Subject: Solar

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Cristina Strobel

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Judy Munro

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Sir:
In my opinion, you are doing consumers a great disservice eliminating solar rebates. It is actually embarrassing when I tell people about the lack of support for solar energy in the "Sunshine State. Northern states are beyond us.

You need to say NO to the big utilities who are lobbying in their interests and not ours.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Roger Messenger

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

I understand that on November 25th you will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts.

This is to ask ask that you set conservation goals that increase efficiency opportunities, rather than dramatically decreasing the scope of what are already extremely modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those with lower incomes who lack the resources to reduce their energy use and save money on their bills.

Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's Pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida. PLEASE DO THE RIGHT THING FOR THE PEOPLE, NOT THE POWER COMPANIES!

November 22, 2014

Re: Docket 130199, 130200, 130201, 130202, 130203, 310204 and 130205
Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar and renewable energy industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you **not** to terminate the solar pilot program and consider the following request:

- Reduce the incentive for January 2015 for Residential Solar PV to $0.40
- Apply a similar reduction to the commercial solar PV program
- Require a MW goal
- Require a predictable declining incentive structure
- Maintain the current funding cap

Sighting the most recent Staff recommendations the installed solar photovoltaic prices have dropped in Florida to $4.13/watt for the average residential solar system and lower for commercial. As compared to slightly over $8.00/watt in 2009 .
In 2009 the Florida Solar Coalition, an intervener in Docket 080407 suggested the following:
FSC (Florida Solar Coalition) suggests that annual support should continue for five years, and decrease every year to account for market development and reductions in technology costs.
At that time 25% of the installed cost per watt was subsidized by this program. This coming January if left unchanged the incentive will have actually increased to approximately 50% of the installed cost. Everything in the middle was purposefully over subsidized in order to promote the Utility argument toward the termination of this program - all at the expense of the ratepayers who provide them their guaranteed profits. The utilities could have avoided this by following the Florida Solar Coalitions recommendations in 2009 and followed a simple market price decline and the residential solar rebate would be approximately $1.00/watt.
The Utilities have blatantly avoided a simple way of increasing the programs participation rates and it is time to require the utilities to lower the incentive amount for the 2015 program launch to $0.50 cents per watt. This would positively impact promoting solar energy in Florida all while maintaining the funding cap established in order PSC-09-0855-FOF-EG. Though this appears to be a dramatic step downward in incentive, it signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It

also supports staffs favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.
If the Commission believes this request is prudent and the best decision for ratepayers, participants and reasonable use of funds it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.
Regarding the future of the Solar Pilot Programs, we believe that they should have been designed to have a MW goal accompanied with a smooth transition to an incentive less market. We urge the Commission, rather than terminate the Solar Pilot Programs, extend them for 1 more year following the 2015 launch with a MW Goal combined with declining incentives as we approach zero incentives and the programs end.
Though it is not part of the mandate of the commission to consider these statistics we feel that it is important to note that the solar industry employs nearly 150,000 Americans and is growing every day. Every 3 and half minutes a new solar energy system is installed in the United States. These are well paying construction jobs that cannot be outsourced overseas. The sun provides Florida with stable energy that does not come from across our border. It is energy that is generated here in Florida using our most popular resource.
The Florida industry is not asking for overly rich subsidies to promote solar, but simply for a clear and stable business environment in which to operate. One that sends the appropriate signals to ratepayers - incentives that decrease over time, not increase. The utilities have ignored this request on all accounts which is why the staff was easily able to come to the conclusions to terminate the programs. We are now relying on you the Commissioners to heed our requests and enforce make sense policy for the ratepayers of Florida.

Professionally Yours,

Scott McIntyre
President
Florida Alliance for Renewable Energy

Re: Docket 130199, 130200, 130201, 130202, 130203, 310204 and 130205

Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar and renewable energy industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you not to terminate the solar pilot program and consider the following request:

- Reduce the incentive for January 2015 for Residential Solar PV to $0.40
- Apply a similar reduction to the commercial solar PV program
- Require a MW goal
- Require a predictable declining incentive structure
- Maintain the current funding cap

Sighting the most recent Staff recommendations the installed solar photovoltaic prices have dropped in Florida to $4.13/watt for the average residential solar system and lower for commercial. As compared to slightly over $8.00/watt in 2009[1].

In 2009 the Florida Solar Coalition, an intervener in Docket 080407 suggested the following:

> *FSC (Florida Solar Coalition) suggests that annual support should continue for five years, and decrease every year to account for market development and reductions in technology costs.*

At that time 25% of the installed cost per watt was subsidized by this program. This coming January if left unchanged the incentive will have actually increased to approximately 50% of the installed cost. Everything in the middle was purposefully over subsidized in order to promote the Utility argument toward the termination of this program - all at the expense of the ratepayers who provide them their guaranteed profits. The utilities could have avoided this by following the Florida Solar Coalitions recommendations in 2009 and followed a simple market price decline and the residential solar rebate would be approximately $1.00/watt.

The Utilities have blatantly avoided a simple way of increasing the programs participation rates and it is time to require the utilities to lower the incentive amount for the 2015 program launch to $0.50 cents per watt. This would positively impact promoting solar energy in Florida all while maintaining the funding cap established in order PSC-09-0855-FOF-EG.

Though this appears to be a dramatic step downward in incentive, it signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staffs favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

[1] Photovoltaic PV Trends: Historical, Recent and Near Term Projections Nov 2012 produced by NREL. Chart

If the Commission believes this request is prudent and the best decision for ratepayers, participants and reasonable use of funds it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.

Regarding the future of the Solar Pilot Programs, we believe that they should have been designed to have a MW goal accompanied with a smooth transition to an incentive less market. We urge the Commission, rather than terminate the Solar Pilot Programs, extend them for 1 more year following the 2015 launch with a MW Goal combined with declining incentives as we approach zero incentives and the programs end.

Though it is not part of the mandate of the commission to consider these statistics we feel that it is important to note that the solar industry employs nearly 150,000 Americans and is growing everyday. Every 3 and half minutes a new solar energy system is installed in the United States. These are well paying construction jobs that cannot be outsourced overseas. The sun provides Florida with stable energy that does not come from across our border. It is energy that is generated here in Florida using our most popular resource.

The Florida industry is not asking for overly rich subsidies to promote solar, but simply for a clear and stable business environment in which to operate. One that sends the appropriate signals to ratepayers - incentives that decrease over time, not increase. The utilities have ignored this request on all accounts which is why the staff was easily able to come to the conclusions to terminate the programs. We are now relying on you the Commissioners to heed our requests and enforce make sense policy for the ratepayers of Florida.

Respectfully yours,

Scott McIntyre
President
Florida Alliance for Renewable Energy

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Beverly Jones

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: State Rebate Program for Solar
Attachments: National Grid projects a 37 percent increase for winter electricity rates - Business - The Boston Globe.pdf

Dean Commissioner Balbis,

There has been a lot of back and forth with regards to solar pilot programs that have expired. It seems that TECO, Duke and FPL all feel that energy efficiency costs per kWh saved are greater than what they can generate and sell a new kWh now. Let me state that most of the discussions center around Solar PV or the electric panels while you hear little if any on solar water heating systems.

It could be argued as it is, by the utility companies, that they are in fact, in business to generate electricity and make a return for their share holders. Ulike most companies, their rate of return or profit is limited to around 12 or 13% or as dictated by the PUC. So, on the one hand, you have to ask yourself, why does it make sense to ask utility companies to pay for programs that actually reduce their profit? In a real sense, it is like asking General Motors to pay for me to install energy efficiency improvements on my Chevy Truck to improve its fuel economy rating so I don't need to buy a new vehicle. The concept is ridiculous.
On the other hand, by virtue of being a monopoly and the unique guidelines that govern their operations, utiltiy companies can actually be allowed to charge existing rate payers for the cost of building new power plants and generating capacity long before that new production is realized. This makes the case for looking at other strategies that have a lower impact on rates, the environment, and jobs creation. Of course, most people have no idea that some of their bill is covering these expenses so it is rarely questioned.

In my case, my company makes solar water heating equipment. This is a proven technology that offers significant benefits to the utility companies:

1. Storage. Unlike PV, Solar water heating has built in energy storage.
2. Not connected to the grid. This whole argument about the wealthy owners of solar systems being paid for on the backs of poor rate payers, simply does not apply to solar thermal since solar thermal water heating does not use the Utiltiy power lines, transformers or switch gear.
3. Back up element can be radio controlled. Due to the combination of storage and an electric back up element, utilities can remote control the backup element to turn it off when they experience periods of peak demand like on cold mornings in the winter. Solar thermal water heating can actually help the utility more effectively load level their output by allowing the backup elements to come on at say 4:00AM but cut them off at the peak times of around 5:30 to 6:00AM so that they do not have to run expensive peaking units. PV does not offer this benefit since it has no built in storage.
4. The cost per watt offset is greater than with a PV system. A 4x10 solar water heating panel, the most common size installed in Florida, has an approximate equivalent output of about 2100 watts. Most modern PV modules are in the 230 watt range.

Maybe a better strategy for Florida, would be to do what Hawaii has done and just require a solar water heating system on all new homes. This helps to kick the volume higher, lowers cost due to economies of scale, puts the cost of the system into the 30 year mortgage and since Florida does most residential water heating with electricity, will have a huge impact for the utility companies to mitigate new plant construction. This can be done without a utility rebate program. In addition, it has been estimated that 80% or more of Floridians, feel that the state needs to do more with Solar but feel it is too costly and no one wants to pay more on their utility bill to subsidize it.

Just so you know, while Florida lags behind California, New Jersey and now possibly New York in Solar PV, it ranks in the top 3 for solar water heating and has since the late 70's.

Finally, make no mistake, natural gas prices are not going to remain at the historically low figures that they are now forever and Florida is especially vulnerable to spikes and shortages. Look at the attached Boston Globe article that predicts electric rates will rise 37% this year for the North east. This is because the main gas line is not large enough to provide the volume of gas during peak demand events. Florida could have the same problem. Not long ago, FPL used to generate 50% of it's electricity from coal. Now, 70% from Natural gas. Duke just closed down the Crystal River Nuclear Station and will replace it with a gas unit. Consider that this gas comes from a hurricane prone area; the gulf coast. The issue of cost per kWh may be a secondary issue to being able to get power at all if we are hit with the storms we had back in 2003. Use of a technology like solar water heating that can actually store energy, can pull demand off the grid and allow more electricity to be used for more productive activities like running refrigerators for food and meds and oxygen machines for seniors.

Ask yourself, how will you respond in the town hall meetings when the utilities need to raise rates because gas went up and what did you do to mitigate that?

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Kathryn Walters

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Florida Solar Energy Debacle

Chairman Graham -

Those of us who have lived all or most our lives in Florida, as have I, realize the "Sunshine State" is largely a Chamber of Commerce notion when one finds that Florida is in the second quartile of annual insolation of the 50 states.

Nevertheless, being in the second quartile is significant, worthy of the State being much more creative and supportive of distributed solar electric generation, as is occurring in several states (e. g., New Jersey and Minnesota) of less solar resource than Florida.

Net metering has been characterized as the solar elite being subsidized by the non-solar masses. A few months ago economists with the Minnesota equivalent of the PSC debunked this subsidy perception, when all true values and all true costs of solar versus conventional generation are considered.

I look forward to the PSC adding renewed emphasis to the "Public" and the "Service" components of its name in

regard to the big picture of electric power production and usage in Florida.

Respectfully,

Robert R. Bullard, P. E.

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Art Graham,

Solar is the future and Florida is incredibly well positioned to lead. We should take advantage of this incredible resource. FP&L is a super company. I think they do an outstanding job. I am constantly amazed at the low power bill and infrastructure hardening since Hurricane Wilma. The stability of the electric flow could possibly be better. STILL, the future is SOLAR. Let's lead the way to high quality jobs and low cost energy.

I am Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Subject: FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a year-round Florida resident, and I strongly support the development and use of solar energy systems in our state.

There is a growing demand for clean energy, and it would be ludicrous for The Sunshine State to fail to exploit this natural and available energy source. A solar rebate program is vital to the growth of the solar industry, which can provide new, badly needed jobs and spur investments in Florida. Solar energy growth would decrease the use of fossil fuels, resulting in a cleaner environment and thereby support the tourist industry. It would also reduce the impetus for fracking, an environmental disaster that is now threatening Florida and would result in heavy demands on already stressed water supplies, contamination of the aquifer and air and health problems. On a larger scale, decreased fossil fuel use will affect climate change and its impacts, impacts to which Florida will be especially susceptible.

Consumers deserve to have energy options, including localized solar power. It is vital that the Solar Pilot Program not only continue but be expanded if Florida is not to fall behind in developing cleaner energy. I urge you to support consumers and Florida's future in the face of strong opposition from utility companies and to continue and strengthen Florida's Solar Pilot Program.

Thank you for the opportunity to comment.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

I installed solar electricity and hot water panels on my former home back in 2005. At that time it was quite expensive, but worth it in cutting down on my use of coal or gas generated electricity. I wondered why the "sunshine state " did not do more to facilitate the use of solar energy. Please don't go backwards on the effort to bring solar energy usage to out state. Go forward to make solar more available, less expensive, and the norm in Florida.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar reb ate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Art Graham,

As a former Floridian I wondered why there was so little solar energy in the sunshine state I have just begun adding solar to my roof here in Ohio.
Why not preserve and improve your Solar Pilot Program so that customers can continue to invest in and benefit from local solar power?

Unfortunately my Governor Kasich put a freeze on renewable standards, threatening jobs (while pushing the dubious JobsOhio) and a fossil-free future. But we carry on despite his blindness to progress.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Subject: Support and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a longtime Florida resident, homeowner, voter and ratepayer. I fully support solar energy in our state. I just do not understand why we, The Sunshine State, have been so far behind in supporting the widespread use of solar power throughout the State. It is just unbelievable to me that we have not embraced this clean, renewable, inexpensive energy source. I've written to Governors and legislators about this for as long as I can remember. Yet, nothing has been done. The big electric utilities and other special interests continue to kill any meaningful actions that should be taken so preserve their own profits.

I now urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power. We should have solar panels on every roof in the state. Now.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Solar Pilot Program Helps Minorities

Dear Chairman Graham and Commissioners of the Florida Public Service Commission,

As a City of Tampa certified Minority Business Enterprise and Service Disabled Veteran Owned Small Business – Florida Licensed Solar Contractor, I cannot stress sufficiently how integral the Solar Pilot Program (SPP) was in getting my business out of the "starting block" and how important it is to providing opportunities to those who cannot afford the upfront cost of installing solar on their home.

Tampa Energy Solutions began installing solar panels in 2012 shortly after my retirement from the military. My first customers were Solar Pilot Program recipients. Two these customers (SPP recipients) are your average hard working single women located in the heart of Tampa's blue collar district. They would not have solar on their roof today without this important program and remain grateful for the opportunity to receive the support provided by this critical program. Contrary to what has been described in other publications, these individuals are NOT well paid doctors, lawyers or big business owners. Their homes are modest two bedroom places.

Overall, we have been fortunate to support solar installations on 6 customers in the past two years that received support from this critical program. The Solar Pilot Program is for many the only way for those in this economic category to obtain solar on their home. The majority of my mainstream customers that purchase solar without the rebate are more affluent and possess the financial means to afford systems at today's cost.

For the reasons stated above, I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By simply reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maria Fernandez

Letter to the Florida Public Service Commission:

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Subject: State Rebate Program for Solar
Attachments: National Grid projects a 37 percent increase for winter electricity rates - Business - The Boston Globe.pdf

Dean Commissioner Balbis,

There has been a lot of back and forth with regards to solar pilot programs that have expired. It seems that TECO, Duke and FPL all feel that energy efficiency costs per kWh saved are greater than what they can generate and sell a new kWh now. Let me state that most of the discussions center around Solar PV or the electric panels while you hear little if any on solar water heating systems.

It could be argued as it is, by the utility companies, that they are in fact, in business to generate electricity and make a return for their share holders. Ulike most companies, their rate of return or profit is limited to around 12 or 13% or as dictated by the PUC. So, on the one hand, you have to ask yourself, why does it make sense to ask utility companies to pay for programs that actually reduce their profit? In a real sense, it is like asking General Motors to pay for me to install energy efficiency improvements on my Chevy Truck to improve its fuel economy rating so I don't need to buy a new vehicle. The concept is ridiculous.
On the other hand, by virtue of being a monopoly and the unique guidelines that govern their operations, utiltiy companies can actually be allowed to charge existing rate payers for the cost of building new power plants and generating capacity long before that new production is realized. This makes the case for looking at other strategies that have a lower impact on rates, the environment, and jobs creation. Of course, most people have no idea that some of their bill is covering these expenses so it is rarely questioned.

In my case, my company makes solar water heating equipment. This is a proven technology that offers significant benefits to the utility companies:

1. Storage. Unlike PV, Solar water heating has built in energy storage.
2. Not connected to the grid. This whole argument about the wealthy owners of solar systems being paid for on the backs of poor rate payers, simply does not apply to solar thermal since solar thermal water heating does not use the Utiltiy power lines, transformers or switch gear.
3. Back up element can be radio controlled. Due to the combination of storage and an electric back up element, utilities can remote control the backup element to turn it off when they experience periods of peak demand like on cold mornings in the winter. Solar thermal water heating can actually help the utility more effectively load level their output by allowing the backup elements to come on at say 4:00AM but cut them off at the peak times of around 5:30 to 6:00AM so that they do not have to run expensive peaking units. PV does not offer this benefit since it has no built in storage.
4. The cost per watt offset is greater than with a PV system. A 4x10 solar water heating panel, the most common size installed in Florida, has an approximate equivalent output of about 2100 watts. Most modern PV modules are in the 230 watt range.

Maybe a better strategy for Florida, would be to do what Hawaii has done and just require a solar water heating system on all new homes. This helps to kick the volume higher, lowers cost due to economies of scale, puts the cost of the system into the 30 year mortgage and since Florida does most residential water heating with electricity, will have a huge impact for the utility companies to mitigate new plant construction. This can be done without a utility rebate program. In addition, it has been estimated that 80% or more of Floridians, feel that the state needs to do more with Solar but feel it is too costly and no one wants to pay more on their utility bill to subsidize it.

Just so you know, while Florida lags behind California, New Jersey and now possibly New York in Solar PV, it ranks in the top 3 for solar water heating and has since the late 70's.

Finally, make no mistake, natural gas prices are not going to remain at the historically low figures that they are now forever and Florida is especially vulnerable to spikes and shortages. Look at the attached Boston Globe article that predicts electric rates will rise 37% this year for the North east. This is because the main gas line is not large enough to provide the volume of gas during peak demand events. Florida could have the same problem. Not long ago, FPL used to generate 50% of it's electricity from coal. Now, 70% from Natural gas. Duke just closed down the Crystal River Nuclear Station and will replace it with a gas unit. Consider that this gas comes from a hurricane prone area; the gulf coast. The issue of cost per kWh may be a secondary issue to being able to get power at all if we are hit with the storms we had back in 2003. Use of a technology like solar water heating that can actually store energy, can pull demand off the grid and allow more electricity to be used for more productive activities like running refrigerators for food and meds and oxygen machines for seniors.

Ask yourself, how will you respond in the town hall meetings when the utilities need to raise rates because gas went up and what did you do to mitigate that?

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

It is a bit of an embarrassment to me and should be to you as well, that even a state like New Jersey with no where near as much sunshine as Florida is more supportive of distributed solar energy for homes and businesses. Florida is the Sunshine State and we should be doing more in Florida as well as the entire US to take advantage of solar energy.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy as a protection against climate change, a completely viable alternative energy source and one which also protects the environment. Of course, then, I support any effort to promote solar energy development and distribution in the Sunshine State.

I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. The goal is not to create an unfair advantage for solar but to allow this completely clean energy to compete and develop. A smart solar rebate program should predictably decrease over time, and during its existence will help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

I have already installed a solar generation system in my house and am reaping the benefits daily. This was an economic and environmental decision that has huge ramifications for our children and future generations.

Our system paid for itself in the first two years of operation and now it continues to generate electricity, saving me well over $200 per month. This is a no-brainer decision for anyone, especially residents of the Sunshine state.

Subject: Please preserve and improve the FEECA Solar Pilot Program (Docket 130199)

Dear Chairman Art Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to preserve and improve our Solar Pilot Program so that customers like me can continue to invest in and benefit from local solar power.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. A smart solar rebate program that predictably decreases over time can help our local solar industry grow and compete to meet consumer demand for solar power, while using ratepayer dollars much more efficiently. Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Thank you for your attention.

Dear Chairman Graham,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maria Fernandez

Subject: Solar Pilot Program
Attachments: FlaSEIA letter to the PSC Nov 21, 2014.docx

FlaSEIA
Florida Solar Energy Industries Association

November 20, 2014

Re: Solar Pilot Program

Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you not to terminate the Solar Pilot Program and consider the following request:

> Reduce the incentive for January 2015 for Residential Solar PV to $0.40 per watt and engage in an open dialogue with the solar industry for a redesign of the 2016 program and beyond.

We believe that the current Solar Pilot Program does more harm than good to a developing sustainable solar market. But instead of "throwing the baby out with the bath water" with your upcoming FEECA ruling, we urge you to take the next year and work to meet consumer demand for solar power and promote energy diversity in Florida

Citing the most recent Staff recommendations, the installed solar photovoltaic prices have dropped 28% between 2011 and 2013 and according to a study by GTM research the average national price has fallen by 41% since 2010 to an average of $3.92 per watt for an average residential solar system and even lower for commercial. As early as 2011 FlaSEIA sent letters to the PSC asking for the rate to be reduced. The program is vastly oversubscribed and the rebate funds are exhausted in a matter of seconds. By reducing the rate from $2.00 a watt to $0.40 there could 5 times the amount of solar installed and 5 times as many solar consumers investing their private capital in to our energy production mix.

There are also several other simple fixes to enhance this program and ensure better value for ratepayers while meeting consumer demand for solar power. We are optimistic to have a dialogue with the commission about fixes for the 2016 program such as including a MW goal, a predictable declining incentive structure, and exempting the first 1000 KWH of ratepayer consumption from paying in.

Reducing the rebate amount from $2.00 to $0.40 signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staff's favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

If the Commission believes this request is prudent and the best decision for ratepayers, participants and a reasonable use of funds, it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.

Our request is simple: Vote to extend the Solar Pilot Program in 2016, reduce the rate from $2.00 to $0.40 in 2015, and work with the solar industry to redesign the program in a way that will promote renewable energy and solar in Florida while delivering maximum value to ratepayers and meeting consumer demand.

Respectfully yours,

Reed Wilson

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maria Fernandez

Subject: Solar Rebate Program

Letter to the Florida Public Service Commission:

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Subject: expired solar pilot programs.

Dean Commissioner Brown,

There has been a lot of back and forth with regards to solar pilot programs that have expired. It seems that TECO, Duke and FPL all feel that energy efficiency costs per kWh saved are greater than what they can generate and sell a new kWh now. Let me state that most of the discussions center around Solar PV or the electric panels while you hear little if any on solar water heating systems.

It could be argued as it is, by the utility companies, that they are in fact, in business to generate electricity and make a return for their share holders. Ulike most companies, their rate of return or profit is limited to around 12 or 13% or as dictated by the PUC. So, on the one hand, you have to ask yourself, why does it make sense to ask utility companies to pay for programs that actually reduce their profit? In a real sense, it is like asking General Motors to pay for me to install energy efficiency improvements on my Chevy Truck to improve its fuel economy rating so I don't need to buy a new vehicle. The concept is ridiculous.
On the other hand, by virtue of being a monopoly and the unique guidelines that govern their operations, utiltiy companies can actually be allowed to charge existing rate payers for the cost of building new power plants and generating capacity long before that new production is realized. This makes the case for looking at other strategies that have a lower impact on rates, the environment, and jobs creation. Of course, most people have no idea that some of their bill is covering these expenses so it is rarely questioned.

In my case, my company makes solar water heating equipment. This is a proven technology that offers significant benefits to the utility companies:

1. Storage. Unlike PV, Solar water heating has built in energy storage.
2. Not connected to the grid. This whole argument about the wealthy owners of solar systems being paid for on the backs of poor rate payers, simply does not apply to solar thermal since solar thermal water heating does not use the Utiltiy power lines, transformers or switch gear.
3. Back up element can be radio controlled. Due to the combination of storage and an electric back up element, utilities can remote control the backup element to turn it off when they experience periods of peak demand like on cold mornings in the winter. Solar thermal water heating can actually help the utility more effectively load level their output by allowing the backup elements to come on at say 4:00AM but cut them off at the peak times of around 5:30 to 6:00AM so that they do not have to run expensive peaking units. PV does not offer this benefit since it has no built in storage.
4. The cost per watt offset is greater than with a PV system. A 4x10 solar water heating panel, the most common size installed in Florida, has an approximate equivalent output of about 2100 watts. Most modern PV modules are in the 230 watt range.

Maybe a better strategy for Florida, would be to do what Hawaii has done and just require a solar water heating system on all new homes. This helps to kick the volume higher, lowers cost due to economies of scale, puts the cost of the system into the 30 year mortgage and since Florida does most residential water heating with electricity, will have a huge impact for the utility companies to mitigate new plant construction. This can be done without a utility rebate program. In addition, it has been estimated that 80% or more of Floridians, feel that the state needs to do more with Solar but feel it is too costly and no one wants to pay more on their utility bill to subsidize it.

Just so you know, while Florida lags behind California, New Jersey and now possibly New York in Solar PV, it ranks in the top 3 for solar water heating and has since the late 70's.

Finally, make no mistake, natural gas prices are not going to remain at the historically low figures that they are now forever and Florida is especially vulnerable to spikes and shortages. Look at the attached Boston Globe article that predicts electric rates will rise 37% this year for the North east. This is because the main gas line is not large enough to provide the volume of gas during peak demand events. Florida could have the same problem. Not long ago, FPL used to generate 50% of it's electricity from coal. Now, 70% from Natural gas. Duke just closed down the Crystal River Nuclear Station and will replace it with a gas unit. Consider that this gas comes from a hurricane prone area; the gulf coast. The issue of cost per kWh may be a secondary issue to being able to get power at all if we are hit with the storms we had back in 2003. Use of a technology like solar water heating that can actually store energy, can pull demand off the grid and allow more electricity to be used for more productive activities like running refrigerators for food and meds and oxygen machines for seniors.

Ask yourself, how will you respond in the town hall meetings when the utilities need to raise rates because gas went up and what did you do to mitigate tha

FlaSEIA
Florida Solar Energy Industries Association

November 20, 2014

Re: Solar Pilot Program

Honorable Chairman Arthur Graham, Presiding Commissioners and Staff,

On behalf of the solar industry in Florida and the ratepayers who contribute to the Solar Pilot Programs we ask you not to terminate the Solar Pilot Program and consider the following request:

> Reduce the incentive for January 2015 for Residential Solar PV to $0.40 per watt and engage in an open dialogue with the solar industry for a redesign of the 2016 program and beyond.

We believe that the current Solar Pilot Program does more harm than good to a developing sustainable solar market. But instead of "throwing the baby out with the bath water" with your upcoming FEECA ruling, we urge you to take the next year and work to meet consumer demand for solar power and promote energy diversity in Florida

Citing the most recent Staff recommendations, the installed solar photovoltaic prices have dropped 28% between 2011 and 2013 and according to a study by GTM research the average national price has fallen by 41% since 2010 to an average of $3.92 per watt for an average residential solar system and even lower for commercial. As early as 2011 FlaSEIA sent letters to the PSC asking for the rate to be reduced. The program is vastly oversubscribed and the rebate funds are exhausted in a matter of seconds. By reducing the rate from $2.00 a watt to $0.40 there could 5 times the amount of solar installed and 5 times as many solar consumers investing their private capital in to our energy production mix.

There are also several other simple fixes to enhance this program and ensure better value for ratepayers while meeting consumer demand for solar power. We are optimistic to have a dialogue with the commission about fixes for the 2016 program such as including a MW goal, a predictable declining incentive structure, and exempting the first 1000 KWH of ratepayer consumption from paying in.

Reducing the rebate amount from $2.00 to $0.40 signals to the ratepayers of Florida that solar energy should be considered, pricing has come down, the market is maturing and rebates do not and should not last forever. It also supports staff's favorable recommendation that Florida's Net-Metering rule is supportive of an incentive free solar market.

If the Commission believes this request is prudent and the best decision for ratepayers, participants and a reasonable use of funds, it would require the utilities to make the adjustment to the program prior to the January launch as part of the order on November 25th.

Our request is simple: Vote to extend the Solar Pilot Program in 2016, reduce the rate from $2.00 to $0.40 in 2015, and work with the solar industry to redesign the program in a way that will promote renewable energy and solar in Florida while delivering maximum value to ratepayers and meeting consumer demand.

Respectfully yours,

Reed Wilson

Subject: Support Solar Energy NOW

I work at Solar Direct, a Florida solar energy company, that employs over 30 people in Florida.

I am also Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

This support is critical for our business and others like it to survive and grow – adding more jobs in Florida. It's also the right thing to do for our environment.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Regards,

Sheila Gulden

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Opinion

ANOTHER VIEWPOINT

We lag behind nation in efficiency, renewables

By Christopher von Zwehl

von Zwehl

In response to the Aug. 17 story, "Florida among the states with tons of sun but rules that prevent using it" by Evan Halper:

Florida is one of only a dozen states that does not have a renewable energy standards portfolio, either mandatory or voluntary. The purpose of these standards are stated as, "Policies designed to increase generation of electricity from renewable resources."

Contrary to what the Public Service Commission is proposing, energy efficiency and renewable energy mandates must be part of the energy mix to sustain Florida's future and our state must establish a renewable energy standards portfolio. For Floridians this would mean putting cleaner skies ahead of the state's 15 coal-fired power plants. Two possible scenarios can play out. One, the replacement power will only come from natural gas as FP&L proposes. Or two, Florida will join the 21 century and incentivize the state utilities to mix it up with renewables and greater energy efficiency standards.

The second scenario provides a more stable and secure future for all Floridians and our economy. Renewable energy credit structures could be set in place to have an effective market system that government (state and federal), utilities and consumers participate in to reduce our reliance on carbon-intensive power while increasing the grids resiliency to spikes, outages and the like.

"The Perfect Climate" For Business is the official slogan for Enterprise Florida, the state's office of economic development. Their website quotes "Floridians understand the undeniable link between sustainability and the economy, and are building a robust clean tech industry." Cleaning the air means thousands of new jobs and billions of dollars invested in replacing those outdated coal plants. The right way to accomplish this goal is with a mix of clean power options.

Hundreds of clean-tech energy suppliers and manufacturers, subcontractors and alike could provide alternative wind, sun, algae, bio-fuels and fuel-cell derived power along with micro-grids that would flourish in Florida but only with economic incentives from Tallahassee.

The questions Floridians need to ask themselves are:

With all of these facts, why is the state proposing to do away with energy efficiency mandates? Will our representatives miss this opportune moment in truly making Florida a cleaner, brighter state to live, work and play?

We all need to take positive action and let our elected representatives know a clean energy future for our state needs to be a priority.

Christopher von Zwehl is the vice president of Business Development for E-Renewables, one of the nation's leading business development, financing and consulting companies in the clean energy sector.

New EPA rules should keep the Sunshine State sunny

By Christopher Von Zwehl

Von Zwehl

The new EPA rules outlined in the Clean Power Plan are the right direction for Florida, and will improve the state's energy efficiency, environment and overall economy.

Our state's dominate base-load electric power source, coal, dates back to the 1800's and is causing rising sea levels and the erosion of our beautiful beaches.

As we continue to face this debate between the renewable and conventional energy, big oil focuses on shale gas, which has ignited a tipping point in energy. This tipping point is the phase out of black carbon (coal) power to lower carbon emission sources to meet new EPA clean-air guidelines.

What does this mean for the Sunshine State? We have the most to gain by effectively meeting these standards. A new clean energy mandate out of Tallahassee now, while our beaches are still around, will become a strong economic driver and set Florida up as an example to be followed by other coastal states in the South.

The good news for big energy players here, Duke, NextEra/FPL, Teco, JEA, FMPA and others, is they can play the central role in helping Florida come in to the 21st century clean-power equation. In renewable energy and energy efficiency projects, we have worked on across America, a mix of players successfully partnered together. Some of which are and were the biggest carbon emitters in the U.S., and by putting aside politics, we made a big difference in achieving reductions in the use of coal and oil.

We are also home to the world's largest clean energy technology and equipment providers, Seiman's AG, who provides thousands of Floridians and Americans clean-energy jobs out of Orlando.

To be successful, our next governor must lead the charge to invest $100 million a year (about one-tenth of 1% of the state budget). Leveraged by industry and minimally offset by consumers, we can and will lower our carbon emissions and advance renewable energy in Florida. This investment in our future will prove to be a strong equation for success in protecting low-lying areas. The legislation will also add high-paying jobs and economic activity that are exportable.

The absence of real action now and measurable legislation by our lawmakers could be disastrous for our future. Current projections of rising sea levels call for billions of dollars of Florida taxpayer funded expenditures to protect critical infrastructure and our water supply. We will also see billions in ratable taxes on waterfront properties disappear along with double-digit insurance premium increases. We can't afford the luxury of finger pointing and debating anymore. Florida is soon to be the third biggest state in the nation and the 16th biggest economy in the world with a GDP approaching $1 trillion. We can and need to make a difference today. There is no time to waste.

Some ideas on how to make that happen include an increased focus on solar energy. Solar is poised to be a leader to a brighter, cleaner energy economy here in Florida. We are light years behind other states in this area. We need no less than 1,000 megawatts (1 gigawatt) a year of new, cleaner power (including natural gas cycled turbine power) installed for the next 15 years to meet federal guidelines. We also need stronger conservation mandates to meet our growing energy needs and protect our way of life.

Critics will argue the balance of cost versus benefits. Well, the benefits for Florida are unmistakable. While the risk for the Sunshine State would be irreversible; beaches gone, tourists gone, drinkable water gone and more. Cheap, dirty coal power is forever a thing of the past in the U.S., and so are its detractors.

Who would have thought big oil would be the tipping point to have built the bridge to a brighter, cleaner energy future for the United States' power hungry economy? Let's lead the way to a more economically rich future in Florida while protecting our way of life with clean energy legislation to support the execution of the new EPA guidelines.

Christopher von Zwehl is vice president of business development & operations for E-Renewables, one of the nation's leading business development, financing and consulting companies in the clean energy sector. He lives in Fort Lauderdale and can be reached at 954 895-3524 or at www.e-renewables.com.

Subject: Sunshine to Power the Sunshine State

All,

I've had a solar system since 2008. It's serviced me and my immediate neighbors very well. They use my excess production during peak hours of the day (via a shared transformer). I am not a drain on the utility as they try to claim. I do, of course, buy power at night when demand for it is lower. This makes me a Florida ratepayer as well as supporter of solar energy in our state.

I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me continue to have the opportunity to invest and benefit from local solar power.
A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.
Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.
Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program.

Respectfully,

Vicki Eckels

Subject: Solar Rebate Program

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Signed,

Guy

Subject: Sunshine to Power the Sunshine State

All,

I've had a solar system since 2008. It's serviced me and my immediate neighbors very well. They use my excess production during peak hours of the day (via a shared transformer). I am not a drain on the utility as they try to claim. I do, of course, buy power at night when demand for it is lower. This makes me a Florida ratepayer as well as supporter of solar energy in our state.

I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me continue to have the opportunity to invest and benefit from local solar power.

Opinion

ANOTHER VIEWPOINT

We lag behind nation in efficiency, renewables

By Christopher von Zwehl

von Zwehl

In response to the Aug. 17 story, "Florida among the states with tons of sun but rules that prevent using it" by Evan Halper:

Florida is one of only a dozen states that does not have a renewable energy standards portfolio, either mandatory or voluntary. The purpose of these standards are stated as, "Policies designed to increase generation of electricity from renewable resources."

Contrary to what the Public Service Commission is proposing, energy efficiency and renewable energy mandates must be part of the energy mix to sustain Florida's future and our state must establish a renewable energy standards portfolio. For Floridians this would mean putting cleaner skies ahead of the state's 15 coal-fired power plants. Two possible scenarios can play out. One, the replacement power will only come from natural gas as FP&L proposes. Or two, Florida will join the 21 century and incentivize the state utilities to mix it up with renewables and greater energy efficiency standards.

The second scenario provides a more stable and secure future for all Floridians and our economy. Renewable energy credit structures could be set in place to have an effective market system that government (state and federal), utilities and consumers participate in to reduce our reliance on carbon-intensive power while increasing the grids resiliency to spikes, outages and the like.

"The Perfect Climate" For Business is the official slogan for Enterprise Florida, the state's office of economic development. Their website quotes "Floridians understand the undeniable link between sustainability and the economy, and are building a robust clean tech industry." Cleaning the air means thousands of new jobs and billions of dollars invested in replacing those outdated coal plants. The right way to accomplish this goal is with a mix of clean power options.

Hundreds of clean-tech energy suppliers and manufacturers, subcontractors and alike could provide alternative wind, sun, algae, bio-fuels and fuel-cell derived power along with micro-grids that would flourish in Florida but only with economic incentives from Tallahassee.

The questions Floridians need to ask themselves are:

With all of these facts, why is the state proposing to do away with energy efficiency mandates? Will our representatives miss this opportune moment in truly making Florida a cleaner, brighter state to live, work and play?

We all need to take positive action and let our elected representatives know a clean energy future for our state needs to be a priority.

Christopher von Zwehl is the vice president of Business Development for E-Renewables, one of the nation's leading business development, financing and consulting companies in the clean energy sector.

New EPA rules should keep the Sunshine State sunny

By Christopher Von Zwehl

Von Zwehl

The new EPA rules outlined in the Clean Power Plan are the right direction for Florida, and will improve the state's energy efficiency, environment and overall economy.

Our state's dominate base-load electric power source, coal, dates back to the 1800's and is causing rising sea levels and the erosion of our beautiful beaches.

As we continue to face this debate between the renewable and conventional energy, big oil focuses on shale gas, which has ignited a tipping point in energy. This tipping point is the phase out of black carbon (coal) power to lower carbon emission sources to meet new EPA clean-air guidelines.

What does this mean for the Sunshine State? We have the most to gain by effectively meeting these standards. A new clean energy mandate out of Tallahassee now, while our beaches are still around, will become a strong economic driver and set Florida up as an example to be followed by other coastal states in the South.

The good news for big energy players here, Duke, NextEra/FPL, Teco, JEA, FMPA and others, is they can play the central role in helping Florida come in to the 21st century clean-power equation. In renewable energy and energy efficiency projects, we have worked on across America, a mix of players successfully partnered together. Some of which are and were the biggest carbon emitters in the U.S., and by putting aside politics, we made a big difference in achieving reductions in the use of coal and oil.

We are also home to the world's largest clean energy technology and equipment providers, Seiman's AG, who provides thousands of Floridians and Americans clean-energy jobs out of Orlando.

To be successful, our next governor must lead the charge to invest $100 million a year (about one-tenth of 1% of the state budget). Leveraged by industry and minimally offset by consumers, we can and will lower our carbon emissions and advance renewable energy in Florida. This investment in our future will prove to be a strong equation for success in protecting low-lying areas. The legislation will also add high-paying jobs and economic activity that are exportable.

The absence of real action now and measurable legislation by our lawmakers could be disastrous for our future. Current projections of rising sea levels call for billions of dollars of Florida taxpayer funded expenditures to protect critical infrastructure and our water supply. We will also see billions in ratable taxes on waterfront properties disappear along with double-digit insurance premium increases. We can't afford the luxury of finger pointing and debating anymore. Florida is soon to be the third biggest state in the nation and the 16th biggest economy in the world with a GDP approaching $1 trillion. We can and need to make a difference today. There is no time to waste.

Some ideas on how to make that happen include an increased focus on solar energy. Solar is poised to be a leader to a brighter, cleaner energy economy here in Florida. We are light years behind other states in this area. We need no less than 1,000 megawatts (1 gigawatt) a year of new, cleaner power (including natural gas cycled turbine power) installed for the next 15 years to meet federal guidelines. We also need stronger conservation mandates to meet our growing energy needs and protect our way of life.

Critics will argue the balance of cost versus benefits. Well, the benefits for Florida are unmistakable. While the risk for the Sunshine State would be irreversible; beaches gone, tourists gone, drinkable water gone and more. Cheap, dirty coal power is forever a thing of the past in the U.S., and so are its detractors.

Who would have thought big oil would be the tipping point to have built the bridge to a brighter, cleaner energy future for the United States' power hungry economy? Let's lead the way to a more economically rich future in Florida while protecting our way of life with clean energy legislation to support the execution of the new EPA guidelines.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

JP Roberts

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Many other states have clearly proven the effectiveness of these programs. Given the rapid population growth in Florida and future demand, we need efficiency programs to meet that demand in a way that is cost effective and helps preserve the unique natural beauty that attracts so many people and businesses to Florida.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Maura ODonnell

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Chairman Graham and Commissioners of the Florida Public Service Commission,

I am a Florida ratepayer, and I support solar energy in our state. I urge you to work with the solar industry to preserve and improve the Solar Pilot Program so that customers like me can continue to invest and benefit from local solar power.

A smart solar rebate program can help our local solar industry grow to meet and compete to meet consumer demand while delivering strong ratepayer value. By reducing the rebate amount per watt in 2015, the commission could increase by five-fold or greater the number of Floridians who are able to participate in this program.

Affordable solar power is ready to help build a stronger, healthier, and more resilient Florida. Please extend and redesign this solar incentive program to provide a smooth transition to an incentive free market, and engage in a meaningful discussion with the solar industry on how to provide a stable business environment during this period of rapid innovation in our energy sector.

Please give industry and customers alike the confidence they need to invest in our growing solar economy by extending and redesigning Florida's Solar Pilot Program. .

Sincerely,

Bill Gallagher

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

It is no longer possible to pretend that renewable energy is not viable. The technology exists right now to produce a major portion of our electricity from renewables. I know people in Utah that have generated near 40% of their annual electricity with solar panels. This is in a place where it snows and the panels are covered. Solar panels on my house would save me at least 40% on my electricity bill.

A distributed energy grid that maximizes rooftop solar is the future for Florida. The benefits of renewable energy for consumers and society as a whole are clear. The coming change in energy generation can be likened in scale to the change our society accommodated in the transition from horse-drawn carriages to automobiles. It will be a fundamental change that improves our lives.

Setting high standards for energy efficiency will help consumers, get us a more resilient energy grid, and improve our environment and our economy.

If you do not enact meaningful energy efficient goals, it will be obvious you are working to support the power companies ever-increasing profits to the detriment of consumers.

The people you represent want new, clean sources of energy, not from fossil fuels.

I hope you keep that in mind on November 25th.

Sincerely,

Kathy Freeman

Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Robin Hudspeth

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Fred Rilling

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

It is no longer possible to pretend that renewable energy is not viable. The technology exists right now to produce a major portion of our electricity from renewables. I know people in Utah that have generated near 40% of their annual electricity with solar panels. This is in a place where it snows and the panels are covered. Solar panels on my house would save me at least 40% on my electricity bill.

A distributed energy grid that maximizes rooftop solar is the future for Florida. The benefits of renewable energy for consumers and society as a whole are clear. The coming change in energy generation can be likened in scale to the change our society accommodated in the transition from horse-drawn carriages to automobiles. It will be a fundamental change that improves our lives.

Setting high standards for energy efficiency will help consumers, get us a more resilient energy grid, and improve our environment and our economy.

If you do not enact meaningful energy efficient goals, it will be obvious you are working to support the power companies ever-increasing profits to the detriment of consumers.

The people you represent want new, clean sources of energy, not from fossil fuels.

I hope you keep that in mind on November 25th.

Sincerely,

Kathy Freeman

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Fred Rilling

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

It is no longer possible to pretend that renewable energy is not viable. The technology exists right now to produce a major portion of our electricity from renewables. I know people in Utah that have generated near 40% of their annual electricity with solar panels. This is in a place where it snows and the panels are covered. Solar panels on my house would save me at least 40% on my electricity bill.

A distributed energy grid that maximizes rooftop solar is the future for Florida. The benefits of renewable energy for consumers and society as a whole are clear. The coming change in energy generation can be likened in scale to the change our society accommodated in the transition from horse-drawn carriages to automobiles. It will be a fundamental change that improves our lives.

Setting high standards for energy efficiency will help consumers, get us a more resilient energy grid, and improve our environment and our economy.

If you do not enact meaningful energy efficient goals, it will be obvious you are working to support the power companies ever-increasing profits to the detriment of consumers.

The people you represent want new, clean sources of energy, not from fossil fuels.

I hope you keep that in mind on November 25th.

Sincerely,

Kathy Freeman

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

Simply said, energy efficiency works. Throughout the United States, including Florida, and around the world, efforts to incent energy efficiency have had a meaningful impact in reducing the demand for energy. Reducing our efficiency goals while simultaneously approving new power plants makes no sense except to monopoly energy providers who win when they produce more energy, not less, enriching their shareholders at the expense of Florida's citizens.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

abby Fuller

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Scott Bellefleur

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Esther Prexl

Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Oscar Lopez

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

Simply said, energy efficiency works. Throughout the United States, including Florida, and around the world, efforts to incent energy efficiency have had a meaningful impact in reducing the demand for energy. Reducing our efficiency goals while simultaneously approving new power plants makes no sense except to monopoly energy providers who win when they produce more energy, not less, enriching their shareholders at the expense of Florida's citizens.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

abby Fuller

The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Brian Paradise

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Barbara Hughes

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

We need energy conservation in Florida! Toward that end, you will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Desiray Blackburn

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

Simply said, energy efficiency works. Throughout the United States, including Florida, and around the world, efforts to incent energy efficiency have had a meaningful impact in reducing the demand for energy. Reducing our efficiency goals while simultaneously approving new power plants makes no sense except to monopoly energy providers who win when they produce more energy, not less, enriching their shareholders at the expense of Florida's citizens.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Joseph Tomi

We need energy conservation in Florida! Toward that end, you will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

merrill simmring

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

Simply said, energy efficiency works. Throughout the United States, including Florida, and around the world, efforts to incent energy efficiency have had a meaningful impact in reducing the demand for energy. Reducing our efficiency goals while simultaneously approving new power plants makes no sense except to monopoly energy providers who win when they produce more energy, not less, enriching their shareholders at the expense of Florida's citizens.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. Looking deeper into Germany's power market transition, seeking clues for US

November 18, 2014, San Francisco—Are renewables sinking or boosting Germany? This, the subject of a curtain-opening panel, "Germany's Transition to Renewables," at NARUC's annual meeting Sunday led to a surprising consensus: In spite of mistakes that were made and high electricity rates, the German people overwhelmingly support getting off nuclear and fossil-fueled power and committing heavily to renewables. That steady commitment, based on a long-term view of the future, has allowed the government to continue and refine the program.

Read more

Ambiguities could muddy the waters of EPA's existing, new power plant rules

Attendees at the annual meeting of the National Association of Regulatory Utility Commissioners on Sunday heard from two legal experts discuss ambiguities between section 111 (b) of the Clean Air Act, covering new power plants, and 111 (d) of the Act addressed to existing plants. They were among many complications that could fuel litigation over rules the

Environmental Protection Agency will promulgate to enforce both provisions. Roger Martella of the Sidley Austin firm, a former EPA general counsel, said it was unclear what the timing might be for adopting the two rules, but that June 2015 was a firm deadline for the 111 (d) rule. Litigation is likely to swiftly follow adoption, he said. Martella opined that EPA's strongest argument is the very purpose of the rile—climate change—which has been given deference by federal appeals courts. Appellants' strongest line of attack, he said, might be that third parties could be held liable for the actions of others, as could happen here, with both utilities and states under the gun. Rishi Garg, general counsel for the National Regulatory Research Institute, addressed interactions between section 111 (d) and the Federal Power Act and focused on a lack of clarity on what is a new and what is an existing source.

Nevada Power to regulators: Reconsider decision to axe $438M solar plant

Nevada Power has petitioned the Nevada Public Utilities Commission to reconsider its decision to reject construction of a 200-MW solar project on the Moapa River Paiute Indian Reservation as part of the utility's plan to retire its coal-fired electricity generation within the next five years. The commission voted 2-1 on Oct. 27 to reject the $438 million solar facility on the basis it was not needed and too costly. Approving the Moapa project would provide value to customers through incremental fuel diversity, generate construction jobs, and yield a net positive impact on Nevada's economy," the petition says. The commission's action, says the utility, a unit of Berkshire Hathaway Energy's NV Energy, "increases Nevada Power's dependence on natural gas, a resource that does not exist in this state in any significant quantity, and increases the price exposure of Nevada Power's customers to fluctuation in the natural gas markets." Sen. Harry Reid called the vote a setback for all Nevadans, according to the *Las Vegas Review Journal*.

What price tag nuclear decommissioning?

While capital and replacement costs of nuclear generating plants are a huge deterrent to their future development, the end-of-life costs associated with these plants is equally daunting, maintains the *EnergyDigital* website. In the US, 200 nuclear reactors are due to be shut down by 2040 at an estimated $100 billion in decommissioning costs. Now the International Energy

Agency is warning governments that there are "considerable uncertainties" about these costs, citing governments' limited experience in the matter. Only ten plants have been decommissioned in the last 40 years. The most recent estimate in the US comes from the San Onofre Nuclear Power Plant. According to the Nuclear Regulatory Commission, the process could take around 20 years and cost $4.4 billion, or about $2.1 million/MW installed, the most ever for such a decommissioning. Adding to the debit side of the ledger, a major cost not considered part of decommissioning proper is the cost of storing nuclear waste produced by the plant. As of right now, there are no commercial facilities to do so. The cost of dry cask storage for the spent fuel onsite and security that might be required adds only question marks to the burden.

Foundation blasts Ivanpah solar plant's request for a grant to pay off its loan

Having earlier received a $1.6 billion construction loan from U.S. taxpayers, the libertarian think tank Reason Foundation says the wealthy investors of a concentrating solar thermal power plant in California's Mojave Desert now want a $539 million federal grant to pay off their federal loan. Terming the request an unwarranted bailout, Reason Foundation VP of Research Julian Morris called the plan "rather obscene." The Ivanpah solar electric generating plant is owned by Google and diversified energy giant NRG, which are on the hook for paying off the loan. But if approved by the US Treasury, the two companies would use taxpayer funds to pay off the borrowed 30 percent of the plant's cost. Taxpayers would receive none of the millions in revenues the plant will generate over the next 30 years, said the foundation. Ivanpah has produced only one-quarter of the power it was expected to during the first eight months of 2014.

Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

abby Fuller

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Subject: Please support meaningful energy efficiency goals

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

winnie Foster

Subject: Please include energy efficiency in your conservation goals

Dear Chairman Graham, Commissioners Brise, Edgar, Bablis & Brown,

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

You will have an opportunity on November 25th to set meaningful conservation goals for the state's biggest utilities, or set Florida back by approving the companies' request to gut energy efficiency efforts. I ask that you set conservation goals that increase efficiency opportunities, not dramatically decrease the scope of modest energy efficiency programs. These programs, on top of being the most cost-effective way to meet electricity demand, are critical to those on lower income who don't have the resources to reduce their energy use and save money on their bills. Your goals should include energy efficiency measures that are the lowest cost and provide the highest savings to customers.

If you approve your staff's recommendation, Florida's families and businesses will lose valuable opportunities to lower their energy use. While that may be good for utility shareholders, it's not good for customers like myself. Energy efficiency keeps money in everyone's pocket, it's good for economic development and it leaves a more sustainable future.

Please stand with utility customers and reject the big power companies' requests to slash energy efficiency efforts in Florida.

Dear Commissioners,

I understand that on November 25th, you will be setting conservation goals for the state's biggest power companies. I ask that you set meaningful conservation goals that include energy efficiency measures that are the lowest cost and provide the highest savings to customers. The scale of energy efficiency programs is critically important to customers - especially those on low and fixed incomes. Utility-sponsored programs provide information and financial resources that help customers, like me, reduce energy use and save money on monthly bills.

Yet, Florida's families and businesses will never realize the benefits of those programs if you approve the historic reductions in energy efficiency efforts being requested by the state's power companies – and affirmed by your staff. The easiest, cheapest and cleanest way to save energy is to use less of it. It keeps money in the pockets of Florida's families and is good for economic development. We should be increasing efforts to use energy smarter, not slashing those efforts.

Please stand on the side of utility customers and reject the big power companies' request to gut energy efficiency efforts.

Sincerely,

Barbara Hughes

Attachments: FEECA public comment 72.pdf; 21JUL14-PUBLIC STATEMENTS.pdf

Attached please find public comments for docket numbers 130199-130205, the goal setting docket for the Florida Energy Efficiency and Conservation Act. The comments were transcribed from oral testimony at a Citizens' Hearing on Energy Efficiency in St. Petersburg on July 2, 2014 and during the hearing on the this docket on July 20 in Tallahassee. This includes comments from 41 participants. The comments were collected as oral testimony and recorded by a court reporter since the Commission did not accept public comment during the hearing. We respectfully submit the public comments into the record for consideration in this docket.

Please kindly confirm receipt of these comments at your convenience.

Sincerely,
Kelly Martin

CITIZENS' HEARING FOR CLEAN ENERGY SOLUTIONS
SUNSHINE STATE CLEAN ENERGY COALITION
PUBLIC HEARING

DATE TAKEN: July 2, 2014

TIME: 7:16 p.m. - 9:12 p.m.

PLACE: FreeFall Theatre
St. Petersburg, Florida

Stenographically Reported by:
Michelle L. Deliman

P-R-O-C-E-E-D-I-N-G-S

- - - - - - -

MR. JACKALON: Thank you. My name is Frank Jackalon. I'm the Florida staff director of the Sierra Club, and on behalf of the Sierra Club and the Sunshine State Clean Energy Coalition, let me welcome you to the citizens hearing for clean energy solutions. The Sierra Club founded by conservationist John Muir in 1892 is the nation's largest grass roots environmental organization in the country with 2.3 million sponsors and members.

Our Florida state headquarters is located right here in St. Petersburg on Central Avenue in a net zero energy building. It is covered by solar panels that generate more electricity than the Sierra Club and the other tenants in the building use. We feed solar power back to Duke Energy.

The Sunshine State Clean Energy Coalition is an alliance of environmental, health, business and other groups which care about Florida's energy future. Our goal is to move far and away from dirty fuels like coal and towards clean energy. We do this by helping communities advocate for the retirement of old and outdated coal plants and replacing them with clean energy solutions, like

solar, geothermal and energy efficiency.

Simply put, the brightest future for the Sunshine State is to invest in job creating and money saving clean energy solutions. Across the

country electric utility companies are investing in efficiency. I knew I skipped a page here. Okay. All right. So why did we ask you to be here tonight for a hearing on a hot July evening at the beginning of the hurricane season, just two days before a national holiday, what is so urgent; why did we drag you here tonight? It is because we have a once in a decade opportunity to save consumers and businesses billions of dollars on our power bills, and at the same time steer the State of Florida towards a healthier clean energy future.

Energy efficiency is the cheapest, fastest and safest way and meet Florida's electricity needs. The cost of coal, gas and nuclear power is going up while the price of solar power and efficiency programs keep going down.

Duke Energy, Tampa Electric Company and Florida Power & Light can give consumers a break by investing in energy efficiency, which saves consumers money and protects our health. Energy efficiency programs lowers customer's monthly bills,

saving consumer's money and supporting Florida's economy.

Now, does that sound worthwhile to you?

(Audience answers yes)

MR. JACKALON: Okay. Well, there is more. This year the Florida Public Service Commission will set new standards for energy efficiency for the next

ten years under the Florida Energy Efficiency and Conservation Act. This process presents an immensely important opportunity for us all. Energy efficiency is the cheapest, fastest and most reliable energy source. If Florida's utilities include Duke, TECO, FP&L are required to achieve higher energy efficiency goals, their customers, that is all of us, will see lower bills, job growth and the environmental benefits of an energy efficient economy. Now, across the country utility companies are investing in efficiency to cut monthly energy bills, and they are doing more on solar and wind, but Florida lags way behind most of the country, as you will learn tonight.

Florida electric utilities have now submitted their request to the Public Service Commission, and it is bad news. Their proposed energy saving goals are unprecedented lows. They want to eliminate

solar pilot projects. This means we will have higher energy bills for rate payers and pollution from new unnecessary power plants. The Public Service Commission needs to hear from us. We asked for a public hearing. We asked them to come here to Pinellas County or somewhere else in Florida and hold a public hearing. They said no. They're isolated in Tallahassee, comfortable to be there. They said no. Here is a direct quote from the chair of the Public Service Commission, quote, given the

technical nature of this goal-setting procedure and non-legislative directs you to take public testimony, I do not find it necessary to hold a public hearing. Persons without the resources to intervene may file written comments in the docket.

We are here tonight at the citizens hearing to make sure that all of our voices are heard. There is a court reporter present who will be recording our comments. We will have some experts testify and then hear from the public so that all of you can let the Commission know that you want energy savings to protect our health and lower our bills. This is your hearing, and we encourage you to provide your comments tonight.

Now, I would like to introduce three of

Florida's top advocates and organizers who are with us; first is Julia Hathaway. Julia, raise your hand.

(Audience applauds)

MR. JACKALON: Julia is the Sierra Club's representative who served as the first organizer for the Sunshine State Clean Energy Coalition and helped to coordinate tonight's event. The other coordinator of the hearing tonight is Sierra Club conservation organizer Britton Cleveland. Britton, are you there?

(Audience applauds)

MR. JACKALON: And finally, I would like to

turn the microphone over to the third person, Tim Heberlein, the political director of the Florida Consumer Action Network, one of the co-founders of the Sunshine State Clean Energy Coalition. I am happy to announce that Tim will join the Sierra Club staff full-time next week.

(Audience applauds)

MR. JACKALON: Tim will serve as our MC for the rest of the program tonight. Tim, take it away.

MR. HEBERLEIN: Thank you very much. Again, welcome. Thank you. That is very loud. My name is Tim Heberlein, I'm the political director of the

Florida Consumer Action Network, and I will be your MC for tonight. Just before we get started, I'll want to lay out some ground rules. We will have some expert testimony as Frank mentioned, as well as receive public comments. Please when you are making your statements, please direct them at the PSC, or to the commission, if you were, because we will be submitting these to the official record on the 21st in Tallahassee when the PSC has their hearing there.

As Frank mentioned, why are we here, the Sunshine State Clean Energy Coalition believes that your voices need to be heard. So thank you very much for coming. The PSC didn't think this was necessary, but by your presence here, obviously they were wrong. This is an important issue and I'm so glad to be part of the team. Again, your comments

are being recorded, so please direct them -- when you approach the microphone, please state your name and your address and make your comment.

So first I have some notes here. Well, first I want to recognize some of the elected officials in the room and thank you very much for being advocates for the coalition as well as Clean Energy Solutions here in Florida. First is Representative Dwight Dudley.

♀

8

(Audience applauds)

MR. HEBERLEIN: St. Pete council member Dardin Rice.

(Audience applauds)

MR. HEBERLEIN: And Pinellas County Commissioner Ken Welch. Thank you.

(Audience applauds)

MR. HEBERLEIN: Seminole council member Patty Plantamura.

(Audience applauds)

MR. HEBERLEIN: City of Gulf Port council member Yolonda Roman.

(Audience applauds)

MR. HEBERLEIN: Gulf Point council member Michael Fridovich.

(Audience applauds)

MR. HEBERLEIN: And Safety Harbor member Andrew Zodrow.

(Audience applauds)

MR. HEBERLEIN: Ms. Martin, representative for the Sierra Club, go ahead.

MS. MARTIN: Good evening, folks. We are moving into the public testimony portion of the evening, so I'm going to kick us off. My name is Kelly Martin, and I'm the senior campaign

♀

9

representative with the Sierra Club, Beyond Coal Campaign. I'm here tonight to ask the Public Services Commission to set much, much higher energy savings goals than the ones that the big power companies have proposed, because saving energy through efficiency is the cheapest, fastest and safest way to meet Florida's electricity needs. There is a huge opportunity here in Florida to save more energy and more money starting right now in 2014. Simple things, simple programs can go a really long way, compact florescent light bulbs, modern appliances that use less electricity, energy audits and good insulation so that air conditioning cools the inside of our homes and not the outside, and through setting strong goals, the Commission should hold the big power companies accountable for helping all customers install these efficiency measures and gain the benefits of lower power bills and the benefits of energy efficiency investments going far beyond low power bills. They help create local jobs.

If the big utilities in Florida were to match

the industry standard for investments in energy efficiency that one percent of the previous years retail sales that most -- a lot of states, more than

♀

half the states nationwide are hitting, we would create here in Florida 900 jobs in the first year alone, and consumers would save $10 million on their electric bills over the life of these energy efficiency programs. But instead, Florida's power companies have proposed dramatic, unprecedented reductions from the modest annual energy savings that they currently achieve. That is a giant step backwards, and it means higher power bills, economic stagnation and dirty air. What is proposed by the power companies are unwise because they fail to look ahead and to acknowledge that saving energy can help save avoid expensive new power plants and expensive pollution controls for the old plants.

So just recently, as you heard, the U.S. Environmental Protection Agency has announced historic carbon pollution standards, and they will require that we reduce our emissions in every state, and part of that includes a one-and-a-half percent annual energy savings, energy efficiency savings related -- which is relative to sales by 2020 and in every state including Florida, and the utilities -- the utilities' goals that they propose right now in this energy savings proceeding, also known as PIKA, are nowhere near the standard, and so that means

11

that they are failing to capture the savings for peoples' bills, and they are also -- how on earth -- how on earth is Florida going to meet the carbon pollution standard if they are not maximizing investments in energy efficiency. That is the cheapest, that's the fastest and that is the safest way to reduce our emissions.

So let's be clear, Florida ranks 27th in the country on energy efficiency. North Carolina, South Carolina, Ohio, all the other states where Duke Energy operates, are all achieving much, much higher energy savings every year. Even Arkansas is achieving much higher energy savings every year, and here is one reason why, so when the utilities propose the goals they look at what is cost effective, which makes sense, but what happens is they're using a really flawed analysis to look at cost effectiveness. Nearly every state in the country has rejected the analysis that Florida companies are using. It is called the rate impact measure test and the two-year payback provision, and what these are is they are very limiting. They are really narrow ways to look at whether a particular energy efficiency measure is in the consumer's interest, and as a result, the companies, Florida

12

companies are missing out on most of the great energy efficiency programs that are working all over the country to reduce bills, reduce pollution and protect our interest.

All right. So I'm going to try out an analogy here and I think it is kind of like this to describe this cost effectiveness, so-called cost effectiveness test. So pretend for a minute that you are at a breakfast buffet, and you want to have a big fruit salad for breakfast, right? You want it to be full of delicious fruits that are chockful of vitamins and minerals and nutrients are good for your health, right? And then you go up to the buffet, and it has got this weird section where only the blueberries are available, and all the other fruits are like behind a glass cage that you can't get to, and then somewhere along the way you learn that maybe a pork company backs the restaurant, and you start to think that might be weird, and then you see that your only option for this big, healthy fruit salad that you want is these expensive blueberries; the watermelon, the oranges, the peaches, raspberries, grapefruits, they are all off limits, right? So what was going to be your big, healthy fruit salad is limited to the boring, narrow

option of blueberries that are more expensive than the other fruits, and then slowly bacon starts to look pretty good and the waffles look pretty good,

and your pathetic blueberries aren't even looking very appetizing or cheap anymore, so why even bother.

So this little silly rule about what kind of fruit you can have means that you have ended up with a meal that has no vitamins, no minerals, little nutrition and leaves all these delicious and lovely options left on the table, and that is how this screen works for the utilities what they are looking at. It is an arbitrary rule. The limits the options that allows us to make the best choices for energy efficiency. The leaves awesome energy efficiency and ion solar programs on the table that consumers in Florida can't take advantage of, and it makes the options much like the bacon and waffles. It makes the options to build new expensive, polluting power plants much more palatable. They, all of the sudden, look like better options than energy efficiency, and it skewes with the results for options that pays more money for the shareholders and less options available that save money for consumers and protect our health. So I

ask the Public Service Commission to please leave behind this flawed test that the utilities use and allow customers better choices for energy savings like is happening all over the country.

I will close with this, so I'm a mom, probably like many of you in the room, and I like to make

sure my kids eat healthy fruits and vegetables such as you could tell in my analogy, but I have three small children, and I worry about their future, and what their future looks like, really quite literally keeps me up at night. We're already feeling the impact of climate disruption from super storms and severe temperatures to droughts out west and eroding beaches. Climate change is on our doorstep, and power plants are the largest source of carbon pollution of causing climate changes.

This Commission right now this summer has an opportunity to set easy high goals for the utilities for energy savings. It is the cheapest way, the easiest way to reduce our reliance on dangerous and polluting fossil fuels, to reduce our carbon emissions, to mitigate the worst impact of climate change, because our window to act on climate is closing. We are the last generation of people that can act. By the time that my three children are

grown up and are my age, our window to act on climate will have closed.

So I ask the Commission to please hear our call for more energy savings and set these high goal for energy efficiency that are on par with nationwide standards, to expand these narrow tests that utilities use to calculate what programs are cost effective and to protect and expand the solar pilot programs, and by doing so, the Commission will help

protect clean air and clean water and create jobs in the clean energy economy, saving millions of dollars for our consumers. So thank you very much for that opportunity to testify.

MR. HEBERLEIN: Thank you very much, Kelly.

I'm glad you are staying and we are going to the timely comment portion of tonight's meeting.

REVEREND BELL: Good evening, everyone. I'm Reverend Andy Bell. I'm a licensed psychotherapist here in St. Petersburg, and I come here tonight as a representative of Sunshine State Interfaith Power & Light. We have been told that these issues are far too complex for us mere public folks to understand. There are certain things I understand that I want to try to address them very quickly tonight. I understand that our governor may say he doesn't get

it. I understand that he is being told it is too complex even for him to understand, but what I do understand is this, I am one of those many, many people in the state who suffers with asthma. I am thrilled that my asthma doctor is here this evening and is much more educated on these issues, and I know that she is going to be an advocate, as well.

I understand it when energy is produced, we need energy, we do, but when it is produced in a way that causes toxins to flow into the atmosphere it causes our children to be sick. It causes our elderly to be sick. I also understand that the

solar panels that are on my house work well. I understand that at my home we haven't paid a power bill to Duke or Province in over two years. I get that. I also understand solar works. I understand energy efficiency works. I understand energy efficiency is the least expensive option for some people.

I want to sum up by telling you about Martha. Martha is a woman who has come to Lakewood United Methodist Church, who comes in and she asks for assistance with power bills, two months worth of power bills that total over $650. Martha is a single grandmother raising two children with no

possible way to ever pay those bills. She lives in a sieve, living in her home -- she is actually a homeowner. Her home was built in the 1950s, typical block style. She tries to air condition it. It is like trying to air condition a sieve, and I understand also that with a few hundred dollars worth of energy efficiency programs savings would go a long way in probably cutting that bill at least in half, along with some good energy conservation education. Martha is one of many.

In closing, now Martha is one of many. Every church, every synagogue, every mosque, every house of faith, every social welfare organization in Florida is deluged with people just like Martha, every year. We need to call on the Public Service

Commission to actually step up to help our brothers and sisters who can have affordable air conditioning in their home, who can have affordable power, and we need the public service commission to satisfy our request to stand up to help them. We have to do this. Thank you.

(Applause)

MR. HEBERLEIN: Thank you very much.

MS. HAYES: Hello. My name is Maria Hayes. I live in St. Petersburg, Florida. I'm here to speak

to the PSC. I may not be a financial analyst, but what I do understand is that under the state law the PSC must ensure our electric rates are as low as possible, and currently we are ranked ninth in the country, but that is slowly changing due to increasing temperatures here in Florida. I remember last year, last summer, and I am not one to get overheated, I actually like it to be 75 degrees and seem comfortable. I actually feel cold in my home. I have the thermostat set around 78 to 80. I like to keep it that way because it is energy efficient, but this year I have noticed, because of the increasing heat and because of global warming, my AC is constantly running. I am a single mother of two children on a single income. I don't receive any help. So for me, utility bills matter to me, just like I pay my rent, just like I pay my car insurance. Utility bills are slowly raising, and

that means less money for investing in my children, less money for them to go to after-school programs, less money for -- you know, clothing, decide whether to pay the bills or to, you know, opt out of paying medical costs and things like that. So that is a huge concern for me.

The other thing is that fossil fuels and

nuclear power is expensive and harmful to the environment, while solar power is inexpensive, and we have an abundance here in Florida. We are the Sunshine State, and I, like the other gentleman that spoke, I suffer from chronic allergies and respiratory issues, and so does my eldest daughter, and this last spring we had a ridiculously high pollen count. It made me so sick I couldn't function, even to the point where I broke out into hives for several days. I couldn't get rid of them. This affects us. It affects us financially. It affects our health. So in conclusion, we need financial, efficient renewal goals here in the State of Florida, and Floridians just can't afford this anymore, and it is just not sustainable. Thank you.

(Applause)

MR. HEBERLEIN: Thank you.

SPEAKER: Good evening, everyone. My name is Neo Constintino. I'm with a small public interest think tank called Camelot Florida. Our mission goal is Florida first and quality of life and sustainable

living, and we had put together a program twelve years ago at the University of South Florida clean energy where we saved -- put saved the Frenchen Trail Bridge and then we put panels on the bridge.

♀

Well, that didn't work for a lot of reasons, but history repeats itself. So we are back again. The bridge is there, but we're smarter this time because we want to put solar panels not only on the Frenchen Trail Bridge, not only on the two other bridges on the Gandy but all the bridges in Florida, all the bridges in Tampa Bay. So words are good. It is called talk the talk, and it is a wonderful talk to talk tonight, but if you really want to do something, an actionable item, something that gets done and we're working together to get it done, look at the Fourth of July as independence from these four power companies. It is a new way of looking at the Fourth of July. We are independent of these people. We take control, and we can indeed put solar panels on these eight bridges we have. We could be solar and that could work, but we all have to pull together to make it work, and we are asking for your help tonight to make it work.

We can generate upwards of 100 megawatts of solar panels, or we call it megasolarwatts instead of megawatts, explain how it was generated. The other thing on our production of energy, you can all buy solar panels and join the coal op and then we

would install your panels on bridges. There is a

lot to it. We have a website. Thank you very much, and thank you, all of you for being here.

(Applause)

SPEAKER: Hey, everybody. My name is Mike Antheil. I'm the executive director of a group called the Florida Alliance for Renewable Energy. I'll be real quick. We just want to hopefully convey this message to the Public Service Commission. That message is simply that the eyes of the state are on this process, the eyes of the state are on the Public Service Commission and the folks that are up there making decisions on our behalf. I have traveled all around, probably to every city in this state with Susan and some others working renewable energy. We are a trade association. We essentially represent the solar businesses, renewable energy businesses in the state. I can tell you just like the people that are in this room tonight there are pockets all across the state of people that are very serious about taking control and taking renewable energy a little more serious than some of our decision-makers are. Right now we can tell you firsthand there is this drumbeat. There is this slow and steady drumbeat, and every time another nuclear power plant gets commissioned,

the drumbeats a little louder. Every time a million dollars flows into the coffers of whoever is campaigning so on and so forth for the utilities, the drumbeats a little louder. Every time the public is denied input in a process where all times the public should have input in that process, the drumbeats a little louder, and I can tell you without question that if the Public Service Commission doesn't take their obligation to the public serious, that the citizens and the public and residents in the State of Florida are going to take it upon themselves to take control and make change.

Thank you very much. I just want to say to everybody that is here awesome conversation, love the blueberry analysis, for this many elected official representatives, all the commissioners here, seriously fantastic and great job, Sunshine State Energy Coalition. Thank you.

(Applause)

MR. HEBERLEIN: Thank you.

SPEAKER: My name is Jim Shirff. I live at 8705 Cove Court in Tampa, yes, the other side of the Bay. Thank you very much to the commissioners for allowing me to speak. First, I would like to solve Ms. Ross' question about why it is so hard to do

solar energy in Florida, and the best statement is

someone who once said it is really difficult to get somebody to understand something when its salary depends on their understanding. I would like -- (Applause) the floor of my condominium is nine feet above sea level. How many people in this room have a floor level within the first, say, 20 feet above sea level? Just for the record, I would like to say that over half the hands of the people in this room indicate they live at or near sea level, and all it is going to take is one storm surge to wipe us out. This state, Florida, is right at the edge of survivability and any more global warming is going to put you literally underwater. We have to do everything we can to make this work, to make energy conservation and renewable energy sources work.

Basically, we have got to get away from fossil fuels and we have got to get away now. I would like to ask everybody in this room to commit to go to Tallahassee, whether it is on a bus or with private transportation -- if the busses overflow, I will take four people in my Prius. Thank you very much, and I look forward to seeing you in Tally.

(Applause)

MR. HEBERLEIN: Thank you.

♀

24

SPEAKER: My name is Gerald Gowen, G-e-r-a-l-d G-o-w-e-n. Janet and I live at 104 Clippers Way in Tarpon Springs. We have lived there for 20 years. We are no longer Hoosiers. We are Floridians. Our

burial sites are in this county. I'm going to say that lightly. Let's get serious for a moment. There are 20 solar panels currently sitting on a wastewater plant in Tarpon Springs as a $50,000 pilot project that is one year old. It is working. If you are accepting any kind of exhibits tonight, here is Exhibit No. 1 about that project. There is example after example after example appearing in the news to tell us that solar saves money. Scientists recently told us in May of this year that Tampa Bay is in the cross-hairs of climate change and Senator Nelson called a conference in April of this year because of flooding in Miami Beach streets, the beach erosion and the saltwater contamination, you may not know too much about that, are occurring now.

Pinellas County is ready to move on solar and other alternative sources. I won't pretend to speak for that because Commissioner Welsh is here, but he knows about a year ago I wrote him and challenged the county as well as the school system to do everything they could to put everything possible on

alternative energy sources for this county. He wrote back. With your permission, I will read this sentence.

COMMISSIONER: I don't remember it, so go ahead.

SPEAKER: Thank you for your letter, Gerald. The Commission is moving forward with the RFP and

pace implementation. We are looking forward to moving this initiative forward in collaboration with other citizens and multiple powers. Ken Welsh. (Applause) there is a solar field at the entrance of the Florida Gulf Coast University that is producing 18 to 20 percent of the university's electrical needs. It is headed by Dr. Joseph Simmons, and he was brought here from Arizona specifically to head the research program there. I have been in contact with him. This is not entirely a political issue. This is a moral issue. It is a survival issue. It isn't an issue about what I give to my children, my grandchildren, and as of four weeks ago my great grandchildren. Don't let me have to say I am sorry your mother and I left you this mess.

(Applause)

SPEAKER: My name is (inaudable) Salona. I came from Orlando because this is important, and I'm

glad to see you guys here. I'm glad to see so many familiar faces. I want to say a few things for the record. When I heard this was going to the Public Service Commission, they need to think about this very seriously. Let's start first with these talks about sea level rise. I've done some calculations, and the bottom line to me is that whether it is 2060 or 2100, the thing is that most of these processes physically impact energy, and you have to put -- you know that I've been using other people's data, but

basically it is an exponential catastrophe, because you don't see anything really happening until the last ten years. So this is something to be taken very seriously, especially with the calculations I read, that NASA has started, in October, to fly over Greenland to get better data. So we really need to get on the ball on that, really right now.

So in terms of solar, first of all, so I don't get any booing, I did supper insulate my house a couple years ago. I have to go fast now. 1.73 was quoted for a solar system here in the area, Tampa Bay area, okay. Use that number and nuclear can't even touch solar. On top of that, nuclear gets 40 years. You do 40 years on solar, and you get less than a two cent a kilowatt hour. Even gas

beats that. So basically another thing that the Public Services Commission needs to understand very carefully is transit costs. When I start getting people off the grid and then the utility goes to the Public Service Commission for more money because they have less customers, you have big problems. That is the thing that the Public Service Commission needs to consider very seriously.

Thank you.

(Applause)

SPEAKER: Hi, everybody. My name is Greg Wilson. I'm the president of Windjammer Energy. When I was designing my patent for a new type of

wind energy, our governor, Rick Scott, went to see the Coke brothers, and he came back and did away with all the federal grant money that was in the state hands, and so I have been trying to come up with funding for the last three years to get my invention going. It is pretty simple. The sails in the center move and it pulls a rope. It is just like pulling on a lawn mower. All the high-speed equipment is down in the middle of the base unit, and so it is safe for wildlife and people and birds and all that, Winter Bines kill big birds and lots of birds and they don't pay for themselves in

Florida. That is why I came up with this new kind of invention, to have Florida Power & Light and Duke think they are going to build more nuclear power plants they are crazy. I even called the Nuclear Regulatory Commission in Orlando and said it was insane to build a new nuclear power plant. There is no safe way to store the spent fuel for eternity, which is basically what it comes down to. So I'm going to be a thorn in the side of Florida Power & Light just like I did for Duke, and I stopped their program at Duke, and I'm going to stop this one at Florida Power & Light. We are going to get away from coal and oil and natural gas, and we are going to go with renewable because that is the future. We are not going to sit and wait for them to decide for us.

When everybody is laying on their deathbed including the people that own these companies, and they look outside their window and they see the sky is black at the rivers are poison and all the animals are dead and the fish are long gone, what are they going to do, they are going to look around and see their family there, their children and their spouses and their grandkids, what are they going to tell do, tell them to eat money, that doesn't work.

♀

So anybody that needs to know any information, I'm on Facebook, Windjammerenergy.com. I mean, yeah, I got that too, but I have a group and like a page on Facebook.

SPEAKER: I'm Ken Conklin, 435 62nd Avenue South. We the CEOs of the corporations of the United States in order to form a more profitable business established the statutory law, ensure stock tranquility, promote the general profits over the environmental welfare and secure the blessing of lobbyists to ensure our prosperity. Is this the preamble of our Constitution?

(Audience answers no)

SPEAKER: It starts out with the "We the People," and it contains promote the general welfare. Each and every appointed and elected official takes an oath to uphold the Constitution of the United States. Now, I'm not here to talk to you about the Constitution. On December 20, 2010, I was

diagnosed with severe asthma. I live 75 percent of my life in my bedroom. It is environmentally sealed, HEPA filters, humidifiers and its own air conditioning system. I'm self-employed. I also work in my bedroom. Being self-employed, I don't get sick days. I don't get vacation. So when I

♀

don't feel good, I have to get up and work. I would like you to close your eyes and imagine this. In the middle of the night as you are sleeping you shoot up from the bed desperately gasping for air. While gasping, you frantically struggle to find your rescue inhaler on the nightstand. By the time you find it, you are in a full panic, unable to breathe. Even though you have your rescue inhaler, you cannot take a deep breath to get the medicine in your lungs. Your panic worsens, your spouse is trying to help, but again, your airways are clogged. You can't calm down enough to take a deep breath. You hope that you are able to calm down enough to take a deep breath before your fingers turn blue and you have to have to have the paramedics come. This is what us asthmatics live with.

(Applause)

SPEAKER: Greetings. I'm Nancy Ogden, 190 18th Avenue North, St. Petersburg, and thank you for the great presentations this evening. We are happy not to have snow in Florida, but it is critical to our state, our real estate to preserve

the snow in the mountains in the north and in the poles, because Florida was underwater at one time, and think of everything we have burned produces CO2.

♀

Think of CO2 as a blanket. The more we produce it, the thicker it gets, the warmer the earth is going to get. And Florida is heading for that underwater state. I have been documenting the disappearance of palm trees at the park as sea level rises and comes around the base of the tree. It is happening. The older docks are underwater at high tide. So let's -- we have to do something about CO2. We have to get the snow back in the mountains and save our country, our world. Thank you.

(Applause)

SPEAKER: Hi. My name is Patricia Holmes. I live at 6357 2nd Avenue North, St. Pete. I decided to speak tonight because I have been a tree hugger for most of my life, but I know that I live under an oak tree for shade that somebody else planted, and whenever we talk about trying to save the future, everybody goes, well, that is going to be in 2100. I'm not going to be alive. Well, that means you are not planting oak trees for somebody else to enjoy the shade. You are not planting for the future of our children, of our grandchildren, of our great grandchildren. I'm a third generation Floridian, and my son is a fourth generation Floridian. I'm hoping for a fifth. Another thing I would say, I'm

32

very glad about the EPA now putting a limit on carbon. The unfortunate thing is they have no powers to fine or penalize somebody for not doing it. The other thing I would say is that here in the United States we call it an ocean surge. In Japan it is called a Tsunami. If you remember what they went through and that atomic or nuclear power is still polluting the ocean, it is still -- the people cannot return to their homes. They can go in there 45 minutes every month. They are still looking for bodies of their children, of their parents, of their wife. We don't want this here. This is a beautiful state, and it is up to us to make everyone work to save it. Thank you.

(Applause)

SPEAKER: Good evening. My name is Bruce Taylor. I reside at 131 35th Avenue Northeast in St. Petersburg, and I have been born and raised in Pinellas County, and I want to start by saying, as I don't disagree with hardly anything that has been said here tonight, but I do want to add a different twist. It is my understanding the immediate question before the commission is whether or not to relax the energy efficiency standards to a considerable extent, and I want to say I have a

33

great deal of confidence in corporate America, particularly in the power companies. They can meet the old standards with the finances and the resources at their disposal and the pool of talents that they have, they can meet the old standards. Sometimes they need an incentive to meet those, and that is why we have laws that require them to meet certain efficiency standards, and therefore, I'm going to ask you to not take those incentives away because they can meet those standards if they try, and I want you to keep the old standards in place. Thank you.

(Applause)

SPEAKER: Hello. My name is Stephanie Striklin. I am a resident of Tallahassee, but I'm down here in St. Pete because I'm an intern. I just wanted to say that this April I worked with (Inaudible) Clear Energy & Southern Energy Network on the solar rally in Tallahassee, Florida. You may have heard of it. And across the state there were eight or nine of us organizing at universities. I was organizing at Florida State, and many people were organizing at FIU and different other colleges, and people of our generation want this. Our generation is the solar generation. We are the

people moving to make this happen, and we meet with thousands of people that would love this to happen, all in our age group and everyone -- many people

showed up and voted for clean energy in our ballots, and I just wanted to say that it is something that is so important, and I want to have a great future for my family, and I want to help make my family better. My parents both suffer from very severe asthma. My boyfriend had an asthma attack and had to go to a hospital four days ago, and just quickly there is something you may not know about Tallahassee, Tallahassee does not actually produce any of its own power. It doesn't have any power plants, and it does not have any admissible trash dumps, which means that people up there are not responsible for what they put out, and that is something we have to do. We have to make them responsible for their own pollution up there, because they can't pollute our water and our lives just because they can't see it. Thank you.

(Applause)

MR. HEBERLEIN: Thank you.

SPEAKER: Hi. I want to thank everybody that put this on tonight. I'm Linda Varonich, V-a-r-o-n-i-c-h. I live at 1728 Lori Lane in Belair,

Florida. I'm a Michagander, grew up next to Fisher Body. I used to know when they were going to paint because you could smell it in the air, and asthmatic too. I blame Fisher Body there is nothing there anymore to blame. It has already been decimated. Fast forward to when I was a public health

sanitarian in Michigan and I had the occasion to meet the general who responded to the Chernobyl incident. He was one of the last surviving people, in like 1985. I'm sorry. Because all the first responders were dead that responded to the Chernobyl incident. Do we want that in Florida? I don't think so. Get rid of that 22 million stupid watt nuclear idea, Governor, and all the other stuff that goes with it. (Applause) and there is an easy one for the Public Services Commission who seem to be very into baby steps. I was in Albuquerque last week and had the occasion to go to a park and view a movie called (inaudible) Ocean, and in response to the carbon comments that are made, it is not entertaining even though Sigourney Weaver narrates it. It is about how shells cannot form in the arctic for the fact that the ocean temperature is rising, acid changes in our oceans are killing all the marine animals to the tune of one out of four

that rely on coral reefs to sustain, you know, and bigger fish eat the little fish, and as the other gentleman said too, you can look out the window and just sit on your piles of money. I don't think so.

(Applause)

SPEAKER: Hello. My name is Dave Kovar, K-o-v-a-r. I live in Safety Harbor at 305 Los Posis Drive. I appreciate this great event and giving us an opportunity. I'm with the Tampa Bay Clean Air

Coalition, a member of the Sunshine State Commission. I made this speech at dozens of events. It applies to solar just like it does to transits just like it does to healthcare, and that is -- I'm tired of the way that Americans measure costs. There is a story where the person with the blueberries. Bear with me, when someone clear cuts a mountain for its coal, that makes money for the gross domestic product. If they turn around and send those workers into dark pits and they work all day and they don't come out for air, that adds money to the GDP. When they burn the dirty coal, that adds money to the GDP. Here is my favorite one. If everybody within a hundred miles gets cancer, that adds money to the GDP because we can hire more people in the hospitals, more pills from the

pharmacy and of course more grave diggers and sell more graves in the cemetery. Those are our job creators.

We hear again and again that solar doesn't pay, that Germany has to subsidize solar work and that -- but that these other states have set -- we know that Germany subsidizes it and that other states have reached these savings goals that the profit makers dispute. We hear that coal is cheap, that fracking gas is cheap, that nuclear is cheap, but somehow solar power is expensive and that is because of the way costs are measured. People don't put a cost on

cancer. People don't put a cost on pollution. People don't put a cost on the quality of life, and I frankly am sick and tired of it, whether we are talking about transit, whether we are talking about Medicare, whatever, the value of drilling in public parks, national parks or Alaska, it is all the same. We are not measuring costs the correct way. Thank you very much.

(Applause)

SPEAKER: Good evening. I am Kathy Harrelson. I'm a Florida organizer for Gulf Coast Networks, and we are also members of the coalition. Thanks to everyone for doing everything you did tonight to

make this happen. I do this for my grandson, and I brought -- you can't see it. It is small, but I brought a picture of him tonight. He is ten years old. He is the only one within our family with asthma, the only one born and raised here in the Tampa Bay area. So it is not genetic. This is causative, but one of the things I want to talk about that hasn't -- you may not realize this, the Public Service Commission, by not pushing renewable energy standards, by not pushing energy efficiency creates a trumped-up need, quote, unquote, need for new energy plants in this state. It is a manufactured number, and what the result of it -- you might not realize that even now Florida Power & Light and a company called Spectra Energy is pushing

to build a 300 mile natural gas pipeline called single trail through our springs and rivers to the green swamps going to Orlando going to the other coasts. Why, because we have a need which they have created for us. That is why you need to push for energy efficiency standards. The one percent should be happening now and should be happening every year. That's the direction we need to go to create jobs, to make this state a liveable place and to save our water. Thank you very much.

♀

(Applause)

SPEAKER: Good evening. My name is Rose Marie Grougo. I'm a resident of Brookshaw, Florida in Hernando County. I have come here to St. Pete today so that my words can be heard by the Public Service Commission, who doesn't feel that the public has any right to make a comment. I think that the Public Service Commission should remember that its name is Public Service Commission and that their job is to serve the public and not their own pockets and the greed of the giant power companies in our state. I would expect them to pay close attention to the new EPA standards and to push and push very hard for your utility companies in Florida to get in line and also serve their customers. Thank you.

(Applause)

SPEAKER: My name is Greg Decosmo, I live at 1951 Bayou Grand in St. Pete. For those of you who

are local, you know that the ever water rising, we're the first to know. We live on the water, but when the water rises, we have water front and back. So I have experienced that, and I'm glad to see St. Petersburg's commissions here and Pinellas County because we are on the front line of climate change. We are first to be affected, and I think

that we should go to the front of the line as far as protesting what is happening in the Public Service Commission. I'm really glad to see they are taking the buses to Tallahassee. I'm planning on being on one of those buses. The other thing I want to say is sometimes public -- sometimes their job is to not hear because they are being paid to not hear or not pay attention. I'm a big proponent of grabbing people's attention with non-violent, non-confrontational and protest, and I just had an idea. I don't know how sound or safe it is, or if you, the more sane and experienced persons in the room, but I would think that if on July 19th, the Saturday before everyone -- at 4:00 in the afternoon turned off their air conditions, turned off their lights, if they want to save energy we'll show them how. Of course, there are safety concerns as far as, you know, power outages, but I think it is something that we could do, and if we get that Pinellas or St. Petersburg, I think that might get some attention. Thank you.

(Applause)

MR. HEBERLEIN: A few more comments for time sake.

SPEAKER: Hi. I'm Julie Kessel, the president

of the League of Women Voters of the St. Pete area, and I'm speaking on behalf of (inaudible). Our location is in downtown St. Petersburg at 233 3rd Street North. Come visit us. I'm also a resident of St. Petersburg. The League of Women Voters of Florida and the local St. Pete area supports state legislation for energy conservation and greater use of renewable resources, such as solar energy. The League encourages the efficient use of energy in public and private sectors, new construction and how commit state funds to achieve those goals. This position is rooted in intense study and are resulted commitment to conservation of our natural resources and the environment, our support for sustainable economy and the promotion of effective solutions and transportation, including mass transportation. We have got the following specific concerns. One, we already have legislation in place in Florida to improve energy efficiency but limited enforcement. We have technologies that are home grown, available and the intelligent resources here to make renewable but outsource those resources, we have left or residents with limited affordable energy options, our commitment to renewable energy has actually gone

down in the last five years rather than up. Our

power companies continue to endure substantial further reduction and reversal of renewable energy standards. Public Service Commission does not make public comment easily accessible to its residents, making the process not transparent. We are not training the next generation of skilled workers in this area and putting people to work in a clearly robust economy sector. The impact of these things are failures to invest in renewable energy resources is disingenuous. It doesn't represent the interests of its resident, it doesn't support the development of a sustainable economy, it doesn't trust the citizens to make effective, affordable choices for their family and compromises our collective physical health.

We respectfully request the following, public hearings, PSC hold public hearings, make the process more transparent, increase civic engagement in this decision, meet standards that are here in place, meet standards signed most recently by the EPA and address climate changes in mindful ways, use resources we already have in Florida, encourage private and public sector investment, put people to work, expand the solar pilot programs and incentivize residents and businesses to move to

renewable resources for energy in the homes and places of work. Thank you.

(Applause)

MR. HEBERLEIN: Thank you.

SPEAKER: Yes, Patricia Plantamura. I'm a city council member in Seminole, Florida, and I took some random notes so bear with me here. I want to say first that Florida is a peninsula, and Pinellas County is a peninsula on a peninsula. Should we not be speaking up tonight? In fact, if we are not speaking up tonight, it is like sitting on a branch in a tree with a saw and sawing the branch that you are sitting on slowly -- well, this is going to accelerate and the consequences are come a lot more quickly if we proceed in the manner that we are doing. About six months ago I spent three weeks in Germany, and the people there, it was an urban fellowship. They sent me back with a German energy plan through 2050, and the bottom line, one of the principles is the energy side itself, the goal of making the most energy events and environmentally sounds economics on the world while maintaining competitive energy prices and a high level of prosperity, and I have to emphasize that because I think it is really something that does not occur to

people a lot, is that to be environmentally

responsible, does not mean that it is excluding you from being economically prosperous. These are not mutually exclusive ideas, and when we get that, (applause) we will move forward, and we want both. Let me just tell you a couple of the German plans, things they have, they have goals like primary energy demands will be progressively reduced by 80 percent by 2050. By 2050 every building in Germany will be climate neutral. They are not only taking out some of their nuclear plants, but they're accelerating taking them up because they see the writing on the wall.

Let's stop chopping the branch we are sitting on, okay.

MR. HEBERLEIN: We have the place until 9:00, which it is around that time. I don't want to surprise anybody. The PSC is very good at doing that. We actually want to take your public comments on the comment cards. We want you to fill those out if you are unable to make a comment at the microphone or interest in writing it down. We want to hear your comments that way. We can go ahead and finish up the line here, and I'm going to introduce afterwards our organizer. We'll go ahead and finish

up the rest of the comments, and just to let everybody know, where -- please fill out the comment cards if you didn't get a chance to speak.

SPEAKER: Good afternoon. My name is Winnie

Foster, and I live at 311 57th Avenue South. I am a grass roots organizer at the Sojourner Truth Center, and in studying sojourner truth throughout live, we know how important it is to speak truth to power and so we are speaking our truth tonight to the Public Service Commission and sending many heart felt messages and facts to them. I'm also -- our organization is also a member of the Sunshine State Clean Energy Coalition, and we appreciate this community building work that is going on around this. I'm a great grandmother, and I am very concerned about global warming and what is this going to mean to future generations but also to our lives right now, and if the global warming is like a heavy blanket coming down on top of us, and some of the reasons for that are directly traceable to the work of the Public Service Commission and the permission that they give to utilities to use the fuels that they are using. Let me give you some statistics. The amount of CO2 that is in our atmosphere comes from -- 44 percent of it is from

♀

the use of coal. Utilities are using coal, burning coal, and we know about the asthma, and 36 percent of the CO2 is from burning of fossil fuels. We say to the Public Service Commission, keep the dinosaurs in the ground. 20 percent comes from natural gas, and we know the other complications of getting natural gas and polluting widely everywhere that it

goes. So I think we all need to do our civic duty, and that's the thing that I hear all the time, and I'm going to stop.

(Applause)

MR. HEBERLEIN: Thank you very much.

SPEAKER: Good evening. (Inaudible) I live at 2519 (inaudible) in St. Petersburg. I understand that Germany is the first solar produce -- solar energy producer in the world. We are the Sunshine State. I am wondering where does the cloud cover that prevents efficiency of solar energy in Florida come from? I will let you speculate. Thank you.

(Applause)

MR. HEBERLEIN: Thank you very much.

SPEAKER: My name is Chuck (inaudible). I'm a citizen of St. Petersburg, Pinellas County, Florida, United States and the world. I take my citizenship and my responsibility as a citizen pretty seriously,

not just some response to my community and the future. I ask that the Public Service Commission consider their responsibility not just for themselves but also to this community and the future. I ask that they do what they can to serve the public that they should be serving, that they diminish the perception of corruption. It doesn't take a rocket scientist to look and see money flying into Tallahassee from power companies and then see policy made by the Public Service Commission that

benefits power companies. Even if there isn't a direct quid pro quo, there is a perception of corruption that erodes our confidence as citizens in our elected and non-elected leaders to do their job. I ask that they do what they can to make the standards for energy efficiency much more re bus than what they are doing, and absent that, they will present participate state that perception of corruption, and it is our job to organize and to shame them, every one of them for sacrificing our future.

(Applause)

SPEAKER: My name is (inaudible) I'm the host and executive producer of Spectrum 360 on 10 Talk Radio Network. (Inaudible) that 20 percent of the

electricity in the United States is wasted. What is the percentage of energy in the United States that is generated by nuclear power, 20 percent. We can eliminate nuclear power with energy efficiency and increasing renewables. We need to commit to a (inaudible) products, renewable energy and energy security programs in this country. Now, we can't let people who are (inaudible) abject stupidity stop us from saving our civilization. Thank you.

(Applause)

MR. HEBERLEIN: That would conclude the public comment portion of it. We do have elected officials here, and they have a chance to speak, and I wanted

to see if you have any comments or reactions from the public comments that were made. If anybody would like to say a few things, keep it to a minimum.

Commissioner?

COMMISSIONER: Good evening. Thank you all for coming and staying tonight. This kind of reminds me of some commissions where you just kind of wonder where the logic and common sense is. My colleagues of Seminole council said we are a peninsula. If anybody ought to concerned about climate changes it is Pinellas County. We are the Sunshine State. If

anybody should be doing more with solar power and renewables, it is the State of Florida. This is just common sense, and I told Julia that I wanted to get the facts, and I think I got a lot of facts here tonight. I do want to tell you county commission last year made sea level rise and climate change one of our strategic priorities, and I want to take this back to the county commissioners. I want to take this information back to how we can join this effort. So thank you all for being here.

(Applause)

COUNCIL WOMAN PLANTAMURA: Yeah, I wanted to make one more point. When I was talking candidly for the three weeks I was in Germany with people there, people are very careful about what they tell Americans, and I asked in discussions, please be

frank with me about what you think America is doing in its energy policy, and people did not want to talk, and finally one group of people said to me, they said, you know, your country has such great people with great ideas, how come you don't use your own ideas in your own country they asked me. So I mean, we're not asking for anything really weird. Let's use these great American ideas for making a better American future. Thank you.

♀

(Applause)

MR. HEBERLEIN: Thank you very much. That concludes our public portion of the event tonight. I actually want to thank you, Michelle for being a great court reporter.

(Applause)

(Proceedings concluded at 9:12 p.m.)

CERTIFICATE OF REPORTER

STATE OF FLORIDA
COUNTY OF HILLSBOROUGH

I, Michelle L. Deliman, do hereby certify that I was authorized to and did report in Stenotypy and electronically the foregoing proceedings and evidence in the captioned case and that the foregoing pages constitute a true and correct transcription of my recordings thereof.

IN WITNESS WHEREOF, I have hereunto affixed my hand this 16th day of July, 2014, Hillsborough County, Florida.

PREMIER REPORTING
TALLAHASSEE, FLORIDA
(850) 894-0828

PUBLIC STATEMENTS

MR. MESSINA: My name is Charles Messina, M-e-s-s-i-n-a. For the intent of full disclosure, I am a candidate for Florida State House District 76 as a Democrat for Representative Rodrigues.

I am here today to let the Public Service Commission know that they are not acting as a good steward for the people that they represent here in Florida. They are neglecting the idea of creating a renewable portfolio standard, which there are only three states that don't have one, and Florida is one of them.

And we should be looking at clean renewal sources of energy here in the state of Florida. It would be an economic benefit to the people of the state of Florida because every year Florida consumes or purchases $9 billion in fuel used to generate electric power for the state. If we invest in solar power, we would not have to spend that much money. There would be a huge savings for the consumers in the state.

And if we were to invest in solar power in the state of Florida, which we do in certain ways, in other ways we don't, the Public Service

Commission says that if you generate solar power -- or if you generate power, that you need to be regulated as a power generator.

There are companies that will come to our state, to our homes, and install solar panels and connect to the grid on a lease to purchase agreement, and the Public Service Commission refused to let that happen. Consequently, the only ones that can get solar panels or solar panels in their home are the affluent and well-heeled.

There was 119,000 solar jobs in the United States in 2013, and the state of Florida only participated to the tune of 2,500 solar jobs for a state with a population of 19 million. By the year 2030, there would be 220,000 more new solar jobs created, and I fear that the people of Florida will not be participating in these new good paying jobs.

The Public Service Commission needs to get out of the way of solar power and clean renewables and promote them instead of hindering them. I would recommend that the Public Service Commission approve the Babcock Ranch exemption -- exception, I'm sorry -- request, because this is a project in

the state of Florida that has -- it's an excellent experiment for the development of solar energy in Florida. It would have no costs to the taxpayers and it would have no costs to the ratepayers.

I'm not saying this because, you know, I'm in favor of Babcock Ranch or development, I'm just saying that there are entities, Babcock Ranch being one of them, that would like to have their own solar power generation facility. I know that Cape Coral is looking into the idea of taking over the business of distribution of power in their area because companies like LCEC are just middling the deal, they don't create the energy, they just maintain the infrastructure. And, quite frankly, there's plenty of talented people around that could do that.

One other fact I would like the Public Service Commission to be aware of is solar is economical, it is feasible, it's getting less and less costly every day. And if you had a single-level home, a single-family home with a single level in the state of Florida with rooftop solar panels, that home would create enough electric power to sustain it for two years.

The Public Service Commission, in my humble

opinion, needs to get out of the way of clean renewable energy development in the state. And they don't have to -- how should I say this -- the power companies themselves can participate. They don't have to fade away into nothingness. They could be maintaining the infrastructure. They could be participating in the system and allowing and being involved in clean renewables. They don't have to look at it as losing turf.

This is my humble opinion. I thank you for letting me make my remarks. And I hope the Commission takes this serious, that the public is demanding to be able to save money in these trying economic times when the taxes are being raised. They want to try and save money, they want to put solar panels on their homes, and they are prevented from doing so. Thank you for your time.

THE COURT REPORTER: I think they want you to say where you're from.

MR. MESSINA: I live on Pine Island. My name is Charles Messina, I live on Pine Island, St. James City, Florida.

MR. KRUMREICH: My name is Tom Krumreich K-r-u-m-r-e-i-c-h, Tampa, Florida.

Well, I'm here representing the people of the

state of Florida. "We the People" are the iconic first three words in our country's Declaration of Independence from the tyranny of the British empire. Those words set the tone for the spirit of our political culture, which we still need to cultivate and vigilantly defend today.

We the People, not We the Government, not We the Corporations, but We the People, the public, the average Joe and Jane whose opinions are supposed to guide us in the formation of our public policy as decided by entities like the Florida Public Service Commission.

So why are we excluded from making a contribution in the form of testimony before the very group making decisions which have a potential to have dramatic effects on the quality of our lives? On behalf of the people of the state of Florida, I beseech the Public Service Commission to do the right thing and increase, not lower, the efficiency standards for generating electricity in our state and invite us to engage with them in a dialogue to decide on the necessary steps towards creating a more economically and environmentally sustainable future for our state.

MS. STRICKLAND: My name is Stephanie

Strickland, S-t-r-i-c-k-l-a-n-d. I am a resident of Leon County.

Every day I work with youth in the St. Pete area and in the Tallahassee area and all over the state, and we all have one goal, to make this world cleaner, to have more clean energy. Of all the things that we're concerned about, the primary goals we focus on are health for all of our citizens, national security and a clean environment we can call home.

We all know that using less oil or any form of fossil fuel would be good for us as a society because it would let us release ourselves from foreign powers that we have unstable relationships with, such as Russia. We would be more secure as a nation if we felt that we didn't have to go to wars to protect our oil security.

I helped organize the solar rally in Tallahassee with Southern Energy Network and Southern Alliance for Clean Energy on April 10th in Tallahassee, and hundreds of youth from all over the state came out to say that they care about solar energy. We are the solar generation. We care about these issues. It is of the utmost importance to us that we make something that we

can be proud of.

MR. WILSON: My name is Greg Wilson, and I live in Dunedin, Florida.

I would like to talk about the future of having too much carbon in our atmosphere. We need to cut back on that, which is where energy efficiency comes in. I also have a new type of wind energy. And for them to make up rules that will stand for ten years, it will possibly block out new innovation for any kind of new type of electrical energy.

Global warming and climate change are a big issue for Florida because the climate scientists, some of them say that they may be off a little bit and sea level rise may happen faster than what it's predicted. Greenland glaciers are sliding off at a much faster rate than they were ever predicted. And the west side of Antarctica is starting to slide also, which includes thousands of years of icepack and glaciers.

So to encourage energy efficiency is very important due to the fact that Florida is very susceptible to sea level rise. And that will be very expensive if we have to start moving away from the coastlines. We will lose our barrier

islands. And there's really not a price tag that you can put on something like that.

So the power companies should help with energy efficiency, especially solar and any kind of new wind energy, which Florida does not have wind energy here. And my wind invention is the only one that will work here in Florida. It's safe for birds and wildlife and it works in very light wind conditions. I think that's it.

MS. FRAINETTI: Nancy Frainetti F-r-a-i-n-e-t-t-i. And I'm from St. Petersburg, Florida.

I'm a woman-owned electric solar boat manufacturer, and I believe that solar is key to our future. And the same with my electric boats, that they be able to not pollute the air and the water. And solar is an efficient and excellent way to power these boats. That's it.

MS. BRONSON: Christina Bronson, Lehigh Acres, Florida.

What I wanted to bring to attention is since I'm a native from Austria and my generation was doing what is going on right now here 40 years ago, about, and we are very successful, I wanted to bring your attention to the Wikipedia site

where they talk about renewable energy in Germany. And they already have the problem that there is an overflow of energy created by wind and solar, and that they have not enough facilities to detain it -- I don't know the right word -- to keep it. They don't know what to do with it. They send it to Czechoslovakia, to Yugoslavia and also to Austria, but the Austrians don't have the capacity to work the energy.

So definitely in Germany by 2050, I was reading that they want to have 100 percent solar wind power. So there is good information out there. And look over the boarders, it's already happening, it's already effective and successful. Thank you.

MR. SILLMAN: David Sillman, S-i-l-l-m-a-n, from New Port Richey, Florida.

And I want to put on my support for efficiency and solar standards. I know this question has been studied by other utilities, one in Austin, Texas in particular, that found clearly that efficiency is a far better investment than new power plants, as verified in one of the opening statements in the opening session. To protect for-profit utility monopolies does not

serve the public's interest. That is not what the Public Service Commission should be in the business of doing.

Solar and efficiency are proliferating around the country and around the world. Florida stands out for its status as a laggard in these areas. Fortune 500 companies are implementing solar efficiency at an ever increasing pace, not out of altruism but because these make business sense.

Solar projects that pay for themselves in five years or less and efficiency projects that do even better are solid business decisions. And to set an unfair bar of a two or three-year payback when clean energy that we desperately need is set to too rigid of a standard is not in the public interest and not a good policy. That's about it.

MS. ROSS: I'm Kim Ross, R-o-s-s, and I'm from Tallahassee, Florida.

The investor and the utilities are giving as small of an investment and energy efficiency and renewal energies as possible and they aren't taking into account the true needs of its ratepayers, especially poverty stricken ratepayers, as they go about making their recommended goals.

I run, as a contractor, a Demand-Side Management Program in Tallahassee, and I have run a low income weatherization program called Neighborhood Reach here in Tallahassee. And these programs are great examples of what investor-owned utilities ought to be doing and would save on a statewide basis a larger percentage of energy than any of the larger investor-owned utilities are recommending.

Energy efficiency and renewable energy both provide far more jobs than the conventional form of energy production, which also further boosts Florida's economy. So while we're listening to this show of Public Service Commission considering the testimony, it does not appear that Florida's citizens and ratepayers' true needs are taken into account.

The Public Service Commission should be accountable to the public and protective of the public good. The types of tests that they're talking about using for determining whether or not to allow any particular measure don't take into account the public good, specifically there are documents that define -- that specifically state they don't take into account the public good. The

Public Service Commission should have found a way to allow themselves to hear from the public rather than ignoring the public.

MS. EMMEL: My name is Linda Emmel, E-m-m-e-l, Plant City, Florida 33566. We have a solar energy panel, a solar panel at home, and I love it. It's cut our electric bill down quite a bit. It's for the water heater. And the power will go out for a week at a time with storms and whatever, but I always have hot water, that's why I love it.

It's jobs for people putting them up, solar energy, solar power, it's clean. I can't see why people don't go for it, why the Commissioners and stuff can't see it. It's the best thing, you know, we're missing out. Other states have it, they have the wind turbines. I believe there's a country, it's Scotland, it's either 90 or 99 percent completely clean energy. It's all solar and wind turbines. So if the whole country can do it, why can't Florida, one state, do it? We have sun here almost every day of the year, it doesn't make any sense not to use it. It's healthier. It helps the environment. I guess that's about all I have to say.

MS. GARGEL: My name is Cheryl Curry Gargel, G-a-r-g-e-l, and I am from Gulfport, Florida. I'm also a realtor in the state of Florida holding an EcoBroker's Green Certification. I'm also a broker in Aspen, Colorado.

My concern as a citizen and as a professional realtor of 30 years is that one of the first questions I get when I interview clients to buy a home, after they have selected a home, I should say, is what does the electric run on the house. Today it seems as though even qualifying for a mortgage, we have to take in consideration the expenses that the client is incurring presently. And if that is not sufficient to pay for the new home and the ratio that is already set, then they will not qualify for what they are trying to buy.

And as the electric rates go up, if this policy is allowed to expire, which electric rates will go up, then it's going to impact our buying clients, home purchasing, which in turn will have an impact on the taxes in the state. So it's a great concern professionally and also as a citizen of the state of Florida. So I'm asking that the Public Service Commission keep the policy that is currently in place and work toward more efficiency

in our state. And that is my purpose being here today. Thank you.

MS. GRIFFITHS: Beverly, B-e-v-e-r-l-y, Griffiths, it's spelled G-r-i-f-f-i-t-h-s, like Sam, Tampa, Florida.

I would like to see the Public Service Commission consider keeping the percentage of renewables required by utilities the same or higher, not lower them. And I would like to see Florida move in the direction of increased solar and for the Legislature to create a renewable portfolio standard that would create incentive for businesses and residents to purchase solar.

I'm concerned that the utilities have too much control over the Public Service Commission's decision making and that they should be willing and more available for public comment and input. And the reason I want to see more clean renewable energy used in our state is to project our air and water quality. And I'm very concerned about the rush to use more natural gas because I'm concerned about the environmental damage caused by fracking.

THE COURT REPORTER: Spell fracking.

MS. GRIFFITHS: Fracking is spelled f-r-a-c-k-i-n-g.

THE COURT REPORTER: Thank you.

MS. GRIFFITHS: So that's it.

MS. FORCAN: Jasmina, with an A at the end, Forcan, F-o-r-c-a-n, Clearwater, Florida.

I want to talk about efficiency and energy savings. I personally in my household, I waste almost nothing. I unplug everything. All of the appliances that are not being used at the moment I always unplug. And I believe that I do everything I can to reduce the energy use and therefore save the environment.

And my question is why Duke Energy doesn't help us in Florida. We are older people, you know, on fixed incomes, and I think we need more help with our energy costs than most of the other states. However, we are 27th on the Energy Efficiency Listing in the United States.

So I'm not sure why are they neglecting the state of Florida in helping like they help other states. They provide free of charge squirrely light bulbs and, you know, the window and door insulation and things. So that's my question to the Duke Energy.

And I think we should be going more to clean and renewable energy because it will keep our

environment in better condition, and also our health is important. When we use coal, it's not good.

And that's another cost to us, the users in Florida, we have higher medical bills because of the pollution. They used to have emission control in Florida, but they dismantled that process. So I think we really need to address why is Florida 27th on the list in energy efficiency.

MS. DATZ: My name is Amy, A-m-y, my last name is Datz, D as in David, A as in apple, T as in Tom, Z as in zebra. I live in Tallahassee, Florida.

I am the Chair of the Democratic Environmental Caucus of Leon County and am on the State Board for the Democratic Environment Caucus.

I am here today because I am opposed to fracking, f-r-a-c-k-i-n-g, in Florida. I feel fracking will destroy Florida's environment. There are 18 permitted wells in Florida, each well can be fracked 18 times. Each fracking requires 8 million gallons of water. If all wells are completely fracked, we would have generated 2.6 gallons of highly explosive, highly toxic fracked water that will have to be stored for more

than 100 years and will never, ever be able to be clean water again.

We do not have enough water to support this industry. We do not have a viable aquifer that will allow fracking without damage to our drinking water, to our spring systems and to our natural wildlife lagoons and Everglades. We must stop fracking in Florida.

I would support subsidizing solar for any household that is under -- I should say within or under 400 percent of the federal poverty level. This will allow these poverty level citizens to be able to afford food and housing.

I think it is criminal that Duke Energy has charged their customers for a nuclear power plant they will never build and has refused to reimburse those costs to the public. They should be investigated and prosecuted for criminal theft to the public.

MR. MASCIA: My name is Nick Mascia, M-a-s-c-i-a, Sanford, Florida. I've been hearing comments concerning solar electric. They seem to conflict research done by other states, specifically the installation of solar energy on residential homes will actually save money for

utility companies as opposed to having costs passed on to those homeowners that don't have solar energy. I heard it quoted twice, once by a utility company passing the costs off onto other users. And I'm speaking of grid costs.

There is research done by the Public Utility Commission of Nevada that supports my statement as done by an outside research firm in San Francisco. I would be glad to supply this evidence.

Also missing from the use of solar energy on a home is the fact that one home with solar electric energy will negate the use of 55,000 gallons of water that a power company would need to use to cool down liquid to provide electricity for that one home. Water conservation should be tied into energy conservation when considering the replacement of fossil fuel energy by utilities with solar energy.

I do not understand how the determination of ten years of energy use for 17 million, 18 million Florida residents can be determined by five individuals listening to five utility companies and not utilizing research resources to get information for both sides from a neutral provider.

There was a comment by the NAACP that impoverished -- poverty level families are penalized by increased costs of utility availability because of homes that can't afford solar energy do not contribute to the cost of the grid. Not true. By utilizing solar energy on a home, it reduces the cost for the utility companies to create power, they just don't pass the savings to those that don't have it. End of statement.

Good Morning, Ms. Safran:

This email address is intended for use by reporters and/or media requests. However, I will forward your comments to our Clerk's Office so that they may be included in docket numbers 130199-130203, relating to numeric conservation goals for the electric utilities subject to the Florida Energy Efficiency and Conservation Act.

Thank you,
Cindy Muir

Subject: FPL

I've written before regarding FPL/Duke Energy and their application for more nuclear plants. I found an article regarding the scale back/dropping incentives for solar energy which I have included below:

Regulators asked to scale back energy goals

Florida power providers say rebates expensive, benefit few.

By Jim Turner The News Service of Florida

TALLAHASSEE — Florida's biggest electric providers are asking state regulators this week to let them scale back energy-efficiency programs — such as rebates for installing solar panels and power-saving appliances — that they say have become expensive and benefit few customers.

But conservationists argue that dramatically reducing energy-efficiency programs will only result in higher monthly bills for customers as the utilities eventually will need to build more natural gas and nuclear power plants.

This week, Florida Power & Light, Duke Energy Florida, Tampa Electric Co., Gulf Power Co. and JEA in Jacksonville are presenting testimony to the Florida Public Service Commission that they should be allowed to roll back energy-efficiency goals, as demand for the conservation programs has declined.

“We think it’s in the best interest of our 1.7 million customers to reduce that energy conservation goal and let us look at programs that could benefit the whole entire customer base,” Duke spokesman Sterling Ivey said. “It could be a community solar offering versus a rebate to an individual to put a solar panel on a roof, perhaps we can build a community solar array that all our customers pay into it and all would benefit.”

Rep. Dwight Dudley, D-St. Petersburg, said customers’ electricity bills have dropped due to conservation efforts and “slashing” the energy-efficiency programs will simply allow the power companies to make more money.

“This is not in the interest of the public, this is not in the interest of the people,” Dudley told the commission.

The hearing is expected to last three days. Two extra days have been set aside next week if the review runs long.

The commission isn’t expected to make a ruling on any of the requests until late fall.

Before the hearing began Monday, Dudley joined about 100 conservationists, many up since 3 a.m. as they bused from the Tampa region, demanding the energy-efficiency programs be retained or expanded.

“The opportunity to take action on climate is right now,” Kelly Martin, of the Sierra Club, said during a pre-hearing rally outside the Public Service Commission building. “Climate change is not some far off thing in the future. Severe weather, extreme weather is happening right now on our doorsteps.”

Susan Glickman, Florida director for the Southern Alliance for Clean Energy Action Fund, said the proposal will “effectively eliminate energy efficiency programs in Florida” as FPL seeks to expand its nuclear plants in South Florida and Duke is planning a new natural-gas plant in Citrus County.

“The utilities feign that their concern is for poor people in our communities,” Glickman said. “If the concern was for poor people, why don’t they help them lower their bill by offering cost-effective energy efficiency?”

Utility officials say the economic advantage of conservation has waned as natural gas has grown in use. Also, government efficiency rules have resulted in more energy-efficient construction and in people using products such as lower emitting light bulbs.

Duke Energy now charges residential customers $4.02 per 1,000 kilowatt-hours on monthly bills for environmental programs, including energy efficiency. FPL has a similar monthly charge of $3.37 per 1,000 kilowatt-hours.

If the Public Service Commission approves FPL’s full proposal, company spokeswoman Alys Daly estimated the savings on a typical bill would be about $1 a month.

State Public Counsel J.R. Kelly, whose office represents consumers on utility issues, said some of the proposals are “extremely low” and expects the commission to find a middle ground in its decisions.

“We’re very cognizant of the impact of rates on our constituents,” said Kelly, whose office is taking a limited role in the hearings. “You have some of my clients who want all the conservation in the world and don’t care what the rates are. I’ve got others, seniors, low income, that say, ‘Look I just can’t conserve any more, so don’t make my rates go up.’”

Last year, Duke spent $1.4 million for solar programs that were approved for about 150 of its 1.7 million customers.

In the past three years, FPL’s solar installation program has been used by 916 of its 4.7 million customers at a cost of $16.5 million.

Please consider these points of opposition and instead of promoting nuclear energy by approving the proposal, promote alternative energy by NOT approving the application. You could take the lead.

Subject: Comment on Utilities Seeking to Reduce Conservation Efforts

I saw in the Jacksonville Times Union that utilities, including the one that serves me(JEA), wants the state to reduce conservation efforts.
Their interest is self serving and not in the best interest of residents in the State of Florida. We live at low elevations in Florida and are at risk with rising ocean levels as we warm our climate with carbon emissions. The real solution is to increase solar efforts. There is absolutely enough energy available to provide the power we need. The prices for solar systems are falling as the economy of scale improves.
Many countries like India and China are skipping fossil fuel and going directly to solar. We need more subsidies for solar cell systems. We need our government to stop giving economic incentive to fossil fuel profiteers.

I was an engineer for JEA and installed the continuous emissions monitoring systems under the Clean Air Act. This made me realize the huge amount of emissions that are pumped out hourly. This does not include the huge ash stream that grows hourly, full of toxic metals.
All fossil generation produces a huge stream of toxic waste. If we can serve our energy needs with clean technology we would be fools to do otherwise. I know this state has a reputation of serving business over the people. The PSC needs to serve the people and our children. We need to be responsible and not throw their future away for someone's profit.

Commissioners,

It looks like when these NGC proceedings were created and introduced in 2008. There were public forums where the commission held 4 Workshops (two without a docket number in place) but they were held and the public could speak and the full commission was present and had to listen . Written comments are just put into the revolving file and the public knows this all to well. So the edited hearings held on Monday, Tuesday, and Today are in fact flawed, illegal and have left the public without a voice. I am ashamed and angry that the Public Service Commission has once again denied the very people that you are appointed to represent the PUBLIC. The public was ignored. Power Companies do not pay your paychecks the taxpayers / ratepayers do. The Power Companies are not diversifying their portfolios as needed and this hearing is the one place where you might receive true input. Power Companies have only one goal Money. Listed below are the notices and relevant hearing material from the past proceeding. It is time that you do your job and stop ignoring the very missions which you have

been granted.

It kind of looks like everybody was invited in 2008 ("all persons are invited"), but only "stakeholders" came. The workshop was for presentations and discussions. Seeking honest government Alexandria Larson

Lisa -

I write to encourage you and the Commission to open for public comment the opportunity to discuss the conservation efforts of utilities. A discussion among various interests is greatly needed to better understand and appreciate what can be done for under privileged and under served low income communities. Please let us know if we can help.

Re: Comments on Florida's Numeric Conservation Goals, Docket # 130199 – 130205

Commissioners:

The Florida Legislature established the process for setting conservation goals for electric energy and natural gas usage through the enactment of the Florida Energy Efficiency and Conservation Act (FEECA) Section 366.80-85, Florida Statutes. The statute states that "it is critical to utilize the most efficient and cost-effective energy conservation systems in order to protect the health, prosperity and general welfare of the state and its citizens." The statute also authorizes the Public Service Commission to "require each utility to develop plans and implement programs for increasing energy efficiency and conservation…"

With the passage of HB 7147 during this year's legislative session, the Solar Energy System Incentives Program and the Florida Energy Star Residential HVAC Rebate Program were terminated. The repeal of these two programs represents a significant backwards step of our state's policy for development of alternative energy sources which promote conservation and efficiency. Florida Statute 366.801 states "the Legislature intends that the use of solar energy, renewable energy sources, highly efficient systems, cogeneration, and load-control systems be encouraged."

Encouragement of solar and renewable energy sources is severely lacking in Florida. There are many ways to address this lack, including some more traditional and some more creative, but the fact of the matter is that Florida is doing precious little. It is disheartening that the "Sunshine State" only generates 2.2% of its energy from renewable sources. While 83% of Florida's energy is generate from natural gas and coal, neither of these are "Florida Brand" energy sources. Meanwhile, other states being serviced by some of the same utilities and which have less potential for renewable energy have been more active in enacting policies which have resulted in more efficient, secure and cost-effective energy systems. This is the proverbial Cinderella story; Florida has the most potential but is not being invited to the ball.

Duke Energy is investing more in improving energy efficiency in states like Ohio and North Carolina, than in Florida. Floridians are being denied the opportunity to save money, support jobs and the environment while Duke customers in other states are seeing those benefits. This year, utility companies like Duke, TECO and FP&L didn't propose any renewable energy goals. In two years, Georgia will have almost double the solar that Florida plans to have nearly a decade from now. These missed opportunities will have a long-term negative impact on Florida's economy and will give a competitive advantage to other states, costing Florida jobs.

Increasing energy savings is a business opportunity. Investing in energy savings boosts local industries, especially manufacturing. The savings flow back into the local economy, creating and supporting jobs here at home year after year. If Florida utility companies achieved annual energy efficiency savings in line with the industry standard (1% of the previous year's retail sales), over 900 jobs would be created in the state in the first year alone and consumers would save millions of dollars each year on their electric bills.

Absent new goals, statewide Florida utilities are expected to save 0.3 percent per year from 2014 - 2022. High performing states are saving around 2% per year, so Florida's energy savings performance is lagging and stronger goals would help spur better performance. Today, the utilities use a variety of residential and commercial/industrial programs, as well as solar pilot programs, to reach their energy savings goals. The PSC

must require Duke Energy and other utilities to make the same investment in energy efficiency and conservation in Florida as they do in other states, saving us money, creating jobs and improving our environment. Duke Energy, Florida Power & Light and TECO need to increase their energy savings goals and expand their solar power programs. Florida's economy will get a big boost if Duke Energy, FP&L, TECO and Gulf Power strengthen their energy savings and solar power programs.

We cannot take seriously enough the very critical concerns that include state and national security, human health and environmental health issues as well as reliability. Energy and how we produce and consume it has crossed the Rubicon into a new era entirely. Florida must not lag other states and nations. If we do, it is to our great detriment and economic risk. Florida must to examine critical vulnerabilities in our energy distribution and generation infrastructure because now is the opportunity to strengthen and harden the grid, which will improve conservation and efficiency.

Thank you for your consideration.

Sincerely,

Michelle

RE: Docket numbers: 130199-130205

Enclosed please find 3,103 comments regarding the energy effiiency goal settting dockets under the Florida Energy Efficiency and Conservation Act. These comments demonstrate overwhelming support from Florida electric customers statewide for high energy efficiency goals that will save consumers money, reduce the need for new polluting power plants, protect clean air and clean water and reduce carbon pollution.

I respectfully request that you consider these comments as you make your deliberations in this important proceeding that will shape Florida's energy future for the decade to come.

Sincerely,

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Timothy Moore

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Gail Gagnon

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs. And start representing the Public Interests, not the power companies. You are a disgrace to public integrity and ethics. We've paid billions for a nuclear power plant that's not working and the planning, engineering and land for one that will never be built-and we're not getting our money back.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least five (5) percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Peter Patras

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a 57-year resident of Florida, I ask that the Commission enforce much higher goals for Florida's power companies to save energy through energy efficiency, and to support solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs.

The Commission must investigate all available energy efficiency measures.

Please protect and expand the solar pilot programs. After all, we are "The Sunshine State." Now is the time to get more, safe, home-grown solar power.

Please look to the future generations of Floridians and their needs.

Sincerely,
Shirley Wilder

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Hi,
i am writing to urge you to support solar energy. In our home, we installed a solar hot water heater several years ago and it is working beautifully. Our water is hot and our power bills have gone. At a minimum, we should have more incentives and a push to put these in many more homes and help cut our dependance on oil.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Maureen Peterson

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Dieter Randolph

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Bruce Nissen

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, My friends and I would like the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I expect that Commissioners to set new energy efficiency goals that are at least 10 percent of the companies' previous year's retail sales. This is consistent with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy and preserving the environment that attracts so many new residents.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, I expect my elected representatives to protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. I have travelled extensively through Europe and they its countries are far out front of the USA on alternative energy programs. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
William Heaslip

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Susan Small

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. It is embarrassing to live in Florida and have family, friends from out of state continue to ask why Florida is so behind in renewable energy. I reply, "It's politics." And that's sad. When a public commission doesn't protect it's citizens, it's also unethical. Step up. Do the right thing. Stop being manipulated by the big power companies and be truly and honestly independent.

Thank you.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Bettrice Conner-Mason

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

You are NOT required to protect the profits of big oil and gas. You are required to provide the best, safest, and cheapest energy for Floridians. SOLAR! Every roof in Florida should be covered with solar panels. Why don't you start a program to make that happen?

Sincerely,
Peggy Alcorn

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Marie Randall

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Lawrence Jaffe

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Michele Migeot

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Felice Baldi

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I am a Florida resident and a Duke Energy shareholder. I understand the balance between electric generating efficiency and the necessity of profits.

But, Florida's standards for energy efficiency and renewable power are simply too low. New Jersey, with 100 fewer sunny days a year leads Florida in solar energy development - this is not right.

Development of solar will be good for Duke, FP&L, TECO and other Florida utilities. It will enhance their bottom line as the costs come down and volume increases. It appears their management is too short-sighted to realize this, thus, I ask the PSC to force Florida utilities to add solar to their long range plans via regulation.

Sincerely,
Paul Einboden

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Bonnie Jenks

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jacob Wurtz

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Florida Public Service Commission
FL

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Please consider having Florida be the national leader in clean energy. We have what it takes to do this.

Other countries are already realizing a return on their investments to increase revenues and jobs. The USA has been lacking.

Your leadership will greatly enhance what is becoming more and more powerful in the city of St Petersburg, Pinellas County and Tampa Bay - turning to energy efficiency and conservation.

We must act now to address the threats facing our coastal communities and state.

Please enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not building new power plants.

I request that Commissioners set new energy efficiency goals in this year's Florida Energy Efficiency and Conservation Act, so that they are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

I urge the Commission to investigate all available energy efficiency measures, and reject the companies' attempts to exclude measures under the "rate" test and the "two-year payback" test.
These are flawed tests that are not used in other states, because they fail to identify which energy efficiency programs are in customers' interest. Globally, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

We must protect and expand solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power. Big power companies can become the leaders here.

The time of citizen ignorance has come to a close. We know what our part is and urge you to play yours.

Sincerely,
Sharon Joy Kleitsch

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Frank Fojtik

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Do you remember that you are the PUBLIC Service Commission? As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Don Margeson

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kevin Mongelli

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Thomas Joy

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Les Hazelrigg

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. The people have the right to sell power generated on their own rooftops back into the grid. FPL does not have a monopoly on sunshine. Require FPL to buy back surplus power from its own consumers who own their own solar panels.

Sincerely,
Richard Thomas

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs. I ask that you dramatically increase solar and wind energy support for individual home and business owners, covering the expense by culling the high profits and corporate pay of the utilities.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I also request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jennafer Clay

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
John Walker

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kathy Walsh

Last month I had a $69 electric bill, that stated only $49 of actual electric use, the other $20 goes to pay for oil, and several different taxes! 20 dollars out of a $70 dollars is 30% or more! This is Theft, plain and simple, and you people are responsible!

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Robert Hart

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jamie Harrsion

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Doug Hanke

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Katrina Crill

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Michael Zeno

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
James Starkweather
