FLORIDA PUBLIC SERVICE COMMISSION
DOCKET: 20180007-EI EXHIBIT: 2
PARTY: FLORIDA POWER & LIGHT COMPANY (FPL)(DIRECT)
DESCRIPTION: Michael W. Sole MWS-1

FLORIDA POWER & LIGHT COMPANY
DOCKET NO. 20180007-EI
ENVIRONMENTAL COST RECOVERY CLAUSE
FPL SUPPLEMENTAL CAIR/MATS/CAVR FILING
APRIL 2, 2018

The discussion below provides FPL's current estimates of project activities and associated costs related to its Clean Air Interstate Rule ("CAIR") now the Cross State Air Pollution Rule ("CSAPR"), Mercury and Air Toxics Standards ("MATS"), which was formerly the Clean Air Mercury Rule ("CAMR") and Clean Air Visibility Rule ("CAVR")/ Best Available Retrofit Technology ("BART") projects.

CAIR Compliance Project Update:

Status of CAIR (now CSAPR) Rule Revision On November 16, 2015 the EPA proposed the CSAPR Update rule to address interstate transport of air pollution under the 2008 Ozone National Ambient Air Quality Standards ("NAAQS"). The proposed rule significantly reduces ozone season NOx budgets for many states using revised air quality data and updates to unit emission rates following installation of controls. In its final CSAPR ("Update Rule") the EPA removed Florida from the cap-and-trade program as emissions from utility units are now below the significance threshold in downwind ozone nonattainment areas. Several states have challenged the EPA rule and litigation is ongoing in the D.C. Circuit on the Update Rule. FPL will continue working with the EPA to ensure that Florida and FPL are treated fairly in any proposed changes to CSAPR. Operation of controls installed under the CSAPR project that are required for compliance with other federal and state rules are ongoing as needed. Costs for operations and maintenance of equipment associated with CSAPR are still required for installed equipment. The associated projects are described below.

St. Johns River Power Park ("SJRPP") Selective Catalytic Reduction Systems ("SCR") and Ammonia Injection Systems

The construction and installation of SCR and Ammonia Injection Systems at SJRPP were accomplished in 2009 with the controls on units 1 & 2 being placed into service in 2010.

FPL's ownership share of the total CSAPR capital cost for installation of the SCR and Ammonia Injection System through 2017 was $55.02 million and $1.57 for O&M. Projected capital cost and operating expenses associated with the SCR/Ammonia Injection System at SJRPP for 2018 are $0. In January 2018 both SJRPP units were retired from service.

Scherer SCR and Wet Flue Gas Desulfurization ("FGD")

The total capital cost for FPL's share of the construction and installation of the FGD (scrubber) and SCR with Ammonia Injection System on Scherer Unit 4 through 2017 is $362.14 million. FPL estimates its share of the Scherer Unit 4 CSAPR capital costs for projects planned in 2018 to be $2.15 million for replacement of the FGD booster fan hub.

For 2018, FPL has estimated its share of O&M expenses for operation of the SCR, FGD, and common plant facilities supporting the controls at $4.33 million to comply with CSAPR. O&M activities for the SCR include incremental operating staff, ammonia consumption, maintenance of the SCR ammonia injection skid and SCR auxiliary equipment. O&M activities for the FGD include limestone consumption, limestone and by-product (gypsum) handling operation, FGD operations, FGD tower and auxiliary equipment maintenance. FPL's ownership share of total capital cost for installation of the SCR and FGD at Scherer through 2017 was $23.08 million.

800 MW Unit Cycling Project

FPL completed construction work associated with this project in 2011 to comply with CSAPR. Total capital costs for the 800 MW unit cycling project at Martin and Manatee plants through 2017 are $94.72 million with total O&M expenses at $7.81 million. Projected 2018 O&M expenses are $0.53 million for treatment of condenser tube fouling and maintenance of associated equipment at the Martin and Manatee 800 MW units.

Continuous Emissions Monitoring System ("CEMS") Plan for Gas Turbines ("GT")

In December 2016, FPL completed the construction of peaking combustion turbines at the Lauderdale and Fort Myers plants, which replaced the generating capacity of the gas turbine peaking units at those plants. The 12 peaking gas turbines at Port Everglades have been decommissioned along with 22 gas turbines at Lauderdale and 10 gas turbines at Fort Myers plants. The remaining units are neither subject to Acid Rain monitoring requirements nor CSAPR monitoring requirements, so CEMS use has been discontinued. O&M expenses for the CEMS at the GTs were $0.46 million through 2017. There are no future projected capital or operating costs for the GT CEMS associated with this project.

Purchases of Allowances

To comply with the CSAPR program requirements, FPL must evaluate whether it holds sufficient allowances for compliance or needs to purchase allowances. In late 2017 EPA evaluated banked CSAPR allowances and was provided notice that banked pre-2017 vintage allowances could be used in 2017 and later years at a discount ratio established by EPA. Similar to 2016, FPL evaluated that the remaining banked 2015 and 2016 CSAPR allowances would not be required for compliance and pursued their market sale to a third party. These allowances were sold to outside parties in fourth quarter of 2017, resulting in a credit of $119,218 to ECRC project "Amortization of Gains on Sales of Emissions Allowances." Allowance sales in 2016 and 2017 resulted in $769,180 of credits that have helped offset FPL's ECRC expenses.

Actual CAIR/CSAPR capital costs through 2017 were $511.89 million.

CAIR/CSAPR CAPITAL COSTS ($Millions)		
Project	Total Project	2018 Projections
SJRPP-SCR/Ammonia Injection System	$55.02	$0.00
Scherer-SCR/FGD	$362.14	$2.15
800 MW Unit Cycling – Martin	$58.56	$0.00
800 MW Unit Cycling – Manatee	$36.16	$0.00

Actual CAIR/CSAPR O&M expenses through 2017 are $32.91 million.

CAIR/CSAPR O&M EXPENSE ($Millions)		
Project	Total Project	2018 Projections
SJRPP-SCR/Ammonia Injection System	$1.57	$0.00
Scherer-SCR/FGD	$23.08	$4.33
800 MW Unit Cycling – Martin	$4.25	$0.40
800 MW Unit Cycling – Manatee	$3.56	$0.13
CEMS at GTs	$0.46	$0.00

Mercury Air Toxics Standards ("MATS") Compliance Project Update (formerly CAMR):

FPL is complying with the Mercury (Hg) reduction requirements of the Georgia Multipollutant Rule and the EPA's MATS rule by using the following projects identified previously under the CAMR:

1. Installation of Fabric Filter Baghouse and Mercury Sorbent Injection System on Scherer Unit 4 (completed 2010).
2. Installation of HgCEMS on Scherer Unit 4 (completed 2009).
3. Installation of HgCEMS on SJRPP Units 1 and 2 (completed in 2008 prior to the vacatur of CAMR).

FPL's share of capital costs associated with the Mercury Sorbent Injection System, baghouse and Mercury CEMS on Scherer Unit 4 through 2017 is $114.16 million. For 2018, FPL's share of capital costs for the projects at Scherer Unit 4 is estimated to be $0 as capital replacement of components is not anticipated for 2018. For FPL's co-owned units at SJRPP, the retirement of Units 1 and 2 removes all MATS emission, reporting requirements beginning January 2018 and projected costs are $0. For 2018, projected MATS O&M expenses for Plant Scherer are $2.40 million, primarily for purchase and disposal of sorbents and replacement of bags as well as operation and maintenance of the Hg monitors.

In EPA's December 21, 2011 final MATS rule, oil-fired electric steam generating units were required to meet specific emission standards during oil combustion and demonstrate compliance through quarterly testing or continuous particulate emission monitoring systems. The rule's emission limits for oil operation had the effect of requiring electrostatic precipitators ("ESP's") for FPL's 800 MW oil-fired units. Construction of the ESPs was completed in 2014 with total capital costs for construction of the ESPs through 2017 at $209.82 million. Total O&M costs through 2017 are $3.14 million. For 2018, FPL is projecting $0.20 million in capital costs for replacement of ESP components and $0.83 million of O&M expenses for maintenance and operation of the 800 MW ESP project.

Actual MATS capital costs through 2017 are $323.98 million.

MATS CAPITAL COSTS ($Millions)		
Project	**Total Project**	**2018 Projections**
Scherer-Sorbent Injection/Baghouse/ HgCEMS	$114.16	$0.00
800 MW ESP PMR/PMT	$209.82	$0.20

**FPL's share of the project costs*

Actual MATS O&M expenses through 2017 are $19.80 million.

MATS O&M EXPENSE ($Millions)		
Project	**Total Project**	**2018 Projections**
SJRPP-Mercury CEMS	$0.46	$0.00
Scherer-Sorbent Injection/Baghouse/ HgCEMS	$16.21	$2.40
800 MW ESP PMR/PMT	$3.14	$0.83

CAVR / BART Project Update:

EPA's promulgation of the Clean Air Visibility Rule (CAVR) to address regional haze required affected sources to reduce visibility impacts to many of the U.S. National Parks and Monuments. FPL's retirement of Turkey Point Units 1 and 2, retirement of both combined cycle units at the Putnam plant and installation of ESPs on the 800 MW units resulted in

agreement with the Florida DEP that FPL had complied with the requirements of EPA's Regional Haze requirements. Actual CAVR capital costs through 2017 are $0. Actual CAVR O&M expenses through 2017 are $0.06 million. FPL is projecting $0 of CAVR compliance costs for 2018 and does not anticipate any future compliance costs.

CAVR/BART O&M EXPENSE ($Millions)		
Project	**Total Project**	**2018 Projections**
Reasonable Progress Control Technology Determination	$0.06	$0.00

Application for Permit by:

Florida Power & Light Company (FPL)
Mr. Timothy Panoff
Plant General Manager
10650 State Road 80
Fort Myers, FL 33902

Lee County
Fort Myers Plant
NPDES Permit No. FL0001490
File Number FL0001490-008-IW1S

NOTICE OF PERMIT

Enclosed is Permit Number FL0001490 to operate the Fort Myers Plant, issued under Chapter 403, Florida Statutes.

Monitoring requirements under this permit are effective on the first day of the second month following the effective date of the permit. Until such time, the permittee shall continue to monitor and report in accordance with previously effective permit requirements, if any.

Any party to this order (permit) has the right to seek judicial review of the permit action under Section 120.68, Florida Statutes, by the filing of a notice of appeal under Rules 9.110 and 9.190, Florida Rules of Appellate Procedure, with the Clerk of the Department of Environmental Protection, Office of General Counsel, 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days from the date when this document is filed with the Clerk of the Department.

Executed in Tallahassee, Florida.

10650 State Road 80
Post Office Box 430
Fort Myers, FL 33902
Lee County

Latitnde: 26°41' 50" N Longitude: 81°46' 56" W

This permit is issued under the provisions of Chapter 403, Florida Statutes (F.S.), and applicable rules of the Florida Administrative Code (F.A.C.) and constitutes authorization to discharge to waters of the state under the National Pollutant Discharge Elimination System. This permit does not constitute authorization to discharge wastewater other than as expressly stated in this permit. The above named permittee is hereby authorized to operate the facilities in accordance with the documents attached hereto and specifically described as follows:

FACILITY DESCRIPTION:

The plant consists of six natural gas combined cycle combustion turbines with associated Heat Recovery Steam Generators (HRSGs) and steam turbines with a total generating capacity of 1550 megawatts. There are also twelve gas turbine peaking units that have a combined capacity of 600 megawatts and use No. 2 fuel oil. There are also two peaking combustion turbines that have a combined capacity of 326 megawatts.

The plant has a once-through condenser cooling water system that uses water from the Caloosahatchee River as intake water. The cooling water is routed through the plant condensers and then discharged to the Orange River via the on-site discharge canal. A once-through helper cooling tower is located adjacent to the discharge canal to seasonally reduce the discharge temperature. Boiler blowdown is captured and reused. Reverse osmosis reject is discharged indirectly to the discharge canal via an internal discharge to the cooling tower basin. Metal cleaning wastewater will be disposed of offsite.

WASTEWATER TREATMENT:

Once-through cooling water may be chlorinated to reduce biological fouling in the condensers and intake structures. Dechlorination may be conducted prior to discharge if required. Equipment area storm water and washdown that have the potential to contain oil and grease are routed through an oil/water separator prior to discharge to the storm water basin. The contents of the storm water basin is pumped to the evaporation/percolation basin. In addition, fuel oil storage runoff is routed to an oil/water separator prior to discharge to the evaporation/percolation basin.

REUSE OR DISPOSAL:

Surface Water Discharge D-010: An existing permitted combined discharge to the Orange River (WBID 3240K). The Orange River is a tidally influenced Class III fresh water system at the point of discharge. This combined plant discharge at the end of the 2,500 foot discharge canal is located at approximately at latitude 26° 41' 31" N, longitude 81° 46' 41" W.

PERMITTEE:	Florida Power & Light	PERMIT NUMBER:	FL0001490 (Major)
FACILITY:	Ft. Myers Power Plant	EXPIRATION DATE:	January 19, 2021

Land Application G-001: An existing land application system (G-001) consisting of an evaporation/percolation pond. The evaporation/percolation pond is located at approximately latitude 26° 41' 38" N, longitude 81° 47' 12" W.

Evaporation/Percolation Emergency Overflow D-020: An existing emergency overflow discharge from the evaporation/percolation pond to the Caloosahatchee River. The discharge is located at approximately latitude 26° 41' 46.7" N, longitude 81° 47' 21.3" W.

Internal Outfalls:

Internal Outfall I-111: An existing internal discharge of once-through cooling water from Unit 1 to the discharge canal.

Internal Outfall I-112: An existing internal discharge of once-through cooling water from Unit 2 to the discharge canal.

Internal Outfall I-113: A new internal discharge of manatee heating water to the discharge canal.

Internal Outfall I-130: An existing internal discharge of reverse osmosis reject water to the cooling tower basin.

Internal Outfall I-170: An existing internal discharge of cooling tower discharge to the discharge canal.

Internal Outfall I-180: An existing internal discharge of auxiliary equipment cooling water to the discharge canal.

Internal Outfall I-190: An existing internal discharge of intake screen wash water to the discharge canal.

Internal Outfall I-1D0: An existing internal discharge of fire pump discharge water to the discharge canal.

IN ACCORDANCE WITH: The limitations, monitoring requirements and other conditions set forth in this Cover Sheet and Part I through Part IX on pages 1 through 27 of this permit.

PERMITTEE: Florida Power & Light
FACILITY: Ft. Myers Power Plant

PERMIT NUMBER: FL0001490 (Major)
EXPIRATION DATE: January 19, 2021

I. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

A. Surface Water Discharges

1. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **once-through non-contact cooling water, auxiliary equipment cooling water, intake screen wash water, and reverse osmosis reject water** from **Outfall D-010** to the Orange River. Such discharge shall be limited and monitored by the permittee as specified below and reported in accordance with Permit Condition I.D.3.:

			Effluent Limitations		Monitoring Requirements			
Parameter	Units	Max/ Min	Limit	Statistical Basis	Frequency of Analysis	Sample Type	Monitoring Site Number	Notes
Temperature, Water	Deg F	Max	Report	Monthly Average	6/Day	Recorder	INT-1	
Temperature Rise (ΔT), Water, MODE I	Deg F	Max	Report	Monthly Average	6/Day	Recorder	EFF-1	See I.A.3
Temperature Rise (ΔT), Water, MODE II	Deg F	Max	13.0	Monthly Average	6/Day	Recorder	EFF-1	See I.A.4
Chlorides	mg/L	Max	Report	Daily Maximum	Monthly	Grab	INT-1	
Oxidants, Total Residual	mg/L	Max	0.01	Daily Maximum	Weekly	Grab	EFF-1	See I.A.10
Oxidants, Total Residual	mg/L	Max	0.01	Daily Maximum	Monthly	Grab	EFF-1	See I.A.11
pH	s.u.	Min Max	6.0 8.5	Daily Minimum Daily Maximum	Weekly	Meter	EFF-1	See I.A.12
Temperature, Water	Deg C	Max	Report	Single Sample	Quarterly	Grab	EFF-1, INT-1	See I.A.12
Nitrogen, Total	mg/L	Max	Report	Single Sample	Quarterly	Grab	EFF-1, INT-1	
Phosphorus, Total (as P)	mg/L	Max	Report	Single Sample	Quarterly	Grab	EFF-1, INT-1	
Chronic Whole Effluent Toxicity, 7-Day IC25 (Americamysis bahia)	percent	Min	100	Single Sample	Semi-annually	24-hr Composite	EFF-1	See I.A.14
Chronic Whole Effluent Toxicity, 7-Day IC25 (Menidia beryllina)	percent	Min	100	Single Sample	Semi-annually	24-hr Composite	EFF-1	See I.A.14

2. Effluent samples shall be taken at the monitoring site locations listed in Permit Condition I.A.1. and as described below:

Monitoring Site Number	Description of Monitoring Site
INT-1	OTCW plant intake.
INT-2	Plant intake screens.
EFF-1	At the end of the discharge canal prior to discharge to the Orange River. Temperature measurements shall be taken at the surface, midpoint, and bottom at the midsection of the canal and averaged.

3. Mode I is applicable each year beginning on January 1 and lasting until the daily average intake temperature first equals or exceeds 74.0°F in the spring. Additionally, Mode I is applicable beginning the day after the daily average intake temperature falls below 74.0°F in the fall and lasting through December 31.

4. Mode II is applicable each year beginning the day after the daily average intake temperature first equals or exceeds 74.0°F and lasting through the day on which the daily average intake temperature first falls below 74.0°F.

5. For partial months in which Mode I ends and Mode II begins (or Mode II ends and Mode I begins) during the middle of the month, the monthly average for each respectively mode shall be calculated based on the number of days the plant was operating in that mode.

6. During the summer months (June, July, and August) and when the steam units are in operation, the permittee shall operate all cells of the cooling tower at all times, regardless of whether the temperature rise is significantly less than the permit limit of 13.0°F . The only exceptions to this requirement are as follows:

   a. In the event of an unavoidable mechanical or electrical failure of a cooling tower component; or

   b. In the event of an unavoidable need to undertake required maintenance of a cooling tower component.

7. The permittee shall maintain current intake traveling screen practices so as to assure that the screens are cycled at least twice during each 24 hours of continuous operation unless precluded by repair or maintenance requirements.

8. The intake through-screen velocity shall be maintained at current levels such that existing maximum velocity is not exceeded.

9. Nothing in this permit authorizes take for the purposes of a Facility's compliance with the federal Endangered Species Act. *[40 CFR 125.98(b)(1)]*

10. Total Residual Oxidants (TRO) means the value obtained using the amperometric titration method for total residual chlorine or the Hach model 19300 or equivalent). Testing for TRO by titration shall be conducted according to either the low-level amperometric method, or the DPD calorimetric method as specified in section 4500-CI E. or 4500 CI G., respectively, Standard Methods for the examination of Water and Waste water, 18th Edition (or most current edition).

    Monitoring requirements for TRO are not applicable if an oxidant has not been added to the non-contact cooling water systems of any electric generating unit during the previous 7 days.

    Multiple grabs for TRO shall be defined as once per five minutes during TRO discharge periods of 30 minutes or less and once per 15 minutes for periods exceeding 30 minutes with no less than four analyses during the period of TRO discharge (sampling shall be continued until the end of the TRO discharge).

11. When only chlorinating Auxiliary Equipment Cooling Water (AECW) sampling for TRO shall be monthly and consists of a single grab sample taken during the middle of the chlorination period. Alternatively, up to three grab samples of AECW, equally spaced within the 2-hour chlorination permit, can be averaged to report on the DMR.

12. Samples for pH and temperature (grab) shall be taken simultaneously with each total ammonia grab sample. Un-ionized ammonia shall be calculated in accordance with the procedure provided by the Department (refer to the website www.dep.state.fl.us./labs/library/index.htm.

    The facility shall submit annual summaries of the quarterly monitoring results sampled at Outfall D-010 as an attachment to EzDMR for the following parameters: Phosphate, Ortho (as PO4); Nitrogen, Ammonia (as N); Ammonia, Total Unionized (as N); Nitrate plus Nitrate, Total (as N); Nitrogen, Kjeldahl, Total (as N); Temperature, Degree C, and pH.

13. The discharge shall not contain components that settle to form putrescent deposits or float as debris, scum, oil, or other matter. *[62-302.500(1)(a)]*

14. The permittee shall comply with the following requirements to evaluate chronic whole effluent toxicity of the discharge from outfall D-010.

    a. Effluent Limitation

(1) In any routine or additional follow-up test for chronic whole effluent toxicity, the 25 percent inhibition concentration (IC25) shall not be less than 100% effluent. *[Rules 62-302.530(61) and 62-4.241(1)(b), F.A.C.]*
(2) For acute whole effluent toxicity, the 96-hour LC50 shall not be less than 100% effluent in any test. *[Rules 62-302.500(1)(a)4. and 62-4.241(1)(a), F.A.C.]*

b. Monitoring Frequency
(1) Routine toxicity tests shall be conducted once every six months, consistent with the existing established schedule and lasting for the duration of this permit.

c. Sampling Requirements
(1) For each routine test or additional follow-up test conducted, a total of three 24-hour composite samples of final effluent shall be collected and used in accordance with the sampling protocol discussed in EPA-821-R-02-014, Section 8.
(2) The first sample shall be used to initiate the test. The remaining two samples shall be collected according to the protocol and used as renewal solutions on Day 3 (48 hours) and Day 5 (96 hours) of the test.
(3) Samples for routine and additional follow-up tests shall not be collected on the same day.

d. Test Requirements
(1) Routine Tests: All routine tests shall be conducted using a control (0% effluent) and a minimum of five test dilutions: **100%, 50%, 25%, 12.5%,** and **6.25%** final effluent.
(2) The permittee shall conduct 7-day survival and growth chronic toxicity tests with a mysid shrimp, **Americamysis (Mysidopsis) bahia**, Method 1007.0, and an inland silverside, **Menidia beryllina**, Method 1006.0, concurrently.
(3) All test species, procedures and quality assurance criteria used shall be in accordance with **Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Marine and Estuarine Organisms**, 3rd Edition, EPA-821-R-02-014. Any deviation of the bioassay procedures outlined herein shall be submitted in writing to the Department for review and approval prior to use. In the event the above method is revised, the permittee shall conduct chronic toxicity testing in accordance with the revised method.
(4) The control water and dilution water used shall be artificial sea salts as described in EPA-821-R-02-014, Section 7.2. The test salinity shall be determined as follows:
(a) For the **Americamysis bahia** bioassays, the effluent shall be adjusted to a salinity of 20 parts per thousand (ppt) with artificial sea salts. The salinity of the control/dilution water (0% effluent) shall be 20 ppt. If the salinity of the effluent is greater than 20 ppt, no salinity adjustment shall be made to the effluent and the test shall be run at the effluent salinity. The salinity of the control/dilution water shall match the salinity of the effluent.
(b) For the **Menidia beryllina** bioassays, if the effluent salinity is less than 5ppt, the salinity shall be adjusted to 5 ppt with artificial sea salts. The salinity of the control/dilution water (0% effluent) shall be 5 ppt. If the salinity of the effluent is greater than 5 ppt, no salinity adjustment shall be made to the effluent and the test shall be run at the effluent salinity. The salinity of the control/dilution water shall match the salinity of the effluent.
(c) If the salinity of the effluent requires adjustment, a salinity adjustment control should be prepared and included with each bioassay. The salinity adjustment control is intended to identify toxicity resulting from adjusting the effluent salinity with artificial sea salts. To prepare the salinity adjustment control, dilute the control/dilution water to the salinity of the effluent and adjust the salinity of the salinity adjustment control at the same time and to the same salinity that the salinity of the effluent is adjusted using the same artificial sea salts.

e. Quality Assurance Requirements
(1) A standard reference toxicant (SRT) quality assurance (QA) chronic toxicity test shall be conducted with each species used in the required toxicity tests either concurrently or initiated no more than 30 days before the date of each routine or additional follow-up test conducted. Additionally, the SRT test must be conducted concurrently if the test organisms are obtained from outside the test laboratory unless the test organism supplier provides control chart data from at least the last five monthly chronic toxicity tests using the same reference toxicant and test conditions. If the organism supplier provides the required SRT data, the organism supplier's SRT data and the test laboratory's monthly SRT-QA data shall be included in the reports for each companion routine or additional follow-up test required.

(2) If the mortality in the control (0% effluent) exceeds 20% for either species in any test or any test does not meet "test acceptability criteria", the test for that species (including the control) shall be invalidated and the test repeated. Test acceptability criteria for each species are defined in EPA-821-R-02-014, Section 14.12 (**Americamysis bahia**) and Section 13.12 (**Menidia beryllina**). The repeat test shall begin within 21 days after the last day of the invalid test.
(3) If 100% mortality occurs in all effluent concentrations for either species prior to the end of any test and the control mortality is less than 20% at that time, the test (including the control) for that species shall be terminated with the conclusion that the test fails and constitutes non-compliance.
(4) Routine and additional follow-up tests shall be evaluated for acceptability based on the observed dose-response relationship as required by EPA-821-R-02-014, Section 10.2.6., and the evaluation shall be included with the bioassay laboratory reports.

f. Reporting Requirements
(1) Results from all required tests shall be reported on the Discharge Monitoring Report (DMR) as follows:
(a) Routine and Additional Follow-up Test Results: The calculated IC25 for each test species shall be entered on the DMR.
(2) A bioassay laboratory report for each routine test shall be prepared according to EPA-821-R-02-014, Section 10, Report Preparation and Test Review, and mailed to the Department at the address below within 30 days after the last day of the test.
(3) For additional follow-up tests, a single bioassay laboratory report shall be prepared according to EPA-821-R-02-014, Section 10, and mailed within 30 days after the last day of the second valid additional follow-up test.
(4) Data for invalid tests shall be included in the bioassay laboratory report for the repeat test.
(5) The same bioassay data shall not be reported as the results of more than one test.
(6) All bioassay laboratory reports shall be sent to:

Florida Department of Environmental Protection
South District
2295 Victoria Ave
Suite 364
Ft. Myers, Florida 33901-3875

g. Test Failures
(1) A test fails when the test results do not meet the limits in 14.a.(1).
(2) Additional Follow-up Tests:
(a) If a routine test does not meet the chronic toxicity limitation in 14.a.(1) above, the permittee shall notify the Department at the address above within 21 days after the last day of the failed routine test and conduct two additional follow-up tests on each species that failed the test in accordance with 14.d.
(b) The first test shall be initiated within 28 days after the last day of the failed routine test. The remaining additional follow-up tests shall be conducted weekly thereafter until a total of two valid additional follow-up tests are completed.
(c) The first additional follow-up test shall be conducted using a control (0% effluent) and a minimum of five dilutions: 100%, 50%, 25%, 12.5%, and 6.25% effluent. The permittee may modify the dilution series in the second additional follow-up test to more accurately bracket the toxicity such that at least two dilutions above and two dilutions below the target concentration and a control (0% effluent) are run. All test results shall be analyzed according to the procedures in EPA-821-R-02-014.

(3) In the event of three valid test failures (whether routine or additional follow-up tests) within a 12-month period, the permittee shall notify the Department witbin 21 days after the last day of the third test failure.
(a) The permittee shall submit a plan for correction of the effluent toxicity within 60 days after the last day of the third test failure.
(b) The Department shall review and approve the plan before initiation.
(c) The plan shall be initiated within 30 days following the Department's written approval of the plan.
(d) Progress reports shall be submitted quarterly to the Department at the address above.

(e) During the implementation of the plan, the permittee shall conduct quarterly routine whole effluent toxicity tests in accordance with 14.d. Additional follow-up tests are not required while the plan is in progress. Following completion or termination of the plan, the frequency of monitoring for routine and additional follow-up tests shall return to the schedule established in 14.b.(1). If a routine test is invalid according to the acceptance criteria in EPA-821-R-02-014, a repeat test shall be initiated within 21 days after the last day of the invalid routine test.

(f) Upon completion of four consecutive quarterly valid routine tests that demonstrate compliance with the effluent limitation in 14.a.(1) above, the permittee may submit a written request to the Department to terminate the plan. The plan shall be terminated upon written verification by the Department that the facility has passed at least four consecutive quarterly valid routine whole effluent toxicity tests. If a test within the sequence of the four is deemed invalid, but is replaced by a repeat valid test initiated within 21 days after the last day of the invalid test, the invalid test will not be counted against the requirement for four consecutive quarterly valid routine tests for the purpose of terminating the plan.

(4) If chronic toxicity test results indicate greater than 50% mortality within 96 hours in an effluent concentration equal to or less than the effluent concentration specified as the acute toxicity limit in 14.(a)(2), the Department may revise this permit to require acute definitive whole effluent toxicity testing.

(5) The additional follow-up testing and the plan do not preclude the Department taking enforcement action for acute or chronic whole effluent toxicity failures.

[62-4.241, 62-620.620(3)]

15. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **Evaporation/Percolation Pond Emergency Overflow** from **Outfall D-020** to the Caloosahatchee River. Such discharge shall be limited and monitored by the permittee as specified below and reported in accordance with Permit Condition I.D.3.:

			Effluent Limitations		Monitoring Requirements			
Parameter	Units	Max/Min	Limit	Statistical Basis	Frequency of Analysis	Sample Type	Monitoring Site Number	Notes
Flow	MGD	Max	Report	Daily Maximum	Weekly Upon Discharge	Estimated	EFF-2	
Oil and Grease	mg/L	Max Max	15.0 20.0	Monthly Average Daily Maximum	Weekly Upon Discharge	Grab	EFF-2	
Solids, Total Suspended	mg/L	Max Max	30.0 100.0	Monthly Average Daily Maximum	Weekly Upon Discharge	Grab	EFF-2	

16. Effluent samples shall be taken at the monitoring site locations listed in Permit Condition I.A.15. and as described below:

Monitoring Site Number	Description of Monitoring Site
EFF-2	At the end of the evaporation/percolation pond overflow pipe.

B. Internal Outfalls

1. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **once-through non-contact cooling water** from **Outfall I-111** to the discharge canal. Such discharge shall be limited and monitored by the permittee as specified below and reported in accordance with Permit Condition I.D.3.:

PERMITTEE: Florida Power & Light
FACILITY: Ft. Myers Power Plant

PERMIT NUMBER: FL0001490 (Major)
EXPIRATION DATE: January 19, 2021

			Effluent Limitations		Monitoring Requirements			
Parameter	Units	Max/ Min	Limit	Statistical Basis	Frequency of Analysis	Sample Type	Monitoring Site Number	Notes
Flow	MGD	Max Max	Report Report	Daily Maximum Monthly Average	Daily	Recording Flow Meter with Totalizer	FLW-1	

2. Effluent samples shall be taken at the monitoring site locations listed in Permit Condition I.B.1. and as described below:

Monitoring Site Number	Description of Monitoring Site
FLW-1	OTCW intake for Unit 1.

3. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **once-through non-contact cooling water** from **Outfall I-112** to the discharge canal. Such discharge shall be limited and monitored by the permittee as specified below and reported in accordance with Permit Condition I.D.3.:

			Effluent Limitations		Monitoring Requirements			
Parameter	Units	Max/ Min	Limit	Statistical Basis	Frequency of Analysis	Sample Type	Monitoring Site Number	Notes
Flow	MGD	Max Max	Report Report	Daily Maximum Monthly Average	Daily	Recording Flow Meter with Totalizer	FLW-2	

4. Effluent samples shall be taken at the monitoring site locations listed in Permit Condition I.B.3. and as described below:

Monitoring Site Number	Description of Monitoring Site
FLW-2	OTCW intake for Unit 2.

5. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **reverse osmosis reject water**[1] from **Outfall I-130** to the cooling tower basin. Such discharge shall be limited and monitored by the permittee as specified below and reported in accordance with Permit Condition I.D.3.:

			Effluent Limitations		Monitoring Requirements			
Parameter	Units	Max/Min	Limit	Statistical Basis	Frequency of Analysis	Sample Type	Monitoring Site Number	Notes
Flow	MGD	Max	Report	Daily Maximum	Semi-Annually	Calculated	FLW-3	
Oil and Grease	mg/L	Max Max	15.0 20.0	Monthly Average Daily Maximum	Semi-Annually	Grab	OUI-1	
Solids, Total Suspended	mg/L	Max Max	30.0 100.0	Monthly Average Daily Maximum	Semi-Annually	Grab	OUI-1	

6. Effluent samples shall be taken at the monitoring site locations listed in Permit Condition I.B.5. and as described below:

[1] When using the Suwannee Aquifer well as source water, discharge of reverse osmosis reject water shall only occur when there is a minimum flow in the discharge canal of 149 MGD.

PERMITTEE: Florida Power & Light
FACILITY: Ft. Myers Power Plant

PERMIT NUMBER: FL0001490 (Major)
EXPIRATION DATE: January 19, 2021

Monitoring Site Number	Description of Monitoring Site
FLW-3	The point of discharge to the cooling tower basin (flow measurement).
OUI-1	The point of discharge to the cooling tower basin.

7. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge once-through **cooling tower discharge** from **Ontfall I-170** to the discharge canal. Such discharge shall be limited and monitored by the permittee as specified below and reported in accordance with Permit Condition I.D.3.:

			Effluent Limitations		Monitoring Requirements			
Parameter	Units	Max/ Min	Limit	Statistical Basis	Frequency of Analysis	Sample Type	Monitoring Site Number	Notes
Flow	MGD	Max Max	Report Report	Daily Maximum Monthly Average	Daily	Recorder	FLW-4	
Time of Chlorine Addition	min/day	Max	120	Daily Maximum	Daily	Calculated	OTH-1	
Oxidants, Total Residual	mg/L	Max	0.20	Daily Maximum	Weekly	Grab	OUI-2	See I.B.9

8. Effluent samples shall be taken at the monitoring site locations listed in Permit Condition I.B.7. and as described below:

Monitoring Site Number	Description of Monitoring Site
FLW-4	The cooling tower discharge flume (flow measurement).
OTH-1	The point of chlorine addition to the cooling tower flow.
OUI-2	The cooling tower discharge flume.

9. Total Residual Oxidants (TRO) means the value obtained using the amperometric titration method for total residual chlorine or the Hach model 19300 or equivalent). Testing for TRO by titration shall be conducted according to either the low-level amperometric method, or the DPD calorimetric method as specified in section 4500-CI E. or 4500 CI G., respectively, Standard Methods for the examination of Water and Waste water, 18th Edition (or most current edition).

   Monitoring requirements for TRO are not applicable if an oxidant has not been added to the non-contact cooling water systems of any electric generating unit during the previous 7 days.

   Multiple grabs for TRO shall be defined as once per five minutes during TRO discharge periods of 30 minutes or less and once per 15 minutes for periods exceeding 30 minutes with no less than four analyses during the period of TRO discharge (sampling shall be continued until the end of the TRO discharge).

10. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **Anxiliary Equipment Cooling Water (AECW)** from Outfall I-180 to the discharge canal. Such discharge shall be limited and monitored by the permittee as specified below and reported in accordance with Permit Condition I.D.3.:

			Effluent Limitations		Monitoring Requirements			
Parameter	Units	Max/ Min	Limit	Statistical Basis	Frequency of Analysis	Sample Type	Monitoring Site Number	Notes
Flow	MGD	Max	Report	Daily Maximum	Weekly	Calculated	FLW-5	
Time of Chlorine Addition	min/day	Max	120	Daily Maximum	Daily	Calculated	OTH-2	

11. Effluent samples shall be taken at the monitoring site locations listed in Permit Condition I.B.10 and as described below:

Monitoring Site Number	Description of Monitoring Site
FLW-5	AECW intake for Units 1 and 2 (flow measurement).
OTH-2	The point of chlorine addition to AECW.

12. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **manatee heated water** from **Outfall I-113** to the discharge canal via internal outfall I-180. Discharge of the manatee heating water is permitted without limitation or monitoring requirements.

13. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **intake screen wash water** from **Outfall I-190** to the discharge canal. Discharge of intake screen wash water is permitted without limitation or monitoring requirements.

14. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **fire pump discharge** water from **Outfall I-1D0** to the discharge canal. Discharge of fire pump discharge water is permitted without limitation or monitoring requirements.

C. Land Application Systems

1. During the period beginning on the issuance date and lasting through the expiration date of this permit, the permittee is authorized to discharge **equipment area stormwater and washdown as well as fuel oil storage runoff** to the **Land Application System G-001**, an evaporation/percolation pond. Occasionally, the runoff may mix with de minimis quantities of process water from minor leaks or spills from the steam generating facilities associated with these units.

   In addition, the permittee is authorized to discharge non-industrial stormwater from Sub-basins 7B and 7C to the evaporation/percolation pond. Discharge to the evaporation/percolation pond is permitted without limitation or monitoring requirements.

D. Other Limitations and Monitoring and Reporting Requirements

1. The sample collection, analytical test methods, and method detection limits (MDLs) applicable to this permit shall be conducted using a sufficiently sensitive method to ensure compliance with applicable water quality standards and effluent limitations and shall be in accordance with Rule 62-4.246, Chapters 62-160 and 62-601, F.A.C., and 40 CFR 136, as appropriate. The list of Department established analytical methods, and corresponding MDLs (method detection limits) and PQLs (practical quantitation limits), which is titled "FAC 62-4 MDL/PQL Table (April 26, 2006)" is available at http://www.dep.state.fl.us/labs/library/index.htm. The MDLs and PQLs as described in this list shall constitute the minimum acceptable MDL/PQL values and the Department shall not accept results for which the laboratory's MDLs or PQLs are greater than those described above unless alternate MDLs and/or PQLs have been specifically approved by the Department for this permit. Any method included in the list may be used for reporting as long as it meets the following requirements:

   a. The laboratory's reported MDL and PQL values for the particular method must be equal or less than the corresponding method values specified in the Department's approved MDL and PQL list;

   b. The laboratory reported MDL for the specific parameter is less than or equal to the permit limit or the applicable water quality criteria, if any, stated in Chapter 62-302, F.A.C. Parameters that are listed as "report only" in the permit shall use methods that provide an MDL, which is equal to or less than the applicable water quality criteria stated in 62-302, F.A.C.; and

   c. If the MDLs for all methods available in the approved list are above the stated permit limit or applicable water quality criteria for that parameter, then the method with the lowest stated MDL shall be used.

   When the analytical results are below method detection or practical quantitation limits, the permittee shall report the actual laboratory MDL and/or PQL values for the analyses that were performed following the instructions on the applicable discharge monitoring report.

Where necessary, the permittee may request approval of alternate methods or for alternative MDLs or PQLs for any approved analytical method. Approval of alternate laboratory MDLs or PQLs are not necessary if the laboratory reported MDLs and PQLs are less than or equal to the permit limit or the applicable water quality criteria, if any, stated in Chapter 62-302, F.A.C. Approval of an analytical method not included in the above-referenced list is not necessary if the analytical method is approved in accordance with 40 CFR 136 or deemed acceptable by the Department. *[62-4.246, 62-160]*

2. The permittee shall provide safe access points for obtaining representative influent and effluent samples which are required by this permit. *[62-620.320(6)]*

3. Monitoring requirements under this permit are effective on the first day of the second month following permit issuance. Until such time, the permittee shall continue to monitor and report in accordance with previously effective permit requirements, if any. During the period of operation authorized by this permit, the permittee shall complete and submit to the Department Discharge Monitoring Reports (DMRs) in accordance with the frequencies specified by the REPORT type (i.e. monthly, quarterly, semiannual, annual, etc.) indicated on the DMR forms attached to this permit. Monitoring results for each monitoring period shall be submitted in accordance with the associated DMR due dates below.

REPORT Type on DMR	Monitoring Period	Due Date
Monthly	first day of month - last day of month	28th day of following month
Quarterly	January 1 - March 31 April 1 - June 30 July 1 - September 30 October 1 - December 31	April 28 July 28 October 28 January 28
Semiannual	January 1 - June 30 July 1 - December 30	July 28 January 28
Annual	January 1 - December 31	January 28

The permittee may submit either paper or electronic DMR forms. If submitting paper DMR forms, the permittee shall make copies of the attached DMR forms, without altering the original format or content unless approved by the Department, and shall mail the completed DMR forms to the Department by the twenty-eighth (28th) of the month following the month of operation at the address specified below:

Florida Department of Environmental Protection
Water Compliance Assurance Program, Mail Station 3550
Bob Martinez Center
2600 Blair Stone Road
Tallahassee, Florida 32399-2400

If submitting electronic DMR forms, the permittee shall use the electronic DMR system (EzDMR) and shall electronically submit the completed DMR forms to the Department by the twenty-eighth (28th) of the month following the month of operation. Data submitted in electronic format is equivalent to data submitted on signed and certified paper DMR forms. *[62-620.610(18)]*

4. Unless specified otherwise in this permit, all reports and other information required by this permit, including 24-hour notifications, shall be submitted to or reported to, as appropriate, the Department's South District Office at the address specified below:

Florida Department of Environmental Protection
South District
2295 Victoria Ave
Suite 364
Ft. Myers, Florida 33901-3875

Phone Number - (239)344-5600
FAX Number - (850)412-0590
(All FAX copies and e-mails shall be followed by original copies.)

5. All reports and other information shall be signed in accordance with the requirements of Rule 62-620.305, F.A.C. *[62-620.305]*

6. If there is no discharge from the facility on a day when the facility would normally sample, the sample shall be collected on the day of the next discharge. *[62-620.320(6)]*

7. The permittee is authorized to use only those water treatment chemicals at the frequency and dosage rates described in the permit application and associated documents submitted to the Department for renewal of the current permit. Only one antiscalant chemical shall be used at any given time. Permit revisions are not necessary for use of chemicals equivalent to those being used if the alternative chemicals consist of the same constituents, at the same concentrations and are used at the current rate. The use of other chemicals that are not chemical equivalents or current chemicals at higher dosage rates or frequencies is not authorized and will require a permit revision. The permittee is responsible for maintaining documentation on-site which demonstrates equivalency of any new water treatment products from another vendor or manufacturer with a different product name from those described in the permit application.

   The permittee may elect to use products or cleaners other than those listed above, provided the generated wastewater is collected and taken offsite to an approved wastewater treatment facility.

8. A revision to this permit is not necessary for the following activities:

   a. Structural changes that do not change the quality, nature, or quantity of the discharge of wastes or that do not cause water pollution; and

   b. Construction, replacement or repair of components at the facility which does not change the permitted treatment works or the terms and conditions of this permit.

   Records of these activities shall be kept by the permittee (activity description, start date and length of activity). The documentation shall be kept on-site in accordance with Permit Condition V.A.2, and made available to Department staff upon request. *[62-620.200(26)(a) & (b)]*

9. Discharge of any product registered under the Federal Insecticide, Fungicide, and Rodenticide Act to any waste stream that ultimately may be released to waters of the State is prohibited unless specifically authorized elsewhere in a permit; except products used for lawn and agricultural purposes or to the nse of herbicides if used in accordance with labeled instructions and any applicable State permit. The permittee shall consult with the Florida Fish and Wildlife Commission, the U.S. Fish and Wildlife Service, and the National Marine Fisheries Service if threatened or endangered species may be exposed to the product.

   In the event the permittee proposes to use biocides, corrosion inhibitors, or additives not authorized in this permit, or not previously reported to the Department, that ultimately may be released to waters of the State, the permittee shall notify the Department in writing a minimum of thirty (30) days prior to instituting the use of such product. The product shall not be used prior to a determination by the Department that a permit revision is not required or prior to Department approval. Such notification shall include:

   a. Name and general composition of product;

   b. Frequencies of use;

   c. Quantities to be used;

   d. Proposed effluent concentrations;

   e. Acute and/or chronic toxicity data (laboratory reports shall be prepared, depending on the test type, according to Section 12 of EPA document no. EPA-821-R-02-012 entitled, Methods for Measuring the Acute Toxicity of Effluents and Receiving Waters for Freshwater and Marine Organisms, Section 10 of EPA document no. EPA-821-R-02-013 entitled, Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms or Section 10 of EPA document no. EPA-821-R-02-014 entitled, Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Marine and Estuarine Organisms, or most current addition);

   f. Product data sheet;

g. EPA registration number, if applicable.

10. The permittee shall continue compliance with the facility's Manatee Protection Plan approved by the Department on August 18, 1999.

11. The permittee shall complete all studies and gather all information required under 40 CFR 122.21(r)(2-13) necessary to establish impingement mortality and entrainment BTA requirements in accordance with the schedule in Permit Condition VI.4.

12. There shall be no discharge of polychlorinated biphenyl (PCB) compounds such as those commonly used for transformer flnid. The permittee shall dispose of all known PCB equipment, articles, and wastes either in accordance with:

    a. Department-issued permits governing soil thermal treatmeut (Chapter 62-713, F.A.C.) or Department-approved landfills provided the PCB concentrations meet the Florida landfill's permitted limit when concentrations are less than 50 ppm; or

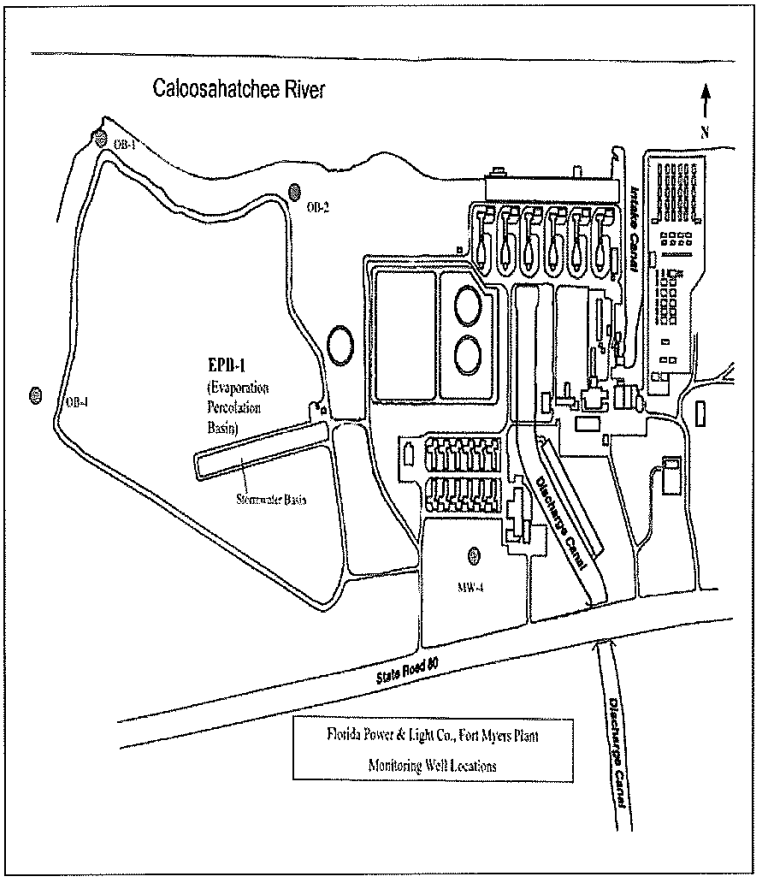
    b. 40 CFR 761 when concentrations are greater than or equal to 50 ppm.

    [40 CFR Part 423.12(b)(2)]

II. SLUDGE MANAGEMENT REQUIREMENTS

1. The permittee shall be responsible for proper treatment, management, use, and disposal of its sludges. *[62-620.320(6)]*

2. Storage, transportation, and disposal of sludge/solids characterized as hazardous waste shall be in accordance with requirements of Chapter 62-730, F.A.C. *[62-730]*



3. Vegetation and materials removed from intake screens and vegetation, sediments and sludge excavated from the settling basins and percolation basins must be properly stored onsite until they are disposed in accordance with requirements in Chapter 62-701, F.A.C., and other applicable State and Federal requirements.

PERMITTEE: Florida Power & Light
FACILITY: Ft. Myers Power Plant

PERMIT NUMBER: FL0001490 (Major)
EXPIRATION DATE: January 19, 2021

III. GROUND WATER REQUIREMENTS

1. The ground water monitoring well locations for this facility are depicted on the site map below as "MW" and "OB":

2. During the period of operation authorized by this permit, the permittee shall sample ground water in accordance with this permit and the approved ground water monitoring plan prepared under Rule 62-522.600, F.A.C.

3. The following monitoring wells shall be sampled for the Fort Myers FP&L Power Plant evaporation/percolation pond, Land Application System G-001.

Monitoring Well ID	Alternate Well Name and/or Description of Monitoring Location	Depth (Feet)	Aquifer Monitored	New or Existing
MW-4 21556	Background Well. Replaces background well MW-3, which was destroyed. Monitor well located along S.R. 80.	20.0	Surficial	Existing
OB-1 21555	Compliance Well. Northwest corner of percolation pond (G-001), between the percolation pond and the Caloosahatchee River.	30.0	Surficial	Existing
OB-2 21554	Intermediate Well. Northeast corner of percolation pond (G-001), between the percolation pond and Caloosahatchee River.	30.0	Surficial	Existing
OB-4 21553	Compliance Well. West of the perc pond (G-001), deep compliance well.	100.0	Surficial	Existing

MWB = Background; MWI = Intermediate; MWC = Compliance, MWP = Piezometer

4. The monitor wells specified in Condition III.B.2 shall be sampled for the parameters listed below:

Parameter Name	Compliance Well Limit	Units	Sample Type	Monitoring Frequency
Specific Conductance	60000.0	umho/cm	Grab	Quarterly
PH	Report	s.u.	Grab	Quarterly
Chloride (as Cl)	Report	mg/L	Grab	Quarterly
Solids, Total Dissolved (TDS)	Report	MG/L	Grab	Quarterly
Water Level Relative to NGVD	Report	FEET	Measured	Quarterly
Sulfate, Total	Report	mg/L	Grab	Quarterly
Nitrogen, Nitrate, Total (as N)	10.0	mg/L	Grab	Quarterly
Carbon, Total Organic (TOC)	Report	mg/L	Grab	Annually
Petroleum Hydrocarbons, Total Recoverable (TRPH)	Report	mg/L	Grab	Annually

5. A zone of discharge is established for G-001, more specifically described as follows:

   The zone of discharge shall not extend further than the limits of the property boundaries as described in the legal description of the property limits for the Fort Myers Florida Power and Light Power Plant, as submitted to the Department on August 28, 1990. The vertical zone of discharge shall not extend below the semi-confining zone at the base of the water table aquifer and is designed to protect the Sandstone Aquifer in that area.

6. The permittee's discharge to ground water shall not cause a violation of water quality standards for ground waters at the boundary of the zone of discharge in accordance with Rules 62-520.400 and 62-520.420, F.A.C.

7. The permittee's discharge to ground water shall not cause a violation of the minimum criteria for ground water specified in Rule 62-520.400, F.A.C., within the zone of discharge.

8. If the concentration for any constituent listed in Permit Condition III.B.4 in the natural background quality of the ground water is greater than the stated maximum, or in the case of pH is also less than the minimum, the representative natural backgrouud quality shall be the prevailing standard.

9. Water levels shall be recorded before evacuating each well for sample collection. Elevation references shall include the top of the well casing and land surface at each well site (NAVD allowable) at a precision of plus or minus 0.01 foot. *[62-520.600(11)(c)]*.

10. Ground water monitoring wells shall be purged prior to sampling to obtain representative samples. *[62-160.210]*.

11. Analyses shall be conducted on unfiltered samples, unless filtered samples have been approved by the Department's South District Office as being more representative of ground water conditions. *[62-520.310(5)]*

12. If any monitoring well becomes damaged or inoperable, the permittee shall notify the Department immediately and a detailed written report shall follow within seven days. The written report shall detail what problem has occurred and remedial measures that have been taken to prevent recurrence. All monitoring well design and replacement shall be approved by the Department prior to installation. *[62-520.600][62-620.320(6)]*.

13. All piezometers and monitoring wells not part of the approved ground water monitoring plan are to be plugged and abandoned in accordance with Rule 62-532.500(4), F.A.C., unless future use is intended. *[62-532.500(4)]*.

14. The permittee shall provide verbal notice to the Department as soon as practical after discovery of a sinkhole within an area for the management or application of wastewater or sludge. The permittee shall immediately implement measures appropriate to control the entry of contaminants, and shall detail these measures to the Department in a written report within 7 days of the sinkhole discovery.

15. Ground water monitoring test results shall be submitted on Part D of DEP Form 62-620.910(10) (attached) and shall be submitted to the address specified in I.E.3. Results shall be submitted with the DMR for each month listed in the following schedule.

SAMPLE PERIOD	REPORT DUE DATE
January - March	April 28
April - June	July 28
July - September	October 28
October - December	January 28

IV. ADDITIONAL LAND APPLICATION REQUIREMENTS

Section IV is not applicable to this facility.

V. OPERATION AND MAINTENANCE REQUIREMENTS

A. General Operation and Maintenance Requirements

1. During the period of operation authorized by this permit, the wastewater facilities shall be operated under the supervision of a person who is qualified by formal training and/or practical experience in the field of water pollution control. *[62-620.320(6)]*

2. The permittee shall maintain the following records and make them available for inspection on the site of the permitted facility.

   a. Records of all compliance monitoring information, inclnding all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, including, if applicable, a copy of the laboratory certification showing the certification number of the laboratory, for at least three years from the date the sample or measurement was taken;

   b. Copies of all reports required by the permit for at least three years from the date the report was prepared;

   c. Records of all data, including reports and documents, used to complete the application for the permit for at least three years from the date the application was filed;

   d. Records of all disposal of vegetation and materials removed from intake screens and vegetation, sediments and sludge removed from wastewater and stormwater basins

   e. A copy of the current permit;

   f. A copy of any required record drawings; and

   g. Copies of the logs and schedules showing plant operations and equipment maintenance for three years from the date of the logs or schedules.

   [62-620.350]

3. During the period of operation authorized by this permit, the wastewater facility shall, as part of the regular maintenance schedule, review the structural integrity of all outfalls, including all outfalls that have been taken out of service.

B. Storm Water Requirements

1. The permittee shall amend the SWPPP whenever there is a change at the facility or change in the operation of the facility that materially increases the potential for the ancillary activities to result in a discharge of additional, significant amounts of pollutants. The permittee shall have 30 days after facility or operational changes to update the SWPPP as necessary.

C. Impoundment Design, Construction, Operation, and Maintenance

1. All impoundments used to hold or treat wastewater and other associated wastes shall be operated and maintained to prevent the discharge of pollutants to waters of the State, except as authorized under this permit.

2. Construction, operation, and maintenance of any impoundment shall be in accordance with all relevant Local, Regional, State and Federal regulations and shall be certified by a qualified, Florida registered professional engineer and permitted and inspected by the appropriate agency prior to use.

VI. SCHEDULES

1. The following improvement actions shall be completed according to the following schedule. The Stormwater Pollution Prevention (SWPP) Plan shall be prepared and implemented in accordance with Part VII of this permit.

Improvement Action	Completion Date
1. Develop SWPP Plan	Effective date of permit plus 6 months
2. Implement SWPP Plan	Effective date of permit plus 18 months

2. If the permittee wishes to continue operation of this wastewater facility after the expiration date of this permit, the permittee shall submit an application for renewal no later than one-hundred and eighty days (180) prior to the expiration date of this permit. Application shall be made using the appropriate forms listed in Rule 62-620.910, F.A.C., including submittal of the appropriate processing fee set forth in Rule 62-4.050, F.A.C. *[62-620.335(1) and (2)*

3. The permittee shall submit a copy of the Manatee Protection Plan, including any amendments, with the permit renewal application to each of the following agencies no later than one-hundred and eighty days (180) prior to the expiration date of this permit:

Florida Department of Environmental Protection
Industrial Wastewater Section, Mail Station 3545
Bob Martinez Center
2600 Blair Stone Road
Tallahassee, Florida 32399-2400

Florida Fish and Wildlife Conservation Commission
Bureau of Protected Species Management
620 South Meridian Street
OES-BPS
Tallahassee, Florida 32399-1600

And

US Fish and Wildlife Service
Jacksonville Field Office
7915 Baymeadows Way, Suite 200
Jacksonville, Florida 32256-7517

4. The permittee shall submit the information required by the applicable provisions of 40 CFR 122.21(r) in accordance with the following:

   a. Within six months of the effective date of this permit, the permittee shall submit to the Department a Plan of Study (POS) to address the timely implementation of the 316(b) cooling water intake regulations. The POS shall include a schedule for the submittal of all applicable §122.21(r) forms, any associated reports, and peer review documentation. All applicable forms, reports, and associated material shall be submitted as soon as practicable but no later than 180 days prior to the expiration date of the permit (also the due date for submission of the permit renewal application)

PERMITTEE: Florida Power & Light
FACILITY: Ft. Myers Power Plant

PERMIT NUMBER: FL0001490 (Major)
EXPIRATION DATE: January 19, 2021

VII. BEST MANAGEMENT PRACTICES/STORMWATER POLLUTION PREVENTION PLANS

1. In accordance with Section 304(e) and 402(a)(2) of the Clean Water Act (CWA) as amended, 33 U.S.C. §§ 1251 et seq., and the Pollution Prevention Act of 1990, 42 U.S.C. §§ 13101-13109, the permittee must develop and implement a Stormwater Pollution Prevention Plan (SWPPP) for the facility covered by this permit. The SWPPP shall be prepared in accordance with good engineering practices and in accordance with the factors outlined in 40 CFR §125.3(d)(2) or (3) as appropriate. The plan shall identify potential sources of pollution that may reasonably be expected to affect the quality of stormwater discharges associated with industrial activity from the facility. In addition, the plan shall describe and ensure the implementation of practices which are to be used to reduce the pollutants, including mercury, in stormwater discharges associated with industrial activity at the facility and to assure compliance with the terms and conditions of this permit. Facilities must implement the provisions of the SWPPP required under this part as a condition of this permit. The plan shall include, at a minimum, the following items:

   a. Specific individual(s) within the facility organization as members of a SWPPP Team that are responsible for developing the SWPPP and assisting the facility or operations manager in its implementation, maintenance, and revision. The plan shall clearly identify the responsibilities of each team member. The activities and responsibilities of the team shall address all aspects of the facility's SWPPP.

   b. A description of potential sources which may reasonably be expected to add significant amounts of pollutants to stormwater discharges or which may result in the discharge of pollutants during dry weather from separate storm sewers draining the facility. The plan shall identify all activities and significant materials that may potentially be significant pollutant sources. The plan shall include, at a minimum:

      (1) Drainage
         (a) A site map indicating an outline of the portions of the drainage area of each stormwater outfall that are within the facility boundaries, each existing structural control measure to reduce pollutants in stormwater runoff, surface water bodies, locations where significant materials are exposed to precipitation, locations where major spills or leaks identified under Item (2)(c) (spills and leaks) have occurred, and the locations of the following activities where such activities are exposed to precipitation: fueling stations; vehicle and equipment maintenance and/or cleaning areas; loading/unloading areas; locations used for the treatment, storage or disposal of wastes; liquid storage tanks; processing areas; and storage areas.
         (b) For each area of the facility that generates stormwater discharges associated with industrial activity with a reasonable potential for containing significant amounts of pollutants, a prediction of the direction of flow, and an identification of the types of pollutants which are likely to be present in stormwater discharges associated with industrial activity. Factors to consider include the toxicity of chemical; quantity of chemicals used, produced or discharged; the likelihood of contact with stormwater; and history of significant leaks or spills of toxic or hazardous pollutants. Flows with a significant potential for causing erosion shall be identified.

      (2) An inventory of the types of materials handled at the site that potentially may be exposed to precipitation. Such inventory shall include a narrative description of significant materials that have been handled, treated, stored or disposed in a manner to allow exposure to stormwater between the time of three years prior to the effective date of this permit and the present; method and location of on-site storage or disposal; materials management practices employed to minimize contact of materials with stormwater runoff between the time of three years prior to the effective date of this permit and the present; the location and a description of existing structural and non-structural control measures to reduce pollutants in stormwater runoff; and a description of any treatment the stormwater receives.

      (3) A list of significant spills and significant leaks of toxic or hazardous pollutants that occurred at areas that are exposed to precipitation or that otherwise drain to a stormwater conveyance at the facility after the date of three years prior to the effective date of this permit. Such list shall be updated as appropriate during the term of the permit.

      (4) A summary of existing discharge sampling data describing pollutants in stormwater discharges from the facility, including a summary of sampling data collected during the term of this permit.

      (5) A narrative description of the potential pollutant sources from the following activities if applicable: loading and unloading operations; outdoor storage activities; outdoor manufacturing or processing activities; significant dust or particulate generating processes; loading/unloading areas; and on-site waste disposal practices. The description shall specifically list any significant potential source of pollutants at the site and

for each potential source, any pollutant or pollutant parameter (e.g. biochemical oxygen demand, etc.) of concern shall be identified.

c. A description of stormwater management controls appropriate for the facility and implement such controls. The appropriateness and priorities of controls in a plan shall reflect identified potential sources of pollutants at the facility. The description of stormwater management controls shall address the following minimum components, including a schedule for implementing such controls:
   (1) Good housekeeping requires the maintenance of areas that may contribute pollutants to stormwater discharges in a clean, orderly manner.
   (2) A preventive maintenance program shall involve timely inspection and maintenance of stormwater management devices (e.g. cleaning oil/water separators, catch basins) as well as inspecting and testing facility equipment and systems to uncover conditions that could cause breakdowns or failures resulting in discharges of pollutants to surface waters, and ensuring appropriate maintenance of such equipment and systems.
   (3) Areas where potential spills that can contribute pollutants to stormwater discharges can occur and their accompanying drainage points shall be identified clearly in the SWPPP. Where appropriate, specifying material handling procedures, storage requirements, and use of equipment such as diversion valves in the plan should be considered. Procedures for cleaning up spills shall be identified in the plan and made available to the appropriate personnel. The necessary equipment to implement a cleanup should be available to personnel.
   (4) In addition to or as part of the comprehensive site evaluation required under paragraph (4) of this section, qualified facility personnel shall be identified to inspect designated equipment and areas of the facility at appropriate intervals specified in the plan. A set of tracking or follow-up procedures shall be used to ensure that appropriate actions are taken in response to the inspections. Records of inspections shall be maintained.
   (5) Employee training programs shall inform personnel responsible for implementing activities identified in the SWPPP or otherwise responsible for stormwater management at all levels of responsibility of the components and goals of the SWPPP. Training should address topics such as spill response, good housekeeping and material management practices. A pollution prevention plan shall identify periodic dates for such training.
   (6) A description of incidents (such as spills, or other discharges), along with other information describing the quality and quantity of stormwater discharges shall be included in the plan required under this part. Inspections and maintenance activities shall be documented and records of such activities shall be incorporated into the plan.
   (7) Non-Stormwater Discharges
      (a) The plan shall include a certification that each "stormwater-only" discharge authorized under this permit has been tested or evaluated for the presence of non-stormwater discharges. (This section is not applicable to those discharges authorized under this permit that have been identified in the application as having non-stormwater components.) The certification shall include the identification of potential significant sources of non-stormwater at the site, a description of the results of any test and/or evaluation for the presence of non-stormwater discharges, the evaluation criteria or testing method used, the date of any testing and/or evaluation, and the on-site drainage points that were directly observed during the test. Certifications shall be signed in accordance with paragraph (6) of this section. Such certification may not be feasible if the facility operating the stormwater discharge associated with industrial activity does not have access to an outfall, manhole, or other point of access to the ultimate conduit that receives the discharge. In such cases, the source identification section of the stormwater pollution plan shall indicate why the certification required by this part was not feasible, along with the identification of potential significant sources of non-stormwater at the site. A discharger that is unable to provide the certification required by this paragraph must notify the Department in accordance with paragraph (iii) below.
      (b) Except for flows from firefighting activities, sources of authorized non-stormwater discharges that are combined with stormwater discharges associated with industrial activity must be identified in the plan. The plan shall identify and ensure the implementation of appropriate pollution prevention measures for the non-stormwater component(s) of the discharge.
      (c) Failure to Certify. Any facility that is unable to provide the certification required (testing for non-stormwater discharges), must notify the Department. If the failure to certify is caused by the inability to perform adequate tests or evaluations, such notification shall describe: the procedure of any test conducted for the presence of non-stormwater discharges; the results of such test or other relevant

observations; potential sources of non-stormwater discharges to the storm sewer; and why adequate tests for such storm sewers were not feasible. Non-stormwater discharges to surface waters of the State of Florida which are not authorized by an NPDES permit are unlawful, and must be terminated or dischargers must submit appropriate NPDES permit application forms.

(8) The plan shall identify areas which, due to topography, activities, or other factors, have a high potential for significant soil erosion, and identify structural, vegetative, and/or stabilization measures to be used to limit erosion.

(9) The plan shall contain a narrative consideration of the appropriateness of traditional stormwater management practices (practices other than those which control the generation or source(s) of pollutants) used to divert, infiltrate, reuse, or otherwise manage stormwater runoff in a manner that reduces pollutants in stormwater discharges from the site. The plan shall provide that those measures that the permittee determines to be reasonable and appropriate shall be implemented and maintained. The potential of various sources at the facility to contribute pollutants to stormwater discharges associated with industrial activity shall be considered when determining reasonable and appropriate measures. Appropriate measures may include: vegetative swales and practices; reuse of collected stormwater (such as for a process or as an irrigation source); inlet controls (such as oil/water separators); infiltration devices; and, detention or retention devices.

d. A Comprehensive Site Compliance Evaluation. Qualified personnel shall conduct site compliance evalnations at appropriate intervals specified in the plan, but, except as provided in paragraph (4)(d) of this section, in no case less than once a year. Such evaluations shall provide:

(1) Areas contributing to a stormwater discharge associated with industrial activity shall be visually inspected for evidence of, or the potential for, pollutants entering the drainage system. Measures to reduce pollutant loadings shall be evaluated to determine whether they are adequate and properly implemented in accordance with the terms of the permit or whether additional control measures are needed. Structural stormwater management measures, sediment and erosion control measures, and other structural pollution prevention measures identified in the plan shall be observed to ensure that they are operating correctly. A visual inspection of equipment needed to implement the plan, such as spill response equipment, shall be made.

(2) Based on the results of the inspection, the description of potential pollutant sources identified in the plan in accordance with paragraph (2) of this section (description of potential pollutant sources) and pollution prevention measures and controls identified in the plan in accordance with paragraph (3) of this section (measures and controls) shall be revised as appropriate within two weeks of such inspection and shall provide for implementation of any changes to the plan in a timely manner, but in no case more than twelve weeks after the inspection.

(3) A report summarizing the scope of the inspection, personnel making the inspection, the date(s) of the inspection, major observations relating to the implementation of the SWPPP, and actions taken in accordance with paragraph (4)(b) of this section shall be made and retained as part of the SWPPP for at least one year after coverage under this permit terminates. The report shall identify any incidents of non-compliance. Where a report does not identify any incidents of non-compliance, the report shall contain a certification that the facility is in compliance with the SWPPP and this permit. The report shall be signed in accordance with paragraph (6) (signatory requirements) of this section.

e. Consistency with other plans. SWPPP may reference the existence of other plans for Spill Prevention Control and Countermeasure (SPCC), plans developed for the facility under section 311 of the CWA or Best Management Practices (BMP) Programs otherwise required by an NPDES permit for the facility as long as such requirement is incorporated into the SWPPP.

f. Signatory Authority and Management Responsibilities. The SWPPP shall be signed in accordance with Rule 62-620.305, Florida Administrative Code, and shall be reviewed by the facility engineer and facility manager. A copy of the plan shall be retained at the facility and shall be made available to the Department upon request, or in the case of a stormwater discharge associated with industrial activity that discharges through a municipal separate storm sewer system, to the operator of the municipal system.

g. Plan Review. The Department may notify the permittee at any time that the plan does not meet one or more of the minimum requirements of this Part. Such notification shall identify those provisions of the permit which are not being met by the plan, and identify which provisions of the plan requires modifications in order to meet the minimum requirements of this Part. Within 30 days of such notification from the Department, the permittee

shall make the required changes to the plan and shall submit to the Department a written certification that the requested changes have been made.

h. Keeping Plans Current. The permittee shall amend the plan whenever there is a change in design, construction, operation, or maintenance of the facility which has a significant effect on the potential for the discharge of pollutants to surface waters of the State of Florida; if the SWPPP proves to be ineffective in eliminating or significantly minimizing pollutants from sources identified under paragraph (2) (description of potential pollutant sources) of this section; or, in otherwise achieving the general objectives of controlling pollutants in stormwater discharges associated with industrial activity. Amendments to the plan may be reviewed by the Department in the same manner as described in paragraphs (6) and (7) of this section.

[62-620.100(3)(m)]

VIII. OTHER SPECIFIC CONDITIONS

A. Specific Conditions Applicable to All Permits

1. Where required by Chapter 471 or Chapter 492, F.S., applicable portions of reports that must be submitted under this permit shall be signed and sealed by a professional engineer or a professional geologist, as appropriate. *[62-620.310(4)]*

2. Drawings, plans, documents or specifications submitted by the permittee, not attached hereto, but retained on file at the Department's South District Office, are made a part hereof.

3. This permit satisfies Industrial Wastewater program permitting requirements only and does not authorize operation of this facility prior to obtaining any other permits required by local, state or federal agencies.

4. The permittee shall provide verbal notice to the Department's South District Office as soon as practical after discovery of a sinkhole or other karst feature within an area for the management or application of wastewater, or wastewater sludges. The permittee shall immediately implement measures appropriate to control the entry of contaminants, and shall detail these measures to the Department's South District Office in a written report within 7 days of the sinkhole discovery. *[62-620.320(6)]*

B. Specific Conditions Related to Existing Manufacturing, Commercial, Mining, and Silviculture Wastewater Facilities or Activities

1. Existing manufacturing, commercial, mining, and silvicultural wastewater facilities or activities that discharge into surface waters shall notify the Department as soon as they know or have reason to believe:

   a. That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following levels;
      (1) One hundred micrograms per liter,
      (2) Two hundred micrograms per liter for acrolein and acrylonitrile; five hundred micrograms per liter for 2, 4-dinitrophenol and for 2-methyl-4, 6-dinitrophenol; and one milligram per liter for antimony, or
      (3) Five times the maximum concentration value reported for that pollutant in the permit application; or

   b. That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following levels;
      (1) Five hundred micrograms per liter,
      (2) One milligram per liter for antimony, or
      (3) Ten times the maximum concentration value reported for that pollutant in the permit application.

   [62-620.625(1)]

C. Duty to Reapply

1. The permittee is not authorized to discharge to waters of the State after the expiration date of this permit, unless:

a. the permittee has applied for renewal of this permit at least 180 days before the expiration date (**July 23, 2020**) using the appropriate forms listed in Rule 62-620.910, F.A.C., and in the manner established in the Department of Environmental Protection Guide to Permitting Wastewater Facilities or Activities Under Chapter 62-620, F.A.C., including submittal of the appropriate processing fee set forth in Rule 62-4.050, F.A.C.; or

b. the permittee has made complete the application for renewal of this permit before the permit expiration date.

[62-620.335(1)-(4), F.A.C.]

2. When publishing Notice of Draft and Notice of Intent in accordance with Rules 62-110.106 and 62-620.550, F.A.C., the permittee shall publish the notice at its expense in a newspaper of general circulation in the county or counties in which the activity is to take place either

   a. Within thirty days after the permittee has received a notice; or

   b. Within thirty days after final agency action.

   Failure to publish a notice is a violation of this permit.

D. Reopener Clauses

1. The permit shall be revised, or alternatively, revoked and reissued in accordance with the provisions contained in Rules 62-620.325 and 62-620.345 F.A.C., if applicable, or to comply with any applicable effluent standard or limitation issued or approved under Sections 301(b)(2)(C) and (D), 304(b)(2) and 307(a)(2) of the Clean Water Act (the Act), as amended, if the effluent standards, limitations, or water quality standards so issued or approved:

   a. Contains different conditions or is otherwise more stringent than any condition in the permit/or;

   b. Controls any pollutant not addressed in the permit.

   The permit as revised or reissued under this paragraph shall contain any other requirements then applicable.

2. The permit may be reopened to adjust effluent limitations or monitoring requirements should future Water Quality Based Effluent Limitation determinations, water quality studies, DEP approved changes in water quality standards, EPA established Total Maximum Daily Loads (TMDLs), or other information show a need for a different limitation, monitoring requirement, or more stringent requirements or any applicable standards pertaining to the operation and maintenance of coal combustion waste impoundments.

3. The Department or EPA may develop a TMDL during the life of the permit. Once a TMDL has been established and adopted by rule, the Department shall revise this permit to incorporate the final findings of the TMDL.

4. The permit shall be reopened for revision as appropriate to address new information that was not available at the time of this permit issuance or to comply with requirements of new regulations, standards, or judicial decisions relating to CWA 316(b).

IX. GENERAL CONDITIONS

1. The terms, conditions, requirements, limitations and restrictions set forth in this permit are binding and enforceable pursuant to Chapter 403, Florida Statutes. Any permit noncompliance constitutes a violation of Chapter 403, Florida Statutes, and is grounds for enforcement action, permit termination, permit revocation and reissuance, or permit revision. *[62-620.610(1)]*

2. This permit is valid only for the specific processes and operations applied for and indicated in the approved drawings or exhibits. Any unauthorized deviations from the approved drawings, exhibits, specifications or conditions of this permit constitutes grounds for revocation and enforcement action by the Department. *[62-620.610(2)]*

3. As provided in Subsection 403.087(7), F.S., the issuance of this permit does not convey any vested rights or any exclusive privileges. Neither does it authorize any injury to public or private property or any invasion of personal rights, nor authorize any infringement of federal, state, or local laws or regulations. This permit is not a waiver of or approval of any other Department permit or authorization that may be required for other aspects of the total project which are not addressed in this permit. *[62-620.610(3)]*

4. This permit conveys no title to land or water, does not constitute state recognition or acknowledgment of title, and does not constitute authority for the use of submerged lands unless herein provided and the necessary title or leasehold interests have been obtained from the State. Only the Trustees of the Internal Improvement Trust Fund may express State opinion as to title. *[62-620.610(4)]*

5. This permit does not relieve the permittee from liability and penalties for harm or injury to human health or welfare, animal or plant life, or property caused by the construction or operation of this permitted source; nor does it allow the permittee to cause pollution in contravention of Florida Statutes and Department rules, unless specifically authorized by an order from the Department. The permittee shall take all reasonable steps to minimize or prevent any discharge, reuse of reclaimed water, or residuals use or disposal in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. *[62-620.610(5)]*

6. If the permittee wishes to continue an activity regulated by this permit after its expiration date, the permittee shall apply for and obtain a new permit. *[62-620.610(6)]*

7. The permittee shall at all times properly operate and maintain the facility and systems of treatment and control, and related appurtenances, that are installed and used by the permittee to achieve compliance with the conditions of this permit. This provision includes the operation of backup or auxiliary facilities or similar systems when necessary to maintain or achieve compliance with the conditions of the permit. *[62-620.610(7)]*

8. This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit revision, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition. *[62-620.610(8)]*

9. The permittee, by accepting this permit, specifically agrees to allow authorized Department personnel, including an authorized representative of the Department and authorized EPA personnel, when applicable, upon presentation of credentials or other documents as may be required by law, and at reasonable times, depending upon the nature of the concern being investigated, to:

   a. Enter upon the permittee's premises where a regulated facility, system, or activity is located or conducted, or where records shall be kept under the conditions of this permit;

   b. Have access to and copy any records that shall be kept under the conditions of this permit;

   c. Inspect the facilities, equipment, practices, or operations regulated or required under this permit; and

   d. Sample or monitor any substances or parameters at any location necessary to assure compliance with this permit or Department rules.*[62-620.610(9)]*

10. In accepting this permit, the permittee understands and agrees that all records, notes, monitoring data, and other information relating to the construction or operation of this permitted source which are submitted to the Department may be used by the Department as evidence in any enforcement case involving the permitted source arising under the Florida Statutes or Department rules, except as such use is proscribed by Section 403.111, F.S., or Rule 62-620.302, F.A.C. Such evidence shall only be used to the extent that it is consistent with the Florida Rules of Civil Procedure and applicable evidentiary rules. *[62-620.610(10)]*

11. When requested by the Department, the permittee shall within a reasonable time provide any information required by law which is needed to determine whether there is cause for revising, revoking and reissuing, or terminating this permit, or to determine compliance with the permit. The permittee shall also provide to the Department upon request copies of records required by this permit to be kept. If the permittee becomes aware of relevant facts that

were not submitted or were incorrect in the permit application or in any report to the Department, such facts or information shall be promptly submitted or corrections promptly reported to the Department. *[62-620.610(11)]*

12. Unless specifically stated otherwise in Department rules, the permittee, in accepting this permit, agrees to comply with changes in Department rules and Florida Statutes after a reasonable time for compliance; provided, however, the permittee does not waive any other rights granted by Florida Statutes or Department rules. A reasonable time for compliance with a new or amended surface water quality standard, other than those standards addressed in Rule 62-302.500, F.A.C., shall include a reasonable time to obtain or be denied a mixing zone for the new or amended standard. *[62-620.610(12)]*

13. The permittee, in accepting this permit, agrees to pay the applicable regulatory program and surveillance fee in accordance with Rule 62-4.052, F.A.C. *[62-620.610(13)]*

14. This permit is transferable only upon Department approval in accordance with Rule 62-620.340, F.A.C. The permittee shall be liable for any noncompliance of the permitted activity until the transfer is approved by the Department. *[62-620.610(14)]*

15. The permittee shall give the Department written notice at least 60 days before inactivation or abandonment of a wastewater facility or activity and shall specify what steps will be taken to safeguard public health and safety during and following inactivation or abandonment. *[62-620.610(15)]*

16. The permittee shall apply for a revision to the Department permit in accordance with Rules 62-620.300, F.A.C., and the Department of Environmental Protection Guide to Permitting Wastewater Facilities or Activities Under Chapter 62-620, F.A.C., at least 90 days before construction of any planned substantial modifications to the permitted facility is to commence or with Rule 62-620.325(2), F.A.C., for minor modifications to the permitted facility. A revised permit shall be obtained before construction begins except as provided in Rule 62-620.300, F.A.C. *[62-620.610(16)]*

17. The permittee shall give advance notice to the Department of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements. The permittee shall be responsible for any and all damages which may result from the changes and may be subject to enforcement action by the Department for penalties or revocation of this permit. The notice shall include the following information:

    a. A description of the anticipated noncompliance;

    b. The period of the anticipated noncompliance, including dates and times; and

    c. Steps heing taken to prevent future occurrence of the noncompliance.*[62-620.610(17)]*

18. Sampling and monitoring data shall be collected and analyzed in accordance with Rule 62-4.246 and Chapters 62-160, 62-601, and 62-610, F.A.C., and 40 CFR 136, as appropriate.

    a. Monitoring results shall be reported at the intervals specified elsewhere in this permit and shall be reported on a Discharge Monitoring Report (DMR), DEP Form 62-620.910(10), or as specified elsewhere in the permit.

    b. If the permittee monitors any contaminant more frequently than required by the permit, using Department approved test procedures, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the DMR.

    c. Calculations for all limitations which require averaging of measurements shall use an arithmetic mean unless otherwise specified in this permit.

    d. Except as specifically provided in Rule 62-160.300, F.A.C., any laboratory test required by this permit shall be performed by a laboratory that has been certified by the Department of Health Environmental Laboratory Certification Program (DOH ELCP). Such certification shall be for the matrix, test method and analyte(s) being measured to comply with this permit. For domestic wastewater facilities, testing for parameters listed in Rule 62-160.300(4), F.A.C., shall be conducted under the direction of a certified operator.

    e. Field activities including on-site tests and sample collection shall follow the applicable standard operating procedures described in DEP-SOP-001/01 adopted by reference in Chapter 62-160, F.A.C.

f. Alternate field procedures and laboratory methods may be used where they have been approved in accordance with Rules 62-160.220, and 62-160.330, F.A.C. *[62-620.610(18)]*

19. Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule detailed elsewhere in this permit shall be submitted no later than 14 days following each schedule date. *[62-620.610(19)]*

20. The permittee shall report to the Department's South District Office any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A written submission shall also be provided within five days of the time the permittee becomes aware of the circumstances. The written submission shall contain: a description of the noncompliance and its cause; the period of noncompliance including exact dates and time, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the noncompliance.

a. The following shall be included as information which must be reported within 24 hours under this condition:

(1) Any unanticipated bypass which causes any reclaimed water or effluent to exceed any permit limitation or results in an unpermitted discharge,
(2) Any upset which causes any reclaimed water or the effluent to exceed any limitation in the permit,
(3) Violation of a maximum daily discharge limitation for any of the pollutants specifically listed in the permit for such notice, and
(4) Any unauthorized discharge to surface or ground waters.

b. Oral reports as required by this subsection shall be provided as follows:

(1) For unauthorized releases or spills of treated or untreated wastewater reported pursuant to subparagraph (a)4. that are in excess of 1,000 gallons per incident, or where information indicates that public health or the environment will be endangered, oral reports shall be provided to the STATE WARNING POINT TOLL FREE NUMBER (800) 320-0519, as soon as practical, but no later than 24 hours from the time the permittee becomes aware of the discharge. The permittee, to the extent known, shall provide the following information to the State Warning Point:

(a) Name, address, and telephone number of person reporting;
(b) Name, address, and telephone number of permittee or responsible person for the discharge;
(c) Date and time of the discharge and status of discharge (ongoing or ceased);
(d) Characteristics of the wastewater spilled or released (untreated or treated, industrial or domestic wastewater);
(e) Estimated amount of the discharge;
(f) Location or address of the discharge;
(g) Source and cause of the discharge;
(h) Whether the discharge was contained on-site, and cleanup actions taken to date;
(i) Description of area affected by the discharge, including name of water body affected, if any; and
(j) Other persons or agencies contacted.

(2) Oral reports, not otherwise required to be provided pursuant to subparagraph b.1 above, shall be provided to the Department's South District Office within 24 hours from the time the permittee becomes aware of the circumstances.

c. If the oral report has been received within 24 hours, the noncompliance has been corrected, and the noncompliance did not endanger health or the environment, the Department's South District Office shall waive the written report.

[62-620.610(20)]

21. The permittee shall report all instances of noncompliance not reported under Permit Conditions IX.17, 18 or 19 of this permit at the time monitoring reports are submitted. This report shall contain the same information required by Permit Condition IX.20 of this permit. *[62-620.610(21)]*

22. Bypass Provisions.

    a. "Bypass" means the intentional diversion of waste streams from any portion of a treatment works.

    b. Bypass is prohibited, and the Department may take enforcement action against a permittee for bypass, unless the permittee affirmatively demonstrates that:
       (1) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage; and
       (2) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
       (3) The permittee submitted notices as required under Permit Condition IX.22.b. of this permit.

    c. If the permittee knows in advance of the need for a bypass, it shall submit prior notice to the Department, if possible at least 10 days before the date of the bypass. The permittee shall submit notice of an unanticipated bypass within 24 hours of learning about the bypass as required in Permit Condition IX. 20. of this permit. A notice shall include a description of the bypass and its cause; the period of the bypass, including exact dates and times; if the bypass has not been corrected, the anticipated time it is expected to continue; and the steps taken or planned to reduce, eliminate, and prevent recurrence of the bypass.

    d. The Department shall approve an anticipated bypass, after considering its adverse effect, if the permittee demonstrates that it will meet the three conditions listed in Permit Condition IX.22.b.1 through 3 of this permit.

    e. A permittee may allow any bypass to occur which does not cause reclaimed water or effluent limitations to be exceeded if it is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of Permit Condition IX. 22. a. through c. of this permit.

    [62-620.610(22)]

23. Upset Provisions.

    a. "Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology-based effluent limitations because of factors beyond the reasonable control of the permittee.
       (1) An upset does not include noncompliance caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, careless or improper operation.
       (2) An upset constitutes an affirmative defense to an action brought for noncompliance with technology based permit effluent limitations if the requirements of upset provisions of Rule 62-620.610, F.A.C., are met.

    b. A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed contemporaneous operating logs, or other relevant evidence that:
       (1) An upset occurred and that the permittee can identify the cause(s) of the upset;
       (2) The permitted facility was at the time being properly operated;
       (3) The permittee submitted notice of the upset as required in Permit Condition IX.5. of this permit; and
       (4) The permittee complied with any remedial measures required under Permit Condition IX. 5. of this permit.

    c. In any enforcement proceeding, the burden of proof for establishing the occurrence of an upset rests with the permittee.

    d. Before an enforcement proceeding is instituted, no representation made during the Department review of a claim that noncompliance was caused by an upset is final agency action subject to judicial review. *[62-620.610(23)]*

INSTRUCTIONS FOR COMPLETING THE WASTEWATER DISCHARGE MONITORING REPORT

Read these instructions before completing the DMR. Hard copies and/or electronic copies of the required parts of the DMR were provided with the permit. All required information shall be completed in full and typed or printed in ink. A signed, original DMR shall be mailed to the address printed on the DMR by the 28th of the month following the monitoring period. The DMR shall not be submitted before the end of the monitoring period.

The DMR consists of three parts--A, B, and D--all of which may or may not be applicable to every facility. Facilities may have one or more Part A's for reporting effluent or reclaimed water data. All domestic wastewater facilities will have a Part B for reporting daily sample results. Part D is used for reporting ground water monitoring well data.

When results are not available, the following codes should be used on parts A and D of the DMR and an explanation provided where appropriate. Note: Codes used on Part B for raw data are different.

CODE	DESCRIPTION/INSTRUCTIONS
ANC	Analysis not conducted.
DRY	Dry Well
FLD	Flood disaster.
IFS	Insufficient flow for sampling.
LS	Lost sample.
MNR	Monitoring not required this period.

CODE	DESCRIPTION/INSTRUCTIONS
NOD	No discharge from/to site.
OPS	Operations were shutdown so no sample could be taken.
OTH	Other. Please enter an explanation of why monitoring data were not available.
SEF	Sampling equipment failure.

When reporting analytical results that fall below a laboratory's reported method detection limits or practical quantification limits, the following instructions should be used:

1. Results greater than or equal to the PQL shall be reported as the measured quantity.
2. Results less than the PQL and greater than or equal to the MDL shall be reported as the laboratory's MDL value. These values shall be deemed equal to the MDL when necessary to calculate an average for that parameter and when determining compliance with permit limits.
3. Results less than the MDL shall be reported by entering a less than sign ("<") followed by the laboratory's MDL value, e.g. < 0.001. A value of one-half the MDL or one-half the effluent limit, whichever is lower, shall be used for that sample when necessary to calculate an average for that parameter. Values less than the MDL are considered to demonstrate compliance with an effluent limitation.

PART A -DISCHARGE MONITORING REPORT (DMR)

Part A of the DMR is comprised of one or more sections, each having its own header information. Facility information is preprinted in the header as well as the monitoring group number, whether the limits and monitoring requirements are interim or final, and the required submittal frequency (e.g. monthly, annually, quarterly, etc.). Submit Part A based on the required reporting frequency in the header and the instructions shown in the permit. The following should be completed by the permittee or authorized representative:

Resubmitted DMR: Check this box if this DMR is being re-submitted because there was information missing from or information that needed correction on a previously submitted DMR. The information that is being revised should be clearly noted on the re-submitted DMR (e.g. highlight, circle, etc.)
No Discharge From Site: Check this box if no discharge occurs and, as a result, there are no data or codes to be entered for all of the parameters on the DMR for the entire monitoring group number; however, if the monitoring group includes other monitoring locations (e.g., influent sampling), the "NOD" code should be used to individually denote those parameters for which there was no discharge.
Monitoring Period: Enter the month, day, and year for the first and last day of the monitoring period (i.e. the month, the quarter, the year, etc.) during which the data on this report were collected and analyzed.
Sample Measurement: Before filling in sample measurements in the table, check to see that the data collected correspond to the limit indicated on the DMR (i.e. interim or final) and that the data correspond to the monitoring group number in the header. Enter the data or calculated results for each parameter on this row in the non-shaded area above the limit. Be sure the result being entered corresponds to the appropriate statistical base code (e.g. annual average, monthly average, single sample maximum, etc.) and units.
No. Ex.: Enter the number of sample measurements during the monitoring period that exceeded the permit limit for each parameter in the non-shaded area. If none, enter zero.
Frequency of Analysis: The shaded areas in this column contain the minimum number of times the measurement is required to be made according to the permit. Enter the actual number of times the measurement was made in the space above the shaded area.
Sample Type: The shaded areas in this column contain the type of sample (e.g. grab, composite, continuous) required by the permit. Enter the actual sample type that was taken in the space above the shaded area.
Signature: This report must be signed in accordance with Rule 62-620.305, F.A.C. Type or print the name and title of the signing official. Include the telephone number where the official may be reached in the event there are questions concerning this report. Enter the date when the report is signed.
Comment and Explanation of Any Violations: Use this area to explain any exceedances, any upset or by-pass events, or other items which require explanation. If more space is needed, reference all attachments in this area.

Docket No. 20180007-EI
FDEP NPDES Permit for PFM
Exhibit MWS-3, Page 47 of 48

PART B - DAILY SAMPLE RESULTS

Monitoring Period: Enter the month, day, and year for the first and last day of the monitoring period (i.e. the month, the quarter, the year, etc.) during which the data on this report were collected and analyzed.
Daily Monitoring Results: Transfer all analytical data from your facility's laboratory or a contract laboratory's data sheets for all day(s) that samples were collected. Record the data in the units indicated. Table 1 in Chapter 62-160, F.A.C., contains a complete list of all the data qualifier codes that your laboratory may use when reporting analytical results. However, when transferring numerical results onto Part B of the DMR, only the following data qualifier codes should be used and an explanation provided where appropriate.

CODE	DESCRIPTION/INSTRUCTIONS
<	The compound was analyzed for but not detected.
A	Value reported is the mean (average) of two or more determinations.
J	Estimated value, value not accurate.
Q	Sample held beyond the actual holding time.
Y	Laboratory analysis was from an unpreserved or improperly preserved sample.

To calculate the monthly average, add each reported value to get a total. For flow, divide this total by the number of days in the month. For all other parameters, divide the total by the number of observations.
Plant Staffing: List the name, certificate number, and class of all state certified operators operating the facility during the monitoring period. Use additional sheets as necessary.

PART D - GROUND WATER MONITORING REPORT

Monitoring Period: Enter the month, day, and year for the first and last day of the monitoring period (i.e. the month, the quarter, the year, etc.) during which the data on this report were collected and analyzed.
Date Sample Obtained: Enter the date the sample was taken. Also, check whether or not the well was purged before sampling.
Time Sample Obtained: Enter the time the sample was taken.
Sample Measurement: Record the results of the analysis. If the result was below the minimum detection limit, indicate that.
Detection Limits: Record the detection limits of the analytical methods used.
Analysis Method: Indicate the analytical method used. Record the method number from Chapter 62-160 or Chapter 62-601, F.A.C., or from other sources.
Sampling Equipment Used: Indicate the procedure used to collect the sample (e.g. airlift, bucket/bailer, centrifugal pump, etc.)
Samples Filtered: Indicate whether the sample obtained was filtered by laboratory (L), filtered in field (F), or unfiltered (N).
Signature: This report must be signed in accordance with Rule 62-620.305, F.A.C. Type or print the name and title of the signing official. Include the telephone number where the official may be reached in the event there are questions concerning this report. Enter the date when the report is signed.
Comments and Explanation: Use this space to make any comments on or explanations of results that are unexpected. If more space is needed, reference all attachments in this area.

SPECIAL INSTRUCTIONS FOR LIMITED WET WEATHER DISCHARGES

Flow (Limited Wet Weather Discharge): Enter the measured average flow rate during the period of discharge or divide gallons discharged by duration of discharge (converted into days). Record in million gallons per day (MGD).
Flow (Upstream): Enter the average flow rate in the receiving stream upstream from the point of discharge for the period of discharge. The average flow rate can be calculated based on two measurements; one made at the start and one made at the end of the discharge period. Measurements are to be made at the upstream gauging station described in the permit.
Actual Stream Dilution Ratio: To calculate the Actual Stream Dilution Ratio, divide the average upstream flow rate by the average discharge flow rate. Enter the Actual Stream Dilution Ratio accurate to the nearest 0.1.
No. of Days the SDF > Stream Dilution Ratio: For each day of discharge, compare the minimum Stream Dilution Factor (SDF) from the permit to the calculated Stream Dilution Ratio. On Part B of the DMR, enter an asterisk (*) if the SDF is greater than the Stream Dilution Ratio on any day of discharge. On Part A of the DMR, add up the days with an "*" and record the total number of days the Stream Dilution Factor was greater than the Stream Dilution Ratio.
$CBOD_5$: Enter the average $CBOD_5$ of the reclaimed water discharged during the period shown in duration of discharge.
TKN: Enter the average TKN of the reclaimed water discharged during the period shown in duration of discharge.
Actual Rainfall: Enter the actual rainfall for each day on Part B. Enter the actual cumulative rainfall to date for this calendar year and the actual total monthly rainfall on Part A. The cumulative rainfall to date for this calendar year is the total amount of rain, in inches, that has been recorded since January 1 of the current year through the month for which this DMR contains data.
Rainfall During Average Rainfall Year: On Part A, enter the total monthly rainfall during the average rainfall year and the cumulative rainfall for the average rainfall year. The cumulative rainfall for the average rainfall year is the amount of rain, in inches, which fell during the average rainfall year from January through the month for which this DMR contains data.
No. of Days LWWD Activated During Calendar Year: Enter the cumulative number of days that the limited wet weather discharge was activated since January 1 of the current year.
Reason for Discharge: Attach to the DMR a brief explanation of the factors contributing to the need to activate the limited wet weather discharge.

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET: 20180007-EI EXHIBIT: 5
PARTY: FLORIDA POWER & LIGHT COMPANY (FPL)(DIRECT)
DESCRIPTION: Michael W. Sole MWS-4

Department of Environmental Protection

Jeb Bush
Governor

Twin Towers Office Building
2600 Blair Stone Road
Tallahassee, Florida 32399-2400

David B. Struhs
Secretary

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

In the matter of:
Approval of FPL Fort Myers Plant
Manatee Protection Plan

DEP Permit No. FL0001490
Lee County

Mr Ron Hix
Florida Power & Light Company
P.O. Box 088801
North Palm Beach, FL 33408-08801

NOTICE OF AGENCY ACTION

The Department of Environmental Protection hereby gives notice of its approval of the enclosed Manatee Protection Plan for the FPL Fort Myers Plant, completed July 12, 1999 pursuant to Specific Condition 14 of Permit Number FL0001490 and noticed pursuant to the Final Settlement Agreement, dated March 1998, between Southwest Florida Marine Trades Association, Inc. and Florida Power and Light Company and the Department.

A person whose substantial interests are affected by the Department action may petition for an administrative hearing in accordance with sections 120.569 and 120 57 of the Florida Statutes.

The petition must contain the information set forth below and must be filed (received) in the Department of Environmental Protection, Office of General Counsel, Mail Station 35, 3900 Commonwealth Boulevard, Tallahassee, Florida, 32399-3000. Petitions filed by the applicant or any of the parties listed below must be filed within twenty-one days of receipt of this notice of intent. Petitions filed by any other person must be filed within twenty-one days of publication of the public notice or within twenty-one days of receipt of this notice of intent, whichever occurs first. A petitioner must mail a copy of the petition to the applicant at the address indicated above, at the time of filing. The failure of any person to file a petition within the appropriate time period shall constitute a waiver of that person's right to request an administrative determination (hearing) under sections 120 569 and 120.57 of the Florida Statutes, or to intervene in this proceeding and participate as a party to it Any subsequent intervention will be only at the discretion of the presiding officer upon the filing of a motion in compliance with rule 28-5 207 of the Florida Administrative Code.

A petition must contain the following information:
(a) The name, address, and telephone number of each petitioner; the Department case identification number and the county in which the subject matter or activity is located;
(b) A statement of how and when each petitioner received notice of the Department action;

(c) A statement of how each petitioner's substantial interests are affected by the Department action;
(d) A statement of the material facts disputed by the petitioner, if any;
(e) A statement of facts that the petitioner contends warrant reversal or modification of the Department action;
(f) A statement of which rules or statutes the petitioner contends require reversal or modification of the Department action; and
(g) A statement of the relief sought by the petitioner, stating precisely the action that the petitioner wants the Department to take.

Because the administrative hearing process is designed to formulate final agency action, the filing of a petition means that the Department final action may be different from the position taken by it in this order. Persons whose substantial interests will be affected by any such final decision of the Department on the application have the right to petition to become a party to the proceeding, in accordance with the requirements set forth above.

Mediation under section 120.573 of the Florida Statutes is not available for this proceeding.

This action is final and effective on the date filed with the Clerk of the Department unless a petition is filed in accordance with the above. Upon the timely filing of a petition this order will not be effective until further order of the Department.

Any party to the order has the right to seek judicial review of the order under section 120.68 of the Florida Statutes, by the filing of a notice of appeal under rule 9.110 of the Florida Rules of Appellate Procedure with the Clerk of the Department of Environmental Protection, Office of General Counsel, Mail Station 35, 3900 Commonwealth Boulevard, Tallahassee, Florida, 32399-3000; and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days from the date when the final order is filed with the Clerk of the Department.

Executed in Tallahassee, Florida.

RECEIVED
JUL 19 1999
Industrial Wastewater Section

Dear Vince;

I have attached the Manatee Protection Plan dated July 12, 1999 for Florida Power & Light's (FPL) Ft. Myers facility. The Bureau of Protected Species Management has reviewed the attached plan and with this letter acknowledges our acceptance of this plan as that required by permit condition 14, of the FPL-Ft. Myers NPDES permit. I have provided the following chronological list recounting the submittal of Florida Power & Light-Ft. Myers draft Manatee Protection Plans and our corresponding responses.

October 12, 1998	The Bureau of Protected Species Management receives a draft Manatee Protection Plan from Florida Power & Light's Ft. Myers facility
December 7, 1998	The Bureau of Protected Species Management provides verbal comments and recommended modifications to FPL regarding their Ft. Myers facility's draft Manatee Protection Plan.
December 8, 1998	FPL provides the Bureau of Protected Species Management with an interim Manatee Protection Plan for the Ft. Myers facility while a final plan is completed.
December 10, 1998	The Bureau of Protected Species Management notifies the DEP's Industrial Wastewater Section that it does not object to the interim plan
March 10, 1999	The Bureau of Protected Species Management receives the FPL-Ft. Myers draft Manatee Protection Plan and additional information on the current manatee protection wells.

May 7, 1999	The Bureau of Protected Species Management provides comments and recommended modifications to the FPL-Ft. Myers Manatee Protection Plan.
May 12, 1999	The Bureau of Protected Species Management provides a second set of additional recommendations and wording changes for consistency to FPL-Ft. Myers
May 28, 1999	The Bureau of Protected Species Management provides the U. S. Fish and Wildlife Service (USFWS) with a copy of the final draft of the FPL-Ft. Myers Manatee Protection Plan for review and comment.
June 1, 1999	The USFWS provides several recommended modifications to the FPL-Ft. Myers final draft plan.
June 3, 1999	The Bureau of Protected Species receives a carbon copy of the USFWS letter to the Department's Industrial Wastewater Section providing their concurrence to the attached Manatee Protection Plan for the FPL-Ft. Myers facility.
July 12, 1999	The Bureau of Protected Species Management receives concurrence from FPL-Ft. Myers on the attached Manatee Protection Plan dated July 12, 1999.

If you have any questions or need further information, please call me at suncom 292-4330.

Sincerely,

OFFICE OF ENVIRONMENTAL SERVICES

R. Kipp Frohlich
Biological Administrator
Bureau of Protected Species Management

Suite 310
Jacksonville, Florida 32216-0912

JUN 01 1999

RECEIVED
JUN 3 1999
BUREAU OF PROTECTED SPECIES
MARINE RESOURCES DIVISION

Vince Seibold
Florida Department of Environmental Protection
Division of Water Facilities
2600 Blair Stone Road
Tallahassee, Florida 32399-2400

Dear Mr. Seibold:

The Fish and Wildlife Service (Service) has reviewed manatee protection plans for the following facilities:

✓ Florida Power and Light's Fort Myers Plant
(State Industrial Wastewater Permit Number FL0001490)

Florida Power and Light's Ft. Lauderdale Plant
(State Industrial Wastewater Permit Number FL0001503)

Florida Power and Light's Port Everglades Plant
(State Industrial Wastewater Permit Number FL0001538)

The measures incorporated in these plans are consistent with the intent of the Florida Manatee Recovery Plan, which seeks to maintain safe and reliable warm water refuges for wintering manatees. The Service believes that the measures included in these plans will give manatees adequate protection during the periods specified in the permits at the respective power plants.

Thank you for the opportunity to review these plans.

Sincerely,

James A. Valade
Assistant Recovery Manatee Coordinator

cc: FDEP/BPSM - Ron Mezich
FWS Vero Beach Field Office - Jay Slack

Florida Power & Light – Fort Myers
Manatee Protection Plan

Purpose:

The purpose of the Ft. Myers Plant Manatee Protection Plan is to set forth Florida Power & Light Company's (FPL) procedures to comply with Specific Condition 14 of the facility's State Industrial Wastewater Permit Number FL0001490 that was issued on April 10, 1998. This Specific Condition reads, in part:

14. The permittee, in so far as required to comply with Tasks 25 and 251 of the U.S. Fish and Wildlife Service (USFWS) "Florida Manatee Recovery Plan," shall develop a plan and procedures addressing potential manatee impacts ... All plans, if required, shall include an implementation schedule and address, at a minimum:

    (a) Plans to minimize disruption to warm-water outflows during the winter and response procedures in case of disruptions.

    (b) Strategy to maintain discharge temperatures that will sustain manatees during cold events.

    (c) Plan to monitor ambient and discharge water temperatures

    (d) Precautions to minimize hazards to manatees at intake and outfall areas.

    (e) Timely communication to manatee recovery program personnel of any long term changes in the availability of warm water.

Compliance with Specific Condition 14:

1. This Manatee Protection Plan will be in effect during the term of the permit. In order for the plant's warm water discharge to provide a safe, warm water refuge for the manatees and to comply with Specific Condition 14, FPL will take the following actions:

    a) In the case of an unplanned shutdown or plant failure that will affect the warm water refuge from November 15 through March 31, when the ambient water temperature is below 61°F, the Florida Wildlife Conservation Commission (FWCC) and USFWS will be notified no later than four (4) hours after the event has occurred. The following agency representatives shall be notified in the above referenced event or if any distressed manatees are observed at any time:

    FWCC – Florida Marine Research Institute – Marine Mammal Pathobiology Lab: (813) 893-2904
    USFWS – Jacksonville Field Office: (904) 232-2580

    The FWCC, Bureau of Protected Species Management (BPSM) shall be provided a schedule of any anticipated in-water work within the discharge canal or work that will affect the warm water refuge during the period of November 15 through March 31 each year. This would include schedules for work being done in conjunction with the repowering of the Ft. Myers plant. Schedules for work pursuant to the repowering project should be updated and provided to BPSM as schedule changes occur. No routine in-water maintenance work shall occur in the discharge canal from November 15 through March 31, unless it is considered essential by FPL and approved by BPSM prior to the start of work. If emergency in-water work is needed, the BPSM will be notified and consulted no later than two weeks following the commencement of the activity. All vessels used in the operation or associated with the activity shall be operated pursuant to the attached standard manatee construction conditions.

b) From November 15 through March 31 each year, to coincide with the time of greatest manatee abundance, if the ambient water temperature falls below 61°F, the FPL Ft. Myers power plant shall endeavor to operate in a manner that maintains the water temperature in an adequate portion of the discharge canal at or above 68°F, until such time as the ambient water temperature reaches 61°F, unless otherwise authorized by the BPSM and the USFWS, or unless safety or reliability of the plant would be compromised.

c) The FPL Ft. Myers power plant will provide personnel from the BPSM, USFWS, Florida Marine Research Institute, USGS-Sirenia Project, or a designee of these agencies, access to FPL Ft. Myers power plant property to conduct manatee research and monitoring activities which may include, placing, maintaining and downloading data from temperature data loggers (These temperature data loggers will be used to collect air and water temperature data in an ongoing research effort to better understand manatee behavior patterns in response to artificial warm water refugia and environmental variables. The temperature data loggers will be placed in the discharge canal and at ambient water and air locations) Access would be limited to normal business hours (8:00 a.m. to 5:00 p.m.) unless arrangements are made in advance with the FPL Fort Myers power plant.

Intake Area: No special surveys will be required for the intake canal.

Discharge Area: No special surveys will be required for the discharge canal.

d) Should the FPL decide to retire this plant, notice will be provided to FWCC and USFWS as soon as practical after a definite decision is made or, if possible, at least five years prior to the date of retirement

e) To assist in documenting long-term use patterns of this facility, FPL should conduct periodic aerial surveys of manatees at the Fort Myers facility. The continuation of the ongoing statewide aerial survey that FPL has funded in the past years meets these criteria.

g) The FPL Ft. Myers Power Plant will provide phone numbers for weekday and weekend notification of appropriate plant personnel for the purpose of allowing FWCC or USFWS to coordinate manatee rescue operations as necessary.

2. FPL actions, pursuant to this plan, that will be conducted for the current Ft. Myers Power Plant and the Ft Myers Power Plant post-repowering:

a) Provide a site map of the facility as a part of the plan that includes the following information;

1. The location of the intake pipes and outfall pipes.
2. Proximate streams, rivers, bays, etc.
3. The location of the condenser inlet and outlet temperature monitoring stations.
4. The location of any fuel barge docking facilities in relation to the discharge canal
5. The delineation of the no-entry boundary at the discharge canal.

b) In order to evaluate and determine what portions of the thermal discharge will provide a sufficient warm water refuge for manatees under potential cold stress water conditions; the FPL Ft Myers power plant will, within two (2) years of the effective date of this plan, provide a profile of the thermal gradient (either actual or calculated) of the discharge canal waters, as well as its gross bathymetry, at the mean rate of discharge when the ambient water temperature reaches a seasonal low

FLORIDA POWER & LIGHT – FT. MYERS PLANT
MANATEE PROTECTION PLAN

1a) STANDARD MANATEE CONSTRUCTION CONDITIONS FOR ARTIFICIAL WARM WATER REFUGIA DURING THE PERIOD OF NOVEMBER 15 THROUGH MARCH 31

The permittee shall comply with the following manatee protection conditions:

a. The permittee shall instruct all personnel associated with in-water work within the discharge canal and/or the warm water refuge of the potential presence of manatees and the need to avoid collisions with manatees. All vessels used in the operation or in association with the in-water work shall have an observer on board responsible for identifying the presence and location of manatee(s).

b. The permittee shall advise all construction personnel that there are civil and criminal penalties for harming, harassing, or killing manatees which are protected under the Marine Mammal Protection Act of 1972, The Endangered Species Act of 1973, and the Florida Manatee Sanctuary Act.

c. All vessels associated with in-water work associated with the discharge canal and/or warm water refuge shall operate at "no wake/idle" speeds at all times while in the manatee warm water refuge area. All vessels will follow routes of deep water whenever possible.

d. If manatee(s) are seen within the discharge canal and/or warm water refuge area all appropriate precautions shall be implemented to ensure protection of the manatee(s). These precautions shall include the immediate shutdown of equipment if necessary. Activities will not resume until the manatee(s) has departed to a safe distance on its own volition.

e. Any collision with and/or injury to a manatee shall be reported immediately to the Florida Fish & Wildlife Conservation Commission at (1-800-342-5367). Collision and/or injury should also be reported to the U.S. Fish and Wildlife Service in Jacksonville (1-904-232-2580).

RE: Georgia Power Co. - Plant Scherer
NPDES Permit No. GA0035564

Dear Mr. Huling:

EPD has initiated a basin wide permitting strategy whereby permits are reissued within groups of river basins during specific years. As a part of that process, permits are extended until such time they can be reissued within that basin grouping.

The Environmental Protection Division (EPD) has received your application for reissuance of the referenced permit. EPD is hereby extending your permit until such time that it can be reissued within the appropriate river basin group.

Sincerely,

Carol A. Couch, Ph.D.

PERMIT NO. GA0035564

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

AUTHORIZATION TO DISCHARGE UNDER THE
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

In compliance with the provisions of the Georgia Water Quality Control Act (Georgia Laws 1964, p. 416, as amended), hereinafter called the "State Act;" the Federal Water Pollution Control Act, as amended (33 U.S. C. 1251 et seq.), hereinafter called the "Federal Act;" and the Rules and Regulations promulgated pursuant to each of these Acts,

Georgia Power Company
241 Ralph McGill Boulevard, N.E.
Atlanta, Georgia 30308

is authorized to discharge from a facility located at

Plant Scherer (SIC 4911)
10986 Highway 87
Juliette, Monroe County, Georgia 31046

to receiving waters

Berry Creek, Lake Juliette (Rum Creek) and the Ocmulgee River (Ocmulgee River Basin)

in accordance with effluent limitations, monitoring requirements and other conditions set forth in Parts I, II and III hereof.

This permit shall become effective on January 30, 2002.

This permit and the authorization to discharge shall expire at midnight, November 30, 2006.

Signed this 30th day of January, 2002.

Director,
Environmental Protection Division

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

1. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 01 - Final Plant Discharge: Combined discharge of outfalls 01A, 01B, 01C, 01D, and 01E to the Ocmulgee River.

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations				Monitoring Requirements		
	Mass Based		Concentration Based (mg/l)				
	Daily Avg.	Daily Max.	Daily Avg.	Daily Max.	Measurement Frequency	Sample Type	Sample Location
Flow-m^3Day(MGD)	-	-	-	-	-	-	-
Total Residual Chlorine (TRC)		-	-	-	1/Day*	Grab	Final Discharge

The pH shall not be less than 6.0 standard units nor greater than 9.0 standard units and shall be monitored once per month by a grab sample of the final discharge to the Ocmulgee River.

There shall be no discharge of floating solids or visible foam in other than trace amounts.

* Monitoring of TRC is required only during continuous service water chlorination for controlling asiatic clams.

Docket No. 20180007-EI
Environmental Protection Division of the Georgia
Department of Natural Resources Permit NPDES
Permit Number GA0035564 for Plant Scherer
Exhibit MWS-5, Page 4 of 28

2. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 01A - Cooling Tower Blowdown for Units 1, 2, 3 and 4.

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations Concentration Based (mg/l) Daily Max.	Avg.	Inst. Max.	Monitoring Requirements Measurement Frequency	Sample Type	Sample Location
Flow-m^3Day (MGD)	-	-	-	-	-	-
Free Available Chlorine (FAC)	-	0.2	0.5	1/Week	Multiple Grabs	Blowdown Line
Total Residual Chlorine (TRC)	-	-	-	1/Week	Multiple Grabs	Blowdown Line
TRC Time (minutes/day/unit)	120	-	-	1/Week	Multiple Grabs	Blowdown Line
Total Residual Chlorine (TRC)	-	-	-	1/Week	Multiple Grabs	Service Water
Total Chromium	0.2	-	-	1/Year	Grab	Blowdown Line
Total Zinc	1.0	-	-	1/Year	Grab	Blowdown Line

Multiple grab samples are to be collected on 15 minute intervals during periods of FAC and TRC discharges attributable to cooling tower/condenser chlorination. Intervals are to be once per day during FAC and TRC discharges attributable to continuous service water chlorination. Samples are to be taken before each individual cooling tower blowdown combines with waste streams from other sources.

All numerical discharge limitations and monitoring requirements apply to the individual cooling tower blowdown from each generating unit. The limitations of 0.2/0.5 mg/l of FAC apply to FAC discharge attributable to cooling tower/ condenser chlorination (i.e. effluent concentration of FAC above that due to continuous service water system chlorination). Time of discharge of TRC attributable to cooling tower/condenser chlorination is limited to 2 hours/day/ unit. Simultaneous discharge of TRC attributable to cooling tower/condenser chlorination is prohibited.

Docket No. 20180007-EI
Environmental Protection Division of the Georgia
Department of Natural Resources Permit NPDES
Permit Number GA0035564 for Plant Scherer
Exhibit MWS-5, Page 5 of 28

3. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 01B - Ash Transport Bleedoff (includes 03E Wastewater Basins Units 1, 2, 3 and 4, Low Volume Waste).

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations				Monitoring Requirements		
	Mass Based		Concentration Based (mg/l)				
	Daily Avg.	Daily Max.	Daily Avg.	Daily Max.	Measurement Frequency	Sample Type	Sample Location*
Flow-m^3Day (MGD)	-	-	-	-	-	-	-
Total Suspended Solids (TSS)	-	-	30	100	2/Month	Grab	Bleedoff
Oil and Grease (O & G)	-	-	15	20	2/Month	Grab	Bleedoff

* Samples are to be taken at the ash transport bleedoff line prior to combination with any other wastewater stream.

Docket No. 20180007-EI
Environmental Protection Division of the Georgia
Department of Natural Resources Permit NPDES
Permit Number GA0035564 for Plant Scherer
Exhibit MWS-5, Page 6 of 28

4. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 01C and 01D - Units 3 and 4 Cooling Tower Overflows/Basin Drains.

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations Units (Specify) (mg/l)				Monitoring Requirements		
	Avg.	Inst. Max.	Daily Avg.	Daily Max.	Measurement Frequency	Sample Type	Sample Location
Flow-m^3Day (MGD)	-	-	-	-	-	-	-
Total Suspended Solids (TSS)	-	-	30	100	2/Month	Grab	Overflow
Oil & Grease (O & G)	-	-	15	20	2/Month	Grab	Overflow
Free Available Chlorine (FAC)	0.2	0.5	-	-	1/Week	Multiple Grabs	Overflow
Total Residual Chlorine (TRC)	-	-	-	-	1/Week	Multiple Grabs	Overflow
TRC Time (minutes/day/unit)	-	-	-	120	1/Week	Multiple Grabs	Overflow
Total Chromium	-	-	-	0.2	1/Year	Grab	Overflow
Total Zinc	-	-	-	1.0	1/Year	Grab	Overflow

TSS and O & G are required for basin drain discharges. FAC, TRC, TRC Time, chromium, and zinc are required for cooling tower overflow discharges.

Multiple grab samples are to be collected on 15 minute intervals during periods of FAC and TRC discharges attributable to cooling tower/condenser chlorination. Intervals are to be once per day during FAC and TRC discharges attributable to continuous service water chlorination. Samples are to be taken before each individual cooling tower overflow combines with waste streams from other sources.

All numerical discharge limitations and monitoring requirements apply to the individual cooling tower overflow from each generating unit. The limitations of 0.2/0.5 mg/l of FAC apply to FAC discharge attributable to cooling tower/condenser chlorination (i.e. effluent concentration of FAC above that due to continuous service water system chlorination). Time of discharge of TRC attributable to cooling tower/condenser chlorination is limited to 2 hours/day/unit. Simultaneous discharge of TRC attributable to cooling tower/condenser chlorination is prohibited.

Department of Natural Resources Permit NPDES
Permit Number GA0035564 for Plant Scherer
Exhibit MWS-5, Page 7 of 28

5. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 02 - Detention Pond (I Pond) and 02A - I Pond Bottom Drain; Discharges to Berry Creek (includes 02B, Fire Training Runoff and 02C, NPDES Basin Emergency Overflow).

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations				Monitoring Requirements		
	Mass Based		Concentration Based (mg/l)				
	Daily Avg.	Daily Max.	Daily Avg.	Daily Max.	Measurement Frequency	Sample Type	Sample Location
Flow-m^3Day (MGD)	-	-	-	-	-	-	-
Total Residual Chlorine (TRC)[1]	-	-	-		1/Day	Grab	Final Discharge[3]

The pH shall not be less than 6.0 standard units nor greater than 9.0 standard units and shall be monitored once per month by a grab sample at the final discharge to Berry Creek or at the bottom drain when discharging.

There shall be no discharge of floating solids or visible foam in other than trace amounts.

(1) Monitoring of TRC is required only when continuous service water chlorination for controlling asiatic clams coincides with discharge from the NPDES Basin Emergency Overflow (02C) to I Pond.

(2) Monitoring for pH is required only when the NPDES Basin Emergency Overflow (02C) is discharging to I pond.

(3) Final discharge or bottom drain when discharging.

Permit Number GA0035564 for Plant Scherer
Exhibit MWS-5, Page 8 of 28

6. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 04 - Service Water Final Discharge to Lake Juliette.

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations				Monitoring Requirements		
	Mass Based		Concentration Based				
	Daily Avg.	Daily Max.	Daily Avg.	Daily Max.	Measurement Frequency	Sample Type	Sample Location
Flow-m^3Day (MGD)	-	-	-	-	-	-	-
Temperature	-	-	-	-	1/Quarter	Grab	*
Total Residual Chlorine (TRC)		-	-	-	1/Quarter	Grab	*

There shall be no discharge of floating solids or visible foam in other than trace amounts.

* Temperature will be monitored and reported for the plant intake and the discharge. TRC will also be monitored and reported for the discharge. The temperature difference ("ΔT") between the intake and discharge temperature shall be calculated and entered on the monitoring report. The discharge temperature and TRC are the temperature and TRC recorded at a point not more than 50 feet from the discharge pipe outlet at a depth of 3 feet or other locations approved by the Division.

7. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 05 and 06 - Units 1 and 2 Cooling Tower Overflows/Basin Drains to Lake Juliette.

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations Units (Specify) (mg/l)				Monitoring Requirements		
	Avg.	Inst. Max.	Daily Avg.	Daily Max.	Measurement Frequency	Sample Type	Sample Location
Flow-m^3Day (MGD)	-	-	-	-	-	-	-
Total Suspended Solids (TSS)	-	-	30	100	2/Month	Grab	Overflow
Oil & Grease (O & G)	-	-	15	20	2/Month	Grab	Overflow
Free Available Chlorine (FAC)	0.2	0.5	-	-	1/Week	Multiple Grabs	Overflow
Total Residual Chlorine (TRC)	-	-	-	-	1/Week	Multiple Grabs	Overflow
TRC Time (minutes/day/unit)	-	-	-	120	1/Week	Multiple Grabs	Overflow
Total Chromium	-	-	-	0.2	1/Year	Grab	Overflow
Total Zinc	-	-	-	1.0	1/Year	Grab	Overflow

The pH shall not be less than 6.0 standard units nor greater than 9.0 standard units and shall be monitored twice per month by grab sampling. There shall be no discharge of floating solids or visible foam in other than trace amounts.

TSS, O & G and pH are required for basin drain discharges. FAC, TRC, TRC Time, chromium, zinc, and pH are required for cooling tower overflow discharges.

Multiple grab samples are to be collected on 15 minute intervals during periods of FAC and TRC discharges attributable to cooling tower/condenser chlorination. Intervals are to be once per day during FAC and TRC discharges attributable to continuous service water chlorination. Samples are to be taken before each individual cooling tower overflow combines with waste streams from other sources.

All numerical discharge limitations and monitoring requirements apply to the individual cooling tower overflow from each generating unit. The limitations of 0.2/0.5 mg/l of FAC apply to FAC discharge attributable to cooling tower/ condenser chlorination (i.e. effluent concentration of FAC above that due to continuous service water system chlorination). Time of discharge of TRC attributable to cooling tower/condenser chlorination is limited to 2 hours/day/unit. Simultaneous discharge of TRC attributable to cooling tower/condenser chlorination is prohibited.

8. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 07 - Settling Pond Emergency Overflow to Lake Juliette (Ash Transport Water).

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations				Monitoring Requirements		
	Mass Based		Concentration Based (mg/l)				
	Daily Avg.	Daily Max.	Daily Avg.	Daily Max.	Measurement Frequency*	Sample Type	Sample Location
Flow-m^3Day (MGD)	-	-	-	-	-	-	-
Total Suspended Solids (TSS)	-	-	30	100	2/Month	Grab	Overflow
Oil and Grease (O & G)	-	-	15	20	2/Month	Grab	Overflow

The pH shall not be less than 6.0 standard units nor greater than 9.0 standard units and shall be monitored twice per month by grab sampling.*

There shall be no discharge of floating solids or visible foam in other than trace amounts.

* Monitoring for TSS, O&G, and pH is required only when an overflow is occurring.

Docket No. 20180007-EI
Environmental Protection Division of the Georgia

9. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 08 - Employee Car Wash, 09 Service Water Pump Seal Water, 10 Service Water Screen Backwash, 12 Condensate/Filtered Water/Potable Water Tank Overflows discharging to Lake Juliette, and 11 River Intake Pump Seal Water discharging to the Ocmulgee River.

Such discharges shall be limited as specified below:

There shall be no discharge of floating solids or visible foam in other than trace amounts.

These discharges shall remain as described above. If the Director determines that water quality standards are not being met as the result of these discharges and so notifies the permittee in writing, the permittee shall take all reasonable steps to prevent the discharge from causing water quality standards to be exceeded in the receiving water.

10. During the period beginning effective date and lasting through November 30, 2006, the permittee is authorized to discharge from outfall(s) serial number(s) 13 and 14 - Emergency Overflows to Lake Juliette (Low Volume Wastes) from Units 1 and 2 Wastewater Basin and Units 3 and 4 Wastewater Basin.

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations				Monitoring Requirements		
	Mass Based		Concentration Based (mg/l)				
	Daily Avg.	Daily Max.	Daily Avg.	Daily Max.	Measurement Frequency*	Sample Type	Sample Location
Flow-m^3Day (MGD)	-	-	-	-	-	-	-
Total Suspended Solids (TSS)	-	-	30	100	2/Month	Grab	Overflow
Oil and Grease (O & G)	-	-	15	20	2/Month	Grab	Overflow

The pH shall not be less than 6.0 standard units nor greater than 9.0 standard units and shall be monitored twice per month by grab sampling.*

There shall be no discharge of floating solids or visible foam in other than trace amounts.

* Monitoring for TSS, O&G, and pH is required only when an overflow is occurring.

Exhibit MWS-5, Page 13 of 28

B. SCHEDULE OF COMPLIANCE

1. The permittee shall achieve compliance with the effluent limitations specified for discharges in accordance with the following schedule:

Effluent limitations are effective upon issuance of this permit.

2. No later than 14 calendar days following a date identified in the above schedule of compliance, the permittee shall submit either a report of progress or, in the case of specific actions being required by identified dates, a written notice of compliance or noncompliance, any remedial actions taken, and the probability of meeting the next scheduled requirement.

Note: EPD as used herein means the Environmental Protection Division of the Department of Natural Resources.

C. MONITORING AND REPORTING

1. Representative Sampling

Samples and measurements taken as required herein shall be representative of the volume and nature of the monitored discharge.

2. Reporting

Monitoring results obtained during the previous three months shall be summarized for each month and reported on an Operation Monitoring Report (Form WQ 1.45). Forms other than Form WQ 1.45 may be used upon approval by EPD. These forms and any other required reports and information shall be completed, signed and certified by a principal executive officer or ranking elected official, or by a duly authorized representative of that person, and submitted to the Division, postmarked no later than the 21st day of the month following the reporting period. Signed copies of these and all other reports required herein shall be submitted to the following address:

Georgia Environmental Protection Division
Industrial Wastewater Program
4220 International Parkway
Suite 101
Atlanta, Georgia 30354

All instances of noncompliance not reported under Part I. B. and C. and Part II. A. shall be reported at the time the operation monitoring report is submitted.

3. Definitions

a. The "daily average" discharge means the total discharge by weight during a calendar month divided by the number of days in the month that the production or commercial facility was operating. Where less than daily sampling is required by this permit, the daily average discharge shall be determined by the summation of all the measured daily discharges by weight divided by the number of days sampled during the calendar month when the measurements were made.

b. The "daily maximum" discharge means the total discharge by weight during any calendar day.

c. The "daily average" concentration means the arithmetic average of all the daily determinations of concentrations made during a calendar month. Daily determinations of concentration made using a composite sample shall be the concentration of the composite sample.

d. The "daily maximum" concentration means the daily determination of concentration for any calendar day.

e. For the purpose of this permit, a calendar day is defined as any consecutive 24-hour period.

f. "Bypass" means the intentional diversion of waste streams from any portion of a treatment facility.

g. "Severe property damage" means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

4. Test Procedures

Monitoring must be conducted according to test procedures approved pursuant to 40 CFR Part 136 unless other test procedures have been specified in this permit.

5. Recording of Results

For each measurement or sample taken pursuant to the requirements of this permit, the permittee shall record the following information:

a. The exact place, date, and time of sampling or measurements, and the person(s) performing the sampling or the measurements;

b. The dates the analyses were performed, and the person(s) who performed the analyses;

c. The analytical techniques or methods used; and

d. The results of all required analyses.

6. Additional Monitoring by Permittee

If the permittee monitors any pollutant at the location(s) designated herein more frequently than required by this permit, using approved analytical methods as specified above, the results of such monitoring shall be included in the calculation and reporting of the values required in the Operation Monitoring Report Form (WQ 1.45). Such increased monitoring frequency shall also be indicated. The Division may require by written notification more frequent monitoring of other pollutants not required in this permit.

7. Records Retention

The permittee shall retain records of all monitoring information, including all records of analyses performed, calibration and maintenance of instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least three (3) years from the date of the sample, measurement, report or application. This period may be extended by request of the Division at any time.

8. Penalties

The Federal Clean Water Act and the Georgia Water Quality Control Act provide that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this permit, makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or noncompliance shall, upon conviction, be punished by a fine or by imprisonment, or by both. The Federal Clean Water Act and the Georgia Water Quality Control Act also provide procedures for imposing civil penalties which may be levied for violations of the Act, any permit condition or limitation established pursuant to the Act, or negligently or intentionally failing or refusing to comply with any final or emergency order of the Director of the Division.

A. MANAGEMENT REQUIREMENTS

1. Change in Discharge

a. Advance notice to the Division shall be given of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements. Any anticipated facility expansions, production increases, or process modifications must be reported by submission of a new NPDES permit application or, if such changes will not violate the effluent limitations specified in this permit, by notice to the Division of such changes. Following such notice, the permit may be modified to specify and limit any pollutants not previously limited.

b. All existing manufacturing, commercial, mining, and silviculture dischargers shall notify the Division as soon as it is known or there is reason to believe that any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant not limited in the permit, if that discharge will exceed (I) 100 μg/l, (ii) five times the maximum concentration reported for that pollutant in the permit application, or (iii) 200 μg/l for acrolein and acrylonitrile, 500 μg/l for 2,4 dinitrophenol and for 2-methyl-4-6-dinitrophenol, or 1 mg/l antimony.

c. All existing manufacturing, commercial, mining, and silvicultural dischargers shall notify the Division as soon as it is known or there is reason to believe that any activity has occurred or will occur which would result in any discharge on a nonroutine or infrequent basis, of any toxic pollutant not limited in the permit, if that discharge will exceed (I) 500 μg/l, (ii) ten times the maximum concentration reported for that pollutant in the permit application, or (iii) 1 mg/l antimony.

2. Noncompliance Notification

If, for any reason, the permittee does not comply with, or will be unable to comply with any effluent limitation specified in this permit, the permittee shall provide the Division with an oral report within 24 hours from the time the permittee becomes aware of the circumstances followed by a written report within five (5) days of becoming aware of such condition. The written submission shall contain the following information:

a. A description of the discharge and cause of noncompliance; and

b. The period of noncompliance, including exact dates and times; or, if not corrected, the anticipated time the noncompliance is expected to continue, and steps being taken to reduce, eliminate and prevent recurrence of the noncomplying discharge.

3. Facilities Operation

The permittee shall at all times maintain in good working order and operate as efficiently as possible all treatment or control facilities or systems installed or used by the permittee to achieve compliance with the terms and conditions of this permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.

4. Adverse Impact

The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment, including such accelerated or additional monitoring as necessary to determine the nature and impact of the noncomplying discharge.

5. Bypassing

a. If the permittee knows in advance of the need for a bypass, it shall submit prior notice to the Division at least 10 days (if possible) before the date of the bypass. The permittee shall submit notice of any unanticipated bypass with an oral report within 24 hours from the time the permittee becomes aware of the circumstances followed by a written report within five (5) days of becoming aware of such condition. The written submission shall contain the following information:

1. A description of the discharge and cause of noncompliance; and

2. The period of noncompliance, including exact dates and times; or, if not corrected, the anticipated time the noncompliance is expected to continue, and steps being taken to reduce, eliminate and prevent recurrence of the noncomplying discharge.

b. Any diversion or bypass of facilities covered by this permit is prohibited, except (I) where unavoidable to prevent loss of life, personal injury, or severe property damage; (ii) there were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime (this condition is not satisfied if the permittee could have installed adequate back-up equipment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance); and (iii) the permittee submitted a notice as required above. The permittee shall operate the treatment works, including the treatment plant and total sewer system, to minimize discharge of the pollutants listed in Part I of this permit from combined sewer overflows or bypasses. Upon written notification by the Division, the permittee may be required to submit a plan and schedule for reducing bypasses, overflows, and infiltration in the system.

6. Sludge Disposal Requirements

Hazardous sludge shall be disposed of in accordance with the regulations and guidelines established by the Division pursuant to the Federal Clean Water Act (CWA) and the Resource Conservation and Recovery Act (RCRA). For land application of nonhazardous sludge, the permittee shall comply with any applicable criteria outlined in the Division's "Guidelines for Land Application of Municipal Sludges." Prior to disposal of sludge by land application, the permittee shall submit a proposal to the Division for approval in accordance with applicable criteria in the Division's "Guidelines for Land Application of Municipal Sludges." Upon evaluation of the permittee's proposal, the Division may require that more stringent control of this activity is required. Upon written notification, the permittee shall submit to the Division for approval, a detailed plan of operation for land application of sludge. Upon approval, the plan will become a part of the NPDES permit. Disposal of nonhazardous sludge by other means, such as landfilling, must be approved by the Division.

7. Sludge Monitoring Requirements

The permittee shall develop and implement procedures to insure adequate year-round sludge disposal. The permittee shall monitor the volume and concentration of solids removed from the plant. Records shall be maintained which document the quantity of solids removed from the plant. The ultimate disposal of solids shall be reported monthly (in the unit of lbs/day) to the Division with the Operation Monitoring Report Forms required under Part I (C)(2) of this permit.

8. Power Failures

Upon the reduction, loss, or failure of the primary source of power to said water pollution control facilities, the permittee shall use an alternative source of power if available to reduce or otherwise control production and/or all discharges in order to maintain compliance with the effluent limitations and prohibitions of this permit.

If such alternative power source is not in existence, and no date for its implementation appears in Part I, the permittee shall halt, reduce or otherwise control production and/or all discharges from wastewater control facilities upon the reduction, loss, or failure of the primary source of power to said wastewater control facilities.

B. RESPONSIBILITIES

1. Right of Entry

The permittee shall allow the Director of the Division, the Regional Administrator of EPA, and/or their authorized representatives, agents, or employees, upon the presentation of credentials:

a. To enter upon the permittee's premises where a regulated activity or facility is located or conducted or where any records are required to be kept under the terms and conditions of this permit; and

b. At reasonable times, to have access to and copy any records required to be kept under the terms and conditions of this permit; to inspect any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and to sample any substance or parameters in any location.

2. Transfer of Ownership or Control

A permit may be transferred to another person by a permittee if:

a. The permittee notifies the Director in writing of the proposed transfer at least thirty (30) days in advance of the proposed transfer;

b. A written agreement containing a specific date for transfer of permit responsibility and coverage between the current and new permittee (including acknowledgement that the existing permittee is liable for violations up to that date, and that the new permittee is liable for violations from that date on) is submitted to the Director at least thirty (30) days in advance of the proposed transfer; and

c. The Director, within thirty (30) days, does not notify the current permittee and the new permittee of the Division's intent to modify, revoke and reissue, or terminate the permit and to require that a new application be filed rather than agreeing to the transfer of the permit.

3. Availability of Reports

Except for data deemed to be confidential under O.C.G.A. § 12-5-26 or by the Regional Administrator of the EPA under the Code of Federal Regulations, Title 40, Part 2, all reports prepared in accordance with the terms of this permit shall be available for public inspection at an office of the Division. Effluent data, permit applications, permittee's names and addresses, and permits shall not be considered confidential.

4. Permit Modification

After written notice and opportunity for a hearing, this permit may be modified, suspended, revoked or reissued in whole or in part during its term for cause including, but not limited to, the following:

a. Violation of any conditions of this permit;

b. Obtaining this permit by misrepresentation or failure to disclose fully all relevant facts;

c. A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge; or

d. To comply with any applicable effluent limitation issued pursuant to the order the United States District Court for the District of Columbia issued on June 8, 1976, in Natural Resources Defense Council, Inc. et.al. v. Russell E. Train, 8 ERC 2120(D.D.C. 1976), if the effluent limitation so issued:

(1) is different in conditions or more stringent than any effluent limitation in the permit; or

(2) controls any pollutant not limited in the permit.

5. Toxic Pollutants

The permittee shall comply with effluent standards or prohibitions established pursuant to Section 307(a) of the Federal Clean Water Act for toxic pollutants, which are present in the discharge within the time provided in the regulations

that establish these standards or prohibitions, even if the permit has not yet been modified to incorporate the requirement.

6. Civil and Criminal Liability

Nothing in this permit shall be construed to relieve the permittee from civil or criminal penalties for noncompliance.

7. State Laws

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable State law or regulation under authority preserved by Section 510 of the Federal Clean Water Act.

8. Water Quality Standards

Nothing in this permit shall be construed to preclude the modification of any condition of this permit when it is determined that the effluent limitations specified herein fail to achieve the applicable State water quality standards.

9. Property Rights

The issuance of this permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations.

10. Expiration of Permit

Permittee shall not discharge after the expiration date. In order to receive authorization to discharge beyond the expiration date, the permittee shall submit such information, forms, and fees as are required by the agency authorized to issue permits no later than 180 days prior to the expiration date.

11. Contested Hearings

Any person who is aggrieved or adversely affected by an action of the Director of the Division shall petition the Director for a hearing within thirty (30) days of notice of such action.

12. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected thereby.

13. Best Management Practices

The permittee will implement best management practices to control the discharge of hazardous and/or toxic materials from ancillary manufacturing activities. Such activities include, but are not limited to, materials storage areas, in-plant transfer, process and material handling areas; loading and unloading operations; plant site runoff; and sludge and waste disposal areas.

14. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

15. Duty to Provide Information

a. The permittee shall furnish to the Director of the Division, within a reasonable time, any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit. The permittee shall also furnish upon request copies of records required to be kept by this permit.

b. When the permittee becomes aware that it failed to submit any relevant facts in a permit application or submitted incorrect information in a permit application or any report to the Director, it shall promptly submit such facts and information.

26. Upset Provisions

Provisions of 40 CFR 122.41(n)(1)-(4), regarding "Upset" shall be applicable to any civil, criminal, or administrative proceeding brought to enforce this permit.

A. PREVIOUS PERMITS

1. All previous State water quality permits issued to this facility, whether for construction or operation, are hereby revoked by the issuance of this permit. This action is taken to assure compliance with the Georgia Water Quality Control Act, as amended, and the Federal Clean Water Act, as amended. Receipt of the permit constitutes notice of such action. The conditions, requirements, terms and provisions of this permit authorizing discharge under the National Pollutant Discharge Elimination System govern discharges from this facility.

B. SPECIAL REQUIREMENTS

1. There shall be no discharge of polychlorinated biphenyl compounds such as those commonly used for transformer fluid.

2. Any metal cleaning wastes generated will be contained for further treatment or disposal in a manner to permit compliance at time of discharge (O3I, Chemical Cleaning Wastes) with requirements listed below or disposed of in a manner approved by the Division. This applies to any preoperational chemical cleaning of metal process equipment also. The treatment and disposal procedures shall be discussed in the flow monitoring and characterization submittal.

3. The quantity of pollutants discharged (03I, Chemical Cleaning Wastes) in metal cleaning waste shall not exceed the quantity determined by multiplying the flow of metal cleaning wastes times the concentrations listed below. All effluent characteristics shall be monitored 1/week by grab sampling when a discharge is occurring.

Effluent Characteristic	Discharge Limitation (mg/l)	
	Daily Average	Daily Maximum
Total Suspended Solids	30	100
Oil and Grease	15	20
Copper	1.0	1.0
Iron	1.0	1.0

4. Neither free available chlorine (FAC) nor total residual chlorine (TRC) may be discharged from any unit for more than two hours in any one day and not more than one unit in any plant may discharge free available or total residual chlorine at any one time unless the utility can demonstrate to the Director that the units in a particular location cannot operate at or below this level of chlorination. The permittee has demonstrated the need to continuously chlorinate the service water system to control asiatic clams. The present intent is to chlorinate the service water periodically from April through October, five days per month for 24 hours per day at an initial level of 1.0 mg/l FAC. Other months, longer durations, and lower FAC levels may be used. This chlorination practice will result occasionally in the discharge of FAC or TRC from each cooling tower simultaneously and for more than 2 hours per day. The permittee must reduce the chlorine discharge if possible and has performed a study to determine the minimum practicable chlorine levels,

frequencies and duration of continuous chlorination for the service water system to adequately control asiatic clams.

5. In accordance with 40 CFR 423.11(k), the free available chlorine (FAC) average means the average over any individual chlorine release period of 2 hours per day per unit. The FAC maximum is the instantaneous maximum which may occur at any time. Further, the permittee will develop a system for monitoring and recording total time of FAC and TRC discharges. The results shall be reported in a suitably concise form.

6. In accordance with 40 CFR 423.13(d)(3), the permittee shall certify every two years in the flow characterization study that no priority pollutant other than chromium or zinc is above detectable limits in outfall 01A, 01C, 01D, 05 and 06 (cooling tower blowdowns or overflows). This certification may be based on manufacturers' certifications or engineering calculations.

7. In the event that waste streams for various sources are combined for treatment or discharge, the quantity of each pollutant or pollutant property controlled by this permit shall not exceed the specified limitations for that source.

8. The Director may modify any effluent limitation upon request of the permittee if such limitation is covered by an approved variance or by an amendment to the Federal Clean Water Act.

9. Once every two years, the permittee shall submit to the Director flow monitoring and characterization information regarding the various waste streams.

10. All sewage treatment plants (STP) must be properly operated and maintained. This applies to 03A No. 2 STP, 03B No. 4 STP, and 03C, No. 1 STP.

11. Summary of flow characterization study requirements from preceding pages.

    a. Metal cleaning waste treatment and disposal procedures.

    b. Flow determination of various waste streams.

    c. Cooling tower blowdown priority pollutant certification per 40 CFR 423.13(d)(3).

12. The provisions of 40 CFR 122.41(l)(6)(iii) regarding waiver of the 5 day written report required by Part II.A.2. and Part II.A.5 of this permit shall be applicable and may be implemented on a case-by-case basis by EPD for noncompliances which are orally reported by the permittee within 24 hours of discovery of the noncompliance condition.

13. The Division recognizes the inherent analytical variability in approved test methods and procedures and further agrees that such issues can be raised by the permittee as a defense in an enforcement action.

14. Upon approval of the Director, the permittee shall, on a case-by-case basis, be able to utilize alternative analytical methods, conversion factors, methodology, procedures, or new technologies, to ensure that the biomonitoring and toxicity reduction requirements of Part III.C. and the testing/reporting requirements of the permit are adequately addressed.

15. If the results for a given sample are such that a parameter is not detected at or above the method detection limit or reporting limit, a value of zero will be reported for that sample and the method detection limit or reporting limit will also be reported. Such sample shall be deemed to be in compliance with the permit limit.

16. The best management practices plan for "Macrofouling and Biofouling Control" dated July 26, 2001 is hereby approved and incorporated in this permit. The plan may be modified upon written approval by the Division.

17. The permittee is authorized to discharge storm water from the outfalls identified in Part I, Section A. of this permit provided that these discharges do not cause violations of State water quality standards in the receiving streams.

C. BIOMONITORING AND TOXICITY REDUCTION REQUIREMENTS

In order to determine whether the permittee is discharging wastes in concentrations or combinations which may have an adverse impact on the State's water quality, the Division can require the permittee to conduct a biomonitoring program.

If toxicity is believed to be present in the permittee's effluent, the Division may require the permittee to develop a biomonitoring screening program according to the following schedule:

1. Within 90 days of Division notification a screening program study plan detailing the test methodology and test organisms shall be submitted for conducting a forty-eight hour static acute test of the final effluent.

   Note: If residual chlorine is present in the final effluent from a treatment and/or disinfection process, a prechlorinated or dechlorinated sample will be tested.

2. Within 90 days of Division approval of the study plan, the permittee shall conduct and submit the results of the forty-eight hour static acute test.

The Division will then review the results of the forty-eight hour static acute test. If the test criteria specified in the study plan are exceeded, then the permittee shall within 90 days of written notification by the Division repeat steps 1. and 2. above replacing the forty-eight hour static acute test with the ninety-six hour test.

The Division will then review the results of the ninety-six hour test. If the criteria* detailed in the ninety-six hour test indicates toxicity, then the permittee shall within 90 days of written notification by the Division submit to the Division a plan to reduce the toxicity of the effluent. Within 270 days of Division approval of this plan, the permittee shall implement the plan and initiate follow-up biomonitoring of the effluent in accordance with the approved toxicity reduction plan. The toxicity reduction plan shall not be complete until the permittee meets the criteria detailed in the ninety-six hour test plan.

If there are substantial composition changes in the permittee's effluent, the permittee may be required to repeat the forty-eight hour static acute test upon notification by the Division. Unless otherwise advised, the permittee shall perform biomonitoring of the effluent as provided in C. 1. and 2. above, at a minimum of once every three years upon notification by the Division. On a case specific basis, chronic toxicity testing procedures may be required. Upon approval by the Division, all of the plans will become part of the requirements of this permit.

*The 96 hour criteria shall define toxicity as a greater than 10% mortality of the exposed test organisms in 96 hours or less when the test solution contains volumes of effluent and dilution water proportional to the plant daily average flow and the 7Q10 flow of the receiving stream, as determined using test procedures and methods, and statistical methods for evaluating test results, developed by the permittee and approved by the Division pursuant to this section or revised pursuant to Part III. B. 14. above.

CERTIFIED MAIL

Mr. Richard E. Dunn, Director
Environmental Protection Division
2 Martin Luther King Jr. Drive SE
Suite 1456 East, Floyd Tower
Atlanta, Georgia 30334-9000

RE: Plant Scherer
NPDES Permit No. GA00035564
Application for Permit Renewal

Dear Mr. Dunn:

Attached is an updated NPDES permit renewal application package for Georgia Power Company's Plant Scherer facility, located in Juliette, Georgia.

The updated application package includes the following supporting documentation:

- EPA NPDES Application Forms 1 and 2C
- Water flow diagrams for:
  a. Current Configuration; and
  b. Ash Pond Closure Configuration
- USGS 7.5 minute topographic location map showing the facility
- NPDES Industrial Permit Application Addendum
- 316(b) Cooling Water Intake Structure information
- Effluent Limitations Guidelines Applicability Timing

As noted above, ash pond dewatering activities are likely to occur during the permit term. As such, the application package includes two flow diagrams. The first diagram depicts the current wastewater flow schematic; this flow pattern is expected to remain until commencement of ash pond closure. The second diagram represents the wastewater flow schematic necessary to support ash pond closure and during the dewatering process. Georgia Power will notify EPD in advance of ash pond dewatering activities in accordance with NPDES Permit.

If you need additional information or have any questions regarding this application package, please contact Jean Brown at jeabrown@southernco.com or 404-506-6360.

Sincerely,

Mark S. Berry, Vice President
Environmental & Natural Resources

FORM 1 GENERAL

U.S. ENVIRONMENTAL PROTECTION AGENCY
GENERAL INFORMATION
Consolidated Permits Program
(Read the "General Instructions" before starting.)

I. EPA I.D. NUMBER: F GAD000612796

LABEL ITEMS
- I. EPA I.D. NUMBER
- III. FACILITY NAME
- V. FACILITY MAILING ADDRESS
- VI. FACILITY LOCATION

PLEASE PLACE LABEL IN THIS SPACE

GENERAL INSTRUCTIONS
If a preprinted label has been provided, affix it in the designated space. Review the information carefully: if any of it is incorrect, cross through it and enter the correct data in the appropriate fill-in area below. Also, if any of the preprinted data is absent *(the area to the left of the label space lists the information that should appear)*, please provide it in the proper fill-in area(s) below. If the label is complete and correct, you need not complete Items I, III, V, and VI *(except VI-B which must be completed regardless)*. Complete all items if no label has been provided. Refer to the instructions for detailed item descriptions and for the legal authorizations under which this data is collected.

II. POLLUTANT CHARACTERISTICS

INSTRUCTIONS: Complete A through J to determine whether you need to submit any permit application forms to the EPA. If you answer "yes" to any questions, you must submit this form and the supplemental form listed in the parenthesis following the question. Mark "X" in the box in the third column if the supplemental form is attached. If you answer "no" to each question, you need not submit any of these forms. You may answer "no" if your activity is excluded from permit requirements; see Section C of the instructions. See also, Section D of the instructions for definitions of **bold-faced terms**.

SPECIFIC QUESTIONS	Mark "X" YES	NO	FORM ATTACHED
A. Is this facility a **publicly owned treatment works** which results in a **discharge to waters of the U.S.?** (FORM 2A)		X	
B. Does or will this facility *(either existing or proposed)* include a **concentrated animal feeding operation** or **aquatic animal production facility** which results in a **discharge to waters of the U.S.?** (FORM 2B)		X	
C. Is this a facility which currently results in **discharges to waters of the U.S.** other than those described in A or B above? (FORM 2C)	X		X
D. Is a proposed facility *(other than those described in A or B above)* which will result in a **discharge** to waters of the U.S.? (FORM 2D)		X	
E. Does or will this facility treat, store, or dispose of **hazardous wastes?** (FORM 3)		X	
F. Do you or will you inject at this facility industrial or municipal effluent below the lowermost stratum containing, within one quarter mile of the well bore, underground sources of drinking water? (FORM 4)		X	
G. Do you or will you inject at this facility any produced water or other fluids which are brought to the surface in connection with conventional oil or natural gas production, inject fluids used for enhanced recovery of oil or natural gas, or inject fluids for storage of liquid hydrocarbons? (FORM 4)		X	
H. Do you or will you inject at this facility fluids for special processes such as mining of sulfur by the Frasch process, solution mining of minerals, in situ combustion of fossil fuel, or recovery of geothermal energy? (FORM 4)		X	
I. Is this facility a proposed **stationary source** which is one of the 28 industrial categories listed in the instructions and which will potentially emit 100 tons per year of any air pollutant regulated under the Clean Air Act and may affect or be located in an attainment area? (FORM 5)		X	
J. Is this facility a proposed **stationary source** which is NOT one of the 28 industrial categories listed in the instructions and which will potentially emit 250 tons per year of any air pollutant regulated under the Clean Air Act and may affect or be located in an attainment area? (FORM 5)		X	

III. NAME OF FACILITY

1 SKIP: PLANT SCHERER

IV. FACILITY CONTACT

A. NAME & TITLE *(last, first, & title)*	B. PHONE *(area code & no.)*

F. CITY OR TOWN: ATLANTA

G. STATE: GA

H. ZIP CODE: 30308

IX. INDIAN LAND: Is the facility located on Indian lands? ☐ YES ☑ NO

X. EXISTING ENVIRONMENTAL PERMITS

A. NPDES *(Discharges to Surface Water)*	D. PSD *(Air Emissions from Proposed Sources)*
N GA0035564	P N/A
B. UIC *(Underground Injection of Fluids)*	**E. OTHER** *(specify)*
U N/A	N/A (specify)
C. RCRA *(Hazardous Wastes)*	**E. OTHER** *(specify)*
R N/A	N/A (specify)

XI. MAP

Attach to this application a topographic map of the area extending to at least one mile beyond property boundaries. The map must show the outline of the facility, the location of each of its existing and proposed intake and discharge structures, each of its hazardous waste treatment, storage, or disposal facilities, and each well where it injects fluids underground. Include all springs, rivers, and other surface water bodies in the map area. See instructions for precise requirements.

XII. NATURE OF BUSINESS *(provide a brief description)*

Generation of electricity through combustion of fossil fuels.

*Plant Scherer is jointly owned by: Georgia Power Company, Oglethorpe Power Corporation, Municipal Electric Authority of Georgia, Florida Power and Light, Jacksonville Electric Authority, Gulf Power Company and the City of Dalton.

XIII. CERTIFICATION *(see instructions)*

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this application and all attachments and that, based on my inquiry of those persons immediately responsible for obtaining the information contained in the application, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

02	33.00	4.00	18.00	-83.00	47.00	45.00	Berry Creek

II. FLOWS, SOURCES OF POLLUTION, AND TREATMENT TECHNOLOGIES

A. Attach a line drawing showing the water flow through the facility. Indicate sources of intake water, operations contributing wastewater to the effluent, and treatment units labeled to correspond to the more detailed descriptions in Item B. Construct a water balance on the line drawing by showing average flows between intakes, operations, treatment units, and outfalls. If a water balance cannot be determined (*e.g., for certain mining activities*), provide a pictorial description of the nature and amount of any sources of water and any collection or treatment measures.

B. For each outfall, provide a description of: (1) All operations contributing wastewater to the effluent, including process wastewater, sanitary wastewater, cooling water, and storm water runoff; (2) The average flow contributed by each operation; and (3) The treatment received by the wastewater. Continue on additional sheets if necessary.

FORM 2C NPDES

EPA

U.S. ENVIRONMENTAL PROTECTION AGENCY
APPLICATION FOR PERMIT TO DISCHARGE WASTEWATER
EXISTING MANUFACTURING, COMMERCIAL, MINING AND SILVICULTURE OPERATIONS
Consolidated Permits Program

I. OUTFALL LOCATION

For each outfall, list the latitude and longitude of its location to the nearest 15 seconds and the name of the receiving water.

A. OUTFALL NUMBER (*list*)	B. LATITUDE			C. LONGITUDE			D. RECEIVING WATER (*name*)
	1. DEG	2. MIN	3. SEC.	1. DEG	2. MIN.	3. SEC.	
13,14	33.00	3.00	14.00	-83.00	48.00	26.00	Lake Juliette

II. FLOWS, SOURCES OF POLLUTION, AND TREATMENT TECHNOLOGIES

A. Attach a line drawing showing the water flow through the facility. Indicate sources of intake water, operations contributing wastewater to the effluent, and treatment units labeled to correspond to the more detailed descriptions in Item B. Construct a water balance on the line drawing by showing average flows between intakes, operations, treatment units, and outfalls. If a water balance cannot be determined (*e.g., for certain mining activities*), provide a pictorial description of the nature and amount of any sources of water and any collection or treatment measures.

B. For each outfall, provide a description of: (1) All operations contributing wastewater to the effluent, including process wastewater, sanitary wastewater, cooling water, and storm water runoff; (2) The average flow contributed by each operation, and (3) The treatment received by the wastewater. Continue on additional sheets if necessary.

1. OUTFALL NO. (*list*)	2. OPERATION(S) CONTRIBUTING FLOW		3. TREATMENT		
	a. OPERATION (*list*)	b. AVERAGE FLOW (*include units*)	a. DESCRIPTION	b. LIST CODES FROM TABLE 2C-1	
13	Units 1 & 2 Wastewater Basin	**	4,300 gpm (maximum)		4A
	Emergency Overflow				
14	Units 3 & 4 Wastewater Basin	**	4,300 gpm (maximum)		4A
	Emergency Overflow				
	** Intermittent or emergency				
	discharge				

OFFICIAL USE ONLY (*effluent guidelines sub-categories*)

CONTINUED FROM THE FRONT

C. Except for storm runoff, leaks, or spills, are any of the discharges described in Items II-A or B intermittent or seasonal?

☐ YES (*complete the following table*) ☐ NO (*go to Section III*)

1. OUTFALL NUMBER (*list*)	2. OPERATION(s) CONTRIBUTING FLOW (*list*)	3. FREQUENCY		4. FLOW				
		a. DAYS PER WEEK (*specify average*)	b. MONTHS PER YEAR (*specify average*)	a. FLOW RATE (*in mgd*)		B. TOTAL VOLUME (*specify with units*)		C. DURATION (*in days*)
				1. LONG TERM AVERAGE	2. MAXIMUM DAILY	1. LONG TERM AVERAGE	2. MAXIMUM DAILY	
	See Attachement 1 for intermittent discharges Analysis of overflows and emergency dicharges are submitted with the Operating Monitoring Reports							

III. PRODUCTION

A. Does an effluent guideline limitation promulgated by EPA under Section 304 of the Clean Water Act apply to your facility?

☒ YES (*complete Item III-B*) ☐ NO (*go to Section IV*)

B. Are the limitations in the applicable effluent guideline expressed in terms of production (*or other measure of operation*)?

☐ YES (*complete Item III-C*) ☒ NO (*go to Section IV*)

C. If you answered "yes" to Item III-B, list the quantity which represents an actual measurement of your level of production, expressed in the terms and units used in the applicable effluent guideline, and indicate the affected outfalls.

1. AVERAGE DAILY PRODUCTION			2. AFFECTED OUTFALLS (*list outfall numbers*)
a. QUANTITY PER DAY	b. UNITS OF MEASURE	c. OPERATION, PRODUCT, MATERIAL, ETC. (*specify*)	

IV. IMPROVEMENTS

A. Are you now required by any Federal, State or local authority to meet any implementation schedule for the construction, upgrading or operations of wastewater treatment equipment or practices or any other environmental programs which may affect the discharges described in this application? This includes, but is not limited to, permit conditions, administrative or enforcement orders, enforcement compliance schedule letters, stipulations, court orders, and grant or loan conditions.

☐ YES (*complete the following table*) ☑ NO (*go to Item IV-B*)

1. IDENTIFICATION OF CONDITION, AGREEMENT, ETC.	2. AFFECTED OUTFALLS		3. BRIEF DESCRIPTION OF PROJECT	4. FINAL COMPLIANCE DATE	
	a. NO.	b. SOURCE OF DISCHARGE		a. REQUIRED	b. PROJECTED

B. OPTIONAL: You may attach additional sheets describing any additional water pollution control programs (*or other environmental projects which may affect your discharges*) you now have underway or which you plan. Indicate whether each program is now underway or planned, and indicate your actual or planned schedules for construction.

☐ MARK "X" IF DESCRIPTION OF ADDITIONAL CONTROL PROGRAMS IS ATTACHED

CONTINUED FROM PAGE 2

V. INTAKE AND EFFLUENT CHARACTERISTICS

A, B, & C: See instructions before proceeding – Complete one set of tables for each outfall – Annotate the outfall number in the space provided. NOTE: Tables V-A, V-B, and V-C are included on separate sheets numbered V-1 through V-9.

D. Use the space below to list any of the pollutants listed in Table 2c-3 of the instructions, which you know or have reason to believe is discharged or may be discharged from any outfall. For every pollutant you list, briefly describe the reasons you believe it to be present and report any analytical data in your possession.

1. POLLUTANT	2. SOURCE	1. POLLUTANT	2. SOURCE
None			

VI. POTENTIAL DISCHARGES NOT COVERED BY ANALYSIS

Is any pollutant listed in Item V-C a substance or a component of a substance which you currently use or manufacture as an intermediate or final product or byproduct?

☐ YES (*list all such pollutants below*) ☑ NO (*go to Item VI-B*)

CONTINUED FROM THE FRONT

VII. BIOLOGICAL TOXICITY TESTING DATA

Do you have any knowledge or reason to believe that any biological test for acute or chronic toxicity has been made on any of your discharges or on a receiving water in relation to your discharge within the last 3 years?

☐ YES (*identify the test(s) and describe their purposes below*) ☑ NO (*go to Section VIII*)

VIII. CONTRACT ANALYSIS INFORMATION

Were any of the analyses reported in Item V performed by a contract laboratory or consulting firm?

☑ YES (*list the name, address, and telephone number of, and pollutants analyzed by, each such laboratory or firm below*) ☐ NO (*go to Section IX*)

A. NAME	B. ADDRESS	C. TELEPHONE (*area code & no.*)	D. POLLUTANTS ANALYZED (*list*)
Pace Analytical Services, LLC	110 Technology Parkway Peachtree Corners, GA 30092	770-734-4200	All except pH, temperature, sulfite and low level mercury
Pace Analytical Services, LLC	2225 Riverside Drive Asheville, NC 28804	828-254-7176	Low level mercury

IX. CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

INTERMITTENT FLOW DESCRIPTIONS

Attachment 1 for Form 2C page 2

Outfalls 01C, 01D, 05, and 06 – Cooling Tower Overflow / Basin Drain

Overflows from cooling towers may occur infrequently during equipment malfunction or emergency conditions. The estimated overflow discharge (15,820 gpm) is the design make-up water flow. Draining of the cooling tower basins may occur during unit outages. The frequency is dependent on unit operation and is estimated at twice per year.

Outfall 01E - NPDES Basin Minimum Flow

NPDES system minimum flows typically occur during periods of unit outages or cooling tower biocide treatment due to reduced cooling tower blow-down. The effluent is service water with a maximum discharge of 2,238 gpm.

Outfall 02A - I-Pond Bottom Drain

Discharges from the Detention (I-Pond) through the bottom drain could occur if necessary to perform dike, dam, or pond maintenance.

Outfall 02B - Fire Training Runoff

Discharges of filtered water used for fire training purposes may occur during the year due to classes conducted on site.

Outfall 02C - NPDES Basin Emergency Overflow

The normal discharge for the NPDES basin is through Outfall 01. In the event of equipment malfunctions or emergency conditions, the basin may discharge though this outfall. Past events have been infrequent and of short duration.

Outfall 03I - Chemical Metal Cleaning Wastes

Boiler and turbine cleaning wastes are usually treated with sodium hydroxide or lime to a pH sufficient to precipitate the iron and copper suspended in solution. The water is then pumped to the ash pond via the wastewater basin. Boiler cleaning is infrequent and turbine cleaning is typically once per year. Rainwater is also pumped out of the chemical cleaning basin into the Units 1 & 2 wastewater basin.

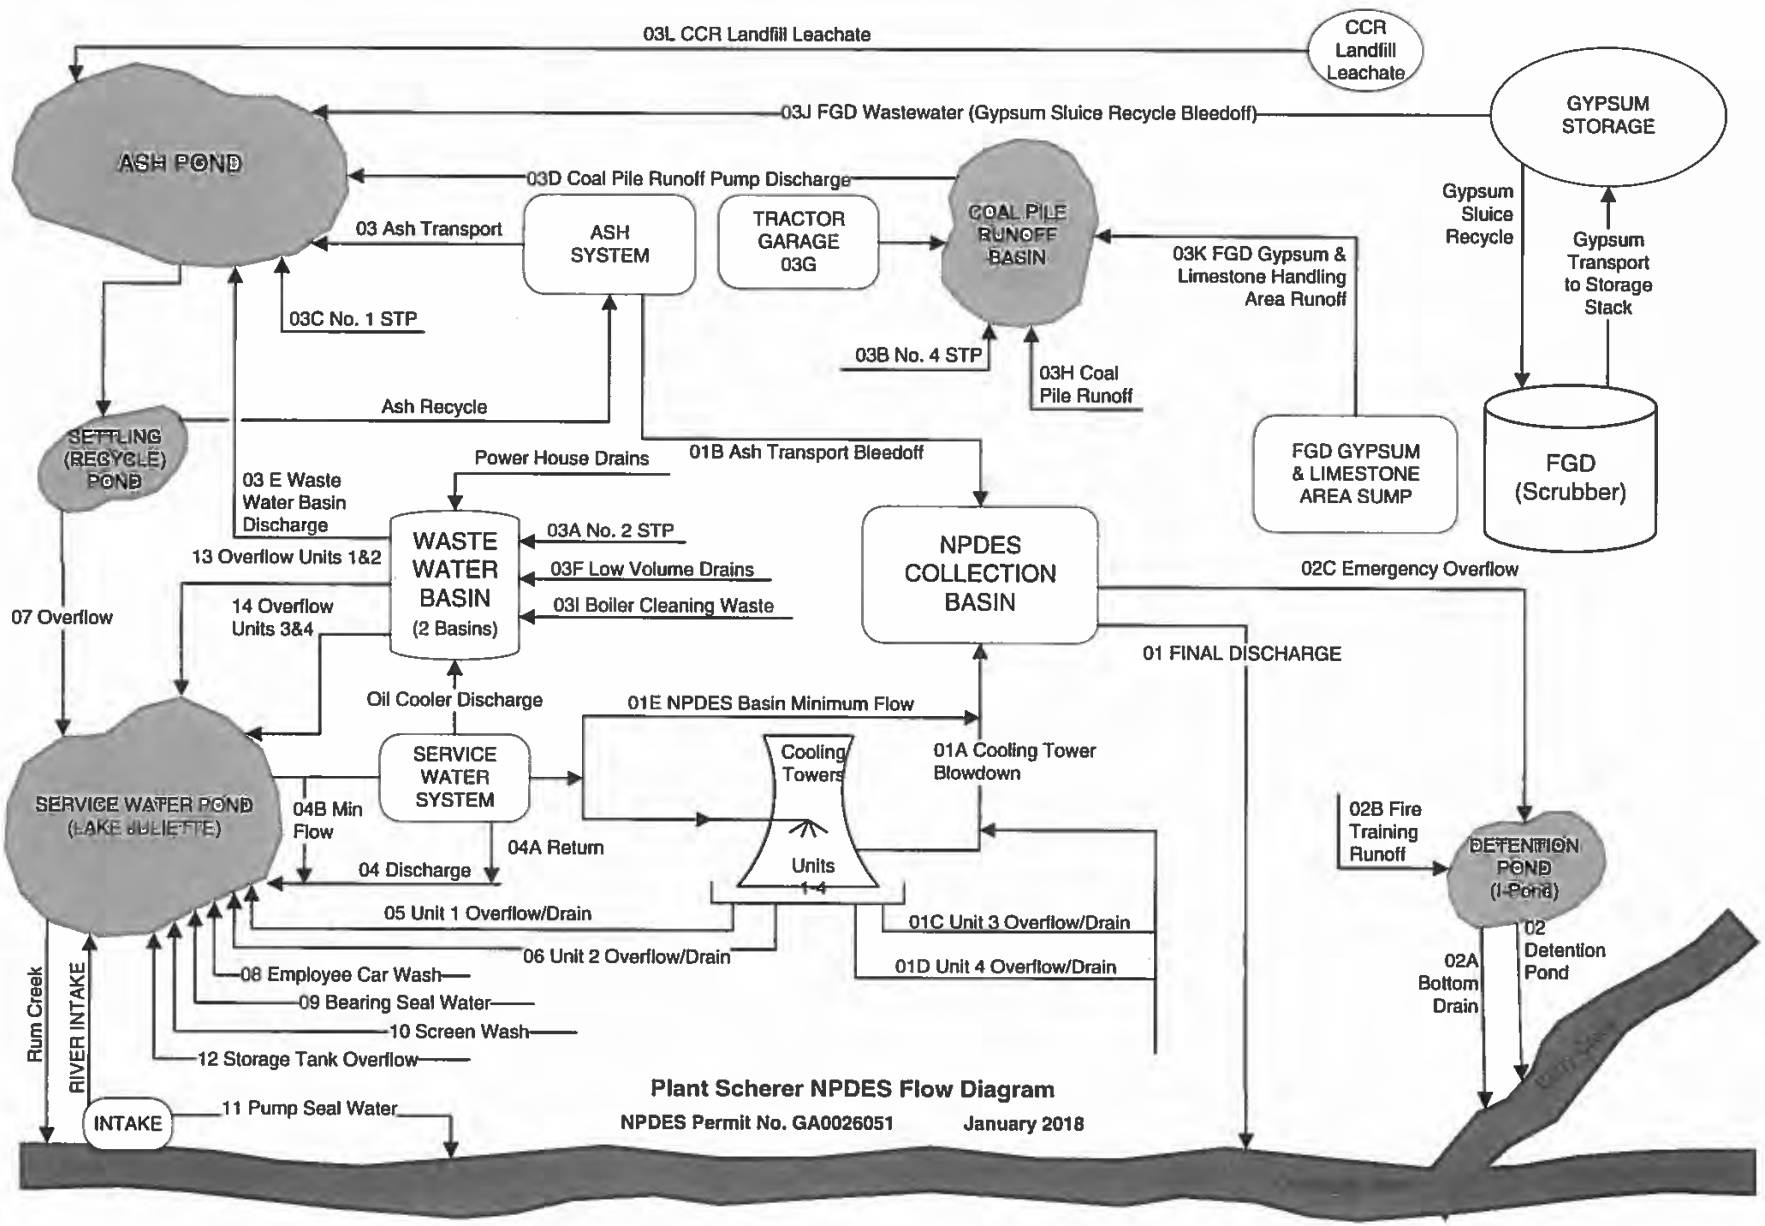
Outfall 03K – Limestone and Gypsum Handling Area Runoff

Discharges from storm water runoff from the limestone stockpile and gypsum handing area will depend on frequency and volume of rainfall events. These will flow to the Coal Pile Runoff Pond which is pumped to the Ash Pond.

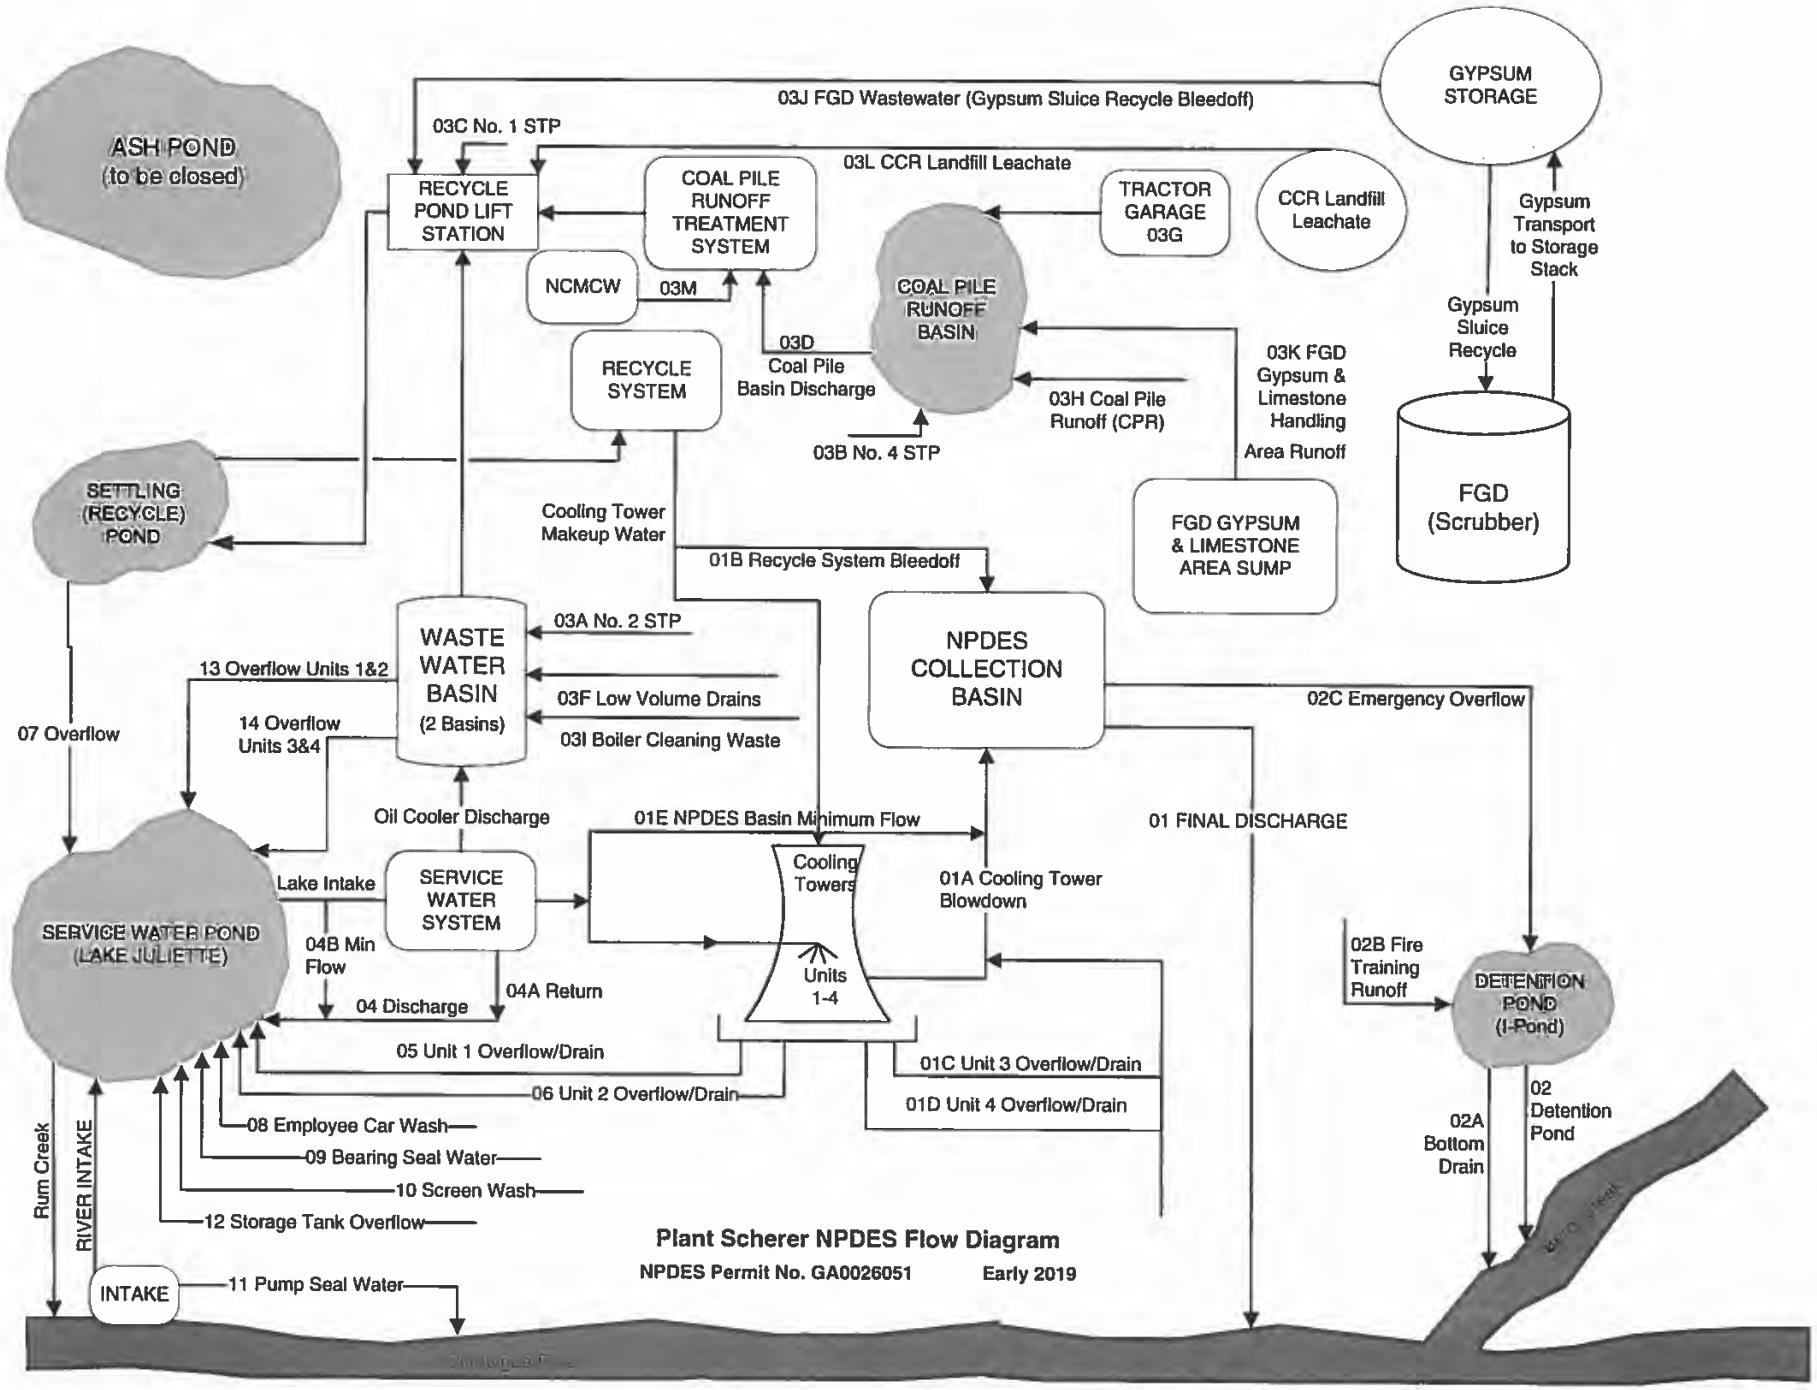
Outfall 03M – Non-Chemical Metal Cleaning Wastes

Precipitators may be washed down during outages. This water will now be sent to the new Coal Pile Runoff Treatment System (in the 2019 flow schematic). The frequency is dependent on unit operation and is estimated at once per year.

Outfall 07 - Settling Pond Emergency Overflow

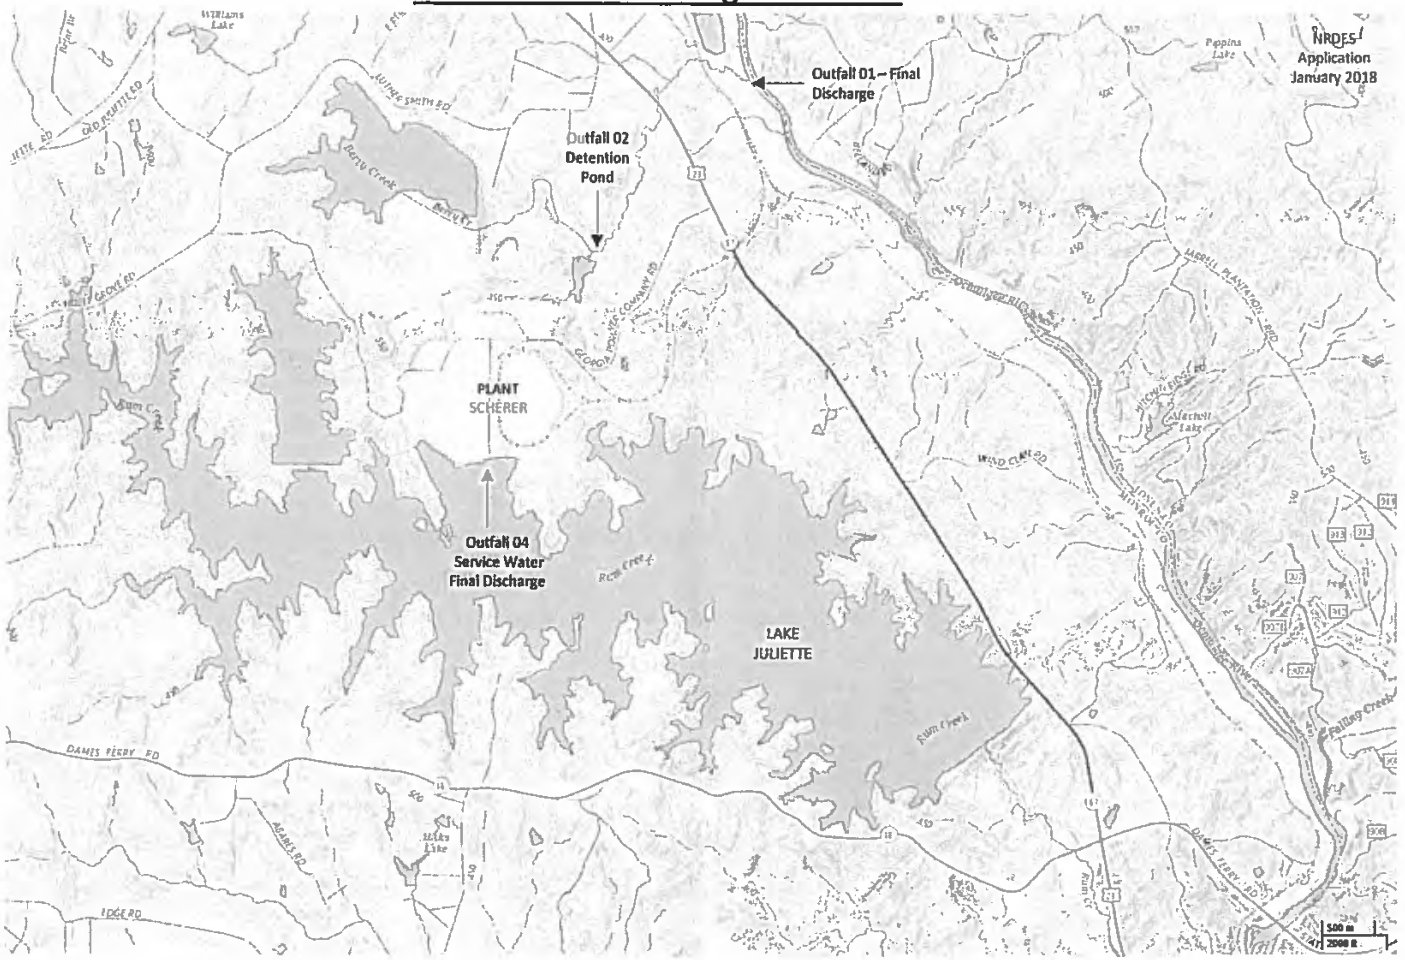


The normal settling pond discharge is through the ash transport bleed-off system. Discharges from the emergency overflow should only occur during periods of equipment malfunction, heavy rainfall, or emergency conditions. Overflow volume is variable with an estimated maximum of 57,000 gpm.



Outfall 12 - Condensate/Filtered Water/Potable Water Tank Overflows to Lake Juliette (Service Water Pond)

Storage tanks could overflow during abnormal operations. These infrequent overflows would consist of condensate, demineralized water, filtered water, or potable water. An overflow is typically less than 100 gpm and of short duration.



Outfall 13 and 14 - Waste Water Basin Emergency Overflow

Discharges could occur from equipment malfunctions or emergency conditions. An emergency portable pump is in standby mode to reduce the likelihood of an overflow.

GAD000612796 (Scherer)	01

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

Docket No. 20180007-EI
Application for EPD NPDES Permit GA0035564 Renewal for Plant Scherer
Exhibit MWS-6, Page 29 of 165

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	02

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

Scherer 2018 Outfall 04

Docket No. 20180007-EI
Application for EPD NPDES Permit GA0035564 Renewal for Plant Scherer
Exhibit MWS-6, Page 38 of 165

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	04

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

h. Temperature (*summer*)	VALUE 29.16		VALUE		VALUE		1	°C		VALUE		1
i. pH	MINIMUM 8.12	MAXIMUM 8.12	MINIMUM	MAXIMUM			1	STANDARD UNITS				

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	05

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

Application for EPD NPDES Permit GA0035564 Renewal for Plant Scherer
Exhibit MWS-6, Page 56 of 165

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	06

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

PLEASE PRINT OR TYPE IN THE UNSHADED AREAS ONLY. You may report some or all of this information on separate sheets (*use the same format*) instead of completing these pages. SEE INSTRUCTIONS.

EPA I D. NUMBER (*copy from Item 1 of Form 1*): GAD000612796 (Scherer)

V. INTAKE AND EFFLUENT CHARACTERISTICS *(continued from page 3 of Form 2-C)*

OUTFALL NO. 07

PART A –You must provide the results of at least one analysis for every pollutant in this table. Complete one table for each outfall. See instructions for additional details.

1. POLLUTANT	2. EFFLUENT						3. UNITS (*specify if blank*)		4. INTAKE (*optional*)		
	a. MAXIMUM DAILY VALUE		b. MAXIMUM 30 DAY VALUE (*if available*)		c. LONG TERM AVRG. VALUE (*if available*)		d. NO. OF ANALYSES	a. CONCEN-TRATION	b. MASS	a. LONG TERM AVERAGE VALUE		b. NO. OF ANALYSES
	(1) CONCENTRATION	(2) MASS	(1) CONCENTRATION	(2) MASS	(1) CONCENTRATION	(2) MASS				(1) CONCENTRATION	(2) MASS	
a. Biochemical Oxygen Demand (*BOD*)	<8.0	<5476.4					1	mg/l	lb/d			1
b. Chemical Oxygen Demand (*COD*)	<10	<6845.5					1	mg/l	lb/d			1
c. Total Organic Carbon (*TOC*)	3.5	<2395.9					1	mg/l	lb/d			1
d. Total Suspended Solids (*TSS*)	6	<4107.3					1	mg/l	lb/d			1
e. Ammonia (*as N*)	<0.10	<68.45					1	mg/l	lb/d			1
f. Flow	VALUE 57,000		VALUE		VALUE		1	gpm		VALUE		1
g. Temperature (*winter*)	VALUE 20.16		VALUE		VALUE		1	°C		VALUE		1
h. Temperature (*summer*)	VALUE 28.05		VALUE		VALUE		1	°C		VALUE		1
i. pH	MINIMUM 7.41	MAXIMUM 7.41	MINIMUM	MAXIMUM			1	STANDARD UNITS				

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

Application for EPD NPDES Permit GA0035564 Renewal for Plant Scherer
Exhibit MWS-6, Page 65 of 165

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	07

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

h. Temperature (*summer*)	VALUE 29.61		VALUE		VALUE		1	°C		VALUE		1
i. pH	MINIMUM 8.57	MAXIMUM 8.57	MINIMUM	MAXIMUM			1	STANDARD UNITS				

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

1. POLLUTANT AND CAS NO. (*if available*)	2. MARK "X"		3. EFFLUENT							4. UNITS		5. INTAKE (*optional*)

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	08

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

i. pH	MINIMUM 8.91	MAXIMUM 8.91	MINIMUM	MAXIMUM			1	STANDARD UNITS				

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

Scherer 2018 Outfall 09

Docket No. 20180007-EI
Application for EPD NPDES Permit GA0035564 Renewal for Plant Scherer
Exhibit MWS-6, Page 83 of 165

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	09

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

e. Ammonia (*as N*)	0.12	1.1					1	mg/l	lb/d			1
f. Flow	VALUE 765		VALUE		VALUE		1	gpm		VALUE		1
g. Temperature (*winter*)	VALUE 17.49		VALUE		VALUE		1	°C		VALUE		1
h. Temperature (*summer*)	VALUE 29.05		VALUE		VALUE		1	°C		VALUE		1
i. pH	MINIMUM 8.91	MAXIMUM 8.91	MINIMUM	MAXIMUM			1	STANDARD UNITS				

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

V. INTAKE AND EFFLUENT CHARACTERISTICS *(continued from page 3 of Form 2-C)*

OUTFALL NO.: 11

PART A –You must provide the results of at least one analysis for every pollutant in this table. Complete one table for each outfall. See instructions for additional details.

1. POLLUTANT	2. EFFLUENT a. MAXIMUM DAILY VALUE (1) CONCENTRATION	a. MAXIMUM DAILY VALUE (2) MASS	b. MAXIMUM 30 DAY VALUE (*if available*) (1) CONCENTRATION	b. MAXIMUM 30 DAY VALUE (*if available*) (2) MASS	c. LONG TERM AVRG. VALUE (*if available*) (1) CONCENTRATION	c. LONG TERM AVRG. VALUE (*if available*) (2) MASS	d. NO. OF ANALYSES	3. UNITS (*specify if blank*) a. CONCEN-TRATION	3. UNITS b. MASS	4. INTAKE (*optional*) a. LONG TERM AVERAGE VALUE (1) CONCENTRATION	4. INTAKE a. LONG TERM AVERAGE VALUE (2) MASS	4. INTAKE b. NO. OF ANALYSES
a. Biochemical Oxygen Demand (*BOD*)	<8	<10					1	mg/l	lb/d	<8		1
b. Chemical Oxygen Demand (*COD*)	<10	<12					1	mg/l	lb/d	<10		1
c. Total Organic Carbon (*TOC*)	4.8	5.8					1	mg/l	lb/d	4.8		1
d. Total Suspended Solids (*TSS*)	<5	<6					1	mg/l	lb/d	<5		1
e. Ammonia (*as N*)	<0.10	<0.12					1	mg/l	lb/d	<0.10		1
f. Flow	VALUE 100		VALUE		VALUE		1	gpm		VALUE		1
g. Temperature (*winter*)	VALUE 16.53		VALUE		VALUE		1	°C		VALUE		1
h. Temperature (*summer*)	VALUE 25.09		VALUE		VALUE		1	°C		VALUE		1
i. pH	MINIMUM 7.54	MAXIMUM 7.54	MINIMUM	MAXIMUM			1	STANDARD UNITS				

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

1. POLLUTANT AND CAS NO. (*if available*)	2. MARK "X" a. BELIEVED PRESENT	2. MARK "X" b. BELIEVED ABSENT	3. EFFLUENT a. MAXIMUM DAILY VALUE (1) CONCENTRATION	a. MAXIMUM DAILY VALUE (2) MASS	b. MAXIMUM 30 DAY VALUE (*if available*) (1) CONCENTRATION	b. MAXIMUM 30 DAY VALUE (*if available*) (2) MASS	c. LONG TERM AVRG. VALUE (*if available*) (1) CONCENTRATION	c. LONG TERM AVRG. VALUE (*if available*) (2) MASS	d. NO. OF ANALYSES	4. UNITS a. CONCEN-TRATION	4. UNITS b. MASS	5. INTAKE (*optional*) a. LONG TERM AVERAGE VALUE (1) CONCENTRATION	5. INTAKE a. LONG TERM AVERAGE VALUE (2) MASS	5. INTAKE b. NO. OF ANALYSES
a. Bromide (24959-67-9)			<1.0	<1.2					1	mg/l	lb/d	<1.0		1
b. Chlorine, Total Residual			0.1						1	mg/l		0.1		1
c. Color			200						1	PCU		200		1
d. Fecal Coliform			800						1	col/100		800		1
e. Fluoride (16984-48-8)			0.31	0.37					1	mg/l	lb/d	0.31		1
f. Nitrate-Nitrite (*as N*)			0.89	1.07					1	mg/l	lb/d	0.89		1

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	11

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

i. pH	MINIMUM 8.34	MAXIMUM 8.34	MINIMUM	MAXIMUM			1	STANDARD UNITS				

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	12

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	13

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

Exhibit MWS-6, Page 126 of 165

PLEASE PRINT OR TYPE IN THE UNSHADED AREAS ONLY. You may report some or all of this information on separate sheets (*use the same format*) instead of completing these pages.
SEE INSTRUCTIONS.

EPA I.D. NUMBER (*copy from Item 1 of Form 1*): GAD000612796 (Scherer)

V. INTAKE AND EFFLUENT CHARACTERISTICS *(continued from page 3 of Form 2-C)*

OUTFALL NO. 14

PART A –You must provide the results of at least one analysis for every pollutant in this table. Complete one table for each outfall. See instructions for additional details.

1. POLLUTANT	2. EFFLUENT							3. UNITS (*specify if blank*)		4. INTAKE (*optional*)		
	a. MAXIMUM DAILY VALUE		b. MAXIMUM 30 DAY VALUE (*if available*)		c. LONG TERM AVRG. VALUE (*if available*)		d. NO. OF ANALYSES	a. CONCEN-TRATION	b. MASS	a. LONG TERM AVERAGE VALUE		b. NO. OF ANALYSES
	(1) CONCENTRATION	(2) MASS	(1) CONCENTRATION	(2) MASS	(1) CONCENTRATION	(2) MASS				(1) CONCENTRATION	(2) MASS	
a. Biochemical Oxygen Demand (*BOD*)	<9	<465					1	mg/l	lb/d			1
b. Chemical Oxygen Demand (*COD*)	82	4235					1	mg/l	lb/d			1
c. Total Organic Carbon (*TOC*)	5.7	294.4					1	mg/l	lb/d			1
d. Total Suspended Solids (*TSS*)	27	1394.3					1	mg/l	lb/d			1
e. Ammonia (*as N*)	0.19	9.8					1	mg/l	lb/d			1
f. Flow	VALUE 4300		VALUE		VALUE		1	gpm		VALUE		1
g. Temperature (*winter*)	VALUE 21.49		VALUE		VALUE		1	°C		VALUE		1
h. Temperature (*summer*)	VALUE 32.75		VALUE		VALUE		1	°C		VALUE		1
i. pH	MINIMUM 9.72	MAXIMUM 9.72	MINIMUM	MAXIMUM			1	STANDARD UNITS				

PART B – Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

Docket No. 20180007-EI
Application for EPD NPDES Permit GA0035564 Renewal for Plant Scherer
Exhibit MWS-6, Page 128 of 165

EPA I.D. NUMBER (*copy from Item 1 of Form 1*)	OUTFALL NUMBER
GAD000612796 (Scherer)	14

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a (*secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions*), mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table (*all 7 pages*) for each outfall. See instructions for additional details and requirements.

NPDES Industrial Permit Application Addendum

Please check the applicable box and enter the associated information:

☐ New discharger Name of facility:

☒ Existing NPDES discharger Name of facility: Plant Scherer Existing NPDES Permit No.: GA0035564

SECTION I. CONTACT & FACILITY INFORMATION

Permit Application Contact Name (first & last): Jean Brown	
Title: Environmental Specialist	
E-mail Address: jeabrown@southernco.com	
Total Design Flow (MGD): 172 (DIF)	Actual Design Flow (MGD):
Facility Latitude/Longitude (ex. 34.5364, -84.8045): 33.06 -83.807	EPA Major (circle one): *yes* or (*no*)
Primary Industry (circle one): (*yes*) or *no*	NAICS Codes: 221112

SECTION II. EFFLUENT LIMITS AND CONDITIONS

1. Is there an effluent limit, standard, guideline, or categorical pretreatment standard established for this type of discharge in 40 CFR Part 400-471, as amended or elsewhere pursuant to 301, 306, 307, 316, 318, or 405 of the Clean Water Act?

☒ Yes ☐ No

If you answered "yes", to question No. 1 above, please complete the following table below by providing the name of the discharge category and the specific citation to the regulation, if applicable, that establishes the limitation or condition.

If you answered "no" to question No. 1 above, please proceed to Section No. III.

Section II, Table No. 1

Name of Discharge Category and Appropriate Citation From State of Federal Regulations.	Effluent Limitation or Condition: (Yes or No)	Name of Subpart and Appropriate Subpart Citation
Example: ***Iron and Steel Manufacturing; 40 CFR Part 420***	***Yes***	***Acid Pickling; 40 CFR part 420 subpart I***
Steam Electric Power Generating Point Source Category	Yes	40 CFR Part 423

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

2. Are any of the applicable effluent limitations applicable to the discharge(s) expressed in terms of production?

☐ Yes ☒ No

If you answered "yes", complete the following table below. For an existing discharge, list an actual measurement of your average or maximum level of daily production. For new discharges, list an average or maximum projected daily production. (indicate in the table whether the production figures given are average or maximum level.) Express the production in terms and units used in the applicable discharge limitation. Attach additional sheets if necessary.

If you answered "no" to question No. 2 above, please proceed to Section III.

Section II, Table No. 2 – Applicable Effluent Limit Guidelines

Name of Category and Subpart	Name and Quantity of Product per Day with Units of Measure	Description of Process	No. of Cycles through Process
Example: ***40CFR Part 420 Subpart I. Iron and Steel Manufacturing; Hydrochloric Acid Pickling***	***27,000 lbs of stainless steel strips (average)***	***Stainless steel strips are passed through solder flux baths in #1 Tinner***	***2***

SECTION III. WATER QUALITY

1. Name of Georgia major river basin(s) in which your discharge(s) enters: Ocmulgee

2. Do you discharge to 305(b)/303(d) Listed Waters*?

☐ Yes ☒ No

If you answered "yes" to question No.2 above, please complete the Table No. 1 below.

If you answered "no" to question No. 2 above, please proceed to Section IV.

** Georgia's 305(b)/303(d) list can be found on EPD's website at the following web address:*
http://epd.georgia.gov/georgia-305b303d-list-documents

STATE OF GEORGIA

ENVIRONMENTAL PROTECTION DIVISION

SECTION IV. SUMMARY OF DISCHARGE ANALYSIS*

If you are a new industrial discharger, you may omit this Section of the NPDES Application Addendum and proceed to Section V. If you are an existing facility with an existing NPDES wastewater permit, please proceed to question No. 1 of this Section below.

1. Complete the following table with a summary of discharge analytical data from the *previous three (3) years*. To complete the table for renewals, refer to your existing permit; for other discharges previously permitted by EPD, refer to your previous authorization or permit. Reproduce and complete Section IV of the NPDES Application Addendum form for each outfall that you are proposing to renew.

Outfall Identification (as referenced on permit and monitoring report): 01 Final Discharge

Parameter	Maximum Loading (lbs/day)	Average Loading (lbs/day)	Maximum Concentration (units)	Average Concentration (units)	Number of Exceedances	Comments
Ex. BOD 5-day	*325*	*204*	*22 (mg/L)*	*45 (mg/L)*	*3*	
Ex. pH	*NA*	*NA*	*10.0 (max. s.u.)*	*7.3 (min. s.u.)*	*2*	
pH	NA	NA	7.6 (max. s.u.)	7.6 (avg. s.u.)	0	1/1/2015-12/31/2017

SECTION V. 40 CFR 122.21(r) COOLING WATER INTAKE STRUCTURES

Does the Cooling Water Intake Structure Rule for Existing Facilities Apply?

Directions: Answer questions 1 through 4 below for your cooling water intake structure(s) (CWIS). If your answer to any one of these questions is "No", then the requirements of 40 CFR 125.94 through 125.99 do not apply to your facility, and you may proceed to Section No. X. However, the State reserves the right to establish BPJ requirements as allowed in 40 CFR 125.90(b) for facilities.

Note: If you are a new facility please contact the GA EPD.

1. Is the facility a point source that discharges under a NPDES permit to waters of the State?

☒ Yes ☐ No

If you answered "yes" to question No. 1 above, please proceed to question No. 2 below.

2. Is the cooling water intake structure withdrawing cooling water from waters of the State?

☒ Yes ☐ No

If you answered "yes" to question No. 2 above, please proceed to question No. 3 below.

Note: Obtaining cooling water from a public water system, using reclaimed water from wastewater treatment facilities or desalination plants, or recycling treated process wastewater effluent as cooling water does not constitute use of a cooling water intake structure.

3. Is the facility-wide design intake flow (DIF) for all cooling water intake structures at the facility greater than 2 MGD?

☒ Yes ☐ No

If you answered "yes" to question No. 3 above, please provide the facility-wide design intake flow (DIF) and actual intake flow (AIF) for all cooling water intake structures in box 3.a.

Note: Actual Intake Flow means the average volume of water withdrawn on an annual basis by the cooling water intake structures over the past three years

3.a.

DIF = 172 (mgd)

AIF = 52.9 (mgd)

4. Does the facility have an intake structure that withdraws more than 25 percent of the water for cooling purposes on an actual intake flow basis?

☒ Yes ☐ No

If you answered "yes" to question No. 4 above, please provide the AIF percentage used exclusively for cooling purposes in box 4.a.

4.a.

AIF = 87 %

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

Additional Information for Facilities to which the CWIS Rule applies

Section VI of this addendum lists the application requirements for all facilities for which the CWIS rule applies. The bullets below provide additional directions for which of following Sections VII, VIII and/or IX may also apply

- If you answered "yes" to question nos. 1, 2, 3 and 4 ***and*** you have an *existing unit at an existing facility*; the Impingement Mortality Best Technology Available (BTA) Standard, Section No. VII, applies to your facility.

- If you answered "yes" to question nos. 1, 2, 3 and 4 ***and*** your facility has a new unit at an existing facility; the Impingement Mortality BTA Standard, Section No. VIII, applies to you.

- If you answered "yes" to question nos. 1, 2, 3 and 4 **and** your facility withdraws greater than 125 MGD on an actual intake flow basis then the Entrainment BTA Standard, Section IX also applies to your facility.

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

What is the timing of the submission of information required in permit application under the 316(b) Rule? *(December 2014 EPA MEMO)*

If your permit expires prior to July 14, 2018, under 40 CFR Part 125.95(a)(2), a facility may request that the Director establish an alternative schedule for submission of some of the permit application information in 40 CFR Part 122.21(r), based on a showing of the owner or operator of the facility that it could not develop the information for which an alternative schedule is requested by the time required for the submission of the permit renewal application.

Please check the applicable box(s).

☐ I request the Director provide an alternative schedule for the submission of some of the permit application information in 40 CFR Part 122.21(r).

☒ I request the Director provide an alternative schedule for the submission of the following permit application requirements in 40 CFR Part 122.21(r).

- ☐ (2) Source water physical data
- ☐ (3) Cooling water intake structure data
- ☒ (4) Source water baseline biological characterization data
- ☐ (5) Cooling water system data
- ☐ (6) Chosen Method(s) of Compliance with Impingement Mortality Standard
- ☐ (7) Entrainment Performance Studies
- ☐ (8) Operational Status
- ☐ (9) Entrainment Characterization Study
- ☐ (10) Comprehensive Technical Feasibility and Cost Evaluation Study
- ☐ (11) Benefits Valuation Study
- ☐ (12) Non-water Quality Environmental and Other Impacts Study
- ☐ (13) Peer Review
- ☐ (H) All facilities must also submit with their permit application all information received as a result of any communication with a Field Office of the Fish and Wildlife Service and/or Regional Office of the National Marine Fisheries Service.

☐ I do not request an alternative schedule for the submission of some of the permit application information in 40 CFR Part 122.21(r). I have included the applicable permit application information required in 40 CFR Part 122.21(r).

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

SECTION VI. APPLICATION REQUIREMENTS FOR ALL EXISITNG FACILITIES

1. If you are an existing facility, then you are required to submit the following information in accordance with §122.21(r)(1)(ii)(A), as applicable, with your permit application.

Please check the box next to the required information which you are submitting with this application.

- ☒ (2) Source water physical data
- ☒ (3) Cooling water intake structure data
- ☐ (4) If applicable, Source water baseline biological characterization data
- ☒ (5) If applicable, Cooling water system data
- ☒ (6) If applicable, Chosen Method(s) of Compliance with Impingement Mortality Standard
- ☐ (7) If applicable, Entrainment Performance Studies
- ☒ (8) If applicable, Operational Status
- ☐ (H) All facilities must also submit with their permit application all information received as a result of any communication with a Field Office of the Fish and Wildlife Service and/or Regional Office of the National Marine Fisheries Service.

2. If you are an existing facility that withdraws greater than 125 mgd actual intake flow (AIF), as defined at 40 CFR 125.92 (a), of water for cooling purposes, then you are required to submit the following information in accordance with §122.21(r)(1)(ii)(B).

Please check the box next to the required information which you are submitting with this application.

- ☐ (2) Source water physical data
- ☐ (3) Cooling water intake structure data
- ☐ (9) Entrainment Characterization Study
- ☐ (10) Comprehensive Technical Feasibility and Cost Evaluation Study
- ☐ (11) Benefits Valuation Study
- ☐ (12) Non-water Quality Environmental and Other Impacts Study
- ☐ (13) Peer Review
- ☐ (H) All facilities must also submit with their permit application all information received as a result of any communication with a Field Office of the Fish and Wildlife Service and/or Regional Office of the National Marine Fisheries Service.

Note: If the owner or operator of an existing facility intends to comply with the BTA (best technology available) standards for entrainment using a closed-cycle recirculating system as defined at 40 CFR 125.92(c), the Director may reduce or waive some or all of the information required under paragraphs (r)(9) through (13) of this section. If you intend to comply with BTA standards for entrainment using closed cycle recirculating systems as referenced above, please contact EPD.

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

3. If you are a new unit at an existing facility, as defined at 40 CFR 125.92(u), you must submit or update the following information in accordance with §122.21(r)(1)(ii)(D).

Please check the box next to the required information which you are submitting with this application.

- ☐ (4) If applicable, Source water baseline biological characterization data
- ☐ (5) Cooling water system data
- ☐ (6) If applicable, Chosen Method(s) of Compliance with Impingement Mortality Standard
- ☐ (7) If applicable, Entrainment Performance Studies
- ☐ (8) Operational Status
- ☐ (H) All facilities must also submit with their permit application all information received as a result of any communication with a Field Office of the Fish and Wildlife Service and/or Regional Office of the National Marine Fisheries Service.

4. If you are a new unit at an existing facility, as defined at 40 CFR 125.92(u), not previously subject to part 125 that increases the total capacity of the existing facility to more than 2 mgd DIF, you must submit the following information in accordance with §122.21(r)(1)(ii)(E).

Please check the box next to the required information which you are submitting with this application.

- ☐ (4) If applicable, Source water baseline biological characterization data
- ☐ (5) Cooling water system data
- ☐ (6) If applicable, Chosen Method(s) of Compliance with Impingement Mortality Standard
- ☐ (7) If applicable, Entrainment Performance Studies
- ☐ (8) Operational Status
- ☐ (9) If total capacity increases to more than 125 mgd, Entrainment Characterization Study
- ☐ (10) If total capacity increases to more than 125 mgd, Comprehensive Technical Feasibility and Cost Evaluation Study
- ☐ (11) If total capacity increases to more than 125 mgd, Benefits Valuation Study
- ☐ (12) If total capacity increases to more than 125 mgd, Non-water Quality Environmental and Other Impacts Study
- ☐ (13) Peer Review
- ☐ (H) All facilities must also submit with their permit application all information received as a result of any communication with a Field Office of the Fish and Wildlife Service and/or Regional Office of the National Marine Fisheries Service.

Note: If the owner or operator of an existing facility intends to comply with the BTA (best technology available) standards for entrainment using a closed-cycle recirculating system as defined at 40 CFR 125.92(c), the Director may reduce or waive some or all of the information required under paragraphs (r)(9) through (13) of this section. If you intend to comply with BTA standards for entrainment using closed cycle recirculating systems as referenced above, please contact EPD.

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

SECTION VII. *BTA STANDARD FOR IMPINGEMENT MORTALITY FOR EXISTING UNITS AT EXISTING FACILITIES*

The final rule requires that existing facilities subject to this rule must comply with one of the following seven alternatives listed below identified in the national BTA standard for impingement mortality at § 125.94(c) (hereafter, impingement mortality standards).

Note: Please check the box under the applicable impingement mortality standard in which your facility currently has in operation or intends to install to comply with the referenced standard. Please also provide the appropriate documentation for the chosen alternative and attach it your application.

1. Operate a closed-cycle recirculating system as defined at § 125.92;

☒ Currently in operation ☐ Request a compliance schedule

2. Operate a cooling water intake structure that has a maximum through screen design intake velocity of 0.5 fps or less;

☐ Currently in operation ☐ Request a compliance schedule

3. Operate a cooling water intake structure that has a maximum through screen intake velocity of 0.5 fps;
   a) In the case of Option (3), which EPA considers to be a streamlined alternative, the facility must submit information to the Director that demonstrates that the maximum intake velocity as water passes through the structural components of a screen measured perpendicular to the screen mesh does not exceed 0.5 feet per second.

☐ Currently in operation ☐ Request a compliance schedule

4. Operate an offshore velocity cap as defined at § 125.92 that is installed before October 14, 2014;

☐ Currently in operation ☐ Request a compliance schedule

5. Operate a modified traveling screen that the Director determines meets the definition at § 125.92(s) and that the Director determines is the best technology available for impingement reduction;
   a) In the case of Option (5), the facility must submit a site-specific impingement technology performance optimization study that must include two years of biological sampling demonstrating that the operation of the modified traveling screens has been optimized to minimize impingement mortality. As discussed below, if the facility does not already have this technology installed and chooses this option, the Director may postpone this study till the screens are installed (see VI.G.1.d below).

☐ Currently in operation ☐ Request a compliance schedule

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

6. Operate any other combination of technologies, management practices and operational measures that the Director determines is the best technology available for impingement reduction; or

(a) In the case of Option (6), the facility must submit a site-specific impingement study including two years of biological data collection demonstrating that the operation of the system of technologies, operational measures and best management practices has been optimized to minimize impingement mortality. If this demonstration relies in part on a credit for reductions in the rate of impingement already achieved by measures taken at the facility, an estimate of those reductions and any relevant supporting documentation must be submitted. The estimated reductions in rate of impingement must be based on a comparison of the system to a once-through cooling system with a traveling screen whose point of withdrawal from the surface water source is located at the shoreline of the source waterbody.

☐ Currently in operation ☐ Request a compliance schedule

7. Achieve the specified impingement mortality performance standard.

(a) The impingement mortality performance standard in (7) requires that a facility must achieve a 12-month impingement mortality performance of all life stages of fish and shellfish of no more than 24 percent mortality, including latent mortality, for all non-fragile species that are collected or retained in a sieve with maximum opening dimension of 0.56 inches and kept for holding period of 18 to 96 hours. The Director may, however, prescribe an alternative holding period.

The 12-month average of impingement mortality is calculated as the sum of total impingement mortality for the previous 12 months divided by the sum of total impingement for the previous 12 months. A facility must choose to demonstrate compliance with this requirement for the entire facility, or for each individual cooling water intake structure. Biological monitoring must be completed at a minimum frequency of monthly.

☐ Currently in operation ☐ Request a compliance schedule

SECTION VIII. BTA STANDARDS FOR IMPINGEMENT MORTALITY AND ENTRAINMENT FOR NEW UNITS AT EXISTING FACILITIES

The owner or operator of a new unit at an existing facility must achieve one of two compliance alternatives under the national BTA standards for impingement mortality and entrainment for new units at existing facilities at § 125.94(e) (hereafter, new unit standards).

☐ Option No. 1

You must reduce AIF at the new unit, at a minimum, to a level commensurate with that which can be attained by the use of a closed-cycle recirculating system as defined at § 125.92(c)(1).

☐ Option No. 2

You must demonstrate to the Director that it has installed and will operate and maintain, technological or other control measures that reduce the level of adverse environmental impact from any cooling water intake structure used to supply cooling water to the new unit to a comparable level to that which would be achieved through flow reductions commensurate with the use of a closed-cycle recirculating system. Under this alternative, the owner or operator of a facility must demonstrate entrainment mortality reductions that are equivalent to 90 percent or greater of the reduction that could be achieved through compliance with the first alternative entrainment standard for new units.

SECTION IX. ENTRAINMENT BTA

STATE OF GEORGIA
DEPARTMENT OF NATURAL RESOURCES
ENVIRONMENTAL PROTECTION DIVISION

The Director must establish the Entrainment BTA requirement for your facility on a site-specific basis in accordance with § 125.98(f)(2).

If you withdraw greater than 125 mgd AIF, you must develop and submit an Entrainment Characterization Study (§ 122.21(r)(9)), as well as provide other information required in § 122.21(r)(7) and (10), (11), (12) and (13) that must include specified data pertinent to consideration of several of the factors identified in § 125.98(f).

Please include your Entrainment Characterization Study as well as the other required information referenced above with your application.

SECTION X. CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Print Name: Mark Berry, Vice President - Georgia Power Environmental & Natural Resources	Date:
Signature of Applicant: Mark Berry	01/29/18

Plant Scherer, NPDES Permit No. GA0035564
Permit Renewal Application January 2018
316(b) Cooling Water Intake Structure (CWIS) Information

Plant Scherer employs a closed cycle cooling system for all four steam electric generating units. As such, it conforms to the Best Technology Available for both entrainment and impingement as described in the October 14, 2014 final 316(b) rule. The information provided below covers source water physical data, cooling water intake structure data, cooling water system data, and facility operational status as prescribed in 40 CFR 122.21(r)(2), (3), (5), and (8) respectively. A segment of the USGS 7.5 minute topographical map showing the location of Plant Scherer and the location of the intake structure is provided as Attachment A.

Source Water Physical Data. 40 CFR 122.21(r)(2)

Plant Scherer withdraws cooling water from an impoundment of Rum Creek, which is a tributary of the Ocmulgee River with a watershed area of approximately 37 square miles. The impoundment, which is a Water of the United States, is known as Lake Juliette and provides storage for at least six months of full plant operation without supplemental pumping from the Ocmulgee River. Pumping from the Ocmulgee River is necessary to supplement inflow from the Rum Creek watershed area, and is limited by the Surface Water Withdrawal Permit during low river flows.

The normal operating level of Lake Juliette is 435'above Mean Sea Level and the bottom of the design storage is 415'. The surface area of Lake Juliette is 3,600 acres and usable storage volume is 53,700 acre-feet. Lake Juliette is located in the Rum Creek Wildlife Management Area (WMA), which is managed by the Georgia Department of Natural Resources. The WMA provides for extensive riparian zones throughout the lake, commonly more than 3000ft. There is no riparian vegetation in the immediate vicinity of the intake structure, although adjacent banks provide for approximately 200ft of riparian buffer.

Lake depths vary significantly, although typical depths of the lake fall between 20-35ft. Maximum depth is observed in the dam pool area and is approximately 70-80ft. Water depths at the intake structure vary depending on the operating level of the dam, but typical depths are approximately 32-35ft.

The elevations of the CWIS are included in the drawings in Attachment B.

Annual temperature regimes of Lake Juliette are a factor of ambient environmental conditions. Ambient lake temperatures are monitored under a seasonal monitoring program. Over the last three years, the maximum summer temperatures were measured between 28.5°C and 30.5°C, with winter minimums being between 7.5°C and 9.5°C. This data indicated that the temperature undergoes typical seasonal fluctuation associated with lakes in this region.

The hydraulic zone of influence has not been evaluated.

Plant Scherer, NPDES Permit No. GA0035564
Permit Renewal Application January 2018
316(b) Cooling Water Intake Structure (CWIS) Information

Cooling water intake structure (CWIS) data. 40 CFR 122.21(r)(3)

Plant Scherer has four coal-fired steam electric generating units, all utilizing closed cycle cooling systems with natural draft cooling towers. The Lake Juliette intake structure provides make-up water to supply cooling and process water to all four units. Each of six platform mounted pumps draws water through a traveling water screen to pressurize a Service Water System header which supplies the cooling water as well as process water. The common header has a minimum flow return line to Lake Juliette, such that the quantity of water pumped is larger than the quantity delivered to the units.

Design drawings of the structure are enclosed in Attachment B, as well as a water flow diagram as part of the NPDES application.

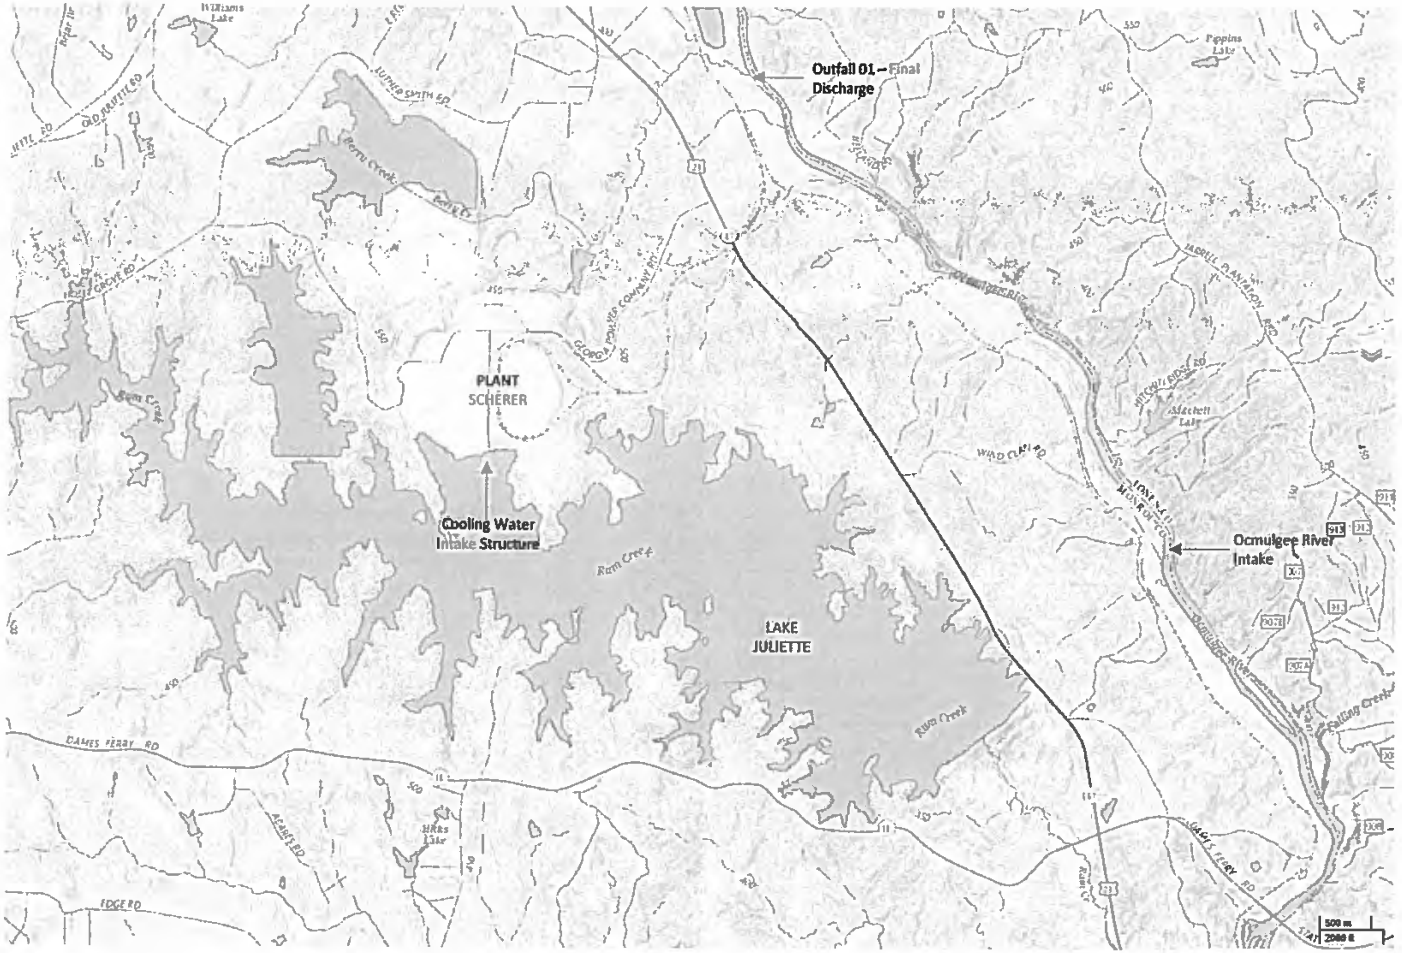
The structure is located at Latitude 33° 03' 14" and Longitude -83° 48' 22".

Cooling water system data. 40 CFR 122.21(r)(5)

The intake is in operation continuously 365 days per year to maintain pressure and supply the demand of any combination and dispatch level of the four units.

87 percent of the intake flow is to provide cooling water to the cooling system on the four units. The design circulating water flow for each unit is 386 mgd, or 1,545 mgd for all four units. The design make-up flow for all four units is 62 mgd. Therefore, the make-up flows drawn through the intake structure are 4% of the cooling system circulating water flow, demonstrating 96% reduction of flow that would be required through the intake if the system were once-through cooling. The systems are designed to operate at approximately 3 cycles of concentration. Additional Cooling Water Intake Structure information is provided in the NPDES Industrial Permit Application Addendum form.

Facility Operational Status. 40 CFR 122.21(r)(8)



Unit	Nameplate (MW)	Age (years)	Fuel	Capacity Utilization Factor %				
				2012	2013	2014	2015	2016
1	818	35	Subbituminous Coal	68	64	73	52	57
2	818	33	Subbituminous Coal	71	67	62	59	51
3	818	30	Subbituminous Coal	66	56	61	42	53
4	818	28	Subbituminous Coal	66	86	58	77	59

Over the last 15 years the only major upgrades to the system have been condenser tube replacement on Unit 3 (2017) and Unit 4 (2016).

PLANT SCHERER

Plant Scherer Effluent Limitation Guidelines Rule Applicability Timing NPDES Permit Application 2018

Background

This document details Plant Scherer's plans for addressing the revised Steam Electric Effluent Limitations Guidelines (ELGs), 80 Fed. Reg. 67,838 (Nov. 3, 2015), and the associated applicability dates for various waste streams being implemented in Plant Scherer's NPDES permit. Pursuant to the 2015 ELG rule, compliance with the new Best Available Technology (BAT) limitations in the final rule does not apply until a date determined by the Environmental Protection Division (EPD) that is "as soon as possible" beginning November 1, 2018, but that is also no later than December 31, 2023. However, on September 18, 2017, EPA modified the ELG rule by postponing certain applicability dates, 82 Fed. Reg. 43494 (Postponement Rule). The applicability dates relevant to Plant Scherer are as follows:

Fly Ash Transport Water (FATW)	November 1, 2018 through December 31, 2023
Bottom Ash Transport Water (BATW)	November 1, 2020 through December 31, 2023
FGD Wastewater (FGDW)	November 1, 2020 through December 31, 2023

Georgia Power encourages EPD to consider how best to approach implementation of the ELG rule, in light of the EPA Administrator's actions to postpone the applicability dates for BATW and FGDW. The preamble to the Postponement Rule makes it clear that it is EPA's intention to preserve the regulatory status quo and to avoid any unnecessary expenditures for compliance with limitations for BATW and FGDW, because those limitations may change as a result of further rulemaking. Given the further rulemaking being proposed; the Company requests that the Draft Permit refrain from addressing the applicability dates for BATW and FGDW, or in the alternative include language acknowledging the potential for changes and an associated permit reopener clause.

Based upon the existing rule, the phrase "as soon as possible" means November 1, 2018 for FATW, and November 1, 2020 for BATW and FGDW, unless a later applicability date is established. The "as soon as possible" date can be different for each waste stream. In order for EPD to determine the as soon as possible date within the implementation period, the ELG rule (80 Fed. Reg. at 67,883) identifies the following factors for EPD to consider:

1. Time to expeditiously plan (including to raise capital), design, procure, and install equipment to comply with the requirements of the final rule;
2. Changes being made or planned at the plant in response to greenhouse gas regulations for new or existing fossil fuel-fired power plants under the Clean Air Act, as well as regulations for the disposal of coal combustion residuals under Subtitle D of the Resource Conservation and Recovery Act;
3. For FGD wastewater requirements only, an initial commissioning period to optimize the installed equipment; and
4. Other factors as appropriate.

Section A of this document explains Georgia Power's ELG compliance evaluation. Sections B, C, and D address each of the factors identified by the ELG rule for assessing the "as soon as possible" date (as relevant). And, Section E addresses Georgia Power's proposed applicability timeframes.

A. ELG Compliance Evaluation

The ELG Rule's preamble (80 Fed. Reg. at 67,883-4) states that regardless of when a plant's NPDES permit is ready for renewal, the plant should immediately begin evaluating how it intends to comply with the requirements of the final ELGs. In cases where significant changes in operation are appropriate, the plant should discuss such changes with the permitting authority and evaluate appropriate steps and a timeline. Georgia Power has done that.

Georgia Power began evaluating how it intends to comply with the requirements of the ELG rule well before the rule's issuance in November 2015 (with effective date in January 2016). The company undergoes an ongoing comprehensive strategy development process involving many organizations within the company, including environmental, regulatory affairs, planning, fuels, engineering, finance, operations, communications, generation, and research groups. This strategy development process involves evaluating proposed and final environmental regulations to determine their impact to the generating fleet, conducting research to evaluate technology options for environmental control, developing compliance costs and schedules for capital environmental control technologies for regulatory compliance, and evaluating the impact of these costs to the company and its customers. In addition, and as explained further below, the Company has begun engineering work at Plant Scherer, which includes initial scoping of projects, design work, and in some cases commencement of construction.

Beginning in 2007, Southern Company Services began a R&D program focused on wastewater treatment technology development and demonstration. Over the last nine years, more than $20 million has been spent on R&D, including the construction of the Water Research Center (WRC) at Georgia Power's Plant Bowen. The WRC is a state-of-the-art facility focused on water reuse, recycle, conservation, and treatment. To date, over 20 projects have been completed at the WRC in key focus areas, including wastewater treatment, water conservation, and coal combustion residuals management.

B. Plant Scherer needs time to expeditiously plan (including to raise capital), design, procure, and install equipment to comply with the requirements of the final ELG rule

The magnitude and complexity of process changes and new equipment installations that will be required for Plant Scherer to comply with the ELG rule and multiple other rule requirements is significant. The company must evaluate what operational changes are expected at Plant Scherer to meet the new BAT limitations, including the types of new treatment technologies that the plant needs to install, process changes anticipated, and the timeframe estimated to plan, design, procure, install, and optimize any relevant technologies. Moreover, consideration must be taken for the coordination of planned outages across the Southern Company generating fleet needed to install

new technologies and maintain electricity generation reliability. This all needs to occur in light of the reconsideration of the ELG's and in anticipation of those future regulatory requirements.

As noted above, Georgia Power maintains a robust annual environmental strategy and planning process that includes development of environmental compliance cost estimates for proposed and final regulations. Engineering cost estimates for each technology require constant revision based upon new information, as well as the continued evaluation of site-specific factors, such as the characterization of internal waste streams and their variability due to operational and seasonal changes. Using the engineering estimates, the regulatory interpretation, and the technology options available, cost-benefit analyses must be performed for each option. This analysis compares the costs and benefits of each option and their interplay with other system operating variables such as fuel costs. The analysis also must evaluate the costs and benefits of the most optimum compliance technology option against the option of retirement and replacement of the generation. These analyses include complex simulation models to forecast operating profiles, energy costs, impacts to the Georgia Power system production costs, and other factors for every affected unit using detailed unit-specific characteristics, such as heat rates; minimum and maximum capacity; up and down time; start-up costs; SO_X, NO_X, and CO_2 rates; fuel prices; and maintenance schedules. In addition to the operational profile outputs from the simulation models, financial calculations must be performed to evaluate impacts to total revenue requirements considering all incremental capital expenditures, plant O&M costs, transmission impacts, and any other peripheral requirements or costs. Georgia Power performs these economic analyses for each unit under multiple planning scenarios to capture a broad range of uncertainty in natural gas prices and CO_2 pressures.

As described above, many factors continue to be evaluated in order to develop a conceptual design for Plant Scherer. This evaluation is wastestream specific, cannot occur in isolation, and requires a holistic assessment of all the regulatory requirements at Plant Scherer as well as across Georgia Power's generating fleet.

C. Changes being made or planned at Plant Scherer in response to greenhouse gas regulations for new or existing fossil fuel-fired power plants under the Clean Air Act, as well as regulations for the disposal of coal combustion residuals under Subtitle D of the Resource Conservation and Recovery Act

It is clear that Plant Scherer is in the midst of an unprecedented period of uncertainty with respect to environmental regulations, such as the Clean Power Plan (CPP), federal Coal Combustions Residuals rule (CCR rule), the Section 316(b) Cooling Water Intake Structure rule (§ 316(b)), and other regulatory obligations. EPA finalized existing source greenhouse gas (GHG) emission guidelines, known as the Clean Power Plan (CPP), on October 23, 2015.

On February 9, 2016, the U.S. Supreme Court granted a stay of the CPP for the duration of the litigation. As a result of the stay, Georgia EPD, like many other states, suspended its work on the CPP for the duration of the litigation.

On March 28, 2017, President Trump signed the Energy Independence Executive Order, which directs agencies to review existing regulations that potentially burden the development of domestic

energy resources and suspend, revise, or rescind them, as appropriate. The Executive Order specifically directs EPA to review and take appropriate action on the CPP. On the same day, the U.S. Department of Justice, on behalf of EPA, filed a motion with the D.C. Circuit Court of Appeals to hold the CPP case in abeyance while EPA reviews the rule, as directed by the Executive Order.

On October 16, 2017, EPA proposed to repeal the CPP. In this proposal, EPA also notes it has not determined if it will issue a replacement rule or what form it will take. EPA stated it would issue an advanced notice of proposed rulemaking (ANPR) to solicit comments on the scope of a potential replacement rule and on December 28, EPA published the ANPR requesting ideas from the public on what a replacement rule for the CPP would look like. After EPA receives public comment on the ANPR, a possible next step would be EPA issuing a proposed replacement rule.

In light of these activities, the future of the CPP, or a replacement rule, and what it may require of existing power plants, is unknown at this time.

On April 17, 2015, EPA released publicly its final rule to regulate CCRs under Subtitle D of RCRA for nonhazardous waste. The rule became effective on October 19, 2015 and applies to: (i) new and existing CCR landfills and surface impoundments, including any lateral expansions of such units that dispose or otherwise manage CCRs generated by electric utilities and independent power producers (IPPs); and (ii) inactive surface impoundments, located at an active electric utility or IPP, regardless of fuel currently used (i.e., natural gas, coal, or oil) at the facility to produce electricity. The final rule does not apply to: (i) CCR landfills that have ceased receiving CCR prior to October 19, 2015; (ii) CCR landfills and surface impoundments at electric utilities and IPPs that have ceased producing electricity prior to October 19, 2015; (iii) municipal solid waste landfills that receive CCR; and (iv) beneficial use of CCR. The CCR rule was "self-implementing," with enforcement from RCRA citizen suits.

The Georgia Board of Natural Resources adopted a final "Coal Combustion Residuals" rule on October 26, 2016. Georgia's final CCR rule establishes a new permitting program for all CCR units at electric utilities in the State. The rule took effect on November 22, 2016. On December 16, 2016, President Obama signed the Water Infrastructure Investment for the Nation Act (WIIN) (S. 612). The Act gives EPA enforcement authority for the federal CCR rule and authority to approve state permitting programs for CCR units. The Act also gives EPA authority to implement a federal permitting program in non-participating states. EPA's process for reviewing and approving state CCR permit submissions will be subject to a public notice and comment period. However, it is unclear if EPA will go through rulemaking to establish this process. The WIIN Act takes the federal CCR rule from a self-implementing rule to a permit-based rule.

The CPP, CCR Rule, § 316(b) rule, and other rules may require capital retrofit decisions that could result in unneccesary expenditures, stranded assets and/or permanent or temporary closures of facilities prior to the end of their useful life. Plant Scherer needs significant additional time to gain more certainty regarding these rules to determine the most appropriate compliance option to ensure that safe, reliable, and affordable electricity is provided to our customers.

The factors provided for in the 2015 rule have been bolstered by the recently promulgated ELG Postponement Rule. As mentioned previously, on September 18, 2017, EPA issued a final rule

postponing the near-term applicability dates for FGDW and BATW from November 1, 2018, to November 1, 2020. 82 Fed. Reg. 43,494. EPA's stated purpose for the Postponement Rule is to authorize permit writers to select applicability dates that will avoid any expenditures to comply with the 2015 ELGs for FGD wastewater and BATW until EPA completes further rulemaking for those waste-streams. As such, achieving the central purpose of the Postponement Rule means that EPD must use the November 1, 2020 deadline (the date by which EPA intends to complete the rulemaking) as the starting point, not the endpoint, for compliance expenditures. The preamble accompanying the Postponement Rule indicates that EPA will conduct further rulemaking to revise the applicability dates if it has not completed its reconsideration of the FGDW and BATW limits by November 1, 2020.

D. Other Factors and Waste-Stream Specific Considerations

(i) Bottom Ash Handling

Significant factors influence the implementation schedule of dry bottom ash retrofits at Plant Scherer. These retrofits are site-specific, with little opportunity for modularization or standardized designs to accelerate the schedule. Furthermore, engineering and construction labor resources will likely be strained, due to the number of similar projects being undertaken in the Southern Company fleet and nationwide. Plant Scherer has already completed the technology selection and design process for bottom ash conversions. Plant Scherer is installing Magaldi systems which are completely dry bottom ash handling systems. These systems are scheduled for completion in 2019.

(ii) Fly Ash Handling

Dry fly ash handling infrastructure is already in place at Plant Scherer, however additional testing and minor infrastructure improvements are required to ensure reliable operations. The system will undergo additional testing prior to the earliest implementation date of the ELG rule. Compliance with the updated ELG's is anticipated at the beginning of the applicability timeframe.

(iii) Flue Gas Desulfurization Wastewater (FGDW)

As mentioned previously, Southern Company and its partners, the Electric Power Research Institute (EPRI), Southern Research Institute (SRI) and 14 other companies, created a state-of-the-art Water Research Center (WRC) that focuses on finding new ways to reduce, conserve and improve the quality of water returned to the environment from power plants.

One major area of WRC focus has been evaluating EPA's chosen BAT for FGDW, which is physical chemical treatment followed by GE's ABMet technology. In addition, several other technologies have been under evaluation at the WRC to treat and discharge FGDW to ELG limits. These include technologies from Frontier Water Systems, Inotec, Evoqua, Liberty Hydro, and an in-house Biofilm technology. To date,

no technology, including the EPA's BAT has consistently or reliably met the final ELG limits. Testing has shown an approximate 75 to 80% compliance rate at the WRC with the two most promising technologies. It should be noted that those compliance rates were: 1) based upon pilot scale tests; 2) do not accurately reflect the FGDW treatability characteristics that may be encountered in the future; and 3) were not performed for Plant Scherer's FGDW. Southern Company has also been exploring technologies to eliminate the discharge of FGDW. Traditional thermal Zero Liquid Discharge (ZLD) technologies such as falling film evaporators have proven to be unreliable around the industry; therefore, novel concepts and technologies are being developed and demonstrated. These technologies are not commercially demonstrated on a utility scale at this time and need further development and demonstration.

Due to the immature nature of the available effective compliance options, grid reliability could be significantly impacted. FGD wastewater technology limits based on biological treatment or ZLD are not consistently achievable and, if prematurely implemented in NPDES permits, could cause numerous compliance issues and forced plant outages. In addition, tie-in outages during installation will need to be staggered and coordinated with those required for other projects in order to maintain the reliability of the plant and the grid.

A single FGDW treatment system with physical, chemical, and biological treatment will take, on average, four years to complete detailed design engineering, procurement of equipment and materials, and construction. Southern Company will likely need to install eight treatment systems for 27 units that have FGDs. The detailed engineering of these systems is unique and based upon site-specific factors. Therefore, the use of standardized designs and modular construction techniques may not be practical given the unique nature of each design. This lack of leverage will require dedicated engineering teams working on parallel timelines. The availability of engineering resources, as well as construction labor, will be stretched with the abundance of projects across the industry. Procurement of equipment and material lead times will increase as market demand outpaces vendor supply. The market pressures will be exacerbated by the fact that there are very limited process suppliers available whose biological systems come close to meeting all proposed FGDW limits.

EPA's record demonstrates that plants installing the FGDW treatment BAT spent several months optimizing its operation (initial commissioning period). To assure the plant can reliably and consistently meet the new FGD limitation in all seasons, it will need time between equipment startup and the compliance date to optimize system performance. Variability across operations and waste stream characteristics impacts treatability; therefore, a minimum optimization period of 12 months is anticipated.

Again, FGDW considerations listed above should be coupled with EPA's postponement of the compliance dates and the potential future rulemaking for this wastestream. These factors all combine and justify Plant Scherer's proposed FGDW applicability date of late 2023.

E. Georgia Power's Proposed Applicability Timeframes

Georgia Power and Plant Scherer have consistently complied with all environmental regulations, and Plant Scherer's compliance with the 2015 revision to the Effluent Limitation Guidelines is no exception. With that said, and as detailed above, the regulation specifically considers the planning, design, engineering and operational constraints with regard to implementation timing. Georgia Power has spent significant time and resources on assessing the compliance options with the revised ELG's at Plant Scherer and all of the generating plants, and this effort will continue. These efforts will also occur in conjunction with EPA's ELG reconsideration process, ELG Postponement Rule, and potential future ELG rulemaking.

At this time, Georgia Power is able to commit to the following ELG applicability dates at Plant Scherer:

Fly Ash Transport Water per § 40 CFR 423.13(h)	January 1, 2019
Bottom Ash Transport Water per § 40 CFR 423.13(k)	November 1, 2020
Flue Gas Desulfurization Wastewater § 40 CFR 423.13(g).	December 31, 2023

Re: Plant Scherer Condenser Tube and Cooling Tower Packing Replacement Projects

Dear Co-Owners:

I am writing to follow up on discussions on the condenser tube and cooling tower packing replacement projects at Plant Scherer. As both operator of Plant Scherer and as an owner of several units at Plant Scherer, Georgia Power Company ("Georgia Power") operates Plant Scherer in accordance with all applicable regulations and prudent utility practice. Completing appropriate condenser tube and cooling tower packing replacement projects at each of Plant Scherer's units during each unit's currently planned outage in 2018 and 2019 will position Plant Scherer for the continued environmental compliance of Plant Scherer and is a key part of long-term equipment maintenance activities for Plant Scherer.

Each unit at Plant Scherer has undergone or will undergo condenser tube and cooling tower packing replacement projects over the next two years during its scheduled outage. All projects should be completed by the end of 2019. At Plant Scherer and at its other plants, Georgia Power takes its environmental compliance record seriously, and Georgia Power believes the condenser tube and cooling tower packaging replacement projects are vital to long-term continued generating efficiency and regulatory compliance at Plant Scherer.

If you have any questions, please contact me at 404-506-7777.

Sincerely,

Mark S. Berry

DEVELOPMENT REVIEW COMMITTEE ORDER DR-17-04

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET: 20180007-EI EXHIBIT: 9
PARTY: FLORIDA POWER & LIGHT COMPANY (FPL)(DIRECT)
DESCRIPTION: Michael W. Sole MWS-8

Property Owner: Florida Power and Light Company

Agent: Gunster, Yoakley & Steward, P.A.

In the above numbered Order, the Development Review Committee took the following action on **February 16, 2017**:

Approved Project 2016082903, a **Preliminary and Final Development Plan, a Floodplain Development Permit, Issuance of a Final Certificate of Level of Service Compliance and Waiver from Section and half-section line setbacks** for **Florida Power and Light - Project Horizon** the construction of a 74.5 MW photovoltaic solar facility on approximately 489.01 acres of project area east of County Road 219A and north of County Road 1474, **as per staff recommendation with conditions as follow:**

1. FP&L shall maintain a performance bond, as outlined and approved by the BoCC on 2/14, until the extinguishment or subordination of all existing mortgages or liens. A failure to fulfill this requirement constitutes a violation of this development order and may, at the election of the County, result in termination of the final development order.

2. The clearing and grading or construction permit shall not be issued until the following items have been addressed:
   a. Demonstrate that protective fencing and/or erosion/sedimentation barriers have been installed adjacent to the CMA.
   b. Provide a copy of the recorded Conservation Easement to EPD.

3. The applicant has indicated that FPL intends to utilize the wells during construction and appropriately cap them following construction. Prior to final release of site, provide EPD documentation that the wells have been properly plugged and abandoned in the form of completed well registration forms (406.66, 406.67, ULDC) and copies of well completion reports.
4. Landscape Irrigation Design and Maintenance Standards, Article II of Part II, Title 7, Chapter 79 of the Alachua County Code went into effect 4/1/16. All new irrigation systems installed in unincorporated Alachua County now require County approval **prior to installation**, which includes a review fee and site plan. All systems will then go through an inspection process. The Alachua County Irrigation Professional Portal has been created to allow irrigation professionals to submit required documents and pay fees entirely online. For those who are not online, required information may be submitted on paper in person at the EPD office at 408 West University Ave in

Gainesville, 8:30-5:00 Monday through Friday. For more information about the Landscape Irrigation Efficiency Code and for a list of helpful resources, we encourage you to click HERE. For more information, contact Water Resources staff at 352-264-6800 or at Irrigation@AlachuaCounty.us.

5. The applicant shall obtain all required state and federal permits prior to commencement of the development. Upon issuance of a required state or federal permit, the applicant shall furnish a copy of such permit to the applicable County department.

6. FPL will conduct avian mortality monitoring and reporting at the existing FPL Desoto solar PV facility, utilizing a study design developed in coordination with the Florida Fish and Wildlife Conservation Commission and consistent with the methodology described in USGS Open File Report 2016-1087, Mortality Monitoring Design for Utility-Scale Solar Power Facilities. The monitoring protocol shall be in place and monitoring shall begin during 2017 and results will be provided to Alachua County. If FPL does not initiate the study at Desoto by the end of 2017, FPL shall conduct the study in Alachua County at the Horizon site, commencing no later than January 1, 2018.

7. The applicant shall be required to maintain CR 219A from US 301 to SR 26 and CR 1474 from US 301 to the Putnam County Line during construction. The applicant shall notify the Public Works Department a minimum of five business days prior to the commencement of construction so that the Department can evaluate the condition of the roadway. The limits of maintenance may be amended if the County is provided with a specific haul route for delivery of materials necessary for construction. Prior to the final release of the site, the applicant shall restore this roadway to pre-existing conditions as determined by the Public Works Department.

In reaching this decision and order, the Development Review Committee has considered all matters presented to it including the written reports by departments of the County which are filed in the official file in the Growth Management Department and information presented at the hearing and has found the proposed application to be consistent with the Alachua County Comprehensive Plan and Unified Land Development Code.

Signed this 16th day of February 2017

Protocol for monitoring avian mortality at solar energy facilities in Florida

Summary

Utility-scale solar energy is projected to greatly increase in the United States and the state of Florida. Despite the benefits of solar energy, there is the potential for negative impact on avian communities. Birds have been documented colliding with panels, which may lead to direct mortality or leave individuals stunned and vulnerable to predators (Kagan et al. 2014). Waterbirds in particular can confuse the reflection of polarized light off of photovoltaic cells (PV) for water (Horváth et al. 2010, Smith and Dwyer 2016) which can lead to injury through direct impact or stranding for those species that require water to take off (e.g. grebes). However, as large solar arrays are fairly new to the landscape, few studies have performed systematic monitoring that allows for rigorous quantification of avian mortality (WEST 2014, H.T. Harvey and Associates 2015), and little supporting data exists in the peer-reviewed literature (McCrary et al. 1986, Walston et al. 2016). Furthermore, studies resulting in publicly available documents have historically focused on high production-capacity facilities in arid areas in the southwestern United States (WEST 2014, Walston et al. 2015a; H.T. Harvey and Associates 2015). Given these potential impacts and the geographic focus of existing studies, monitoring for avian mortality at solar energy facilities in Florida is recommended.

In order to facilitate assessment of avian mortality at solar energy facilities in Florida, this document outlines necessary considerations for a monitoring protocol and follows with more specific recommendations for the DeSoto Next Generation Energy Center, a photovoltaic solar facility in DeSoto County. Recommendations focus on photovoltaic (PV) arrays and not on other sources of solar energy production (i.e. concentrated solar power). Monitoring for avian mortality at PV facilities in Florida is expected to be difficult because (a) carcass detection may be hindered by dense vegetation, (b) carcasses may not persist in the environment for long due to numerous and diverse scavengers, and (c) mortality rates associated with PV panels may be low. Combined, these factors reduce the overall carcass detection probability. One efficient way to increase carcass detection and reduce the uncertainty around the fatality estimate is by increasing searcher efficiency. Searcher efficiency can be increased by using detection dogs, which will also help reduce other aspects of survey effort. A web-based application was developed to determine the minimal survey frequency (how often the facility is searched) and the extent of the sampling fraction (proportion of the facility searched) for obtaining sufficiently precise estimates (https://hermes475.shinyapps.io/newplotconditional/). This application simulates scenarios under different monitoring conditions and displays the level of precision of the mortality estimate associated with those scenarios. To make these simulations realistic, they have to be informed by estimates of searcher efficiency and carcass persistence that are based on experimental trials performed on-site. Monitoring is recommended during each of the four annual seasons to account for the diversity and abundance of birds throughout the year in Florida. The suggested approach, combined with the provided simulation tool, will help determine the minimal effort necessary to obtain avian mortality estimates at the desired level of precision.

Background

Utility-scale solar energy is projected to greatly increase in the United States and the state of Florida. There are substantial benefits to solar energy, such as reduced toxic and carbon emissions compared to non-renewable sources of energy, but despite these benefits there is the potential for negative impact on a variety of bird species. Given these potential impacts, monitoring for avian mortality at solar energy facilities is recommended. Because development of utility-scale (several megawatt capacity) solar arrays are relatively new, few studies have performed systematic monitoring that allows for rigorous quantification of avian mortality (WEST 2014), and little supporting data exists in the peer-reviewed literature (McCrary et al. 1986, Walston et al. 2016).

There are two main types of utility-scale solar energy installations: concentrating solar power (CSP) which use reflectors to concentrate solar energy to heat a receiver, and photovoltaics (PV) which use cells to convert sunlight directly into electric current (Walston et al. 2016). Avian mortality has been reported at both types of facilities (reviewed in Walston et al. 2015a). Bird mortality at CSP facilities can occur due to burning or singeing when birds are exposed to the solar-flux (i.e. concentrated sunlight; Kagan et al. 2014). Collision trauma can occur when birds can collide with reflective surfaces (PV panel or reflector) which may lead to direct mortality or leave individuals stunned and vulnerable to predators (Kagan et al. 2014). Water birds may be particularly at risk where photovoltaic cells (PV) reflect polarized light and give the impression of water (Hováth et al. 2010, Smith and Dwyer 2016). If such a "lake effect" occurs (Kagan et al. 2014), mortality could be a consequence of impact with the panels when birds descend to land or birds could become stranded since some species require water for take-off, leaving them vulnerable to starvation or predation (Kagan et al. 2014). Evidence of a lake effect as a source of mortality is scarce. For example, only three water bird carcasses were found (a low proportion of the total) at the approximately 1,586-acre, 250MW California Valley Solar Ranch, a PV solar energy facility (H.T. Harvey and Associates 2015). But given the lack of habitat for these species and their very low abundances around this arid site, H.T. Harvey and Associates (2015) concluded these birds likely died due to collision and by confusing the arrays with a body of water. Ultimately, occurrence of bird mortalities may depend on bird population abundances and the land-type context around the facility, but evidence for avian mortality at any type of solar facility is not always collected in a systematic and rigorous way which makes quantification and comparisons across facilities difficult (Walston et al. 2015a).

The purpose of this protocol

Studies have described the potential negative effects of solar energy on birds and bird communities as both direct (e.g. fatality due to collision) or indirect (e.g. impact on habitat conditions; Lovich and Ennen 2011, Hernandez et al. 2014, Walston et al 2015a, 2016). This approach focuses on the direct impacts of utility-scale solar energy because other considerations (e.g. siting) are made at earlier stages by the landowners, usually when performing an Environmental Assessment, a pre-construction survey as part of a Bird and Bat Conservation Strategy (BBCS; e.g. WEST 2014) or similar analyses. In contrast, post-construction mortality monitoring is equivalent to the tier 4 monitoring of the Land-based Wind Energy Guidelines established by the USFWS (2012). That is, the concern is not with site evaluation and characterization, pre-construction monitoring, or mitigation decisions. Instead this protocol is intended to serve as a general guideline to solar energy developers on how to monitor for avian

mortality in a systematic and rigorous way that allows for representative mortality estimates to be obtained and ultimately for cross-facility comparisons. These guidelines are focused on the impact of the solar array (the PV solar panels) on birds and do not consider the effect of other infrastructure (transmission lines, perimeter fences, buildings, inverters, etc.) since guidelines already exist for those (e.g. the Avian Power Line Interaction Committee's Reducing Avian Collision with Power Lines [2012]). The focus here is on PV technology and not on other types of solar energy because PV is the main technology projected to expand in the state of Florida in the near future.

A bibliography of peer-reviewed and gray literature papers , including technical reports from the private sector and government agencies is included as Appendix A (based on literature available as of May 2017). This bibliography collects evidence of avian mortality associated with utility-scale solar energy and papers that discuss methods for estimating mortality. Many of the methods used for estimating mortality come from other sectors, mainly wind energy where the impact on birds and bats has been studied extensively, and have been used to differing degrees in the solar energy sector. This methodological focus of the bibliography complements the bibliography by Walston et al. (2015b).

Evidence of avian mortality at PV facilities

Avian mortality at utility-scale PV facilities has been recorded for a variety of bird taxa, including ducks, wading birds, shorebirds, and songbirds, among others (WEST 2014, Walston et al. 2015a). Most records come from technical reports of consulting companies monitoring at facilities with high production-capacity (e.g. 250 - 550MW at California Valley Solar Ranch, Desert Sunlight, and Topaz Solar Farm), which have been summarized elsewhere (WEST 2014, Walston et al. 2015a; see also H.T. Harvey and Associates 2015). However, our understanding of how birds and PV arrays interact is limited because few of these studies have performed systematic mortality monitoring while accounting for carcass detection biases. Furthermore, comparisons across sites are challenging because some facilities have not yet published results and/or facilities differ in methodological approaches (such as survey design and length of monitoring periods). Additionally, these studies are limited in geographic scope as most of the publicly available documents come from facilities in arid areas in southwestern United States (California and Nevada).

One of the most rigorous avian mortality monitoring efforts available to date suggests that mortality can be substantial at PV facilities. Researchers at the 250MW California Valley Solar Ranch estimated that >500 avian mortality events occurred in a single year, even after controlling for background mortality rates determined from study of nearby conservation areas (H.T. Harvey and Associates 2015). Their results are summarized in more detail in table 1. Fatality estimates were greater for small than for large birds, and for winter compared to fall estimates. These results, and those from others (Kagan et al. 2014, WEST 2014), indicate that mortality due to collision can occur at solar energy facilities –albeit, it is likely lower than that associated with other energy sources, including wind (WEST 2014). Additionally, collision risk may differ across facilities, birds of different size classes, and seasons.

Table 1. Mortality estimates at California Valley Solar Ranch based on a one year monitoring period between November 2013 and November 2014 (data from H.T. Harvey and Associates 2015).

Annual mortality based on a	Number of	Estimated	90% Confidence

one year monitoring period	carcasses used in mortality estimate	mortality	Interval
Mortality for *known* causes throughout the facility[1]	40	126	106 – 155
Mortality for *unknown*[2] causes throughout facility	186	2598	2116 – 3334
Mortality for *unknown*[2] causes within the arrays	150	2314	1890 – 2965
Mortality for *unknown*[2] causes for each tracker (a total 1032 solar panel tracking units/plots)	NA	2.24	1.83 – 2.87
Mortality across control plots (30 plots similar in size to a solar tracking unit)	14	52	31 – 81
Estimated mortality per control plot	NA	1.72	1.05 – 2.68
Mean background-adjusted per-tracker fatality rate for *unknown*[2] cause	NA	0.51	-0.83 – 1.81
Mean background-adjusted mortality within the array for *unknown*[2] cause	NA	526	----

[1] Including incidental finds, bird mortality associated with infrastructure other than the solar panels, and control plots that were used to monitor background avian mortality.
[2] Determining the cause of mortality is often difficult. In this study the cause of mortality of the majority (80.9%) of birds could not be identified. Necropsies were not performed and are generally necessary to identify if a bird died from collision trauma.

Avian mortality at solar energy facilities varies in magnitude and species composition across facilities (as evidenced in a comparison of three facilities by WEST [2014]). Differences may in part depend on local habitat features, such as the presence of ponds or wetlands, and bird abundances around the facility. These factors may interact with processes occurring at a larger geographic scale, such as winter or short-distance migration. For example, higher proportion of migrant mortality were reported for the spring than during other times of the year at Ivanpah Solar Electric Generating System in California, a CSP solar energy plant (Walston et al. 2015a). Thus, each solar energy facility is unique in its conditions and may require independent monitoring.

Several factors make solar development in Florida different from that in southwestern United States, and these need to be considered when developing avian mortality monitoring approaches. Most sites planned for Florida in the near future have smaller production capacity, generally ≤75MW (compare to the 250MW at California Valley Solar Ranch, used in the example above). Smaller facilities tend to have smaller footprints and may have lower overall avian mortality rates. Bird species composition, diversity, and density likely differs between Florida and the arid southwestern U.S., which could also affect risk of mortality. For example, Florida may have higher abundance of wading or water-associated birds which could increase mortality if there is a "lake effect" with solar arrays (Kagan et al. 2014). On the other hand, bodies of water are less limiting in Florida than they are in arid regions, potentially making solar arrays less alluring to birds in this state. Similar to California/Nevada, Florida has high solar

radiation but with much higher precipitation and humidity. The conditions in Florida favor fast and dense vegetation growth which may be associated with higher bird abundances around the facility and which can make carcass detection around the panels difficult. Additionally, denser vegetation around the panels could offer more nesting opportunities for birds. Whether these nesting sites could offer benefits or disadvantages to birds remains unclear.

Quantifying avian mortality at energy facilities is an imperfect process because of our inability to continuously monitor throughout space and time. Several factors make this detection process imperfect, and these factors should be understood in order to adequately estimate mortality. This document contains two sections: (1) a general description of these factors and important considerations to establish a post-construction monitoring protocol to estimate avian mortality at solar energy facilities in the state of Florida. (2) An example of how this protocol could be implemented at the DeSoto Next Generation Energy Center, in Arcadia, FL.

1. Considerations for estimating avian mortality at solar energy facilities

Post-construction monitoring guidelines for avian mortality at solar energy facilities build on those developed for the wind energy sector (e.g. Land-based Wind Energy Guidelines established by the USFWS 2012, Kunz et al. 2007a), and preliminary guidelines exist from the USGS and USFWS (Huso et al. 2016a). Current efforts exist to develop standardized protocols to monitor avian mortality at solar energy facilities, such as those by The Multiagency Avian-Solar Working Group (2016), the U.S. Fish and Wildlife Service (USFWS), and the U.S. Geological Survey (USGS). These efforts may lead to new guidelines to be implemented in the state of Florida. Meanwhile, this document and the accompanying simulation application (https://hermes475.shinyapps.io/newplotconditional/) will serve as an initial step towards developing rigorous post-construction monitoring protocols to estimate avian mortality as utility-scale PV solar energy facilities.

Factors affecting the overall detection probability

Several factors make bird carcass detection an imperfect process and decrease detection probability. Additionally, logistical and budgetary constraints may limit the ability to comprehensively monitor a facility across space and time. These are the factors that must be considered when quantifying avian mortality:

- ***Searcher efficiency*** – proportion of carcasses found by the searcher out of all carcasses in the search area. The ability to find carcasses can be affected by carcass size, vegetation cover, location relative to the panel, weather, etc. (Huso 2010).
- ***Carcass persistence*** – average number of days a carcass persists before it decays or it is removed by a scavenger. Also expressed as the probability a carcass persists to the following day. Similar to searcher efficiency, carcass persistence can be affected by factors such as carcass size, vegetation cover, and weather.
- ***Sampling fraction*** – Technically, the proportion of dead birds that fall into the searched area. However, given that carcass distribution is assumed to be homogeneous, operationally sampling fraction is the proportion of the facility or area covered during the survey.
- ***Duration*** – period of time over which surveys take place (e.g. throughout the year, eight weeks each season, etc.). Even though duration only reflects length of time, if surveys are not year-round, timing within a year is important to consider. Not only bird mortality probability can vary with season but also carcass detection can change, for example, with seasonal vegetation changes.
- ***Survey Frequency*** – time interval between each survey. That is, number of days between sampling sessions which occur within the *duration* period (e.g. every four days.)
- ***Mortality*** (or ***count***) – number of carcasses found in the search area.

In addition to the factors that influence carcass detection, it is important to determine the *desired level of precision* of the mortality estimate because the desired precision will have a major influence on the monitoring strategy. The level of precision to achieve a general understanding of the order of magnitude of facility-caused avian mortality is usually far less than the level needed for testing hypotheses (Huso et al. 2016a). Researchers often use a coefficient of variation (i.e., the ratio of the standard deviation to the mean estimate) to gauge the precision of mortality monitoring because it is independent of the magnitude of the measured effect. In general, the necessary precision to broadly understand what the total number of bird fatalities is

may result in a coefficient of variation of 20-30% (Strickland et al. 2011). If the focus of the study is specific (e.g. state or federally listed) species, and/or the anticipated magnitude of the impacts is low (i.e. very low mortality rates) an increased level of precision may be required. An increased level of precision can be achieved by increasing search effort or increasing the overall detection probability (USFWS 2012, Huso et al. 2016a).

Searcher efficiency and ***carcass persistence***

Both *searcher efficiency* and *carcass persistence* need to be empirically measured by following existing protocols (as described in Huso et al. 2016a; Smallwood 2007, 2010, 2013, and those described in WEST 2016, H.T. Harvey and Associates 2015). These trials require deliberately placing carcasses in the search area and measuring 1) the searcher's ability to find them and 2) the persistence of undisturbed carcasses on the ground over time. *Searcher efficiency* and *carcass persistence* trials need to be performed at each facility where mortality wants to be estimated. Independent trials need to be performed because many conditions vary across sites, including: differences in vegetation (both within and around the facility), differences in the community of carcass scavengers, differences in the types of perimeter fences, use of different searchers (customarily each searcher undergoes his/her own searcher efficiency trials), among others. Additionally, trials should be performed each season the carcass surveys will be performed. This is standard because conditions vary across seasons (e.g. vegetation changes influence searcher efficiency, and scavenging rates can fluctuate seasonally), affecting *searcher efficiency* and *carcass persistence* (e.g. Osborn et al. 2000, Smallwood et al. 2010, Villegas-Patraca et al. 2012, Hull and Cawthen, 2013, Reyes et al. 2016).

Searcher efficiency and *carcass persistence* trials should include bird carcasses of different sizes, generally small, medium, and large. At least small and large birds should be used (for example, representative of a songbird and an egret) as these size differences will markedly affect both *searcher efficiency* and *carcass persistence* estimates (Osborn et al. 2000, Arnett et al. 2010, Smallwood 2007, 2013). Commonly, *searcher efficiency* and *carcass persistence* of small birds tends to be much lower than for large birds. Yet, small birds are important to consider given that they can represent a large portion of bird mortality at PV facilities. A review of three PV solar facilities in western United States found that close to 50% of bird carcasses found across these sites were from songbirds (Passeriformes; WEST 2014). Ideally, carcasses of local birds should be used or, in the case of using surrogates, care should be taken to avoid using unusually conspicuous species (Smallwood 2007, WEST 2016). Other considerations, such as the use of fresh carcasses (Smallwood 2013), minimizing carcass manipulation and using latex gloves, avoidance of predator swamping (Smallwood 2007), carcass location relative to the panel unit (Visser 2016), etc. are described thoroughly in Bird and Bat Conservation Strategies and reports such as WEST (2016), H.T. Harvey and Associates (2015), and Huso et al. 2016a.

In some cases, no actual carcass is found, but scavengers may leave behind feathers indicating a bird was caught or consumed and these "feather spots" should be counted as carcasses. A feather spot is usually defined as a set of feathers above a certain threshold; for example, ≥10 feathers within one square meter (Erickson et al. 2004, Smallwood 2007, Reyes et al. 2016; see recommendations by the California Energy Commission and California Department of Fish and Game 2007) or at least five tail feathers, or two or more primary flight feathers within five m or less of each other (H.T. Harvey and Associates 2015, WEST 2016). Detection of feathers with significant amounts of skin, flesh, or bone attached are generally not categorized as feather spots but as partial carcasses (H.T. Harvey and Associates 2015). Reyes et al. (2016)

suggest inclusion of feather spots as a category (its own carcass size class) for trials as these tend to be harder to detect as corroborated during searcher efficiency trials. For example, only one feather spot in 43 were detected in trials by Stevens et al. (2011). When used, detection dogs should be trained to detect feather spots as well as carcasses (Reyes et al. 2016).

Carcass persistence is generally outside the control of researchers because it depends on the scavenger community and carcass decomposition rates. The appropriate perimeter fencing could potentially reduce the number of scavengers, but may be ineffective against coyotes if they can dig and crawl under a fence, against smaller meso-predators (such as raccoons and opossums) that can easily climb fences, or against birds and invertebrates. Given the diversity of small and medium sized mammals, birds, and invertebrates (e.g. fire ants), carcass persistence may be relatively low in subtropical Florida compared to more northern latitudes where most of these trials have been performed (mostly for the wind energy sector; e.g. Crawford and Engstrom 2001, Villegas-Patraca et al. 2012). If measures are taken to mitigate carcass removal by scavengers, such as improvement of fences or crow control/deterrence measures, these should be put in place prior to a monitoring season and continued throughout monitoring to avoid dramatic changes in carcass persistence during the monitoring season.

Unlike *carcass persistence*, *searcher efficiency* can generally be influenced by researchers. There are primarily two approaches to increase *searcher efficiency*: frequent mowing of vegetation to maximize line of sight to carcasses, and the use of detection dogs. Determining which approach is best will depend on a variety of factors, not the least of which is the relative cost of the two approaches. Mowing is likely more expensive and might also bias results, as an increased mowing frequency relative to what is customary at a facility would result in mortality monitoring under atypical conditions (i.e., artificially low vegetation that may or may not attracts or deters birds and/or influence mortality rates; Korner-Nievergelt et al. 2011). Additionally, if there are any birds nesting in these grasses, an increase in mowing frequency may impact their reproductive success.

An alternative approach is the use of detection dogs to find carcasses. Dogs have been shown to greatly increase searcher efficiency, particularly in areas of dense vegetation. For example, during trials, dogs found 73% of all bat carcasses whereas humans found 20% (Mathews et al. 2013). Similar results were found when searching for birds (Arnett 2006, Homan et al. 2001, Paula et al. 2011, Boroski et al. 2016, Reyes et al. 2016). Dogs could search the facility under the conditions of a regular mowing schedule provided that *searcher efficiencies* are also measured under those varying conditions. Additionally, solar panels obscure ground visibility under one side of the panel (true for both fixed position and tracking systems panels during monitoring hours) and dog searches based on olfaction may help mitigate this problem (WEST 2016). Dogs may be particularly effective in humid environments, like Florida, compared to dry environments such as those in the southwestern U.S. where dry air presented problems (Reyes et al. 2016). In all cases, environmental conditions during carcass searches should be taken into account and later used as covariates in search efficiency estimates, since factors such as wind variability or moisture may negatively affect carcass detection ability by dogs (Shivik 2002). Additionally, wind direction should be taken into account during searches with dogs and ideally searches will be performed while moving upwind to increase chance of detection (Mathews et al. 2013). Dog training techniques, including types and number of carcasses used, and details on how to perform search efficiency trials, should follow thorough studies such as Reyes et al. (2016).

Using dogs may require running survey transects along the length of the panel rows instead of using distance sampling and walking perpendicular to panel rows (Huso et al. 2016a). Walking along panel rows may be more effective because running transects perpendicular to the panel rows with tall vegetation would require truncation of the transect width due to rapid decrease of detectability with distance (effectively reducing the *sampling fraction*). Whichever approach is taken, walking along or perpendicular to panel rows, the same approach should be used during *searcher efficiency* trials and during mortality surveys. However, the simulations performed here do not use distance sampling to inform the estimates and assume a thorough survey approach will be taken (i.e. walking along panel rows). Ultimately, increasing *searcher efficiency* is recommended as it will allow reduction of the *sampling fraction* and increase precision of the estimate.

Whether the mowing schedule becomes more regular or detection dogs are used, vegetation is assumed to be relatively homogeneous across the *sampling fraction* and closely matching the vegetation during the *searcher efficiency* trials. Another way that vegetation around the panel has been controlled is by using sheep. If sheep are used, vegetation is likely to be more variable and therefore it may be particularly important to observe that vegetation during the *searcher efficiency* and *carcass persistence* trials is representative of the vegetation during facility monitoring. To do so, trials and monitoring will likely need to occur concurrently in order to achieve a robust mortality estimate.

Researchers have three options for temporally matching searcher efficiency and carcass persistence trials with mortality monitoring. First, trials could start and end prior to monitoring for mortality in the facility. This approach is not recommended as it may not appropriately characterize conditions while monitoring is taking place. Second, trials could start simultaneously with and occur concurrently with facility monitoring. This approach may help minimize cost and logistical burden but it requires a thorough and more conservative monitoring protocol at first, until trial parameters are estimated and monitoring is adjusted accordingly. The resulting estimates obtained using this approach will be more representative of the season (e.g. as vegetation cover increases or searcher skills improve) and avoid scavenger satiation (setting out too many carcasses at once may overwhelm scavengers and misrepresent scavenging rates). The third option is recommended where trials could start prior to mortality monitoring in order to obtain values that will inform the study design and staff needed, and continue concurrently with facility monitoring. Once regular mortality monitoring begins (while *searcher efficiency* and *carcass persistence* trials continue), study design may be adjusted to obtain the desired level of precision. Of course, to avoid biases, searchers should not be aware of when trials vs. actual monitoring are taking place and trial-carcass location should be undisclosed to the searchers. Each searcher, human or canine, should undergo their own searcher efficiency trials.

The estimates obtained in *search efficiency* and *carcass persistence* trials at each site will determine the *sampling fraction*, *duration* and *frequency*. For example, the survey *frequency* (how often surveys will take place) directly depends on the *carcass persistence*. If carcasses persist for 15 days on average, then the survey *frequency* should be sufficient to be able to find the majority of those carcasses (≥50%) before they disappear (e.g. about every 10 days; Strickland et al. 2011). Conversely, a low *carcass persistence* would require high survey *frequency*. Therefore, establishing a single protocol to use across sites which vary in carcass persistence would not be cost effective. A facility where conditions are not favorable to estimate mortality may require a more thorough monitoring protocol, but that same protocol may be

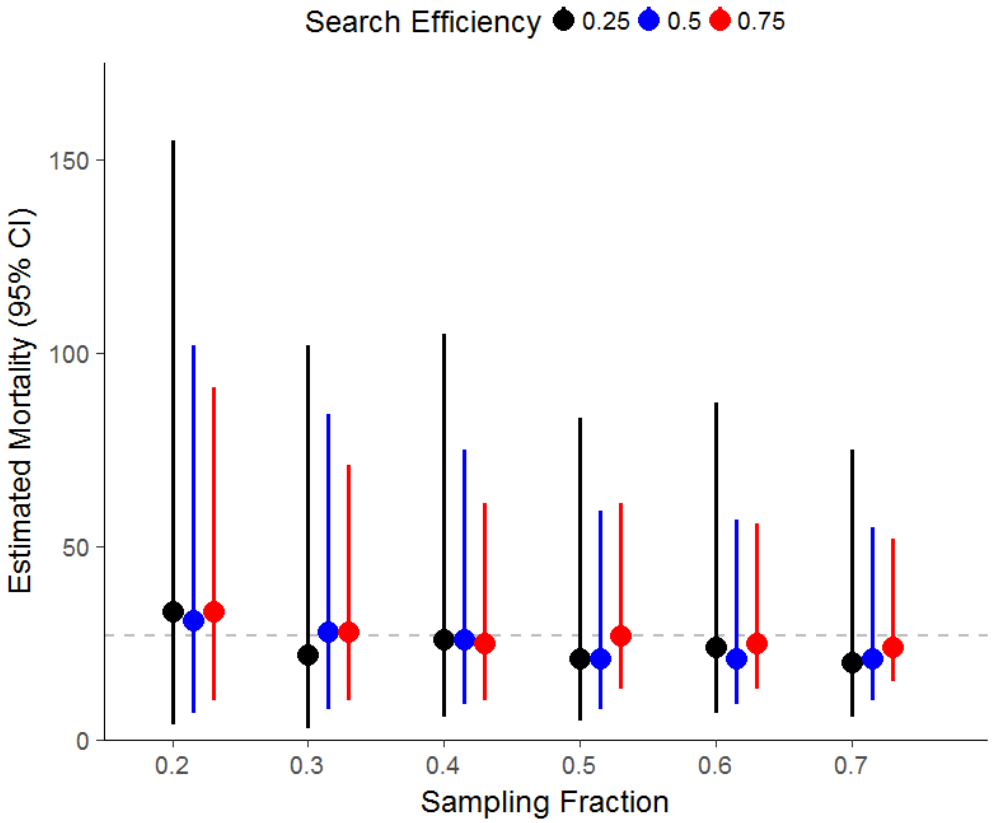
excessive and unnecessarily costly for a facility where conditions are more favorable (e.g. one with high carcass persistence). Since information was not available on the possible *searcher efficiencies* and *carcass persistence* rates at different sites, a web-based application (app) was created to simulate possible scenarios with varying values of these parameters. These simulations serve as a tool to provide insight into optimal *survey frequency* and *sampling fraction* at a given solar energy facility given the *searcher efficiency* and *carcass persistence* trials performed on that site. The app and instructions for running the simulations can be found at https://hermes475.shinyapps.io/newplotconditional/.

Duration of the survey period
Whenever feasible, an adaptive approach should be taken where carcass searches would be performed more intensively for the first few years (e.g. first two years, as in WEST 2016) and depending on the resulting mortality estimates, carcass searches could increase, decrease or cease altogether in subsequent years. At least two years of intensive monitoring would be recommended to account for potential differences across years (e.g. in precipitation and bird movements; Borkhataria 2009), especially because mortality rates during the initial years post-commissioning (immediately after the land has been disturbed) may differ from mortality on subsequent years (after vegetation has recovered). In addition, prolonged drought conditions could affect estimates by decreasing bird abundance and consequently the estimates of mortality may not be representative of periods of higher bird abundance (H.T. Harvey and Associates 2015).

Ideally, monitoring would occur throughout the year (e.g. WEST 2016, H.T. Harvey and Associates 2015, WEST 2016) with a survey *frequency* (e.g. every 5 days) dependent on *carcass persistence* (see below). Alternatively, surveys could take place on a seasonal basis to reduce monitoring costs without sacrificing temporal representation (e.g., one sampling period in each of the four seasons). Seasonal monitoring can make it difficult to calculate annual mortality rates but instead allows for four separate seasonal estimates that can be interpreted in a manner similar to how annual rates are interpreted. If four monitoring seasons take place and each lasts two months on average, this will deduct four months of monitoring out of the year.

Many wind energy studies have focused on spring and fall surveys to coincide with bird migrations which are thought to represent peaks in bird collision mortalities. However, timing surveys with migration in Florida might not provide a complete picture of mortality associated with PV arrays because birds are abundant year-round in Florida. Many species are non-migratory, many additional species breed in more temperate latitudes but winter in Florida, and other species are short-distance and/or facultative migrants that may follow movement patterns different from boreal migration schedules. For example, wading birds tend to follow changes in precipitation and water levels and, unlike songbirds, their movements across Florida may peak in November and late-Feb to mid-March; (Kahl 1964, Kushlan 1986, Comer et al. 1987, Breininger and Smith 1990, David 1994, Borkhataria 2009). Accordingly, H.T. Harvey and Associates (2015) found that within the array at California Valley Solar Ranch, mortality peaked in the winter months which also coincided with higher bird abundances. Therefore, a temporally representative sample should be taken in Florida, and this would require that at least four sampling periods take place across the year, covering all four seasons.

Temporal variation should be considered in bird abundances when planning a carcass monitoring timeframe. For example, spring migration tends to be more concentrated than fall



migration, and bird densities tend to be higher during fall migration because of the presence of hatch-year birds and because of the elliptical migration pattern of some species that cover parts of the state during the fall but not the spring (i.e. species may have different southbound and northbound routes; Ydenberg et al. 2007). Combined, these factors can affect bird mortality rates across seasons in Florida (Crawford and Engstrom 2001).

Nighttime versus daytime mortality can also vary. Since most birds are diurnal, most mortality will occur during the day which would suggest that surveys should take place late in the afternoon (before scavengers become active at dusk), as suggested by Kagan et al. (2014). Nocturnal mortality rates may vary depending on the type of activity, as some species forage at night (nocturnal species) while others migrate at night. Studies at three PV facilities, reported that 50-75% of the species (and 17.6-75.2% of individual fatalities) were of birds that migrate at night (WEST 2014). However, there was no indication that mortality occurred during nocturnal migration and some of the species reported also have resident (non-migratory) populations at these sites. Monitoring may need to be adjusted to account for nocturnal mortality; if mortality is high at night this may require early morning surveys (preferably starting at dawn to minimize scavenging which tends to be highest early in the morning; Crawford and Engstrom 2001). To assess which approach is most effective at detecting birds, monitoring and trials could take place in the morning and afternoon at the beginning of the season. Description of the carcasses found (e.g. species identification, presence of ants or *rigor mortis*, etc.) and careful consideration of the species' life history (including migratory strategies) will help inform which are the best monitoring times.

Sampling fraction

The goal of an efficient avian mortality monitoring effort is to minimize the effort required to produce robust estimates. This may be achieved by increasing *searcher efficiency*, because higher *searcher efficiencies* allow for a reduced *sampling fraction* (Fig. 1). A more thorough monitoring of the *sampling fraction* (e.g. walking along panel rows and using detection dogs) will increase carcass detection probability. Once *carcass persistence* and *searcher efficiency* trials have been performed, simulations with the provided app will help determine an adequate *sampling fraction* at each site. It may be necessary to survey around 25% to 50% of the facility to obtain accurate estimates, but this percent could increase if *searcher efficiency* proves to be poor and the number of carcasses found (count) is low (as found by our simulations and those by WEST [2016]).

Figure 1. Simulations showing the relationship between the proportion of the facility searched (sampling fraction) and its influence on the estimated mortality and its 95% confidence interval. All simulations were performed maintaining constant values of carcass persistence and associated error (0.8 ± 0.16), survey duration (8 weeks), survey frequency (3 days). The dashed line represents the true number of birds that died based on simulations (27 birds in 8 weeks). The points represent mortality estimates based on the Korner-Nievergelt et al (2011) estimator using package *Carcass* (Korner-Nievergelt et al 2015) in program R (R Core Team 2017). Variation in the point estimate partially reflect stochasticity implicit in the model. Colors represent scenarios with different searcher efficiencies (0.25, 0.5, and 0.75; black, blue and red, respectively). For details see note on page 26.

In general, the estimator performs well and the mortality estimates on Fig. 1 approximate actual mortality (all near the dashed line). However, as this figure shows, the confidence around that estimate decreases when the proportion of the facility that is searched decreases (i.e. more uncertainty with lower *sampling fraction*). This decrease in the confidence level is greater when *searcher efficiency* is low (black color). A simulation using 75% searcher efficiency (red color), shows less uncertainty as a larger area of the facility is sampled. That is, as the *sampling fraction* increases, the confidence in the estimate increases. But, in this example, increases beyond 0.4 (40% of the facility) result only in small increases in precision. For reference, landowners should aim for a high *searcher efficiency* (e.g. ~0.75; red color) which allows them

to maintain a relatively low search area (0.3-0.5) and still have relatively high confidence around the estimate.

Figures 1 and 2 are examples based on arbitrary carcass persistence rates and should not be used as a guideline to decide upon a desired survey *frequency* and *sampling fraction.* Instead, researchers can use FWC's web application to input the values derived from searcher efficiency and carcass persistence trials to create figures similar to those shown here (https://hermes475.shinyapps.io/newplotconditional/). These figures will serve as a guide to help determine the appropriate *sampling fraction* and *frequency* to choose given the desired precision.

Extrapolation of the mortality values from a *sampling fraction* to an entire facility requires that the *sampling fraction* be representative of the facility. The *sampling fraction* should be a simple random sample of the facility, with several search plots scattered throughout the facility. For an example see case study 3 in Huso et al. (2016a), showing the search protocol established by WEST (2015) at Desert Sunlight, California. Plots should include central parts of the arrays and the edges to avoid biases (WEST 2016). Plots close to the edge should be scattered throughout the facility, particularly if the habitat types around the facility differ as habitat type and degree of human activity could influence mortality rates and *carcass persistence*. One way to ensure a more spatially balanced sampling fraction is by stratifying the random sample. To do so, the facility can be subdivided into sections of equal size. Then an equal number of plots for each section is selected by using a simple random sample, ensuring a more homogeneous distribution of plots.

The *sampling fraction* should incorporate all aspects of the landscape and be representative of the facility as a whole. Injured birds may move from the area where they collide and into an area with more cover (e.g. under a panel, where vegetation is densest, to a pond, or under a nearby building or other structure), and these areas may be outside search plots. An even plot distribution will help mitigate this problem, particularly if using detection dogs, which are more likely to locate injured birds.

Survey frequency

The main determinant of survey frequency is carcass persistence (Fig. 2). An initial target could be set so that the survey frequency allows ≥ 50% of the carcasses to persist to the next search, and can be later adjusted once searcher efficiency and sampling fraction are calculated (Huso et al. 2016a). The optimal survey frequency should complement the *search efficiency* in order to achieve the target detection probability.

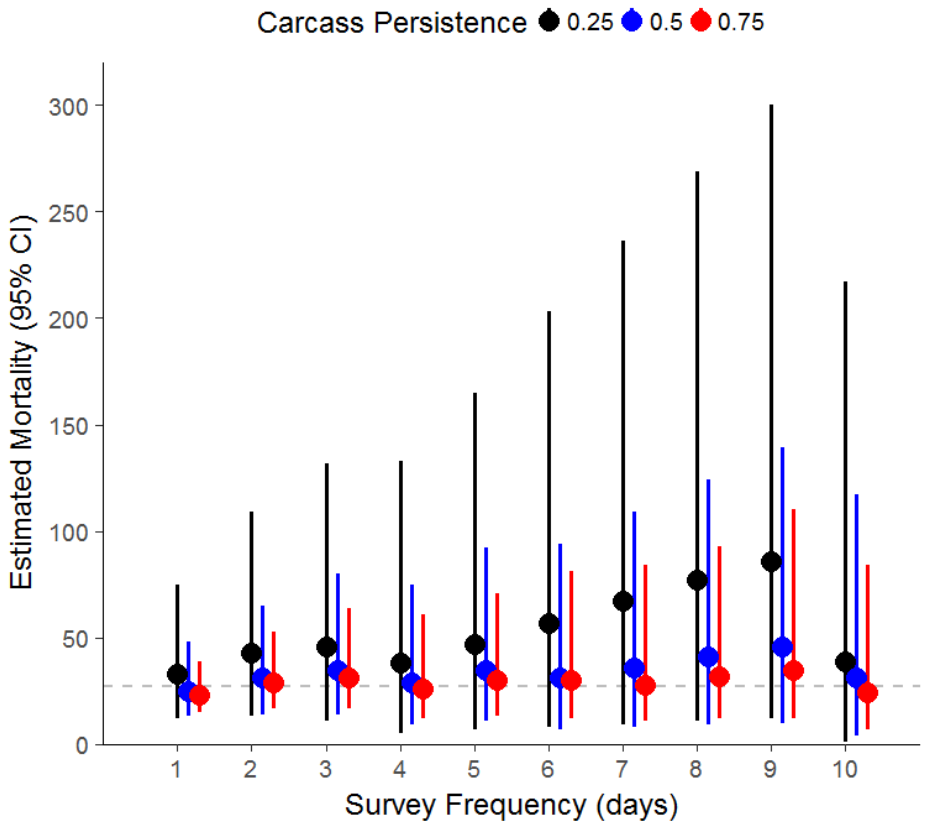


Figure 2. Simulations showing the relationship between search interval (survey frequency) and its influence on the estimated mortality and its 95% confidence interval. All simulations were performed maintaining constant values of searcher efficiency and its error (0.8 ± 0.16), survey duration (8 weeks), and sampling fraction (0.5 of the facility). The dashed line represents the true number of birds that died based on simulations (27 birds in 8 weeks). The points represent mortality estimates based on the Korner-Nievergelt et al (2011) estimator using package *Carcass* (Korner-Nievergelt et al 2015) in program R (R Core Team 2017). Variation in the point estimate partially reflect stochasticity implicit in the model. Colors represent scenarios with different carcass persistence (0.25, 0.5, and 0.75; black, blue and red, respectively). For details see note on page 26.

The estimator performs well and the mortality estimate approximates actual mortality (all near the dashed line), except when *carcass persistence* was very low (when only 25% of the carcass are available to be found the next day; black color). The figure shows that the confidence around that estimate decreases when the survey *frequency* decreases (more days between surveys). This decrease in the confidence level is greater when *carcass persistence* is low (black color). Thus, a relatively frequent *search interval* is necessary to maintain a relatively small confidence interval around the estimate when *carcass persistence* is low or moderate.

Once *carcass persistence* trials are performed, it is recommended to use the carcass class with the most rapid removal rate (e.g. small birds may have the lowest persistence) to establish survey *frequency*. Higher survey *frequency* typically results in more precise mortality estimates because a higher proportion of carcasses will remain to be found (Fig. 2; Huso et al. 2016a, WEST 2016). Ideally, surveys should take place at regular intervals (e.g. every five days) for the *duration* of the survey period (i.e. the six to eight week seasonal block or throughout the year;

Huso 2010). This is an assumption of some mortality estimator equations, but some estimators allow for irregular intervals which would allow for an adaptive monitoring approach. However, if *searcher efficiency* and *carcass persistence* vary across seasons, survey frequency can be adjusted to each season (Huso 2010).

Monitoring efforts should be spread out in time to be able to capture variation in mortality that could exist due to weather, migratory patterns, etc. and to maximize the likelihood of capturing unusual mortality events (Strickland et al. 2011). For example, if the survey *frequency* is determined to be every five days, a rotation covering 20% of the *sampling fraction* each day until completion would assure temporal coverage of the site. Similarly, sampling 25% of the *sampling fraction* for four consecutive days and taking one day off would also allow to maintain the five-day survey *frequency* while maintaining good temporal coverage. Completion of 100% of the sampling fraction on a single day is possible but increases the likelihood of producing a biased estimate (Kunz et al. 2007a) because large mortality events may be over- or under-sampled (Huso et al. 2016a).

Lastly, if carcasses are found opportunistically outside the survey period but inside a survey area, they should be documented and left in place to be found during the scheduled surveys, removed by scavenger, or neither (Huso et al. 2016a). However, the carcass can be removed and the data collected could still be used later for mortality estimates, if appropriate (Huso et al. 2016a).

Mortality (count)
The number of carcasses detected influences the estimates of actual mortality, and it should be considered as its magnitude can impact the study design. Simulations performed by Korner-Nievergelt et al. (2011) showed that the precision of the mortality estimate was low when there were fewer than 10 carcasses found. This result was corroborated in our simulations (not shown here) and WEST (2016). If solar energy facilities are associated with a low bird mortality rate, and therefore a low number of carcasses are found (which can be exacerbated by low carcass persistence, as may be the case in Florida), a high sampling fraction may be required to maintain the desired level of precision. Since precision decreases considerably as searcher efficiency and carcass persistence decreases (based on our simulations and Korner-Nievergelt et al. 2011), another approach to help compensate for low counts is to increase searcher efficiency and carcass persistence. Dogs may provide the means to increase searcher efficiency (Mathews et al. 2013, Reyes et al. 2016) and some exclusion measures (e.g. fence improvements) may help mitigate carcass removal (albeit, depending on scavenger type this may have a small effect and may be costly). The best approach may include a combination of these factors while also decreasing survey frequency and potentially increasing duration. If a rigorous and conservative monitoring approach is taken (i.e. reasonably high searcher efficiency, high survey frequency, and a large sampling fraction is monitored) and the number of carcasses found is still low, this may indicate that mortality is actually low. To verify that this is evidence of a low mortality rate, analysis designed for this case should be performed (Huso et al. 2015, Dalthorp et al. 2014).

Background mortality

Avian mortality can occur within the solar energy facility independent of the presence of solar energy infrastructure, but in general this background mortality has been poorly studied. Some studies (mostly from the wind energy sector) have used reference plots and have found no

difference in mortality between monitoring and reference plots (e.g. Osborn et al. 2000, H.T. Harvey and Associates 2015), but monitoring was not consistent or balanced. Little work has been done that thoroughly measures background mortality at PV solar energy facilities (WEST 2014). Preliminary evidence from three studies with limited effort suggests that background mortality (e.g. from predation) appears to be a substantial contributor to fatalities found at solar and wind energy facilities (Erickson et al. 2014). However, further studies are needed to determine the contribution of background mortality in a statistically rigorous manner (WEST 2014). An improved and more balanced study comparing a solar energy facility that is currently in development and a control plot (same size, layout, search effort, etc.), found no significant difference in avian mortality between the facility and control plots, and even found slightly higher mortality in control plots (Boroski et al. 2016). Yet, at the time of this report, this site had not yet been commissioned and the solar energy infrastructure had been only partially put in place (Boroski et al. 2016). Future work at this site will help elucidate the importance of background mortality in affecting fatalities at PV facilities in California.

There are important caveats to consider when estimating background mortality rates. First, estimating *background mortality* rates can be very costly. In fact, it may effectively double monitoring costs since a rigorous approach would require estimating *searcher efficiency* and *carcass persistence* rates on the control plots outside of the solar facility. Similarly, monitoring of these control plots would have to follow the same protocol (schedule/area cover) and effort as monitoring within the arrays. Second, finding a control area of similar size and spatial resource distribution as that of the one monitored within the PV array may be difficult because the site should be close to the solar energy facility to be representative of the background mortality of the area, but far away enough from the solar facility to prevent scavengers from transferring carcasses from the solar facility and into control plots. Ideally control and monitoring plots should have similar vegetation structure (e.g. grasslands). Third, background mortality rates may be low. Adult survivorship for birds varies widely across species but is often >50% annually for small, short-lived species (e.g., Karr 1990, Faaborg et al. 1995), greater for larger species (e.g., Stromborg et al 2012, Koczur et al. 2017) and tends to be greater in subtropical and tropical climates such as that in Florida (Ricklefs 1973, Skutch 1985). As such, background mortality monitoring at a control site is likely to detect few or no dead birds unless a substantial number of birds routinely use the site. Together, these factors indicate measuring background mortality rates is costly and, when combined with potentially low mortality rates associated with PV energy facilities, may be of low priority. Yet, when treated as a true replicate of the mortality monitoring within the array (i.e. in a treatment vs. control framework) this option can be informative. Before After Control Impact (BACI) studies offer an alternative approach to measuring background mortality (Hewitt et al. 2001). Yet, a rigorous approach may require a significant temporal increase in the monitoring plan, including start of monitoring before construction of the facility.

9. Total System Recoverable Costs (Lines 7 & 8)		$6,006	$5,982	$5,958	$5,934	$5,910	$5,885	$5,856	$5,832	$5,808	$5,784	$5,760	$5,736	$70,450

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

□Average Net Investment: See footnotes (b) and (c).

□Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

□ Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

□ Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

b. Amortization [e]		$4,173	$4,173	$4,173	$4,173	$4,173	$4,173	$4,173	$4,173	$4,173	$4,173	$4,173	$4,173	$50,074
c. Dismantlement [f]		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Amortization ITC Solar		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$45,773	$46,320	$47,170	$47,340	$47,202	$47,339	$48,734	$51,164	$52,825	$52,918	$51,976	$51,860	$590,622

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

- Average Net Investment: See footnotes (b) and (c).
- Average Unamortized ITC Balance:

  Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon
  - Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.
  - Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Amortization ITC Solar		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$72,853	$72,753	$72,654	$72,554	$72,455	$72,355	$72,142	$72,043	$71,943	$71,844	$71,745	$71,645	$866,986

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

- Average Net Investment: See footnotes (b) and (c).
- Average Unamortized ITC Balance:

  Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon
  - Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.
  - Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

- Average Net Investment: See footnotes (b) and (c).
- Average Unamortized ITC Balance:

  Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon
  - Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.
  - Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

c. Dismantlement [f]		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Amortization ITC Solar		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$4,827,639	$4,817,689	$4,807,571	$4,797,458	$4,787,294	$4,777,289	$4,760,691	$4,746,615	$4,733,471	$4,723,447	$4,713,393	$4,703,445	$57,196,003

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

- Average Net Investment: See footnotes (b) and (c).
- Average Unamortized ITC Balance:

  Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon
  - Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.
  - Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

□ Average Net Investment: See footnotes (b) and (c).

□ Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

□ Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

□ Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

□ Average Net Investment: See footnotes (b) and (c).

□ Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

□ Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

□ Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

a. Depreciation [d]		$44,615	$44,445	$44,411	$44,381	$44,449	$44,514	$44,514	$44,514	$44,514	$44,514	$44,514	$44,514	$533,899
b. Amortization [e]		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
c. Dismantlement [f]		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Amortization ITC Solar		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$225,721	$226,186	$230,047	$234,984	$237,754	$240,298	$244,184	$251,870	$262,188	$279,766	$298,754	$310,579	$3,042,331

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

□ Average Net Investment: See footnotes (b) and (c).

□ Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

□ Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

□ Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

□ Average Net Investment: See footnotes (b) and (c).

□ Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

□ Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

□ Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

9. Total System Recoverable Costs (Lines 7 & 8)		$26,861	$26,770	$26,677	$26,572	$26,467	$28,487	$30,374	$30,444	$30,343	$30,242	$30,140	$30,039	$343,416

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

9. Total System Recoverable Costs (Lines 7 & 8)		$50,897	$50,850	$51,356	$51,862	$51,814	$51,767	$50,819	$50,772	$50,726	$50,679	$50,633	$51,419	$613,592

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

Note: Change in beginning balance is due to charge of $371K for Port Everglades Tanks 903/904, which was incorrectly charged to base rates in August 2017 and is now being correctly included in ECRC.

b. Amortization (f)		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
c. Dismantlement (g)		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Other		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$153	$153	$152	$151	$150	$149	$148	$147	$146	$145	$145	$144	$1,782

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

9. Total System Recoverable Costs (Lines 7 & 8)		$5,471	$5,450	$5,430	$5,409	$5,388	$5,367	$5,155	$5,283	$5,182	$5,403	$5,679	$5,634	$64,852

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

Note: Change in beginning balance is due to incorrect charge of $178K moved from Project 8 - Oil Spill Clean-Up/Response Equipment to Project 23 - Spill Prevention, Control & Countermeasures.

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

9. Total System Recoverable Costs (Lines 7 & 8)		$25,622	$25,561	$25,500	$27,662	$29,881	$29,868	$29,433	$29,355	$29,276	$29,198	$29,120	$29,042	$339,517

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

Note: Change in beginning balance is due to incorrect charge of $178K moved from Project 8 - Oil Spill Clean-Up/Response Equipment to Project 23 - Spill Prevention, Control & Countermeasures.

9. Total System Recoverable Costs (Lines 7 & 8)		$47,754	$47,589	$47,425	$47,261	$47,097	$46,932	$46,332	$46,171	$46,010	$46,678	$47,533	$47,560	$564,342

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

Note: Change in beginning balance is due to incorrect charge of $178K moved from Project 8 - Oil Spill Clean-Up/Response Equipment to Project 23 - Spill Prevention, Control & Countermeasures.

e. Other		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$267,640	$266,816	$265,997	$265,177	$264,354	$263,873	$260,701	$259,973	$259,164	$258,356	$257,810	$257,264	$3,147,124

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

b. Amortization (f)		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
c. Dismantlement (g)		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Other		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$807,947	$806,320	$804,961	$806,901	$809,089	$808,695	$797,030	$795,984	$794,390	$792,796	$791,201	$791,062	$9,606,375

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

9. Total System Recoverable Costs (Lines 7 & 8)		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

(a) Applicable to reserve salvage and removal cost

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8E, pages 65-67.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Jun. 2018 period is 4.8251%, based on May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Jun. 2018 period is 1.3413% is based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-8E, pages 65-67.

(f) Applicable amortization period(s). See Form 42-8E, pages 65-67.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Jun. 2018 period of 6.557% based on the May 2017 Earning Surveillance Report and reflects a 10.55% return on equity, and the Equity Component for the Jul. – Dec. 2018 period of 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Jun. 2018 period of 1.716% based on the May 2017 Earning Surveillance Report and the Debt Component for the Jul. – Dec. 2018 period of 1.670% based on the May 2018 Earning Surveillance Report.

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon
Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

9. Total System Recoverable Costs (Lines 7 & 8)		$15,281	$15,599	$15,690	$15,787	$15,694	$15,286	$15,027	$15,014	$14,943	$14,889	$14,819	$14,333	$182,362

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

9. Total System Recoverable Costs (Lines 7 & 8)		$7,541	$7,519	$7,496	$7,474	$7,451	$7,428	$7,397	$7,374	$7,352	$7,329	$7,307	$7,284	$88,952

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

9. Total System Recoverable Costs (Lines 7 & 8)		$589,137	$587,465	$585,749	$584,033	$582,142	$580,252	$579,480	$577,810	$576,141	$574,472	$572,802	$571,133	$6,960,615

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

7. Return on Average Net Investment														
a. Equity Component grossed up for taxes [b][g]		$153,621	$154,161	$157,464	$161,678	$163,969	$166,072	$170,547	$177,113	$185,925	$200,939	$217,158	$227,258	$2,135,905
b. Debt Component (Line 6 x debt rate x 1/12) [c][g]		$27,484	$27,581	$28,172	$28,926	$29,336	$29,712	$29,123	$30,244	$31,749	$34,312	$37,082	$38,807	$372,527
8. Investment Expenses														
a. Depreciation [d]		$44,615	$44,445	$44,411	$44,381	$44,449	$44,514	$44,514	$44,514	$44,514	$44,514	$44,514	$44,514	$533,899
b. Amortization [e]		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
c. Dismantlement [f]		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Amortization ITC Solar		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$225,721	$226,186	$230,047	$234,984	$237,754	$240,298	$244,184	$251,870	$262,188	$279,766	$298,754	$310,579	$3,042,331

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

9. Total System Recoverable Costs (Lines 7 & 8)		$28,415	$32,126	$34,343	$38,031	$42,415	$47,109	$51,576	$56,835	$63,456	$73,085	$86,383	$140,526	$694,299

[a] Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-8A, pages 43-45.

[b] The Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%. The monthly Equity Component for the Jan. – Jun. 2017 actual period is 4.8009% based on FPSC Order No. PSC-2016-0560-AS-EI and reflects a 10.55% return on equity, and the monthly Equity Component for the Jul. – Dec. 2017 actual period is 4.8251% based on the May 2017 ROR Surveillance Report and reflects a 10.55% return on equity, per FPSC Order No. PSC-2016-0560-AS-EI.

[c] The Debt Component for the Jan. – Jun. 2017 actual period is 1.3984% based on rate case Order No. PSC-2016-0560-AS-EI and the Debt Component for the Jul. – Dec. 2017 actual period is 1.3413% based on the May 2017 ROR Surveillance Report.

[d] Applicable depreciation rate or rates. See Form 42-8A, pages 43-45.

[e] Applicable amortization period(s). See Form 42-8A, pages 43-45.

[f] Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

[g] For solar projects the return on investment calculation is comprised of two parts:

Average Net Investment: See footnotes (b) and (c).

Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes uses 0.61425, which reflects the Federal Income Tax Rate of 35%; the monthly Equity Component for the Jan. – Jun. 2017 actual period of 6.430% reflects a 10.55% return on equity and the monthly Equity Compon

Jul. – Dec. 2017 actual period of 6.557% reflects a 10.55% return on equity.

Debt Component: For the Jan. – Jun. 2017 actual period return of 1.796% and for the Jul. – Dec. 2017 actual period return of 1.716% is based on FPSC Order No. PSC-2016-0560-AS-EI.

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Other		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$2,390	$2,382	$2,375	$2,367	$2,360	$2,352	$2,344	$2,337	$2,329	$2,321	$2,314	$2,306	$28,177

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

a. Equity Component grossed up for taxes (c)(h)		$35,713	$35,666	$35,619	$35,572	$35,524	$35,477	$35,430	$35,383	$35,336	$35,288	$35,241	$35,194	$425,442
b. Debt Component (Line 6 x debt rate x 1/12) (d)(h)		$7,518	$7,508	$7,498	$7,488	$7,478	$7,468	$7,458	$7,448	$7,439	$7,429	$7,419	$7,409	$89,560
8. Investment Expenses														
a. Depreciation		$8,968	$8,968	$8,968	$8,968	$8,968	$8,968	$8,968	$8,968	$8,968	$8,968	$8,968	$8,968	$107,619
b. Amortization		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
c. Dismantlement (g)		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Other		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$52,199	$52,142	$52,085	$52,028	$51,971	$51,914	$51,857	$51,799	$51,742	$51,685	$51,628	$51,571	$622,622

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

c. Dismantlement (g)		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Other		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$892	$891	$890	$888	$887	$886	$885	$884	$883	$881	$880	$879	$10,626

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

9. Total System Recoverable Costs (Lines 7 & 8)		$940,150	$937,485	$934,819	$932,154	$929,488	$926,823	$924,157	$921,492	$918,826	$916,161	$913,495	$910,830	$11,105,881

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:

Return on the Average Net Investment: See footnotes (b) and (c).

Return on the Average Unamortized ITC Balance:

Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.

Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Other		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
9. Total System Recoverable Costs (Lines 7 & 8)		$719	$718	$716	$715	$714	$712	$711	$710	$708	$707	$706	$704	$8,541

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

b. Amortization		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
c. Dismantlement (g)		$49,555	$49,555	$49,555	$49,555	$49,555	$49,555	$49,555	$49,555	$49,555	$49,555	$49,555	$49,555	$594,660
d. Property Expenses		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0
e. Other		($451,751)	($451,751)	($451,751)	($451,751)	($451,751)	($451,751)	($451,751)	($451,751)	($451,751)	($451,751)	($451,751)	($451,751)	($5,421,012)
9. Total System Recoverable Costs (Lines 7 & 8)		$2,890,454	$2,888,031	$2,881,193	$2,874,354	$2,867,516	$2,860,677	$2,853,839	$2,847,000	$2,840,161	$2,833,323	$2,826,484	$2,819,646	$34,282,678

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

9. Total System Recoverable Costs (Lines 7 & 8)		$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0	$0

(a) Applicable to reserve salvage and removal cost.

(b) Applicable beginning of period and end of period depreciable base by production plant name(s), unit(s), or plant account(s). See Form 42-4P, pages 60-62.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

(c) The Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%. The Equity Component for the Jan. – Dec. 2019 period is 4.7156% based on the May 2018 Earning Surveillance Report and reflects a 10.55% return on equity.

(d) The Debt Component for the Jan. – Dec. 2019 period is 1.3297% based on the May 2018 Earning Surveillance Report.

(e) Applicable depreciation rate or rates. See Form 42-4P, pages 60-62.

(f) Applicable amortization period(s). See Form 42-4P, pages 60-62.

(g) Dismantlement only applies to Solar projects - DeSoto (37), NASA (38) & Martin (39).

(h) For solar projects the return on investment calculation is comprised of two parts:
Return on the Average Net Investment: See footnotes (b) and (c).
Return on the Average Unamortized ITC Balance:
Equity Component: Gross-up factor for taxes is 1/0.74655, which reflects the Federal Income Tax Rate of 21%; the Equity Component for the Jan. – Dec. 2019 period is 6.480% based on the May 2018 Earning Surveillance Report reflects a 10.55% return on equity.
Debt Component: the Debt Component for the Jan. – Dec. 2019 period is 1.670% based on the May 2018 Earning Surveillance Report.

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Air Operating Permit Fees

Project No. 1

Project Description:

The Clean Air Act Amendments of 1990, Public Law 101-549, and Florida Statute 403.0872 require each major source of air pollution to pay an annual license fee. The amount of the fee is based on each source's previous year's emissions. The fee covers FPL's units within the State of Florida, as well as Plant Scherer's Unit 4 located in Juliette, Georgia of which FPL owns a 76.36% share. The fees for FPL's units in Florida are paid to the Florida Department of Environmental Protection ("DEP") in the first quarter of each year. FPL pays its share of the fees for Scherer Unit 4 to Georgia Power Company on a monthly basis for submittal to the Georgia Environmental Protection Department by the operating agent.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

O&M - Previous year's air operating permit fees for Florida facilities were calculated in the first quarter of 2018 utilizing 2017 air operating information and paid to DEP. Permit fees for FPL's ownership share of Scherer Unit 4 were paid monthly.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $287,797, which is $25,018 or 10% higher than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $233,257.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Low NOx Burner Technology

Project No. 2

Project Description:

Under Title I of the Clean Air Act Amendments of 1990, Public Law 101-349, utilities with units located in areas designated as "non-attainment" for ozone will be required to reduce Nitrogen Oxide ("NOx") emissions by implementing Reasonably Available Control Technology. To comply with the state's plan to bring the Dade, Broward and Palm Beach county areas into attainment of the ozone air quality standard, FPL implemented NOx Burner Technology on its oil and gas-fired steam generating units in those counties to reduce emissions of the pollutants that contributed to the ozone non-attainment.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Capital - Project revenue requirements are estimated to be $62,269, which is $245 or 0.4% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

Capital - Estimated project revenue requirements for the projection period are $59,135.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Continuous Emission Monitoring Systems ("CEMS")

Project No. 3

Project Description:

The Clean Air Act Amendments of 1990, Public Law 101-549, established requirements for the monitoring, record keeping, and reporting of SO_2, NOx, and CO_2 emissions from affected air pollution sources. FPL's fossil fired generating units are affected by these regulations and have installed CEMS to comply with these requirements. Operation and maintenance of CEMS in accordance with the provisions of 40 CFR Part 75 is an ongoing activity, which follows the FPL CEMS Quality Assurance ("QA") Program Manual approved by the Environmental Protection Agency ("EPA").

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Operation and maintenance of the CEMS continues to be performed according to the requirements of the CEMS QA Program Manual, all applicable federal and state regulations, as well as local requirements. Relative accuracy stack tests and linearity tests continue to be performed as scheduled for quality assurance and as needed for diagnostic or recertification requirements. Quality assurance maintenance continues to be performed on the analyzers to meet reliability and availability requirements. CEMS required parts are purchased as needed for repairs and/or preventative maintenance. Equipment having met end of life is replaced as determined in the QA Manual. CEMS analyzer calibration gases, that ensure accuracy of the measurements, are required to be used daily and are purchased as needed. Analysis of fuel oil for sulfur content, heat of combustion and carbon must be periodically performed per the requirements of 40 CFR Part 75, Appendix D. FPL maintains its CEMS 24/7 Software Support contract with its CEMS vendor to ensure proper functionality as well as the integrity of the CEMS data. Maintenance of the software also ensures compliance with current rules or regulations and changes made by EPA, state and local agencies. Training on the operation and maintenance of the system, as well as rule/regulation changes continue as needed.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $337,938, which is $35,807 or 10% lower than previously projected.

Capital - Project revenue requirements are estimated to be $596,293, which is $81,100 or 12.0% lower than previously projected. The variance is primarily related to the replacement of a CEMS server at the Sanford Plant in 2017, which was originally projected to occur in 2018. In addition, the Martin Plant NOx analyzers and CEMS servers on Units 1 and 2 were removed due to dismantlement. These decreases were partially offset by higher than projected costs of NOx analyzers at Martin Units 3 and 4.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $544,646.

Capital - Estimated project revenue requirements for the projection period are $588,862.

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Clean Closure Equivalency

Project No. 4

Project Description:

In compliance with 40 CFR 270.1(c)(5) and (6), FPL developed Closure Equivalency Determinations for nine FPL power plants to demonstrate to EPA that no hazardous waste or hazardous constituents remain in the soil or water beneath the basins, which had been used in the past to treat corrosive hazardous waste. The basins, which are still operational as part of the wastewater treatment systems at these plants, are no longer used to treat hazardous waste.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Project costs are estimated to be $0.

Project Projections:

(January 1, 2019 to December 31, 2019)

Estimated project revenue requirements for the projection period are $0. This project is complete and fully recovered. This report will be removed from future project progress reports.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Maintenance of Stationary Above Ground Fuel Storage Tanks

Project No. 5

Project Description:

Florida Administrative Code ("F.A.C.") Chapter 62-762, provides standards for the maintenance of stationary above ground fuel storage tank systems and associated piping. These standards impose various implementation schedules for internal and external inspections, coating, repairs and upgrades to FPL's fuel storage tanks including secondary containment, spill containment, release detection, overfill protection (e.g., high level alarms, level gauges, etc.) and cathodic protection. Inspections and work performed on the fuel storage tanks and piping must follow certain standards such as the American Petroleum Institute ("API") standards. The project also requires equipment testing and includes registration fees that must be paid to DEP for tanks that are in operation.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Work continued on miscellaneous maintenance of above ground fuel storage tanks and piping systems. External inspection is scheduled this year for one of the tanks at Manatee Terminal. Additionally, full coating projects were completed for two Martin Plant tanks earlier this year. The repairs of the Port Everglades 901/902 tanks are in progress, as well as the conversions of the Port Everglades 903/904 tanks.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project expenditures are estimated to be $699,377, which is $1.1 million or 61% lower than previously projected. The variance is primarily due to the planned retirement of Martin Units 1 and 2 by the end of 2018, which eliminated the need for project activities associated with those units that were included in the original 2018 projections.

Capital - Project revenue requirements are estimated to be $1,672,922, which is $91,143 or 5.8% higher than previously projected.

FORM: 42-5P

PROJECT DESCRIPTION AND PROGRESS

Project Title: Relocate Turbine Lube Oil Underground Piping to Above Ground

Project No. 7

Project Description:

In accordance with criteria contained in Chapter 62-762 F.A.C. for storage of pollutants, FPL replaced the underground turbine lube oil piping with above ground installations at the St. Lucie Nuclear Power Plant.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Capital - Project revenue requirements are estimated to be $1,782, which is $1 or 0.1% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

Capital - Estimated project revenue requirements for the projection period are $1,659.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Oil Spill Clean-up/Response Equipment

Project No. 8

Project Description:

The Oil Pollution Act of 1990 ("OPA 90") mandated that all regulated facilities that store or transfer oil over certain quantities and which could reasonably be expected to discharge oil into navigable waters prepare Facility Response Plans ("FRP") to address a worst case discharge of oil. The FRPs were required to be submitted to the appropriate agency (i.e., Coast Guard, EPA and DOT Pipeline & Hazardous Materials Administration) by August 18, 1993 or prior to going into operation. In these plans, a facility owner or operator must identify (among other items) its spill management team organization, response equipment and training, equipment inspection and exercise program. FPL developed the plans for ten power plants, two fuel oil terminals, three pipelines, and one corporate plan. Additionally, FPL purchased the mandated response resources and provided for mobilization to a worst case discharge at each site.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Facility Response Plan updates continue to be performed for all sites as required. Routine maintenance of all oil spill equipment has continued throughout the year as well as training and planned oil spill drills.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $273,045, which is $269 or 0.1% lower than previously projected.

Capital - Project revenue requirements are estimated to be $152,108, which is $2,863 or 1.8% lower than previously projected.

PROJECT DESCRIPTION AND PROGRESS

Project Title: Relocate Storm Water Runoff

Project No. 10

Project Description:

The National Pollutant Discharge Elimination System ("NPDES") permit, Permit No. FL0002206 for the St. Lucie plant, issued by EPA contains effluent discharge limitations for industrial-related storm water from the plant and land utilization building areas. The requirements became effective on January 1, 1994. As a result of these requirements, affected areas were surveyed, graded, excavated and paved as necessary to clean and redirect the storm water runoff. The storm water runoff is collected and discharged to existing water catch basins on site.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Capital - Project revenue requirements are estimated to be $6,513, which is $39 or 0.6% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

Capital - Estimated project revenue requirements for the projection period are $6,270.

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Scherer Discharge Pipeline

Project No. 12

Project Description:

On March 16, 1992, pursuant to the provisions of the Georgia Water Control Act, as amended, the Federal Clean Water Act, as amended, and the rules and regulations promulgated thereunder, the Georgia Department of Natural Resources ("the Department") issued the National Pollutant Discharge Elimination System ("NPDES") permit for Plant Scherer to Georgia Power Company. In addition to the permit, the Department issued Administrative Order EPD-WQ-1855, which provided a schedule for compliance by April 1, 1994 with the facility discharge limitations to Berry Creek. As a result of these limitations, and pursuant to the order, Georgia Power Company was required to construct an alternate outfall to redirect certain wastewater discharges to the Ocmulgee River. Pursuant to the ownership agreement with Georgia Power Company for Scherer Unit 4, FPL is required to pay for its share of construction of the discharge pipeline, which will constitute the alternate outfall.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Capital - Project revenue requirements are estimated to be $35,530, which is $205 or 0.6% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

Capital - Estimated project revenue requirements for the projection period are $34,152.

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: NPDES Permit Fees

Project No. 14

Project Description:

In compliance with Rule 62-4.052, F.A.C., FPL is required to pay annual regulatory program and surveillance fees for any permits which are required to allow the discharge of wastewater to surface waters under the National Pollution Discharge Elimination System ("NPDES"). These fees implement the Florida legislature's intent that DEP's costs for administering the NPDES program be borne by the regulated parties, as applicable.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

The NPDES permit fees were paid to DEP for applicable power generation and nuclear plants.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $69,200, which is $200 or 0.3% higher than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $69,200.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Disposal of Noncontainerized Liquid Waste

Project 17

Project Description:

FPL manages ash from heavy oil-fired power plants using a wet ash system. Ash from the dust collector and economizer is sluiced to surface ash basins. The ash sludge is then pH adjusted to precipitate metals. In order to comply with Florida Administrative Code 62-701.300(10), the ash is then de-watered using a plate/frame filter-press in order to dispose of it in a Class I landfill or ship by railcar to a processing facility for beneficial reuse.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $0, which is $5,000 or 100% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $0.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Substation Pollutant Discharge Prevention and Removal

Project 19a – Distribution, 19b - Transmission

Project Description:

Florida Statute Chapter 376 -- Pollutant Discharge Prevention and Removal requires that any person discharging a pollutant, defined as any commodity made from oil or gas, shall immediately undertake to contain, remove and abate the discharge to the satisfaction of the department. This project includes the prevention and removal of pollutant discharges at FPL substations including equipment mineral oil and historical arsenic impacts.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Leak repair and regasketing work continues as needed on affected equipment identified during inspections. A mobile transformer has been utilized at two locations to alleviate energy load problems in critical substations in order to repair and regasket leaking transformers. The arsenic remediation work continues to be addressed at four substations where historical impacts have been identified.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M -

19a. Project costs are estimated to be $2,619,748, which is $55,522 or 2.1% lower than previously projected.

19b. Project costs are estimated to be $1,066,231, which is $78,291 or 7.9% higher than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are:

19a. $2,675,270

19b. $987,940

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Wastewater Discharge Elimination & Reuse

Project No. 20

Project Description:

Pursuant to 33 U.S.C. Section 1342 and 40 CFR 122, FPL is required to obtain NPDES permits for each power plant facility. The last permits issued contain requirements to develop and implement a Best Management Practice Pollution Prevention Plan (BMP3 Plan) to minimize or eliminate, whenever feasible, the discharge of regulated pollutants, including fuel oil and ash, to surface waters. In addition, DEP Industrial Wastewater Permits issued under 62-620 F.A.C., regulate discharges of any wastewater discharges to groundwater at all plants, and the Miami-Dade County Department of Environmental Resource Management requires the Turkey Point and Cutler plants' wastewater discharges into canals to meet county water quality standards found in Section 24-11, Code of Metropolitan Dade County. In order to address these requirements, FPL has undertaken a multifaceted project, which includes activities such as ash basin lining, installation of retention tanks, tank coating, sump construction, installation of pumps, motor, and piping, boiler blowdown recovery, site preparation, separation of stormwater and ashwater systems, separation of potable and service water systems, and the associated engineering and design work to implement these projects.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Capital - Project revenue requirements are estimated to be $77,613, which is $425 or 0.5% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

Capital - Estimated project revenue requirements for the projection period are $74,467.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: St. Lucie Turtle Net

Project No. 21

Project Description:

The Incidental Take Statement contained in the Endangered Species Act Section 7 Consultation Biological Opinion, issued to FPL on March 24, 2015, by the National Marine Fisheries Service limits the number of lethal turtle "takings" permitted at its St. Lucie Power Plant. An effective 5-inch primary barrier net is vital to limiting the number of lethal turtle takes per year.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Inspections and cleaning were performed to remove algae and jellyfish buildup that occurred on the turtle net. In early 2018 the 5-inch primary barrier net was replaced due to damage and impacts from Hurricane Irma.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $103,420, which is $6,580 or 6.0% lower than previously projected.

Capital - Project revenue requirements are estimated to be $740,606, which is $5,961 or 0.8% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $110,000.

Capital - Estimated project revenue requirements for the projection period are $722,690.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Pipeline Integrity Management Program

Project No. 22

Project Description:

FPL is required to develop and implement a written pipeline integrity management program for its hazardous liquid/gas pipelines. This program must include the following elements: (1) a process for identifying which pipeline segments could affect a high consequence area; (2) a baseline assessment plan; (3) an information analysis that integrates all available information about the integrity of the entire pipeline and the consequences of a failure; (4) the criteria for determining remedial actions to address integrity issues raised by the assessments and information analysis; (5) a continual process of assessment and evaluation of pipeline integrity; (6) the identification of preventive and mitigative measures to protect the high consequence area; (7) the methods to measure the program's effectiveness; (8) a process for review of assessment results and information analysis by a person qualified to evaluate the results and information; and (9) record keeping.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Cathodic Protection Surveys were completed for the following:

- Martin Terminal 24" & 30" oil pipeline to the Port of Palm Beach and the
- 18" fuel oil pipeline to the Martin Plant; 24" natural gas pipeline and compressor station piping from terminal to Riviera plant. Manatee Terminal 30" & 16" fuel oil piping to Manatee plant.
- Sanford Plant natural gas piping from meter yard to Units 4 & 5.

Public outreach meetings with contractors (excavators) and first responders are planned to begin in September and continue through the end of the year in advance of planned pipeline work. Preliminary work has begun on assessing Manatee pipeline depth of cover over piping, but no related field execution has been initiated.

Project Costs:

(January 1, 2018 to December 31, 2018)

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

O&M - Project expenditures are estimated to be $80,476, which is $505,524 or 86.3% lower than previously projected. The variance is primarily due to the planned retirement of Martin Units 1 and 2 by the end of 2018, which eliminated the need for project activities associated with those units that were included in the original 2018 projections.

Capital - Project revenue requirements are estimated to be $269,328, which is $33,237 or 11.0% lower than previously projected.

Project Projections:

Capital - Estimated project revenue requirements for the projection period are $261,500.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: SPCC (Spill Prevention, Control, and Countermeasures) Program

Project No. 23

Project Description:

EPA issued the Oil Pollution Prevention Regulation (i.e., SPCC rule) to address the oil spill prevention provisions contained in the Federal Water Pollution Control Act of 1972 (later amended as the Clean Water Act) to prevent discharges of oil from reaching the navigable waters of the U.S. The SPCC rule also requires certain facilities to prepare and implement SPCC Plans and address oil spill prevention requirements including the establishment of procedures, methods, equipment, and other requirements to prevent discharges of oil as described above. As revised, the SPCC rule requires that each regulated facility prepare and implement an SPCC Plan; install secondary containment and/or diversionary structures for bulk oil storage containers, certain oil-filled equipment, piping and tank truck unloading racks/areas; provide overfill protection (e.g., tank level alarms, etc.); and conduct training, inspections, testing, security measures and facility drainage systems.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

FPL routinely reviews and updates the Facility Response Plans and SPCC Plans for its power plant and fuel terminal facilities. These updates incorporate modifications to tanks, piping, equipment, transformers, containment features and drainage systems as well as enhancements to facility inspection programs. For this year, additional updates incorporate specific projects including the addition/modification of fuel gas metering stations at Martin, the addition of fuel efficient combustion turbine peaking units at Fort Lauderdale and the removal of obsolete gas turbine peaking units at Port Everglades.

Project Costs:

(January 1, 2018 to December 31, 2018)

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Manatee Plant Reburn

Project No. 24

Project Description:

This project involves installation of reburn technology in Manatee Units 1 and 2. Reburn is an advanced NOx control technology that has been developed for, and applied successfully in, commercial applications to utility and large industrial boilers to reduce emissions. Reburn is an in-furnace NOx control technology that employs fuel staging in a configuration where a portion of the fuel is injected downstream of the main combustion zone to create a second combustion zone, called the reburning zone where a portion of the NOx formed from combustion is converted back into elemental nitrogen.

In response to concerns about local ground level ozone during the 1996-97 time period, FPL invested considerable effort evaluating the Manatee Units for the application of reburn technology. Installation of reburn technology for Manatee Units 1 and 2 resulted in a reduction in NOx emissions through a "pollution prevention" approach that does not require the use of reagents, catalysts, and pollution reduction or removal equipment. FPL determined that reburn technology was the most cost-effective alternative to achieve significant reductions in NOx emissions from Manatee Units 1 and 2 to reduce impacts to local ozone air quality impacts that DEP had required FPL to achieve.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

The site has completed maintenance during the Unit 2 overhaul for the burner assemblies, burner swirler, and damper inspections on the system.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $116,892, which is $9,084 or 7.2% lower than previously projected.

Project Title: UST Replacement/Removal

Project No. 26

Project Description:

Chapter 62-761.500 of the F.A.C., dated July 13, 1998, requires the removal or replacement of existing Category-A and Category-B storage tank systems with systems meeting the standards of Category-C storage tank systems by December 31, 2009. Underground Storage Tank ("UST") Category-A tanks are single-walled tanks or underground single-walled piping with no secondary containment that were installed before June 30, 1992.

UST Category-B tanks are tanks containing pollutants after June 30, 1992 or a hazardous substance after January 1, 1994 that shall have secondary containment. Small diameter piping that comes in contact with the soil that is connected to a UST shall have secondary containment if installed after December 10, 1990.

UST and AST Category-C tanks under F.A.C. 62-761.500 are tanks that shall have some or all of the following; a double wall, be made of fiberglass, exterior coatings that protect the tank from external corrosion, secondary containment (e.g., concrete walls and floor) for the tank and the piping, and overfill protection.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Capital - Project revenue requirements are estimated to be $6,764, which is $51 or 0.8% lower than previously projected.

PROJECT DESCRIPTION AND PROGRESS

Project Title: Lowest Quality Water Source ("LQWS")

Project No. 27

Project Description:

The LQWS Project is required in order to comply with permit conditions in the Consumptive Use Permits ("CUP") issued by the St. Johns River Water Management District ("SJRWMD" or "the District") for the Sanford Plant. Those permit conditions are intended to preserve Florida's groundwater, which is an important environmental resource. The SJRWMD adopted a policy in 2000 that, upon permit renewal, a user of the District's water is required to use the lowest quality of water that is technically, environmentally and economically feasible for its needs. This policy was implemented for the Sanford Plant in the current CUP, which requires use of water from the Sanford Cooling Pond as the LQWS for plant consumptive water use. The LQWS project at Sanford Plant is currently operational.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

For 2018, the water treatment system operator will bill FPL according to the cost of running the system, chemicals included, based on amount of water processed from the cooling pond.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $142,896, which is $13,104 or 8.4% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $156,000.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: CWA 316(b) Phase II Rule

Project No: 28

Project Description:

The final rule entitled, "National Pollutant Discharge Elimination System - Final Regulations to Establish Requirements for Cooling Water Intake Structures at Existing Facilities and Amend Requirements at Phase I Facilities" (the 316(b) Rule and formerly the CWA 316(b) Phase II Rule), which became effective October 14, 2014, is found in 40 CFR Parts 122 and 125, implements section 316(b) of the Clean Water Act ("CWA") for existing power plants. The 316(b) Rule is applicable to all power plants and other manufacturing that employ a cooling water intake structure and that withdraw two million gallons per day or more of water from rivers, streams, lakes, reservoirs, estuaries, oceans or other Waters of the United States for cooling purposes. The 316(b) Rule established national requirements applicable to, and that reflect, the best technology available ("BTA") for the location, design, construction and capacity of, existing cooling water intake structures to minimize adverse environmental impacts. DEP adopted and is implementing the 316(b) Rule in its entirety, effective June 24, 2015, at the following FPL facilities: Cape Canaveral, Ft. Myers, Lauderdale, Riviera, Sanford, Martin, Manatee and St. Lucie Plants, as well as SJRPP. Plant Scherer is also regulated by the 316(b) Rule through the Georgia Environmental Protection Division.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

In 2018, 316(b) compliance information was submitted for the Sanford, Martin and Manatee and Scherer plants as part of the permit renewal process. Entrainment sampling was completed at the Ft. Lauderdale Plant, Riviera Beach Energy Center, Port Everglades Energy Center, the Ft. Myers Plant, and Cape Canaveral Energy Center and was in progress at the St. Lucie Plant. Also, work was conducted by consultants on reports required by the 316(b) Rule to determine the appropriate BTA for minimizing impingement mortality and entrainment at all of FPL's facilities employing once-through cooling water systems. This work will continue through the 2021 timeframe.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

At the Cape Canaveral Energy Center, the new horseshoe crab deterrent wall (installed October 2017) has reduced the impingement of horseshoe crabs in 2018 by more than 95% compared to the time period before installation of the wall.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $1,441,646, which is $84,469 or 5.5% lower than previously projected.

Capital - Project revenue requirements are estimated to be $78,782, which is $125,813 or 61.5% lower than previously projected. The variance is primarily attributed to lower than estimated costs for construction of the horseshoe crab barrier in 2017, which impacted the beginning balance in 2018.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $1,408,067.

Capital - Estimated project revenue requirements for the projection period are $143,340.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: SCR Consumables

Project No. 29

Project Description:

The Manatee Unit 3 and Martin Unit 8 Expansion Project Final Orders of Certification under the Florida Power Plant Siting Act, and the PSD Air Construction Permit emission specifications, require the installation of Selective Catalytic Reduction systems ("SCR") for the control of NOx emissions. DEP made the determination that the SCR system is considered Best Available Control Technology ("BACT") for these types of units, with concurrence from EPA. The operation of the SCRs caused FPL to incur O&M costs for certain products that are consumed in the SCRs and for required Risk Management Plans ("RMP") and training. SCR components include anhydrous ammonia, analyzers, calibration gases, replacement catalyst, and equipment wear parts requiring periodic replacement.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

The Manatee site has completed its annual training as required.

In 2018, the Martin Plant Unit 8 SCR system will complete a three year inspection of 8D Heat Recovery System Generators ("HRSG"). Annual inspections will also be completed on 8A, 8B, and 8C HRSG. Throughout the year, anhydrous ammonia and calibration gases will be purchased as needed.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $532,480, which is $184,612 or 25.7% lower than previously projected. The variance is primarily related to lower ammonia consumption associated with a reduction in unit operations. In addition, costs for planned outage work, which include SCR annual inspections on Martin Units 8A, B & C, SCR 3-year inspection on Martin Unit 8D, and piping inspections in the fall of 2018 at the Martin site are now projected to be less than originally estimated.

PROJECT DESCRIPTION AND PROGRESS

Project Title: Hydrobiological Monitoring Program ("HBMP")

Project No. 30

Project Description:

HBMP was required by the Southwest Florida Water Management District ("SWFWMD") in the Conditions of Certification for construction of Manatee Unit 3. The HBMP involved the data collection of river chemistry, flow and vegetation conditions to demonstrate that the plant's withdrawals would not impact the environment in and along the Little Manatee River. The Hydrobiological Monitoring Program was a 10-year study, which started in 2003 during the construction phase of Unit 3 and was completed in 2013. Correspondence submitted to the SWFWMD in 2014 requested discontinuance of the Program. SWFWMD responded to FPL on July 20, 2016, and stated they had no objection to the discontinuance of the Program.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $0.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $0. This project is complete and fully recovered and this report will be removed from future project progress reports.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Clean Air Interstate Rule ("CAIR") Compliance

Project No. 31

Project Description:

In response to EPA's Clean Air Interstate Rule ("CAIR"), FPL initiated the CAIR Project to implement strategies to comply with Annual and Ozone Season NOx and SO_2 emissions requirements. The CAIR project has included a consultant study of FPL's control and allowance management options, an engineering study conducted for the reliable cycling of the 800 MW units (Martin Units 1 and 2, Manatee Units 1 and 2), the construction and operation of SCRs on SJRPP Units 1 and 2, the construction and operation of the scrubber and SCR for Scherer Unit 4, and the installation of CEMS for the peaking gas turbine units. On December 3, 2008, in addition to EPA's CAIR requirements, Georgia Environmental Protection Division ("EPD") promulgated the GA Multi-Pollutant rule also requiring installation of an SCR and a Scrubber on Scherer Unit 4.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

2017 O&M activities associated with the 800MW cycling project were primarily related to water demineralization and the use of chemicals for treatment of biological fouling of condenser tubes. The Scherer project O&M includes routine maintenance of the SCR and scrubber and associated limestone sorbent costs for removal of SO_2 and ammonia costs for control of NOx. SJRPP was retired January 5, 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $4,797,154 which is $92,407 or 1.9% lower than previously projected.

Capital - Project revenue requirements are estimated to be $48,156,194, which is $596,317 or 1.2% lower than previously projected.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: MATS Project

Project No. 33

Project Description:

The Clean Air Mercury Rule ("CAMR") was promulgated by EPA on March 15, 2005, imposing nationwide standards of performance for mercury ("Hg") emissions from existing and new coal-fired electric utility steam generating units. The CAMR is designed to reduce emissions of Hg through implementation of coal-fired generating unit Hg controls. In addition, CAMR requires the installation of Hg Continuous Emission Monitoring Systems ("HgCEMS") to monitor compliance with the emission requirements. In response to a court decision vacating the CAMR, EPA promulgated a final Mercury and Air Toxics Standard ("MATS") rule that addressed toxic metal (including Hg) and acid gas emissions from coal and oil-fired steam electric generating units. FPL's coal-fired units at SJRPP and Scherer are subject to this replacement rule and costs for compliance continue to be recovered under this project. On June 29, 2015 the Supreme Court issued an opinion remanding the MATS rule back to the D.C. Circuit Court of Appeals deciding that EPA could ignore costs when deciding to regulate power plants. While the court has not yet issued an opinion on the validity of MATS, the rule is final and FPL must comply with the requirements until it is revoked or reissued.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

For Scherer, operation for the baghouse and sorbent injection system continues per the requirements of the State of Georgia Multi Pollutant Rule and MATS. SJRPP was retired on January 5, 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $2,395,698, which is on target for 2018.

Capital - Project revenue requirements are estimated to be $9,606,375, which is $198,481 or 2.0% lower than previously projected.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: St. Lucie Cooling Water System Inspection and Maintenance

Project No. 34

Project Description:

The purpose of the proposed St. Lucie Plant Cooling Water System Inspection and Maintenance Project is to inspect and, as necessary, maintain the cooling water system (the "Cooling System") at FPL's St. Lucie Nuclear Power Plant, such that it minimizes injuries and/or deaths of endangered species and thus helps FPL to remain in compliance with the federal Endangered Species Act, 16 U.S.C. Section 1531, et seq.. The specific "environmental law or regulation" requiring inspection and cleaning of the intake pipes are terms and conditions imposed pursuant to a Biological Opinion ("BO") that was issued by the National Marine Fisheries Service ("NMFS") pursuant to Section 7 of the ESA. NMFS finalized the BO on March 24, 2016. FPL is currently working with NMFS to develop an acceptable cooling system turtle excluder device or alternatives, as required by the BO.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

A prototype of the excluder devise has been constructed and testing was conducted in accordance with the BO. Test results of the proposed configuration showed possible injury to turtles. The testing associated with the proposed turtle barrier has been suspended due to comments received from NMFS and the Florida Fish and Wildlife Conservation Commission ("FWC").

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $0.

Capital - Project revenue requirements are estimated to be $347,643, which is $101,418 or 22.6% lower than previously projected. The variance is primarily due to suspension of activity associated with the proposed turtle barrier pending receipt of comments from NMFS and FWC on possible alternatives after test results of the proposed configuration of the turtle barrier showed possible injury to turtles.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Projections:

(January 1, 2019 to December 31, 2019)

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Martin Plant Water System

Project No. 35

Project Description:

The Martin Plant Drinking Water System is required to comply with the requirements of DEP's rules for drinking water systems. DEP determined the system must be brought into compliance with newly imposed drinking water rules for trihalomethanes and Haleo Acetic Acid. These include nano-filtration, air stripping, carbon and multimedia filtration.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

FPL performed monthly maintenance and cleaning of nano-filter membranes related to the operation of the potable water system. The filter and tank are being replaced this year as part of a capital upgrade, so there is no routine carbon replacement planned for 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $36,715, which is $911 or 2.5% higher than previously projected.

Capital - Project revenue requirements are estimated to be $20,466, which is $148 or 0.7% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $0.

Capital - Estimated project revenue requirements for the projection period are $19,863.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Low Level Radioactive Waste

Project No. 36

Project Description:

The Barnwell, South Carolina radioactive waste disposal facility is the only site of its kind presently available to FPL for disposal of Low Level Waste ("LLW") such as radioactive spent resins, filters, activated metals, and other highly contaminated materials. On June 30, 2008, the Barnwell facility ceased accepting LLW from FPL. This project will construct a LLW storage facility for class B and C radioactive waste at the St. Lucie . Turkey Point plants ; however, the Turkey Point project will start later than the St. Lucie project since Turkey Point has limited existing LLW storage capacity. Where practical, this project will be implemented as part of a fleet approach. The objective at the St. Lucie and Turkey Point plants is to ensure construction of a LLW storage facility with sufficient capacity to store all LLW B and C class waste generated at each plant site over a 5-year period. This will allow continued uninterrupted operation of the St. Lucie and Turkey Point nuclear units until an alternate solution becomes available. The LLW on site storage facilities at St. Lucie and Turkey Point will also provide a "buffer" storage capacity for LLW even if an alternate solution becomes feasible, should the alternate solution be delayed or interrupted at a later date.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Capital - Project revenue requirements are estimated to be $1,690,444, which is $12,305 or 0.7% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

Capital - Estimated project revenue requirements for the projection period are $1,641,273.

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: DeSoto Next Generation Solar Energy Center

Project No. 37

Project Description:

The DeSoto Next Generation Solar Energy Center ("DeSoto Solar") project is a zero greenhouse gas emitting renewable generation project, which on August 4, 2008, the Commission found in Order Number PSC-08-0491-PAA-EI, to be eligible for recovery through the ECRC pursuant to House Bill 7135. The DeSoto Solar project is a 25 MW solar photovoltaic ("PV") generating facility, which converts sunlight directly into electric power utilizing tracking arrays that are designed to follow the sun as it traverses through the sky. In addition, the system includes electrical equipment necessary to convert the power from direct current to alternating current to connect the system to the FPL grid. Ongoing operation and maintenance expenses include repair and replacement of PV system components and support equipment and facilities by FPL personnel and vegetation management of land adjacent to the panels.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

For January through June 2018, Desoto Solar's net energy production was 24,588 MWh. Several field walk downs were performed this year to identify failing components that will be replaced during the remainder of this year. This will ensure improved efficiency to current performance. Site personnel continue to perform required maintenance activities including replacement of components as necessary.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $575,861, which is $33,868 or 5.6% lower than previously projected.

Capital - Project revenue requirements are estimated to be $12,719,862, which is $67,259 or 0.5% lower than previously projected.

PROJECT DESCRIPTION AND PROGRESS

Project Title: **Space Coast Next Generation Solar Energy Center**

Project No. 38

Project Description:

The Space Coast Next Generation Solar Energy Center ("Space Coast Solar") project is a zero greenhouse gas emitting renewable generation project, which on August 4, 2008, the Commission found in Order Number PSC-08-0491-PAA-EI, to be eligible for recovery through the ECRC pursuant to House Bill 7135. The Space Coast Solar project is a 10 MW PV generating facility which converts sunlight directly into electric power. The facility utilizes a fixed array and uses solar PV panels, support structures, and electrical equipment necessary to convert the power from direct current to alternating current and to connect the system to the FPL grid. Ongoing operation and maintenance expenses include repair and replacement of PV system components and support equipment and facilities by FPL personnel and vegetation management of land adjacent to the panels.

The Space Coast project also included building a 900 kW solar PV facility at the Kennedy Space Center ("KSC") industrial area. The KSC solar site was built and is operated and maintained by FPL as compensation for the lease of the land for the Space Coast Solar site which is located on KSC property.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

For January through the end of June, 2018, net energy production at Space Coast Solar was 9,124 MWh. Work is being conducted to improve meteorological stations and DC field performance measurement to improve remote monitoring of the DC field. The KSC site operated well from January through May, with the malfunction of an inverter and communications in June 2018 resulted in lower than anticipated generation from the KSC site for that month. This resulted in measured net energy production of 659 MWh. Quarterly O&M reports are submitted to NASA in accordance with the lease agreement between NASA and FPL. Support personnel continue to perform required maintenance activities including replacement of components as necessary.

PROJECT DESCRIPTION AND PROGRESS

Project Title: Martin Next Generation Solar Energy Center

Project No. 39

Project Description:

On August 4, 2008, the Commission found, in Order Number PSC-08-0491-PAA-EI, that the Martin Next Generation Solar Energy Center ("Martin Solar") project was eligible for recovery through the ECRC pursuant to House Bill 7135. The Martin Solar project is a 75 MW solar thermal steam generating facility which is integrated into the existing steam cycle for the Martin Unit 8 natural gas-fired combined cycle power plant. The steam supplied by Martin Solar is used to supplement the steam currently generated by the heat recovery steam generators. The project involved the installation of parabolic trough solar collectors that concentrate solar radiation on heat collection elements and track the sun to maintain the optimum angle to collect solar radiation. These heat collection elements contain a heat transfer fluid ("HTF") that is heated by the concentrated solar radiation and is then circulated to heat exchangers that will produce steam, which is routed to the existing Martin Unit 8 heat recovery steam generators for use in generating a design rating of 75 MW of electricity from the Martin Unit 8 Steam Turbine Generator.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Martin Solar 2018 accomplishments include: routine repairs to solar loops, engineering and construction of modified array support pedestals and a comprehensive planned outage on the HTF system. During the outage in the fall of 2018 we will be overhauling critical feed water control valves and also perform inspections of the heat transfer fluid vessels.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $4,325,647, which is $837,854 or 24.0% higher than previously projected. The variance is primarily due to the acceleration of the maintenance outage at Unit 8 from 2019 to the fourth quarter of 2018, which also accelerated the outage work.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Capital - Project revenue requirements are estimated to be $35,389,515, which is $273,666 or 0.8% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $3,346,966.

Capital - Estimated project revenue requirements for the projection period are $34,282,678.

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Greenhouse Gas Reduction Program

Project No. 40

Project Description:

The purpose of FPL's Electric Utility Greenhouse Gas ("GHG") Reduction Program is to comply with EPA's policies that require reductions in emissions of GHGs from electric generating units and mandatory reporting of GHG emissions. EPA's Mandatory GHG Reporting Rule requires electric utilities to record emissions of GHGs, primarily CO_2 from the combustion of fossil fuels, and report actual data in the subsequent year. FPL was required to begin reporting GHGs emitted from its fossil generating units annually starting in 2011 for calendar year 2010 and to report every year thereafter. EPA's performance standards for reductions of GHG emissions have been stayed by the U.S. Supreme Court, and until EPA revises its rules, FPL does not have any required GHG emission reductions.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $0.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - There are no projected costs.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Manatee Temporary Heating System ("MTHS")

Project No. 41

Project Description:

FPL is subject to specific and continuing legal requirements to provide warm water refuges for the threatened manatee at its Port Everglades, Ft. Myers, Lauderdale, Riviera, and Cape Canaveral plants. In order to comply with the legal requirement during modernizations, FPL undertook the design, engineering, purchase, and installation of MTHS for Cape Canaveral, Riviera and Port Everglades. Likewise, FPL is planning to implement a modernization project at Lauderdale for the construction of the Dania Beach Energy Center which will also require a MTHS during the modernization process.

FPL's installation of a MTHS at each site was implemented to provide warm water until each site completed the planned modernization of the existing power generation units and the warm water flow from the generating unit cooling water returned. The Power Plant Siting Act Conditions of Certification require additional environmental and biological monitoring associated with the operation of the heaters during and following plant shut-downs due to the modernizations. The modernization projects have been completed at Cape Canaveral, Port Everglades and Riviera, with Fort Lauderdale being modernized during the 2018-2022 time frame. For Cape Canaveral, the heating system remained in place to serve as an emergency backup in the future in case the entire Unit 3 power block needs to shut down during future manatee seasons. Due to requirements of the U.S. Fish and Wildlife Service to reduce the possibility of impinging dead or severely compromised manatees on the Cape Canaveral intake screens, Cape Canaveral relocated the permanent manatee heating area farther from the plant intakes. Fort Myers is also installing a permanent MTHS due to its "northern" location and the probability of reduced operation in the future.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

In September 2017 the modernization of Fort Lauderdale began. One of the first items addressed was the installation of a MTHS so it could be in place for the 2018-19 manatee season and beyond.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

In addition, Fort Myers started construction of a permanent MTHS, which is expected to be completed by December 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $663,434, which is $14,666 or 2.2% lower than previously projected.

Capital - Project revenue requirements are estimated to be $478,899, which is $210,440 or 30.5% lower than previously projected. The variance is primarily due to the delay of capital spend and in-service dates for the Dania Beach MTHS, which resulted in a reduction in forecasted debt and equity return and depreciation expense. This decrease is partially offset by the addition of the Ft. Myers Plant MTHS as discussed in FPL's April 2, 2018 testimony.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $215,900.

Capital - Estimated project revenue requirements for the projection period are $2,708,761.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Turkey Point Cooling Canal Monitoring Plan ("TPCCMP")

Project No. 42

Project Description:

Pursuant to Conditions IX and X of DEP's Final Order Approving Site Certification, FPL submitted a revised Cooling Canal Monitoring Plan to the South Florida Water Management District ("SFWMD"). After receiving input from the SFWMD as well as DEP and Miami-Dade County Department of Environmental Resource Management ("MDC DERM"), the Revised Plan was finalized on October 14, 2009. The objective of FPL's TPCCMP Project is to implement the Conditions of Certification IX and X.

Based on the data FPL had collected pursuant to the Revised Plan, DEP, in consultation with the SFWMD and the MDC DERM issued a final Administrative Order ("AO") on December 23, 2014. The AO directed FPL to achieve a substantial reduction in Cooling Canal System ("CCS") salinity within four years and identifies a series of potential measures that FPL could include in the Salinity Management Plan ("SMP") that FPL must file with DEP outlining how it will do so. The AO was challenged by several parties. In October 2015, the MDC DERM entered into a Consent Agreement ("CA") with FPL. Following challenges to the AO, DEP issued a Final Administrative Order on April 21, 2016, and on April 25, 2016, it issued a Notice of Violation ("NOV") regarding the hypersaline groundwater to the west of the CCS and a Warning letter identifying issues related to water quality in few deep artificial channels to the east and south of the CCS. The NOV directed FPL to enter into a Consent Order ("CO") to, at a minimum, remediate the CCS contribution to the hypersaline plume, reduce the size of the hypersaline plume, and prevent future harm to waters of the State. The CO was executed between FPL and DEP on June 20, 2016. On August 15, 2016 the MDC DERM entered into an addendum to the CA with FPL ("CAA"), which requires FPL to undertake additional activities to address releases of groundwater into deep artificial channels on the east side of the CCS.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

FPL continues to move forward with compliance and implementation of actions associated with activities required under the CO, CA and CAA. On May 9, 2018 FPL received a Section 404 permit from the U.S. Army Corp of Engineers for the restoration of the Turning Basin and Turtle Point Canal, two deep external artificial channels adjacent to the CCS. The final permit for the restoration work is expected later this year. On May 15, 2018, FPL began operation of the recovery well system ("RWS") consisting of 10 extraction wells required by the CO and CA. The RWS will extract 15 million gallons per day of hypersaline groundwater from the Biscayne aquifer and safely dispose it in an underground injection control ("UIC") well. Since FPL began extracting the hypersaline plume using an interim extraction system in the fall of 2016, FPL has removed approximately 3,800 million pounds of salt from the Biscayne Aquifer. Prior to operation of the RWS, FPL completed a baseline controlled source electromagnetic survey required by the CO and CA. This survey will provide a three dimensional view of the hypersaline plume and aid in assessing the extraction of the hypersaline plume. Pursuant to the CO, on June 20, 2018 FPL completed an analysis that seeks to allocate relative contributions of other entities or factors to the movement of the saltwater interface. This analysis was completed using the variable density three dimensional groundwater model developed under the CA, with input from DEP and other agencies.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project expenditures are $28,268,375, which is $9,463,456 or 50.3% higher than previously projected. The variance is primarily due to the deferral of certain activities from 2017 to 2018, as discussed in FPL witness Michael W. Sole's testimony filed April 2, 2018.

Capital - Project revenue requirements are $4,504,185 which is $1,791,486 or 28.5% lower than previously projected. As discussed in the testimony of witness Sole filed April 2, 2018, the variance is primarily due to deferrals in capital spending from 2017 to the later part of 2018 for the Turning Basin and Turtle Point Backfill projects as a result of delays in the permitting process.

Project Projections:

(January 1, 2019 to December 31, 2019)

FORM: 42-5P

PROJECT DESCRIPTION AND PROGRESS

Project Title: Martin Plant Barley Barber Swamp Iron Mitigation Project

Project No. 44

Project Description:

Martin Plant Barley Barber Swamp Iron Mitigation Project was installed in 2011. The project included the installation of complete siphon systems to mitigate iron discharges in the Barley Barber Swamp. The systems, which use cooling pond water (low iron) to hydrate the swamp, are required by permit.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

Capital - Project revenue requirements are estimated to be $14,919 which is $110 or 0.7% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

Capital - Estimated project revenue requirements for the projection period are $14,491.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: 800MW Unit ESP Project

Project No. 45

Project Description:

On December 21, 2011, the Environmental Protection Agency issued the final MATS rule as required under Section 112 of the Clean Air Act for regulation of Hazardous Air Pollutants. This has the effect of requiring Electrostatic Precipitators ("ESPs") for the 800 MW oil-fired units (Martin Units 1 and 2, Manatee Units 1 and 2) to meet the established numerical emission limits for particulate material when combusting fuel oil. ESPs are the most cost-effective form of particulate emission control for the 800 MW oil-fired units. As to the final MATS rule's limits on acid gasses, FPL will use the compliance option of limiting the moisture content of the oil it burns in those units through its specifications for fuel oil procurement. To comply, FPL installed ESPs on Manatee Units 1 and 2 and Martin Units 1 and 2.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

The installation of ESPs on units 1 and 2 at Martin was completed and placed in service in 2014.

The systems will continue to run through 2018, until the units are retired, with O&M costs for payroll, materials, and contractors. These costs are associated with inspections, preventative maintenance, and repairs needed to operate and maintain the system.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $752,395, which is $70,786 or 8.6% lower than previously projected.

Capital - Project revenue requirements are estimated to be $24,103,096, which is $123,188 or 0.5% lower than previously projected.

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: NPDES Permit Renewal Requirements

Project No. 47

Project Description:

The Federal Clean Water Act requires all point source discharges into navigable waters from industrial facilities to obtain permits under the NPDES program. See 33 U.S.C. Section 1342. Pursuant to EPA's delegation of authority, DEP implements the NPDES permitting program in Florida. Affected facilities are required to apply for renewal of the 5-year-duration NPDES permits prior to their expiration. Any additional costs incurred due to new permit requirements are recovered via this project.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

On November 4, 2016, DEP issued a renewed NPDES permit for the St. Lucie Plant. The renewed permit contained several new requirements. One of these requirements was that the plant initiate, by November 4, 2017, a chlorine optimization study consisting of three phases: Phase I consists of project baseline data collection and planning; Phase II is the actual project implementation, which includes preparation, project initiation and completion, and report writing; and Phase III is post-implementation support. A consultant was retained and Phases I and II must be completed by November 4, 2018. Thus far, the plant is conducting a pilot test for the use of chlorine dioxide to replace sodium hypochlorite (bleach) as a biocide in the plant's cooling water system. It was also determined that less bleach could be used in the plant's intake cooling water system. Smaller pumps were installed to directly inject chlorine into that system resulting in a significant cost savings and reduction in the amount of chemical introduced to the environment. In addition, FPL, with assistance from a consultant who has been retained, will utilize a DEP approved mixing zone modeling plan, should the chlorine dioxide prove to be ineffective, such that the plant would continue to use sodium hypochlorite as a biocide for the plant's once-through cooling water system.

In another 2018 project, the Martin Plant NPDES Permit is being renewed in 2018. DEP has informed FPL that the new permit will contain a discharge limit for a new parameter, total ammonia as nitrogen ("TAN"). DEP is aware the Martin Plant will not be able to meet the TAN limit for

several of the facility's wastewater discharges without an administrative solution or installation of a treatment system. Therefore, Martin Plant has applied to DEP to obtain a Site Specific Alternative Criterion ("SSAC") for the site which is issued under Rule 62-302.800, F.A.C. The process for obtaining the SSAC requires the amendment of Rule 62-302.520(3), F.A.C. The process for amending the rule includes an application, a public workshop, and approval by the Environmental Regulatory Commission ("ERC"), and, ultimately, the DEP Secretary. FPL estimates this process will result in approximately $20,000 of ECRC related expenses. Costs for the studies required to justify the SSAC were expensed under a base account. Should the ERC or DEP not approve the SSAC, FPL will have to explore alternative treatment methods to allow the discharges to meet the new TAN limits at Martin Plant. The following additional activity also occurred in 2018:

- Whole Effluent Toxicity ("WET") Testing – WET testing was conducted at Cape Canaveral, Lauderdale, Ft. Myers, Riviera and St. Lucie plants.

For informational purposes, FPL notes that it submitted a petition on March 5, 2018, and testimony on April 2, 2018, regarding recovery of the cost for replacing the cooling tower packing in Plant Scherer Unit 4 which is partially owned by FPL. The estimated cost for FPL's portion of this project was $9 million. The actual cost of the project, which began in March 2018 after submittal of the petition and was completed in May 2018, was $7.9 million. Because the NPDES permit renewal process is still in an early stage, FPL is seeking to defer ECRC recovery only after issuance of the renewed NPDES permit with a requirement to address copper discharges. Prior to that, FPL will exclude the costs incurred for the repacking activity at Plant Scherer Unit 4 from ECRC recoverable accounts and instead will record those costs in base capital accounts. Any associated expenses will likewise be recorded in base expense accounts.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project expenditures are $487,554 which is $189,356 or 63.5% higher than previously projected. The variance is primarily related to the installation of chlorine injection pump skids at the St. Lucie Plant. These pumps are projected to cost effectively optimize chlorine use in the intake cooling water system, which is a requirement of the facility's Florida Department of Environmental Protection Industrial Wastewater Facility Permit No. FL0002208. Study work on

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

chlorine optimization of the remaining St. Lucie Plant water systems is ongoing and additional activities will likely be identified and implemented prior to completion of the study.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $45,127.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Industrial Boiler MACT Project

Project No. 48

Project Description:

40 CFR Part 63 Subpart JJJJJ Final Rule for National Emission Standards for Hazardous Air Pollutants for Area Sources: Industrial, Commercial, and Institutional Boilers was published on March 21, 2011. In EPA's final rule it published notice that it intended to reconsider the major source rule, as well as the final rule establishing emissions standards for boilers located at area sources. *(See 76 Fed. Reg.15266).* FPL must complete energy audits, inspections and boiler tune-ups as well as comply with recordkeeping requirements for boilers and heaters that are subject to the requirements of the rule.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

FPL's Industrial Boiler MACT project includes required boiler tuning for the affected units and one-time performance of a site energy audit for each site. FPL has completed all required one-time energy audits at all of its affected facilities. FPL has also performed required boiler tunings at FPL's Martin Fuel Oil Terminal and the auxiliary boilers at its Fort Myers, Lauderdale, Martin, and West County power generation facilities.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $17,000, which is $6,000 or 26.1% lower than previously projected.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $32,000.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Thermal Discharge Standards Project

Project No. 49

Project Description:

FPL power plants with once-through cooling water systems that were built before July 1, 1972, must meet a "narrative" thermal standard found in Chapter 62-302.520(1) (a)-(c) F.A.C.

Facilities that cannot meet DEP narrative standard for thermal discharges may apply for a "variance" (i.e. less stringent standards) under Section 316(a) of the Federal Clean Water Act. Section 316(a) ensures that thermal effluent limitations will assure protection and propagation of a balanced, indigenous population of shellfish, fish, and wildlife and provides that thermal dischargers can be granted less stringent alternate thermal limits than those imposed by a state program if the discharger can demonstrate that the current effluent limitations, based on water quality standards, are more stringent than necessary to protect the aquatic organisms in the receiving water body.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

There are no projected costs.

Project Projections:

(January 1, 2019 to December 31, 2019)

There are no projected costs.

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Steam Electric Effluent Limitation Guidelines Revised Rule

Project No. 50

Project Description:

Title 40 Code of Federal Regulations Part 423, which was promulgated under the authority of the Federal Clean Water Act, limits the discharge of pollutants into navigable waters and into publicly owned treatment works by existing and new sources of steam electric power plants. The previous version of the Steam Electric Effluent Limitation Guidelines ("ELG") Rule was published in the Federal Register on November 19, 1982. The renewed final ELG rule was promulgated and became effective on January 4, 2016. The ELG Rule requires facilities to be in compliance as soon as possible, but no later than 2023. In May 2018 EPA published a new plan for implementation of the ELG Rule, which could result in less stringent requirements. EPA is reviewing the rule to determine if the strict requirements for treating or eliminating certain wastestreams are justified. A new draft ELG Rule is expected by December 2018, with a new final rule is expected to be in place by December 2019.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

The operating agent for Plant Scherer conducted studies which looked at a number of possible technology solutions in an attempt to determine the costs for various methods of complying with the ELG Rule under assumptions presented in the proposed rule. Activities necessary to achieve compliance will continue until the compliance dates are officially postponed.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are estimated to be $295,500, which is on target for 2018.

Capital – Estimated revenue requirements for the project are $0

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Gopher Tortoise Relocation Project

Project No. 51

Project Description:

The gopher tortoise *(Gopherus polyphemus)* is a state-designated threatened species, per Rule 68A-27.003(1)(d)3, F.A.C. Gopher tortoises have been creating burrows in the cooling pond embankments at FPL's Martin , Manatee and Sanford power plants over time, as well as in the oil tank farm embankments at Martin and Manatee plants. Gopher tortoise burrows must be inspected and then filled as necessary to ensure the integrity of the embankments. Filling burrows means that affected gopher tortoises must be relocated. In 2008, the Florida Fish and Wildlife Conservation Commission provided new gopher tortoise guidelines that have changed the permitting process for relocations. An authorized gopher tortoise agent is now required to conduct surveys and perform relocations, and all tortoises now must be sent to a recipient site.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

In 2018, gopher tortoise burrows were discovered in the Manatee plant's cooling pond that could compromise the embankments' integrity. In order to fill the burrows, the gopher tortoises are expected to be relocated by an authorized gopher tortoise agent by the end of the year. FPL continues through the year to monitor the Martin and Sanford plants' cooling ponds and the Manatee Fuel Oil Storage Terminal embankments as well.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - Project costs are expected to be $24,649, which is on target for 2018.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projected period are $25,649.

PROJECT DESCRIPTION AND PROGRESS

Project Title: Numeric Nutrient Criteria

Project No. 52

Project Description:

DEP drafted a Numeric Nutrient Criteria ("NNC") rule on June 28, 2013, and EPA accepted the state numeric and narrative standards for freshwaters. On September 26, 2013, EPA accepted DEP's NNC standards for Florida's estuaries. The Environmental Resource Council for the State of Florida adopted the proposed NNC for estuarine and coastal waters on December 1, 2014. DEP submitted the final coastal criteria to EPA in May of 2015. DEP's NNC rule has been implemented through NPDES Industrial Waste Water permit renewals to achieve the reduction of total nitrogen and total phosphorus discharges and loading in Florida freshwaters, estuarine and coastal waters.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

There was no activity in 2018.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M -There are no projected costs.

Project Projections:

(January 1, 2019 to December 31, 2019)

There are no projected costs for the projection period.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Coal Combustion Residuals – SJRPP and Scherer

Project No: 54

Project Description:

The final rule entitled, "Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals From Electric Utilities," which became effective October 19, 2015, is found in 40 CFR Parts 257 and 261, regulates the disposal of coal combustion residuals ("CCR") generated from the combustion of coal in new and existing impoundments and landfills at electric utilities and independent power producers.

The CCR rule established requirements for location, design, operation, safety, public disclosure and closure of CCR impoundments and landfills at electric utilities. Existing facilities that fail to meet the criteria including the location requirements or indications of groundwater impacts are required to cease receiving CCR in 6 months and initiate closure of the disposal unit.

The rule set specific schedules for implementation of each of the performance requirements including a groundwater monitoring system and detection monitoring plan, inspection, demonstration of compliance with location restrictions or no groundwater contact, development of the CCR unit closure plan and Professional Engineer inspections. While SJRPP was retired on January 5, 2018, the CCR rule compliance requirements for ash which was previously produced continues.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Project accomplishments included replacement of the Plant Scherer Unit 4 wet bottom ash handling system, ongoing construction of the common ash management silo area, and CCR water management system.

Project Costs:

(January 1, 2018 to December 31, 2018)

O&M - There are no projected O&M costs.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Capital - Project revenue requirements are estimated to be $3,243,328, which is $291,800 or 9.9% higher than previously projected. The variance is primarily related to higher than projected engineering and construction costs associated with required wastewater treatment and higher than projected quantities of concrete, steel, piping and installation labor hours associated with ash management activities for Plant Scherer. These increases were partially offset by lower than projected costs associated with deferral of the landfill construction.

Project Projections:

(January 1, 2019 to December 31, 2019)

O&M - Estimated project costs for the projection period are $334,680.

Capital - Estimated project revenue requirements for the projection period are $6,033,559.

FORM: 42-5P

FLORIDA POWER & LIGHT COMPANY
PROJECT DESCRIPTION AND PROGRESS

Project Title: Solar Site Avian Monitoring and Reporting

Project No. 55

Project Description:

Pursuant to the Development Review Committee Order DR-17-04 ("Order DR-17-04") issued by the Alachua Department of Growth Management ("Alachua DGM") on February 16, 2017, FPL is required to conduct avian mortality monitoring and report on the results of that monitoring as a permit condition for the Horizon Solar Energy Center ("HSEC"). FPL will be monitoring and reporting on avian mortality at FPL's existing DeSoto solar photovoltaic ("PV") facility ("DeSoto"), utilizing a protocol for avian monitoring at solar facilities that was developed in conjunction with the Florida Fish and Wildlife Conservation Commission ("FWC"). In order to accommodate the Alachua DGM's desire for prompt results, FPL recommended that monitoring be conducted at DeSoto (an existing universal solar facility) because construction of HSEC had not been completed at the time the permit condition was imposed. Using a fully operational site helped FPL and FWC create the avian solar protocol and allowed FPL to conduct a necessary trial in 2017 for implementing the protocol. The Alachua DGM agreed that the data from DeSoto would be representative of future universal solar PV facilities located in Alachua County and required the monitoring be conducted at DeSoto as part of the Order DR-17-04.

Project Accomplishments:

(January 1, 2018 to December 31, 2018)

Pursuant to Order DR-17-04, FPL is required to conduct four seasons of avian mortality monitoring, including bias trials (carcass persistence and searcher efficiency), and must provide Alachua County an annual report with fatality estimates for birds. FPL will start the standardized mortality monitoring in 2018.

FLORIDA PUBLIC SERVICE COMMISSION
DOCKET: 20180007-EI EXHIBIT: 15
PARTY: DUKE ENERGY FLORIDA, INC. (DEF)(DIRECT)
DESCRIPTION: Christopher Menendez

DUKE ENERGY FLORIDA, LLC
Environmental Cost Recovery Clause
Final True-Up
January 2017 - December 2017
(in Dollars)

Form 42-1A

Docket No. 20180007-EI
Duke Energy Florida
Witness: C. A. Menendez
Exh. No. __ (CAM-1)

Line		Period Amount
1	Over/(Under) Recovery for the Period January 2017 - December 2017 (Form 42-2A, Line 5 + 6 + 10)	$ 6,565,806
2	Actual/Estimated True-Up Amount Approved for the Period January 2017 - December 2017 (Order No. PSC-2018-0014-FOF-EI)	1,751,015
3	Final True-Up Amount to be Refunded/(Recovered) in the Projection Period January 2019 to December 2019 (Lines 1 - 2)	$ 4,814,791

DUKE ENERGY FLORIDA, LLC
Environmental Cost Recovery Clause
Final True-Up
January 2017 - December 2017

End-of-Period True-Up Amount
(in Dollars)

Form 42-2A

Docket No. 20180007-EI
Duke Energy Florida
Witness: C. A. Menendez
Exh. No. __ (CAM-1)

Notes:

(A) N/A

(B) Jan - Jun 2017 Line 6 x 9.80% x 1/12. Jul - Dec 2017 Line 6 x 9.66% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 4.87% (Jan-Jun) and 4.70% (Jul-Dec), and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002). See Stipulation & Settlement Agreement in Order No. PSC-2012-0425-PAA-EU Docket No. 20120007-EI.

(C) Depreciation calculated in Pipeline Integrity Management section of Capital Program Detail file only on assets placed in service. Calculated on that schedule as Line 2 x rate x 1/12. Depreciation Rate based on 2010 Rate Case Order PSC-2010-0131-FOF-EI.

(D) Property tax calculated in Pipeline Integrity Management section of Capital Program Detail file only on assets placed in service. Calculated on that schedule as Line 2 x rate x 1/12. Based on 2016 Effective Tax Rate on original cost.

(E) Line 9a x Line 10

(F) Line 9b x Line 11

(G) Projects 3.1b, 3.1c, and 3.1d are being treated as a regulatory asset and are being amortized over 3 years as approved in Order No. PSC-2016-0535-FOF-EI. Project 3.1a amortized over 26 months as approved in Order No. PSC-2018-0014-FOF-EI.

Notes:

(A) Jan - Jun 2017 Line 6 x 9.80% x 1/12. Jul - Dec 2017 Line 6 x 9.66% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 4.87% (Jan-Jun) and 4.70% (Jul-Dec), and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002).

(B) Line 5 is reported on Capital Schedule

(C) Line 7 is reported on O&M Schedule

(D) Line 9a x Line 10

(E) Line 9b x Line 11

(F) Unusable NOx emission allowances due to expiration of Clean Air Interstate Rile (CAIR) on 12/31/14 replaced by Cross State Air Pollution Rule (CSAPR) on 1/1/15. DEF is treating these costs as a regulatory asset and amortizing these costs over 3 years consistent with Order No. PSC-2011-0553-FOF-EI.

(G) June 2017 DEF sold $26,998 of Seasonal NOx inventory and made a gain on the sale of of $28,002, for a net proceed of $55,000.

Notes:

(A) N/A

(B) Jan - Jun 2017 Line 6 x 9.80% x 1/12. Jul - Dec 2017 Line 6 x 9.66% x 1/12. Based on ROE of 10.5%, weighted cost of equity component of capital structure of 4.87% (Jan-Jun) and 4.70% (Jul-Dec), and statutory income tax rate of 38.575% (inc tax multiplier = 1.628002).

(C) Depreciation calculated in Pipeline Integrity Management section of Capital Program Detail file only on assets placed in service. Calculated on that schedule as Line 2 x rate x 1/12. Depreciation Rate based on approved rates in Order PSC-2010-0131-FOF-EI.

(D) Property tax calculated in Pipeline Integrity Management section of Capital Program Detail file only on assets placed in-service. Calculated on that schedule as Line 2 x rate x 1/12. Based on 2016 Effective Tax Rate on original cost.

(E) Line 9a x Line 10

(F) Line 9b x Line 11

(G) Project 7.2g is being treated as a regulatory asset and is being amortized over 3 years consistent with Order No. PSC-2016-0535-FOF-EI.
