Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Phillip Clark

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Return the PSC to an elected board, not 1 appointed by criminals like our Medicare embezzling governor.
The current board is a wholly owned subsidiary of kkKoc Industries.
The PSC doesn't care about the environment or the health and safety of Floridians.
This will change in November when Charlie Crist restores Democracy to Florida.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Agnes Mouchette

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Lynne Liska

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Personally, I am always looking for ways to reduce my familiy's energy consumption by turning off ceiling fans and lights when we leave a room, using a programmed AC thermostat that raises the temp to 85 during the day when we're not home, plus other measures, but our energy bill continues to go up. We need help from our government (especially LOCAL) to do improve this situation while at the same time, helping to possibly "save" the environment.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Peggy Yates

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

We should be the leader in solar energy use in this country!

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Samira Haraoui

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Richard King

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I am a permanent Florida resident, and I love my state, our abundant sunshine and clean air. However, it seems we are headed in the wrong direction with regard to our energy policies which are not in keeping with the rest of the nation!

I urge you to move to protect and expand solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Lisa Leighton

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

We need your HELP! As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Larry Whipple

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Mercedes Gyorgy

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Drew Duncan

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jerell Knowles

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Dr. Drew Ermelin

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Richard Johnson

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Michelle Inere

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Bradley Sharkey

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

For over twenty years, we lived in Naples and Ohio. I was delighted that FPL (Florida Power & Light) showed less than 10% generation from coal. In contrast APL in Ohio showed over 90% power from coal. Tennessee, Kentucky, and West Virginia bore the brunt of the acid rain, foul air, and polluted water.

Locally, here in Sumter County the head of SECO prattles on about how using coal is cheap power without any apparent understanding of the consequences! Your costs will go up he warns us. If you do not yet understand the true costs of so-called cheap energy please avail yourselves of the wealth of studies that will give you a hint of the dire consequences of continued use of fossil fuels.

The future of our state, our country, is at stake. Do the right and honorable thing for the future of our children, grandchildren, and beyond.

Sincerely,
James Borad

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
L Arscott

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I'm trying to understand why Florida can't take a prominent place in the future. Renewable energy is the future. As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Eric Yoder

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Gregg Kolessar

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Richard Fowlkes

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Calvin Harris

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Maureen Flaherty

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Elizabeth Denning

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Richard Hatfield

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Charles Woodruff

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Eric Bindler

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Sheila Ellis

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. I have solar roof panels to power my home and received half of rebate promised by State of Florida. Many people who participated in the solar program experienced the same treatment which includes paying a service fee monthly to have solar with net metering. Recent studies (article in Guardian) show proof (ex:Australia) that rooftop programs can and do provide more power, not just cleaner energy, than coal.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Steve Schafir

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Bonita Sierra

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Renee Gauthier

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Return the PSC to an elected board, not 1 appointed by criminals like our Medicare embezzling governor.
The current board is a wholly owned subsidiary of kkKoc Industries.
The PSC doesn't care about the environment or the health and safety of Floridians.
This will change in November when Charlie Crist restores Democracy to Florida.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Katherine Gorell

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Personally, I am always looking for ways to reduce my familiy's energy consumption by turning off ceiling fans and lights when we leave a room, using a programmed AC thermostat that raises the temp to 85 during the day when we're not home, plus other measures, but our energy bill continues to go up. We need help from our government (especially LOCAL) to do improve this situation while at the same time, helping to possibly "save" the environment.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Lori Blass-Adams

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Ann Wolff

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Marjorie Gelber

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I am a permanent Florida resident, and I love my state, our abundant sunshine and clean air. However, it seems we are headed in the wrong direction with regard to our energy policies which are not in keeping with the rest of the nation!

I urge you to move to protect and expand solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jim Ewing

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Enrique Baloyra

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. WE NEED TO PROTECT AND PRIORITIZE THE PROTECTION OF OUR ENVIRONMENT. WE NEED TO PUT WHAT IS BEST FOR OUR FUTURE IN FRONT OF PROFITS. DO THE RIGHT THING.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Barbara Vilaseca

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Alicia Frecker

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

Among other things, consider Thorium fuel, especially using it to reuse the long-term species-threatening problem nuclear wastes as fuel enough to empower our species millennia leaving it much less dangerous & of no use in weaponization for a period less than a few centuries rather than extremely dangerous for many many millennia.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Helen Smylie

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Mark Shami

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Irene Napolitano

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Elisa Rivera-Boyles

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I am writing this from San Francisco where i have spent the past week at a professional trade conference for the solar industry and my biggest takeaway: Florida should be ASHAMED!! This industry is exploding across the US and the world and FL is woefully behind the curve STRICTLY because of the lack of State incentives, which translate into a hostile environment for the fastest growing industry in the nation! We are forfeiting thousands of jobs and million of $$ in economic activity. Even GA and both Carolina's have implemented good incentives. Rick Scott and state congressional republicans should be shot!

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Debra Lancia

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Ginger Brewer

Dear Florida Public Service Commission,

time to step out of the stone age!!!

we have the most sun and have the worst solar record due to the inability to sell 3rd party power.

I am in construction and have studied for NABCEP certification. I HAVE MET WITH SEVERAL INTERNATIONAL INVESTORS READY TO INVEST MILLIONS IN FLORIDA'S SOLAR. THEY LEFT TO OTHER COUNTRIES DO TO THE EMBARRASSING POLICIES AND POOR ROI . THANKS.

Sincerely,
Cyril Taieb

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Christy Grabove

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Robin Storm

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jay Silverman

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Jane Du Brin

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian and scientist, I am very concerned that Florida is not at the forefront of alternative energy development. To the contrary, utility companies such as FPL try to convince customers that natural gas is clean energy, knowing full well that fracking not only wastes and contaminates huge amounts of ground water but that the methane releases contribute as much or more to climate change as coal use does.

I urge the Commission to ensure that Florida's power companies improve energy efficiency and to support rooftop and distributed solar power programs. This year's Florida Energy Efficiency and Conservation Act should set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. In particular, The Sunshine State needs to take advantage of this energy source and greatly expand its solar pilot programs.

I also urge the Commission to reject any attempt to exclude energy efficiency measures under the "rate" test and the "two-year payback" test, flawed tests that fail to identify which energy efficiency programs are in customers' best interest. Floridians deserve the same benefits as residents of other states that don't use these tests and where energy efficiency programs are rapidly growing, reducing bills and pollution while boosting economic growth.

Energy conservation and efficiency along with increased solar programs can meet Florida's energy needs, avoid the need for expensive new power plants and protect our air and water while reducing climate disrupting pollutants. We need to be pat of a clean energy future, not an outdated, dirty energy past.

Sincerely,
Cheryl Gross

And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals. I have spent the last three years working to bring more solar to Florida, it is the ideal solution to Florida's peak hour demand needs.

Sincerely,
Kathryn Younkin

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
G. Buccola

This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Kathi Ward

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Mary Bailey

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

I support everything said in this letter. We can't continue to burry our heads in the sand to jot supporting switching over to clean energy. Florida is extremely vulnerable to climate change (sea level rise, droughts, floods). Don't risk our future by supporting policies that promote the status quo of coal and gas only and concentrated energy systems that don't allow for individual household production sharing.

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Myron Clark

Dear Florida Public Service Commission,

Hello, Sunshine!

As a relatively new Floridian, coming from states with far less sun and far more solar, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

USE WHAT WE'VE GOT!

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Ellen Matis

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Robert Hague

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. Dear Florida Public Service Commission,

At this year's FEECA proceeding please explore ways to open energy production to more competition. Our existing energy structure gives monopoly power to only a few providers. These providers have been using very limited methods to reduce electricity consumption and have been using only limited sources for power generation.

Opening up the market for alternative power generation and rewarding the reduction in electricity consumption will reduce power bills and make it possible for the the public to choose non-carbon energy production. This will help the state meet the new carbon reduction targets.

Sincerely,
Samuel Kendall

Run Duke Energy proposals through a "fine- tooth comb"... they are recently guilty of polluting the streams of North Carolina and colluding with the state Department of Natural Resources nearly allowing Duke a "sweetheart" fine for heavy damage to the environment....

And respectfully remember, the commission's decisions are under constant review by an increasingly environmentally aware- public.....

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Lynn Ennis

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Gregory Williams

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Subject: I support more efficiency and solar in FEECA plans

Dear Florida Public Service Commission,

As a Floridian, I ask that the Commission enforce much higher goals for Florida's big power companies to save energy through energy efficiency, and to support rooftop and distributed solar power programs.

Specifically, in this year's Florida Energy Efficiency and Conservation Act proceeding, I request that Commissioners set new energy efficiency goals that are at least 1 percent of the companies' previous year's retail sales. This is consistent with industry standards, and with Florida's well-established interest in wasting less energy and growing an innovative, energy-efficient economy.

Anything less would be unfair and unwise because energy efficiency is the cheapest, fastest and most reliable way to meet our state's energy needs, not new power plants.

Further, the Commission should investigate all available energy efficiency measures, and reject the companies' attempt to exclude measures under the "rate" test and the "two-year payback" test. These are flawed tests that are not used in other states because they fail to identify which energy efficiency programs are in customers' interest. And in other states where the customers' interest wins the day, energy efficiency programs are rapidly growing, year after year, reducing bills and pollution while boosting economic growth. Floridians want the same benefits.

Finally, please protect and expand the solar pilot programs. It makes no sense to import so much expensive fuel when we are awash in sunshine. We need to move quickly to get more, safe, home-grown solar power, and the big power companies should be leaders here - not proposing zero solar goals.

Sincerely,
Sheila Gaby
