FPSC-COMMISSION CLERK

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Fuel and purchased power cost
recovery clause with generating
performance incentive factor.

Docket No. 110001-EI

Submitted for Filing: September 29, 2011

**PROGRESS ENERGY FLORIDA'S RESPONSES TO
STAFF'S SIXTH SET OF INTERROGATORIES (NOS. 81-95)**

Progress Energy Florida, Inc. ("PEF"), responds to Staff's Sixth Set of Interrogatories to PEF (Nos. 81-95), as follows:

INTERROGATORIES

81. Staff is asking for the following information to assist in analyzing whether Progress Energy Florida's (PEF) hedging activities were prudent. Specifically, staff needs to understand and be satisfied that PEF paid market prices for swaps, options, and any other hedging instruments for each fuel type.

- a. For realized (actual) hedging gains and losses for the twelve months beginning August 1, 2010 and ending July 31, 2011 associated with swap contracts for natural gas, please provide the following information: (1) the transaction date (the date the swap was entered into) for the swap; (2) the fixed price for the swap; (3) the month or period in the future the swap is covering; and (4) the corresponding NYMEX futures price for the future month or period for natural gas on the transaction date of the swap. Please provide your responses in a schedule format.

Answer: Please see Attachment A.

DOCUMENT NUMBER-DATE

FPSC-COMMISSION CLERK

- b. For realized (actual) hedging gains and losses for the twelve months beginning August 1, 2010 and ending July 31, 2011 associated with swap contracts for fuel oil, please provide the following information: (1) the transaction date (the date the swap was entered into) for the swap; (2) the fixed price for the swap; (3) the month or period in the future the swap is covering; and (4) the corresponding NYMEX futures price for the future month or period for natural gas on the transaction date of the swap. Please provide your responses in a schedule format.

Answer: Please see Attachment B.

- c. For interrogatories 81a. and 81b. above, please explain any difference between the swap fixed price and the corresponding futures or forward price for the future period (the period being hedged) that is greater than 5 percent of the swap fixed price.

Answer: The trading prices represented in responses 81A and 81B are the actual prices that PEF executed the various transactions. The market prices used for the basis of the comparison are the closing daily settlement market prices for each individual month for the respective trade date of each transaction. PEF used the closing daily settlement market prices, as these prices were the data that was readily available. This simplified method of comparison will result in calculated pricing differences between the prices that PEF executed the various transactions versus the closing market prices on those same days. These differences are due to the timing of when PEF executed the transactions during the trading day and the closing market prices on those days for the respective periods hedged. It is common for commodity prices for the forward time periods to fluctuate, sometimes significantly, throughout a trading day. Thus, there will be differences between closing daily settlement prices for any respective month and period, and the price levels that PEF executed the various trades for throughout the trading day. In addition to the timing of trade execution differences, there will also be differences that are caused by transactions that included basis in the transaction price, such as FGT ZN3, versus a NYMEX market price which does not include the basis. Additional differences result from comparing individual month closing prices to trades that were executed for multiple time periods such as common seasonal and annual strip periods where the same fixed price was executed for the entire time period. Lastly, unlike the NYMEX natural gas contract, the heavy oil market is not as liquid and the heavy oil forward curve is not as observable beyond a period of approximately 18 to 24 months.

As can be seen from the comparison utilizing the simplified comparison method, PEF had transactions where the comparison would indicate PEF traded

below market and above market. However, PEF always pays the market price for all the trades it executes at the time the hedges are executed during the trading day and the highlighted differences in the Attachments are the result of differences between the market prices that existed at the time PEF executed the transactions during the course of the trading day and the closing prices used for the comparison as noted above. Additionally, some months of strip trades fell both in the test period and outside the test period which will result in additional differences when calculating percentage variances. PEF executes all of its natural gas and fuel oil transactions at the prevailing market price that exist at the time the transactions are executed during the course of the trading day.

As summarized in Attachments A & B, PEF has outlined on Attachment C some illustrations of this for natural gas trades, heavy oil and light oil trades executed for 2010 and 2011. These are further described below.

As outlined in Example #1 on Attachment C, PEF executed a natural gas financial swap for the July 2010 through September 2010 time period on June 3, 2010 for [REDACTED] per MMBtu. During the course of the trading day on June 3, 2010, the market price for the July 2010 through September 2010 strip time period traded from a low of approximately \$4.4367 per MMBtu to a high of approximately \$4.7477 per MMBtu, a range of approximately \$0.3110 per MMBtu, and closed on that day at \$4.7300 per MMBtu. At the time PEF executed this trade, the market price for this time period was [REDACTED] per MMBtu and as illustrated above was within the daily trading range.

As outlined in Example #2 on Attachment C, PEF executed a natural gas financial swap for the July 2010 through September 2010 time period on June 3, 2010 for [REDACTED] per MMBtu. During the course of the trading day on June 3, 2010, the market price for the July 2010 through September 2010 strip time period traded from a low of approximately \$4.4367 per MMBtu to a high of approximately \$4.7477 per MMBtu, a range of approximately \$0.3110 per MMBtu, and closed on that day at \$4.7300 per MMBtu. At the time PEF executed this trade, the market price for this time period was [REDACTED] per MMBtu and as illustrated above was within the daily trading range.

As outlined in Example #3 on Attachment C, PEF executed a natural gas financial swap for the July 2010 through September 2010 time period on June 3, 2010 for [REDACTED] per MMBtu. During the course of the trading day on June 3, 2010, the market price for the July 2010 through September 2010 strip time period traded from a low of approximately \$4.4367 per MMBtu to a high of approximately \$4.7477 per MMBtu, a range of approximately \$0.3110 per MMBtu, and closed on that day at \$4.7300 per MMBtu. At the time PEF executed this trade, the market price for this time period was [REDACTED] per MMBtu and as illustrated above was within the daily trading range.

As outlined in Example #4 on Attachment C, PEF executed a natural gas financial swap for the July 2010 through September 2010 time period on June

21, 2010 for [REDACTED] per MMBtu. During the course of the trading day on June 21, 2010, the market price for the July 2010 through September 2010 strip time period traded from a low of approximately \$4.8633 per MMBtu to a high of approximately \$5.2193 per MMBtu, a range of approximately \$0.3560 per MMBtu, and closed on that day at \$4.9090 per MMBtu. At the time PEF executed this trade, the market price for this time period was [REDACTED] per MMBtu and as illustrated above was within the daily trading range.

With respect to heavy oil transactions that appear to fall outside the 5% threshold for 2010 periods outlined in Examples #5 through #10 on Attachment C, the same explanation outlined above for strip trades applies to these trades as well. In addition, unlike the NYMEX natural gas contract, which is liquid, the New York Harbor 1.0 Residual fuel oil is not as liquid and not as observable via transparent market beyond a period of approximately 18 to 24 months. As such, on the trade dates for the trades outlined in Examples #5 through #10 on Attachment C, there was not a transparent observable forward curve for the 2010 calendar year strip trades or an intraday observable price range data available for calendar year 2010 on the trade dates. For background, in Attachment B for question 81B on the trade date of these transactions outlined in Examples #5 through #10, the market price reported on the trade date for heavy oil was an internal estimated indicative price modeled using a relationship to the more liquid observable WTI crude oil commodity. This relationship was derived by taking the ratio of the WTI Crude forward price to NYH 1.0 forward price reported by the Intercontinental Exchange (ICE) Monthly Price Validation service. This service surveys companies with interest in commodity trading and calculates a market consensus of indicative long-range forward prices for different pricing points and fuels. As part of estimating the indicative price for non-observable pricing periods, each month Enterprise Risk Management (ERM) would update the ratio and used it to convert the daily-observed WTI crude prices to NYH 1.0 prices. This methodology described was discontinued in 2009 as it was deemed to be insufficient to capture the quickly changing oil markets and the relationship between the fuels. However, this was the indicative estimated price reported in the system on the respective trade dates, as there was no observable market. Thus, on the trade dates there will be percentage variances between the traded price executed and the indicative calculated market price in the system for the respective periods. Today, ERM changes the daily forward prices of heavy oil based on the percentages changes in WTI crude on a daily basis. However, regardless of the reported internal modeled prices for the non-observable forward prices for heavy oil, PEF always pays market price for the products it hedges. PEF identified trades that based on the simplified comparison that were outside of the 5%. PEF included market quotes from financial counterparties for additional transparency prior to execution of the least cost transaction at the time. With the above background, as described in examples #5 through #10 additional explanations are outlined below for heavy oil hedge trades.

As outlined in Example #5 on Attachment C, with respect to the heavy oil trade executed on December 6, 2007 for calendar year 2010 strip, PEF obtained three independent quotes from three separate companies that ranged from [REDACTED] per barrel to [REDACTED] per barrel. PEF executed the lowest market price of [REDACTED] per barrel which was the price at the time of the trade. Although the comparison on Attachment B question 81B would indicate what PEF paid versus the estimated indicative modeled strip price for 2010 as noted above, PEF executed the trade at the prevailing market at the time of the trade.

As outlined in Example #6 on Attachment C, with respect to the heavy oil trade executed on March 12, 2008 for calendar year 2010 strip, PEF obtained four independent quotes from four separate companies that ranged from [REDACTED] per barrel to [REDACTED] per barrel. PEF executed the lowest market price of [REDACTED] per barrel which was the price at the time of the trade. Although the comparison on Attachment B question 81B would indicate what PEF paid versus the estimated indicative modeled strip price for 2010, PEF executed the trade at the prevailing market at the time of the trade.

As outlined in Example #7 on Attachment C, with respect to the heavy oil trade executed on July 17, 2008 for July through September 2010 strip, PEF obtained three independent quotes from three separate companies that ranged from [REDACTED] per barrel to [REDACTED] per barrel. PEF executed the lowest market price of [REDACTED] per barrel which was the price at the time of the trade. Although the comparison on Attachment B question 81B would indicate what PEF paid versus the estimated indicative modeled July through September strip price for 2010, PEF executed the trade at the prevailing market at the time of the trade.

As outlined in Example #8 on Attachment C, with respect to the heavy oil trade executed on July 17, 2008 for July through September 2011 strip, PEF obtained three independent quotes from three separate companies that ranged from [REDACTED] per barrel to [REDACTED] per barrel. PEF executed the lowest market price of [REDACTED] per barrel which was the price at the time of the trade. Although the comparison on Attachment B question 81B would indicate what PEF paid versus the estimated indicative modeled July through September strip price for 2011, PEF executed the trade at the prevailing market at the time of the trade.

As outlined in Example #9 on Attachment C, with respect to the heavy oil trade executed on September 17, 2008 for July through September 2011 strip, PEF obtained three independent quotes from three separate companies that ranged from [REDACTED] per barrel to [REDACTED] per barrel. PEF executed the lowest market price of [REDACTED] per barrel which was the price at the time of the trade. Although the comparison on Attachment B question 81B would indicate what PEF paid versus the estimated indicative modeled September strip price for 2011, PEF executed the trade at the prevailing market at the time of the trade.

As outlined in Example #10 on Attachment C, with respect to the heavy oil trade executed on December 18, 2008 for calendar 2011 strip, PEF obtained

three independent quotes from three separate companies that ranged from [REDACTED] per barrel to [REDACTED] per barrel. PEF executed the lowest market price of [REDACTED] per barrel which was the price at the time of the trade. Although the comparison on Attachment B question 81B would indicate what PEF paid versus the estimated indicative modeled calendar strip price for 2011, PEF executed the trade at the prevailing market at the time of the trade.

As outlined in Example #11 on Attachment C, with respect to the light oil trade executed on October 14, 2009 for August through December 2010 strip. The transaction as a whole is within the 5% threshold; however, split into individual months, the transaction appears to fall outside the 5% threshold. As can be seen in Example #11 on Attachment C, the light oil settle on this date for the August through December 2010 strip was [REDACTED] per barrel and the market related price for the trade was [REDACTED] per barrel if the entire trade was summarized. This results in a difference of only [REDACTED]. As noted, PEF always executes its hedges at the prevailing market price that exist at the time of the transaction occurs.

As outlined in Example #12 on Attachment C, with respect to the light oil trade executed on October 7, 2009 for October through December 2010 strip. The transaction as a whole is within the 5% threshold; however, split into individual months, the transaction appears to fall outside the 5% threshold. As can be seen in Example #12 on Attachment C, the light oil settle on this date for the October through December 2010 strip was [REDACTED] per gallon and the market related price for the trade was [REDACTED] per gallon if the entire trade was summarized. This results in a difference of only [REDACTED]. As noted, PEF always executes its hedges at the prevailing market price that exist at the time of the transaction occurs.

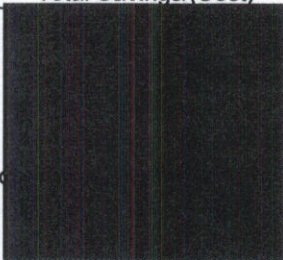

As all these examples illustrate market prices for natural gas and fuel oil change within trading days, and can experience large movements within any given trading day for the respective forward time periods being hedged. As noted previously, PEF always executes trades at the market prices that exist at the time trades are executed within the trading day and all the trades executed for the test period were executed at the prevailing market price that existed at the time of the trade on the respective trading day.

82. Please state the realized hedging gains and losses by fuel type and by type of hedging instrument for the twelve months beginning August 1, 2010 and ending July 31, 2011.

Answer:

REDACTED

Progress Energy Florida, Inc.
For August 2010 through July 2011

Hedging Instrument	Fuel Type	Total Savings/(Cost)
OTC Financial Instruments	Natural Gas	
Fixed Physical Price Contracts	Natural Gas	
OTC Financial Instruments	Natural Gas - Storage	
OTC Financial Instruments	Heavy Oil	
OTC Financial Instruments	Light Oil	
OTC Financial Instruments	Light Heating Oil - River Barge - Fuel Surcharge Hedges	
OTC Financial Instruments	Light Heating Oil - Rail - Fuel Surcharge Hedges	
Total Net Cost		

83. For the twelve months beginning August 1, 2010 and ending July 31, 2011, for each month that hedged volumes of fuel oil or natural gas were outside the percentage range for volumes to be hedged stated in PEF's risk management plan or otherwise stated in internal procedures governing PEF's hedging activities, please state the month, the extent to which the volume hedged was outside of the range, and an explanation of the cause.

Answer: The hedging targets ranges established in PEF's 2011 Risk Management Plan for calendar year 2011 were [REDACTED] to [REDACTED] of forecasted natural gas burns at least [REDACTED] of forecasted heavy oil burns, and at least [REDACTED] of forecasted light oil burns. In addition, PEF targeted to hedge between [REDACTED] to [REDACTED] of the estimated fuel surcharge exposure in the coal rail and river barge transportation agreements. As of December 2010, PEF estimated hedge percentages based on 2011 forecasted burns for natural gas, heavy oil, and light oil, and estimated fuel surcharge exposures the river barge and railroad agreements were approximately [REDACTED], [REDACTED], [REDACTED], [REDACTED] and [REDACTED], respectively. Thus, based on forecasted burns and estimated fuel surcharge exposures for 2011, PEF was within its Risk Management Plan target hedge percentage ranges and/or minimum hedge percentage targets as filed in its 2011 Risk Management Plan. PEF's hedging targets are based on annual calendar year forecasted burns and exposures. PEF monitors its actual and forecasted burns for calendar and rolling 12-month periods hedge percentages.

Although the audit period and the annual calendar periods noted in PEF's 2011 Risk Management Plan are different, for the period August 1, 2010 through July 31, 2011, PEF's actual hedge percentages for natural gas, light oil, and coal rail and river surcharge exposures of approximately [REDACTED], [REDACTED], [REDACTED] and [REDACTED], respectively. As such, these were within the hedging ranges and/or minimum hedge percentages outlined in PEF's 2011 Risk Management Plan for the 2011 calendar year period. The actual heavy oil hedge percentage for the period of August 1, 2010 through July 31, 2011 of approximately [REDACTED], was lower than the minimum hedge percentage target of [REDACTED] outlined in PEF's 2011 Risk Management Plan. As noted earlier, based on forecasted heavy oil burns for calendar year 2011, PEF's hedge percentage was approximately [REDACTED], which was above its minimum hedge target of [REDACTED] outlined in the 2011 Risk Management Plan. The primary driver of the lower actual heavy oil hedge percentage versus the target minimum hedge percentage was due to significantly higher heavy oil burns for the months of December 2010 and April 2011. The higher heavy oil burns in these months were due to higher loads as a result of cooler than normal weather in December 2010 and warmer weather in April 2011. Differences do occur for any given month between forecasted and actual burns that can be caused by variables including, but not limited to, weather, forecasted and actual load, and changing fuel prices. PEF produces periodic fuel forecast by month and monitors monthly forecasted and actual burns against hedge

84. In comparing PEF's Risk Management Plans for 2011 and 2012, please list all changes between the 2011 and the 2012 plans.

- a. Please explain the reasons for each of the changes listed in response to this interrogatory.

Answer: The overall substance and purpose of the Risk Management Plan (Plan) has not changed between the 2011 Plan and the 2012 Plan.

The following is a summary of the major changes between the 2011 and 2012 Risk Management Plans:

- On page 3 and 4 of the 2012 Plan, PEF's hedging strategy presented in its Risk Management Plan for natural gas with respect to the rolling 36-month time period is consistent with what was presented in the 2011 Plan. In the 2012 Plan, PEF outlined the specific targeted ranges within the body of the Risk Management Plan.
- PEF made additional adjustments to hedging activities for heavy oil. PEF is targeting to hedge a minimum of [REDACTED] of its forecasted burns for 2012 but does not anticipate hedging heavy oil for beyond 2012 at this time. As noted in the plan, PEF will continue to monitor actual and forecasted heavy oil burns throughout the year and make adjustments if needed. Although the formal 36-month rolling tenor limits did not change in its Risk Management Guidelines for heavy oil, the reason PEF outlined it would not hedge heavy oil beyond 2012 at this time was due to the lower forecasts of heavy oil burns. PEF will continue to monitor actual heavy oil burns, update fuel forecast throughout year and make adjustments if needed.
- Item 5 on Page 13 of the 2012 Plan, PEF provided a copy of the Risk Management Committee Guidelines consistent with the 2011 Plan. When these Guidelines were updated during the process of the normal reviews in 2010, there were additional references included in the guidelines to capture the RMC member's officer and director affiliations for the respective Progress Energy Utilities. This additional clarification was made as part of the periodic review the Guidelines to show the oversight roles of the RMC members as officers and/or directors of PEC and PEF.
- In Item 5 on Page 14 of the 2012 Plan, additional references were added to include Legal's and Regulated Back Office roles related to the utility verifying independent and unavoidable oversight. Although these are not new processes or oversight activity for Legal or Regulated Back Office functions, as part of PEF's on-going updating and review of its Plan, it was noted these roles needed to be more clearly referenced given their important role in the independent oversight.

* Percentage difference from trade price - Negative identifies when a trade price is above the closing market price for the respective day based on the simplified comparison.

* Percentage difference from trade price - Positive identifies when a trade price is below the closing market price for the respective day based on the simplified comparison.

Note 1

Due to the test period of the request being different than the actual months of the strip deals executed, this causes the appearance of trades being more than 5% different from the market price for the respective day based on the simplified comparison. Below, the entire strips have been put together to show how they look when in complete form.

* Percentage difference from trade price - Negative identifies when a trade price is above the closing market price for the respective day based on the simplified comparison.

* Percentage difference from trade price - Positive identifies when a trade price is below the closing market price for the respective day based on the simplified comparison.

Note 1

Due to the test period of the request being different than the actual months of the strip deals executed, this causes the appearance of trades being more than 5% different from the market price for the respective day based on the simplified comparison. Below, the entire strips have been put together to show how they look when in complete form.

Residual Fuel Oil prices and quantities are in barrels.

Question 81 b.

2010 August - December Swap Hedges

Light Fuel Oil

Delivery Month	Trade Date	Instrument	Z Key	Market	Location	Volume (BBLs)	Trade Price	Market Price on Trade Date	Percent Difference from Trade	
8/1/2010	1/7/2009	FIXED SWAP	2650046	USGLF	NO2HSD			\$76.23		
9/1/2010	1/7/2009	FIXED SWAP	2650049	USGLF	NO2HSD			\$77.10		
8/1/2010	9/21/2009	FIXED SWAP	2879871	USGLF	NO2HSD			\$82.80		
9/1/2010	9/21/2009	FIXED SWAP	2879873	USGLF	NO2HSD			\$83.69		
10/1/2010	9/21/2009	FIXED SWAP	2879875	USGLF	NO2HSD			\$84.69		
8/1/2010	10/14/2009	FIXED SWAP	2917217	USGLF	NO2HSD			\$88.92	3.4%	<Identified in Attachment C, Example #11
9/1/2010	10/14/2009	FIXED SWAP	2917219	USGLF	NO2HSD			\$89.89	Avg. for the	<Identified in Attachment C, Example #11
10/1/2010	10/14/2009	FIXED SWAP	2917223	USGLF	NO2HSD			\$90.90	Strip Trade	<Identified in Attachment C, Example #11
11/1/2010	10/14/2009	FIXED SWAP	2917227	USGLF	NO2HSD			\$91.82		<Identified in Attachment C, Example #11
12/1/2010	10/14/2009	FIXED SWAP	2917229	USGLF	NO2HSD			\$92.74		<Identified in Attachment C, Example #11
10/1/2010	8/18/2010	FIXED SWAP	3103720	NYMEX	HOIND			\$86.03		
11/1/2010	8/18/2010	FIXED SWAP	3103721	NYMEX	HOIND			\$87.12		
12/1/2010	8/18/2010	FIXED SWAP	3103722	NYMEX	HOIND			\$88.22		

Light Fuel Oil prices and quantities are traded financially in gallons.

* Percentage difference from trade price - Negative identifies when a trade price is above the closing market price for the respective day based on the simplified comparison.

* Percentage difference from trade price - Positive identifies when a trade price is below the closing market price for the respective day based on the simplified comparison.

Note 1

Due to the test period of the request being different than the actual months of the strip deals executed, this causes the appearance of trades being more than 5% different from the market price for the respective day based on the simplified comparison. Below, the entire strips have been put together to show how the look when in complete form.
