FLORIDA PUBLIC SERVICE COMMISSION
DOCKET: 150007-EI EXHIBIT: 2
PARTY: FLORIDA POWER & LIGHT COMPANY (FPL) – (DIRECT)
DESCRIPTION: R.R. Labauve RRL-1

**FLORIDA POWER & LIGHT COMPANY**
**DOCKET NO. 150007-EI**
**ENVIRONMENTAL COST RECOVERY CLAUSE**
**FPL SUPPLEMENTAL CAIR/MATS/CAVR FILING**
**APRIL 1, 2015**

**Per Order No. PSC-14-0643-FOF-EI, issued on November 4, 2014, the discussion below provides FPL's current estimates of project activities and associated costs related to its Clean Air Interstate Rule ("CAIR"), Mercury and Air Toxics Standards ("MATS"), and Clean Air Visibility Rule ("CAVR")/Best Available Retrofit Technology ("BART") projects.**

**Clean Air Interstate Rule ("CAIR") Compliance Project Update – now Cross State Air Pollution Rule:**

**Status of CAIR Rule Revision** - On August 21, 2012, the U.S. Court of Appeals for the District of Columbia Circuit ("D.C. Circuit") vacated the CSAPR and remanded it to the Environmental Protection Agency ("EPA"), directing the EPA to continue administering the CAIR pending promulgation of a "valid replacement" rule. The Court denied all petitions for rehearing on January 24, 2013. On June 24, 2013, the U.S. Supreme Court granted the United States' and environmental group petitions asking the Court to review the D.C. Circuit's decision (EPA v. EME Homer City Generation, L.P.). The three issues before the Supreme Court were whether the D.C. Circuit lacked jurisdiction; if the EPA could validly impose Federal Implementation Plan bypassing the State Implementation Plan ("SIP") process and state discretion; and whether the EPA acted arbitrarily in defining "significant contribution", which was most of the focus of the court's hearing before eight of the nine Justices. On April 29, 2014, the U.S. Supreme Court issued an opinion upholding the CSAPR. The Court's opinion reversed the D.C. Circuit's decision.

On June 26, 2014, the EPA filed a motion in the D.C. Circuit requesting that the court lift the stay of the CSAPR. The EPA also requested that the court extend the CSAPR's compliance deadlines by three years, so that the Phase 1 emissions budgets apply in 2015 and 2016 (instead of 2012 and 2013), and the Phase 2 emissions budgets apply in 2017 and beyond (instead of 2014 and beyond). On October 23, 2014, the D.C. Circuit granted the EPA's request that the stay be lifted. On December 3, 2014 the EPA published in the Federal Register an interim final rule addressing compliance deadlines for the CSAPR and issued a Notice of Data Availability ("NODA"). The EPA's interim final rule tolls compliance dates three years, such that they begin in January 2015. The NODA provides allowance allocation changes that reflect changes made to the CSAPR subsequent to the final rule and "revintaging" original allowances forward by three years. On February 25, 2015 the D.C. Circuit heard oral argument on the EPA's rejection of the SIPs for 22 states as insufficient under the "good neighbor" provision of the Clean Air Act when it finalized the CSAPR. A decision from the Court is expected by the Summer of 2015. FPL will be working with the EPA during the rulemaking to address the Court's decision on the CSAPR to ensure that Florida in general and our facilities in particular receive their fair allocation of allowances.

**St. Johns River Power Park ("SJRPP") Selective Catalytic Reduction Systems ("SCR") and Ammonia Injection Systems** – The construction and installation of SCR and Ammonia Injection Systems on SJRPP were accomplished in 2009 with the controls on both units being placed into service in 2010. FPL's ownership share of the total CAIR capital cost for installation of the SCR and Ammonia Injection System is $55.3 million.

Estimated CAIR annual O&M expenses for 2015 are approximately $32,000 (FPL's 20% ownership) for operation of the SCR for increased mercury co-benefit removal to comply with the MATS rule. Ongoing O&M activities for the SCR include incremental operating staff, ammonia consumption, maintenance of the SCR ammonia injection skid and SCR auxiliary equipment.

**Scherer SCR and Wet Flue Gas Desulfurization (FGD)** – The total capital cost for FPL's share of the construction and installation of the FGD (scrubber) and SCR with Ammonia Injection System on Scherer Unit 4 through 2014 is $398.9 million. In 2014 a third layer of catalyst was added to the SCR. Planned construction activities in 2015 include the addition of bromine injection to the SCR and completion of site restoration for the FGD and the wrap-up of the FGD completion project which began in 2013. Site restoration work includes paving/repaving roadways, reclaiming site storage areas, repairing areas damaged during construction and removing temporary facilities to return the site to the condition it was at the beginning of the construction project. FPL estimates its share of the Scherer Unit 4 CAIR capital costs for projects planned in 2015 to be $1.54 million.

FPL has estimated annual O&M for operation of the SCR, FGD, and common plant facilities supporting the controls at $3.88 million for 2015. O&M activities for the SCR include incremental operating staff, ammonia consumption, maintenance of the SCR ammonia injection skid and SCR auxiliary equipment. O&M activities for the FGD include limestone consumption, limestone and by-product handling operation, FGD operations, FGD tower and auxiliary equipment maintenance.

**800 MW unit cycling project**– FPL completed construction work associated with this project in 2011.

Total capital costs for the 800 MW unit cycling project are $137.2 million. Projected O&M annual expenses are $0.569 million in 2015 primarily for treatment of condenser tube fouling.

**Continuous Emissions Monitoring System ("CEMS") Plan for Gas Turbines ("GT")** - The Low Mass Emitting ("LME") CEMS under 40 CFR Part 75 have been installed, tested, and are now in operation at the Fort Myers, Port Everglades, and Fort Lauderdale Gas Turbine sites, as required by the CAIR and by the CSAPR.

FPL has projected that O&M expenses of $5,000 per year will be required for routine maintenance of these CEMS systems. It should be noted that the LME option is available for a GT only if its emissions remain under EPA-prescribed thresholds. While FPL has filed notice

that it intends to replace all but 2 GTs at the Lauderdale and Fort Myers plants, CEMS will still be needed for monitoring those sources.

**Purchases of allowances** – To comply with the CSAPR Ozone Season NOx program requirements, FPL must evaluate each year whether it needs to purchase CSAPR allowances. FPL has evaluated the proposed allowance allocations under the CSAPR and has projected that it will have sufficient allocated allowances to cover projected emissions in 2015.

Actual CAIR capital costs for 2014 are $4.453 million.

| CAIR CAPITAL COST ESTIMATES ($Millions) | | |
|---|---|---|
| **PROJECT** | **TOTAL PROJECT through 2014** | **2015 Projections** |
| SJRPP-SCR/Ammonia Injection System | 55.3 | 0 |
| Scherer-SCR/FGD | 398.9 | 1.54 |
| 800 MW Unit Cycling – Martin | 72.1 | 0 |
| 800 MW Unit Cycling – Manatee | 65.1 | 0 |
| CEMS at GTs | Capital project completed | 0 |
| Allowances | N/A | N/A |

Actual CAIR O&M expenses for 2014 are $5.03 million.

| CEMS at GTs | annual operating costs are on-going | $0.005 |
| Allowances | N/A | N/A |

**Mercury Air Toxics Standards ("MATS") Compliance Project Update (formerly CAMR):**

On March 15, 2005, the EPA issued the Clean Air Mercury Rule ("CAMR") to permanently cap and reduce mercury ("Hg") emissions from coal-fired power plants for the first time. In response to the EPA's CAMR, the Georgia Environmental Protection Division ("EPD") promulgated two major rules to implement Hg reductions within Georgia: a rule to adopt the CAMR federal Hg cap and trade program: Rule 391-3-1-.02(15) – "*Georgia Mercury Trading Rule*" and a Georgia state specific Multipollutant Rule: Rule 391-3-1-.02(2) (sss) – *"Multipollutant Control for Electric Utility Steam Generating Units"*, which became effective June 1, 2008. The Georgia Multipollutant Rule was promulgated to specify the implementation of specific air pollution control equipment for reductions of Hg, sulfur dioxide ("$SO_2$"), and nitrogen oxides ("NOx") emissions from identified coal-fired Electric Generating Units ("EGUs") within Georgia. Section 4(i) of the Georgia Multipollutant Rule requires that Scherer Unit 4 may not be operated after April 30, 2010, unless it is equipped and operated with sorbent injection and a baghouse for the control of Hg emissions.

On February 8, 2008, the District of Columbia Circuit Court of Appeals, in a unanimous decision, vacated the EPA's CAMR. However, installation of Hg controls, and associated continuous Hg emissions monitoring that would have been needed to comply with the CAMR requirements remain necessary to comply with the requirements of the Georgia Multipollutant Rule; therefore installation of Hg controls on Plant Scherer Unit 4 must continue. The vacatur of the CAMR does not change the compliance obligations at Plant Scherer, including FPL's share of Unit 4. In addition, on December 16, 2011, the EPA published its final Mercury and Air Toxics Standards ("MATS") rule as a replacement for the CAMR. The EPA's MATS rule sets limits on emissions of Toxic Metal Hazardous Air Pollutants ("HAPs"), including Hg, limits on emissions of acid gasses, and work practice standards for emissions of organic HAPs. FPL has reviewed the compliance requirements of the MATS rule and believes that controls installed on Scherer Unit 4 for compliance with the CAIR, the CAMR, and the Georgia Multipollutant Rule will allow the unit to meet the rule's emissions specifications for HAPs. Specifically, FPL is complying with the Hg reduction requirements of the Georgia Multipollutant Rule and the EPA's MATS rule by using the following projects identified previously under the CAMR:

1. Installation of Fabric Filter Baghouse and Mercury Sorbent Injection System on Scherer Unit 4 (completed 2010).
2. Installation of HgCEMS on Scherer Unit 4 (completed 2009) for compliance with the Georgia Multipollutant Rule.
3. Installation of HgCEMS on SJRPP Units 1 and 2 (completed in 2008 prior to the vacatur of the CAMR). Hg CEMS are required to comply with the MATS rule.

FPL's share of the capital cost associated with the installation of Hg CEMS at SJRPP is $0.4 million. Testing has confirmed that use of low sulfur coal containing low Hg concentrations in SJRPP Units 1 and 2 boilers with an increase in the use of dibasic acid in the FGD and operation of the SCR will allow the units to meet the MATS emissions limits. JEA and FPL concluded that the clean fuel option was the most cost-effective option for compliance with the MATS emissions limits. Compliance requirements for the MATS emissions limits were scheduled to go

into effect on April 16, 2015. However, Georgia Power Company, operator of Plant Scherer, filed a request with the Georgia Environmental Protection Division ("GAEPD") for an extension of the compliance deadline until April 2016 to complete monitoring changes needed for compliance with the EPA's November 2014 revision of the MATS rule. The GAEPD granted the extension request in March 2015.

Projected annual O&M associated with operation of the Hg controls includes purchase of new sorbent, disposal of spent sorbent, replacement of filter bags, and maintenance activities associated with the baghouse and sorbent injection system, and the maintenance costs associated with FPL's share of the Scherer Unit 4 Hg CEMS. For 2015, projected MATS O&M expenses for Plant Scherer are $2.297 million and for SJRPP are $0.110 million, primarily for purchase and disposal of sorbents and replacement of bags at Plant Scherer and operation and maintenance of the Hg monitors at SJRPP.

On December 21, 2011, the EPA issued the final MATS rule, which has the effect of requiring ESPs for the 800 MW oil-fired units. Construction of the ESPs was completed in 2014. Actual capital costs for construction of the ESPs through 2014 are $209.4 million. FPL's costs for compliance with the MATS rule include Project 33: the SJRPP Mercury CEMS project and the Scherer Sorbant Injection/Baghouse/Mercury CEMS, and Project 45 (the 800 MW ESP project).

Actual MATS capital costs for 2014 are $55.3 million.

| **MATS CAPITAL COST ESTIMATES ($Millions)** | | |
|---|---|---|
| **PROJECT** | **TOTAL PROJECT through 2014** | **2015 Projections** |
| SJRPP-Mercury CEMS | 0.4 | 0.14 |
| Scherer-Sorbent Injection/Baghouse/ Mercury CEMS | 108.62 | 0.001 |
| 800 MW ESP PMR/PMT | 209.4 | 7.831 |

Actual MATS O&M expenses for 2014 are $2.2 million.

| **MATS O&M EXPENSE ESTIMATES ($Millions)** | | |
|---|---|---|
| **PROJECT** | **TOTAL PROJECT through 2014** | **2015 Projection** |
| SJRPP-Mercury CEMS | 0.0 | 0.11 |
| Scherer-Sorbent Injection/Baghouse/ HgCEMS | (annual operating costs are on-going) | 2.3 |
| 800 MW ESP PMR/PMT | N/A | 1.34 |

**CAVR / BART Project Update:**

FPL successfully concluded negotiations with the Florida Department of Environmental Protection ("FDEP" or "the Department") regarding Turkey Point Units 1 and 2 in February 2009, with the Department accepting FPL's proposed plan to comply with the BART requirements under the Regional Haze program. In 2011, FPL negotiated with the FDEP changes to its compliance plan at Turkey Point to address changes to the state's plan as a result of the CSAPR's impact on the Regional Haze SIP. FPL proposed to remove the requirement to install new multi-cyclone dust collectors and instead proposed to reduce emissions of $SO_2$ through use of 0.7% sulfur residual fuel oil and to commit to no longer burning fossil fuels in the Unit 2 boiler effective immediately, and to take a significant reduction in fuel oil firing in Unit 1 boiler beginning in 2013. In 2011, the FDEP identified concerns with the analysis of the Putnam units, which were projected to exceed the criteria threshold. FPL retained a consultant in 2012 to prepare modeling required by the state to demonstrate that the Putnam plant and the Manatee and Martin 800 MW units do not exceed the criteria thresholds. The FDEP contends that visibility improvements at Florida's Class 1 Areas will meet the Reasonable Progress glide slope in 2018 by way of existing air rules. FPL does not anticipate that installation of additional controls will be required for compliance with the Reasonable Progress requirements as a result of FPL's retirement of Turkey Point Unit 2, retirement of both combined cycle units at the Putnam plant and installation of ESPs on the 800 MW units.

When the EPA issued its CSAPR, Florida was no longer included in the particulate matter portion of the rule, removing previously affected units from the annual NOx and $SO_2$ requirements. Because of the regulatory uncertainty from the status of the CSAPR and the CAIR at that time, FPL was required to perform a full 5-factor BART Determination for $SO_2$ and NOx at Turkey Point Units 1 and 2, Manatee Units 1 and 2, and Martin Units 1 and 2. The EPA has approved Florida's SIP which adopts FPL's BART compliance plan. FPL's results from the 5-factor analysis demonstrated that FPL's affected fossil units did not exceed visibility threshold values and were in compliance with the Regional Haze requirements. The EPA subsequently approved the SIP for Regional Haze that included FPL's compliance plan.

Actual CAVR capital costs through 2014 are $0, and FPL does not anticipate any future compliance costs for CAVR at this time. Actual CAVR O&M expenses through 2014 are $0.056 million. FPL did not project any O&M costs for CAVR in 2014 and does not anticipate any further O&M costs at this time. Actual costs in 2014 for compliance with the BART/CAVR requirements were $0. FPL does not anticipate CAVR/BART costs during the 2015 period.

## Environmental Protection Agency

40 CFR Parts 257 and 261
Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals From Electric Utilities; Final Rule

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET: 150007-EI EXHIBIT: 3
PARTY: FLORIDA POWER & LIGHT COMPANY (FPL) – (DIRECT)
DESCRIPTION: R.R. Labauve RRL-2

**ENVIRONMENTAL PROTECTION AGENCY**

**40 CFR Parts 257 and 261**

**[EPA–HQ–RCRA–2009–0640; FRL–9919–44–OSWER]**

**RIN–2050–AE81**

## Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals From Electric Utilities

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Final rule.

**SUMMARY:** The Environmental Protection Agency (EPA or the Agency) is publishing a final rule to regulate the disposal of coal combustion residuals (CCR) as solid waste under subtitle D of the Resource Conservation and Recovery Act (RCRA). The available information demonstrates that the risks posed to human health and the environment by certain CCR management units warrant regulatory controls. EPA is finalizing national minimum criteria for existing and new CCR landfills and existing and new CCR surface impoundments and all lateral expansions consisting of location restrictions, design and operating criteria, groundwater monitoring and corrective action, closure requirements and post closure care, and recordkeeping, notification, and internet posting requirements. The rule requires any existing unlined CCR surface impoundment that is contaminating groundwater above a regulated constituent's groundwater protection standard to stop receiving CCR and either retrofit or close, except in limited circumstances. It also requires the closure of any CCR landfill or CCR surface impoundment that cannot meet the applicable performance criteria for location restrictions or structural integrity. Finally, those CCR surface impoundments that do not receive CCR after the effective date of the rule, but still contain water and CCR will be subject to all applicable regulatory requirements, unless the owner or operator of the facility dewaters and installs a final cover system on these inactive units no later than three years from publication of the rule. EPA is deferring its final decision on the Bevill Regulatory Determination because of regulatory and technical uncertainties that cannot be resolved at this time.

**DATES:** This final rule is effective on October 14, 2015.

**ADDRESSES:** EPA has established three dockets for this regulatory action under Docket ID No. EPA–HQ–RCRA–2009–0640, Docket ID No. EPA–HQ–RCRA–2011–0392, and Docket ID No. EPA–HQ–RCRA–2012–0028. All documents in these dockets are available at *http://www.regulations.gov*. Although listed in the index, some information is not publicly available, *e.g.*, Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy at the OSWER Docket, EPA/DC, WJC West Building, Room 3334, 1301 Constitution Ave. NW., Washington, DC 20460. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OSWER Docket is 202–566–0276.

**FOR FURTHER INFORMATION CONTACT:** For questions on technical issues: Alexander Livnat, Office of Resource Conservation and Recovery, Environmental Protection Agency, 5304P; telephone number: (703) 308–7251; fax number: (703) 605–0595; email address: *livnat.alexander@epa.gov*, or Steve Souders, Office of Resource Conservation and Recovery, Environmental Protection Agency, 5304P; telephone number: (703) 308–8431; fax number: (703) 605–0595; email address: *souders.steve@epa.gov*. **SUPPLEMENTARY INFORMATION:**

### A. Does this action apply to me?

This rule applies to all coal combustion residuals (CCR) generated by electric utilities and independent power producers that fall within the North American Industry Classification System (NAICS) code 221112 and may affect the following entities: Electric utility facilities and independent power producers that fall under the NAICS code 221112. The industry sector(s) identified above may not be exhaustive; other types of entities not listed could also be affected. The Agency's aim is to provide a guide for readers regarding those entities that potentially could be affected by this action. To determine whether your facility, company, business, organization, etc., is affected by this action, you should refer to the applicability criteria discussed in Unit VI.A. of this document If you have any questions regarding the applicability of this action to a particular entity, consult the person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

### B. What actions are not addressed in this rule?

This rule does not address the placement of CCR in coal mines. The U.S. Department of Interior (DOI) and, as necessary, EPA will address the management of CCR in minefills in separate regulatory action(s), consistent with the approach recommended by the National Academy of Sciences, recognizing the expertise of DOI's Office of Surface Mining Reclamation and Enforcement in this area. See Unit VI of this document for further details. This rule does not regulate practices that meet the definition of a beneficial use of CCR. Beneficial uses that occur after the effective date of the rule need to determine if they comply with the criteria contained in the definition of ''beneficial use of CCRs.'' This rule does not affect past beneficial uses (*i.e.*, uses completed before the effective date of the rule.) See Unit VI of this document for further details on proposed clarifications of beneficial use. Furthermore, CCR from non-utility boilers burning coal are also not addressed in this final rule. EPA will decide on an appropriate action for these wastes through a separate rulemaking effort. See Unit IV of this document for further details. Finally, this rule does not apply to municipal solid waste landfills (MSWLFs) that receive CCR for disposal or use as daily cover.

### C. The Contents of This Preamble Are Listed in the Following Outline

I. Executive Summary
II. Statutory Authority
III. Background
IV. Bevill Regulatory Determination Relating to CCR From Electric Utilities and Independent Power Producers
V. Development of the Final Rule—RCRA Subtitle D Regulatory Approach

VI. Development of the Final Rule—Technical Requirements
VII. Summary of Major Differences Between the Proposed and Final Rules
VIII. Implementation Timeframes for Minimum National Criteria and Coordination With Steam Electric ELG Rule
IX. Implementation of the Minimum Federal Criteria and State Solid Waste Management Plans
X. Risk Assessment
XI. Summary of Damage Cases
XII. Summary of Regulatory Impact Analysis
XIII. Uniquely Associated Wastes
XIV. Statutory and Executive Order Reviews

## I. Executive Summary

This rule establishes nationally applicable minimum criteria for the safe disposal of coal combustion residuals in landfills and surface impoundments. This section summarizes these criteria. Detailed discussions of the criteria and the Agency's rationale for finalizing these requirements are provided in Unit VI of this document.

### *A. What are coal combustion residuals?*

Coal combustion residuals (CCR) are generated from the combustion of coal, including solid fuels classified as anthracite, bituminous, subbituminous, and lignite, for the purpose of generating steam for the purpose of powering a generator to produce electricity or electricity and other thermal energy by electric utilities and independent power producers. CCR includes fly ash, bottom ash, boiler slag, and flue gas desulfurization materials. A description of the types of CCR can be found in the proposed rule (see 75 FR 35137).

CCR is one of the largest industrial waste streams generated in the U.S. In 2012, over 470 coal-fired electric utilities burned over 800 million tons of coal, generating approximately 110 million tons of CCR in 47 states and Puerto Rico. CCR may be generated wet or dry; however, this composition may change after generation. Some CCR is dewatered while other CCR is mixed with water to facilitate transport (*i.e.*, sluiced). CCR can be sent off-site for disposal or beneficial use or disposed in on-site landfills or surface impoundments. In 2012, approximately 40 percent of the CCR generated was beneficially used, with the remaining 60 percent disposed in surface impoundments and landfills. Of that 60 percent, approximately 80 percent was disposed in on-site disposal units. CCR disposal currently occurs at over 310 active on-site landfills, averaging over 120 acres in size with an average depth of over 40 feet, and at over 735 active on-site surface impoundments, averaging over 50 acres in size with an average depth of 20 feet.

### *B. Background*

The Agency first solicited comments on the regulation of CCR in a proposed rule published in the **Federal Register** on June 21, 2010. This proposal, under the Resource Conservation and Recovery Act (RCRA), addressed the risks from disposal of CCR generated from the combustion of coal at electric utilities and from independent power producers. Two regulatory options were proposed. Under the first option, EPA proposed to list CCR as special waste subject to regulation under subtitle C of RCRA, when destined for disposal in landfills or surface impoundments. Under this option, CCR would require ''cradle-to-grave'' management and would be subject to requirements for, among other things, composite liners, groundwater monitoring, structural stability requirements, corrective action, closure/post closure care and financial assurance. States would be required to adopt the rule before it went into effect and a permitting program would be established with direct federal oversight. The subtitle C option, as proposed, would also effectively result in the closure of all CCR surface impoundments.

Under the second option, EPA proposed to regulate the disposal of CCR under subtitle D of RCRA by issuing minimum national criteria. Similar to the subtitle C option, this option would require composite liners, groundwater monitoring, structural stability requirements, corrective action, and closure/post closure care. However, consistent with the available statutory authority under subtitle D, EPA proposed this option to be a self-implementing rule with no direct federal oversight, with an effective date six months after publication in the **Federal Register**. This option required all unlined surface impoundments to either retrofit to a composite liner or close within five years.

After reviewing all the comments and additional data received, EPA is promulgating this final rule to regulate the disposal of CCR as solid waste under subtitle D of RCRA. This rule addresses the risks from structural failures of CCR surface impoundments, groundwater contamination from the improper management of CCR in landfills and surface impoundments and fugitive dust emissions. The rule has also been designed to provide electric utilities and independent power producers generating CCR with a practical approach for implementation of the requirements and has established implementation timelines that take into account, among other things, other upcoming regulatory actions affecting electric utilities and site specific practical realities. In order to ease implementation of the regulatory requirements for CCR units with state programs, EPA is also providing the opportunity for states to secure approval of its CCR program through the State Solid Waste Management Plan (''SWMP''). EPA strongly recommends that states take advantage of this process by revising their SWMPs to address the issuance of the revised federal requirements in this final rule, and to submit revisions of these plans to EPA for review. EPA would then review and approve the revised SWMPs provided they demonstrate that the minimum federal requirements in this final rule will be met. In this way, EPA's approval of a revised SWMP signals EPA's opinion that the state SWMP meets the minimum federal criteria.

### *C. What types of CCR units are covered by this rule?*

The final rule applies to owners and operators of new and existing landfills and new and existing surface impoundments, including all lateral expansions of landfills and surface impoundments that dispose or otherwise engage in solid waste management of CCR generated from the combustion of coal at electric utilities and independent power producers. The requirements of the rule also apply to CCR units located off-site of the electric utilities' or independent power producers' facilities that receive CCR for disposal. In addition, the rule applies to certain inactive CCR surface impoundments (*i.e.*, units not receiving CCR after the effective date of the rule) at active electric utilities' or independent power producers' facilities, regardless of the fuel currently used at the facility to produce electricity (*e.g.* coal, natural gas, oil), if the CCR unit still contains CCR and liquids.

The requirements do not apply to: (1) CCR landfills that ceased receiving CCR prior to the effective date of the rule; (2) CCR units at facilities that have ceased producing electricity (or electricity and other thermal energy) prior to the effective date of the rule; (3) CCR generated at facilities that are not part of an electric utility or independent power producer, such as manufacturing facilities, universities, and hospitals; (4) fly ash, bottom ash, boiler slag, and flue gas desulfurization materials, generated primarily from the combustion of fuels (including other fossil fuels) other than coal, for the purpose of generating electricity unless the fuel burned

consists of more than fifty percent coal on a total heat input or mass input basis, whichever results in the greater mass feed rate of coal; (5) CCR that is beneficially used; (6) CCR placement at active or abandoned underground or surface coal mines; or (7) municipal solid waste landfills (MSWLF) that receive CCR.

*D. What minimum national criteria are being established for CCR landfills and CCR surface impoundments?*

This final rule establishes minimum national criteria for CCR landfills, CCR surface impoundments, and all lateral expansions of CCR units including location restrictions, liner design criteria, structural integrity requirements, operating criteria, groundwater monitoring and corrective action requirements, closure and post-closure care requirements, and recordkeeping, notification, and internet posting requirements.

*1. Location Restrictions.* To ensure there will be no reasonable probability of adverse effects on health or the environment from the disposal of CCR in CCR landfills, CCR surface impoundments, and all lateral expansions of CCR landfills and CCR surface impoundments (together ''CCR units''), this final rule establishes five location restrictions. The location criteria include restrictions relating to placement of CCR above the uppermost aquifer, in wetlands, within fault areas, in seismic impact zones, and in unstable areas. All of these location restrictions require the owner or operator of a CCR unit to demonstrate that they meet the specific criteria. As discussed elsewhere in this preamble, the five location restrictions apply to all new CCR landfills, all new and existing CCR surface impoundments, and all lateral expansions of CCR units; however, existing CCR landfills are only subject to the location restriction for unstable areas. Units that do not meet these restrictions can retrofit or make appropriate engineering demonstrations to meet this criteria. This final rule requires owner or operators of existing CCR units that cannot make the required demonstrations to close, while owners or operators of new CCR units and all lateral expansions who fail to make the required demonstrations are prohibited from placing CCR in the CCR unit.

*2. Liner Design Criteria.* The final rule also establishes liner design criteria to help prevent contaminants in CCR from leaching from the CCR unit and contaminating groundwater. All new CCR landfills, new CCR surface impoundments, and lateral expansions of CCR units must be lined with composite liner, which is a liner system consisting of two components—a geomembrane and a two-foot layer of compacted soil—installed in direct and uniform contact with one another. The final rule allows an owner or operator to construct a new CCR unit with an alternative composite liner, provided the alternative composite liner performs no less effectively than the composite liner. In addition, new landfills are required to operate with a leachate collection and removal system which is designed to remove excess leachate that may accumulate on top of the composite (or alternative composite) liner. Existing CCR landfills are not required to close or retrofit with a composite (or alternative composite) liner and a leachate collection and removal system. These existing CCR units can continue to receive CCR after this rule is in effect; however, the CCR units must meet all applicable groundwater monitoring and corrective action criteria to address any groundwater releases promptly. Existing CCR surface impoundments can also continue to operate as designed. However, if the existing CCR surface impoundment was not constructed with a composite (or alternative composite) liner or with at least two feet of compacted soil with a specified hydraulic conductivity, the rule would require the unit to retrofit or close if the CCR surface impoundment detects concentrations of one or more constituents listed in appendix IV at statistically significant levels above the groundwater protection standard established by the rule.

*3. Structural Integrity Requirements.* To help prevent the damages associated with structural failures of CCR surface impoundments, the final rule establishes structural integrity criteria for new and existing surface impoundments (and all lateral expansions) as part of the design criteria. While the applicability of the structural integrity requirements to individual CCR surface impoundments vary depending on factors such as dike heights and the potential for loss of life, environmental damage and economic loss if there is a dike failure, the final rule establishes requirements for owner or operators to conduct a number of structural integrity-related assessments regularly. These include: (1) Conducting periodic hazard potential classification assessments to assess the potential adverse incremental consequences that would occur if there was a failure of the CCR surface impoundment; (2) conducting periodic structural stability assessments by a qualified professional engineer to document whether the design, construction, operation and maintenance is consistent with recognized and generally accepted good engineering practices; and (3) conducting periodic safety factor assessments to document whether the CCR unit achieves minimum factors of safety for slope stability. If a CCR unit required to conduct a safety factor assessment fails to demonstrate that the unit achieves the specified factors of safety, the owner or operator must close the unit. In addition, certain CCR surface impoundments are required to develop an emergency action plan which defines the events and circumstances involving the CCR unit that represent an emergency and identifies the actions that will be taken in the event of a safety emergency.

*4. Operating Criteria.* The operating criteria include air criteria for all CCR units, run-on and run-off controls for CCR landfills, hydrologic and hydraulic capacity requirements for CCR surface impoundments, and periodic inspection requirements for all CCR units. These criteria address the day-to-day operations of CCR units and are established to prevent health and environmental impacts from CCR units. The air criteria address the pollution caused by windblown dust from CCR units, and require owners and operators to minimize CCR from becoming airborne at the facility. The run-on controls for CCR landfills minimize the amount of surface water entering the unit that will help prevent erosion, surface discharges of CCR in solution or suspension, and will mitigate the generation of landfill leachate, while run-off controls help prevent erosion, protect downstream surface water from releases from the unit, and minimize storm water run-off volume and velocity. CCR surface impoundments are subject to hydrologic and hydraulic capacity requirements to ensure the unit can safely handle flood flows, which will help prevent uncontrolled overtopping of the unit or erosion of the materials used to construct the surface impoundment. The final rule also requires periodic inspections of CCR units to identify any appearance of structural weakness or other conditions that are not consistent with recognized and generally accepted good engineering standards.

*5. Groundwater Monitoring and Corrective Action.* The groundwater monitoring and corrective action criteria require an owner or operator of a CCR unit to install a system of monitoring wells and specify procedures for sampling these wells, in addition to methods for analyzing the groundwater data collected, to detect the presence of

hazardous constituents (*e.g.,* toxic metals) and other monitoring parameters (*e.g.,* pH, total dissolved solids) released from the units. The final rule establishes a groundwater monitoring program consisting of detection monitoring, assessment monitoring and corrective action. Once a groundwater monitoring system and groundwater monitoring program has been established for a CCR unit, the owner or operator must conduct groundwater monitoring and, if the monitoring demonstrates an exceedance of a groundwater protection standard for any of the identified constituents in CCR, must initiate corrective action.

*6. Closure and Post-Closure Requirements.* The closure and post-closure care criteria require all CCR units to close in accordance with specified standards and to monitor and maintain the units for a period of time after closure, including the groundwater monitoring and corrective action programs. These criteria are essential to ensuring the long-term safety of closed CCR units. Closure of a CCR unit must be completed either by leaving the CCR in place and installing a final cover system or through removal of the CCR and decontamination of the CCR unit. The final rule establishes timeframes to initiate and complete closure activities, and authorize owners or operators to obtain time extensions due to circumstances beyond the facility's control. As discussed elsewhere in this preamble, the rule also establishes alternative closure procedures in situations where an owner or operator is closing a CCR unit, but has no alternative CCR disposal capacity or is permanently closing the coal-fired boiler unit in the foreseeable future. Finally, owners and operators are required to prepare closure and post-closure care plans describing these activities.

*7. Record Keeping, Notification, and Internet Posting Requirements.* The final rule requires owners or operators of CCR units to record certain information in the facility's operating record. In addition, owners and operators are required to provide notification to States and/or appropriate Tribal authorities when the owner or operator places information in the operating record, as well as to maintain a publicly accessible internet site for this information.

*8. Severability.* EPA intends that the provisions of this rule be severable. In the event that any individual provision or part of this rule is invalidated, EPA intends that this would not render the entire rule invalid, and that any individual provisions that can continue to operate will be left in place. The following tables provide a summary of the specific technical requirements applicable to existing and new CCR landfills, existing and new CCR surface impoundments, and all lateral expansions of CCR units.

United States Department of the Interior
U. S. FISH AND WILDLIFE SERVICE
7915 BAYMEADOWS WAY, SUITE 200
JACKSONVILLE, FLORIDA 32256-7517

IN REPLY REFER TO:

August 24, 2015

Randall LaBauve, Vice President
Environmental Services
Florida Power and Light Company
700 Universe Boulevard
Juno Beach, Florida 33408

Re: Manatee carcasses found in Cape Canaveral Energy Center intake wells

Dear Mr. LaBauve:

The U.S. Fish and Wildlife Service (Service) was notified by Florida Power and Light Company (FP&L) staff of the presence of seventeen manatee carcasses in the Cape Canaveral Energy Center (CCEC) intake wells subsequent to modernization in April 2013.

The carcasses were recovered and examined by staff from the Florida Fish and Wildlife Conservation Commission's (FWC) Marine Mammal Pathobiology Lab. For some of the carcasses, FWC was able to determine that the animals had died prior to entering the intake wells. For the remaining carcasses, it was not possible to determine if the animals had died prior to appearing in the wells. As such, the Service is very concerned that CCEC operations may have caused the deaths of some of these manatees.

The Federal Endangered Species Act (ESA), as amended (16 U.S.C. 1531), and the Marine Mammal Protection Act, as amended (16 U.S.C. 1361), prohibit the take of the endangered manatee. Specifically, section 9 of the ESA prohibits those actions that harass, harm, wound, kill, trap, capture, or collect, and prohibit attempts to engage in any such conduct. Section 11 of the ESA provides for criminal sanctions, civil penalties, and injunctions for unauthorized takes or other violations of the ESA (16 U.S.C. § 1540). The Service may seek all three remedies. In addition; section 11 enables private citizens to pursue injunctions in order to prevent actions conducted by individuals or organizations that cause unauthorized takes. The civil penalties established in section 11(a)(1) are not more than $25,000 if the violation is done "knowingly" and $500 otherwise (16 U.S.C. § 1540(a)(1)). Section 11(b)(1) imposes a maximum criminal penalty of $50,000 and/or one year in jail against anyone who "knowingly" violates the ESA (16 U.S.C. § 1540(b)(1)). These penalties have since been increased by to a maximum per violation of $100,000 for individuals and $200,000 for corporations (18 U.S.C. §3571).

FPL is not authorized to take manatees. In order to avoid violating provisions of these acts, FP&L must develop and implement a suitable solution to prevent the future impingement of manatees in the intake wells. In the event that FP&L elects to not develop and implement a solution, the Service will refer this information to our Office of Law Enforcement and request

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET: 150007-EI EXHIBIT: 4
PARTY: FLORIDA POWER & LIGHT COMPANY (FPL) – (DIRECT)
DESCRIPTION: R.R. Labauve RRL-3

that any future manatee deaths that occur in the CCEC intake wells be investigated. We have been working with FP&L to develop a solution to address this concern and appreciate your efforts to conserve manatees.

If you have any questions regarding this response please contact Jim Valade of my staff at (904) 731-3116 or Jim_Valade@fws.gov.

Sincerely,

Jay B. Herrington
Field Supervisor

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

| 9. Total System Recoverable Expenses (Lines 7 & 8) | | $105 | $104 | $104 | $104 | $103 | $103 | $102 | $102 | $101 | $101 | $101 | $100 | $1,230 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU. □

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.□

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

| 9. Total System Recoverable Expenses (Lines 7 & 8) | | $12,454 | $12,441 | $12,398 | $12,342 | $12,287 | $12,116 | $11,543 | $11,168 | $11,048 | $10,784 | $10,512 | $10,335 | $139,429 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU. □

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.□

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU. □

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.□

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

| e. Other | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| 9. Total System Recoverable Expenses (Lines 7 & 8) | | $263,911 | $265,897 | $269,290 | $271,841 | $271,801 | $271,288 | $267,837 | $267,293 | $266,748 | $266,087 | $265,426 | $264,883 | $3,212,302 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU. □

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.□

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

[h] In the 2013 final true-up capital schedule, expenditures and additions amounts on Line 1 and CWIP non-interest bearing amounts on Line 4 were inadvertently excluded, however, these amounts were included in the total system recoverable expenses.

The beginning balance of $1934 on this schedule is correctly reflected.

| b. Amortization [e] | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| c. Dismantlement [f] | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| d. Property Expenses | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| e. Other | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| 9. Total System Recoverable Expenses (Lines 7 & 8) | | $4,994,186 | $4,985,274 | $4,976,044 | $4,966,788 | $4,957,887 | $4,949,889 | $4,932,372 | $4,952,307 | $4,928,733 | $4,910,223 | $4,903,576 | $4,898,245 | $59,355,524 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU. □

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.□

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU. □

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.□

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU. □

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.□

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 39-42.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2014 actual period is 4.9230% based on May 2013 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2014 actual period is 4.8938% based on the May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU. □

[c] The Debt Component for the Jan. – Jun. 2014 actual period is 1.5658% based on May 2013 Surveillance Report and the Debt Component for the Jul. – Dec. 2014 actual period is 1.4751% based on the May 2014 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8A, pages 39-42.

(e) Applicable amortization period(s). See Form 42-8A, pages 39-42.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2014 actual period of 6.437% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2014 actual period of 6.421% reflects a 10.5% return on equity.□

Debt Component: For the Jan. – Jun. 2014 actual period return of 1.927% is based on May 2013 Surveillance Report and for the Jul. – Dec. 2014 actual period return of 1.854% is based on FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 39-41.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2015 actual period is 4.8938% based on May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2015 estimated period is 4.8201% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2015 actual period is 1.4751% based on May 2014 ROR Surveillance Report and the Debt Component for the Jul. – Dec. 2015 estimated period is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8E, pages 39-41.

(e) Applicable amortization period(s). See Form 42-8E, pages 39-41.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2015 actual period of 6.42% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2015 estimated period of 6.36% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2015 actual period return of 1.85% is based on May 2014 ROR Surveillance Report and for the Jul. – Dec. 2015 estimated period return of 1.89% is based on May 2015 ROR Surveillance Report per FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 39-41.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2015 actual period is 4.8938% based on May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2015 estimated period is 4.8201% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2015 actual period is 1.4751% based on May 2014 ROR Surveillance Report and the Debt Component for the Jul. – Dec. 2015 estimated period is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8E, pages 39-41.

(e) Applicable amortization period(s). See Form 42-8E, pages 39-41.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2015 actual period of 6.42% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2015 estimated period of 6.36% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2015 actual period return of 1.85% is based on May 2014 ROR Surveillance Report and for the Jul. – Dec. 2015 estimated period return of 1.89% is based on May 2015 ROR Surveillance Report per FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 39-41.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2015 actual period is 4.8938% based on May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2015 estimated period is 4.8201% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2015 actual period is 1.4751% based on May 2014 ROR Surveillance Report and the Debt Component for the Jul. – Dec. 2015 estimated period is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8E, pages 39-41.

(e) Applicable amortization period(s). See Form 42-8E, pages 39-41.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2015 actual period of 6.42% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2015 estimated period of 6.36% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2015 actual period return of 1.85% is based on May 2014 ROR Surveillance Report and for the Jul. – Dec. 2015 estimated period return of 1.89% is based on May 2015 ROR Surveillance Report per FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 39-41.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2015 actual period is 4.8938% based on May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2015 estimated period is 4.8201% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2015 actual period is 1.4751% based on May 2014 ROR Surveillance Report and the Debt Component for the Jul. – Dec. 2015 estimated period is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8E, pages 39-41.

(e) Applicable amortization period(s). See Form 42-8E, pages 39-41.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2015 actual period of 6.42% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2015 estimated period of 6.36% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2015 actual period return of 1.85% is based on May 2014 ROR Surveillance Report and for the Jul. – Dec. 2015 estimated period return of 1.89% is based on May 2015 ROR Surveillance Report per FPSC Order No. PSC-12-0425-PAA-EU.

| e. Other | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| 9. Total System Recoverable Expenses (Lines 7 & 8) | | $125,962 | $125,880 | $125,636 | $125,515 | $125,420 | $125,186 | $123,896 | $123,664 | $123,432 | $123,201 | $122,969 | $131,416 | $1,502,177 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 39-41.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2015 actual period is 4.8938% based on May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2015 estimated period is 4.8201% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2015 actual period is 1.4751% based on May 2014 ROR Surveillance Report and the Debt Component for the Jul. – Dec. 2015 estimated period is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8E, pages 39-41.

(e) Applicable amortization period(s). See Form 42-8E, pages 39-41.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2015 actual period of 6.42% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2015 estimated period of 6.36% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2015 actual period return of 1.85% is based on May 2014 ROR Surveillance Report and for the Jul. – Dec. 2015 estimated period return of 1.89% is based on May 2015 ROR Surveillance Report per FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 39-41.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2015 actual period is 4.8938% based on May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2015 estimated period is 4.8201% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2015 actual period is 1.4751% based on May 2014 ROR Surveillance Report and the Debt Component for the Jul. – Dec. 2015 estimated period is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8E, pages 39-41.

(e) Applicable amortization period(s). See Form 42-8E, pages 39-41.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2015 actual period of 6.42% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2015 estimated period of 6.36% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2015 actual period return of 1.85% is based on May 2014 ROR Surveillance Report and for the Jul. – Dec. 2015 estimated period return of 1.89% is based on May 2015 ROR Surveillance Report per FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 39-41.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2015 actual period is 4.8938% based on May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2015 estimated period is 4.8201% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2015 actual period is 1.4751% based on May 2014 ROR Surveillance Report and the Debt Component for the Jul. – Dec. 2015 estimated period is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8E, pages 39-41.

(e) Applicable amortization period(s). See Form 42-8E, pages 39-41.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2015 actual period of 6.42% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2015 estimated period of 6.36% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2015 actual period return of 1.85% is based on May 2014 ROR Surveillance Report and for the Jul. – Dec. 2015 estimated period return of 1.89% is based on May 2015 ROR Surveillance Report per FPSC Order No. PSC-12-0425-PAA-EU.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 39-41.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2015 actual period is 4.8938% based on May 2014 ROR Surveillance Report and reflects a 10.5% return on equity, and the monthly Equity Component for the Jul. – Dec. 2015 estimated period is 4.8201% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] The Debt Component for the Jan. – Jun. 2015 actual period is 1.4751% based on May 2014 ROR Surveillance Report and the Debt Component for the Jul. – Dec. 2015 estimated period is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-8E, pages 39-41.

(e) Applicable amortization period(s). See Form 42-8E, pages 39-41.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2015 actual period of 6.42% reflects a 10.5% return on equity and the monthly Equity Component for the Jul. – Dec. 2015 estimated period of 6.36% reflects a 10.5% return on equity.

Debt Component: For the Jan. – Jun. 2015 actual period return of 1.85% is based on May 2014 ROR Surveillance Report and for the Jul. – Dec. 2015 estimated period return of 1.89% is based on May 2015 ROR Surveillance Report per FPSC Order No. PSC-12-0425-PAA-EU.

| | January Estimated | February Estimated | March Estimated | April Estimated | May Estimated | June Estimated | July Estimated | August Estimated | September Estimated | October Estimated | November Estimated | December Estimated | Twelve Month Amount | Energy | CP Demand | GCP Demand |
| 1. Description of O&M Activities | | | | | | | | | | | | | | | | |
| 1 - Air Operating Permit Fees | $22,797 | $22,797 | $22,797 | $22,797 | $22,797 | $22,797 | $22,797 | $22,797 | $22,797 | $22,797 | $22,797 | $22,797 | $273,565 | $273,565 | | |
| 3a - Continuous Emission Monitoring Systems | $128,910 | $29,461 | $36,456 | $30,061 | $30,076 | $34,074 | $128,397 | $30,090 | $34,074 | $30,061 | $31,154 | $49,152 | $591,966 | $591,966 | | |
| 5a - Maintenance of Stationary Above Ground Fuel Storage Tanks | $60,000 | $5,000 | $53,045 | $34,505 | $25,608 | $13,455 | $5,835 | $16,135 | $0 | $0 | $0 | $0 | $213,583 | | $213,583 | |
| 8a - Oil Spill Clean-up/Response Equipment | $21,486 | $21,486 | $21,486 | $21,486 | $21,486 | $21,486 | $21,486 | $21,486 | $21,486 | $21,486 | $21,486 | $21,486 | $257,829 | $257,829 | | |
| 13 - RCRA (Resource Conservation & Recovery Act) Corrective Action | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | | $0 | |
| 14 - NPDES Permit Fees | $69,200 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $69,200 | | $69,200 | |
| 17a - Disposal of Non-Containerized Liquid Waste | $0 | $0 | $0 | $2,500 | $0 | $0 | $0 | $2,500 | $0 | $0 | $0 | $0 | $5,000 | $5,000 | | |
| 19a - Substation Pollutant Discharge Prevention & Removal - Distribution | $294,497 | $294,497 | $294,497 | $294,497 | $194,497 | $174,497 | $174,497 | $174,497 | $174,497 | $209,497 | $219,497 | $235,144 | $2,734,611 | | | $2,734,611 |
| 19b - Substation Pollutant Discharge Prevention & Removal - Transmission | $177,682 | $127,682 | $77,682 | $77,682 | $77,682 | $52,682 | $52,682 | $52,682 | $52,682 | $92,682 | $86,594 | $77,691 | $1,006,105 | $77,393 | $928,712 | |
| NA - Amortization of Gains on Sales of Emissions Allowances | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($1,113) | ($13,356) | ($13,356) | | |
| 21 - St. Lucie Turtle Nets | $0 | $0 | $0 | $0 | $0 | $0 | $30,000 | $16,000 | $16,000 | $16,000 | $16,000 | $16,000 | $110,000 | | $110,000 | |
| 22 - Pipeline Integrity Management | $0 | $30,000 | $30,000 | $30,000 | $36,000 | $58,000 | $5,000 | $7,500 | $0 | $0 | $0 | $0 | $196,500 | | $196,500 | |
| 23 - SPCC - Spill Prevention, Control & Countermeasures | $73,745 | $73,741 | $91,761 | $75,581 | $73,740 | $96,240 | $78,740 | $73,740 | $86,760 | $80,580 | $85,005 | $86,240 | $975,871 | | $975,871 | |
| 24 - Manatee Reburn | $0 | $0 | $95,898 | $95,898 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $191,795 | $191,795 | | |
| 27 - Lowest Quality Water Source | $12,000 | $12,000 | $12,000 | $12,000 | $12,000 | $12,000 | $12,000 | $12,000 | $12,000 | $12,000 | $12,000 | $12,000 | $144,000 | | $144,000 | |
| 28 - CWA 316(b) Phase II Rule | $31,105 | $50,023 | $30,676 | $30,003 | $56,834 | $37,551 | $37,215 | $37,888 | $37,551 | $37,215 | $64,046 | $70,673 | $520,780 | | $520,780 | |
| 29 - SCR Consumables | $35,794 | $35,794 | $54,695 | $53,294 | $36,495 | $36,495 | $35,794 | $37,195 | $37,856 | $37,155 | $37,856 | $37,856 | $476,279 | $476,279 | | |
| 30 - HBMP | $2,300 | $2,300 | $2,300 | $2,300 | $2,300 | $2,300 | $2,300 | $2,300 | $2,300 | $2,300 | $2,300 | $2,200 | $27,500 | | $27,500 | |
| 31 - Clean Air Interstate Rule (CAIR) Compliance | $591,811 | $611,811 | $593,218 | $591,811 | $612,514 | $592,514 | $591,811 | $613,218 | $592,514 | $591,811 | $592,514 | $592,514 | $7,168,062 | $7,168,062 | | |
| 33 - MATS Project | $251,506 | $251,506 | $251,506 | $251,506 | $251,506 | $251,506 | $251,506 | $251,506 | $251,506 | $251,506 | $251,506 | $251,506 | $3,018,075 | $3,018,075 | | |
| 35 - Martin Plant Drinking Water System Compliance | $2,983 | $2,983 | $2,983 | $2,983 | $2,983 | $2,983 | $2,983 | $2,983 | $2,983 | $2,983 | $2,983 | $2,983 | $35,800 | | $35,800 | |
| 37 - DeSoto Next Generation Solar Energy Center | $81,743 | $65,063 | $106,989 | $65,293 | $66,501 | $72,851 | $74,413 | $73,639 | $72,031 | $70,563 | $71,501 | $76,870 | $897,458 | | $897,458 | |
| 38 - Space Coast Next Generation Solar Energy Center | $24,657 | $19,557 | $35,217 | $19,772 | $21,872 | $24,002 | $27,657 | $23,787 | $24,872 | $19,687 | $19,372 | $28,444 | $288,893 | | $288,893 | |
| 39 - Martin Next Generation Solar Energy Center | $299,497 | $296,008 | $309,669 | $299,497 | $302,839 | $304,583 | $301,241 | $307,925 | $304,583 | $299,497 | $422,821 | $306,327 | $3,754,487 | | $3,754,487 | |
| 40 - Greenhouse Gas Reduction Program | $4,500 | $0 | $0 | $0 | $50,000 | $0 | $4,500 | $0 | $0 | $0 | $20,000 | $0 | $79,000 | $79,000 | | |
| 41 - Manatee Temporary Heating System | $33,566 | $26,417 | $31,705 | $95,352 | $222,799 | $265,585 | $257,542 | $208,884 | $268,368 | $218,077 | $179,939 | $78,584 | $1,886,820 | $1,886,820 | | |
| 42 - Turkey Point Cooling Canal Monitoring Plan | $163,300 | $199,967 | $4,613,300 | $4,583,301 | $4,583,300 | $4,274,967 | $4,358,667 | $4,358,667 | $208,667 | $208,667 | $208,667 | $240,330 | $28,001,800 | $28,001,800 | | |
| 45 - 800 MW Unit ESP | $92,911 | $92,911 | $98,819 | $92,911 | $95,865 | $95,865 | $92,911 | $98,819 | $145,405 | $92,911 | $95,865 | $110,665 | $1,205,861 | $1,205,861 | | |
| 46 - St. Lucie Cooling Water Discharge Monitoring | $0 | $0 | $25,000 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $25,000 | | $25,000 | |
| 47 - NPDES Permit Renewal Requirements | $2,135 | $4,939 | $10,600 | $0 | $11,500 | $0 | $2,135 | $4,489 | $10,600 | $0 | $11,500 | $0 | $57,898 | | $57,898 | |
| 48 - Industrial Boiler MACT | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $32,500 | $0 | $20,000 | $52,500 | | $52,500 | |
| 49 - Thermal Discharge Standards | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | | $0 | |
| 50 - Steam Electric Effluent Guidelines Revised Rules | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | | $0 | |
| 51 - Gopher Tortoise Relocations | $0 | $0 | $0 | $0 | $8,000 | $0 | $0 | $16,000 | $0 | $0 | $0 | $0 | $24,000 | | $24,000 | |
| 52 - Numeric Nutrient Criteria Water Quality Standards in Florida | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | | $0 | |
| 2. Total of O&M Activities | $2,477,013 | $2,274,830 | $6,901,186 | $6,783,916 | $6,818,082 | $6,445,320 | $6,570,997 | $6,465,615 | $2,378,420 | $2,348,862 | $2,474,291 | $2,338,350 | $54,276,883 | $43,220,089 | $8,322,182 | $2,734,611 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 33-36.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 4.8201% is based on May 2015 ROR Surveillance Report and reflects a 10.5% return on equity per FPSC Order No PSC-12-0425-PAA-EU.

[c] The Debt Component is 1.4904% based on May 2015 ROR Surveillance Report and reflects a 10.5% ROE per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-4P, pages 33-36

(e) Applicable amortization period(s). See Form 42-4P, pages 33-36.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39)

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 6.36% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity.

Debt Component: Return of 1.89% based on the May 2015 ROR Surveillance Report and reflects a 10.5% ROE. Per FPSC Order PSC 12-0425-PAA-EU.

Note: Totals may not add due to rounding.

(e) Applicable amortization period(s). See Form 42-4P, pages 33-36.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39)

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 6.36% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity.

Debt Component: Return of 1.89% based on the May 2015 ROR Surveillance Report and reflects a 10.5% ROE. Per FPSC Order PSC 12-0425-PAA-EU.

Note: Totals may not add due to rounding.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 33-36.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 4.8201% is based on May 2015 ROR Surveillance Report and reflects a 10.5% return on equity per FPSC Order No PSC-12-0425-PAA-EU.

[c] The Debt Component is 1.4904% based on May 2015 ROR Surveillance Report and reflects a 10.5% ROE per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-4P, pages 33-36

(e) Applicable amortization period(s). See Form 42-4P, pages 33-36.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39)

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 6.36% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity.

Debt Component: Return of 1.89% based on the May 2015 ROR Surveillance Report and reflects a 10.5% ROE. Per FPSC Order PSC 12-0425-PAA-EU.

Note: Totals may not add due to rounding.

| d. Property Expenses | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| e. Other | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| 9. Total System Recoverable Expenses (Lines 7 & 8) | | $65,699 | $65,628 | $65,557 | $65,486 | $65,415 | $65,344 | $65,273 | $65,202 | $65,131 | $65,060 | $64,989 | $64,918 | $783,701 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 33-36.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 4.8201% is based on May 2015 ROR Surveillance Report and reflects a 10.5% return on equity per FPSC Order No PSC-12-0425-PAA-EU.

[c] The Debt Component is 1.4904% based on May 2015 ROR Surveillance Report and reflects a 10.5% ROE per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-4P, pages 33-36

(e) Applicable amortization period(s). See Form 42-4P, pages 33-36.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39)

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 6.36% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity.

Debt Component: Return of 1.89% based on the May 2015 ROR Surveillance Report and reflects a 10.5% ROE. Per FPSC Order PSC 12-0425-PAA-EU.

Note: Totals may not add due to rounding.

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 33-36.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 4.8201% is based on May 2015 ROR Surveillance Report and reflects a 10.5% return on equity per FPSC Order No PSC-12-0425-PAA-EU.

[c] The Debt Component is 1.4904% based on May 2015 ROR Surveillance Report and reflects a 10.5% ROE per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-4P, pages 33-36

(e) Applicable amortization period(s). See Form 42-4P, pages 33-36.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39)

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 6.36% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity.

Debt Component: Return of 1.89% based on the May 2015 ROR Surveillance Report and reflects a 10.5% ROE. Per FPSC Order PSC 12-0425-PAA-EU.

Note: Totals may not add due to rounding.

| d. Property Expenses | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| e. Other | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| 9. Total System Recoverable Expenses (Lines 7 & 8) | | $942,786 | $942,358 | $944,073 | $946,164 | $947,864 | $949,558 | $951,246 | $952,928 | $954,604 | $956,274 | $957,938 | $962,169 | $11,407,958 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 33-36.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 4.8201% is based on May 2015 ROR Surveillance Report and reflects a 10.5% return on equity per FPSC Order No PSC-12-0425-PAA-EU.

[c] The Debt Component is 1.4904% based on May 2015 ROR Surveillance Report and reflects a 10.5% ROE per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-4P, pages 33-36

(e) Applicable amortization period(s). See Form 42-4P, pages 33-36.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39)

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 6.36% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity.

Debt Component: Return of 1.89% based on the May 2015 ROR Surveillance Report and reflects a 10.5% ROE. Per FPSC Order PSC 12-0425-PAA-EU.

Note: Totals may not add due to rounding.

[c] The Debt Component is 1.4904% based on May 2015 ROR Surveillance Report and reflects a 10.5% ROE per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-4P, pages 33-36

(e) Applicable amortization period(s). See Form 42-4P, pages 33-36.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39)

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 6.36% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity.

Debt Component: Return of 1.89% based on the May 2015 ROR Surveillance Report and reflects a 10.5% ROE. Per FPSC Order PSC 12-0425-PAA-EU.

Note: Totals may not add due to rounding.

| 7. Return on Average Net Investment | | | | | | | | | | | | | | |
| a. Equity Component grossed up for taxes [b][g] | | $56,058 | $56,068 | $55,980 | $55,892 | $56,147 | $56,401 | $56,312 | $56,223 | $56,430 | $56,636 | $56,546 | $79,714 | $698,410 |
| b. Debt Component (Line 6 x debt rate x 1/12) [c][g] | | $10,647 | $10,649 | $10,632 | $10,615 | $10,664 | $10,712 | $10,695 | $10,678 | $10,718 | $10,757 | $10,740 | $15,140 | $132,647 |
| 8. Investment Expenses | | | | | | | | | | | | | | |
| a. Depreciation [d] | | $13,435 | $13,458 | $13,458 | $13,458 | $13,536 | $13,615 | $13,615 | $13,615 | $13,683 | $13,751 | $13,751 | $19,090 | $168,465 |
| b. Amortization [e] | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| c. Dismantlement [f] | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| d. Property Expenses | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| e. Other | | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 |
| 9. Total System Recoverable Expenses (Lines 7 & 8) | | $80,140 | $80,175 | $80,070 | $79,966 | $80,347 | $80,729 | $80,623 | $80,517 | $80,830 | $81,144 | $81,037 | $113,943 | $999,521 |

(a) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 33-36.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 4.8201% is based on May 2015 ROR Surveillance Report and reflects a 10.5% return on equity per FPSC Order No PSC-12-0425-PAA-EU.

[c] The Debt Component is 1.4904% based on May 2015 ROR Surveillance Report and reflects a 10.5% ROE per FPSC Order No. PSC-12-0425-PAA-EU.

(d) Applicable depreciation rate or rates. See Form 42-4P, pages 33-36

(e) Applicable amortization period(s). See Form 42-4P, pages 33-36.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39)

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 6.36% based on the May 2015 ROR Surveillance Report and reflects a 10.5% return on equity.

Debt Component: Return of 1.89% based on the May 2015 ROR Surveillance Report and reflects a 10.5% ROE. Per FPSC Order PSC 12-0425-PAA-EU.

Note: Totals may not add due to rounding.

[a] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component of 4.8201% is based on May 2015 ROR Surveillance Report and reflects a 10.5% return on equity per FPSC Order No PSC-12-0425-PAA-EU.

[b] The Debt Component is 1.4904% based on the May 2015 ROR Surveillance Report, per FPSC Order No. PSC-12-0425-PAA-EU.

[c] Line 8a times Line 9

[d] Line 8b times Line 10

[e] Line 5 is reported on Capital Schedule

[f] Line 7 is reported on O&M Schedule

In accordance with FPSC Order No. PSC-94-0393-FOF-EI, FPL has recorded the gains on sales of emissions allowances as a regulatory liability.

Totals may not add due to rounding.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Air Operating Permit Fees - O&M**

**Project No. 1**

**Project Description:**

The Clean Air Act Amendments of 1990, Public Law 101-549, and Florida Statutes 403.0872, require each major source of air pollution to pay an annual license fee. The amount of the fee is based on each source's previous year's emissions. It is calculated by multiplying the applicable annual operation license fee factor by the tons of each air pollutant emitted by the unit during the previous year and regulated in each unit's air operating permit, up to a total of 4,000 tons per pollutant. The major regulated pollutants at the present time are sulfur dioxide (SO2), nitrogen oxides (NOx) and particulate matter. The fee covers FPL's units within the state of Florida, as well as Unit 4 of Plant Scherer located in Juliette, Georgia in which FPL owns a 76.36% share. The fees for FPL's units in Florida are paid to the Florida Department of Environmental Protection (FDEP) generally in February of each year, whereas FPL pays its share of the fees for Scherer Unit 4 to Georgia Power Company on a monthly basis.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Year 2014 air operating permit fees for the Florida facilities were calculated in the first quarter of 2015 utilizing 2014 air operating information. They were paid to the FDEP in March 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $284,412 or 101.3% higher than previously projected. Actual fuel consumption, and associated emissions, for both gas and oil for 2014 (used for 2015 projections) was significantly higher than original projections, which is the primary driver for the cost variance. Additionally, state required emissions fees for each ton emitted increased slightly.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $273,565.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Continuous Emission Monitoring Systems (CEMS) - O&M**

**Project No. 3a**

**Project Description:**

The Clean Air Act Amendments of 1990, Public Law 101-549, established requirements for the monitoring, record keeping, and reporting of SO2, NOx, Carbon Dioxide (CO2) emissions, from affected air pollution sources. FPL's fossil fired generating units are affected by these regulations and have installed CEMS to comply with these requirements.

40 CFR Part 75 includes the general requirements for the installation, certification, operation and maintenance of CEMS and specific requirements for the monitoring of pollutants and opacity. These systems continuously monitor and quantify emissions (as required) for each power plant stack and have automated data acquisition and reporting capability. Operation and maintenance of these systems in accordance with the provisions of 40 CFR Part 75 is an ongoing activity, which follow the CEMS Quality Assurance Program Manual.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Operation and maintenance of the CEMS continue to be performed according to requirements of the CEMS Quality Assurance (QA) Program Manual, 40 CFR Parts 60 & 75 regulations and all applicable state regulations, as well as local requirements. Relative Accuracy Tests and Linearity Tests continue to be performed as scheduled for quality assurance and as needed for diagnostic or recertification requirements. QA/QC maintenance continues to be performed on the analyzers to meet reliability and availability requirements. CEMS required parts are purchased as needed for repairs and/or preventative maintenance. Equipment having met end of life has been replaced as recommended by OEMs. CEMS analyzer calibration gases are purchased as needed to meet required daily and QA calibrations. Analysis of fuel oil for sulfur content, heat of combustion and carbon must be periodically performed per the requirements of 40 CFR Part 75, Appendix D. FPL maintains its CEMS 24/7 Software Support contract with Babcock & Wilcox / KVB-Enertec (CEMS NETDAHS) to ensure proper functionality as well as the integrity of the CEMS data. Maintenance of the software also ensures compliance with current rules or regulations or changes made by the EPA, State and Local Agencies. Training on the operation and maintenance of the system, as well as rule/regulation changes continue as needed.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures are estimated to be $37,541 or 5.4% higher than previously projected. The variance is primarily due to the replacement of the Ft. Myers CEMS umbilicals on the combined cycle and bypass stacks. This was partially offset by lower than expected costs for oil sample analyses at the Martin and Manatee 800 MW units that resulted from lower than projected oil use.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $591,966.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Maintenance of Stationary Above Ground Fuel Storage Tanks - O&M**

**Project No. 5a**

**Project Description:**

Florida Administrative Code (F.A.C.) Chapter 62-761, previously 17-762, which became effective on March 12, 1991, provides standards for the maintenance of stationary above ground fuel storage tank systems. These standards impose various implementation schedules for inspections/repairs and upgrades to fuel storage tanks.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Work continued on miscellaneous maintenance of above ground fuel storage tanks and piping systems. All required API 653 external inspections will be completed for this year and all 2015 tank registration fees have been paid. In 2015 we performed two API internal inspection (TPE tanks 901 & 902), scheduled one (PMR Unit 2 Metering Tank for September, and executed four API external (in-service) inspections on PFM Tanks 1 & 2, PTF 5 L/O Tank & PMT Unit 1 Metering Tank which were due for external inspection. Additionally, external coating system replacement/ repair was performed on PFM Tanks 1 & 2, PMT Tanks 1371/A &B, PMT Units 1 &2 Metering & L/O start up tanks, and TPE tank 902. The Manatee Terminal Tanks 1271/A&B painting is scheduled for August, 2015 and will be completed by November, 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $71,024 or 3.2% higher than previously projected. The variance is primarily due to the API internal inspection of the Martin Unit 2 metering tank, which was not originally budgeted. FPL is implementing the use of a new work management system to improve the budgeting process in order to avoid reoccurrences of similar issues. In addition, work performed in 2014 at the Manatee Terminal was inadvertently charged to the SPCC project. A correcting entry was made in February of 2015.

Project increases were partially offset by lower than projected costs resulting from competitive bidding associated with the painting of the tanks at Ft. Myers Units 1 and 2. The increase was also partially offset by lower than projected costs associated with the API internal inspection of Tank 902 at the Port Everglades plant. Costs associated with tank cleaning were included as part of lease termination activities and therefore were not incurred as part of inspection costs.

**Project Projections**:

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $213,583.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: RCRA Corrective Action - O&M**

**Project No. 13**

**Project Description:**

Under the Hazardous and Solid Waste Amendments of 1984 (amending the Resource Conservation and Recovery Act, or RCRA), the U.S. EPA has the authority to require hazardous waste treatment facilities to investigate whether there have been releases of hazardous waste or constituents from non-regulated units on the facility site. If contamination is found to be present at levels that represent a threat to human health or the environment, the facility operator would be required to undertake "corrective action" to remediate the contamination. In April 1994, the U.S. EPA advised FPL that it intended to initiate RCRA Facility Assessments (RFAs) at FPL's nine former hazardous waste treatment facility sites. The RFA is the first step in the RCRA Corrective Action process. At a minimum, FPL will be responding to the agency's requests for information concerning the operation of these power plants, their waste streams, their former hazardous waste treatment facilities, and their non-regulated Solid Waste Management Units (SWMUs). FPL may also conduct assessments of human health risks resulting from possible releases from the SWMU's in order to demonstrate that any residual contamination does not represent an undue threat to human health or the environment. Other response actions could include a voluntary clean-up or compliance with the agency's imposition of the full gamut of RCRA Corrective Action requirements, including RCRA Facility Investigation, Corrective Measures Study, and Corrective Measures Implementation.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The FDEP issued a letter to FPL on June 20, 2013, allowing the closure of the turbine lube oil and transformer spill sites as well as the diesel fuel spill sites at St. Lucie. The deed restrictions for the Turbine Lube Oil and Transformer spill sites have been approved and recorded with the State of Florida. FPL is now waiting on the site rehabilitation completion order (SRCO) to be prepared by the FDEP. The SRCO is expected by the end of 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

No expenditures have been incurred in 2015.

**Project Projection:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $0.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: NPDES Permit Fees – O&M**

**Project No. 14**

**Project Description:**

In compliance with State of Florida Rule 62-4.052, FPL is required to pay annual regulatory program and surveillance fees for any permits it requires to discharge wastewater to surface waters under the National Pollution Discharge Elimination System (NPDES). These fees implement the Florida legislature's intent that the Florida Department of Environmental Protection's (FDEP) costs for administering the NPDES program be borne by the regulated parties, as applicable. The fees for each permit type are as set forth in the rule, with an effective date of May 1, 1995, for their implementation.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The NPDES permit fees were paid to FDEP for power generation operating plants and nuclear plants. The payment is due in January of each year, and the payment for 2015 was done on time.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures are estimated to be on target.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $69,200.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Disposal of Noncontainerized Liquid Waste - O&M**

**Project 17a**

**Project Description:**

FPL manages ash from heavy oil fired power plants using a wet ash system. Ash from the dust collector and economizer is sluiced to surface ash basins. The ash sludge is then pH adjusted to precipitate metals. In order to comply with Florida Administrative Code 62-701.300 (10), the ash is then de-watered using a plate/frame filter-press in order to dispose of it in a Class I landfill or ship by railcar to a processing facility for beneficial reuse.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Required routine maintenance has been performed in 2015, and only minimal work is planned for the remainder of the year due to low oil burning.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $62,369 or 96.0% lower than previously projected. The variance is primarily due to lower than projected processing of ash at the Martin site, resulting from reduced operation at Units 1 and 2.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $5,000.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Substation Pollutant Discharge Prevention & Removal - O&M**

**Project No. 19a, 19b**

**Project Description:**

Florida Statute Chapter 376 Pollutant Discharge Prevention and Removal requires that any person discharging a pollutant, defined as any commodity made from oil or gas, shall immediately undertake to contain, remove and abate the discharge to the satisfaction of the department. Florida Statute Chapter 403 states it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. This project includes the prevention and removal of pollutant discharges at FPL substations and will prevent further environmental degradation.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

During 2015, the equipment leak repair and regasketing work continues. Arsenic remediation work continues to be addressed at five (5) substations located in Miami-Dade County. Arsenic-impacted soils have been remediated at all the substations, except for Cutler Substation. An engineering control is currently under design for the recently identified arsenic soil impacts at the Cutler Substation, which were identified during the Cutler Power Plant decommissioning work. We anticipate the engineering control plan and covenant for Cutler Substation will be submitted to the county by end of 2015. Arsenic groundwater treatment systems have been operating successfully at the University, Coconut Grove and Princeton Substations. An arsenic groundwater treatment system for the Lawrence Substation has been proposed to Dade County for persistent arsenic at property boundary and we expect an approval by end of September 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

19a. Project expenditures are estimated to be $705,847 or 38.9% higher than previously projected. The variance is primarily due to obtaining equipment clearances (i.e., de-energize equipment) than expected, which in turn facilitated a higher than projected number of transformers being repaired during 2015.

19b. Project expenditures are estimated to be $554,316 or 29.9% lower than previously projected. The variance is primarily due to delays in obtaining equipment clearances (i.e., de-energize equipment), which in turn resulted in a lower than projected number of transformers being repaired in 2015.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are:

19a $2,734,611

19b $1,006,105

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: St. Lucie Turtle Net – O&M**

**Project No. 21**

**Project Description:**

FPL is limited in the number of lethal turtle takings permitted at its St. Lucie Power Plant by the Incidental Take Statement contained in the Endangered Species Act Section 7 Consultation Biological Opinion, issued to FPL on May 4, 2001 by the National Marine Fisheries Service (NMFS). The number of lethal takings permitted in a given year is calculated by taking one percent of the total number of loggerhead and green turtles captured in that year. The Incidental Take Statement separately limits the number of lethal takings of Kemp's Ridley turtles to two per year over the next ten years, and the number of lethal takings of either Hawksbill or Leatherback turtles to one of those species every two years over the next ten years.

In October 2009, the 5-inch primary barrier net failed due to influxes of algae that entered the canal and created a blockage of approximately 80% of the net. A new turtle net was installed in January 2015 that has a more robust barrier structure that can withstand significant algae events and similar environmental challenges.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Inspections and cleaning were performed on the net in order to remove algae and jellyfish buildup to maintain the effectiveness of the net in avoiding sea turtle fatalities.

**Project Fiscal Expenditures:**

(January 1, 2015 – December 31, 2015)

Project expenditures were $110,000 or 100% higher than previously projected. The variance is due to costs incurred for inspections and cleaning to remove algae and jellyfish buildup on the net that caused water velocity increases. An increase in water velocity can trap turtles on the net, cause injury and impair their safety.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $110,000.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Pipeline Integrity Management (PIM) – O&M**

**Project No. 22**

**Project Description:**

FPL is required to develop and implement a written pipeline integrity management program for its hazardous liquid / gas pipelines. This program must include the following elements: (1) a process for identifying which pipeline segments could affect a high consequence area; (2) a baseline assessment plan; (3) an information analysis that integrates all available information about the integrity of the entire pipeline and the consequences of a failure; (4) the criteria for determining remedial actions to address integrity issues raised by the assessments and information analysis; (5) a continual process of assessment and evaluation of pipeline integrity; (6) the identification of preventive and mitigative measures to protect the high consequence area; (7) the methods to measure the program's effectiveness; (8) a process for review of assessment results and information analysis by a person qualified to evaluate the results and information; and, (9) record keeping.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The ongoing integrity assessments were undertaken for the corporate liquid pipelines, along with associated evaluations and appropriate countermeasures. Inline inspection of TMR 30" and 18" pipelines along with TMT 16" pipeline were completed in 2015. The Final Inspection report on the 18" pipeline was provided by PII/GE (PII Solutions/General Electric) and 10 inspection/repair digs were identified. As part of the 180-day repair condition issued by the DOT, digs are required to be completed by October 14, 2015. Currently, the reports on inspections for the TMR 30" and TMT 16" pipelines have not been released by the Inline Inspection vendor.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $466,270 or 120.0% higher than previously projected. The variance is primarily due to deferral of planned smart pig inspections of both Martin pipelines from 2014 to 2015 due to the following:

- To pig the 18" pipeline, FPL needs approximately 200,000 bbls of excess room at the plant tank to accommodate oil used during pigging. Due to the lower price of natural gas versus the price of No. 6 oil, the plant did not burn oil and as a result, there was insufficient capacity available at the plant tank to support pigging the line.
- For the Martin 30" pipeline, there was a delay in the completion of port construction activities by the Port Authority, which resulted in delaying dock unloading pit work at the Port of Palm Beach required to allow vessels to unload fuel oil. Without the ability to receive a vessel, the Martin terminal 30" pipeline could not be online for planned inline inspection which was scheduled in 2014 and was rescheduled in 2015.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Projections**:

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $196,500.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: SPCC (Spill Prevention, Control, and Countermeasures) - O&M**
**Project No. 23**

**Project Description:**

The EPA first established the SPCC Program in 1973 when the agency issued the Oil Pollution Prevention Regulation (i.e., SPCC rule) to address the oil spill prevention provisions contained in the Federal Water Pollution Control Act of 1972 (later amended as the Clean Water Act). The purpose of the regulation was to prevent discharges of oil from reaching the navigable waters of the U.S. or adjoining shorelines and to prepare facility personnel to respond to oil spills. The SPCC regulation requires certain facilities to prepare and implement SPCC Plans and address oil spill prevention requirements including the establishment of procedures, methods, equipment, and other requirements to prevent discharges of oil as described above. Specifically, the rule applies to any owner or operator of a non-transportation related facility that:

- has a combined aboveground oil storage capacity of more than 1,320 gallons, or a total underground oil storage capacity exceeding 42,000 gallons (Note: the underground storage capacity does not apply to those tanks subject to all of the technical requirements of the federal underground storage tank rule found in 40 CFR 280 or a State approved program); and
- due to its location, could be reasonably expected to discharge oil in quantities that may be harmful into or upon the navigable waters of the United States or adjoining shorelines.

In January 1988, a large storage tank owned by Ashland Oil Company at a site in western Pennsylvania collapsed, releasing approximately 750,000 gallons of diesel fuel to the Monongahela River. Following calls for new tank legislation, an EPA task force recommended expanded regulation of aboveground tanks within the framework of existing legislative authority. The result was the EPA's SPCC rulemaking package, the first phase of which was proposed in 1991. Due to a series of agency delays primarily resulting from the 1989 Exxon Valdez oil spill that required the EPA to issue the Facility Response Plan rule under the Oil Pollution Act of 1990, the final SPCC Rule was not published until July of 2002. A deficiency was found at the Turkey Point Unit 3 Emergency Diesel Generator and Unit 4 Auxiliary Transformer areas. In order to meet compliance regulations, Engineering is currently evaluating project alternatives which will meet compliance regulations for secondary containment systems. Based on these analyses, the Station will construct facilities which will meet or exceed requirements to catch any spilled fuel and oil upon delivery, in these areas.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

FPL is continually updating a massive SPCC plan that contains 622+ facilities. The updates are required to maintain SPCC compliance when oil-filled equipment is relocated, removed, upgraded, or added to a substation. All substation inspections, required by regulations, are being performed on a quarterly basis and all information is being captured via electronic means. The information is directly uploaded from the field location into a complex database. This process has improved efficiency and data accuracy. FPL continues

to use an innovative perimeter oil barrier material that allows rainwater to flow through but solidifies when in contact with petroleum liquids. This material has proven effective to allow rainwater to flow off the property, and conversely prevents oil from migrating.

FPL is continually updating the Facility Response Plans for all electrical power plants and terminals. These updates incorporate changes to equipment, drainage systems, and containment throughout the year including Biodiesel Fuel Tank at Martin Terminal; Fuel Oil Fill Line modification at Turkey Point; and Storm Surge Protection at Cape Canaveral, Riviera Beach, Fort Myers, and Manatee Terminal. The Martin Plant completed installation of the Electrostatic Precipitators and associated equipment, stormwater management, wastewater management, and secondary containment systems. Engineering evaluated alternatives for secondary containment improvements and repairs at Martin Plant and West County Energy Center that will be implemented in 2016. Ongoing construction activities at Port Everglades Energy Center continue through early 2016.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $281,195 or 23.3% lower than expected, because work associated with the Maintenance of Stationary Above Ground Fuel Storage Tanks project was inadvertently charged to the SPCC project in 2014. A correcting entry was made in February 2015. Additionally, there was a staffing reduction of one full time and one part time position and an open position has not been filled.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $975,871.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Manatee Reburn – O&M**

**Project No. 24**

**Project Description:**

This project involves installation of reburn technology in Manatee Units 1 and 2. Reburn is an advanced nitrogen oxides (NOx) control technology that has been developed for, and applied successfully in, commercial applications to utility and large industrial boilers to reduce emissions. Reburn is an in-furnace NOx control technology that employs fuel staging in a configuration where a portion of the fuel is injected downstream of the main combustion zone to create a second combustion zone, called the reburning zone where a portion of the NOx formed from combustion is converted back into elemental Nitrogen.

In response to local concerns about ground level ozone during the 1996-97 time period, FPL invested considerable effort evaluating the Manatee Units for the application of reburn technology. Installation of reburn technology for Manatee Units 1 and 2 resulted in a reduction in NOx emissions through a "pollution prevention" approach that does not require the use of reagents, catalysts, and pollution reduction or removal equipment. The FDEP and FPL agreed that reburn technology was the most cost-effective alternative to achieve significant reductions in NOx emissions from Manatee Units 1 and 2.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Limited replacement of burner gas valves has begun in 2014 with the remainder to complete in 2015. The Unit #1 Burner component inspection and repairs is scheduled for the fall of 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $16,777 or 4.8% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $191,795.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Lowest Quality Water Source (LQWS) – O&M**

**Project No. 27**

**Project Description:**

The LQWS Project is required in order to comply with permit conditions in the Consumptive Use Permits (CUPs) issued by the St. Johns River Water Management District (SJRWMD or the District) for the Sanford Plant. Those permit conditions are intended to preserve Florida's groundwater, which is an important environmental resource. The permit conditions therefore "apply to electric utilities and are designed to protect the environment" as contemplated by section 366.8255. The SJRWMD adopted a policy in 2000 that, upon permit renewal, a user of the District's water is required to use the lowest quality of water that is technically, environmentally and economically feasible for its needs. This policy was implemented for the Sanford Plant in the current CUPs. For the Sanford facility, Condition 15 of CUP No. 9202, issued in June 2000, requires the lowest quality of water to be used that is feasible to meet the needs of the facility. The LQWS project at Sanford Plant is currently operational.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The project at the Sanford Plant is currently operational. For 2015, our water treatment system operator, MPW, will bill us according to the cost of running the system, chemicals included, based on amount of water processed from the cooling pond.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $26,443 or 16.3% lower than previously projected. The variance is primarily due to reduced water supply from our source due to pump issues and the inability to run the water treatment system during unit reliability outages of Sanford Unit 4 and 5 that required switchgear de-energizations needed for preventative maintenance. LQWS usage is anticipated to increase in the coming months due to improvements to that system and as a result of increased water usage in the summer months due to increased unit dispatch. Use of the LQWS, when feasible, is required as a condition of the Water Use Permit in compliance with St Johns Water Management District rules. Cooling pond water at the Sanford Plant is considered LQWS and it use is required to the extent possible, rather than aquifer water. The purpose of the permit limitations for use of aquifer water are for the conservation of higher quality water taken from the environment.

**Project Projections**:

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $144,000.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: CWA 316(b) Phase II Rule – O&M**

**Project No: 28**

**Project Description:**

The final rule entitled, "National Pollutant Discharge Elimination System - Final Regulations to Establish Requirements for Cooling Water Intake Structures at Existing Facilities and Amend Requirements at Phase I Facilities" (the 316 (b) Rule and formerly the CWA 316 (b) Phase II Rule), which became effective October 14, 2014, is found in 40 CFR Parts 122 and 125, implements section 316 (b) of the Clean Water Act (CWA) for existing power plants. The 316 (b) Rule is applicable to all power plants and other manufacturing that employ a cooling water intake structure and that withdraw 2 million gallons per day (MGD) or more of water from rivers, streams, lakes, reservoirs, estuaries, oceans or other Waters of the United States (WOTUS) for cooling purposes. The 316 (b) Rule established national requirements applicable to, and that reflect, the best technology available (BTA) for the location, design, construction and capacity of, existing cooling water intake structures (CWIS) to minimize adverse environmental impacts. The Florida Department of Environmental Protection (FDEP) adopted and is implementing, the 316 (b) Rule in its entirety, effective June 24, 2015, at the following FPL facilities: Cape Canaveral, Ft. Myers, Lauderdale, Riviera, Sanford, Martin, Manatee and St. Lucie Plants, as well as SJRPP. Plant Scherer is also regulated by the 316 (b) Rule through the Georgia Environmental Protection Division.

In the 316 (b) Rule, the EPA approved seven (7) impingement mortality (IM) control options, rather than requiring facilities to meet unrealistic numeric IM reduction limits that were contained in the proposed Rule. Offshore velocity caps and closed cycle cooling (cooling towers and cooling ponds) are pre-approved options. This means St. Lucie Plant, which has offshore velocity caps and Manatee, Martin, Sanford, SJRPP and Scherer Plants, which have cooling towers or cooling ponds, should have minimal expenditures required to comply with the IM standards. All facilities that withdraw 125 million gallons per day will undertake Entrainment Mortality (EM) studies that will determine if additional technology is required at any of these facilities to meet the EM BTA standards. Cape Canaveral, Ft. Myers, Lauderdale, Port Everglades, Riviera and St. Lucie will be required to undertake these EM studies. Requirements for additional EM controls to demonstrate BTA are determined on a site-by-site basis by comparing the benefits (i.e. value of organisms "saved" by EM additional EM controls) to cost of those controls.

In addition, through the process of understanding the final 316 (b) Rule, FPL, in conversations with the EPA and the DEP, became aware that horseshoe crabs, which are collected in large numbers at Cape Canaveral and were disposed of, are considered to be "shellfish" and therefore actions must be taken to reduce IM mortality associated with their presence in the plant's intake.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

A contractor was selected via a bidding process to assist FPL in developing a strategy for compliance with the 316 (b) Rule as well as the development and execution of studies required by the 316 (b) Rule to determine the appropriate BTA for minimizing IM and EM mortality at all of FPL's affected facilities. This work was begun in June of 2015 and will continue through the 2021 timeframe.

In addition, modifications were made to the temporary underwater horseshoe crab exclusion fence which was installed in late 2014 at the entrance to the cooling water intake of the Cape Canaveral Plant. This fence was designed to deter horseshoe crabs from entering the intake area and then getting impinged on the course screens located in front of the individual unit cooling water intake areas. A program was put in place to manually return any horseshoe crabs that are impinged on the plant intake to the Indian River. FPL held several meetings with the Florida Freshwater Fish and Wildlife Conservation Commission (FWC), the FDEP, and the National Marine Fisheries Service to discuss the results of horseshoe crab mortality reduction and relocation effort. Based on the outcome of these meetings, permitting and engineering was begun in 2015 and will likely continue into 2016 for the construction of a permanent horseshoe crab barrier further east of the current fence. It is possible, based on the effectiveness evaluation of this new barrier, that a return system will also be constructed at a later date.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $453,555 or 40.3% lower than previously projected. The variance is primarily due to the Florida Department of Environmental Protection's decision to delay the initiation of the compliance requirement until the beginning of the 2015 NPDES permit cycles. Actual compliance-related activities (i.e. strategy development, agency meetings and required studies) commenced for all plants in June 2015. Original estimates assumed that many of the plants' studies would commence in 2014.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $520,780**.**

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: SCR Consumables - O&M**

**Project No. 29**

**Project Description:**

The Manatee Unit 3 and Martin Unit 8 Expansion Project Final Orders of Certification under the Florida Power Plant Siting Act, and the PSD Air Construction Permit emission specifications, require the installation of SCRs on each of the plants' four Heat Recovery System Generators (HRSG) for the control of nitrogen oxide (NOx) emissions. The Florida Department of Environmental Protection (FDEP) made the determination that the SCR system is considered Best Available Control Technology (BACT) for these types of units, with concurrence from the U.S. Environmental Protection Agency (EPA). The operation of the SCRs caused FPL to incur O&M costs for certain products that are consumed in the SCRs. These include anhydrous ammonia, calibration gases, and equipment wear parts requiring periodic replacement such as controllers, ammonia detectors, heaters, pressure relief valves, dilution air blower components, NOX control analyzers, catalyst and components.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Manatee Unit 3 completed the required 5-yr Process Hazard Analysis for RMP (Risk Management Plan). For the Martin plant, an internal tank inspection was completed in February of 2015. PSM RMP (Process Safety Management Plan) (Risk Management Plan) Audit was completed in March of 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $10,972 or 1.9% higher than previously projected.

**Project Projections**:

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $476,279.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Hydrobiological Monitoring Program (HBMP) - O&M**

**Project No. 30**

**Project Description:**

The Hydrobiological Monitoring Program is required by the Southwest Florida Water Management District (SFWMD) in the Conditions of Certification for Manatee Unit 3. The program involves the data collection of river chemistry, flow and vegetation conditions to demonstrate that the plant's withdrawals do not impact the environment in and along the river. The Hydrobiological Monitoring Program is a 10 year study, which started in 2003 during the construction phase of Unit 3 and was completed in 2013.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

An Interpretive report was submitted in August. The SFWMD may agree to discontinue vegetative mapping, aerial photography and ground mapping, along with data and Interpretive reports. Continue with river monitoring, calibration, maintenance and data collection to report any effects of time spent on the Emergency Diversion Schedule. Data acquisition and analysis, along with a report to SWFWMD is required any time the Emergency Diversion Schedule is used. An annual fee of $24,000 will be incurred for this work in 2015. In 2015, we replaced the gauges at each station on the Little Manatee River.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $5,000 or 22.2% higher than previously projected. The variance is primarily associated with replacement of gauges at each station on the Little Manatee River, which was not included in original projections.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $27,500.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: CAIR – O&M**

**Project No. 31**

**Project Description:**

In response to the EPA Clean Air Interstate Rule (CAIR), FPL initiated the CAIR Project to implement strategies to comply with Annual and Ozone Season NOx and SO2 emissions requirements. The CAIR project to date has included the Black & Veatch (B&V) study of FPL's control and allowance management options, an engineering study conducted by Aptech for the reliable cycling of the 800 MW units, the costs for the operation of SCRs constructed on SJRPP Units 1 and 2, costs for the operation of the Scrubber and SCR being installed on Scherer Unit 4, and the installation of CEMS for the peaking gas turbine units. The 800 MW Cycling Project was added to CAIR after 2006 submittal. Aptech Engineering provided engineering services for the first phase of a multiphase scope of work that will assure that the operating reliability is maintained in a cycling mode. The study costs to Aptech Engineering have been paid and a significant portion of the work has been completed on the Martin and Manatee 800 MW units. Several countermeasures were prioritized and scheduled for implementation in 2008 – 2011. The CEMS installation on the Gas Turbine Peaking Units has been completed with ongoing maintenance expenses for their operation. On December 3, 2008 Georgia EPD promulgated the GA Multi-Pollutant rule requiring installation of SCR and a Scrubber on Scherer Unit 4.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

800MW Cycling Project O&M activities in 2015 were primarily related to water demineralization and us of chemicals for treatment of biological fouling of condenser tubes.

Scherer project O&M includes routine maintenance of the SCR and scrubber and associated limestone sorbent costs for removal of SO2 within the scrubber and ammonia costs for control of NOx emissions within the SCR. SJRPP CAIR O&M includes routine maintenance of the SCR and the purchase of ammonia for use in the SCR to reduce NOx emissions.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $209,864 or 4.3% lower than previously projected. This was primarily the result of anticipated but not incurred legal and consultant expenses to challenge the provisions of the EPA's Cross State Air Pollution Rule (1 CSAPR). Following the U.S. Court of Appeals' July 28, 2015 decision to remand to the EPA the portions of the rule that affect Florida, FPL did not challenge the CSAPR and therefore did not or will not incur in 2015 any associated expenses. Additionally, costs associated with the Martin 800 MW Cycling Project were lower than projected as a result of lower than anticipated water treatment costs.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $7,168,062.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: MATS Project – O&M**

**Project No. 33**

**Project Description:**

The Clean Air Mercury Rule (CAMR) was promulgated by the Environmental Protection Agency (EPA) on March 15, 2005, imposing nation-wide standards of performance for mercury (Hg) emissions from existing and new coal-fired electric utility steam generating units. The CAMR is designed to reduce emissions of Hg through implementation of coal-fired generating unit Hg controls. In addition, CAMR requires the installation of Hg Continuous Emission Monitoring Systems (HgCEMS) to monitor compliance with the emission requirements. The rule is implemented in two phases with an initial compliance date of 2010 for Phase I and the final required reductions of Phase II in 2018. The State of Florida has begun the implementation of the requirements for reduction of Hg through rule making process. Plant St. John's River Power Park (SJRPP) Units 1 and 2, in which FPL has 20% ownership shares, are affected units under this rule and will require the installation of Hg controls and HgCEMS. Similarly, the State of Georgia has also begun their rule making process to implement the federal rule, which will affect FPL's ownership share of Plant Scherer Unit 4, also requiring the installation of HgCEMS and Hg controls. On June 29, 2015 the Supreme Court issued an opinion remanding the MATS rule back to the DC Circuit Court of Appeals deciding that the EPA could ignore costs when deciding to regulate power plants. The EPA has requested that the DC Circuit not vacate the rule and instead allow it to submit by April 2016 a cost-benefit analysis showing that the rule was appropriate and necessary. FPL must continue with the rule requirements until a decision to vacate the rule is issued by the Court, and regardless of that decision, must comply with the Georgia Multi-Pollutant rule at Scherer Unit 4.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

For Scherer, the baghouse continues operating per the requirements of the State of Georgia Multi Pollutant Rule. For SJRPP, the plant is investigating use of calcium bromide to ensure consistent emission compliance.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $275,909 or 11.6% higher than previously projected. The variance is primarily due to higher than originally estimated consumption of powder-activated carbon due to increased unit operation. This is partially offset by less than originally estimated environmental/legal support services required for MATS compliance.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $3,018,075.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Martin Plant Water System – O&M**

**Project No. 35**

**Project Description:**

The Martin Drinking Water System (DWS) is required to comply with the requirements the Florida Department of Environmental Protection (FDEP) regulation's rules for drinking water systems. The FDEP determined the system must be brought into compliance with newly imposed drinking water rules for trihalomethanes (TTHM) and Haleo Acetic Acid (HAA5). The upgrades to the potable water system caused FPL to incur capital costs for major component upgrades to the system in order to comply with the new requirements. These include nano filtration, air stripping, carbon and multimedia filtration. The operation of the potable system will cause FPL to incur O&M costs for certain products that are consumed during the water treatment process. These include carbon and multimedia bed media and nano filtration media.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The system will continue to run throughout 2015. O&M dollars were expended on filter maintenance.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $38,609 or 146.2% higher than previously projected. The variance is primarily due to the Nano filtration membrane which includes housing, end caps and retaining ring needing to be replaced in 2015 rather than 2016 as originally projected. In addition, there was an increase in vendor charges for monthly cleaning and yearly carbon change-out not previously forecasted.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $35,800.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: DeSoto Next Generation Solar Energy Center – O&M**

**Project No. 37**

**Project Description:**

The DeSoto Next Generation Solar Energy Center (DeSoto Solar) project is a zero greenhouse gas emitting renewable generation project, which on August 4, 2008, the Commission found in Order Number PSC-08-0491-PAA-EI, to be eligible for recovery through the ECRC pursuant to House Bill 7135. The DeSoto Solar project is a 25 MW solar photovoltaic generating facility, which will convert sunlight directly into electric power. The facility utilizes tracking arrays that are designed to follow the sun as it traverses through the sky. In addition to the tracking arrays, this facility utilizes cutting edge solar panel technology. The project uses solar PV panels, the associated tracking system, and the electrical equipment necessary to convert the power from direct current to alternating current and to connect the system to the FPL grid. The warranty period has expired and a spare parts strategy and store room was created by site personnel.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Through the end of June, 2015, Desoto's net energy production was 27,302 MWh. The five year master drive fan replacement and tracker assembly boot replacement was performed. A study is being performed to evaluate alternative methods of managing the vegetation beneath the panels. New servers were installed to replace outdated models and for updated monitoring capability. Site personnel continue to develop PV inverter maintenance procedures and long term site maintenance strategies.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $27,246 or 2.5% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $897,458.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Space Coast Next Generation Solar Energy Center – O&M**

**Project No. 38**

**Project Description:**

The Space Coast Next Generation Solar Energy Center (Space Coast Solar) project is a zero greenhouse gas emitting renewable generation project, which on August 4, 2008, the Commission found in Order Number PSC-08-0491-PAA-EI, to be eligible for recovery through the ECRC pursuant to House Bill 7135. The Space Coast Solar project is a 10 MW solar photovoltaic (PV) generating facility which converts sunlight directly into electric power. The facility utilizes a fixed PV array oriented to capture the maximum amount of electricity from the sun over the entire year. The project uses solar PV panels, support structures, and electrical equipment necessary to convert the power from direct current to alternating current and to connect the system to the FPL grid. The warranty period has expired and a spare parts strategy and store room at Desoto Solar was created.

The Space Coast project also includes building a 900 KW solar PV facility at the Kennedy Space Center (KSC) industrial area. This 900 KW solar site will be built and operated and maintained by FPL as compensation for the lease of the land for the Space Coast Solar Site which is located on KSC property.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Through end of June, 2015, Space Coast Solar's net energy production was 9,442 MWh. New servers were installed to replace outdated models and for updated monitoring capability.

The Kennedy Space Center site operated well. A new server was installed to replace an outdated model. The HVAC condenser for the inverter container was replaced. Through end of June, 2014, net energy production was 822 MWHs. Quarterly Operation and Maintenance reports are submitted to NASA in accordance with the lease agreement between NASA and FPL.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $17,136 or 6.0% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $288,893.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Martin Next Generation Solar Energy Center - O&M**

**Project No. 39**

**Project Description:**

The Martin Next Generation Solar Energy Center (Martin Solar) project is a zero greenhouse gas emitting renewable generation project, which on August 4, 2008, the Commission found in Order Number PSC-08-0491-PAA-EI, to be eligible for recovery through the ECRC pursuant to House Bill 7135. The Martin Solar project is a 75 MW solar thermal steam generating facility which is integrated into the existing steam cycle for the Martin Unit 8 natural gas-fired combined cycle power plant. The steam supplied by Martin Solar will be used to supplement the steam currently generated by the heat recovery steam generators. The project involved the installation of parabolic trough solar collectors that concentrate solar radiation and track the sun to maintain the optimum angle to collect solar radiation. The collectors concentrate the sun's energy on heat collection elements located in the focal line of the parabolic reflectors. These heat collection elements contain a heat transfer fluid that is heated by the concentrated solar radiation to approximately 750 degrees Fahrenheit. The heat transfer fluid is then circulated to heat exchangers that will produce up to 75 MW of steam routed to the existing natural gas-fired combined cycle Unit 8 heat recovery steam generators.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

2015 Martin Solar accomplishments:

- Completed the installation of two micro-pumps at the HTF Main pump to increase the fluid flow to the pump seals.
- Completed the installation of 4 Leslie Valve cages to increase the Solar Feed water flow capacity.
- Completed the installation of 2 control valves to automatically vent gases from the HTF pump system
- Installed a new SCA Drive Unit in solar field three.
- Repaired several items on 27 Solar Loops to increase reliability
- Replaced 4 HTF Pump Seal sets

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $143,212 or 4.1% higher than previously projected. The variance is a result of the unplanned installation of support brackets at the ball joint locations within the Solar Field Loops. The Martin Solar Team identified that a design modification of the ball joints to include a new support bracket would reduce the stress on the joints and is projected to avoid a majority of the mechanical failures of the joints.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $3,754,487.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Greenhouse Gas Reduction Program - O&M**

**Project No. 40**

**Project Description:**

The purpose of FPL's proposed Electric Utility Greenhouse Gas (GHG) Reduction Program is to comply with the EPA policies that require reductions in emissions of GHGs from electric generating units. The first requirement from EPA was the mandatory GHG Reporting Rule promulgated on October 30, 2009. The EPA's Mandatory (GHG) Reporting Rule requires electric utilities to record emissions of GHGs, primarily CO2 from the combustion of fossil fuels, and report actual data in a subsequent year. FPL was required to begin reporting GHGs emitted from its fossil generating units annually starting in 2011 for calendar year 2010 and to report every year thereafter. In 2014 the EPA proposed its GHG performance standards for new and existing power plants, referred to as the Clean Power Plan (CPP). The draft CPP rule proposed that all of FPL's existing fossil fuel fired power plants would be subject to the rule requirements with the exception of its peaking combustion turbines. On August 3, 2015 the EPA issued its final CPP rule for existing sources along with a proposed Federal Implementation Plan (FIP) and Model Trading rules. FPL would then need to comply with final rule requirements when they become effective.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Project accomplishments for 2015 include the training of employees responsible for use of the system and OEM software maintenance. The implementation included the installation and use of a GHG reporting system and the training of those employees responsible for imputing required data.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $8,852 or 12.6% higher than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $79,000.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Manatee Temporary Heating System – O&M**

**Project No. 41**

**Project Description:**

FPL is subject to specific and continuing legal requirements to provide warm water refuges for the endangered manatee at its Port Everglades (PPE), Ft. Myers (PFM), Lauderdale (PFL), Riviera (PRV) and Cape Canaveral Plants (PCC). FPL undertook the design, engineering, purchase, and installation of temporary manatee heating systems for PCC, PRV and PPE ("the Project ") while these plants were being "modernized". The Project was required pursuant to PRV's, PCC's and PPE's Manatee Protection Plans (MPP), as part of the State Industrial Wastewater Facility Permit Numbers: PRV FL0001546, Specific Condition 13, issued on February 16, 1998, PCC- FL0001473, Specific Condition 9, issued on August 10, 2005, and PPE – FL0001538, Specific Condition 7, approved by the FDEP on August 13, 1999. FPL's installation of a manatee temporary heating system at each site was intended to be implemented to provide warm water until each site completed the planned modernization of the existing power generation units and of the warm water flow from the generating unit cooling water returned. Additional environmental and biological monitoring requirements were required by the Power Plant Siting Act Conditions of Certification associated operation of the heaters during and following plant shut-downs associated with the modernizations. The modernization projects have been completed at PCC and PRV.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Following the completion of PRV's modernization, the temporary heater system was no longer required and was removed from service. For PCC, the site is operational; the heating system will serve as an emergency backup in the case that the entire Unit 3 block needs to be taken down for outage during the future manatee seasons. However, due to requirements of the U.S. Fish and Wildlife Service to reduce the possibility of impinging dead or severely compromised manatees on the PCC intake screens, PCC is undertaking a project in the 2015-16 (and possibly 2017) time frame to relocate the manatee heating area further from the plant intakes.

For PCC, the annual Florida Fish and Wildlife Conservation Commission (FWC) telemetry monitoring expense will be completed in 2015, and will not continue thereafter. PPE will continue project expenditures related to biological and environmental monitoring and survey reporting costs during the 2015-2016 manatee season. The manatee heating system for PPE will be removed after the 2015-2016 season as it will no longer be required when the facility enters commercial operation.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $35,902 or 10.8% lower than previously projected. The variance is primarily due to lower than originally projected costs for removal of the manatee thermal barrier wall that was installed as part of the Port Everglades Energy Center Manatee Heater project.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for January 2016 through December 2016 are $1,886,820.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Turkey Point Cooling Canal Monitoring Plan - O&M**

**Project No. 42**

**Project Description:**

Pursuant to Conditions IX and X of the Florida Department of Environmental Protection's (FDEP) Final Order Approving Site Certification, filed October 29, 2008, FPL submitted its initial draft of the proposed Cooling Canal Monitoring Plan associated with FPL's Turkey Point Uprate Project to the South Florida Water Management District (SFWMD). This plan requires an assessment of baseline conditions to provide information on the vertical and horizontal extent of the hypersaline groundwater plume and effect of that plume on ground and surface water quality, if any. Comments, concerns and requests for revisions or action items were received from the SFWMD as well as the FDEP. Miami-Dade Department of Environmental Resource Management (DERM) has incorporated into the current draft the proposed monitoring plan, dated July 16, 2009.

The TP CCM Plan was finalized by FPL and the agencies on October 14, 2009. The objective of FPL's TP CCM Plan is to implement the Conditions of Certification IX and X, which state that "the Revised Plan shall be designed to be in concurrence with other existing and ongoing monitoring efforts in the area and shall include but not necessarily be limited to surface water, groundwater and water quality monitoring, and ecological monitoring to delineate the vertical and horizontal extent of the hyper-saline plume that originates from the cooling canal system and to characterize the water quality including salinity and temperature impacts of this plume for the baseline condition; determine the extent and effect of the groundwater plume on surface water quality as a baseline condition; and detect changes in the quantity and quality of surface and groundwater over time due to the cooling canal system associated with the Uprate Project. The Revised Plan includes installation and monitoring of an appropriate network of wells and surface water stations.

Based on the data FPL has collected pursuant to the CCS monitoring plan, the FDEP, in consultation with the SFWMD and Miami Dade County (MDC), issued a final administrative order (AO) on December 23, 2014; well after FPL had filed its 2015 ECRC projections on August 22, 2014. The AO directs FPL to achieve a substantial reduction in CCS salinity within four years and identifies a series of potential measures that FPL could include in the Salinity Management Plan (SMP) that FPL must file with the FDEP outlining how it will do so. Under the AO, measures to achieve salinity reduction include: a) delivering new sources of water to the CCS to reduce hyper-salinity, and b) conducting CCS sediment removal activities to restore CCS design conditions that will assist in managing salinity.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

FPL continued to conduct the monitoring and reporting requirements of the TP CCM Plan, including data collection and publication of periodic reports. Additionally, FPL undertook water projects to deliver new sources of water to the CCS and sediment removal activities to restore design conditions. During 2015 four

water projects were completed. Three water wells (PW-1, SW-1, and SW-2) were developed and installed to provide additional water to reduce the salinity of the CCS. Pumps and pipelines were also installed to deliver excess stormwater from L-31 under an Emergency Order from the SFWMD. CCS sediment removal was conducted to redistribute CCS flows more evenly, to improve heat exchange efficiency. This results in a lower overall CCS temperature, and therefore a lower evaporation rate contributing to a lower CCS salinity. The sediment removal also improves the hydraulic connection between the CCS and underlying groundwater, an important element of the overall salinity-reduction effort.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $39,906,782 higher than previously projected. These costs are the result of multiple activities related to monitoring and addressing salinity issues within the Cooling Canal System ("CCS") and surrounding groundwater at Turkey Point. The variance is primarily due to costs that are being incurred in 2015 related to compliance with requirements to manage the hypersaline condition that has occurred in the system in recent years. FPL did not have enough information to project these compliance costs in 2014, when the 2015 projections for this project were prepared.

Based on the data FPL has collected pursuant to the CCS monitoring plan, the FDEP, in consultation with the South Florida Water Management District ("SFWMD") and Miami Dade County ("MDC"), issued a final administrative order ("AO") on December 23, 2014; well after FPL had filed its 2015 ECRC projections on August 22, 2014. The AO directs FPL to achieve a substantial reduction in CCS salinity within four years and identifies a series of potential measures that FPL could include in the Salinity Management Plan ("SMP") that FPL must file with the FDEP outlining how it will do so. Under the AO, measures to achieve salinity reduction include: a) delivering new sources of water to the CCS to reduce hyper-salinity, and b) conducting CCS maintenance activities to restore CCS design conditions that will assist in managing salinity. Administrative challenges to the AO are presently pending and so FPL has not yet submitted its SMP. However, owing to the short period of time that FPL will have to achieve the required salinity reductions once the challenges are resolved, FPL has begun taking actions to deliver new sources of water to the CCS and restore the CCS design conditions, two measures that will play a core role in the SMP. FPL does not believe that it could meet the AO's timetable without getting started now (in 2015) with implementation of those measures.

In order to deliver new sources of water to the CCS, FPL is incurring costs for monitoring saline water wells, costs for re-installation and permitting of a piping system to deliver local excess storm water (i.e., continuation of the L31-E Canal activity that was also conducted in 2014), and costs related to pursuing authorizations for six Upper Floridan Aquifer ("UFA") wells authorized by an FDEP Site Certification Modification issued December 23, 2014. It should be noted that the Site Certification for the UFA wells is also under administrative challenge. Costs in this category account for $6,906,782 (or 17%) of the $39.9 million variance.

In order to restore CCS design conditions, FPL is conducting maintenance dredging in the CCS. This dredging will restore design flow distribution and connectivity between the CCS and surrounding groundwater. Modeling performed for FPL to evaluate its AO compliance strategy shows that restoring the design flow distribution, thereby reducing overall CCS temperatures and evaporation rates, and re-establishing connectivity between the CCA and groundwater are essential to creating conditions in which the lower salinity levels required by the AO are realistically achievable. Moreover, the dredging will enable the CCS to better manage salinity during low rainfall periods, thereby allowing FPL to maintain the targeted annual average salinity level required by the AO when rainfall is low. Costs in this category account for the remaining $33.0 million (or 83%) of the $39.9 million variance.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $28,001,800.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: 800MW Unit ESP Project – O&M**

**Project No. 45**

**Project Description:**

On December 21, 2011, the Environmental Protection Agency issued the final Mercury and Air Toxics Standard (MATS) rule as required under Section 112 of the Clean Air Act for regulation of Hazardous Air Pollutants (HAPs). This has the effect of requiring Electrostatic Precipitators (ESPs) for the 800 MW oil-fired units. Specifically, the final MATS rule established numerical emission limits for particulate material (PM) as a surrogate for all toxic metals, along with emission limits for acid gasses (hydrochloric and hydrofluoric acids). The numerical particulate emission limits require that FPL install particulate emission control devices on its Martin and Manatee 800 MW oil-fired units in order to retain its flexibility regarding the operation of those units on oil. ESPs are the most cost-effective form of particulate emission control for the 800 MW oil-fired units. As to the final MATS rule's limits on acid gasses, FPL will use the compliance option of limiting the moisture content of the oil it burns in those units through its specifications for fuel oil procurement. To comply, FPL will install ESPs on Manatee Units 1 and 2 and Martin Units 1 and 2. As discussed in the project progress report for Project 33, the Supreme Court has remanded the rule to the DC Circuit. Unless the Court vacates the EPA's MATS rule FPL must continue to comply with applicable rule requirements. However, regardless of the Court's decision regarding the MATS rule, FPL must still comply with the particulate emission limits within its operating permit that require operation of the ESPs during oil operation.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The installation of ESPs on units 1 and 2 at Martin were completed and placed in service in 2014. The systems will continue to run through 2015 with O&M costs for preventative maintenance. These costs will continue each year in order to operate and maintain the system.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $313,393 or 22.5% lower than previously projected. The variance is primarily due to lower than projected run time on fuel oil than originally planned at the Manatee plant. At the Martin plant, the original budget included four employees charging the project for the entire year but only two employees are currently charging the project and the other two employees were hired in July. This reduces the payroll forecast for 2015. In addition, there was a reduction in maintenance costs because of new equipment and warranty coverage.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $1,205,861.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: St. Lucie Cooling Water Discharge Monitoring Project - O&M**

**Project No. 46**

**Project Description:**

In conjunction with the St. Lucie Plant extended power uprates (EPUs) and a Florida Department of Environmental Protection (FDEP) permit modification authorizing a 2 degrees Fahrenheit increase to the plant's discharge temperature limitations, the St. Lucie Plant Industrial Wastewater Facility Permit requires FPL to perform biological and thermal monitoring in the Atlantic Ocean, in the vicinity of FPL's St. Lucie Plant, in accordance with an FDEP Administrative Order (AO). The purpose of this monitoring project (biological and thermal monitoring) is to evaluate potential effects of the EPUs on the plant's indigenous ocean biological species and to ensure that the St. Lucie Plant remains in compliance with Florida environmental permits and regulations applicable to the discharge of heated water to an open ocean environment.

The Biological Plan of Study (BPOS) is required to collect data pre- and post- uprate completion, for no less than 24 months after completion of the uprates. Twelve post-EPU biological sampling events are currently scheduled to complete the BPOS. Following the last sampling event, a Biological Report will be submitted to the Florida Department of Environmental Protection (FDEP) for their review and approval.

The HWPOS is required to be performed for no less than 24 months following its commencement. A total of nine servicing/maintenance events are currently planned for data collection, followed by demobilization/final data collection and submittal of a Heated Water Report to the FDEP for their review and approval.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The BPOS was completed in January 2015. The Heated Water Plan of Study (HWPOS) was completed in December of 2014. Both final reports were submitted to the FDEP in January of 2015. As of this time the reports are still under review by the FDEP, thus we have not received an official response from the Department acknowledging that the reports are acceptable. The BPOS and the HWPOS were conducted in accordance with requirements stipulated in the St. Lucie Industrial Waste Water Facility Permit.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures for 2015 are projected to be $158,823 or 58.4% lower than previously projected. The FDEP did not require St. Lucie to perform the last round of data collection, which resulted in lower than originally projected fieldwork and project management costs.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures for the period January 2016 through December 2016 are $25,000.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: NPDES Permits Project (National Pollutant Discharge Elimination System) – O&M**
**Project No. 47**

**Project Description:**

The Federal Clean Water Act requires all point source discharges into navigable waters from industrial facilities to obtain permits under the NPDES program. See 33 U.S.C. Section 1342. Pursuant to the EPA's delegation of authority, FDEP implements the NPDES permitting program in Florida. Affected facilities are required to apply for renewal of the 5-year-duration NPDES permits prior to their expiration. In April 2009, the FDEP amended Rule 62-620.620 (3), F.A.C. requiring all new or renewed wastewater discharge permits for major facilities, including power plants, to contain whole effluent toxicity (WET) limits. Additionally, the FDEP has required that facilities prepare a Storm Water Pollution Prevention Plan (SWPPP) that conforms to Rule 62-620.100 (m), F.A.C. and 40 CFR Part 122.44(k) when the NDPES permits are renewed. The purpose of the SWPPP is to identify possible pollutant sources that can affect the water quality of stormwater and to require best management practices (BMPs) that, when implemented, will reduce or eliminate any possible pollution impacts to stormwater. FPL had several NPDES permits renewed in 2011 and 2012, and all of FPL's NPDES permits have been renewed since this project was instituted. In late September of 2012, the St. Lucie Plant received a final NPDES permit which contained a requirement to conduct a total residual oxidant plan of study (TROPOS) that will demonstrate that the discharges from the St. Lucie cooling water system meet the State's Class III total residual oxidant water quality standard of 0,01 mg/l. The cost for the TROPOS was added to this project in 2014.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

- WET Testing – WET testing was conducted at Cape Canaveral, Lauderdale, Ft. Myers
- Riviera and St. Lucie Plants in 2015
- SWPPP Development - No SWPPP's were written by contractors in 2015
- TROPOS – The TROPOS was completed in 2015

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $1,320 or 1.9% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project O&M expenditures for the period January 2016 through December 2016 are $57,898.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Industrial Boiler MACT Project – O&M**

**Project No. 48**

**Project Description:**

40 CFR Part 63 Subpart JJJJJ Final Rule for National Emission Standards for Hazardous Air Pollutants (HAPS) for Area Sources: Industrial, Commercial, and Institutional Boilers was published on March 21, 2011. In the EPA's final rule it published notice that it intended to reconsider the major source rule, as well as the final rule establishing emissions standards for boilers located at area sources. *See* 76 Fed. Reg.15266. FPL's boilers and heaters that are subject to the requirements of the rule must complete energy audits, inspections, boiler tune-ups and recordkeeping requirements.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

FPL's Industrial Boiler MACT project includes required boiler tuning for the affected units and one-time performance of a site energy audit for each site. FPL will have completed all required energy audits at its Ft Myers, Lauderdale, Martin, and West County facilities this year.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $4,496, or 74.9% higher than previously projected. The variance is a result of boiler tuning that was conducted earlier than originally planned.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project O&M expenditures for the period January 2016 through December 2016 are $52,500.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Thermal Discharge Standards Project – O&M**

**Project No. 49**

**Project Description:**

FPL power plants with once-through cooling water systems that were built before July 1, 1972, must meet a "narrative" thermal standard found in Chapter 62-302.520(1) (a)-(c) F.A.C. This rule is implemented through the National Pollutant Discharge Elimination System (NPDES) program. See 33 U.S.C. Section 1342. Pursuant to the U.S. Environmental Protection Agency's (EPA) approval, the Florida Department of Environmental Protection (FDEP) implements the NPDES permitting program in Florida. Affected facilities are required to apply for renewal of the 5-year-duration NPDES permits prior to their expiration.

Facilities that cannot meet the FDEP narrative standard for thermal discharges may apply for a "variance" (i.e. less stringent standards) under Section 316(a) of the Federal Clean Water Act. Section 316(a) ensures that thermal effluent limitations will assure protection and propagation of a balanced, indigenous population of shellfish, fish, and wildlife and provides that thermal dischargers can be granted less stringent alternate thermal limits than those imposed by a state program if the discharger can demonstrate that the current effluent limitations, based on water quality standards, are more stringent than necessary to protect the aquatic organisms in the receiving water body.

Prior to 2008, 316(a) variance determinations were conducted using draft guidance from the EPA that was developed in 1977. If a variance from the state water quality standard for temperature was previously granted, facilities were not required to provide additional information regarding thermal discharges in their renewal application unless changes had been made to the thermal loading in the plant discharge. In 2008, the EPA issued additional guidance on this topic and, with the new guidance the EPA has taken a much more active role in granting variances resulting in requests for expanded biological and thermal modeling/monitoring studies to justify the variances.

In addition, many plants that have once-through cooling water systems that discharge heated effluent and were originally deemed compliant with Chapter 62-302.520 (1) (a) (c) have been under scrutiny by the FDEP. Oversight of these facilities is also implemented via the NPDES permitting process. During recent permit renewals, the FDEP, much like the EPA with the 316(a) variances, has taken a more stringent approach to the required demonstration that substantial damage to aquatic organisms is not occurring in the receiving water bodies.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The Riviera Plan of Study was completed and demonstrated that the post-modernization impact of the plant's thermal discharge was minimal. No further action was required by the FDEP. At the Cape Canaveral Plant, the requirements of the approved Plan of Study were completed and indicated that the issuance of the 316

(a) variance for Cape Canaveral is very well justified and there is no need for further data collection at this time. The completed study was submitted as part of the Cape Canaveral NPDES permit renewal application process. FPL has not yet received a reply from the FDEP stating their concurrence with our conclusion.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $29,357 or 72.4% higher than previously projected. The variance is primarily due to the delayed submittal of the Thermal Plans of Study for both the Cape Canaveral and Riviera Beach plants. The delays for submitting both studies to the FDEP were attributable to a lack of agency funding for subcontractors and project support for the agencies. As a result of the delays, some expenses projected to be incurred in 2014 were instead incurred in 2015.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

There are no projected O&M expenditures for the January 2016 through December 2016 period.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Steam Electric Guidelines Revised Rule - O&M**

**Project No. 50**

**Project Description:**

Title 40 Code of Federal Regulations Part 423, which was promulgated under the authority of the Federal Clean Water Act, limits the discharge of pollutants into navigable waters and into publicly owned treatment works by existing and new sources of steam electric power plants. The current version of the rule was published in the Federal Register on November 19, 1982. On September 15, 2009, the EPA announced that they would undertake rulemaking to revise the rule because, "current regulations, which were issued in 1982, have not kept pace with changes that have occurred in the electric power industry over the last three decades." The EPA published a draft rule on June 7, 2013, with a final rule expected to be issued by September 25, 2015.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The operating agent for Plant Scherer conducted various studies which looked at a number of possible technology solutions in an attempt to determine the costs for various methods of complying with the Steam Electric Guidelines Revised Rule under various assumptions presented in the proposed rule.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $395,234, whereas no expenditures were projected. The variance is primarily due to invoices associated with FPL's portion of the cost of studies conducted by Georgia Power Company for Plant Scherer to assess compliance costs that will be incurred in anticipation of the implementation of the Steam Electric guidelines Revisions. This revised rule is anticipated to be released in September 2015. The operating agent did not provide FPL with a cost estimate for these studies until the fourth quarter of 2014 after FPL had filed its 2015 projections.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

There are no projected O&M expenditures for the January 2016 through December 2016 period.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Gopher Tortoise Relocation Project – O&M**

**Project No. 51**

**Project Description:**

The gopher tortoise (*Gopherus polyphemus*) is a state-designated threatened species, per Rule 68A-27.003(1)(d)3, F.A.C. Gopher tortoises have been creating burrows in the cooling pond embankments at FPL's Martin (PMR), Manatee (PMT) and Sanford (PSN) power plants over time, as well as in the oil tank farm embankments at PMR and PMT. Gopher tortoise burrows must be inspected and then filled as necessary to ensure the integrity of the embankments. Filling burrows means that affected gopher tortoises must be relocated. In 2008, the Florida Fish and Wildlife Conservation Commission provided new gopher tortoise guidelines that have changed the permitting process for relocations (i.e., an authorized gopher tortoise agent is now required to conduct surveys and perform relocations and all tortoises now must be sent to a recipient site).

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

In 2015, gopher tortoise burrows were discovered at PSN and PMT as well as the PMT Fuel Oil Storage Terminal embankments that could compromise the embankments' integrity. In order to fill the burrows, the gopher tortoises were relocated by an authorized gopher tortoise agent.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project expenditures were $35,000 or 145.8% higher than previously projected. The increase was due to higher than projected gopher tortoise relocations at the Manatee sites.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project O&M expenditures for the period January 2016 through December 2016 are $24,000.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Numeric Nutrient Criteria – O&M**

**Project No. 52**

**Project Description:**

The EPA was under a federal court order to implement numeric nutrient criteria (NNC) for the reduction of total nitrogen and total phosphorus discharges and load in Florida freshwaters and estuarine and coastal waters to comply with the Federal Clean Water Act. The FDEP drafted its own NNC rule and on June 28, 2013, the EPA accepted the state numeric and narrative standards for freshwaters statewide. On September 26, 2013, the EPA accepted FDEP NNC standards for Florida's estuaries. The FDEP NNC rule will be implemented through NPDES Industrial Waste Water permit renewals to achieve the reduction of total nitrogen (TN) and total phosphorus (TP) discharges and loading in Florida freshwaters, estuarine and coastal waters.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The Environmental Resource Council for the State of Florida adopted the proposed NNC for estuarine and coastal waters on December 1, 2014. The FDEP submitted the final coastal criteria to the EPA in May of 2015 with an anticipation of approval by the end of summer. This action will allow the FDEP to implement state numeric and narrative nutrient standards as approved by the EPA. In 2015, a consultant was retained to verify that the Ft. Myers and Cape Canaveral facilities TN and TP discharges would comply with the newly established NNC.

**Project Fiscal Expenditures**:

(January 1, 2015 to December 31, 2015)

Project expenditures were $38,000, whereas no expenditures were projected. The variance is due to additional expenditures for the Ft. Myers plant due to the FDEP revisiting the Total Maximum Daily Load (TMDL) for the Caloosahatchee River, as well as the commencement of implementation of the NNC for fresh waters. Additionally, consulting expenditures for assistance in verification of compliance with existing Waste Load Allocations for the plant as part of the Indian River Lagoon TMDL were incurred at FPL's Cape Canaveral Plant. NPDES permit applications for both plants are due in 2015 and this information is being submitted as part of the renewal process.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

There are no projected O&M expenditures for the January 2016 through December 2016 period.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Low NOx Burner Technology – Capital**

**Project No. 2**

**Project Description:**

Under Title I of the Clean Air Act Amendments of 1990, Public Law 101-349, utilities with units located in areas designated as "non-attainment" for ozone will be required to reduce NOx emissions by implementing Reasonably Available Control Technology (RACT). The Dade, Broward and Palm Beach county areas were classified as "moderate non-attainment" by the State of Florida and the EPA. FPL has six units in this affected area that require implementation of RACT for NOx emission reductions.

The Florida DEP designated Low NOx Burner Technology (LNBT) as RACT determining that it meets the requirement to reduce NOx emissions. Reductions are achieved by delaying the mixing of the fuel and air at the burner and creating a staged combustion process along the length of the flame. NOx formation is reduced because peak flame temperatures and availability of oxygen for combustion is reduced in the initial stages.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

All activities are complete.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $232 or 0.2% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $100,923.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Continuous Emission Monitoring System (CEMS) – Capital**

**Project No. 3b**

**Project Description:**

The Clean Air Act Amendments of 1990, Public Law 101-549, established requirements for the monitoring, record keeping, and reporting of SO2, NOx, CO, Carbon Dioxide emissions, as well as opacity data from affected air pollution sources. FPL has 57 units, which are affected and which have installed CEMS to comply with these requirements.

40 CFR Part 75 includes the general requirements for the installation, certification, operation and maintenance of CEMS and specific requirements for the monitoring of pollutants and opacity. These systems continuously extract and analyze gaseous samples for each power plant stack and have automated data acquisition and reporting capability. Operation and maintenance of these systems in accordance with the provisions of 40 CFR Part 75 is an ongoing activity, which follow the Title IV CEMS Quality Assurance Program Manual.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

This is an ongoing project. No new additions to plants for 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $36,329 or 6.8% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $507,575.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Clean Closure Equivalency – Capital**

**Project No. 4b**

**Project Description:**

In compliance with 40 CFR 270.1(c)(5) and (6), FPL developed Closure Equivalency Determinations (COEDS) for nine FPL power plants to demonstrate to the U.S. EPA that no hazardous waste or hazardous constituents remain in the soil or water beneath the basins, which had been used in the past to treat corrosive hazardous waste. The basins, which are still operational as part of the wastewater treatment systems at these plants are no longer used to treat hazardous waste.

To demonstrate clean closure, soil sampling and ground water monitoring plans, implementation schedules and related reports must be submitted to the EPA. Capital costs are for the installation of monitoring wells (typically four per site) necessary to collect ground water samples for analysis.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

All activities are complete.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $17, or 1.4% higher than previously projected.

**Project Projections**:

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $1,131.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Maintenance of Stationary Above Ground Fuel Storage Tanks – Capital**

**Project No. 5b**

**Project Description:**

Florida Administrative Code (F.A.C.) Chapter 62-761, previously 17-762, which became effective on March 12, 1991, provides standards for the maintenance of stationary above ground fuel storage tank systems. These standards impose various implementation schedules for inspections/repairs and upgrades to fuel storage tanks.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

There were no capital expenditures associated with Above Ground Fuel Storage Tanks in 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $38,710 or 2.7% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $1,546,673.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Relocate Turbine Lube Oil Underground Piping to Above Ground – Capital**

**Project No. 7**

**Project Description:**

In accordance with criteria contained in Chapter 62-762 of the Florida Administrative Code (F.A.C.) for storage of pollutants, FPL initiated the replacement of underground turbine lube oil piping to above ground installations at the St. Lucie Nuclear Power Plant.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

All activities are complete.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $15 or 1.0% higher than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $1,239.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Oil Spill Cleanup/Response Equipment – Capital**

**Project No. 8b**

**Project Description:**

The Oil Pollution Act of 1990 (OPA '90) mandates that all liable parties in the petroleum handling industry file plans by August 18, 1993. In these plans, a liable party must identify (among other items) its spill management team, organization, resources and training. Within this project, FPL developed the plans for ten power plants, five fuel oil terminals, three pipelines, and one corporate plan. Additionally, FPL purchased the mandated response resources and provided for mobilization to a worst case discharge at each site.

**Project Accomplishments**

(January 1, 2015 to December 31, 2015)

All equipment is being maintained and replaced as necessary to maintain compliance with regulatory guidelines for response readiness. In 2015, FPL intends to replace three (3) oil spill response trailers and purchase two (2) additional trailer mounted motorized boom reels as part of the Corporate Oil Spill Response equipment.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment were $23,712 or 15.4% lower than previously projected. The variance is primarily due to greater than anticipated retirement of corporate oil spill response equipment at the Manatee site and less than anticipated new equipment needing to be purchased.

**Project Projections**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $148,938.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Relocate Storm Water Runoff – Capital**

**Project No. 10**

**Project Description:**

The new National Pollutant Discharge Elimination System (NPDES) permit, Permit No. FL0002206 for the St. Lucie plant, issued by the United States Environmental Protection Agency contains new effluent discharge limitations for industrial-related storm water from the paint and land utilization building areas. The new requirements became effective on January 1, 1994. As a result of these new requirements, the affected areas will be surveyed, graded, excavated and paved as necessary to clean and redirect the storm water runoff. The storm water runoff will be collected and discharged to existing water catch basins on site.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

All activities are complete.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $124 or 1.6% higher than previously projected.

**Project Projections**:

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $7,258.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Scherer Discharge Pipeline- Capital**
**Project No. 12**

**Project Description:**
On March 16, 1992, pursuant to the provisions of the Georgia Water Control Act, as amended, the Federal Clean Water Act, as amended, and the rules and regulations promulgated thereunder, the Georgia Department of Natural Resources issued the National Pollutant Discharge Elimination System (NPDES) permit for Plant Scherer to Georgia Power Company. In addition to the permit, the Department issued Administrative Order EPD-WQ-1855, which provided a schedule for compliance by April 1, 1994 with the new facility discharge limitations to Berry Creek. As a result of these new limitations, and pursuant to the order, Georgia Power Company was required to construct an alternate outfall to redirect certain wastewater discharges to the Ocmulgee River. Pursuant to the ownership agreement with Georgia Power Company for Scherer Unit 4, FPL is required to pay for its share of construction of the discharge pipeline, which will constitute the alternate outfall.

**Project Accomplishments**:
(January 1, 2015 to December 31, 2015)
All activities are complete.

**Project Fiscal Expenditures**:
(January 1, 2015 to December 31, 2015)
Project depreciation and return on investment are estimated to be $712 or 1.4% higher than previously projected.

**Project Projections**:
(January 1, 2016 to December 31, 2016)
Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $47,125.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Wastewater Discharge Elimination & Reuse – Capital**

**Project No. 20**

**Project Description:**

Pursuant to 33 U.S.C. Section 1342 and 40 CFR 122, FPL is required to obtain NPDES permits for each power plant facility. The last permits issued contain requirements to develop and implement a Best Management Practice Pollution Prevention Plan (BMP3 Plan) to minimize or eliminate, whenever feasible, the discharge of regulated pollutants, including fuel oil and ash, to surface waters. In addition, the 1997 Federal Ambient Water Quality Criteria requires FPL to meet surface water standards for any wastewater discharges to groundwater at all plants, and the Dade County DERM requires the Turkey Point and Cutler plants' wastewater discharges into canals to meet county water quality standards found in Section 24-11, Code of Metropolitan Dade County.

In order to address these requirements, FPL has undertaken a multifaceted project, which includes activities such as ash basin lining, installation of retention tanks, tank coating, sump construction, installation of pumps, motor, and piping, boiler blowdown recovery, site preparation, separation of stormwater and ashwater systems, separation of potable and service water systems, and the associated engineering and design work to implement these projects.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

All activities are complete.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $750 or 0.9% higher than previously projected.

**Project Projections**:

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $76,974.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: St. Lucie Turtle Net – Capital**

**Project No. 21**

**Project Description:**

FPL is limited in the number of lethal turtle takings permitted at its St. Lucie Power Plant by the Incidental Take Statement contained in the Endangered Species Act Section 7 Consultation Biological Opinion, issued to FPL on May 4, 2001 by the National Marine Fisheries Service (NMFS). The number of lethal takings permitted in a given year is calculated by taking one percent of the total number of loggerhead and green turtles captured in that year. The Incidental Take Statement separately limits the number of lethal takings of Kemp's Ridley turtles to two per year over the next ten years, and the number of lethal takings of either hawksbill or leatherback turtles to one of those species every two years over the next ten years. An effective 5-inch primary barrier net is vital to limiting the number of lethal turtle takes per year. In 2002, the existing net became deformed due to the influxes of jellyfish and algae entering the canal. With the Commission approval, a replacement and enhancement of the net system was performed. In 2007, the antifoulant and protective coating on the existing 5-inch net deteriorated and was experiencing UV damage. With Commission approval, FPL purchased and installed a new 5-inch net in 2009.

In October 2009, the 5-inch primary barrier net failed due to influxes of algae that entered the canal and created a blockage of approximately 80% of the net. A new turtle net was installed in January 2015 that has a more robust barrier structure that can withstand significant algae events and similar environmental challenges.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The turtle net barrier construction was completed in January 2015. The design includes a bridge structure, net structure, turtle net lifting device, a backup replacement net as well as north and south debris handling station.

**Project Fiscal Expenditures:**

(January 1, 2015 – December 31, 2015)

Project depreciation and return on investment are estimated to be $107,088 or 12.2% lower than previously projected. The variance is primarily attributed to lower vendor implementation costs than originally projected due to favorable contractual terms.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $783,701.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Pipeline Integrity Management (PIM) – Capital**

**Project No. 22**

**Project Description:**

FPL is required to develop a written pipeline integrity management program for its hazardous liquid/gas pipelines. This program must include the following elements: (1) a process for identifying which pipeline segments could affect a high consequence area; (2) a baseline assessment plan; (3) an information analysis that integrates all available information about the integrity of the entire pipeline and the consequences of a failure; (4) the criteria for determining remedial actions to address integrity issues raised by the assessments and information analysis; (5) a continual process of assessment and evaluation of pipeline integrity; (6) the identification of preventive and mitigative measures to protect the high consequence area; (7) the methods to measure the program's effectiveness; (8) a process for review of assessment results and information analysis by a person qualified to evaluate the results and information; and, (9) record keeping.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

There were no capital expenditures associated with this project in 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment were $41,498 or 11.6% lower than previously projected. The initial projection included the depreciation and return on investment for the replacement of TMR 18" pipeline block valve actuators as part of the Pipeline Integrity Management Project. Subsequently, it was determined that the original actuators were part of the base pipeline project and thus the costs for the replacement of the valve actuators, and associated depreciation and return on investment, should be treated consistently (base rate capital).

**Project Projections**:

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $307,123.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: SPCC (Spill Prevention, Control, and Countermeasures) – Capital**

**Project No. 23**

**Project Description:**

The EPA first established the SPCC Program in 1973 when the agency issued the Oil Pollution Prevention Regulation (i.e., SPCC rule) to address the oil spill prevention provisions contained in the Federal Water Pollution Control Act of 1972 (later amended as the Clean Water Act). The purpose of the regulation was to prevent discharges of oil from reaching into the navigable waters of the U.S. or adjoining shorelines and to prepare facility personnel to respond to oil spills. The SPCC regulation requires certain facilities to prepare and implement SPCC Plans and address oil spill prevention requirements including the establishment of procedures, methods, equipment, and other requirements to prevent discharges of oil as described above. Specifically, the rule applies to any owner or operator of a non-transportation related facility that:

- has a combined aboveground oil storage capacity of more than 1320 gallons, or a total underground oil storage capacity exceeding 42,000 gallons (Note: the underground storage capacity does not apply to those tanks subject to all of the technical requirements of the federal underground storage tank rule found in 40 CFR 280 or a State approved program); and
- due to its location, could be reasonably expected to discharge oil in quantities that may be harmful into or upon the navigable waters of the United States or adjoining shorelines.

In January 1988, a large storage tank owned by Ashland Oil Company at a site in western Pennsylvania collapsed, releasing approximately 750,000 gallons of diesel fuel to the Monongahela River. Following calls for new tank legislation, an EPA task force recommended expanded regulation of above ground tanks within the framework of existing legislative authority. The result was EPA's SPCC rulemaking package, the first phase of which was proposed in 1991. Due to a series of agency delays primarily resulting from the 1989 Exxon Valdez oil spill that required the EPA to issue the Facility Response Plan rule under the Oil Pollution Act of 1990, the final SPCC Rule was not published until July of 2002. A deficiency was found at the Turkey Point Unit 3 Emergency Diesel Generator and Unit 4 Auxiliary Transformer areas. In order to meet compliance regulations, Engineering is evaluating project alternatives which will meet compliance regulations for secondary containment systems. Based on these analyses, the station will construct facilities which will meet or exceed requirements to catch any spilled fuel and oil upon delivery in these areas.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Engineering is evaluating secondary containment systems for Turkey Point.

- Construction of the unloading dock at the Cape Canaveral Energy Center (CCEC) has been completed.
- Construction of stormwater detention basins at and stormwater box trenches at CCEC has been completed.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

- The Port Everglades Plant was demolished in 2013 and the new Port Everglades Energy Center (PEEC) is being constructed while the Gas Turbine Power Park remains available to operate.
- Modification of the Gas Turbine non-contact stormwater area and detention berm and installation of a new weir structure have been completed at the future PEEC.
- Installation of heat Transfer Fluid over-pressurization and containment system at Martin Solar Energy Center (MSEC) has been completed.
- The oil water separators at Martin Plant Units 3, 4, and 8 as well as MSEC have been completed.
- Demolition of natural gas equipment at the north gas regulating yard at Martin Plant has been completed.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment were $171,900 or 10.3% lower than previously projected. The variance is primarily attributed to a change in the in-service dates of the collection basin being installed at Turkey Point. The collection basin which was originally expected to be in service in December 2015 has been changed to June 2016.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $1,845,303.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Manatee Reburn – Capital**

**Project No. 24**

**Project Description:**

This project involves installation of reburn technology at Manatee Units 1 and 2. Reburn is an advanced nitrogen oxides (NOx) control technology that has been developed for, and applied successfully in, commercial applications to utility and large industrial boilers. The process is a proven advanced technology, with applications of a reburn-like flue gas incineration technique dating back to the late 1960s, and developments for applications to large coal-fired power plants in the United States dating back to the early to mid-1980s.

Reburn is an in-furnace NOx control technology that employs fuel staging in a configuration where a portion of the fuel is injected downstream of the main combustion zone to create a second combustion zone, called the reburning zone. The reburning zone is operated under conditions where NOx from the main combustion zone is converted to elemental nitrogen (which makes up 79% of the atmosphere).

In the 1996-97 time period, FPL invested a considerable effort evaluating the Manatee units for the application of reburn technology. FPL has recently reviewed the reburn system designs previously proposed for the Manatee units and concluded that a design for either oil or gas reburn would require very similar characteristics. This will require reburn fuel injectors to be located at the elevation of the present top row of burners, with reburn injectors on the boiler front and rear walls. For the present application the injectors will be required to have dual fuel (oil and gas) capability. In order to provide adequate residence time for the reburn process, it is proposed to locate the reburn overfire air (OFA) ports between the boiler wing walls and to angle them slightly to provide better mixing with the boiler flow. Because of the complexity of the boiler flow field and the port location, it was determined that OFA booster fans would be required to assist the air-fuel mixing and complete the burnout process. Installation of reburn technology for Manatee Units 1 and 2 offers the potential to reduce NOx emissions through a “pollution prevention” approach that does not require the use of reagents, catalysts, and pollution reduction or removal equipment. The FDEP and FPL agree that reburn technology is the most cost-effective alternative to achieve significant reductions in NOx emissions from Manatee Units 1 and 2.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Capital project scheduled for 2015 includes replacement of the failing PMT1 Reburn EJ2 Fabric Expansion Joint. In addition, for 2016 we’re planning to install a burner deck platform above the 4th burner deck on both PMT1 and PMT2.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

Project depreciation and return on investment are estimated to be $29,810 or 0.9% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $3,074,050.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Pt. Everglades ESP (Electrostatic Precipitators) Technology – Capital**

**Project No. 25**

**Project Description:**

The requirements of the Clean Air Act direct the Environmental Protection Agency (EPA) to develop health-based standards for certain “criteria pollutants”. i.e. ozone (O3), sulfur dioxide (SO2), carbon monoxide (CO), particulate matter (PM), nitrogen oxides (NOx), an lead (Pb). The EPA developed standards for the criteria pollutants and regulates the emissions of those pollutants from major sources by way of the Title V permit program. Florida has been granted authority by the EPA to administer its own Title V program, which is at least as stringent as the EPA requirements. Florida is able to issue, renew and enforce Title V air operating permits for sources within the state via 403.061 Florida Statutes and Chapter 62-213 F.A.C., which is administered by the DEP. The Title V program addresses the six criteria pollutants mentioned earlier, and includes hazardous air pollutants (HAP). The EPA sets the limits of emissions of Hazardous Air Pollutants through the Maximum Achievable Control Technology (MACT).

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

No Power Generation plant additions occurred.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $10,477 or 0.1% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $16,757,728.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: UST Replacement/Removal – Capital**

**Project No. 26**

**Project Description:**

The Florida Administrative Code (FAC) Chapter 62-761.500, dated July 13, 1998, requires the removal or replacement of existing Category-A and Category-B storage tank systems with systems meeting the standards of Category-C storage tank systems by December 31, 2009. UST Category-A tanks are single-walled tanks or underground single-walled piping with no secondary containment that wwere installed before June 30, 1992.

UST Category-B tanks are tanks containing pollutants after June 30, 1992 or a hazardous substance after January 1, 1994 that shall have secondary containment. Small diameter piping that comes in contact with the soil that is connected to a UST shall have secondary containment if installed after December 10, 1990.

UST and AST Category-C tanks under F.A.C. 62-761.500 are tanks that shall have some or all of the following; a double wall, be made of fiberglass, exterior coatings that protect the tank from external corrosion, secondary containment (e.g., concrete walls and floor) for the tank and the piping, and overfill protection.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

There were no activities in 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $1,262 or 11.6% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $8,863.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: CAIR Compliance – Capital**

**Project No. 31**

**Project Description:**

In response to the EPA's Clean Air Interstate Rule (CAIR), FPL initiated the CAIR Project to implement strategies to comply with Annual and Ozone Season NOx and SO2 emissions requirements. The CAIR project to date has included the Black & Veatch (B&V) study of FPL's control and allowance management options, an engineering study conducted by Aptech for the reliable cycling of the 800 MW units, the costs for the operation of SCRs constructed on SJRPP Units 1 and 2, costs for the operation of the scrubber and SCR installed on Scherer Unit 4, and the installation of CEMS for the peaking gas turbine units. The 800 MW Cycling Project was added to CAIR after the 2006 submittal. Aptech Engineering provided engineering services for the first phase of a multiphase scope of work that will assure that the operating reliability is maintained in a cycling mode. The study costs to Aptech Engineering have been paid and a significant portion of the work has been completed on the Martin and Manatee 800 MW units. The CEMS installation on the gas turbine peaking Units has been completed with ongoing maintenance expenses for their operation. On December 3, 2008 Georgia Environmental Protection Division promulgated the GA Multi-Pollutant rule requiring installation of SCR and a scrubber on Scherer Unit 4. On July 6, 2010, the EPA proposed the Transport Rule, which will leave requirements to comply with the CAIR regulations in place until 2012 when a new program will be implemented to further reduce SO2 and NOx emissions from fossil power plants.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

800MW Cycling - Completed the implementation of the major 800MW cycling countermeasures for Manatee Unit 1 and Martin Unit 2 during the first half of 2010.SJRPP Units 1 and 2 SCRs are now in operation and construction was completed on the Scherer FGD and SCR in May 2012. Performance guarantee testing of the SCR was completed in June 2012 and it is now in operation. Performance guarantee testing of the FGD was completed in September 2012 and it is now in operation.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment were $655,691 or 1.1% lower than previously projected. The variance is primarily due to a reduction in the allocation of Plant Scherer costs for common facility equipment capital additions to Unit 4.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $56,597,147.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: MATS Project – Capital**

**Project No. 33**

**Project Description:**

The Clean Air Mercury Rule (CAMR) was promulgated by the Environmental Protection Agency (EPA) on March 15, 2005, imposing nation-wide standards of performance for mercury (Hg) emissions from existing and new coal-fired electric utility steam generating units. The CAMR is designed to reduce emissions of Hg through implementation of coal-fired generating unit Hg controls. In addition, CAMR requires the installation of Hg Continuous Emission Monitoring Systems (HgCEMS) to monitor compliance with the emission requirements. In December 2012 EPA finalized its replacement rule for CAMR as the Mercury and Air Toxics Standards (MATS). The MATS rule replaces and supersedes the requirements of CAMR. Plant St. John's River Power Park (SJRPP) Units 1 and 2, in which FPL has 20% ownership shares, are affected units under this rule and will require the reductions of acid gasses and HgCEMS. Similarly, the rule also requires that Plant Scherer evaluate its monitoring for pollutants regulated under the rule. On June 29, 2015 the Supreme Court issued an opinion remanding the MATS rule back to the DC Circuit Court of Appeals deciding that the EPA could ignore costs when deciding to regulate power plants. The EPA has requested that the DC Circuit not vacate the rule and instead allow it to submit by April 2016 a cost-benefit analysis showing that the rule was appropriate and necessary. FPL must continue with the rule requirements until a decision to vacate the rule is issued by the Court, and regardless of that decision, must comply with the Georgia Multi-Pollutant rule at Scherer Unit 4.

**Project Accomplishments:**

**(January 1, 2015 to December 31, 2015)**

The Scherer Unit 4 baghouse was placed into service April 4, 2010 meeting the Georgia Multi-Pollutant Rule requirements. The baghouse passed all performance guarantee tests in May 2010 and is now in continuous operation. SJRPP is conducting calcium bromide testing for MATS compliance which may result in addition of a permanent injection system.

**Project Fiscal Expenditures:**

**(January 1, 2015 to December 31, 2015)**

Project depreciation and return on investment were $52,986 or 0.5% lower than previously projected. The variance is primarily due to a reduction in the allocation of Plant Scherer costs for common facility equipment to Unit 4.

**Project Projections:**

**(January 1, 2016 to December 31, 2016)**

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $11,407,958.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: St. Lucie Cooling Water System Inspection and Maintenance – Capital**

**Project No. 34**

**Project Description:**

The purpose of the proposed St. Lucie Plant Cooling Water System Inspection and Maintenance Project (the "Project") is to inspect and, as necessary, maintain the cooling water system (the "Cooling System") at FPL's St. Lucie nuclear plant , such that it minimizes injuries and/or deaths of endangered species and thus helps FPL to remain in compliance with the federal Endangered Species Act, 16 U.S.C. Section 1531, et seq. (the "ESA") The St. Lucie Plant is an electric generating station on Hutchinson Island in St. Lucie County, Florida. The plant consists of two nuclear-fueled 1,025 and 1,032 net MW units, both of which use the Atlantic Ocean as a source of water for once-through condenser cooling. This cooling water is supplied to the units via the Cooling System. The St. Lucie plant cannot operate without the Cooling System. Compliance with the ESA is a condition to the operation of the St. Lucie plant. Inspection and cleaning of the intake pipes is an "environmental compliance cost" under section 366.8255, Florida Statutes. The specific "environmental law or regulation" requiring inspection and cleaning of the intake pipes are terms and conditions that will be imposed pursuant to a Biological Opinion (BO) that is to be issued by the National Oceanic and Atmospheric Administration (NOAA) pursuant to section 7 of the ESA. The NOAA finalized the BO in early 2015. FPL is awaiting a copy of the BO that contains the terms and conditions. The NOAA sent the Nuclear Regulatory Commission (NRC) a letter dated December 19, 2006, confirming its intent to issue the BO and stating the requirements that will be imposed pursuant to the BO with respect to inspection and cleaning of the intake pipes. FPL is currently working with the NOAA to develop take limits, as well as testing, monitoring and remediation plans upon completion of the cooling system turtle Excluder device construction.

**Project Accomplishments:**

(January 1, 2015 thru December 31, 2015)

Engineering commenced in the fourth quarter of 2014 to develop a test turtle tank to ensure that the installation of a turtle excluder device will conform to the requirements of the BO. The tank is scheduled to be completed in 2015 allowing the biologist team to monitor captured turtles. Upon successful completion of the monitoring period at the end of 2016, the construction of the offshore turtle excluder device is scheduled to begin in the first half of 2017.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

No current expenditures in 2015.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are $0.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Martin Plant Drinking Water System Compliance – Capital**

**Project No. 35**

**Project Description:**

The Martin Drinking Water System (DWS) is required to comply with the requirements the Florida Department of Environmental regulations rules for drinking water systems. The Florida Department of Environmental Protection (FDEP) determined the system must be brought into compliance with newly imposed drinking water rules for trihalomethanes (TTHM) and Haleo Acetic Acid (HAA5). The upgrades to the potable water system will cause FPL to incur capital costs for major component upgrades to the system in order to comply with the new requirements. These include nano filtration, air stripping, carbon and multimedia filtration. The operation of the potable system will cause FPL to incur O&M costs for certain products that are consumed during the water treatment process. These include carbon and multimedia bed media and nano filtration media.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The system is in service in 2008 and operating as designed. No changes.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return are estimated to be $106 or 0.4% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for the period January 2016 through December 2016 are $23,571.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Low Level Radioactive Waste – Capital**

**Project No. 36**

**Project Description:**

The Barnwell, South Carolina radioactive waste disposal facility is the only site of its kind presently available to FPL for disposal of Low Level Waste (LLW) such as radioactive spent resins, filters, activated metals, and other highly contaminated materials. On June 30, 2008The Barnwell facility ceased accepting LLW from FPL. This project will construct a LLW storage facility for class B and C radioactive waste at the St. Lucie Plant (PSL). Turkey Point (PTN) will be implementing a similar project; however the PTN project will start later than the PSL project since PTN has some limited existing LLW storage capacity. Where practical, this project will be implemented as part of a fleet approach. The objective at PSL and PTN is to ensure construction of a LLW storage facility with sufficient capacity to store all LLW B and C class waste generated at each plant site over a 5 year period. This will allow continued uninterrupted operation of the PSL and PTN nuclear units until an alternate solution becomes available. The LLW on site storage facilities at PSL and PTN will also provide a “buffer” storage capacity for LLW even if an alternate solution becomes feasible, should the alternate solution be delayed or interrupted at a later date.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

The St. Lucie and Turkey Point facility is currently in use at this time.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $39,383 or 2.1% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are $1,854,128.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: DeSoto Next Generation Solar Energy Center – Capital**

**Project No. 37**

**Project Description:**

The DeSoto Next Generation Solar Energy Center (DeSoto Solar) project is a zero greenhouse gas emitting renewable generation project which, on August 4, 2008, the Commission found in Order Number PSC-08-0491-PAA-EI, to be eligible for recovery through the ECRC pursuant to House Bill 7135. The DeSoto Solar project is a 25 MW solar photovoltaic generating facility, which converts sunlight directly into electric power. The facility utilizes a tracking array that is designed to follow the sun as it traverses through the sky. In addition to the tracking array this facility utilizes cutting edge solar panel technology. The project involves the installation of the solar PV panels, tracking system and electrical equipment necessary to convert the power from direct current to alternating current and to connect the system to the FPL grid.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

No plant additions are projected for 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return were $46,871 or 0.3% higher than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are $15,375,753.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Space Coast Next Generation Solar Energy Center – Capital**

**Project No. 38**

**Project Description:**

The Space Coast Next Generation Solar Energy Center (Space Coast Solar) project is a zero greenhouse gas emitting renewable generation project, which on August 4, 2008, the Commission found in Order Number PSC-08-0491-PAA-EI, to be eligible for recovery through the ECRC pursuant to House Bill 7135. The Space Coast Solar project is a 10 MW solar photovoltaic (PV) generating facility, which converts sunlight directly into electric power. The facility utilizes a fixed PV array oriented to capture the maximum amount of electricity from the sun over the entire year. The project involves the installation of the solar PV panels and support structures and electrical equipment necessary to convert the power from direct current to alternating current and to connect the system to the FPL grid.

The Space Coast project also includes building a 1000 KW solar PV facility at the Kennedy Space Center (KSC) industrial area. This 1000 KW solar site was built and is operated and maintained by FPL as compensation for the lease of the land for the Space Coast Solar Site, which is located on KSC property.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

No plant additions were projected this year.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return were $28,381 or 0.4% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are $7,219,202.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Martin Next Generation Solar Energy Center – Capital**

**Project No. 39**

**Project Description:**

The Martin Next Generation Solar Energy Center ("Martin Solar") project is a zero greenhouse gas emitting renewable generation project which on August 4, 2008, the Commission found in Order Number PSC-08-0491-PAA-EI, to be eligible for recovery through the ECRC pursuant to House Bill 7135. The Martin Solar project is a 75 MW solar thermal steam generating facility which is integrated into the existing steam cycle for the Martin Unit 8 natural gas-fired combined cycle power plant. The steam supplied by Martin Solar is used to supplement the steam currently generated by the heat recovery steam generators. The project involves the installation of parabolic trough solar collectors that concentrate solar radiation. The collectors track the sun to maintain the optimum angle to collect solar radiation. The collectors concentrate the sun's energy on heat collection elements located in the focal line of the parabolic reflectors. These heat collection elements contain a heat transfer fluid which is heated by the concentrated solar radiation to approximately 750 degrees Fahrenheit. The heat transfer fluid is then circulated to heat exchangers that will produce up to 75 MW of steam that will be routed to the existing natural gas-fired combined cycle Unit 8 heat recovery steam generators.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

2015 YTD Martin Solar accomplishments:

- Started construction on Solar HTF Pump VFD building HVAC to improve cooling capacity.
- Installed 8" actuator valves to improve control of system.
- Completed new power block containment area seal coating around pre-heaters.
- Completed solar field thermal camera programming to monitor solar field for HTF fluid leaks.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment were $288,268 or 0.6% lower than previously projected. The variance is primarily due to the result of placing the pre-heaters into service in 2014 and the unitization/retirements of that project occurring in January 2015 upon final close-out of the work order. The retirement unit was not identified until close out of the work order resulting in timing differences.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are expected to be $44,503,043.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Manatee Temporary Heating System Project – Capital**

**Project No. 41**

**Project Description:**

FPL is subject to specific and continuing legal requirements to provide a warm water refuge for endangered manatees at its Riviera (PRV), Cape Canaveral (PCC) and Port Everglades (PPE) Plants. FPL has undertaken the design, engineering, purchase, and installation of a temporary manatee heating system at PRV, PCC, and PPE ("the Project"). The Project is required pursuant to PRV's, PCC's, and PPE's Manatee Protection Plans (MPP), as part of the State Industrial Wastewater Facility Permit Numbers FL0001546, Specific Condition 13, issued on February 16, 1998, FL0001473, Specific Condition 9, issued on August 10,2005, and FL0001538, Specific Condition 10, issued on July 22, 2010, respectively. In order to comply with the respective MPPs; FPL's installation of a temporary manatee heating system at PRV, PCC, and PPE has been implemented to avoid potential adverse impacts to manatees congregating at PRV's, PCC's, and PPE's manatee embayment areas. Manatees currently gather at the plants during the annual period from November 15 to March 31 at PRV and PPE and the annual period of October 15 to March 31 at PCC. FPL's installation of the manatee temporary heating system at each site must be implemented to provide warm water until the site has completed the planned modernization of the existing power generation units and return of warm water flow from the generating unit cooling water will be provided by operation of the new units.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

All activities are complete.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $299 or .1% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are $448,084.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Turkey Point Cooling Canal Monitoring Plan – Capital**

**Project No. 42**

**Project Description:**

Pursuant to Conditions IX and X of the Florida Department of Environmental Protection's (FDEP) Final Order Approving Site Certification, filed October 29, 2008, FPL submitted its initial draft of the proposed Cooling Canal Monitoring Plan associated with FPL's Turkey Point Uprate Project to the South Florida Water Management District (SFWMD). This plan requires an assessment of baseline conditions to provide information on the vertical and horizontal extent of the hypersaline groundwater plume and effect of that plume on ground and surface water quality, if any.

The Turkey Point Cooling Canal Monitoring Plan (TP CCM) Plan was finalized by FPL and the agencies mentioned above on October 14, 2009. The objective of FPL's TP CCM Plan is to implement the Conditions of Certification IX and X, which state that "the Plan shall be designed to be in concurrence with other existing and ongoing monitoring efforts in the area and shall include but not necessarily be limited to surface water, groundwater and water quality monitoring, and ecological monitoring to delineate the vertical and horizontal extent of the hyper-saline plume that originates from the cooling canal system and to characterize the water quality including salinity and temperature impacts of this plume for the baseline condition; determine the extent and effect of the groundwater plume on surface water quality as a baseline condition; and detect changes in the quantity and quality of surface and groundwater over time due to the cooling canal system associated with the Uprate Project. The plan includes installation and monitoring of an appropriate network of wells and surface water stations.

Based on the data FPL has collected pursuant to the CCS monitoring plan, the FDEP, in consultation with the South Florida Water Management District (SFWMD) and Miami Dade County (MDC), issued a final administrative order (AO) on December 23, 2014, well after FPL had filed its 2015 ECRC projections on August 22, 2014. The AO directs FPL to achieve a substantial reduction in CCS salinity within four years and identifies a series of potential measures that FPL could include in the Salinity Management Plan (SMP) that FPL must file with the FDEP outlining how it will do so. Under the AO, measures to achieve salinity reduction include: a) delivering new sources of water to the CCS to reduce hyper-salinity, and b) conducting CCS sediment removal activities to restore CCS design conditions that will assist in managing salinity.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

FPL continued to conduct the monitoring and reporting requirements of the TP CCM Plan, including data collection and publication of periodic reports. Additionally, FPL undertook water projects to deliver new sources of water to the CCS and sediment removal activities to restore design conditions. During 2015 four water projects were completed. Three water wells (PW-1, SW-1, SW-2) were developed and installed to provide additional water to reduce the salinity of the CCS. Pumps and pipelines were also installed to deliver

excess stormwater from L-31 under an Emergency Order from the SFWMD. CCS sediment removal was conducted to redistribute CCS flows more evenly and remove sediment that had built up in certain canals, inhibiting efficient heat exchange. This results in a lower overall CCS temperature, and therefore a lower evaporation rate contributing to a lower CCS salinity. The sediment removal also improves the hydraulic connection between the CCS and underlying groundwater, an important element of the overall salinity-reduction effort.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment were $257,399 or 58.8% higher than previously projected. The variance is primarily attributed to the addition of two water wells that went into service in June 2015, and six monitoring wells and five monitoring stations expected to go into service in September 2015 that were not reflected in the original projection. This was partially offset by a change in the in-service dates of the Upper Floridan Aquifer (“UFA”) and saline water wells at Turkey Point. The UFA wells, which were originally expected to be in service in December 2015, have been delayed to 2016 pending the outcome of administrative challenge.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are $999,521.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: Martin Plant Barley Barber Swamp Iron Mitigation Project – Capital**

**Project No. 44**

**Project Description:**

The project involves the engineering and installation of a siphon and a new discharge system to turn the existing flow away from the Barley Barber Swamp and back into the Martin Plant Cooling Pond.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

A new siphon and discharge system was engineered and installed. The system has been placed into service. The system continues to operate as engineered.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment are estimated to be $78 or 0.4% lower than previously projected.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are $17,217.

**FLORIDA POWER & LIGHT COMPANY**
**PROJECT DESCRIPTION AND PROGRESS**

**Project Title: 800MW Unit ESP Project – Capital**

**Project No. 45**

**Project Description:**

On December 21, 2011, the Environmental Protection Agency issued the final Maximum Achievable Control Technology (MACT) rule, which has the effect of requiring Electrostatic Precipitators (ESPs) for the 800 MW oil-fired units. Specifically, the final MACT rule established numerical emission limits for particulate material (PM) as a surrogate for all toxic metals, along with emission limits for acid gasses (hydrochloric and hydrofluoric acids). The numerical particulate emission limits require that FPL install particulate emission control devices on its Martin and Manatee 800 MW oil-fired units in order to retain its flexibility regarding the operation of those units on oil. ESPs are the most cost-effective form of particulate emission control for the 800 MW oil-fired units. As to the final MACT rule's limits on acid gasses, FPL has the compliance option of limiting the moisture content of the oil it burns in those units. To comply, FPL will install ESPs on Manatee Units 1 and 2 and Martin Units 1 and 2. As discussed in the project progress report for Project 33, the Supreme Court has remanded the rule to the DC Circuit. Unless the Court vacates the EPA's MATS rule FPL must continue to comply with applicable rule requirements. However, regardless of the Court's decision regarding the MATS rule, FPL must still comply with the particulate emission limits within its operating permit that require operation of the ESPs during oil operation.

**Project Accomplishments:**

(January 1, 2015 to December 31, 2015)

Work on Martin Unit 1 commenced on June 30, 2013 and mechanical completion was accomplished on March 18, 2014. The provisional acceptance was achieved on April 16, 2014. Martin Unit 2 outage began on March 24, 2014 with provisional acceptance planned for the first quarter of 2015.

**Project Fiscal Expenditures:**

(January 1, 2015 to December 31, 2015)

Project depreciation and return on investment were $569,690 or 2.4% higher than previously projected. The variance is primarily due to an actual in-service date for the Martin Unit 2 ESP in December 2014 vs. the originally estimated in-service date of February 2015. This earlier in-service date resulted in higher than estimated depreciation expense and return on investment.

**Project Projections:**

(January 1, 2016 to December 31, 2016)

Estimated project fiscal expenditures (depreciation and return) for January 2016 through December 2016 are $24,235,887.

Notes:

(A) N/A
(B) Line 6 x 10.36% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 5.12% and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-12-0425-PAA-EU Docket No. 120007-EI.
(C) Depreciation calculated in Above Ground Tank Secondary Containment section of Capital Program Detail file only on assets in-service. Calculated on that schedule as Line 2 x rate x 1/12. Based on 2010 Rate Case Order PSC-10-0131-FOF-EI.
(D) Property tax calculated in Above Ground Tank Secondary Containment section of Capital Program Detail file only on assets in-service. Calculated on that schedule as Line 2 x rate x 1/12. Based on 2014 Effective Tax Rate on original cost.
(E) Line 9a x Line 10
(F) Line 9b x Line 11

Notes:

(A) As explained in the testimony of Garry Miller, DEF has revised the permanent dust mitigation in-service date from October 2015 to October 2016 and determined vegetation management compliance can be achived without the 2015 capital investment. As a result, DEF has made these adjustments to ensure that the revenue requirement impact to customers is neutral.
(B) Line 6 x 10.36% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 5.12% and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-12-0425-PAA-EU Docket No. 120007-EI.
(C) Line 2 x rate x 1/12. Depreciation rate based on approved rates in Order PSC-10-0131-FOF-EI.
(D) Line 2 x rate x 1/12. Based on 2014 Effective Tax Rate on original cost.
(E) Line 9a x Line 10
(F) Line 9b x Line 11

**Project Title:** **Substation Environmental Investigation, Remediation and Pollution Prevention**
**Project No. 1**

**Project Description:**
Chapter 376 Florida Statutes requires that any person discharging a prohibited pollutant shall undertake to contain, remove and abate the discharge to the satisfaction of the FDEP. Similarly, Chapter 403 Florida Statutes provides that it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. For DEF to comply with these statutes, it is actively conducting remediation and pollution prevention activities at its substation sites to remove the existence of pollutant discharges. Activities also include development and implementation of best management and pollution prevention measures at these sites.

**Project Accomplishments:**
As of 2nd Qtr end 2015, a total of 260 substation remediations are completed out of 279 slated for clean-up. DEF expects to remediate 3 more substations during the remainder of 2015.

**Project Fiscal Expenditures:**
2015 expenditures are estimated to be $405k lower than originally projected due to remediation work delays at the Consolidated Rock, Holder and Kenneth City substations.

**Project Progress Summary:**
DEF continues to remediate substation sites in accordance with the approved Substation Assessment and Remedial Action Plan (SARAP).

**Project Projections:**
2016 estimated expenditures are $1.1M.

**Project Title:** **Distribution System Environmental Investigation, Remediation and Pollution Prevention**
**Project No. 2**

**Project Description:**
Chapter 376 Florida Statutes requires that any person discharging a prohibited pollutant shall undertake to contain, remove and abate the discharge to the satisfaction of the FDEP. Similarly, Chapter 403 Florida Statutes provides that it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. For DEF to comply with these statutes, it is actively conducting remediation and pollution prevention activities at its distribution sites to remove the existence of pollutant discharges. Activities also include development and implementation of best management and pollution prevention measures at these sites.

**Project Accomplishments:**
As of 2nd Qtr end 2015, there are 3 remaining Transformer Replacement and Inspection Program (TRIP) sites.

**Project Fiscal Expenditures:**
2015 expenditures are estimated to be $42k higher than originally projected due to costs to remove additional impacted soil at the three remaining sites.

**Project Progress Summary:**
This project is on schedule according to the approved Distribution System Investigation, Remediation and Pollution Prevention Program.

**Project Projections:**
2016 estimated expenditures are $3k.

**Project Title:** **Pipeline Integrity Management (PIM) - Bartow/Anclote Pipeline**
**Project No. 3**

**Project Description:**
The U.S. Department of Transportation (USDOT) Regulation 49 CFR Part 195, as amended effective 2/15/02, and the new regulation published at 67 Federal Register 2136 on 1/16/02, requires DEF to implement a PIM program. Prior to the 2/15/02 amendments, the USDOT's PIM regulations applied only to operators with 500 miles or more of hazardous liquid and carbon dioxide pipelines that could affect high consequence areas. The amendments which became effective on 2/15/02, extended the requirements for implementing integrity management to operators who have less than 500 miles of regulated pipelines. As such, DEF must maintain the integrity of pipeline systems in order to protect public safety and the environment, and comply with continual assessment and evaluation of pipeline systems integrity through inspection or testing, data integration and analysis, and follow up with remedial, preventative, and mitigative actions. DEF owns one hazardous liquid pipeline, Bartow/Anclote 14-inch hot oil pipeline, extending 33.3 miles from the Company's Bartow Plant north of St. Petersburg to the Anclote Plant in Holiday, that is subject to PIM regulations.

Effective 2/2010, amendments to 49 CFR 195 were finalized to improve opportunities to reduce risk through more effective control of pipelines. Compliance with these amendments will enhance pipeline safety by coupling strengthened control room management with improved controller training and fatigue management. On 6/16/11, the USDOT published in the Federal Register (V0l. 76, 35130-35136), a final rule effective 8/15/11, that expedites the program implementation deadlines in the Control Room Management/Human Factors regulations in order to realize the safety benefits sooner than established in the original rule. This final rule amends the program implementation deadlines for different procedures to no later than 10/21/11 and 8/1/12.

**Project Accomplishments:**
Since the Bartow Anclote Pipeline (BAP) contains a small quantity of #6 fuel oil, the PIM program under 49CFR195 continues to be maintained. Third party projects by Florida Department of Transportation (FDOT), Florida Gas Transmission, Pinellas County, The City of Pinellas Park, and others have been evaluated for their risk to BAP integrity. Risk mitigation measures have been completed per 49CFR195.450. The BAP Risk Analysis has been updated. The Annual Report and National Pipeline Mapping System (NPMS) annual review have been completed. Reviews and evaluations are also being completed for Advisory Bulletins 11-04, 13-02, 15-01, and 15-02, relating to flooding and hurricanes. BAP personnel have participated in US Department of Transportation Pipeline and Hazardous Material Safety Administration (PHMSA), utility owners groups, damage prevention groups, and FDOT workshops and training. Pipeline accidents and PHMSA enforcement actions have been reviewed for conditions that are applicable to the BAP and appropriate changes to BAP practices and procedures have been implemented. Pipeline records are being organized and stored with the conversion to electronic storage now essentially complete.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $19k higher than originally projected due to increased costs to comply with PIM regulations. No capital expenditures are estimated for 2015.

**Project Progress Summary:**
Ongoing regulatory compliance activities will continue until pipeline is sold or retired.

**Project Projections:**
2016 estimated O&M expenditures are $696k. No capital expenditures are expected in 2016.

**Project Title:** **Above Ground Storage Tank Secondary Containment**
**Project No. 4**

**Project Description:**
FDEP Rule 62-761.510(3) states that DEF is required to make improvements to its above ground petroleum storage tanks in order to comply with those provisions. Subsection (d) of the rule requires all internally lined single bottom above ground storage tanks to be upgraded with secondary containment, including secondary containment for piping in contact with the soil. Rule 62-761.500(1)(e) also requires that dike field area containment for pre-1998 tanks be upgraded, if needed, to comply with the requirement.

**Project Accomplishments:**
DEF has completed work at Debary 1 and 2, Turner 7, Turner 8, Higgins 1, and Bartow 6 as well as Turner P-1 and P-2 piping work.

**Project Fiscal Expenditures:**
No project expenditures are expected in 2015.

**Project Progress Summary:**
DEF continually evaluates its compliance program, including project prioritization, schedule and technology applications.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **$SO_2$ and NOx Emissions Allowances**
**Project No. 5**

**Project Description:**
In accordance with the Acid Rain Program in Title IV of the Clean Air Act, CFR 40 Part 73 and Part 76, Florida Administrative Code Rule 62-214 and the Clean Air Interstate Rule (CAIR), DEF manages sulfur dioxide ($SO_2$) and nitrogen oxide (NOx)allowance inventory to offset emissions. On 7/6/11, the EPA issued the Cross-State Air Pollution Rule (CSAPR) to replace the CAIR. The CSAPR significantly alters $SO_2$ and NOx allowance programs. Under the CAIR, Florida has to comply with annual $SO_2$ and NOx emission requirements, and seasonal NOx emission requirements. Under the CSAPR, Florida is no longer required to comply with annual emissions requirements, only ozone seasonal limits. On 8/8/11, the final CSAPR was published in the Federal Register. The CSAPR sets state-level annual and seasonal $SO_2$ and NOx emission allowance requirements effective 1/1/12.

On 8/21/12, the D.C. Circuit Court vacated the CSAPR. It also directed the EPA to continue administering the CAIR which requires additional reductions in $SO_2$ and NOx emissions beginning in 2015. On 4/29/14, the U.S. Supreme Court reversed the D.C. Circuit Court decision finding that with CSAPR the EPA reasonably interpreted the good neighbor provision of the Clean Air Act. The case was then remanded to the D.C. Circuit Court for further proceedings, and the EPA requested the court lift the CSAPR stay and direct it to take effect on 1/1/15. On 10/23/14 the D.C. Circuit Court lifted the CSAPR stay. On 1/1/15, the CSAPR replaced the CAIR. The CSAPR took effect in Florida on 5/1/15. Consequently, CAIR NOx emission allowances have no value; however, SO2 emission allowances can continue to be used to comply with the Acid Rain Program. DEF is treating its unused NOx costs as a regulatory asset amortizing it over 3 years, as approved by the Commission in Order No. PSC-11-0553-FOF-EI.

**Project Accomplishments:**
Air quality compliance costs are administered by an authorized account representative who evaluates a variety of resources and options. Activities performed include purchases of SO2 and NOx emissions allowances as well as auctions and transfers of SO2 emissions allowances.

**Project Fiscal Expenditures:**
2015 emission allowance expenditures are estimated to be $1.5M higher than originally projected due to unusable NOx emission allowances as a result of the expiration of the CAIR. CAIR was replaced by the CSAPR on 1/1/15. Consistent with Order No. PSC-11-0553-FOF-EI, DEF is treating costs associated with its unusable CAIR NOx emission allowances as a regulatory asset amortizing it over 3 years, beginning 1/1/15 until fully recovered by 12/31/17, with a return on the unamortized investment.

**Project Progress Summary:**
DEF continually evaluates the status of emission rules to maximize the cost effectiveness of its compliance strategy.

**Project Projections:**
2016 estimated expenditures are $111k. 2016 amortization of the CAIR NOx regulatory asset is approximately $3.6M.

**Project Title:** **Phase II Cooling Water Intake**
**Project No. 6**

**Project Description:**
Section 316(b) of the Federal Clean Water Act requires that the location, design, construction, and capacity of cooling water intake structures reflect the best technology available for minimizing adverse environmental impact. 33 U.S.C. Section 1326. On 5/19/14, the EPA Administrator signed a final 316(b) rule to protect fish and aquatic life drawn into cooling systems at power plant and factories. The rule aims to minimize impingement (aquatic life pinned against cooling water intake structures) and entrainment (aquatic life drawn into cooling water systems). The regulation became effective on October 14, 2014, 60 days after publication in the Federal Register which was 8/15/14.

**Project Accomplishments:**
DEF is currently evaluating the 316(b) rule to determine potential study requirements, operating and cost impacts to its generating stations. Site specific strategic plans are under development to ensure compliance with all applicable requirements of the rule.

**Project Fiscal Expenditures:**
2015 project expenditures are estimated to be $43k lower than originally projected as methods used to allocate costs to analyze 316(b) compliance strategies at each affected Duke Energy station were adjusted to reflect present configurations and operations. DEF intends to implement a consistent approach across its entire fleet of regulated units to focus on full compliance with applicable 316(b) requirements through the development of facility specific strategic plans.

**Project Progress Summary:**
Initial steps in site specific plan development have been completed. Work continues on plans for implementation, decision milestones, compliance approaches, and study requirements.

**Project Projections:**
2016 estimated O&M expenditures are $440k. No capital expenditures are expected in 2016.

**Project Title:** **Integrated Clean Air Compliance Plan - Clean Air Interstate Rule (CAIR)**
**Project Nos. (7.2, 7.3 & 7.4)**

**Project Description:**
The Clean Air Interstate Rule (CAIR), 40 CFR 24, 262, imposes significant restrictions on emissions of $SO_2$ and NOx from power plants in 28 eastern states, including Florida and the District of Columbia. The CAIR rule apportions region-wide $SO_2$ and NOx emission reduction requirements to the individual states, and further requires each affected state to revise its State Implementation Plans (SIPs) to include measures necessary to achieve its emission reduction budget within prescribed deadlines.

The Cross-State air pollution Rule (CSAPR) replaced CAIR on 1/1/15. Under the CSAPR, the State of Florida is not longer required to comply with annual emission requirements, only NOx ozone seasonal limits. The CSAPR requirements took effect in Florida on 5/1/15, the beginning of the ozone season. NOx emission allowances under CAIR have no value; however, DEF will continue to use its SO2 emission allowances to comply with the Acid Rain Program. (see Project No. 5 - SO2 and NOx Emission Allowances Project Sheet for more information)

**Project Accomplishments:**
The reclaimed water reuse system project was placed in-service in July 2015. This project will provide DEF with up to 1 1/2 million gallons per day of reclaimed water from the City of Crystal River to supplement well water use. This project has positive environmental impacts as it reduces aquifer use.

**Project Fiscal Expenditures:**
2015 estimated O&M expenditures are estimated to be $661k higher than originally projected due to a $710 decrease in CAIR Crystal River Project 7.4 - Base costs and $1.4 million increase in CAIR Crystal River Project 7.4 - Energy costs. The $710k is due to lower base routine project costs. The $1.4M is due to higher ammonia and hydrated lime costs offset by lower limestone and gypsum costs. 2015 estimated capital expenditures are expected to be $124k higher than originally projected due to a shift in spending from 2014 to 2015 in order to align with the City of Crystal River reclaimed water reuse project timeline.

**Project Progress Summary:**
DEF continues to comply with the CAIR, CSAPR and the Acid Rain Program.

**Project Projections:**
2016 estimated O&M and capital expenditures are $34.4M and $713k, respectively.

**Project Title:** **Best Available Retrofit Technology (BART)**
**Project No. 7.5**

**Project Description:**
On 5/25/12, the EPA proposed a partial disapproval of Florida's proposed Regional Haze State Implementation Plan (SIP) because the proposed SIP relies on CAIR to satisfy BART requirements for $SO_2$ and NOx emissions. CAIR remained in effect while litigation against the Cross State Air Pollution Rule (CSAPR) proceeded, and the EPA incorporated the CSAPR in place of CAIR into Regional Haze SIPs, including Florida. DEF worked with the FDEP to develop specific BART and Reasonable Progress permits for affected units that were incorporated into Florida's revised SIP submittal, which was filed with EPA on 9/17/12. The final BART permit applications for Crystal River fossil units were submitted to EPA on 10/15/12 as a supplement to the 9/17/12 submittal. Permitting was finalized in 2013 with an effective date of January 1, 2014.

**Project Accomplishments:**
DEF performed required emissions modeling and associated BART analysis for Crystal River 1&2 (CR1&2) and Anclote plants, developed and submitted a Reasonable Progress evaluation for Crystal River 4&5, developed and submitted necessary BART Implementation Plans and air construction permit applications in support of the FDEP's work to amend its SIP as directed by the EPA. Permitting actions were completed in 2013 with the effective date of the CR 1& 2 permit being January 1, 2014.

**Project Fiscal Expenditures:**
No project expenditures are expected in 2015.

**Project Progress Summary:**
DEF performed required emissions modeling and associated BART analysis for CR1&2 and Anclote, developed and submitted a Reasonable Progress evaluation for Crystal River 4&5, developed and submitted necessary BART Implementation Plans and air construction permit applications needed in support of the FDEP ongoing work to amend its State Implementation Plan as directed by the EPA. Based on the revised Regional Haze SIP incorporating the provisions of Crystal River's BART permits for $SO_2$ and NOx, EPA on 12/10/12 proposed approval of the SIP. In August 2013, EPA finalized the full approval of the SIP. The Crystal River South BART permit became effective on January 1, 2014 and DEF is now operating under the terms of that permit.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **Arsenic Groundwater Standard**
**Project No. 8**

**Project Description:**
On 1/22/01, the EPA adopted a new maximum contaminant level (MCL) for arsenic in drinking water replacing the previous standard of 0.050 mg/L (50ppb) with a new MCL of 0.010 mg/L (10ppb). Effective 1/1/05, the FDEP established the USEPA MCL as Florida's drinking water standard. See Rule 62-550, F.A.C. The new standard has implications for land application and water reuse projects in Florida because the drinking water standard has been established as the groundwater standard by Rule 62-520.420(1), F.A.C. Lowering the arsenic standard will require new analytical methods for sampling groundwater at numerous DEF sites.

**Project Accomplishments:**
DEF has completed required monitoring as directed by the FDEP.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $23k higher than originally projected due to consultant costs to evaluate the source of arsenic exceedances and issue a summery report in compliance with FDEP Consent Order No. 09-3463C executed on 11/21/11. The Consent Order was issued by the FDEP for exceedance of the arsenic groundwater limit when the EPA lowered the arsenic maximum containment level from 50ppb to 10 ppb.

**Project Progress Summary:**
DEF is evaluating monitoring data and other options to achieve compliance in accordance to Consent Order.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **Sea Turtle - Coastal Street Lighting**
**Project No. 9**

**Project Description:**
DEF owns and leases high pressure sodium streetlights throughout its service territory, including areas along the Florida coast. Pursuant to Section 161.163, Florida Statutes, the FDEP, in collaboration with the Florida Fish and Wildlife Conservation Commission (FFWCC) and the U.S. Fish & Wildlife Service (USFWS), has developed a model Sea Turtle lighting ordinance. The model ordinance is used by the local governments to develop and implement ordinances within its jurisdiction. To date, Sea Turtle lighting ordinances have been adopted in Franklin County, Gulf County, City of Mexico Beach in Bay County and Pinellas County, all of which are within DEF's service territory. Since 2004, officials from the various local governments, as well as the FDEP, FFWC, and USFWS, have advised DEF that lighting it owns and leases is affecting turtle nesting areas that fall within the scope of these ordinances. As a result, local governments require DEF to take additional measures to satisfy new criteria being applied to ensure compliance with the sea turtle ordinances.

**Project Accomplishments:**
DEF continues to work with Franklin County, Gulf County, City of Mexico Beach in Bay County, and Pinellas County to mitigate any potential sea turtle nesting issues by retrofitting existing street lights, placing amber shields on existing HPS street lights and monitoring street lights for effectiveness in complying with sea turtle ordinances.

**Project Fiscal Expenditures:**
2015 capital expenditures are estimated to be $3k lower than originally projected. No new street lighting has been required in Franklin County, the City of Mexico Beach in Bay county or GULF County as DEF is in compliance with sea turtle ordinances. Also, the Don Cesar lighting project is delayed from 2014 to late 4th quarter 2015 due to scheduling conflicts.

**Project Progress Summary:**
DEF is on schedule with activities identified for this program.

**Project Projections:**
2016 estimated project O&M and capital expenditures are $450 and $750, respectively.

**Project Title:** **Underground Storage Tanks**
**Project No. 10**

**Project Description:**
FDEP regulations require that underground pollutant storage tanks and small diameter piping be upgraded with secondary containment by 12/31/09. See Rule 62-761.510(5), F.A.C. DEF identified four tanks that must comply with this rule: two at Crystal River Plant and two at Bartow Plant.

**Project Accomplishments:**
Work on Crystal River and Bartow USTs was completed in 4th Qtr 2006.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF continually evaluates its compliance program, including project prioritization, schedule and technology applications.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Modular Cooling Towers**
**Project No. 11**

**Project Description:**
This project involves installation and operation of modular cooling towers in the summer months to minimize de-rates of Crystal River 1&2 (CR1&2) necessary to comply with the NPDES permit limit for the temperature of cooling water discharged from the units.

**Project Accomplishments:**
Vendors of modular cooling towers were evaluated regarding cost of installation and operation. The FDEP reviewed the project and approved operation. A vendor was selected and the towers were installed during the 2nd Qtr 2006.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
The modular cooling towers began operation in June 2006 and successfully minimized de-rates of CR 1&2. The towers were removed during the first half of 2012. This project is complete.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Crystal River Thermal Discharge Compliance Project**
**Project No. 11.1**

**Project Description:**
This project was to evaluate and implement the best long term solution to maintain compliance with the thermal discharge limit in the FDEP industrial wastewater permit for Crystal River Units 1,2&3 that was being addressed in the short term by the Modular Cooling Towers approved in Docket No. 060162-EI. Due to DEF's decision to retire CR3, this project is no longer necessary and will not be implemented.

**Project Accomplishments:**
The study phase of the project was completed with a recommendation to replace the leased modular cooling towers in coordination with the cooling solution for the CR3 Extended Power Uprate (EPU) discharge canal cooling solution. The new cooling tower associated with the CR3 EPU was to be sized to mitigate both increased temperatures from the EPU as well as replace the modular cooling towers, which were removed in 2012. The design contract for the CR3 EPU cooling tower was awarded and a vendor selected. In February 2013, DEF decided to retire CR3; therefore, the project will not proceed.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
Crystal River Units 1,2&3 utilize a once-through cooling water process to cool and condense turbine exhaust steam back to water. The cooling water is removed from the Gulf of Mexico via an intake canal and discharged to a common discharge canal shared by all of the generating units. DEF has a NPDES industrial wastewater permit from the FDEP to discharge this cooling water from CR 1,2&3 into the Gulf of Mexico. The FDEP NPDES permit includes a limit on the temperature of the cooling water discharge (96.5 degrees Fahrenheit on a three-hour rolling average) measured at the point of discharge to the Gulf of Mexico. The new cooling towers were being added as a long term solution to the issue of higher ambient water temperatures previously being addressed by the modular cooling towers and added heat rejection due to the estimated 180MWe Uprate of CR3. With the retirement of CR3, the heat rejection associated with the entire unit is removed and therefore the new cooling tower is not necessary for the continued operation of CR 1&2 within the NPDES permit limits.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Greenhouse Gas (GHG) Inventory and Reporting**
**Project No. 12**

**Project Description:**
The GHG Inventory and Reporting Program was created in response to Chapter 2008-277, Florida Laws, which established the Florida Climate Protection Act to be codified at section 403.44, Florida Statutes. Among other things, this legislation authorizes the FDEP to establish a cap and trade program for GHG emissions from power plants. Utilities subject to the program, including DEF, will be required to use The Climate Registry for purposes of GHG emission registration and reporting. The requirement to report to The Climate Registry was repealed during the 2010 legislative session; however, the EPA GHG Reporting Rule (40 CFR 98) does require DEF to submit 2010 GHG data to the EPA no later than 9/30/2011.

**Project Accomplishments:**
In 2009, DEF joined The Climate Registry and submitted 2008 GHG inventory data. 2009 data was submitted during the third quarter of 2010. Both 2008 and 2009 data was validated by a third party as required by The Climate Registry. 2010 GHG inventory data was submitted to EPA on 9/30/11 and EPA does not require data validation by a third party. DEF has discontinued its membership with The Climate Registry. Since third party validation is not required by the EPA, no future expenditures will be incurred by DEF resulting in the completion of this project.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF submits GHG inventory data directly to EPA which does not require third party validation. Membership with The Climate Registry has been discontinued.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Mercury Total Daily Maximum Loads Monitoring (TMDL)**
**Project No. 13**

**Project Description:**
Section 303(d) of the Federal Clean Water Act requires each state to identify state waters not meeting water quality standards and establish a TMDL for the pollutant or pollutants causing the failure to meet standards. Under a 1999 federal consent decree, TMDLs for over 100 Florida water bodies listed as impaired for mercury must be established by 9/12/12. The FDEP has initiated a research program to provide necessary information for setting appropriate TMDLs for mercury. Among other things, the study will assess the relative contributions of mercury-emitting sources, such as coal-fired power plants, to mercury levels in surface waters.

**Project Accomplishments:**
Atmospheric & Environmental Research, Inc (AER) completed the literature review on mercury deposition in Florida. This document was sent to the FDEP Division of Air Resource Management and the TMDL team for review in February 2009. In addition, the Florida Electric Power Coordinating Group (FCG) Mercury Task Force met with FDEP Division of Air Resource Management to discuss the review in January 2010. AER performed Florida mercury deposition modeling for the Division of Air Resource Management. The FCG Mercury Task Force contracted with Tetra Tech to conduct aquatic field sampling, including an aquatics modeling report, to develop a "Conceptual Model for the Florida Mercury TMDL." This document was finalized and submitted to the FDEP in December 2010. Key personnel from AER were employed by Environ in 2011 and FCG established a contract with Environ to ensure continuity of the project. FCG used Environ and Tetra Tech to review and critique FDEP's aquatic cycling and atmospheric modeling analyses. The FDEP developed a mercury TMDL report in the spring and summer of 2012, and it proposed a TMDL in September 2012. The EPA approved Florida's statewide mercury TMDL in a letter dated October 18, 2013. Florida's mercury TMDL covers 441 waters listed as impaired for mercury based on fish tissue mercury levels. EPA's approval letter states that if FDEP identifies any new waters to be listed as impaired for mercury, a new TMDL will not be required if the listing is caused by the factors addressed in the approved TMDL. Conversely, a new TMDL, addressing the newly listed water body, would be required if "local emission or effluent sources" are determined to be the cause of the elevated fish tissue levels that required the new listing.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
The mercury TMDL study concluded in 2012.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Hazardous Air Pollutants (HAPs) ICR Program**
**Project No. 14**

**Project Description:**
In 2009, the EPA initiated efforts to develop an Information Collection Request (ICR), which requires that owners/operators of all coal- and oil-fired electric utility steam generating units provide information that will allow the EPA to assess emissions of hazardous air pollutants from each such unit. The intention of the ICR is to assist the Administrator of the EPA in developing national emission standards for hazardous air pollutants under Section 112(d) of the Clean Air Act, 42 U.S.C. 7412. Pursuant to those efforts, by letter dated 12/24/09, the EPA formally requested DEF comply with certain data collection and emissions testing requirements for several of its steam electric generating units. The EPA letter states that initial submittal of existing information must be made within 90 days, and that the remaining data must be submitted within 8 months. Collection and submittal of the requested information is mandatory under Section 114 of the Clean Air Act, 42 U.S.C. 7414.

**Project Accomplishments:**
DEF completed and submitted the ICR to EPA during 2010. The HAPS ICR project is complete.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF completed and submitted the ICR to EPA during 2010.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Effluent Limitation Guidelines ICR Program**
**Project No. 15**

**Project Description:**
The Effluent Limitation Guidelines ICR Program was created in response to Section 304 of the Federal Clean Water Act which directs the EPA to develop and periodically review regulations, called effluent guidelines, to limit the amount of pollutants that are discharged to surface waters from various point source categories. 33 U.S.C. §13 14(b). In October 2009, the EPA announced that it intended to update the effluent guidelines for the steam electric power generating point source category, which were last updated in 1982. DEF is required to complete the ICR and submit responses to the EPA within 90 days. Collection and submittal of the requested information is mandatory under Section 308 of the Clean Water Act.

**Project Accomplishments:**
DEF completed and submitted the ICR to the EPA in September 2010. The Effluent Limitation Guidelines ICR Program is complete.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF completed and submitted the ICR to EPA in September 2010.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **National Pollutant Discharge Elimination System (NPDES)**
**Project No. 16**

**Project Description:**
Pursuant to the Federal Clean Water Act, 33 U.S.C. § 1342, all point source discharges to navigable waters from industrial facilities must obtain permits under the NPDES Program. The FDEP administers the NPDES program in Florida. DEF's Anclote, Bartow, and Crystal River North, Crystal River South, and Suwannee NPDES permits were issued on 1/14/11, 2/14/11, 7/18/11,4/7/14 and 11/28/11, respectively. All facilities are required to meet new permitting conditions. In Docket No. 110007-EI, the Commission approved recovery of costs associated with new requirements included or expected to be included in the new renewal permits, including: thermal studies, aquatic organism return studies and implementation, whole effluent toxicity testing, dissolved oxygen (DO) studies (Bartow only), and freeboard limitation related studies (Bartow only). As noted in DEF's 2/8/12 program update, on 12/14/11, the FDEP issued a final NPDES renewal permit and associated Administrative Order (AO) for the Suwannee Plant. The AO includes a new requirement to assess copper discharges that DEF did not anticipate when it filed its petition in 2011.

**Project Accomplishments:**
DEF continues to perform thermal studies and whole effluent toxicity testing as required in accordance to NPDES permit requirements. Bartow freeboard limitation study was completed in May 2011 and submitted to FDEP on 6/23/11. The FDEP approved DEF's corrective action plan and Bartow is in compliance with Administrative Order as of December 2014. The copper discharge study at the Suwannee plant has been completed and a final report was submitted to the FDEP in June 2014.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $54k lower than originally projected due to lower than expected 316(a) thermal study costs at the Anclote and Bartow stations. 2015 capital expenditures are expected to be $86k lower than originally projected due to a vendor reimbursement payment.

**Project Progress Summary:**
DEF has begun complying with the requirements of the NPDES permits. Aquatic organism return study requirements have been postponed to align with the final EPA 316(b) rule requirements (Bartow/Anclote Plants) which was published 8/15/14. The aquatic organism return requirement is not a requirement in the Crystal River North NPDES permit. The dissolved oxygen study of cooling water intake and discharge at the Bartow plant was completed and the results of the study demonstrated there is no negative impact on DO due to the plant's operation. The final DO report was submitted to the FDEP on November 20, 2012, and the Department has not required any additional action. DEF continues to work with FDEP to resolve the copper issue at the Suwannee station.

**Project Projections:**
2016 estimated O&M expenditures are $60k. No capital expenditures are expected in 2016.

**Project Title:** **Mercury & Air Toxic Standards (MATS) CR4 & CR5**
**Project No. 17**

**Project Description:**
The Commission approved ECRC recovery of DEF's costs for compliance with new hazardous air pollutant standards at Crystal River Units 4 & 5 (CR4&5) in Order No. PSC-11-0553-FOF-EI. The final MATS rule was issued by the EPA on 12/21/11. The FDEP granted a limited, one-year extension for the mercury-related requirements on 3/12/15. DEF will utilize the co-benefits of the existing FGD and SCR systems as the primary MATS compliance measures. Additional monitoring and emissions reduction technologies will be installed in 2014 & 2015.

**Project Accomplishments:**
DEF installed ORP probes and particulate matter continuous emissions monitoring systems (PM CEMS) in 2014. In addition, a mercury characterization study was performed in late 2014, and temporary mercury re-emission control systems were installed in early 2015. DEF continues to monitor mercury emissions with Appendix K sorbent trap systems.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $153k higher than originally projected due to the addition of a temporary chemical injection system to control mercury emissions, and the cancellation of preliminary engineering for a fuel additive system to improve mercury oxidation. 2015 capital expenditures are expected to be $1.3M higher than originally projected driven by the installation of continuous emission monitoring systems (CEMS) for mercury monitoring, compliance demonstration and feedback to the re-emission control system.

**Project Progress Summary:**
Installation of mercury CEMS and permanent mercury re-emission control systems is scheduled in the third quarter of 2015. Certification and commissioning activities are expected to be completed by the end of the year.

**Project Projections:**
2016 estimated O&M is $529k. No capital expenditures are expected in 2016.

**Project Title:** **Mercury & Air Toxic Standards (MATS) Anclote Gas Conversion**
**Project No. 17.1**

**Project Description:**
Convert existing Anclote Units to use 100% natural gas to be in compliance with MATS as approved by the Commission in Order No. PSC-12-0432-PAA-EI.

**Project Accomplishments:**
Unit 1 and Unit 2 gas conversions were completed 7/13/13 and 12/2/13, respectively. Unit 1 and Unit 2 Forced Draft (FD) fan modification work was completed 5/22/14 and 11/17/14, respectively.

**Project Fiscal Expenditures:**
2015 capital expenditures are estimated to be $314k lower than originally projected due to earlier than expected completion of Unit 2 FD fan work in November 2013 versus December 2014. There are no recoverable O&M costs for this project.

**Project Progress Summary:**
This project is in-service.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Mercury & Air Toxic Standards (MATS) CR1 & CR2**
**Project No. 17.2**

**Project Description:**
DEF is implementing its CR1&2 MATS Compliance Plan as approved by the Commission in Order No. PSC-14-0173-PAA-EI. DEF will make modifications to the electrostatic precipitators to improve particulate collection efficiency, as well as install reagent injection systems to reduce HCl and mercury emissions.

**Project Accomplishments:**
DEF finalized its CR1&2 MATS Compliance Plan in December 2013 and began implementation in early 2014.

**Project Fiscal Expenditures:**
2015 O&M expenditures are expected to be $51k lower than expected. Capital expenditures are estimated to be $4.2M higher than originally projected due to an additional project related to the Unit 1 electrostatic precipitator (ESP).

**Project Progress Summary:**
Implementation of the CR1&2 MATS Compliance Plan will be completed by April 2016.

**Project Projections:**
2016 estimated O&M and capital expenditures are $3.8M and $2.6M, respectively.

**Project Title:** **Coal Combustion Residual (CCR) Rule**
**Project No. 18**

**Project Description:**
The Coal Combustion Residual (CCR) Rule was published in the Federal Register on 4/17/15 and is effective 10/19/15. this rule regulates the disposal of CCR as non-hazardous solid waste, and contains new requirements for CCR landfills and CCR surface impoundments. It also specifies implementation guidelines for compliance. The CCR compliance deadlines vary, with compliance obligations required as early as 10/19/15. the rule is self-implementing, meaning that affected facilities must comply with the new regulations irrespective of whether the rule is adopted by the State of Florida. The rule has specific impacts on the ash landfill, Flue Gas Desulfurization (FGD) lined blowdown ponds and temporary gypsum pad at the Crystal River site. No other DEF operating facilities are impacted by the CCR rule.

**Project Accomplishments:**
DEF began defining and implementing of its CCR Rule compliance strategy.

**Project Fiscal Expenditures:**
2015 estimated O&M and capital expenditures are $391k and $1.6M, respectively.

**Project Progress Summary:**
Ash Landfill: Two engineering firms are studying Crystal River ash landfill stability and ash placement.
Temporary Gypsum Pad: Efforts are underway to address fugitive dust mitigation at the CCR gypsum stack-out.
FGD Blowdown Ponds: A definitive assessment and action plan is being developed.
Emergency Action Plan: A determination if the CCR requires an EPA for the FGD Blowdown Ponds is in process.
Vegetation Mgt & Inspection Work: More frequent mowing and inspection work is planned to comply with the CCR Rule.

**Project Projections:**
2016 estimated O&M and capital expenditures are $1.8M and $3.9M, respectively. See the August 31, 2015 direct testimony of Mr. Miller for 2015 CCR compliance strategy change.

Notes:

(A) $10,889,450 ($578,825 Line 1c Beg Bal + $10,310,625 Line 1d Beg Bal) unusable NOx emission allowances due expiration of Clean Air Interstate Rule (CAIR)on 12/31/14 replaced by Cross State Air Pollution Rule (CSAPR) on 1/1/15. DEF is treating these costs as a regulatory asset and amortizing these costs over 3 years consistent with Order No. PSC-11-0553-FOF-EI.

(B) Jan - Jun 2015 Line 6 x 10.27% x 1/12. Jul - Dec 2015 Line 6 x 10.36% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 5.08% (Jan-Jun) or 5.12% (Jul-Dec), and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-12-0425-PAA-EU Docket No. 120007-EI.

Notes:

(A) N/A

(B) Investment amortized over three years in accordance with Order No. PSC-13-0381-PAA-EI.

(C) Jan - Jun 2014 Line 6 x 10.39% x 1/12. Jul - Dec 2014 Line 6 x 10.27% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 5.00% (Jan-Jun) or 5.08% (Jul-Dec), and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-12-0425-PAA-EU Docket No. 120007-EI.

(D) N/A

(E) The POD project spend and revenue requirements associated with 2012 and prior activities are jurisdictionalized using the 2012 Production Base Demand separation factor. The revenue requirements associated with the 2013 period and after are jurisdictionalized using the 2013 Production Base Demand separation factor.

Notes:

(A) As explained in the testimony of Garry Miller, DEF has revised the permanent dust mitigation in-service date from October 2015 to October 2016 and determined vegetation management compliance can be achived without the 2015 capital investment. As a result, DEF has made these adjustments to ensure that the revenue requirement impact to customers is neutral.
(B) Line 6 x 10.36% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 5.12% and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-12-0425-PAA-EU Docket No. 120007-EI.
(C) Line 2 x rate x 1/12. Depreciation rate based on approved rates in Order PSC-10-0131-FOF-EI.
(D) Line 2 x rate x 1/12. Based on 2014 Effective Tax Rate on original cost.
(E) Line 9a x Line 10
(F) Line 9b x Line 11

**Project Title:** **Substation Environmental Investigation, Remediation and Pollution Prevention**
**Project No. 1**

**Project Description:**
Chapter 376 Florida Statutes requires that any person discharging a prohibited pollutant shall undertake to contain, remove and abate the discharge to the satisfaction of the FDEP. Similarly, Chapter 403 Florida Statutes provides that it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. For DEF to comply with these statutes, it is actively conducting remediation and pollution prevention activities at its substation sites to remove the existence of pollutant discharges. Activities also include development and implementation of best management and pollution prevention measures at these sites.

**Project Accomplishments:**
As of 2nd Qtr end 2015, a total of 260 substation remediations are completed out of 279 slated for clean-up. DEF expects to remediate 3 more substations during the remainder of 2015.

**Project Fiscal Expenditures:**
2015 expenditures are estimated to be $405k lower than originally projected due to remediation work delays at the Consolidated Rock, Holder and Kenneth City substations.

**Project Progress Summary:**
DEF continues to remediate substation sites in accordance with the approved Substation Assessment and Remedial Action Plan (SARAP).

**Project Projections:**
2016 estimated expenditures are $1.1M.

**Project Title:** **Distribution System Environmental Investigation, Remediation and Pollution Prevention**
**Project No. 2**

**Project Description:**
Chapter 376 Florida Statutes requires that any person discharging a prohibited pollutant shall undertake to contain, remove and abate the discharge to the satisfaction of the FDEP. Similarly, Chapter 403 Florida Statutes provides that it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. For DEF to comply with these statutes, it is actively conducting remediation and pollution prevention activities at its distribution sites to remove the existence of pollutant discharges. Activities also include development and implementation of best management and pollution prevention measures at these sites.

**Project Accomplishments:**
As of 2nd Qtr end 2015, there are 3 remaining Transformer Replacement and Inspection Program (TRIP) sites.

**Project Fiscal Expenditures:**
2015 expenditures are estimated to be $42k higher than originally projected due to costs to remove additional impacted soil at the three remaining sites.

**Project Progress Summary:**
This project is on schedule according to the approved Distribution System Investigation, Remediation and Pollution Prevention Program.

**Project Projections:**
2016 estimated expenditures are $3k.

**Project Title:** **Pipeline Integrity Management (PIM) - Bartow/Anclote Pipeline**
**Project No. 3**

**Project Description:**
The U.S. Department of Transportation (USDOT) Regulation 49 CFR Part 195, as amended effective 2/15/02, and the new regulation published at 67 Federal Register 2136 on 1/16/02, requires DEF to implement a PIM program. Prior to the 2/15/02 amendments, the USDOT's PIM regulations applied only to operators with 500 miles or more of hazardous liquid and carbon dioxide pipelines that could affect high consequence areas. The amendments which became effective on 2/15/02, extended the requirements for implementing integrity management to operators who have less than 500 miles of regulated pipelines. As such, DEF must maintain the integrity of pipeline systems in order to protect public safety and the environment, and comply with continual assessment and evaluation of pipeline systems integrity through inspection or testing, data integration and analysis, and follow up with remedial, preventative, and mitigative actions. DEF owns one hazardous liquid pipeline, Bartow/Anclote 14-inch hot oil pipeline, extending 33.3 miles from the Company's Bartow Plant north of St. Petersburg to the Anclote Plant in Holiday, that is subject to PIM regulations.

Effective 2/2010, amendments to 49 CFR 195 were finalized to improve opportunities to reduce risk through more effective control of pipelines. Compliance with these amendments will enhance pipeline safety by coupling strengthened control room management with improved controller training and fatigue management. On 6/16/11, the USDOT published in the Federal Register (V0l. 76, 35130-35136), a final rule effective 8/15/11, that expedites the program implementation deadlines in the Control Room Management/Human Factors regulations in order to realize the safety benefits sooner than established in the original rule. This final rule amends the program implementation deadlines for different procedures to no later than 10/21/11 and 8/1/12.

**Project Accomplishments:**
Since the Bartow Anclote Pipeline (BAP) contains a small quantity of #6 fuel oil, the PIM program under 49CFR195 continues to be maintained. Third party projects by Florida Department of Transportation (FDOT), Florida Gas Transmission, Pinellas County, The City of Pinellas Park, and others have been evaluated for their risk to BAP integrity. Risk mitigation measures have been completed per 49CFR195.450. The BAP Risk Analysis has been updated. The Annual Report and National Pipeline Mapping System (NPMS) annual review have been completed. Reviews and evaluations are also being completed for Advisory Bulletins 11-04, 13-02, 15-01, and 15-02, relating to flooding and hurricanes. BAP personnel have participated in US Department of Transportation Pipeline and Hazardous Material Safety Administration (PHMSA), utility owners groups, damage prevention groups, and FDOT workshops and training. Pipeline accidents and PHMSA enforcement actions have been reviewed for conditions that are applicable to the BAP and appropriate changes to BAP practices and procedures have been implemented. Pipeline records are being organized and stored with the conversion to electronic storage now essentially complete.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $19k higher than originally projected due to increased costs to comply with PIM regulations. No capital expenditures are estimated for 2015.

**Project Progress Summary:**
Ongoing regulatory compliance activities will continue until pipeline is sold or retired.

**Project Projections:**
2016 estimated O&M expenditures are $696k. No capital expenditures are expected in 2016.

**Project Title:** **Above Ground Storage Tank Secondary Containment**
**Project No. 4**

**Project Description:**
FDEP Rule 62-761.510(3) states that DEF is required to make improvements to its above ground petroleum storage tanks in order to comply with those provisions. Subsection (d) of the rule requires all internally lined single bottom above ground storage tanks to be upgraded with secondary containment, including secondary containment for piping in contact with the soil. Rule 62-761.500(1)(e) also requires that dike field area containment for pre-1998 tanks be upgraded, if needed, to comply with the requirement.

**Project Accomplishments:**
DEF has completed work at Debary 1 and 2, Turner 7, Turner 8, Higgins 1, and Bartow 6 as well as Turner P-1 and P-2 piping work.

**Project Fiscal Expenditures:**
No project expenditures are expected in 2015.

**Project Progress Summary:**
DEF continually evaluates its compliance program, including project prioritization, schedule and technology applications.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **$SO_2$ and NOx Emissions Allowances**
**Project No. 5**

**Project Description:**
In accordance with the Acid Rain Program in Title IV of the Clean Air Act, CFR 40 Part 73 and Part 76, Florida Administrative Code Rule 62-214 and the Clean Air Interstate Rule (CAIR), DEF manages sulfur dioxide ($SO_2$) and nitrogen oxide (NOx)allowance inventory to offset emissions. On 7/6/11, the EPA issued the Cross-State Air Pollution Rule (CSAPR) to replace the CAIR. The CSAPR significantly alters $SO_2$ and NOx allowance programs. Under the CAIR, Florida has to comply with annual $SO_2$ and NOx emission requirements, and seasonal NOx emission requirements. Under the CSAPR, Florida is no longer required to comply with annual emissions requirements, only ozone seasonal limits. On 8/8/11, the final CSAPR was published in the Federal Register. The CSAPR sets state-level annual and seasonal $SO_2$ and NOx emission allowance requirements effective 1/1/12.

On 8/21/12, the D.C. Circuit Court vacated the CSAPR. It also directed the EPA to continue administering the CAIR which requires additional reductions in $SO_2$ and NOx emissions beginning in 2015. On 4/29/14, the U.S. Supreme Court reversed the D.C. Circuit Court decision finding that with CSAPR the EPA reasonably interpreted the good neighbor provision of the Clean Air Act. The case was then remanded to the D.C. Circuit Court for further proceedings, and the EPA requested the court lift the CSAPR stay and direct it to take effect on 1/1/15. On 10/23/14 the D.C. Circuit Court lifted the CSAPR stay. On 1/1/15, the CSAPR replaced the CAIR. The CSAPR took effect in Florida on 5/1/15. Consequently, CAIR NOx emission allowances have no value; however, SO2 emission allowances can continue to be used to comply with the Acid Rain Program. DEF is treating its unused NOx costs as a regulatory asset amortizing it over 3 years, as approved by the Commission in Order No. PSC-11-0553-FOF-EI.

**Project Accomplishments:**
Air quality compliance costs are administered by an authorized account representative who evaluates a variety of resources and options. Activities performed include purchases of SO2 and NOx emissions allowances as well as auctions and transfers of SO2 emissions allowances.

**Project Fiscal Expenditures:**
2015 emission allowance expenditures are estimated to be $1.5M higher than originally projected due to unusable NOx emission allowances as a result of the expiration of the CAIR. CAIR was replaced by the CSAPR on 1/1/15. Consistent with Order No. PSC-11-0553-FOF-EI, DEF is treating costs associated with its unusable CAIR NOx emission allowances as a regulatory asset amortizing it over 3 years, beginning 1/1/15 until fully recovered by 12/31/17, with a return on the unamortized investment.

**Project Progress Summary:**
DEF continually evaluates the status of emission rules to maximize the cost effectiveness of its compliance strategy.

**Project Projections:**
2016 estimated expenditures are $111k. 2016 amortization of the CAIR NOx regulatory asset is approximately $3.6M.

**Project Title:** **Phase II Cooling Water Intake**
**Project No. 6**

**Project Description:**
Section 316(b) of the Federal Clean Water Act requires that the location, design, construction, and capacity of cooling water intake structures reflect the best technology available for minimizing adverse environmental impact. 33 U.S.C. Section 1326. On 5/19/14, the EPA Administrator signed a final 316(b) rule to protect fish and aquatic life drawn into cooling systems at power plant and factories. The rule aims to minimize impingement (aquatic life pinned against cooling water intake structures) and entrainment (aquatic life drawn into cooling water systems). The regulation became effective on October 14, 2014, 60 days after publication in the Federal Register which was 8/15/14.

**Project Accomplishments:**
DEF is currently evaluating the 316(b) rule to determine potential study requirements, operating and cost impacts to its generating stations. Site specific strategic plans are under development to ensure compliance with all applicable requirements of the rule.

**Project Fiscal Expenditures:**
2015 project expenditures are estimated to be $43k lower than originally projected as methods used to allocate costs to analyze 316(b) compliance strategies at each affected Duke Energy station were adjusted to reflect present configurations and operations. DEF intends to implement a consistent approach across its entire fleet of regulated units to focus on full compliance with applicable 316(b) requirements through the development of facility specific strategic plans.

**Project Progress Summary:**
Initial steps in site specific plan development have been completed. Work continues on plans for implementation, decision milestones, compliance approaches, and study requirements.

**Project Projections:**
2016 estimated O&M expenditures are $440k. No capital expenditures are expected in 2016.

**Project Title:** **Integrated Clean Air Compliance Plan - Clean Air Interstate Rule (CAIR)**
**Project Nos. (7.2, 7.3 & 7.4)**

**Project Description:**
The Clean Air Interstate Rule (CAIR), 40 CFR 24, 262, imposes significant restrictions on emissions of $SO_2$ and NOx from power plants in 28 eastern states, including Florida and the District of Columbia. The CAIR rule apportions region-wide $SO_2$ and NOx emission reduction requirements to the individual states, and further requires each affected state to revise its State Implementation Plans (SIPs) to include measures necessary to achieve its emission reduction budget within prescribed deadlines.

The Cross-State air pollution Rule (CSAPR) replaced CAIR on 1/1/15. Under the CSAPR, the State of Florida is not longer required to comply with annual emission requirements, only NOx ozone seasonal limits. The CSAPR requirements took effect in Florida on 5/1/15, the beginning of the ozone season. NOx emission allowances under CAIR have no value; however, DEF will continue to use its SO2 emission allowances to comply with the Acid Rain Program. (see Project No. 5 - SO2 and NOx Emission Allowances Project Sheet for more information)

**Project Accomplishments:**
The reclaimed water reuse system project was placed in-service in July 2015. This project will provide DEF with up to 1 1/2 million gallons per day of reclaimed water from the City of Crystal River to supplement well water use. This project has positive environmental impacts as it reduces aquifer use.

**Project Fiscal Expenditures:**
2015 estimated O&M expenditures are estimated to be $661k higher than originally projected due to a $710 decrease in CAIR Crystal River Project 7.4 - Base costs and $1.4 million increase in CAIR Crystal River Project 7.4 - Energy costs. The $710k is due to lower base routine project costs. The $1.4M is due to higher ammonia and hydrated lime costs offset by lower limestone and gypsum costs. 2015 estimated capital expenditures are expected to be $124k higher than originally projected due to a shift in spending from 2014 to 2015 in order to align with the City of Crystal River reclaimed water reuse project timeline.

**Project Progress Summary:**
DEF continues to comply with the CAIR, CSAPR and the Acid Rain Program.

**Project Projections:**
2016 estimated O&M and capital expenditures are $34.4M and $713k, respectively.

**Project Title:** **Best Available Retrofit Technology (BART)**
**Project No. 7.5**

**Project Description:**
On 5/25/12, the EPA proposed a partial disapproval of Florida's proposed Regional Haze State Implementation Plan (SIP) because the proposed SIP relies on CAIR to satisfy BART requirements for $SO_2$ and NOx emissions. CAIR remained in effect while litigation against the Cross State Air Pollution Rule (CSAPR) proceeded, and the EPA incorporated the CSAPR in place of CAIR into Regional Haze SIPs, including Florida. DEF worked with the FDEP to develop specific BART and Reasonable Progress permits for affected units that were incorporated into Florida's revised SIP submittal, which was filed with EPA on 9/17/12. The final BART permit applications for Crystal River fossil units were submitted to EPA on 10/15/12 as a supplement to the 9/17/12 submittal. Permitting was finalized in 2013 with an effective date of January 1, 2014.

**Project Accomplishments:**
DEF performed required emissions modeling and associated BART analysis for Crystal River 1&2 (CR1&2) and Anclote plants, developed and submitted a Reasonable Progress evaluation for Crystal River 4&5, developed and submitted necessary BART Implementation Plans and air construction permit applications in support of the FDEP's work to amend its SIP as directed by the EPA. Permitting actions were completed in 2013 with the effective date of the CR 1& 2 permit being January 1, 2014.

**Project Fiscal Expenditures:**
No project expenditures are expected in 2015.

**Project Progress Summary:**
DEF performed required emissions modeling and associated BART analysis for CR1&2 and Anclote, developed and submitted a Reasonable Progress evaluation for Crystal River 4&5, developed and submitted necessary BART Implementation Plans and air construction permit applications needed in support of the FDEP ongoing work to amend its State Implementation Plan as directed by the EPA. Based on the revised Regional Haze SIP incorporating the provisions of Crystal River's BART permits for $SO_2$ and NOx, EPA on 12/10/12 proposed approval of the SIP. In August 2013, EPA finalized the full approval of the SIP. The Crystal River South BART permit became effective on January 1, 2014 and DEF is now operating under the terms of that permit.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **Arsenic Groundwater Standard**
**Project No. 8**

**Project Description:**
On 1/22/01, the EPA adopted a new maximum contaminant level (MCL) for arsenic in drinking water replacing the previous standard of 0.050 mg/L (50ppb) with a new MCL of 0.010 mg/L (10ppb). Effective 1/1/05, the FDEP established the USEPA MCL as Florida's drinking water standard. See Rule 62-550, F.A.C. The new standard has implications for land application and water reuse projects in Florida because the drinking water standard has been established as the groundwater standard by Rule 62-520.420(1), F.A.C. Lowering the arsenic standard will require new analytical methods for sampling groundwater at numerous DEF sites.

**Project Accomplishments:**
DEF has completed required monitoring as directed by the FDEP.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $23k higher than originally projected due to consultant costs to evaluate the source of arsenic exceedances and issue a summery report in compliance with FDEP Consent Order No. 09-3463C executed on 11/21/11. The Consent Order was issued by the FDEP for exceedance of the arsenic groundwater limit when the EPA lowered the arsenic maximum containment level from 50ppb to 10 ppb.

**Project Progress Summary:**
DEF is evaluating monitoring data and other options to achieve compliance in accordance to Consent Order.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **Sea Turtle - Coastal Street Lighting**
**Project No. 9**

**Project Description:**
DEF owns and leases high pressure sodium streetlights throughout its service territory, including areas along the Florida coast. Pursuant to Section 161.163, Florida Statutes, the FDEP, in collaboration with the Florida Fish and Wildlife Conservation Commission (FFWCC) and the U.S. Fish & Wildlife Service (USFWS), has developed a model Sea Turtle lighting ordinance. The model ordinance is used by the local governments to develop and implement ordinances within its jurisdiction. To date, Sea Turtle lighting ordinances have been adopted in Franklin County, Gulf County, City of Mexico Beach in Bay County and Pinellas County, all of which are within DEF's service territory. Since 2004, officials from the various local governments, as well as the FDEP, FFWC, and USFWS, have advised DEF that lighting it owns and leases is affecting turtle nesting areas that fall within the scope of these ordinances. As a result, local governments require DEF to take additional measures to satisfy new criteria being applied to ensure compliance with the sea turtle ordinances.

**Project Accomplishments:**
DEF continues to work with Franklin County, Gulf County, City of Mexico Beach in Bay County, and Pinellas County to mitigate any potential sea turtle nesting issues by retrofitting existing street lights, placing amber shields on existing HPS street lights and monitoring street lights for effectiveness in complying with sea turtle ordinances.

**Project Fiscal Expenditures:**
2015 capital expenditures are estimated to be $3k lower than originally projected. No new street lighting has been required in Franklin County, the City of Mexico Beach in Bay county or GULF County as DEF is in compliance with sea turtle ordinances. Also, the Don Cesar lighting project is delayed from 2014 to late 4th quarter 2015 due to scheduling conflicts.

**Project Progress Summary:**
DEF is on schedule with activities identified for this program.

**Project Projections:**
2016 estimated project O&M and capital expenditures are $450 and $750, respectively.

**Project Title:** **Underground Storage Tanks**
**Project No. 10**

**Project Description:**
FDEP regulations require that underground pollutant storage tanks and small diameter piping be upgraded with secondary containment by 12/31/09. See Rule 62-761.510(5), F.A.C. DEF identified four tanks that must comply with this rule: two at Crystal River Plant and two at Bartow Plant.

**Project Accomplishments:**
Work on Crystal River and Bartow USTs was completed in 4th Qtr 2006.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF continually evaluates its compliance program, including project prioritization, schedule and technology applications.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Modular Cooling Towers**
**Project No. 11**

**Project Description:**
This project involves installation and operation of modular cooling towers in the summer months to minimize de-rates of Crystal River 1&2 (CR1&2) necessary to comply with the NPDES permit limit for the temperature of cooling water discharged from the units.

**Project Accomplishments:**
Vendors of modular cooling towers were evaluated regarding cost of installation and operation. The FDEP reviewed the project and approved operation. A vendor was selected and the towers were installed during the 2nd Qtr 2006.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
The modular cooling towers began operation in June 2006 and successfully minimized de-rates of CR 1&2. The towers were removed during the first half of 2012. This project is complete.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Crystal River Thermal Discharge Compliance Project**
**Project No. 11.1**

**Project Description:**
This project was to evaluate and implement the best long term solution to maintain compliance with the thermal discharge limit in the FDEP industrial wastewater permit for Crystal River Units 1,2&3 that was being addressed in the short term by the Modular Cooling Towers approved in Docket No. 060162-EI. Due to DEF's decision to retire CR3, this project is no longer necessary and will not be implemented.

**Project Accomplishments:**
The study phase of the project was completed with a recommendation to replace the leased modular cooling towers in coordination with the cooling solution for the CR3 Extended Power Uprate (EPU) discharge canal cooling solution. The new cooling tower associated with the CR3 EPU was to be sized to mitigate both increased temperatures from the EPU as well as replace the modular cooling towers, which were removed in 2012. The design contract for the CR3 EPU cooling tower was awarded and a vendor selected. In February 2013, DEF decided to retire CR3; therefore, the project will not proceed.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
Crystal River Units 1,2&3 utilize a once-through cooling water process to cool and condense turbine exhaust steam back to water. The cooling water is removed from the Gulf of Mexico via an intake canal and discharged to a common discharge canal shared by all of the generating units. DEF has a NPDES industrial wastewater permit from the FDEP to discharge this cooling water from CR 1,2&3 into the Gulf of Mexico. The FDEP NPDES permit includes a limit on the temperature of the cooling water discharge (96.5 degrees Fahrenheit on a three-hour rolling average) measured at the point of discharge to the Gulf of Mexico. The new cooling towers were being added as a long term solution to the issue of higher ambient water temperatures previously being addressed by the modular cooling towers and added heat rejection due to the estimated 180MWe Uprate of CR3. With the retirement of CR3, the heat rejection associated with the entire unit is removed and therefore the new cooling tower is not necessary for the continued operation of CR 1&2 within the NPDES permit limits.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Greenhouse Gas (GHG) Inventory and Reporting**
**Project No. 12**

**Project Description:**
The GHG Inventory and Reporting Program was created in response to Chapter 2008-277, Florida Laws, which established the Florida Climate Protection Act to be codified at section 403.44, Florida Statutes. Among other things, this legislation authorizes the FDEP to establish a cap and trade program for GHG emissions from power plants. Utilities subject to the program, including DEF, will be required to use The Climate Registry for purposes of GHG emission registration and reporting. The requirement to report to The Climate Registry was repealed during the 2010 legislative session; however, the EPA GHG Reporting Rule (40 CFR 98) does require DEF to submit 2010 GHG data to the EPA no later than 9/30/2011.

**Project Accomplishments:**
In 2009, DEF joined The Climate Registry and submitted 2008 GHG inventory data. 2009 data was submitted during the third quarter of 2010. Both 2008 and 2009 data was validated by a third party as required by The Climate Registry. 2010 GHG inventory data was submitted to EPA on 9/30/11 and EPA does not require data validation by a third party. DEF has discontinued its membership with The Climate Registry. Since third party validation is not required by the EPA, no future expenditures will be incurred by DEF resulting in the completion of this project.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF submits GHG inventory data directly to EPA which does not require third party validation. Membership with The Climate Registry has been discontinued.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Mercury Total Daily Maximum Loads Monitoring (TMDL)**
**Project No. 13**

**Project Description:**
Section 303(d) of the Federal Clean Water Act requires each state to identify state waters not meeting water quality standards and establish a TMDL for the pollutant or pollutants causing the failure to meet standards. Under a 1999 federal consent decree, TMDLs for over 100 Florida water bodies listed as impaired for mercury must be established by 9/12/12. The FDEP has initiated a research program to provide necessary information for setting appropriate TMDLs for mercury. Among other things, the study will assess the relative contributions of mercury-emitting sources, such as coal-fired power plants, to mercury levels in surface waters.

**Project Accomplishments:**
Atmospheric & Environmental Research, Inc (AER) completed the literature review on mercury deposition in Florida. This document was sent to the FDEP Division of Air Resource Management and the TMDL team for review in February 2009. In addition, the Florida Electric Power Coordinating Group (FCG) Mercury Task Force met with FDEP Division of Air Resource Management to discuss the review in January 2010. AER performed Florida mercury deposition modeling for the Division of Air Resource Management. The FCG Mercury Task Force contracted with Tetra Tech to conduct aquatic field sampling, including an aquatics modeling report, to develop a "Conceptual Model for the Florida Mercury TMDL." This document was finalized and submitted to the FDEP in December 2010. Key personnel from AER were employed by Environ in 2011 and FCG established a contract with Environ to ensure continuity of the project. FCG used Environ and Tetra Tech to review and critique FDEP's aquatic cycling and atmospheric modeling analyses. The FDEP developed a mercury TMDL report in the spring and summer of 2012, and it proposed a TMDL in September 2012. The EPA approved Florida's statewide mercury TMDL in a letter dated October 18, 2013. Florida's mercury TMDL covers 441 waters listed as impaired for mercury based on fish tissue mercury levels. EPA's approval letter states that if FDEP identifies any new waters to be listed as impaired for mercury, a new TMDL will not be required if the listing is caused by the factors addressed in the approved TMDL. Conversely, a new TMDL, addressing the newly listed water body, would be required if "local emission or effluent sources" are determined to be the cause of the elevated fish tissue levels that required the new listing.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
The mercury TMDL study concluded in 2012.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Hazardous Air Pollutants (HAPs) ICR Program**
**Project No. 14**

**Project Description:**
In 2009, the EPA initiated efforts to develop an Information Collection Request (ICR), which requires that owners/operators of all coal- and oil-fired electric utility steam generating units provide information that will allow the EPA to assess emissions of hazardous air pollutants from each such unit. The intention of the ICR is to assist the Administrator of the EPA in developing national emission standards for hazardous air pollutants under Section 112(d) of the Clean Air Act, 42 U.S.C. 7412. Pursuant to those efforts, by letter dated 12/24/09, the EPA formally requested DEF comply with certain data collection and emissions testing requirements for several of its steam electric generating units. The EPA letter states that initial submittal of existing information must be made within 90 days, and that the remaining data must be submitted within 8 months. Collection and submittal of the requested information is mandatory under Section 114 of the Clean Air Act, 42 U.S.C. 7414.

**Project Accomplishments:**
DEF completed and submitted the ICR to EPA during 2010. The HAPS ICR project is complete.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF completed and submitted the ICR to EPA during 2010.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Effluent Limitation Guidelines ICR Program**
**Project No. 15**

**Project Description:**
The Effluent Limitation Guidelines ICR Program was created in response to Section 304 of the Federal Clean Water Act which directs the EPA to develop and periodically review regulations, called effluent guidelines, to limit the amount of pollutants that are discharged to surface waters from various point source categories. 33 U.S.C. §13 14(b). In October 2009, the EPA announced that it intended to update the effluent guidelines for the steam electric power generating point source category, which were last updated in 1982. DEF is required to complete the ICR and submit responses to the EPA within 90 days. Collection and submittal of the requested information is mandatory under Section 308 of the Clean Water Act.

**Project Accomplishments:**
DEF completed and submitted the ICR to the EPA in September 2010. The Effluent Limitation Guidelines ICR Program is complete.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF completed and submitted the ICR to EPA in September 2010.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **National Pollutant Discharge Elimination System (NPDES)**
**Project No. 16**

**Project Description:**
Pursuant to the Federal Clean Water Act, 33 U.S.C. § 1342, all point source discharges to navigable waters from industrial facilities must obtain permits under the NPDES Program. The FDEP administers the NPDES program in Florida. DEF's Anclote, Bartow, and Crystal River North, Crystal River South, and Suwannee NPDES permits were issued on 1/14/11, 2/14/11, 7/18/11,4/7/14 and 11/28/11, respectively. All facilities are required to meet new permitting conditions. In Docket No. 110007-EI, the Commission approved recovery of costs associated with new requirements included or expected to be included in the new renewal permits, including: thermal studies, aquatic organism return studies and implementation, whole effluent toxicity testing, dissolved oxygen (DO) studies (Bartow only), and freeboard limitation related studies (Bartow only). As noted in DEF's 2/8/12 program update, on 12/14/11, the FDEP issued a final NPDES renewal permit and associated Administrative Order (AO) for the Suwannee Plant. The AO includes a new requirement to assess copper discharges that DEF did not anticipate when it filed its petition in 2011.

**Project Accomplishments:**
DEF continues to perform thermal studies and whole effluent toxicity testing as required in accordance to NPDES permit requirements. Bartow freeboard limitation study was completed in May 2011 and submitted to FDEP on 6/23/11. The FDEP approved DEF's corrective action plan and Bartow is in compliance with Administrative Order as of December 2014. The copper discharge study at the Suwannee plant has been completed and a final report was submitted to the FDEP in June 2014.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $54k lower than originally projected due to lower than expected 316(a) thermal study costs at the Anclote and Bartow stations. 2015 capital expenditures are expected to be $86k lower than originally projected due to a vendor reimbursement payment.

**Project Progress Summary:**
DEF has begun complying with the requirements of the NPDES permits. Aquatic organism return study requirements have been postponed to align with the final EPA 316(b) rule requirements (Bartow/Anclote Plants) which was published 8/15/14. The aquatic organism return requirement is not a requirement in the Crystal River North NPDES permit. The dissolved oxygen study of cooling water intake and discharge at the Bartow plant was completed and the results of the study demonstrated there is no negative impact on DO due to the plant's operation. The final DO report was submitted to the FDEP on November 20, 2012, and the Department has not required any additional action. DEF continues to work with FDEP to resolve the copper issue at the Suwannee station.

**Project Projections:**
2016 estimated O&M expenditures are $60k. No capital expenditures are expected in 2016.

**Project Title:** **Mercury & Air Toxic Standards (MATS) CR4 & CR5**
**Project No. 17**

**Project Description:**
The Commission approved ECRC recovery of DEF's costs for compliance with new hazardous air pollutant standards at Crystal River Units 4 & 5 (CR4&5) in Order No. PSC-11-0553-FOF-EI. The final MATS rule was issued by the EPA on 12/21/11. The FDEP granted a limited, one-year extension for the mercury-related requirements on 3/12/15. DEF will utilize the co-benefits of the existing FGD and SCR systems as the primary MATS compliance measures. Additional monitoring and emissions reduction technologies will be installed in 2014 & 2015.

**Project Accomplishments:**
DEF installed ORP probes and particulate matter continuous emissions monitoring systems (PM CEMS) in 2014. In addition, a mercury characterization study was performed in late 2014, and temporary mercury re-emission control systems were installed in early 2015. DEF continues to monitor mercury emissions with Appendix K sorbent trap systems.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $153k higher than originally projected due to the addition of a temporary chemical injection system to control mercury emissions, and the cancellation of preliminary engineering for a fuel additive system to improve mercury oxidation. 2015 capital expenditures are expected to be $1.3M higher than originally projected driven by the installation of continuous emission monitoring systems (CEMS) for mercury monitoring, compliance demonstration and feedback to the re-emission control system.

**Project Progress Summary:**
Installation of mercury CEMS and permanent mercury re-emission control systems is scheduled in the third quarter of 2015. Certification and commissioning activities are expected to be completed by the end of the year.

**Project Projections:**
2016 estimated O&M is $529k. No capital expenditures are expected in 2016.

**Project Title:** **Mercury & Air Toxic Standards (MATS) Anclote Gas Conversion**
**Project No. 17.1**

**Project Description:**
Convert existing Anclote Units to use 100% natural gas to be in compliance with MATS as approved by the Commission in Order No. PSC-12-0432-PAA-EI.

**Project Accomplishments:**
Unit 1 and Unit 2 gas conversions were completed 7/13/13 and 12/2/13, respectively. Unit 1 and Unit 2 Forced Draft (FD) fan modification work was completed 5/22/14 and 11/17/14, respectively.

**Project Fiscal Expenditures:**
2015 capital expenditures are estimated to be $314k lower than originally projected due to earlier than expected completion of Unit 2 FD fan work in November 2013 versus December 2014. There are no recoverable O&M costs for this project.

**Project Progress Summary:**
This project is in-service.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Mercury & Air Toxic Standards (MATS) CR1 & CR2**
**Project No. 17.2**

**Project Description:**
DEF is implementing its CR1&2 MATS Compliance Plan as approved by the Commission in Order No. PSC-14-0173-PAA-EI. DEF will make modifications to the electrostatic precipitators to improve particulate collection efficiency, as well as install reagent injection systems to reduce HCl and mercury emissions.

**Project Accomplishments:**
DEF finalized its CR1&2 MATS Compliance Plan in December 2013 and began implementation in early 2014.

**Project Fiscal Expenditures:**
2015 O&M expenditures are expected to be $51k lower than expected. Capital expenditures are estimated to be $4.2M higher than originally projected due to an additional project related to the Unit 1 electrostatic precipitator (ESP).

**Project Progress Summary:**
Implementation of the CR1&2 MATS Compliance Plan will be completed by April 2016.

**Project Projections:**
2016 estimated O&M and capital expenditures are $3.8M and $2.6M, respectively.

**Project Title:** **Coal Combustion Residual (CCR) Rule**
**Project No. 18**

**Project Description:**
The Coal Combustion Residual (CCR) Rule was published in the Federal Register on 4/17/15 and is effective 10/19/15. this rule regulates the disposal of CCR as non-hazardous solid waste, and contains new requirements for CCR landfills and CCR surface impoundments. It also specifies implementation guidelines for compliance. The CCR compliance deadlines vary, with compliance obligations required as early as 10/19/15. the rule is self-implementing, meaning that affected facilities must comply with the new regulations irrespective of whether the rule is adopted by the State of Florida. The rule has specific impacts on the ash landfill, Flue Gas Desulfurization (FGD) lined blowdown ponds and temporary gypsum pad at the Crystal River site. No other DEF operating facilities are impacted by the CCR rule.

**Project Accomplishments:**
DEF began defining and implementing of its CCR Rule compliance strategy.

**Project Fiscal Expenditures:**
2015 estimated O&M and capital expenditures are $391k and $1.6M, respectively.

**Project Progress Summary:**
Ash Landfill: Two engineering firms are studying Crystal River ash landfill stability and ash placement.
Temporary Gypsum Pad: Efforts are underway to address fugitive dust mitigation at the CCR gypsum stack-out.
FGD Blowdown Ponds: A definitive assessment and action plan is being developed.
Emergency Action Plan: A determination if the CCR requires an EPA for the FGD Blowdown Ponds is in process.
Vegetation Mgt & Inspection Work: More frequent mowing and inspection work is planned to comply with the CCR Rule.

**Project Projections:**
2016 estimated O&M and capital expenditures are $1.8M and $3.9M, respectively. See the August 31, 2015 direct testimony of Mr. Miller for 2015 CCR compliance strategy change.

Notes:
(A) Line 3 x Line 5
(B) Line 4 x Line 6
(C) As explained in the testimony of Garry Miller, $75K of 2015 temporary dust mitigation resulting from shift of permanent capital solution from October 2015 to October 2016 is included in Jan-16.

**DUKE ENERGY FLORIDA, LLC**
**Environmental Cost Recovery Clause**
**Calculation of Projection Amount**
**January 2016 - December 2016**

**Capital Investment Projects-Recoverable Costs**
**(in Dollars)**

Notes:

(A) As explained in the testimony of Garry Miller, DEF has revised the permanent dust mitigation in-service date from October 2015 to October 2016 and determined vegetation management compliance can be achived without the 2015 capital investment. As a result, DEF has made these adjustments to ensure that the revenue requirement impact to customers is neutral.
(B) Line 6 x 10.36% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 5.12% and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-12-0425-PAA-EU Docket No. 120007-EI.

**Project Title:** **Substation Environmental Investigation, Remediation and Pollution Prevention**
**Project No. 1**

**Project Description:**
Chapter 376 Florida Statutes requires that any person discharging a prohibited pollutant shall undertake to contain, remove and abate the discharge to the satisfaction of the FDEP. Similarly, Chapter 403 Florida Statutes provides that it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. For DEF to comply with these statutes, it is actively conducting remediation and pollution prevention activities at its substation sites to remove the existence of pollutant discharges. Activities also include development and implementation of best management and pollution prevention measures at these sites.

**Project Accomplishments:**
As of 2nd Qtr end 2015, a total of 260 substation remediations are completed out of 279 slated for clean-up. DEF expects to remediate 3 more substations during the remainder of 2015.

**Project Fiscal Expenditures:**
2015 expenditures are estimated to be $405k lower than originally projected due to remediation work delays at the Consolidated Rock, Holder and Kenneth City substations.

**Project Progress Summary:**
DEF continues to remediate substation sites in accordance with the approved Substation Assessment and Remedial Action Plan (SARAP).

**Project Projections:**
2016 estimated expenditures are $1.1M.

**Project Title:** **Distribution System Environmental Investigation, Remediation and Pollution Prevention**
**Project No. 2**

**Project Description:**
Chapter 376 Florida Statutes requires that any person discharging a prohibited pollutant shall undertake to contain, remove and abate the discharge to the satisfaction of the FDEP. Similarly, Chapter 403 Florida Statutes provides that it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. For DEF to comply with these statutes, it is actively conducting remediation and pollution prevention activities at its distribution sites to remove the existence of pollutant discharges. Activities also include development and implementation of best management and pollution prevention measures at these sites.

**Project Accomplishments:**
As of 2nd Qtr end 2015, there are 3 remaining Transformer Replacement and Inspection Program (TRIP) sites.

**Project Fiscal Expenditures:**
2015 expenditures are estimated to be $42k higher than originally projected due to costs to remove additional impacted soil at the three remaining sites.

**Project Progress Summary:**
This project is on schedule according to the approved Distribution System Investigation, Remediation and Pollution Prevention Program.

**Project Projections:**
2016 estimated expenditures are $3k.

**Project Title:** **Pipeline Integrity Management (PIM) - Bartow/Anclote Pipeline**
**Project No. 3**

**Project Description:**
The U.S. Department of Transportation (USDOT) Regulation 49 CFR Part 195, as amended effective 2/15/02, and the new regulation published at 67 Federal Register 2136 on 1/16/02, requires DEF to implement a PIM program. Prior to the 2/15/02 amendments, the USDOT's PIM regulations applied only to operators with 500 miles or more of hazardous liquid and carbon dioxide pipelines that could affect high consequence areas. The amendments which became effective on 2/15/02, extended the requirements for implementing integrity management to operators who have less than 500 miles of regulated pipelines. As such, DEF must maintain the integrity of pipeline systems in order to protect public safety and the environment, and comply with continual assessment and evaluation of pipeline systems integrity through inspection or testing, data integration and analysis, and follow up with remedial, preventative, and mitigative actions. DEF owns one hazardous liquid pipeline, Bartow/Anclote 14-inch hot oil pipeline, extending 33.3 miles from the Company's Bartow Plant north of St. Petersburg to the Anclote Plant in Holiday, that is subject to PIM regulations.

Effective 2/2010, amendments to 49 CFR 195 were finalized to improve opportunities to reduce risk through more effective control of pipelines. Compliance with these amendments will enhance pipeline safety by coupling strengthened control room management with improved controller training and fatigue management. On 6/16/11, the USDOT published in the Federal Register (V0l. 76, 35130-35136), a final rule effective 8/15/11, that expedites the program implementation deadlines in the Control Room Management/Human Factors regulations in order to realize the safety benefits sooner than established in the original rule. This final rule amends the program implementation deadlines for different procedures to no later than 10/21/11 and 8/1/12.

**Project Accomplishments:**
Since the Bartow Anclote Pipeline (BAP) contains a small quantity of #6 fuel oil, the PIM program under 49CFR195 continues to be maintained. Third party projects by Florida Department of Transportation (FDOT), Florida Gas Transmission, Pinellas County, The City of Pinellas Park, and others have been evaluated for their risk to BAP integrity. Risk mitigation measures have been completed per 49CFR195.450. The BAP Risk Analysis has been updated. The Annual Report and National Pipeline Mapping System (NPMS) annual review have been completed. Reviews and evaluations are also being completed for Advisory Bulletins 11-04, 13-02, 15-01, and 15-02, relating to flooding and hurricanes. BAP personnel have participated in US Department of Transportation Pipeline and Hazardous Material Safety Administration (PHMSA), utility owners groups, damage prevention groups, and FDOT workshops and training. Pipeline accidents and PHMSA enforcement actions have been reviewed for conditions that are applicable to the BAP and appropriate changes to BAP practices and procedures have been implemented. Pipeline records are being organized and stored with the conversion to electronic storage now essentially complete.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $19k higher than originally projected due to increased costs to comply with PIM regulations. No capital expenditures are estimated for 2015.

**Project Progress Summary:**
Ongoing regulatory compliance activities will continue until pipeline is sold or retired.

**Project Projections:**
2016 estimated O&M expenditures are $696k. No capital expenditures are expected in 2016.

**Project Title:** **Above Ground Storage Tank Secondary Containment**
**Project No. 4**

**Project Description:**
FDEP Rule 62-761.510(3) states that DEF is required to make improvements to its above ground petroleum storage tanks in order to comply with those provisions. Subsection (d) of the rule requires all internally lined single bottom above ground storage tanks to be upgraded with secondary containment, including secondary containment for piping in contact with the soil. Rule 62-761.500(1)(e) also requires that dike field area containment for pre-1998 tanks be upgraded, if needed, to comply with the requirement.

**Project Accomplishments:**
DEF has completed work at Debary 1 and 2, Turner 7, Turner 8, Higgins 1, and Bartow 6 as well as Turner P-1 and P-2 piping work.

**Project Fiscal Expenditures:**
No project expenditures are expected in 2015.

**Project Progress Summary:**
DEF continually evaluates its compliance program, including project prioritization, schedule and technology applications.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **$SO_2$ and NOx Emissions Allowances**
**Project No. 5**

**Project Description:**
In accordance with the Acid Rain Program in Title IV of the Clean Air Act, CFR 40 Part 73 and Part 76, Florida Administrative Code Rule 62-214 and the Clean Air Interstate Rule (CAIR), DEF manages sulfur dioxide ($SO_2$) and nitrogen oxide (NOx)allowance inventory to offset emissions. On 7/6/11, the EPA issued the Cross-State Air Pollution Rule (CSAPR) to replace the CAIR. The CSAPR significantly alters $SO_2$ and NOx allowance programs. Under the CAIR, Florida has to comply with annual $SO_2$ and NOx emission requirements, and seasonal NOx emission requirements. Under the CSAPR, Florida is no longer required to comply with annual emissions requirements, only ozone seasonal limits. On 8/8/11, the final CSAPR was published in the Federal Register. The CSAPR sets state-level annual and seasonal $SO_2$ and NOx emission allowance requirements effective 1/1/12.

On 8/21/12, the D.C. Circuit Court vacated the CSAPR. It also directed the EPA to continue administering the CAIR which requires additional reductions in $SO_2$ and NOx emissions beginning in 2015. On 4/29/14, the U.S. Supreme Court reversed the D.C. Circuit Court decision finding that with CSAPR the EPA reasonably interpreted the good neighbor provision of the Clean Air Act. The case was then remanded to the D.C. Circuit Court for further proceedings, and the EPA requested the court lift the CSAPR stay and direct it to take effect on 1/1/15. On 10/23/14 the D.C. Circuit Court lifted the CSAPR stay. On 1/1/15, the CSAPR replaced the CAIR. The CSAPR took effect in Florida on 5/1/15. Consequently, CAIR NOx emission allowances have no value; however, SO2 emission allowances can continue to be used to comply with the Acid Rain Program. DEF is treating its unused NOx costs as a regulatory asset amortizing it over 3 years, as approved by the Commission in Order No. PSC-11-0553-FOF-EI.

**Project Accomplishments:**
Air quality compliance costs are administered by an authorized account representative who evaluates a variety of resources and options. Activities performed include purchases of SO2 and NOx emissions allowances as well as auctions and transfers of SO2 emissions allowances.

**Project Fiscal Expenditures:**
2015 emission allowance expenditures are estimated to be $1.5M higher than originally projected due to unusable NOx emission allowances as a result of the expiration of the CAIR. CAIR was replaced by the CSAPR on 1/1/15. Consistent with Order No. PSC-11-0553-FOF-EI, DEF is treating costs associated with its unusable CAIR NOx emission allowances as a regulatory asset amortizing it over 3 years, beginning 1/1/15 until fully recovered by 12/31/17, with a return on the unamortized investment.

**Project Progress Summary:**
DEF continually evaluates the status of emission rules to maximize the cost effectiveness of its compliance strategy.

**Project Projections:**
2016 estimated expenditures are $111k. 2016 amortization of the CAIR NOx regulatory asset is approximately $3.6M.

**Project Title:** **Phase II Cooling Water Intake**
**Project No. 6**

**Project Description:**
Section 316(b) of the Federal Clean Water Act requires that the location, design, construction, and capacity of cooling water intake structures reflect the best technology available for minimizing adverse environmental impact. 33 U.S.C. Section 1326. On 5/19/14, the EPA Administrator signed a final 316(b) rule to protect fish and aquatic life drawn into cooling systems at power plant and factories. The rule aims to minimize impingement (aquatic life pinned against cooling water intake structures) and entrainment (aquatic life drawn into cooling water systems). The regulation became effective on October 14, 2014, 60 days after publication in the Federal Register which was 8/15/14.

**Project Accomplishments:**
DEF is currently evaluating the 316(b) rule to determine potential study requirements, operating and cost impacts to its generating stations. Site specific strategic plans are under development to ensure compliance with all applicable requirements of the rule.

**Project Fiscal Expenditures:**
2015 project expenditures are estimated to be $43k lower than originally projected as methods used to allocate costs to analyze 316(b) compliance strategies at each affected Duke Energy station were adjusted to reflect present configurations and operations. DEF intends to implement a consistent approach across its entire fleet of regulated units to focus on full compliance with applicable 316(b) requirements through the development of facility specific strategic plans.

**Project Progress Summary:**
Initial steps in site specific plan development have been completed. Work continues on plans for implementation, decision milestones, compliance approaches, and study requirements.

**Project Projections:**
2016 estimated O&M expenditures are $440k. No capital expenditures are expected in 2016.

**Project Title:** **Integrated Clean Air Compliance Plan - Clean Air Interstate Rule (CAIR)**
**Project Nos. (7.2, 7.3 & 7.4)**

**Project Description:**
The Clean Air Interstate Rule (CAIR), 40 CFR 24, 262, imposes significant restrictions on emissions of $SO_2$ and NOx from power plants in 28 eastern states, including Florida and the District of Columbia. The CAIR rule apportions region-wide $SO_2$ and NOx emission reduction requirements to the individual states, and further requires each affected state to revise its State Implementation Plans (SIPs) to include measures necessary to achieve its emission reduction budget within prescribed deadlines.

The Cross-State air pollution Rule (CSAPR) replaced CAIR on 1/1/15. Under the CSAPR, the State of Florida is not longer required to comply with annual emission requirements, only NOx ozone seasonal limits. The CSAPR requirements took effect in Florida on 5/1/15, the beginning of the ozone season. NOx emission allowances under CAIR have no value; however, DEF will continue to use its SO2 emission allowances to comply with the Acid Rain Program. (see Project No. 5 - SO2 and NOx Emission Allowances Project Sheet for more information)

**Project Accomplishments:**
The reclaimed water reuse system project was placed in-service in July 2015. This project will provide DEF with up to 1 1/2 million gallons per day of reclaimed water from the City of Crystal River to supplement well water use. This project has positive environmental impacts as it reduces aquifer use.

**Project Fiscal Expenditures:**
2015 estimated O&M expenditures are estimated to be $661k higher than originally projected due to a $710 decrease in CAIR Crystal River Project 7.4 - Base costs and $1.4 million increase in CAIR Crystal River Project 7.4 - Energy costs. The $710k is due to lower base routine project costs. The $1.4M is due to higher ammonia and hydrated lime costs offset by lower limestone and gypsum costs. 2015 estimated capital expenditures are expected to be $124k higher than originally projected due to a shift in spending from 2014 to 2015 in order to align with the City of Crystal River reclaimed water reuse project timeline.

**Project Progress Summary:**
DEF continues to comply with the CAIR, CSAPR and the Acid Rain Program.

**Project Projections:**
2016 estimated O&M and capital expenditures are $34.4M and $713k, respectively.

**Project Title:** **Best Available Retrofit Technology (BART)**
**Project No. 7.5**

**Project Description:**
On 5/25/12, the EPA proposed a partial disapproval of Florida's proposed Regional Haze State Implementation Plan (SIP) because the proposed SIP relies on CAIR to satisfy BART requirements for $SO_2$ and NOx emissions. CAIR remained in effect while litigation against the Cross State Air Pollution Rule (CSAPR) proceeded, and the EPA incorporated the CSAPR in place of CAIR into Regional Haze SIPs, including Florida. DEF worked with the FDEP to develop specific BART and Reasonable Progress permits for affected units that were incorporated into Florida's revised SIP submittal, which was filed with EPA on 9/17/12. The final BART permit applications for Crystal River fossil units were submitted to EPA on 10/15/12 as a supplement to the 9/17/12 submittal. Permitting was finalized in 2013 with an effective date of January 1, 2014.

**Project Accomplishments:**
DEF performed required emissions modeling and associated BART analysis for Crystal River 1&2 (CR1&2) and Anclote plants, developed and submitted a Reasonable Progress evaluation for Crystal River 4&5, developed and submitted necessary BART Implementation Plans and air construction permit applications in support of the FDEP's work to amend its SIP as directed by the EPA. Permitting actions were completed in 2013 with the effective date of the CR 1& 2 permit being January 1, 2014.

**Project Fiscal Expenditures:**
No project expenditures are expected in 2015.

**Project Progress Summary:**
DEF performed required emissions modeling and associated BART analysis for CR1&2 and Anclote, developed and submitted a Reasonable Progress evaluation for Crystal River 4&5, developed and submitted necessary BART Implementation Plans and air construction permit applications needed in support of the FDEP ongoing work to amend its State Implementation Plan as directed by the EPA. Based on the revised Regional Haze SIP incorporating the provisions of Crystal River's BART permits for $SO_2$ and NOx, EPA on 12/10/12 proposed approval of the SIP. In August 2013, EPA finalized the full approval of the SIP. The Crystal River South BART permit became effective on January 1, 2014 and DEF is now operating under the terms of that permit.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **Arsenic Groundwater Standard**
**Project No. 8**

**Project Description:**
On 1/22/01, the EPA adopted a new maximum contaminant level (MCL) for arsenic in drinking water replacing the previous standard of 0.050 mg/L (50ppb) with a new MCL of 0.010 mg/L (10ppb). Effective 1/1/05, the FDEP established the USEPA MCL as Florida's drinking water standard. See Rule 62-550, F.A.C. The new standard has implications for land application and water reuse projects in Florida because the drinking water standard has been established as the groundwater standard by Rule 62-520.420(1), F.A.C. Lowering the arsenic standard will require new analytical methods for sampling groundwater at numerous DEF sites.

**Project Accomplishments:**
DEF has completed required monitoring as directed by the FDEP.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $23k higher than originally projected due to consultant costs to evaluate the source of arsenic exceedances and issue a summery report in compliance with FDEP Consent Order No. 09-3463C executed on 11/21/11. The Consent Order was issued by the FDEP for exceedance of the arsenic groundwater limit when the EPA lowered the arsenic maximum containment level from 50ppb to 10 ppb.

**Project Progress Summary:**
DEF is evaluating monitoring data and other options to achieve compliance in accordance to Consent Order.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **Sea Turtle - Coastal Street Lighting**
**Project No. 9**

**Project Description:**
DEF owns and leases high pressure sodium streetlights throughout its service territory, including areas along the Florida coast. Pursuant to Section 161.163, Florida Statutes, the FDEP, in collaboration with the Florida Fish and Wildlife Conservation Commission (FFWCC) and the U.S. Fish & Wildlife Service (USFWS), has developed a model Sea Turtle lighting ordinance. The model ordinance is used by the local governments to develop and implement ordinances within its jurisdiction. To date, Sea Turtle lighting ordinances have been adopted in Franklin County, Gulf County, City of Mexico Beach in Bay County and Pinellas County, all of which are within DEF's service territory. Since 2004, officials from the various local governments, as well as the FDEP, FFWC, and USFWS, have advised DEF that lighting it owns and leases is affecting turtle nesting areas that fall within the scope of these ordinances. As a result, local governments require DEF to take additional measures to satisfy new criteria being applied to ensure compliance with the sea turtle ordinances.

**Project Accomplishments:**
DEF continues to work with Franklin County, Gulf County, City of Mexico Beach in Bay County, and Pinellas County to mitigate any potential sea turtle nesting issues by retrofitting existing street lights, placing amber shields on existing HPS street lights and monitoring street lights for effectiveness in complying with sea turtle ordinances.

**Project Fiscal Expenditures:**
2015 capital expenditures are estimated to be $3k lower than originally projected. No new street lighting has been required in Franklin County, the City of Mexico Beach in Bay county or GULF County as DEF is in compliance with sea turtle ordinances. Also, the Don Cesar lighting project is delayed from 2014 to late 4th quarter 2015 due to scheduling conflicts.

**Project Progress Summary:**
DEF is on schedule with activities identified for this program.

**Project Projections:**
2016 estimated project O&M and capital expenditures are $450 and $750, respectively.

**Project Title:** **Underground Storage Tanks**
**Project No. 10**

**Project Description:**
FDEP regulations require that underground pollutant storage tanks and small diameter piping be upgraded with secondary containment by 12/31/09. See Rule 62-761.510(5), F.A.C. DEF identified four tanks that must comply with this rule: two at Crystal River Plant and two at Bartow Plant.

**Project Accomplishments:**
Work on Crystal River and Bartow USTs was completed in 4th Qtr 2006.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF continually evaluates its compliance program, including project prioritization, schedule and technology applications.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Modular Cooling Towers**
**Project No. 11**

**Project Description:**
This project involves installation and operation of modular cooling towers in the summer months to minimize de-rates of Crystal River 1&2 (CR1&2) necessary to comply with the NPDES permit limit for the temperature of cooling water discharged from the units.

**Project Accomplishments:**
Vendors of modular cooling towers were evaluated regarding cost of installation and operation. The FDEP reviewed the project and approved operation. A vendor was selected and the towers were installed during the 2nd Qtr 2006.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
The modular cooling towers began operation in June 2006 and successfully minimized de-rates of CR 1&2. The towers were removed during the first half of 2012. This project is complete.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Crystal River Thermal Discharge Compliance Project**
**Project No. 11.1**

**Project Description:**
This project was to evaluate and implement the best long term solution to maintain compliance with the thermal discharge limit in the FDEP industrial wastewater permit for Crystal River Units 1,2&3 that was being addressed in the short term by the Modular Cooling Towers approved in Docket No. 060162-EI. Due to DEF's decision to retire CR3, this project is no longer necessary and will not be implemented.

**Project Accomplishments:**
The study phase of the project was completed with a recommendation to replace the leased modular cooling towers in coordination with the cooling solution for the CR3 Extended Power Uprate (EPU) discharge canal cooling solution. The new cooling tower associated with the CR3 EPU was to be sized to mitigate both increased temperatures from the EPU as well as replace the modular cooling towers, which were removed in 2012. The design contract for the CR3 EPU cooling tower was awarded and a vendor selected. In February 2013, DEF decided to retire CR3; therefore, the project will not proceed.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
Crystal River Units 1,2&3 utilize a once-through cooling water process to cool and condense turbine exhaust steam back to water. The cooling water is removed from the Gulf of Mexico via an intake canal and discharged to a common discharge canal shared by all of the generating units. DEF has a NPDES industrial wastewater permit from the FDEP to discharge this cooling water from CR 1,2&3 into the Gulf of Mexico. The FDEP NPDES permit includes a limit on the temperature of the cooling water discharge (96.5 degrees Fahrenheit on a three-hour rolling average) measured at the point of discharge to the Gulf of Mexico. The new cooling towers were being added as a long term solution to the issue of higher ambient water temperatures previously being addressed by the modular cooling towers and added heat rejection due to the estimated 180MWe Uprate of CR3. With the retirement of CR3, the heat rejection associated with the entire unit is removed and therefore the new cooling tower is not necessary for the continued operation of CR 1&2 within the NPDES permit limits.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Greenhouse Gas (GHG) Inventory and Reporting**
**Project No. 12**

**Project Description:**
The GHG Inventory and Reporting Program was created in response to Chapter 2008-277, Florida Laws, which established the Florida Climate Protection Act to be codified at section 403.44, Florida Statutes. Among other things, this legislation authorizes the FDEP to establish a cap and trade program for GHG emissions from power plants. Utilities subject to the program, including DEF, will be required to use The Climate Registry for purposes of GHG emission registration and reporting. The requirement to report to The Climate Registry was repealed during the 2010 legislative session; however, the EPA GHG Reporting Rule (40 CFR 98) does require DEF to submit 2010 GHG data to the EPA no later than 9/30/2011.

**Project Accomplishments:**
In 2009, DEF joined The Climate Registry and submitted 2008 GHG inventory data. 2009 data was submitted during the third quarter of 2010. Both 2008 and 2009 data was validated by a third party as required by The Climate Registry. 2010 GHG inventory data was submitted to EPA on 9/30/11 and EPA does not require data validation by a third party. DEF has discontinued its membership with The Climate Registry. Since third party validation is not required by the EPA, no future expenditures will be incurred by DEF resulting in the completion of this project.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF submits GHG inventory data directly to EPA which does not require third party validation. Membership with The Climate Registry has been discontinued.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Mercury Total Daily Maximum Loads Monitoring (TMDL)**
**Project No. 13**

**Project Description:**
Section 303(d) of the Federal Clean Water Act requires each state to identify state waters not meeting water quality standards and establish a TMDL for the pollutant or pollutants causing the failure to meet standards. Under a 1999 federal consent decree, TMDLs for over 100 Florida water bodies listed as impaired for mercury must be established by 9/12/12. The FDEP has initiated a research program to provide necessary information for setting appropriate TMDLs for mercury. Among other things, the study will assess the relative contributions of mercury-emitting sources, such as coal-fired power plants, to mercury levels in surface waters.

**Project Accomplishments:**
Atmospheric & Environmental Research, Inc (AER) completed the literature review on mercury deposition in Florida. This document was sent to the FDEP Division of Air Resource Management and the TMDL team for review in February 2009. In addition, the Florida Electric Power Coordinating Group (FCG) Mercury Task Force met with FDEP Division of Air Resource Management to discuss the review in January 2010. AER performed Florida mercury deposition modeling for the Division of Air Resource Management. The FCG Mercury Task Force contracted with Tetra Tech to conduct aquatic field sampling, including an aquatics modeling report, to develop a "Conceptual Model for the Florida Mercury TMDL." This document was finalized and submitted to the FDEP in December 2010. Key personnel from AER were employed by Environ in 2011 and FCG established a contract with Environ to ensure continuity of the project. FCG used Environ and Tetra Tech to review and critique FDEP's aquatic cycling and atmospheric modeling analyses. The FDEP developed a mercury TMDL report in the spring and summer of 2012, and it proposed a TMDL in September 2012. The EPA approved Florida's statewide mercury TMDL in a letter dated October 18, 2013. Florida's mercury TMDL covers 441 waters listed as impaired for mercury based on fish tissue mercury levels. EPA's approval letter states that if FDEP identifies any new waters to be listed as impaired for mercury, a new TMDL will not be required if the listing is caused by the factors addressed in the approved TMDL. Conversely, a new TMDL, addressing the newly listed water body, would be required if "local emission or effluent sources" are determined to be the cause of the elevated fish tissue levels that required the new listing.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
The mercury TMDL study concluded in 2012.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Hazardous Air Pollutants (HAPs) ICR Program**
**Project No. 14**

**Project Description:**
In 2009, the EPA initiated efforts to develop an Information Collection Request (ICR), which requires that owners/operators of all coal- and oil-fired electric utility steam generating units provide information that will allow the EPA to assess emissions of hazardous air pollutants from each such unit. The intention of the ICR is to assist the Administrator of the EPA in developing national emission standards for hazardous air pollutants under Section 112(d) of the Clean Air Act, 42 U.S.C. 7412. Pursuant to those efforts, by letter dated 12/24/09, the EPA formally requested DEF comply with certain data collection and emissions testing requirements for several of its steam electric generating units. The EPA letter states that initial submittal of existing information must be made within 90 days, and that the remaining data must be submitted within 8 months. Collection and submittal of the requested information is mandatory under Section 114 of the Clean Air Act, 42 U.S.C. 7414.

**Project Accomplishments:**
DEF completed and submitted the ICR to EPA during 2010. The HAPS ICR project is complete.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF completed and submitted the ICR to EPA during 2010.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Effluent Limitation Guidelines ICR Program**
**Project No. 15**

**Project Description:**
The Effluent Limitation Guidelines ICR Program was created in response to Section 304 of the Federal Clean Water Act which directs the EPA to develop and periodically review regulations, called effluent guidelines, to limit the amount of pollutants that are discharged to surface waters from various point source categories. 33 U.S.C. §13 14(b). In October 2009, the EPA announced that it intended to update the effluent guidelines for the steam electric power generating point source category, which were last updated in 1982. DEF is required to complete the ICR and submit responses to the EPA within 90 days. Collection and submittal of the requested information is mandatory under Section 308 of the Clean Water Act.

**Project Accomplishments:**
DEF completed and submitted the ICR to the EPA in September 2010. The Effluent Limitation Guidelines ICR Program is complete.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF completed and submitted the ICR to EPA in September 2010.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **National Pollutant Discharge Elimination System (NPDES)**
**Project No. 16**

**Project Description:**
Pursuant to the Federal Clean Water Act, 33 U.S.C. § 1342, all point source discharges to navigable waters from industrial facilities must obtain permits under the NPDES Program. The FDEP administers the NPDES program in Florida. DEF's Anclote, Bartow, and Crystal River North, Crystal River South, and Suwannee NPDES permits were issued on 1/14/11, 2/14/11, 7/18/11,4/7/14 and 11/28/11, respectively. All facilities are required to meet new permitting conditions. In Docket No. 110007-EI, the Commission approved recovery of costs associated with new requirements included or expected to be included in the new renewal permits, including: thermal studies, aquatic organism return studies and implementation, whole effluent toxicity testing, dissolved oxygen (DO) studies (Bartow only), and freeboard limitation related studies (Bartow only). As noted in DEF's 2/8/12 program update, on 12/14/11, the FDEP issued a final NPDES renewal permit and associated Administrative Order (AO) for the Suwannee Plant. The AO includes a new requirement to assess copper discharges that DEF did not anticipate when it filed its petition in 2011.

**Project Accomplishments:**
DEF continues to perform thermal studies and whole effluent toxicity testing as required in accordance to NPDES permit requirements. Bartow freeboard limitation study was completed in May 2011 and submitted to FDEP on 6/23/11. The FDEP approved DEF's corrective action plan and Bartow is in compliance with Administrative Order as of December 2014. The copper discharge study at the Suwannee plant has been completed and a final report was submitted to the FDEP in June 2014.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $54k lower than originally projected due to lower than expected 316(a) thermal study costs at the Anclote and Bartow stations. 2015 capital expenditures are expected to be $86k lower than originally projected due to a vendor reimbursement payment.

**Project Progress Summary:**
DEF has begun complying with the requirements of the NPDES permits. Aquatic organism return study requirements have been postponed to align with the final EPA 316(b) rule requirements (Bartow/Anclote Plants) which was published 8/15/14. The aquatic organism return requirement is not a requirement in the Crystal River North NPDES permit. The dissolved oxygen study of cooling water intake and discharge at the Bartow plant was completed and the results of the study demonstrated there is no negative impact on DO due to the plant's operation. The final DO report was submitted to the FDEP on November 20, 2012, and the Department has not required any additional action. DEF continues to work with FDEP to resolve the copper issue at the Suwannee station.

**Project Projections:**
2016 estimated O&M expenditures are $60k. No capital expenditures are expected in 2016.

**Project Title:** **Mercury & Air Toxic Standards (MATS) CR4 & CR5**
**Project No. 17**

**Project Description:**
The Commission approved ECRC recovery of DEF's costs for compliance with new hazardous air pollutant standards at Crystal River Units 4 & 5 (CR4&5) in Order No. PSC-11-0553-FOF-EI. The final MATS rule was issued by the EPA on 12/21/11. The FDEP granted a limited, one-year extension for the mercury-related requirements on 3/12/15. DEF will utilize the co-benefits of the existing FGD and SCR systems as the primary MATS compliance measures. Additional monitoring and emissions reduction technologies will be installed in 2014 & 2015.

**Project Accomplishments:**
DEF installed ORP probes and particulate matter continuous emissions monitoring systems (PM CEMS) in 2014. In addition, a mercury characterization study was performed in late 2014, and temporary mercury re-emission control systems were installed in early 2015. DEF continues to monitor mercury emissions with Appendix K sorbent trap systems.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $153k higher than originally projected due to the addition of a temporary chemical injection system to control mercury emissions, and the cancellation of preliminary engineering for a fuel additive system to improve mercury oxidation. 2015 capital expenditures are expected to be $1.3M higher than originally projected driven by the installation of continuous emission monitoring systems (CEMS) for mercury monitoring, compliance demonstration and feedback to the re-emission control system.

**Project Progress Summary:**
Installation of mercury CEMS and permanent mercury re-emission control systems is scheduled in the third quarter of 2015. Certification and commissioning activities are expected to be completed by the end of the year.

**Project Projections:**
2016 estimated O&M is $529k. No capital expenditures are expected in 2016.

**Project Title:** **Mercury & Air Toxic Standards (MATS) Anclote Gas Conversion**
**Project No. 17.1**

**Project Description:**
Convert existing Anclote Units to use 100% natural gas to be in compliance with MATS as approved by the Commission in Order No. PSC-12-0432-PAA-EI.

**Project Accomplishments:**
Unit 1 and Unit 2 gas conversions were completed 7/13/13 and 12/2/13, respectively. Unit 1 and Unit 2 Forced Draft (FD) fan modification work was completed 5/22/14 and 11/17/14, respectively.

**Project Fiscal Expenditures:**
2015 capital expenditures are estimated to be $314k lower than originally projected due to earlier than expected completion of Unit 2 FD fan work in November 2013 versus December 2014. There are no recoverable O&M costs for this project.

**Project Progress Summary:**
This project is in-service.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Mercury & Air Toxic Standards (MATS) CR1 & CR2**
**Project No. 17.2**

**Project Description:**
DEF is implementing its CR1&2 MATS Compliance Plan as approved by the Commission in Order No. PSC-14-0173-PAA-EI. DEF will make modifications to the electrostatic precipitators to improve particulate collection efficiency, as well as install reagent injection systems to reduce HCl and mercury emissions.

**Project Accomplishments:**
DEF finalized its CR1&2 MATS Compliance Plan in December 2013 and began implementation in early 2014.

**Project Fiscal Expenditures:**
2015 O&M expenditures are expected to be $51k lower than expected. Capital expenditures are estimated to be $4.2M higher than originally projected due to an additional project related to the Unit 1 electrostatic precipitator (ESP).

**Project Progress Summary:**
Implementation of the CR1&2 MATS Compliance Plan will be completed by April 2016.

**Project Projections:**
2016 estimated O&M and capital expenditures are $3.8M and $2.6M, respectively.

**Project Title:** **Coal Combustion Residual (CCR) Rule**
**Project No. 18**

**Project Description:**
The Coal Combustion Residual (CCR) Rule was published in the Federal Register on 4/17/15 and is effective 10/19/15. this rule regulates the disposal of CCR as non-hazardous solid waste, and contains new requirements for CCR landfills and CCR surface impoundments. It also specifies implementation guidelines for compliance. The CCR compliance deadlines vary, with compliance obligations required as early as 10/19/15. the rule is self-implementing, meaning that affected facilities must comply with the new regulations irrespective of whether the rule is adopted by the State of Florida. The rule has specific impacts on the ash landfill, Flue Gas Desulfurization (FGD) lined blowdown ponds and temporary gypsum pad at the Crystal River site. No other DEF operating facilities are impacted by the CCR rule.

**Project Accomplishments:**
DEF began defining and implementing of its CCR Rule compliance strategy.

**Project Fiscal Expenditures:**
2015 estimated O&M and capital expenditures are $391k and $1.6M, respectively.

**Project Progress Summary:**
Ash Landfill: Two engineering firms are studying Crystal River ash landfill stability and ash placement.
Temporary Gypsum Pad: Efforts are underway to address fugitive dust mitigation at the CCR gypsum stack-out.
FGD Blowdown Ponds: A definitive assessment and action plan is being developed.
Emergency Action Plan: A determination if the CCR requires an EPA for the FGD Blowdown Ponds is in process.
Vegetation Mgt & Inspection Work: More frequent mowing and inspection work is planned to comply with the CCR Rule.

**Project Projections:**
2016 estimated O&M and capital expenditures are $1.8M and $3.9M, respectively. See the August 31, 2015 direct testimony of Mr. Miller for 2015 CCR compliance strategy change.

Notes:

(A) Unusable NOx emission allowances due expiration of Clean Air Interstate Rule (CAIR) on 12/31/14 replaced by Cross State Air Pollution Rule (CSAPR) on 1/1/15. DEF is treating these costs as a regulatory asset and amortizing these costs over 3 years conisistent with Order No. PSC-11-0553-FOF-EI.

(B) Line 3 x 10.36% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 5.12% and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-12-0425-PAA-EU Docket No. 120007-EI.

(C) Line 5 is reported on Capital Schedule

(D) Line 7 is reported on O&M Schedule

(E) Line 9a x Line 10a

(F) Line 9b x Line 10b

Notes:

(A) As explained in the testimony of Garry Miller, DEF has revised the permanent dust mitigation in-service date from October 2015 to October 2016 and determined vegetation management compliance can be achived without the 2015 capital investment. As a result, DEF has made these adjustments to ensure that the revenue requirement impact to customers is neutral.
(B) Line 6 x 10.36% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 5.12% and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-12-0425-PAA-EU Docket No. 120007-EI.
(C) Line 2 x rate x 1/12. Depreciation rate based on approved rates in Order PSC-10-0131-FOF-EI.
(D) Line 2 x rate x 1/12. Based on 2014 Effective Tax Rate on original cost.
(E) Line 9a x Line 10
(F) Line 9b x Line 11

**Project Title:** **Substation Environmental Investigation, Remediation and Pollution Prevention**
**Project No. 1**

**Project Description:**
Chapter 376 Florida Statutes requires that any person discharging a prohibited pollutant shall undertake to contain, remove and abate the discharge to the satisfaction of the FDEP. Similarly, Chapter 403 Florida Statutes provides that it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. For DEF to comply with these statutes, it is actively conducting remediation and pollution prevention activities at its substation sites to remove the existence of pollutant discharges. Activities also include development and implementation of best management and pollution prevention measures at these sites.

**Project Accomplishments:**
As of 2nd Qtr end 2015, a total of 260 substation remediations are completed out of 279 slated for clean-up. DEF expects to remediate 3 more substations during the remainder of 2015.

**Project Fiscal Expenditures:**
2015 expenditures are estimated to be $405k lower than originally projected due to remediation work delays at the Consolidated Rock, Holder and Kenneth City substations.

**Project Progress Summary:**
DEF continues to remediate substation sites in accordance with the approved Substation Assessment and Remedial Action Plan (SARAP).

**Project Projections:**
2016 estimated expenditures are $1.1M.

**Project Title:** **Distribution System Environmental Investigation, Remediation and Pollution Prevention**
**Project No. 2**

**Project Description:**
Chapter 376 Florida Statutes requires that any person discharging a prohibited pollutant shall undertake to contain, remove and abate the discharge to the satisfaction of the FDEP. Similarly, Chapter 403 Florida Statutes provides that it is prohibited to cause pollution so as to harm or injure human health or welfare, animal, plant, or aquatic life or property. For DEF to comply with these statutes, it is actively conducting remediation and pollution prevention activities at its distribution sites to remove the existence of pollutant discharges. Activities also include development and implementation of best management and pollution prevention measures at these sites.

**Project Accomplishments:**
As of 2nd Qtr end 2015, there are 3 remaining Transformer Replacement and Inspection Program (TRIP) sites.

**Project Fiscal Expenditures:**
2015 expenditures are estimated to be $42k higher than originally projected due to costs to remove additional impacted soil at the three remaining sites.

**Project Progress Summary:**
This project is on schedule according to the approved Distribution System Investigation, Remediation and Pollution Prevention Program.

**Project Projections:**
2016 estimated expenditures are $3k.

**Project Title:** **Pipeline Integrity Management (PIM) - Bartow/Anclote Pipeline**
**Project No. 3**

**Project Description:**
The U.S. Department of Transportation (USDOT) Regulation 49 CFR Part 195, as amended effective 2/15/02, and the new regulation published at 67 Federal Register 2136 on 1/16/02, requires DEF to implement a PIM program. Prior to the 2/15/02 amendments, the USDOT's PIM regulations applied only to operators with 500 miles or more of hazardous liquid and carbon dioxide pipelines that could affect high consequence areas. The amendments which became effective on 2/15/02, extended the requirements for implementing integrity management to operators who have less than 500 miles of regulated pipelines. As such, DEF must maintain the integrity of pipeline systems in order to protect public safety and the environment, and comply with continual assessment and evaluation of pipeline systems integrity through inspection or testing, data integration and analysis, and follow up with remedial, preventative, and mitigative actions. DEF owns one hazardous liquid pipeline, Bartow/Anclote 14-inch hot oil pipeline, extending 33.3 miles from the Company's Bartow Plant north of St. Petersburg to the Anclote Plant in Holiday, that is subject to PIM regulations.

Effective 2/2010, amendments to 49 CFR 195 were finalized to improve opportunities to reduce risk through more effective control of pipelines. Compliance with these amendments will enhance pipeline safety by coupling strengthened control room management with improved controller training and fatigue management. On 6/16/11, the USDOT published in the Federal Register (V0l. 76, 35130-35136), a final rule effective 8/15/11, that expedites the program implementation deadlines in the Control Room Management/Human Factors regulations in order to realize the safety benefits sooner than established in the original rule. This final rule amends the program implementation deadlines for different procedures to no later than 10/21/11 and 8/1/12.

**Project Accomplishments:**
Since the Bartow Anclote Pipeline (BAP) contains a small quantity of #6 fuel oil, the PIM program under 49CFR195 continues to be maintained. Third party projects by Florida Department of Transportation (FDOT), Florida Gas Transmission, Pinellas County, The City of Pinellas Park, and others have been evaluated for their risk to BAP integrity. Risk mitigation measures have been completed per 49CFR195.450. The BAP Risk Analysis has been updated. The Annual Report and National Pipeline Mapping System (NPMS) annual review have been completed. Reviews and evaluations are also being completed for Advisory Bulletins 11-04, 13-02, 15-01, and 15-02, relating to flooding and hurricanes. BAP personnel have participated in US Department of Transportation Pipeline and Hazardous Material Safety Administration (PHMSA), utility owners groups, damage prevention groups, and FDOT workshops and training. Pipeline accidents and PHMSA enforcement actions have been reviewed for conditions that are applicable to the BAP and appropriate changes to BAP practices and procedures have been implemented. Pipeline records are being organized and stored with the conversion to electronic storage now essentially complete.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $19k higher than originally projected due to increased costs to comply with PIM regulations. No capital expenditures are estimated for 2015.

**Project Progress Summary:**
Ongoing regulatory compliance activities will continue until pipeline is sold or retired.

**Project Projections:**
2016 estimated O&M expenditures are $696k. No capital expenditures are expected in 2016.

**Project Title:** **Above Ground Storage Tank Secondary Containment**
**Project No. 4**

**Project Description:**
FDEP Rule 62-761.510(3) states that DEF is required to make improvements to its above ground petroleum storage tanks in order to comply with those provisions. Subsection (d) of the rule requires all internally lined single bottom above ground storage tanks to be upgraded with secondary containment, including secondary containment for piping in contact with the soil. Rule 62-761.500(1)(e) also requires that dike field area containment for pre-1998 tanks be upgraded, if needed, to comply with the requirement.

**Project Accomplishments:**
DEF has completed work at Debary 1 and 2, Turner 7, Turner 8, Higgins 1, and Bartow 6 as well as Turner P-1 and P-2 piping work.

**Project Fiscal Expenditures:**
No project expenditures are expected in 2015.

**Project Progress Summary:**
DEF continually evaluates its compliance program, including project prioritization, schedule and technology applications.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **$SO_2$ and NOx Emissions Allowances**
**Project No. 5**

**Project Description:**
In accordance with the Acid Rain Program in Title IV of the Clean Air Act, CFR 40 Part 73 and Part 76, Florida Administrative Code Rule 62-214 and the Clean Air Interstate Rule (CAIR), DEF manages sulfur dioxide ($SO_2$) and nitrogen oxide (NOx)allowance inventory to offset emissions. On 7/6/11, the EPA issued the Cross-State Air Pollution Rule (CSAPR) to replace the CAIR. The CSAPR significantly alters $SO_2$ and NOx allowance programs. Under the CAIR, Florida has to comply with annual $SO_2$ and NOx emission requirements, and seasonal NOx emission requirements. Under the CSAPR, Florida is no longer required to comply with annual emissions requirements, only ozone seasonal limits. On 8/8/11, the final CSAPR was published in the Federal Register. The CSAPR sets state-level annual and seasonal $SO_2$ and NOx emission allowance requirements effective 1/1/12.

On 8/21/12, the D.C. Circuit Court vacated the CSAPR. It also directed the EPA to continue administering the CAIR which requires additional reductions in $SO_2$ and NOx emissions beginning in 2015. On 4/29/14, the U.S. Supreme Court reversed the D.C. Circuit Court decision finding that with CSAPR the EPA reasonably interpreted the good neighbor provision of the Clean Air Act. The case was then remanded to the D.C. Circuit Court for further proceedings, and the EPA requested the court lift the CSAPR stay and direct it to take effect on 1/1/15. On 10/23/14 the D.C. Circuit Court lifted the CSAPR stay. On 1/1/15, the CSAPR replaced the CAIR. The CSAPR took effect in Florida on 5/1/15. Consequently, CAIR NOx emission allowances have no value; however, SO2 emission allowances can continue to be used to comply with the Acid Rain Program. DEF is treating its unused NOx costs as a regulatory asset amortizing it over 3 years, as approved by the Commission in Order No. PSC-11-0553-FOF-EI.

**Project Accomplishments:**
Air quality compliance costs are administered by an authorized account representative who evaluates a variety of resources and options. Activities performed include purchases of SO2 and NOx emissions allowances as well as auctions and transfers of SO2 emissions allowances.

**Project Fiscal Expenditures:**
2015 emission allowance expenditures are estimated to be $1.5M higher than originally projected due to unusable NOx emission allowances as a result of the expiration of the CAIR. CAIR was replaced by the CSAPR on 1/1/15. Consistent with Order No. PSC-11-0553-FOF-EI, DEF is treating costs associated with its unusable CAIR NOx emission allowances as a regulatory asset amortizing it over 3 years, beginning 1/1/15 until fully recovered by 12/31/17, with a return on the unamortized investment.

**Project Progress Summary:**
DEF continually evaluates the status of emission rules to maximize the cost effectiveness of its compliance strategy.

**Project Projections:**
2016 estimated expenditures are $111k. 2016 amortization of the CAIR NOx regulatory asset is approximately $3.6M.

**Project Title:** **Phase II Cooling Water Intake**
**Project No. 6**

**Project Description:**
Section 316(b) of the Federal Clean Water Act requires that the location, design, construction, and capacity of cooling water intake structures reflect the best technology available for minimizing adverse environmental impact. 33 U.S.C. Section 1326. On 5/19/14, the EPA Administrator signed a final 316(b) rule to protect fish and aquatic life drawn into cooling systems at power plant and factories. The rule aims to minimize impingement (aquatic life pinned against cooling water intake structures) and entrainment (aquatic life drawn into cooling water systems). The regulation became effective on October 14, 2014, 60 days after publication in the Federal Register which was 8/15/14.

**Project Accomplishments:**
DEF is currently evaluating the 316(b) rule to determine potential study requirements, operating and cost impacts to its generating stations. Site specific strategic plans are under development to ensure compliance with all applicable requirements of the rule.

**Project Fiscal Expenditures:**
2015 project expenditures are estimated to be $43k lower than originally projected as methods used to allocate costs to analyze 316(b) compliance strategies at each affected Duke Energy station were adjusted to reflect present configurations and operations. DEF intends to implement a consistent approach across its entire fleet of regulated units to focus on full compliance with applicable 316(b) requirements through the development of facility specific strategic plans.

**Project Progress Summary:**
Initial steps in site specific plan development have been completed. Work continues on plans for implementation, decision milestones, compliance approaches, and study requirements.

**Project Projections:**
2016 estimated O&M expenditures are $440k. No capital expenditures are expected in 2016.

**Project Title:** **Integrated Clean Air Compliance Plan - Clean Air Interstate Rule (CAIR)**
**Project Nos. (7.2, 7.3 & 7.4)**

**Project Description:**
The Clean Air Interstate Rule (CAIR), 40 CFR 24, 262, imposes significant restrictions on emissions of $SO_2$ and NOx from power plants in 28 eastern states, including Florida and the District of Columbia. The CAIR rule apportions region-wide $SO_2$ and NOx emission reduction requirements to the individual states, and further requires each affected state to revise its State Implementation Plans (SIPs) to include measures necessary to achieve its emission reduction budget within prescribed deadlines.

The Cross-State air pollution Rule (CSAPR) replaced CAIR on 1/1/15. Under the CSAPR, the State of Florida is not longer required to comply with annual emission requirements, only NOx ozone seasonal limits. The CSAPR requirements took effect in Florida on 5/1/15, the beginning of the ozone season. NOx emission allowances under CAIR have no value; however, DEF will continue to use its SO2 emission allowances to comply with the Acid Rain Program. (see Project No. 5 - SO2 and NOx Emission Allowances Project Sheet for more information)

**Project Accomplishments:**
The reclaimed water reuse system project was placed in-service in July 2015. This project will provide DEF with up to 1 1/2 million gallons per day of reclaimed water from the City of Crystal River to supplement well water use. This project has positive environmental impacts as it reduces aquifer use.

**Project Fiscal Expenditures:**
2015 estimated O&M expenditures are estimated to be $661k higher than originally projected due to a $710 decrease in CAIR Crystal River Project 7.4 - Base costs and $1.4 million increase in CAIR Crystal River Project 7.4 - Energy costs. The $710k is due to lower base routine project costs. The $1.4M is due to higher ammonia and hydrated lime costs offset by lower limestone and gypsum costs. 2015 estimated capital expenditures are expected to be $124k higher than originally projected due to a shift in spending from 2014 to 2015 in order to align with the City of Crystal River reclaimed water reuse project timeline.

**Project Progress Summary:**
DEF continues to comply with the CAIR, CSAPR and the Acid Rain Program.

**Project Projections:**
2016 estimated O&M and capital expenditures are $34.4M and $713k, respectively.

**Project Title:** **Best Available Retrofit Technology (BART)**
**Project No. 7.5**

**Project Description:**
On 5/25/12, the EPA proposed a partial disapproval of Florida's proposed Regional Haze State Implementation Plan (SIP) because the proposed SIP relies on CAIR to satisfy BART requirements for $SO_2$ and NOx emissions. CAIR remained in effect while litigation against the Cross State Air Pollution Rule (CSAPR) proceeded, and the EPA incorporated the CSAPR in place of CAIR into Regional Haze SIPs, including Florida. DEF worked with the FDEP to develop specific BART and Reasonable Progress permits for affected units that were incorporated into Florida's revised SIP submittal, which was filed with EPA on 9/17/12. The final BART permit applications for Crystal River fossil units were submitted to EPA on 10/15/12 as a supplement to the 9/17/12 submittal. Permitting was finalized in 2013 with an effective date of January 1, 2014.

**Project Accomplishments:**
DEF performed required emissions modeling and associated BART analysis for Crystal River 1&2 (CR1&2) and Anclote plants, developed and submitted a Reasonable Progress evaluation for Crystal River 4&5, developed and submitted necessary BART Implementation Plans and air construction permit applications in support of the FDEP's work to amend its SIP as directed by the EPA. Permitting actions were completed in 2013 with the effective date of the CR 1& 2 permit being January 1, 2014.

**Project Fiscal Expenditures:**
No project expenditures are expected in 2015.

**Project Progress Summary:**
DEF performed required emissions modeling and associated BART analysis for CR1&2 and Anclote, developed and submitted a Reasonable Progress evaluation for Crystal River 4&5, developed and submitted necessary BART Implementation Plans and air construction permit applications needed in support of the FDEP ongoing work to amend its State Implementation Plan as directed by the EPA. Based on the revised Regional Haze SIP incorporating the provisions of Crystal River's BART permits for $SO_2$ and NOx, EPA on 12/10/12 proposed approval of the SIP. In August 2013, EPA finalized the full approval of the SIP. The Crystal River South BART permit became effective on January 1, 2014 and DEF is now operating under the terms of that permit.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **Arsenic Groundwater Standard**
**Project No. 8**

**Project Description:**
On 1/22/01, the EPA adopted a new maximum contaminant level (MCL) for arsenic in drinking water replacing the previous standard of 0.050 mg/L (50ppb) with a new MCL of 0.010 mg/L (10ppb). Effective 1/1/05, the FDEP established the USEPA MCL as Florida's drinking water standard. See Rule 62-550, F.A.C. The new standard has implications for land application and water reuse projects in Florida because the drinking water standard has been established as the groundwater standard by Rule 62-520.420(1), F.A.C. Lowering the arsenic standard will require new analytical methods for sampling groundwater at numerous DEF sites.

**Project Accomplishments:**
DEF has completed required monitoring as directed by the FDEP.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $23k higher than originally projected due to consultant costs to evaluate the source of arsenic exceedances and issue a summery report in compliance with FDEP Consent Order No. 09-3463C executed on 11/21/11. The Consent Order was issued by the FDEP for exceedance of the arsenic groundwater limit when the EPA lowered the arsenic maximum containment level from 50ppb to 10 ppb.

**Project Progress Summary:**
DEF is evaluating monitoring data and other options to achieve compliance in accordance to Consent Order.

**Project Projections:**
No project expenditures are expected in 2016.

**Project Title:** **Sea Turtle - Coastal Street Lighting**
**Project No. 9**

**Project Description:**
DEF owns and leases high pressure sodium streetlights throughout its service territory, including areas along the Florida coast. Pursuant to Section 161.163, Florida Statutes, the FDEP, in collaboration with the Florida Fish and Wildlife Conservation Commission (FFWCC) and the U.S. Fish & Wildlife Service (USFWS), has developed a model Sea Turtle lighting ordinance. The model ordinance is used by the local governments to develop and implement ordinances within its jurisdiction. To date, Sea Turtle lighting ordinances have been adopted in Franklin County, Gulf County, City of Mexico Beach in Bay County and Pinellas County, all of which are within DEF's service territory. Since 2004, officials from the various local governments, as well as the FDEP, FFWC, and USFWS, have advised DEF that lighting it owns and leases is affecting turtle nesting areas that fall within the scope of these ordinances. As a result, local governments require DEF to take additional measures to satisfy new criteria being applied to ensure compliance with the sea turtle ordinances.

**Project Accomplishments:**
DEF continues to work with Franklin County, Gulf County, City of Mexico Beach in Bay County, and Pinellas County to mitigate any potential sea turtle nesting issues by retrofitting existing street lights, placing amber shields on existing HPS street lights and monitoring street lights for effectiveness in complying with sea turtle ordinances.

**Project Fiscal Expenditures:**
2015 capital expenditures are estimated to be $3k lower than originally projected. No new street lighting has been required in Franklin County, the City of Mexico Beach in Bay county or GULF County as DEF is in compliance with sea turtle ordinances. Also, the Don Cesar lighting project is delayed from 2014 to late 4th quarter 2015 due to scheduling conflicts.

**Project Progress Summary:**
DEF is on schedule with activities identified for this program.

**Project Projections:**
2016 estimated project O&M and capital expenditures are $450 and $750, respectively.

**Project Title:** **Underground Storage Tanks**
**Project No. 10**

**Project Description:**
FDEP regulations require that underground pollutant storage tanks and small diameter piping be upgraded with secondary containment by 12/31/09. See Rule 62-761.510(5), F.A.C. DEF identified four tanks that must comply with this rule: two at Crystal River Plant and two at Bartow Plant.

**Project Accomplishments:**
Work on Crystal River and Bartow USTs was completed in 4th Qtr 2006.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF continually evaluates its compliance program, including project prioritization, schedule and technology applications.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Modular Cooling Towers**
**Project No. 11**

**Project Description:**
This project involves installation and operation of modular cooling towers in the summer months to minimize de-rates of Crystal River 1&2 (CR1&2) necessary to comply with the NPDES permit limit for the temperature of cooling water discharged from the units.

**Project Accomplishments:**
Vendors of modular cooling towers were evaluated regarding cost of installation and operation. The FDEP reviewed the project and approved operation. A vendor was selected and the towers were installed during the 2nd Qtr 2006.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
The modular cooling towers began operation in June 2006 and successfully minimized de-rates of CR 1&2. The towers were removed during the first half of 2012. This project is complete.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Crystal River Thermal Discharge Compliance Project**
**Project No. 11.1**

**Project Description:**
This project was to evaluate and implement the best long term solution to maintain compliance with the thermal discharge limit in the FDEP industrial wastewater permit for Crystal River Units 1,2&3 that was being addressed in the short term by the Modular Cooling Towers approved in Docket No. 060162-EI. Due to DEF's decision to retire CR3, this project is no longer necessary and will not be implemented.

**Project Accomplishments:**
The study phase of the project was completed with a recommendation to replace the leased modular cooling towers in coordination with the cooling solution for the CR3 Extended Power Uprate (EPU) discharge canal cooling solution. The new cooling tower associated with the CR3 EPU was to be sized to mitigate both increased temperatures from the EPU as well as replace the modular cooling towers, which were removed in 2012. The design contract for the CR3 EPU cooling tower was awarded and a vendor selected. In February 2013, DEF decided to retire CR3; therefore, the project will not proceed.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
Crystal River Units 1,2&3 utilize a once-through cooling water process to cool and condense turbine exhaust steam back to water. The cooling water is removed from the Gulf of Mexico via an intake canal and discharged to a common discharge canal shared by all of the generating units. DEF has a NPDES industrial wastewater permit from the FDEP to discharge this cooling water from CR 1,2&3 into the Gulf of Mexico. The FDEP NPDES permit includes a limit on the temperature of the cooling water discharge (96.5 degrees Fahrenheit on a three-hour rolling average) measured at the point of discharge to the Gulf of Mexico. The new cooling towers were being added as a long term solution to the issue of higher ambient water temperatures previously being addressed by the modular cooling towers and added heat rejection due to the estimated 180MWe Uprate of CR3. With the retirement of CR3, the heat rejection associated with the entire unit is removed and therefore the new cooling tower is not necessary for the continued operation of CR 1&2 within the NPDES permit limits.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Greenhouse Gas (GHG) Inventory and Reporting**
**Project No. 12**

**Project Description:**
The GHG Inventory and Reporting Program was created in response to Chapter 2008-277, Florida Laws, which established the Florida Climate Protection Act to be codified at section 403.44, Florida Statutes. Among other things, this legislation authorizes the FDEP to establish a cap and trade program for GHG emissions from power plants. Utilities subject to the program, including DEF, will be required to use The Climate Registry for purposes of GHG emission registration and reporting. The requirement to report to The Climate Registry was repealed during the 2010 legislative session; however, the EPA GHG Reporting Rule (40 CFR 98) does require DEF to submit 2010 GHG data to the EPA no later than 9/30/2011.

**Project Accomplishments:**
In 2009, DEF joined The Climate Registry and submitted 2008 GHG inventory data. 2009 data was submitted during the third quarter of 2010. Both 2008 and 2009 data was validated by a third party as required by The Climate Registry. 2010 GHG inventory data was submitted to EPA on 9/30/11 and EPA does not require data validation by a third party. DEF has discontinued its membership with The Climate Registry. Since third party validation is not required by the EPA, no future expenditures will be incurred by DEF resulting in the completion of this project.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF submits GHG inventory data directly to EPA which does not require third party validation. Membership with The Climate Registry has been discontinued.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Mercury Total Daily Maximum Loads Monitoring (TMDL)**
**Project No. 13**

**Project Description:**
Section 303(d) of the Federal Clean Water Act requires each state to identify state waters not meeting water quality standards and establish a TMDL for the pollutant or pollutants causing the failure to meet standards. Under a 1999 federal consent decree, TMDLs for over 100 Florida water bodies listed as impaired for mercury must be established by 9/12/12. The FDEP has initiated a research program to provide necessary information for setting appropriate TMDLs for mercury. Among other things, the study will assess the relative contributions of mercury-emitting sources, such as coal-fired power plants, to mercury levels in surface waters.

**Project Accomplishments:**
Atmospheric & Environmental Research, Inc (AER) completed the literature review on mercury deposition in Florida. This document was sent to the FDEP Division of Air Resource Management and the TMDL team for review in February 2009. In addition, the Florida Electric Power Coordinating Group (FCG) Mercury Task Force met with FDEP Division of Air Resource Management to discuss the review in January 2010. AER performed Florida mercury deposition modeling for the Division of Air Resource Management. The FCG Mercury Task Force contracted with Tetra Tech to conduct aquatic field sampling, including an aquatics modeling report, to develop a "Conceptual Model for the Florida Mercury TMDL." This document was finalized and submitted to the FDEP in December 2010. Key personnel from AER were employed by Environ in 2011 and FCG established a contract with Environ to ensure continuity of the project. FCG used Environ and Tetra Tech to review and critique FDEP's aquatic cycling and atmospheric modeling analyses. The FDEP developed a mercury TMDL report in the spring and summer of 2012, and it proposed a TMDL in September 2012. The EPA approved Florida's statewide mercury TMDL in a letter dated October 18, 2013. Florida's mercury TMDL covers 441 waters listed as impaired for mercury based on fish tissue mercury levels. EPA's approval letter states that if FDEP identifies any new waters to be listed as impaired for mercury, a new TMDL will not be required if the listing is caused by the factors addressed in the approved TMDL. Conversely, a new TMDL, addressing the newly listed water body, would be required if "local emission or effluent sources" are determined to be the cause of the elevated fish tissue levels that required the new listing.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
The mercury TMDL study concluded in 2012.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Hazardous Air Pollutants (HAPs) ICR Program**
**Project No. 14**

**Project Description:**
In 2009, the EPA initiated efforts to develop an Information Collection Request (ICR), which requires that owners/operators of all coal- and oil-fired electric utility steam generating units provide information that will allow the EPA to assess emissions of hazardous air pollutants from each such unit. The intention of the ICR is to assist the Administrator of the EPA in developing national emission standards for hazardous air pollutants under Section 112(d) of the Clean Air Act, 42 U.S.C. 7412. Pursuant to those efforts, by letter dated 12/24/09, the EPA formally requested DEF comply with certain data collection and emissions testing requirements for several of its steam electric generating units. The EPA letter states that initial submittal of existing information must be made within 90 days, and that the remaining data must be submitted within 8 months. Collection and submittal of the requested information is mandatory under Section 114 of the Clean Air Act, 42 U.S.C. 7414.

**Project Accomplishments:**
DEF completed and submitted the ICR to EPA during 2010. The HAPS ICR project is complete.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF completed and submitted the ICR to EPA during 2010.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Effluent Limitation Guidelines ICR Program**
**Project No. 15**

**Project Description:**
The Effluent Limitation Guidelines ICR Program was created in response to Section 304 of the Federal Clean Water Act which directs the EPA to develop and periodically review regulations, called effluent guidelines, to limit the amount of pollutants that are discharged to surface waters from various point source categories. 33 U.S.C. §13 14(b). In October 2009, the EPA announced that it intended to update the effluent guidelines for the steam electric power generating point source category, which were last updated in 1982. DEF is required to complete the ICR and submit responses to the EPA within 90 days. Collection and submittal of the requested information is mandatory under Section 308 of the Clean Water Act.

**Project Accomplishments:**
DEF completed and submitted the ICR to the EPA in September 2010. The Effluent Limitation Guidelines ICR Program is complete.

**Project Fiscal Expenditures:**
There are no 2015 estimated expenditures for this project.

**Project Progress Summary:**
DEF completed and submitted the ICR to EPA in September 2010.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **National Pollutant Discharge Elimination System (NPDES)**
**Project No. 16**

**Project Description:**
Pursuant to the Federal Clean Water Act, 33 U.S.C. § 1342, all point source discharges to navigable waters from industrial facilities must obtain permits under the NPDES Program. The FDEP administers the NPDES program in Florida. DEF's Anclote, Bartow, and Crystal River North, Crystal River South, and Suwannee NPDES permits were issued on 1/14/11, 2/14/11, 7/18/11,4/7/14 and 11/28/11, respectively. All facilities are required to meet new permitting conditions. In Docket No. 110007-EI, the Commission approved recovery of costs associated with new requirements included or expected to be included in the new renewal permits, including: thermal studies, aquatic organism return studies and implementation, whole effluent toxicity testing, dissolved oxygen (DO) studies (Bartow only), and freeboard limitation related studies (Bartow only). As noted in DEF's 2/8/12 program update, on 12/14/11, the FDEP issued a final NPDES renewal permit and associated Administrative Order (AO) for the Suwannee Plant. The AO includes a new requirement to assess copper discharges that DEF did not anticipate when it filed its petition in 2011.

**Project Accomplishments:**
DEF continues to perform thermal studies and whole effluent toxicity testing as required in accordance to NPDES permit requirements. Bartow freeboard limitation study was completed in May 2011 and submitted to FDEP on 6/23/11. The FDEP approved DEF's corrective action plan and Bartow is in compliance with Administrative Order as of December 2014. The copper discharge study at the Suwannee plant has been completed and a final report was submitted to the FDEP in June 2014.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $54k lower than originally projected due to lower than expected 316(a) thermal study costs at the Anclote and Bartow stations. 2015 capital expenditures are expected to be $86k lower than originally projected due to a vendor reimbursement payment.

**Project Progress Summary:**
DEF has begun complying with the requirements of the NPDES permits. Aquatic organism return study requirements have been postponed to align with the final EPA 316(b) rule requirements (Bartow/Anclote Plants) which was published 8/15/14. The aquatic organism return requirement is not a requirement in the Crystal River North NPDES permit. The dissolved oxygen study of cooling water intake and discharge at the Bartow plant was completed and the results of the study demonstrated there is no negative impact on DO due to the plant's operation. The final DO report was submitted to the FDEP on November 20, 2012, and the Department has not required any additional action. DEF continues to work with FDEP to resolve the copper issue at the Suwannee station.

**Project Projections:**
2016 estimated O&M expenditures are $60k. No capital expenditures are expected in 2016.

**Project Title:** **Mercury & Air Toxic Standards (MATS) CR4 & CR5**
**Project No. 17**

**Project Description:**
The Commission approved ECRC recovery of DEF's costs for compliance with new hazardous air pollutant standards at Crystal River Units 4 & 5 (CR4&5) in Order No. PSC-11-0553-FOF-EI. The final MATS rule was issued by the EPA on 12/21/11. The FDEP granted a limited, one-year extension for the mercury-related requirements on 3/12/15. DEF will utilize the co-benefits of the existing FGD and SCR systems as the primary MATS compliance measures. Additional monitoring and emissions reduction technologies will be installed in 2014 & 2015.

**Project Accomplishments:**
DEF installed ORP probes and particulate matter continuous emissions monitoring systems (PM CEMS) in 2014. In addition, a mercury characterization study was performed in late 2014, and temporary mercury re-emission control systems were installed in early 2015. DEF continues to monitor mercury emissions with Appendix K sorbent trap systems.

**Project Fiscal Expenditures:**
2015 O&M expenditures are estimated to be $153k higher than originally projected due to the addition of a temporary chemical injection system to control mercury emissions, and the cancellation of preliminary engineering for a fuel additive system to improve mercury oxidation. 2015 capital expenditures are expected to be $1.3M higher than originally projected driven by the installation of continuous emission monitoring systems (CEMS) for mercury monitoring, compliance demonstration and feedback to the re-emission control system.

**Project Progress Summary:**
Installation of mercury CEMS and permanent mercury re-emission control systems is scheduled in the third quarter of 2015. Certification and commissioning activities are expected to be completed by the end of the year.

**Project Projections:**
2016 estimated O&M is $529k. No capital expenditures are expected in 2016.

**Project Title:** **Mercury & Air Toxic Standards (MATS) Anclote Gas Conversion**
**Project No. 17.1**

**Project Description:**
Convert existing Anclote Units to use 100% natural gas to be in compliance with MATS as approved by the Commission in Order No. PSC-12-0432-PAA-EI.

**Project Accomplishments:**
Unit 1 and Unit 2 gas conversions were completed 7/13/13 and 12/2/13, respectively. Unit 1 and Unit 2 Forced Draft (FD) fan modification work was completed 5/22/14 and 11/17/14, respectively.

**Project Fiscal Expenditures:**
2015 capital expenditures are estimated to be $314k lower than originally projected due to earlier than expected completion of Unit 2 FD fan work in November 2013 versus December 2014. There are no recoverable O&M costs for this project.

**Project Progress Summary:**
This project is in-service.

**Project Projections:**
No 2016 expenditures are expected for this project.

**Project Title:** **Mercury & Air Toxic Standards (MATS) CR1 & CR2**
**Project No. 17.2**

**Project Description:**
DEF is implementing its CR1&2 MATS Compliance Plan as approved by the Commission in Order No. PSC-14-0173-PAA-EI. DEF will make modifications to the electrostatic precipitators to improve particulate collection efficiency, as well as install reagent injection systems to reduce HCl and mercury emissions.

**Project Accomplishments:**
DEF finalized its CR1&2 MATS Compliance Plan in December 2013 and began implementation in early 2014.

**Project Fiscal Expenditures:**
2015 O&M expenditures are expected to be $51k lower than expected. Capital expenditures are estimated to be $4.2M higher than originally projected due to an additional project related to the Unit 1 electrostatic precipitator (ESP).

**Project Progress Summary:**
Implementation of the CR1&2 MATS Compliance Plan will be completed by April 2016.

**Project Projections:**
2016 estimated O&M and capital expenditures are $3.8M and $2.6M, respectively.

**Project Title:** **Coal Combustion Residual (CCR) Rule**
**Project No. 18**

**Project Description:**
The Coal Combustion Residual (CCR) Rule was published in the Federal Register on 4/17/15 and is effective 10/19/15. this rule regulates the disposal of CCR as non-hazardous solid waste, and contains new requirements for CCR landfills and CCR surface impoundments. It also specifies implementation guidelines for compliance. The CCR compliance deadlines vary, with compliance obligations required as early as 10/19/15. the rule is self-implementing, meaning that affected facilities must comply with the new regulations irrespective of whether the rule is adopted by the State of Florida. The rule has specific impacts on the ash landfill, Flue Gas Desulfurization (FGD) lined blowdown ponds and temporary gypsum pad at the Crystal River site. No other DEF operating facilities are impacted by the CCR rule.

**Project Accomplishments:**
DEF began defining and implementing of its CCR Rule compliance strategy.

**Project Fiscal Expenditures:**
2015 estimated O&M and capital expenditures are $391k and $1.6M, respectively.

**Project Progress Summary:**
Ash Landfill: Two engineering firms are studying Crystal River ash landfill stability and ash placement.
Temporary Gypsum Pad: Efforts are underway to address fugitive dust mitigation at the CCR gypsum stack-out.
FGD Blowdown Ponds: A definitive assessment and action plan is being developed.
Emergency Action Plan: A determination if the CCR requires an EPA for the FGD Blowdown Ponds is in process.
Vegetation Mgt & Inspection Work: More frequent mowing and inspection work is planned to comply with the CCR Rule.

**Project Projections:**
2016 estimated O&M and capital expenditures are $1.8M and $3.9M, respectively. See the August 31, 2015 direct testimony of Mr. Miller for 2015 CCR compliance strategy change.

# Acronyms

BART – Best Available Retrofit Technology

CAIR – Clean Air Interstate Rule

CAMR – Clean Air Mercury Rule

CAVR – Clean Air Visibility Rule

CCR - Coal Combustion Residuals

$CO_2$ – Carbon Dioxide

CSAPR – Cross-State Air Pollution Rule

EPA – Environmental Protection Agency

EGU – Electric Generating Unit

ELG - Effluent Limitation Guidelines

ESP – Electrostatic Precipitator

FDEP – Florida Department of Environmental Protection

FGD – Flue Gas Desulfurization

GHG – Greenhouse Gas

LNB – Low $NO_x$ Burner

MATS – Mercury and Air Toxic Standards

NAAQS – National Ambient Air Quality Standards

$NO_x$ – Nitrogen Oxides

NSPS - New Source Performance Standards

PAC – Powdered Activated Carbon

Plan D – DEF Integrated Clean Air Compliance Plan

PM – Particulate Matter

SCR – Selective Catalytic Reduction

SIP – Site Implementation Plan

$SO_2$ – Sulfur Dioxide

# Executive Summary

In the 2007 Environmental Cost Recovery Clause (ECRC) Docket (No. 070007-EI) and as reaffirmed in all subsequent ECRC Dockets (Nos. 080007-EI, 090007-EI, 100007-EI, 110007-EI, 120007-EI, 130007-EI, and 140007-EI), the Public Service Commission approved Duke Energy Florida's (DEF's) updated Integrated Clean Air Compliance Plan (Plan D) as a reasonable and prudent means to comply with the requirements of the Clean Air Interstate Rule (CAIR), Clean Air Mercury Rule (CAMR), Clean Air Visibility Rule (CAVR), and related regulatory requirements. In its 2007 final order, the Commission also directed DEF to file as part of its ECRC true-up testimony "a yearly review of the efficacy of its Plan D and the cost-effectiveness of DEF's retrofit options for each generating unit in relation to expected changes in environmental regulations." This report provides the required review for 2015.

The primary original components of DEF's 2006 Compliance Plan D included:

**Sulfur Dioxide ($SO_2$)**

- Installation of flue gas desulfurization (FGD) systems on Crystal River Units 4 and 5
- Fuel switching at Crystal River Units 1 and 2 to burn low sulfur coal
- Fuel switching at Anclote Units 1 and 2 to burn low sulfur oil and natural gas
- Purchases of $SO_2$ allowances

**Nitrogen Oxides ($NO_x$)**

- Installation of low $NO_x$ burners (LNBs) and selective catalytic reduction (SCR) systems on Crystal River Units 4 and 5
- Installation of LNBs and separated over-fire air (SOFA) or alternative $NO_x$ controls at Anclote Units 1 and 2
- Purchase of annual and ozone season $NO_x$ allowances

**Mercury**

- Installation of FGD and SCR systems at Crystal River Units 4 and 5
- Installation of powdered activated carbon (PAC) injection on Crystal River Unit 2

As detailed in Docket No. 070007-EI, DEF decided upon Plan D based on a quantitative and qualitative evaluation of the ability of alternative plans to meet environmental requirements, while managing risks and controlling costs. That evaluation demonstrated that Plan D is DEF's most cost-effective alternative to meet applicable regulatory requirements. The Plan was

designed to strike a balance between reducing emissions, primarily through the installation of controls on DEF's largest and newest coal units (Crystal River Units 4 and 5), and making strategic use of emission allowance markets.

In accordance with the Commission's final order in Docket No. 070007-EI, DEF has continued to review the efficacy of Plan D and the cost-effectiveness of retrofit options in relation to expected changes in environmental regulations. With regard to efficacy, Plan D remains the cornerstone of DEF's efforts to comply with applicable air quality regulations in a cost-effective manner.

As indicated in previous ECRC filings, the U.S. Court of Appeals for the District of Columbia (D.C. Circuit Court of Appeals) stayed the effect of the Cross-State Air Pollution Rule (CSAPR) that the U.S. Environmental Protection Agency (EPA) had proposed to replace CAIR, leaving CAIR in effect until the Court completed its review of CSAPR. In August 2012 the D.C. Circuit Court of Appeals vacated the CSAPR in its entirety, and in January 2013, the court denied EPA's petition for a rehearing of the court's decision. EPA subsequently appealed the Court's vacatur to the U.S. Supreme Court, and oral argument was heard on December 10, 2013. On April 29, 2014, the U.S. Supreme Court reversed the D.C. Circuit's decision and upheld the CSAPR. EPA subsequently petitioned the D.C. Circuit Court of Appeals to reinstate CSAPR, making it effective January 1, 2015. The Court agreed with EPA and approved its petition.

Additionally, on February 16, 2012, EPA issued the new Mercury and Air Toxics Standards (MATS) to replace the vacated CAMR for emissions from coal- and oil-fired electric generating units (EGUs), including, potentially, DEF's Anclote Units 1 and 2, Suwannee Units 1, 2, and 3, and Crystal River Units 1, 2, 4, and 5. The following summarizes the results of DEF's MATS compliance analyses for these units:

Anclote Units 1 & 2: DEF determined that the most cost-effective option for DEF's Anclote Units 1 and 2 is to convert them to fire 100% natural gas rather than install emission controls in order to comply with the new MATS. The Commission approved DEF's petition for ECRC recovery of costs associated with the Anclote Conversion Project in Docket No. 120103-EI.

Suwannee Units 1, 2 & 3: DEF determined that no further modifications are needed on Suwannee Units 1, 2 and 3 in order to comply with MATS as they are currently capable of operating on 100% natural gas.

Crystal River Units 4 & 5: DEF will utilize the existing electrostatic precipitators (ESPs), FGDs, and SCRs at Crystal River Units 4 and 5 for MATS compliance. DEF will also install chemical injection systems in 2015 to mitigate mercury re-emissions from the FGDs. DEF requested a one year extension for all mercury-related MATS requirements on December 15, 2014. On March 12, 2015, the Florida Department of Environmental Protection (FDEP) authorized a one year extension to April 16, 2016. .

Crystal River Units 1 & 2: DEF determined that the use of alternative coals (along with dry sorbent injection, PAC injection, and ESP enhancements) is a feasible and cost-effective strategy to allow these units to continue running for a limited period of time in compliance with MATS and Best Available Retrofit Technology (BART) requirements until new generation can be built. This plan was approved by the Commission in Order No. PSC-14-0173-PAA-EI (April 17, 2014). Additionally, the FDEP granted a one-year extension to April 2016 for all MATS Units 1 and 2 requirements on February 6, 2014.

Although EPA has begun implementation of a regulatory approach to reduce greenhouse gas (GHG) emissions through the Clean Air Act, there currently are no GHG emission standards applicable to DEF's existing units. Moreover, there are still no retrofit options commercially available to reduce carbon dioxide ($CO_2$) emissions from fossil fuel-fired EGUs. The Company will continue to monitor and update the Commission on EPA's ongoing efforts to establish emission guidelines to address GHG from existing power plants under Section 111(d) of the federal Clean Air Act.

DEF is confident that the emission controls installed pursuant to Plan D, along with compliance strategies discussed further in this Plan, will enable the Company to achieve and maintain compliance with all applicable environmental regulations in a cost-effective manner.

# I. Introduction

In its final order in the 2007 ECRC Docket (No. 070007-EI) and as reaffirmed in all subsequent ECRC Dockets (Nos. 080007-EI, 090007-EI, 100007-EI, 110007-EI, 120007-EI, 130007-EI, and 140007-EI), the Public Service Commission approved the Company's updated Integrated Clean Air Compliance Plan (Plan D) as a reasonable and prudent means to comply with the requirements of CAIR, CAMR, CAVR and related regulatory requirements. In *In re Environmental Cost Recovery Clause*, Order No. PSC-07-0922-FOF-EI, p. 8 (Nov. 16, 2007), the Commission specifically found that "PEF's [now DEF's] updated Integrated Clean Air Compliance Plan represents the most cost-effective alternative for achieving and maintaining compliance with CAIR, CAMR, and CAVR, and related regulatory requirements, and it is reasonable and prudent for PEF to recover prudently incurred costs to implement the plan." *Id*. The Commission also directed [DEF] to file as part of its ECRC true-up testimony "a yearly review of the efficacy of its Plan D and the cost-effectiveness of [DEF's] retrofit options for each generating unit in relation to expected changes in environmental regulations." *Id*. The purpose of this report is to provide the required review for 2015.

# II. Regulatory Background

The CAIR and CAVR programs required DEF and other utilities to significantly reduce emissions of $SO_2$ and $NO_x$. CAIR contemplated emission reductions in incremental phases, in which Phase I began in 2009 for $NO_x$ and in 2010 for $SO_2$. Phase II was scheduled to begin in 2015 for both $NO_x$ and $SO_2$. As noted later in this Plan, CAIR was remanded by the courts in 2008, but remained in place through 2014 while the EPA worked on development and implementation of an acceptable replacement rule. Following resolution of litigation, the replacement rule, CSAPR, took effect on January 1, 2015. The CAVR, designed to improve visibility in Class I areas, remains in effect and the status of the BART requirements under CAVR affecting DEF is provided in part D of this section of this Plan. The CAMR originally required reduction of mercury emissions at a system level and installation of mercury monitors. As discussed later in this Plan, however, CAMR was vacated in early 2008 and in lieu of CAMR, EPA published a final MATS rule on February 16, 2012.

In March 2006, the Company submitted a report and supporting testimony presenting its integrated plan for complying with the CAIR, CAVR, and CAMR, as well as the process the Company used to evaluate alternative plans, to the Commission. The analysis included an examination of the projected emissions associated with several alternative plans and a comparison of economic impacts, in terms of cumulative present value of revenue requirements. The Company's Integrated Clean Air Compliance Plan, designated as Plan D, was found to be the most cost-effective compliance plan for CAIR, CAMR, and CAVR from among five alternative plans.

In June 2007, the Company submitted an updated report and supporting testimony summarizing the status of the Plan and an updated economic analysis incorporating certain Plan revisions necessitated by changed circumstances. Consistent with the approach utilized in 2006, the Company performed a quantitative evaluation to compare the ability of modified alternative plans to meet environmental requirements, while managing risks and controlling costs. That evaluation demonstrated that Plan D, as revised, is the Company's most cost-effective alternative to meet applicable regulatory requirements. Based on that analysis, the Commission approved Plan D as reasonable and prudent, and held that the Company should recover prudently incurred costs of implementing the Plan. In each subsequent ECRC docket, the Commission has approved the Company's annual review of the Integrated Clean Air Compliance Plan. *See* Order No. PSC-14-0643-FOF-EI, at 9 (Nov. 4, 2014); Order No. PSC-13-0606-FOF-EI, at 9-10 (Nov. 19, 2013); Order No. PSC-12-0613-FOF-EI, at 16-17 (Nov. 16, 2012); Order No. PSC-11-0553-FOF-EI, at 13-14 (Dec. 7, 2011); Order No. PSC-10-0683-FOF-EI, at 6-7 (Nov. 15, 2010); Order No. PSC-09-0759-FOF-EI, at 18 (Nov. 18, 2009); Order No. 08-0775-FOF-EI, at 11 (Nov. 24, 2008).

## *A. Status of CAIR and CSAPR*

In July 2008, the U.S. Circuit Court of Appeals for the District of Columbia (D.C. Circuit) issued a decision vacating CAIR in its entirety. *North Carolina v. EPA*, 531 F.3d 896 (D.C. Cir. 2008). However, the Court subsequently decided to remand CAIR without vacatur, thereby leaving the rule and its compliance obligations in place until EPA revises or replaces CAIR. *North Carolina v. EPA*, 550 F.3d 1176 (D.C. Cir. 2008). EPA adopted the CSAPR to

replace the CAIR by publication in the *Federal Register* in August 2011. 76 Fed. Reg. 48,208 (Aug. 8, 2011).

In Order No. PSC-11-0553-FOF-EI, issued in Docket No. 110007-EI on December 7, 2011, the Commission addressed the impact of CSAPR on the Company's recovery of $NO_x$ emission allowance costs. Because CSAPR would no longer allow the Company to use $NO_x$ allowances previously obtained under CAIR for compliance effective January 1, 2012, the Commission established a regulatory asset to allow the Company to recover the costs of its remaining $NO_x$ allowance inventory over a three year amortization period. However, on December 30, 2011, the D.C. Circuit stayed CSAPR, leaving CAIR in effect until the Court completed its review of the new rule. Thus, the Company has continued to maintain its $NO_x$ allowance inventory in order to comply with CAIR. Pursuant to the stipulation approved in Order No. PSC-11-0553-FOF-EI, the Company continued to expense $NO_x$ allowance costs incurred to comply with CAIR based on actual usage consistent with current practice. In August 2012, the D.C. Circuit vacated CSAPR in its entirety, and in January 2013, the Court denied EPA's petition for rehearing. *See EME Homer City Generation, L.P. v. EPA*, 696 F.3d 7 (D.C. Cir. 2013). The EPA subsequently appealed the Court's vacatur to the U.S. Supreme Court and on April 29, 2014, the Supreme Court overturned the D.C. Circuit's decision vacating CSAPR and remanded the case back to the lower Court for further action. On June 26, 2014, the EPA requested that the Court lift the stay of the CSAPR and allow it to be implemented, under a revised schedule, beginning January 1, 2015. This request was granted on October 23, 2014, and the CSAPR went into effect on January 1, 2015, replacing the CAIR. Litigation regarding CSAPR is ongoing as the D.C. Circuit heard oral argument on February 25, 2015.

Under the current terms of the CSAPR, the State of Florida is only affected by the ozone season requirements of the rule, which apply from May through September. The fact that annual $NO_x$ and $SO_2$ CSAPR programs are not required in Florida is due in large part to the installation and operation of emissions control projects designed to comply with CAIR.

## *B. Vacatur of CAMR and Adoption of MATS*

In February 2008, the D.C. Circuit Court vacated CAMR and rejected EPA's delisting of coal-fired EGUs from the list of emission sources that are subject to Section 112 of the Clean Air Act. *See New Jersey v. EPA*, 517 F. 3d 574 (D.C. Cir. 2008). As a result, in lieu of CAMR,

EPA was required to adopt new emissions standards for control of various hazardous air pollutant emissions from coal-fired EGUs. *Id*. EPA issued its proposed rule to replace CAMR on March 16, 2011, with publication following in the *Federal Register* on May 3, 2011. *See* 76 Fed. Reg. 24976 (May 3, 2011). On February 16, 2012, EPA published the final rule which establishes new MATS limits for emissions of various metals and acid gases from both coal- and oil-fired EGUs. The new standards apply to all existing coal- and oil-fired EGUs including DEF's Crystal River Units 1, 2, 4, and 5, Anclote Units 1 and 2, and Suwannee Units 1, 2, and 3. Compliance generally must be achieved within three years of EPA's adoption of MATS (i.e., April 16, 2015), although the Clean Air Act authorizes permitting authorities to grant one-year compliance extensions in certain circumstances.

In the 2011 ECRC docket, the Commission recognized that EPA's adoption of MATS for EGUs would require the Company to modify its Integrated Clean Air Compliance Plan (Order No. PSC-11-0553-FOF-EI, at 11 (Dec. 7, 2011). Accordingly, consistent with the Commission's expectation that utilities "take steps to control the level of costs that must be incurred for environmental compliance," Order No. PSC-08-0775-FOF-EI, at 7 (Nov. 24, 2008), the Commission approved the Company's request to recover costs incurred to assess EPA's proposed rule, prepare comments to EPA, and develop compliance strategies within the aggressive regulatory timeframes proposed by EPA. Specifically, in 2011 and 2012, DEF requested and the Commission approved costs to perform emission testing, engineering and other analyses necessary to develop compliance strategies at Crystal River Units 4 and 5. Results of the 2012 analyses support the expectations stated in the 2012 Integrated Clean Air Plan that the FGDs and SCRs at Crystal River Units 4 and 5 will allow those units to comply with the new MATS standards under typical conditions. DEF conducted further testing in 2013 and those results confirmed expected performance levels. DEF will install chemical injection systems in 2015 to mitigate mercury re-emissions from the FGDs. The Company also completed its analysis of the impact of MATS on Suwannee Units 1, 2, and 3 and determined that no further modifications are needed on those units as they are currently capable of operating on 100% natural gas. In Docket 120103-EI, the Commission approved the Company's request for ECRC recovery of costs associated with the conversion of Anclote Units 1 and 2 to 100% natural gas fired capability as part of DEF's MATS compliance strategy. Finally, with respect to Crystal River Units 1 and 2, DEF has determined that the use of alternative coals (along with dry sorbent

injection, PAC injection, and ESP enhancements) is a feasible and cost-effective strategy to allow these units to continue running in compliance with MATS and BART requirements for a limited period of time until new generation can be built. This plan was approved by the Commission in Order No. PSC-14-0173-PAA-EI (April 17, 2014). Additionally, on February 6, 2014, the FDEP granted a one-year extension (to April 15, 2016) for MATS compliance at Crystal River units 1 and 2.

### *C. Greenhouse Gas Regulation*

In 2007, then-Governor Crist issued Executive Order 07-127 directing FDEP to promulgate regulations requiring reductions in utility $CO_2$ emissions. In addition, the 2008 Florida Legislature enacted legislation authorizing FDEP to adopt rules establishing a cap-and-trade program and requiring FDEP to submit any such rules for legislative review and ratification. However, FDEP did not adopt any cap-and-trade rules, and the Legislature subsequently repealed the 2008 law. Likewise, although a number of bills that would regulate GHG emissions have been introduced to Congress over the past several years, none have become law. In the meantime, EPA has begun implementing a regulatory approach to reducing GHG emissions through the Clean Air Act. At this time, however, there are no GHG emission standards applicable to DEF's existing generating units. Moreover, there are still no retrofit options commercially available to reduce $CO_2$ emissions from fossil fuel-fired electric generating units such as Crystal River Units 4 and 5, which are the primary focus of DEF's compliance plan. To date, there have been no large-scale commercial carbon capture and storage technology demonstrations on electric utility units. Until numerous technological, regulatory, and liability issues are resolved, it will be impossible to determine whether carbon capture and storage would be a technically-feasible or cost-effective means of complying with a $CO_2$ regulatory regime. Moreover, replacing coal-fired generation from Crystal River Units 4 and 5 with lower $CO_2$-emitting natural gas-fired combined cycle generation is not a viable option at this late date, particularly given the fact that DEF has placed in service Plan D components.

On June 25, 2013, President Obama issued a Presidential Memorandum directing EPA to establish GHG emission guidelines for existing power plants under Section 111(d) of the Clean Air Act. The Presidential Memorandum directs EPA to issue proposed GHG standards, regulations, or guidelines, as appropriate, for existing power plants by no later than June 1, 2014,

and issue final standards, regulations or guidelines, as appropriate, by no later than June 1, 2015. In addition, the Presidential Memorandum directs EPA to include a requirement in the new regulations that states submit State Implementation Plans (SIPs) to implement the new guidelines by no later than June 30, 2016.

On June 2, 2014, EPA released the proposed New Source Performance Standards (NSPS) for $CO_2$ emissions from existing fossil fuel-fired EGUs. The proposal establishes state-specific emission rate goals; for Florida, the goals are 794 lb. $CO_2$/MWh annual average for the period 2020-2029 and 740 lb. $CO_2$/MWh for 2030 and beyond. EPA received over two million comments on the proposal by the comment deadline of December 1, 2014. EPA now expects to issue the final rule in mid- to late-summer of 2015.

## *D. Status of BART Requirements under CAVR*

In 2009, FDEP issued a permit imposing BART requirements for particulate matter (PM) emissions from Crystal River Units 1 and 2. The 2009 permit did not impose BART requirements for $SO_2$ and $NO_x$ emissions because, at the time, EPA assumed that compliance with CAIR would satisfy BART requirements for $SO_2$ and $NO_x$. Following the proposed adoption of CSAPR, in early 2012, EPA revised its previous determination to replace the "CAIR satisfies BART" assumption with "CSAPR satisfies BART." In late 2011, CSAPR was vacated (although recently re-instated – see part A above), leaving CAIR in effect and resulting in confusion regarding the ability to rely on CAIR (or CSAPR) to satisfy BART requirements. As a result, in 2012, the Company worked with FDEP to develop and finalize air construction permits to address $SO_2$ and $NO_x$ emissions from Crystal River Units 1 and 2 in support of FDEP's development of a revised Regional Haze SIP to address CAVR requirements for $SO_2$ and $NO_x$. The permits call for the installation of Dry FGD and SCR no later than January 1, 2018, or within 5 years of the effective date of EPA's approval of the Florida Regional Haze SIP, whichever is later, or alternatively the discontinuation of the use of coal in Crystal River Units 1 and 2 by December 31, 2020. The latter of the two options was ultimately selected by DEF.

As discussed in the Company's 2013 Integrated Clean Air Compliance Plan, FDEP subsequently submitted to EPA a revised Regional Haze SIP containing unit-specific determinations for $SO_2$ and $NO_x$, including the new permit requirements for Crystal River Units 1 and 2. EPA formally approved FDEP's revised Regional Haze SIP in August 2013. *See* 78

*Fed Reg.* 53250 (Aug. 29, 2013). Although third parties initially petitioned for review of EPA's approval in the U.S. Court of Appeals for the Eleventh Circuit, the petition was subsequently withdrawn and the SIP approval remains in place.

### *E. Status of National Ambient Air Quality Standards (NAAQS)*

EPA and FDEP are working to implement a new 1-hour NAAQS for $SO_2$. In mid-2013, EPA finalized nonattainment designations for two small areas in Florida outside of DEF's service territory (one in Nassau County, one in Hillsborough County) based on existing monitoring data. EPA deferred making any area designations (attainment, nonattainment, or unclassifiable) for the remainder of the state. EPA released a proposed rule in April 2014 that describes requirements for additional ambient air quality monitoring and/or modeling that will be used to determine future rounds of area designations. Under that proposal, EPA would likely make future nonattainment designations in late 2017 for modeled areas and in late 2020 for monitored areas. DEF will continue to monitor these regulatory efforts and update the Commission on potential impact to DEF facilities.

EPA also revised its $NO_2$ NAAQS to implement a new 1-hour standard. At this time, however, DEF does not anticipate that the new standard will impact compliance measures at DEF facilities.

## *III. DEF's Integrated Clean Air Compliance Plan*

The Company's original compliance plan (Plan D) will continue to help DEF meet applicable environmental requirements by striking a balance between reducing emissions, primarily through installation of controls on its largest and newest coal units (Crystal River Units 4 and 5), and making strategic use of the allowance markets to comply with CSAPR requirements. The controls installed in accordance with Plan D will continue to be the cornerstone of DEF's compliance strategy with the adoption of MATS and other ongoing regulatory efforts. Specific components of the Plan are summarized below.

### *A. FGD Systems*

The most significant component of DEF's Integrated Clean Air Compliance Plan is the installation of FGD systems, also known as wet scrubbers, on Crystal River Units 4 and 5 to

comply with $SO_2$ requirements of the CAIR, Title IV of the Clean Air Act, and $SO_2$ control requirements in DEF's air permits for these units. Together with the SCR systems discussed below, the FGDs also reduce mercury and other air toxic emissions and, therefore, will be a key component of DEF's MATS compliance strategy. The co-benefits of the FGDs and SCRs are expected to reduce mercury emissions by approximately 90%.

### *B. SCR & Other $NO_x$ Controls*

The primary component of DEF's $NO_x$ compliance plan is the installation of LNBs and SCR systems on Crystal River Units 4 and 5. These controls enable DEF to comply with CAIR/CSAPR and other $NO_x$ control requirements included in DEF's air permits for the units. As discussed above, the SCRs also will help achieve MATS requirements for mercury. DEF has also taken strategic advantage of CAIR's cap-and-trade feature by purchasing some annual and ozone season $NO_x$ allowances; however, as explained above, the court stay of CSAPR was lifted and went into effect on January 1, 2015 replacing CAIR. Under CSAPR, the State of Florida is only affected by the ozone season requirements of the rule, which apply May through September. Consequently, DEF has NOx CAIR emission allowances that cannot be used to comply with CSAPR. DEF has established a regulatory asset to recover the costs of its remaining NOx CAIR emission allowance inventory over a three year amortization period beginning January 2015 in accordance with Order No. PSC-11-0553-FOF-EI.

### *C. Additional MATS Compliance Strategies*

The Company determined that the most cost-effective option for its Anclote Units 1 and 2 is conversion to fire 100% natural gas versus installation of emission controls to comply with MATS for oil-fired EGUs. This was approved by the Commission in Docket 120103-EI.

With respect to Suwannee Units 1, 2 and 3, DEF intends to comply with MATS by running the units exclusively on natural gas.

As noted above, DEF will utilize the co-benefits of the existing FGD and SCR systems as the primary MATS control technologies for Crystal River Units 4 and 5, and DEF conducted tests in 2013 to confirm expected performance levels. DEF will also install chemical injection systems in 2015 to mitigate mercury re-emissions from the FGDs.

For Crystal River Units 1 and 2, DEF has determined that the use of alternative coals (along with dry sorbent injection, PAC injection, and ESP enhancements) is a feasible and cost-effective strategy to allow these units to continue running for a limited period of time in compliance with MATS and BART requirements until new generation can be built. This plan was approved by the Commission through Order No. PSC-14-0173-PAA-EI (April 17, 2014).

### *D. Visibility Requirements*

DEF operates four units that are potentially subject to BART under CAVR: Anclote Units 1 and 2 and Crystal River Units 1 and 2. Based on modeling of air emissions from Anclote Units 1 and 2, those units are exempt from BART for PM. Because the modeling results for Crystal River Units 1 and 2 showed visibility impacts at or above regulatory threshold levels, DEF obtained a BART permit in 2009 for PM for those units. This permit established a combined BART PM emission standard for Crystal River Units 1 and 2 that requires demonstration of compliance by October 1, 2013. This deadline was met and the units now operate in compliance with the permit which was effective on January 1, 2014. As discussed above, in 2012, FDEP issued air construction permits addressing $SO_2$ and $NO_x$ requirements for Crystal River Units 1 and 2 in support of FDEP's development of a revised Regional Haze SIP. These units are also subject to the Reasonable Further Progress ("Beyond BART") requirements under CAVR which are scheduled to take effect in 2018. As presented in the Company's petition approved in Order PSC-14-0173-PAA-EI, DEF determined that the use of alternative coals with installation of less expensive pollution controls will provide a cost-effective means for it to continue operating Crystal River Units 1 and 2 in compliance with MATS and CAVR for a limited time until replacement generation can be constructed.

## IV. Efficacy of DEF's Plan

### *A. Project Milestones*

DEF completed installation of Plan D's controls on Crystal River Units 4 and 5 as contemplated in prior ECRC filings. Units 4 and 5 FGD and SCR projects are now in-service, and targeted environmental benefits have been met or exceeded. As noted above, in addition to reducing $SO_2$ and $NO_x$ emissions, the FGDs and SCRs have the combined effect of reducing

mercury emissions and other air toxics which will contribute to DEF's plans to comply with MATS.

With regard to Crystal River Units 1 and 2, the Commission approved DEF's Need Petition in Docket No. 140110-EI to construct the Citrus Combined Cycle Units which are scheduled for in-service in 2018 and will allow for the retirement of these coal units once the new combined cycle units are operational. DEF has also obtained permits necessary to install pollution controls needed to extend operation of Crystal River Units 1 and 2 in compliance with MATS and BART until the Citrus units are operational.

DEF determined that converting Anclote Units 1 and 2 to fire 100% natural gas is more cost-effective than installing emission controls in order to comply with MATS. Conversion of both units was completed in 2013 with necessary upgrade to the forced draft (FD) fans to maintain unit output completed in 2014.

DEF completed its analysis of the impact of MATS on Suwannee Units 1, 2, and 3 and concluded that no further modifications are needed.

## *B. Projects Costs*

Crystal River Units 4 and 5 FGD and SCR projects are now in-service, and the targeted environmental benefits have been met or exceeded. The Anclote units have been converted to fire 100% natural gas.. DEF intends to continue operating Crystal River Units 1 and 2 in compliance with BART and MATS requirements as outlined in Order No. PSC-14-0173-PAA-EI.

## *C. Uncertainties*

The impacts of ongoing federal rulemaking activities on the compliance plan include:

- The final regulation on cooling water intake structures (Clean Water Act Section 316(b)) could influence decisions with regard to control technologies to meet new standards. The rule was issued on 5/19/14 with an effective date of 10/14/14. The requirements are currently being assessed in conjunction with air regulations, and DEF's compliance strategies may be altered when this evaluation is complete.
- EPA proposed updated Steam Electric Effluent Limitation Guidelines (ELG) for electric power plants in the summer of 2013 with final adoption pending

negotiations between the EPA and environmental groups. A final rule is expected by 9/30/15. These standards are expected to affect decisions associated with the treatment of wastewater generated by wet FGDs.

- EPA signed the final Coal Combustion Residuals (CCR) rule on December 19, 2014. Publication of the final rule is still pending. This rule is expected to affect decisions associated with the handling of CCRs, including fly ash, bottom ash, and materials generated from operation of wet FGDs, including synthetic gypsum.
- On June 2, 2014 EPA released the proposed New Source Performance Standards (NSPS) for $CO_2$ emissions from existing fossil fuel-fired EGUs. The proposal establishes aggressive state-specific emission rate goals for the period 2020-2029 and for 2030 and beyond. EPA expects to issue the final rule in mid- to late-summer of 2015. These standards may result in additional changes to DEF's compliance strategies.

# V. Conclusion

DEF has completed installation of the emission controls contemplated in its approved Plan D on time and within budget. The new FGD and SCR systems at Crystal River Units 4 and 5 have enabled DEF to comply with CAIR requirements and will continue to be the cornerstone of DEF's integrated air quality compliance strategy for years to come. DEF is confident that Plan D, along with compliance strategies under development, will enable the Company to achieve and maintain compliance with applicable regulations, including MATS, in a cost-effective manner.
