing the impact to our customers.

SEVERE STORM

This summary will focus strictly on severe storms – named and unnamed - that impact the FPL service territory (non-landfall making and landfall making storms) thereby causing service interruptions to our customers.

Conditions

Tropical storms/hurricanes are categorized by the Saffir-Simpson Hurricane Scale based on the circular wind speed and central pressure. The following is a summary of the storm categorization as found on the National Hurricane Center website:

> **STORM CATEGORIES**
>
> **Category One Hurricane:**
> Winds 74-95 mph (64-82 kt or 119-153 km/hr). No significant damage to building structures. Damage primarily to unanchored mobile homes, shrubbery, and trees. Some damage to poorly constructed signs. Also, some coastal road flooding and minor pier damage.
>
> **Category Two Hurricane:**
> Winds 96-110 mph (83-95 kt or 154-177 km/hr). Some roofing material, door, and window damage of buildings. Considerable damage to shrubbery and trees with some trees blown down. Considerable damage to mobile homes, poorly constructed signs, and piers. Coastal and low-lying escape routes flood 2-4 hours before arrival of the hurricane center. Small craft in unprotected anchorages break moorings. Hurricane Frances of 2004 made landfall over the southern end of Hutchinson Island, Florida as a Category Two hurricane.

Category Three Hurricane:
Winds 111-130 mph (96-113 kt or 178-209 km/hr). Some structural damage to small residences and utility buildings with a minor amount of curtainwall failures. Damage to shrubbery and trees with foliage blown off trees and large trees blown down. Mobile homes and poorly constructed signs are destroyed. Low-lying escape routes are cut by rising water 3-5 hours before arrival of the center of the hurricane. Flooding near the coast destroys smaller structures with larger structures damaged by battering from floating debris. Terrain continuously lower than 5 ft above mean sea level may be flooded inland 8 miles (13 km) or more. Evacuation of low-lying residences within several blocks of the shoreline may be required. Hurricanes Jeanne and Ivan of 2004 were Category Three hurricanes when they made landfall in Florida and in Alabama, respectively.

Category Four Hurricane:
Winds 131-155 mph (114-135 kt or 210-249 km/hr). More extensive curtainwall failures with some complete roof structure failures on small residences. Shrubs, trees, and all signs are blown down. Complete destruction of mobile homes. Extensive damage to doors and windows. Low-lying escape routes may be cut by rising water 3-5 hours before arrival of the center of the hurricane. Major damage to lower floors of structures near the shore. Terrain lower than 10 ft above sea level may be flooded requiring massive evacuation of residential areas as far inland as 6 miles (10 km). Hurricane Charley of 2004 was a Category Four hurricane when it made landfall in Charlotte County, Florida with winds of 150 mph.

Category Five Hurricane:
Winds greater than 155 mph (135 kt or 249 km/hr). Complete roof failure on many residences and industrial buildings. Some complete building failures with small utility buildings blown over or away. All shrubs, trees, and signs blown down. Complete destruction of mobile homes. Severe and extensive window and door damage. Low-lying escape routes are cut by rising water 3-5 hours before arrival of the center of the hurricane. Major damage to lower floors of all structures located less than 15 ft above sea level and within 500 yards of the shoreline. Massive evacuation of residential areas on low ground within 5-10 miles (8-16 km) of the shoreline may be required. Only 3 Category Five Hurricanes have made landfall in the United States since records began: The Labor Day Hurricane of 1935, Hurricane Camille (1969), and Hurricane Andrew in August, 1992.

WATCHES AND WARNINGS

Tropical Storm Watch — Issued when a tropical storm in which the maximum sustained surface winds ranges from 39-73mph is expected in a specified coastal area within 36 hours

Tropical Storm Warning- Issued when a tropical storm is expected in a specified coastal area within 24 hours

Hurricane Watch – Issued when hurricane conditions pose a possible threat to a specified coastal area within 36 hours

Hurricane Warning – Issued when winds of 74mph or higher are expected in a specified coastal area within 24 hours

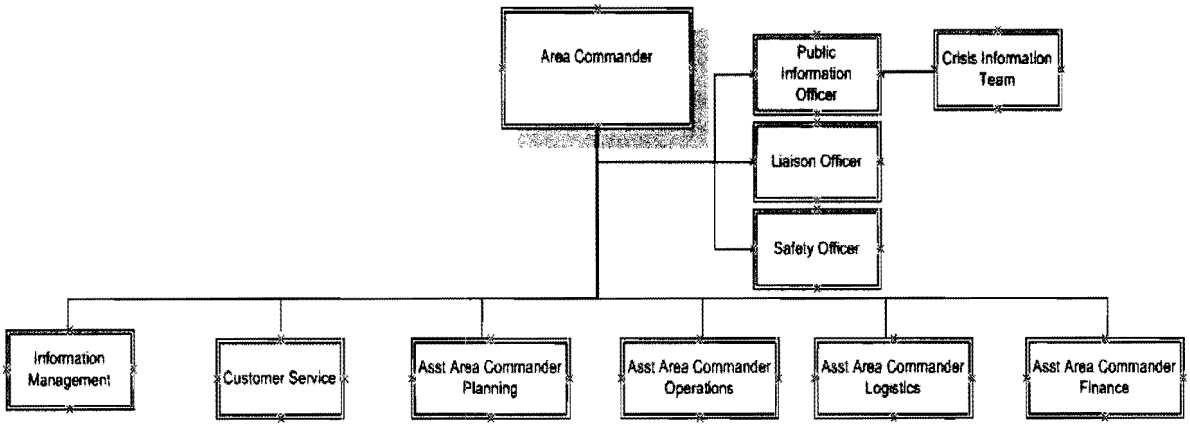

CRITERIA FOR ACTION

At approximately 72 hours pre-landfall/impact, it is the responsibility of the Distribution Vice

President to initiate a corporate conference call with all key business units (such as Corporate Communications, Customer Service, External Affairs, etc.) and their staff in order to provide information about the storm's progress and review precautionary measures including activation of the pre-positioned public safety information messages. Once the course and severity of an imminent storm appear fairly well established, damage estimates are prepared. Utilizing our mutual aid agreements, manpower resources are committed prior to impact. As appropriate, deployment of additional manpower and materials may be authorized and situated at some point out of the storm's path, but close enough to permit short travel and quick deployment of these resources. Preparations for receiving, accommodating, and assigning work crews and personnel from other areas will be completed by the Command Center and coordinated with the appropriate incident commanders in advance of the storm, at either processing sites or staging areas. The existing services centers that are in the path of the storm will be in full storm activation level by 72 hours pre-landfall; the additional staging sites or work bases will begin full storm status once the storm has passed and it is safe to travel.

STORM ORGANIZATION

The storm organizational structure and lines of authority are based on the implementation of the Incident Command System, consistent with the National Incident Management System protocols (including Incident Action Planning and communications plans). The following organization chart is based on a minimal impact; depending on the nature of the storm and the extent of the forecasted damage, this structure would be augmented by other groups as needed. Again, this figure intends to show broad areas of responsibility and assignments may be delegated or reassigned as necessary to perform the work. Roles and responsibilities have been developed for key positions and are part of the Emergency Preparedness Plans.

General

In addition to restoration, the General Office Command Center is responsible for continuous updated information to internal stake holders, general public, media, and state and federal agencies. The General Office Command Center (Area Command) will be appropriately staffed by business units and will be operational throughout the restoration process. This will include the demobilization phase as well. Initial damage and status reports will be made to this location by the affected areas, followed by regular progress reports of the restoration of service. Information submitted will be made available to the Management of the Company, the Public Information Officer and appropriate governmental agencies.

Key Responsibilities

It is the responsibility of the appropriate business unit (distribution or transmission) to focus

manpower and materials as soon as possible following the passage of the hurricane. Rapid restoration of transmission lines, substations, and feeders is essential in minimizing the interruption time. This requires a state of readiness achieved by planning and training. Coordination between the staging areas and Area Command - General Office Command Center

The General Office Command Center coordinates and arranges for support in the following major areas:

1. Embedded Crews – line workers and vegetation management teams
2. External crews: Non-Company crews (both line and vegetation management) from contractors and other utility companies
3. Materials, supplies and vehicles

DAMAGE ASSESSMENT

As soon as possible following a severe storm, a general assessment of damage should be made by all business units, in particular the Distribution and Transmission business units, and reported to the General Office Command Center. This initial report is not a detailed or quantitative survey but rather a qualitative review based on observations by managers and known reports from the various area Operations Departments. This first storm report will address issues such as accounting for employees and their safety, organization levels, general extent and type of damage sustained, and readiness to begin restoration and receive additional outside resources. Aerial patrols will be coordinated shortly thereafter.

The Area Command (GOCC) is responsible for providing key outage information back to the areas such as:

- Names of substations out of operation
- Number of feeders out
- Number of additional crews or area storm teams being deployed
- Number of transmission lines out of service

Due to the need for information there are several key conference calls conducted during the early days of restoration. These range from a corporate level to a operations division-level. Various systems are used to support the information flow, such as the Trouble Call Management System (FPL's outage management system), the Outage Communication System (customer centric), and various lotus notes databases.

Documentation of key issues / points of interest are maintained by the Document Unit at the the Area Command.

RESOURCE MANAGEMENT

Based on pre-storm damage estimates, as well as initial post-storm assessments, the Area Command Resource Unit will acquire and allocate additional resources by staging site / division. This determination is based on the amount and type of damage, location, and estimated time of restoration. The resources allocated for restoration will be both FPL embedded and external, and applies to both line workers and vegetation management crews. All resource movements will be tracked by the Personnel Resource Emergency Preparedness System (PREPS).

The Resource Unit will be responsible for the following activities/information and provide to all appropriate parties as necessary:

- Expected resources, assigned locations, and ETA's
- Update PREPs with incoming resources, and deployment activities
- Maintain a record of all foreign crews on the system, the time they were requested and by whom, and the time they arrived
- Continually evaluate the restoration progress and coordinate the reassignment of foreign crews as necessary
- Provide field supervision to maintain accurate records of outside resource time keeping / billing procedures. These records will be matched to the billing invoice, approved and processed for payment

COMMUNICATION

External storm communication

Public Information consists of both "preparatory" Emergency Public Information, Emergency Media Information programs, and internal distribution of publicly disseminated information. The Public Information Officer is responsible for the dissemination of information including pre-recorded **"public safety" messages** that have been pre-positioned with the media within FPL's service territory.

Storm/hurricane messages cover voluntary pre-storm preparation and safety appeals, as well as information on how to facilitate safe and timely power restoration following a storm. Prompt activation of these messages, with support from the media, can help customers prepare for an emergency and may help prevent accidents.

Emergency media information programs consist of timely and consistent **news statements** for release to radio, television and newspaper outlets in FPL's service territory. These statements are drafted under the guidance of the Public Information Manager and organization as needed and as information on the emergency becomes available. In addition, FPL is prepared to mobilize for media news briefings, provide interviews and otherwise assist with media and press requests for visual aids, photography and video, as appropriate.

The same emergency public information will be shared with state and local emergency management groups and other utilities or industry organizations, as appropriate

Internal storm communication

The Public Communications Officer is responsible for ensuring that information developed for public dissemination is distributed internally to management and employees of the utility.

TRAINING, EXERCISES, AND DRILLS

FPL conducts an annual dry run prior to the beginning of hurricane season. This is a corporate-wide exercise, and involves thousands of employees, each with a specific storm assignment. The annual dry run provides FPL employees an opportunity to refresh their knowledge, practice their skills and prepare for a storm event.

During the dry run, required communications, reports and systems are exercised as if in an actual storm. This provides a forum for all groups involved in restoration to:

- — Exercise each department's storm processes and test any new process improvements
- — Test new technology
- — Evaluate communications processes
- — Assess emergency preparedness by functional area

- Identify improvement opportunities for processes prior to actual storm conditions.
- Assess training needs

Immediately following the dry run exercise, an executive critique session is conducted. Feedback is requested via an anonymous database that is available to all employees. A summary of the critique feedback is completed with Lessons Learned and action items. A Plan-Do-Check-Act process is then followed until completion and implementation of all Lessons Learned. This critique process is followed with each actual event.

HARDENED FACILITIES

System Hardening

Distribution

In 2007, FPL began to implement the three-prongs of its approved 2007 – 2009 plan for hardening its distribution infrastructure: (1) applying extreme wind loading criteria (EWL) to critical infrastructure facilities (CIF); (2) applying incremental hardening to certain existing Community Needs feeders; and (3) implementing FPL's Design Guidelines, which apply EWL to the design and construction of all new overhead facilities, major planned work, relocation projects, and daily work activities. Additionally, FPL coordinates hardening planning and construction with all attaching entities.

In 2008, FPL's first prong, applying EWL to CIF, addressed 51 feeders serving 49 acute care facilities throughout its system. Also, 32 highway crossings on the Florida Turnpike, and 63 "01" switches were hardened to EWL. Additionally, FPL's second prong, applying Incremental Hardening, targeted 21 Community Projects or feeders that serve community needs such as grocery stores, gas stations and pharmacies and 4 feeders serving FPL's Martin and Sanford generating units. In total, 25 feeders were selected for Incremental Hardening in 2008. Finally, the third prong, FPL's Design Guidelines, were applied to all new construction and other construction activities described above. In 2008, FPL installed over 18,000 poles under this three prong approach including replacements from pole inspections. Total costs for the 2008 CIF and incremental hardening projects were $54.6 million. Design Guidelines incremental costs related to new construction, relocation projects and daily work are not tracked.

In 2009, FPL plans are: (1) 69 feeders serving 18 acute care facilities, 26 hospitals, 35 911 facilities, 1 EOC, 2 Police stations, 1 Fire station; 40 highway crossings, and 53 "01" switches will be targeted for EWL hardening; (2) 11 Community Project feeders and the continuation of 1 Critical FPL feeder project are targeted for Incremental Hardening; and (3) Design guidelines will again be used for all new construction activities. Total costs for the 2009 CIF and incremental hardening projects are estimated to be $85-95 million. Design Guidelines incremental costs related to new construction, relocation projects and daily work are not tracked.

Transmission

See Initiative 4 of FPL's 10 Storm Preparedness Initiatives – Transmission Hardening

Storm Hardening Facilities

1. Describe each Storm Hardening activity undertaken in the field during 2008

In 2008, FPL continued to target key Critical Infrastructure Facilities, FPL Critical Facilities and Community Projects within the communities it serves. 51 feeders serving 49 acute care facilities, 32 highway crossings on the Florida Turnpike, and 63 "01" switches were hardened to EWL. Additionally, 4 FPL Critical Facilities and 21 Community Projects were incrementally hardened.

2008 CIF Projects

	Region	County	Feeder #	Hospital Facilities	Status
1	East	Martin	404939	Martin Memorial Hospital South	Complete
2	East	Martin	401138	Martin Memorial Medical Center	Complete

21	West	Manatee	500633	Cortez Rd	Complete

2. Describe the process used by your Company to identify the location and select the scope of storm hardening projects.

Critical Infrastructure Facilities (CIF) were identified by working with the various municipalities and prioritized using a classification hierarchy (Acute Care, 911, EOC, Police, etc). FPL's feeders serving CIF were then classified by the most important Top-CIF and sorted by hierarchy and least cost to harden. Community feeders that serve community needs; such as grocery stores, gas stations and pharmacies; were identified in order to provide a broad footprint across all communities in FPL's service territory. The Critical FPL facilities serve FPL's generation units. The 2008 plan focused on Acute Care facilities. The 2009 plan continues to follow the approved hierarchy, completing

the Acute Care and hospital facilities and beginning work on feeders serving 911 facilities. The 2009 plan also continues the incremental hardening of Community Project feeders and completes the underground phase-2 portion for an FPL critical facility.

3. Provide the costs incurred and any quantified expected benefits

Total hardening costs in 2008 were $54.6 million for hardening the targeted feeders to extreme wind or incremental levels and the replacement of critical poles. Design Guidelines incremental costs related to new construction, relocation projects and daily work are not tracked. Consistent with the information provided by FPL in Docket No. 070301-EI, FPL has estimated that, over an analytical study period of 30 years, the net present value of restoration cost savings per mile of hardened feeder would be approximately 45% to 70% of the cost to harden that mile of feeder for future major storm frequencies in the range of once every three to five years. Of course, it is possible that FPL will face major storms more frequently than that, as it did in the 2004-2005 hurricane seasons. If that were the case, then the net present value of restoration cost savings likely would exceed the hardening costs. It is also important to recognize that in addition to Restoration Cost Savings, customers will benefit substantially, and in many direct and indirect ways, from the reduced number and duration of storm and non-storm outages resulting from the planned hardening activities.

4. Discuss any 2009 projected activities and budget levels

Consistent with its FPSC approved plan, FPL's 2009 projected activities targets 69 feeders, serving 18 acute care facilities, 26 hospitals, 35 911 facilities, 1 EOC, 2 Police stations, and 1 Fire station. These 69 feeders will be built to meet the extreme wind criteria for their respective location within the state. Additionally, 11 Community Project feeders will be incrementally hardened and the phase-2 underground portion of one feeder serving FPL's St Lucie generating unit will be completed. These Community Project feeders are located along major thoroughfares where there is a concentration of gas stations, grocery stores, and pharmacies (i.e. "community needs"). FPL's 2009 targeted hardening plan also continues to include retrofitting certain critical poles, such as overhead highway crossings, throughout its service territory. It will include 40 highway crossings and 53 "01" switches. As noted previously, FPL is working closely with joint pole owners and attaching entities on these projects. This includes providing primary maps of each feeder along with initial project scope plans, conducting joint "ride outs" of feeders to observe existing conditions, capture suggestions, and identify any concerns before each project is engineered, and holding "pre-construction" meetings to make one final review prior to initiating construction. For example, to date, FPL has completed the design of 56% of the 2009 feeders which includes a "ride out" with joint pole owners and attaching entities. FPL's projected expenditure for the 2009 hardening activities on these feeders and critical poles is estimated to be $85-$95 million. Design Guidelines incremental costs related to new construction, relocation projects and daily work are not tracked.

2009 CIF Projects

	Region	County	Feeder #	Hospital / Facility

STORM HARDENING INITIATIVES

Transmission

1. **Description of Hardening Programs**
   Please refer to FPL's response to item 1 – Description of Transmission Hardening Programs, in Initiative 4 of the Storm Preparedness filing for a description of each transmission storm hardening initiative of FPL.

2. **Method of Selection**
   Please refer to FPL's response to item 2 – Method of Selection, in Initiative 4 of the Storm Preparedness filing for a description of the method FPL used to determine each transmission storm hardening initiative.

3. **2008 Accomplishments**
   Please refer to FPL's response to item 4 – 2008 Accomplishments, in Initiative 4 of the Storm Preparedness filing for a summary of the 2008 accomplishments for each of the transmission hardening programs. FPL's 2008 accomplishments are also included in appendix 1 (FPSC Table: Transmission Hardening) of initiative 4.

4. **Proposed 2008 Plans**
   Please refer to FPL's response to item 5 – Proposed 2009 Plans, in Initiative 4 of the Storm Preparedness filing for a summary of the 2009 projections for each of the transmission hardening programs. FPL's 2009 proposed plans are also included in appendix 1 (FPSC Table: Transmission Hardening) of Initiative 4.

STORM READINESS

Storm Season Preparedness

FPL's 2009 storm season preparedness plan encompasses four primary areas: strengthening the infrastructure, preparing the company's storm organization, improving upon its well-tested restoration plan and enhancing communications to customers and municipalities. Strengthening the infrastructure includes FPL's hardening efforts, pole inspections, line clearing and thermovision initiatives. Preparing the company's storm organization includes incorporating lessons learned into its storm plans and processes and training its employees, e.g., FPL's annual dry run exercise.

In addition to all the activities to strengthen our infrastructure and to be better prepared for storms described throughout this filing, FPL either has completed or will complete by June 1 the following additional storm preparedness initiatives: vegetation trimming of feeders and laterals serving all top CIF's (e.g., hospitals, 911 centers, special needs shelters, police and fire stations, etc.), the annual company-wide hurricane dry-run exercise in May 2009, ensuring mutual assistance plans are in place, and implementing outage communications system improvements to provide more accurate estimated restoration times for customers.

In 2008, FPL made several improvements to both organizations and processes. Within the organizational structure and management systems, we have begun implementation of the Incident Command System (ICS) as it relates to the National Incident Management System. Although we already adhere to many of the key features of ICS, our goal is to be as consistent with as many ICS tenets as possible. This will enhance our communication with external agencies, standardize key role expectations, and thereby improve our emergency response. Our objective is to complete this effort by year-end 2010.

FPL also implemented a new internal emergency communication system known as "Send Word Now". This will provide FPL with the ability to more quickly reach and receive responses from our employees and contractors and will enable us to quickly begin a successful emergency response with real-time information regarding staffing.

2009 Preparations

FPL's Hurricane Preparedness Plan

- Continue strengthening the infrastructure
- Preparing the storm organization
- Refine the restoration plan
- Enhance communications

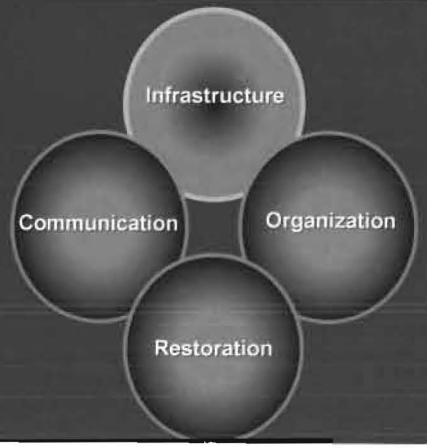

Continue Strengthening the Infrastructure Distribution - Hardening

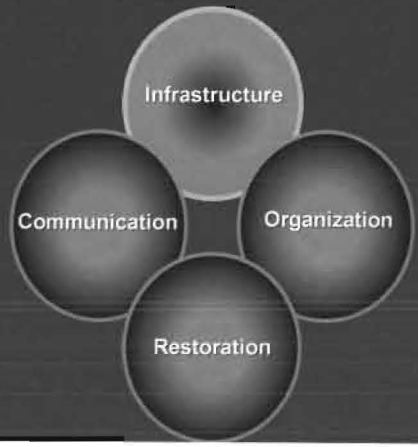

- 3 – Prong approach
- Completing hospitals
- Starting 911 centers, fire and police
- Continuing with "community projects", highway crossings and other critical poles

Continue Strengthening the Infrastructure Transmission - Hardening

- Replace all wood structures, including single pole un-guyed wood structures
- Replace ceramic post insulators

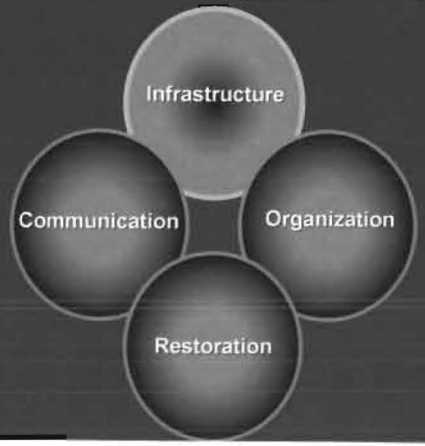

Continue Strengthening the Infrastructure Distribution – Pole Inspections

- FPL owns over 1.1 million poles
- Inspecting 1/8 of poles each year
- Completed about 1/3 by end of 2008
- Working throughout entire FPL system

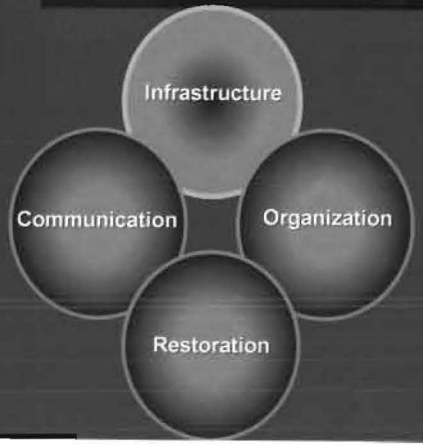

Continue Strengthening the Infrastructure
Transmission - Inspections

- 64,000 structures system-wide
- Inspected over 1/6 of structures in 2008
- Inspect at least 1/6 of structures in 2009
- Before June 1, 2009, inspect all critical 500kV lines & facilities serving distribution CIF projects

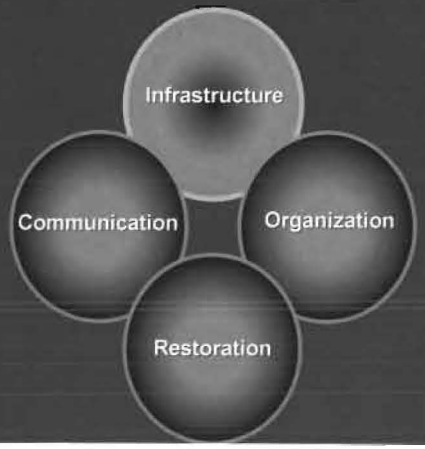

Continue Strengthening the Infrastructure Distribution – Vegetation Management

- Feeders - 3-year average trim cycle
- Laterals - 6-year average trim cycle
- Before June 1 - clear Top CIF
- Encourage "Right Tree - Right Place"

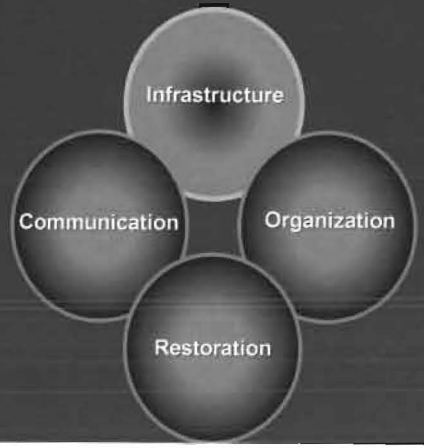

Continue Strengthening the Infrastructure Transmission – Vegetation Management

- Cleared 100% of FPL transmission Right of Way in 2008
- Same for 2009

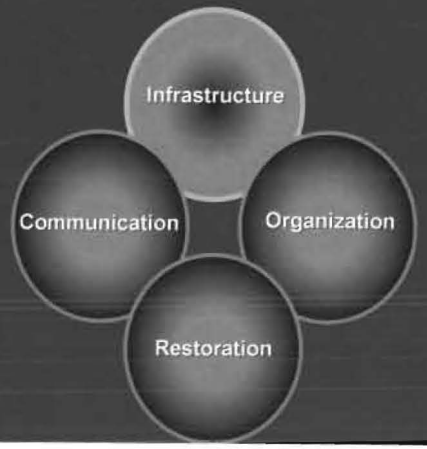

Preparing the Storm Organization

- Roles identified and staffed
- Training updated
- Training conducted
- Forensic teams

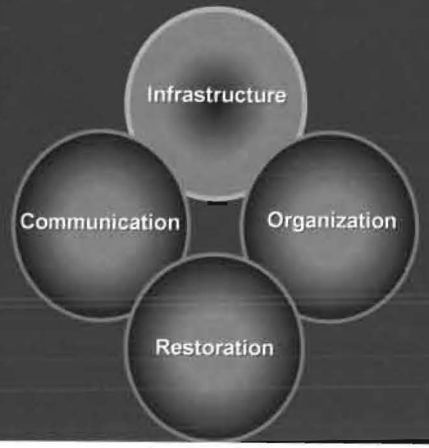

Refine the Restoration Plan

- Resource plans in place
  - Logistics
  - Foreign utilities & contract crews
  - Inventories
- Applied lessons learned
- Refined recovery plan

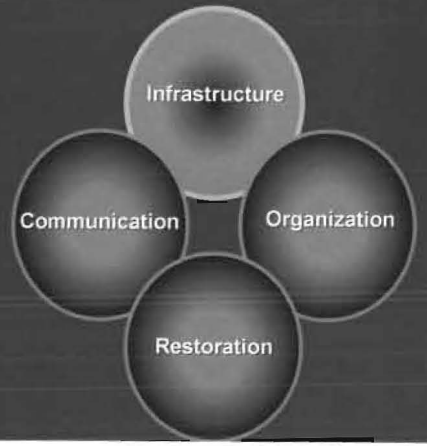

Enhance Communications

- FPL / County EOC meetings
- Increased governmental & community communications
- More detailed estimated restoration times

Summary

- Infrastructure strengthened
  - Hardening; Vegetation; Pole Inspections
- Organization prepared
  - Trained and ready
- Restoration plan tested & refined
  - Lessons learned; Technology; Forensics
- Communications enhanced
  - Better information
