**BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION**

DOCKET NO 891345-EI

**REBUTTAL TESTIMONY
OF
E. B. PARSONS, JR.**

DOCUMENT NUMBER-DATE

04451 MAY 21 1990

FPSC-RECORDS/REPORTING

1 GULF POWER COMPANY

2 Before the Florida Public Service Commission
3 Rebuttal of
4 Earl B. Parsons, Jr.
5 In Support of Rate Relief
6 Docket No. 891345-EI
7 Date of Filing May 21, 1990

8 Q. Are you the same Earl B. Parsons, Jr. who testified
9 earlier in the proceeding?

10 A. Yes, I am.

11 Q. What is the purpose of your testimony?

12 A. The purpose of my testimony is to rebut the testimony
13 of Mr. Schultz, Mr. Larkin, and Mr. Rosen and the
14 positions taken by them with respect to issues raised
15 in this proceeding.

16
17 Q. Mr. Parsons, the Commission Staff and Office of Public
18 Counsel have taken the position that Plant Scherer Unit
19 3 capacity should not be included in rate base. What
20 is your response?

21 A. Gulf is deeply disturbed by the position taken by the
22 Staff regarding exclusion of Scherer 3 capacity in the
23 rate base. Also related to Scherer, Mr. Rosen has
24 filed testimony for the Office of Public Counsel that,
25 if followed by this Commission, will prove extremely

DOCUMENT NUMBER-DATE

04451 MAY 21 1990

EPSC-RECORDS/REPORTING

1 detrimental and harmful to the long-term best interests
2 of the customers which we serve in Northwest Florida.

3 I have been at Gulf Power Company since early
4 1978, when the Scherer capacity was first considered as
5 a cost-effective alternative to continuing construction
6 at the Caryville site. I personally participated in
7 the October 1978 workshop before the Florida Public
8 Service Commission at which time we presented our
9 proposal for cancelling Caryville and acquiring the
10 capacity at Scherer.

11 I have presented extensive testimony to this
12 Commission in four rate cases and attended a number of
13 Planning Workshops and Planning Hearings at which our
14 plans have been fully discussed with the Commission.
15 In every one of these instances, there has never been
16 any concern expressed on the part of the Commission
17 regarding the prudence of acquiring Scherer. If there
18 was a concern, it was that we might not be able to
19 acquire the Scherer capacity. The Commission felt so
20 strongly that we should make this purchase that it
21 held, subject to refund, our write-off of the Caryville
22 cancellation costs approved in Order No. 9628, pending
23 completion of a contract with Georgia to acquire
24 Scherer. Order No. 9628, Docket No. 800001-EU, Order
25 No. 10557, Docket No. 810136-EU, Order No. 11498,

1 Docket No. 820150-EU and a follow-up order issued on
2 May 15, 1984 address these issues.

3 We have on any number of occasions, both formally
4 and informally, presented our plans regarding our
5 capacity expansion and our off-system sales before the
6 Commission. It has been shown from the beginning that
7 Scherer capacity would eventually come back to our
8 territorial customers. Some of that capacity is
9 available for use by our territorial customers now.

10 The Scherer capacity was acquired for the
11 long-term benefit of our territorial customers. It was
12 not purchased for purposes of unit power sales. All of
13 our actions regarding this acquisition have been
14 prudent. If the Commission follows the prehearing
15 recommendation of its own Staff or that of Mr. Rosen in
16 his prefiled testimony and disallows cost recovery for
17 capacity which the Commission itself has agreed was
18 prudent to acquire, it will break the regulatory
19 compact which has been established with Gulf. While
20 Mr. Howell will fully review the details of our concern
21 in his testimony, I simply want to emphasize how
22 strongly the Company feels that disallowance of the
23 Scherer capacity in rate base would be a detriment to
24 our customers and send an extremely negative signal to
25

1 the Company regarding what constitutes prudence in its
2 decisions.

3 The long-term benefits of the Scherer capacity
4 were valid when we made the decision to invest, and are
5 still valid today. The new unit power sales, for which
6 Gulf contracted in 1988, will allow us to capture even
7 more savings for our territorial customers in the long
8 term.

9 As Mr. Howell will cover in his testimony, Gulf
10 had two choices - either participate in Scherer or not.
11 Participation requires at least a 40 year commitment to
12 the capacity and, therefore, cost-effectiveness must be
13 viewed over the long term. If the Company were to
14 follow the philosophy suggested by the Staff and Mr.
15 Rosen, it would cease making decisions based on
16 long-term cost benefits and make decisions based on
17 one-year, short-term analysis. This would create an
18 extremely unreliable and costly electric system for our
19 customers. Mr. Howell will cover in detail how the
20 Scherer decision is a long-term benefit to our
21 customers, and how we have done everything reasonable
22 to minimize the impact of the Scherer capacity in the
23 test year. I ask the Commission to approach this issue
24 with an open mind, carefully consider the strong

25

1 evidence which we will present, and allow cost recovery
2 of the Scherer capacity.

3
4 Q. Mr. Parsons, do you agree with Mr. Rosen's
5 recommendation of an 18 percent reserve margin for
6 Gulf?

7 A. No. The 20-25 percent range for planning reserve
8 margin guideline utilized by Gulf and Southern has been
9 adopted by the Commission as reasonable. Since the
10 criteria was last established, there has been no need
11 to commit to additional capacity on the system. As
12 indicated in Mr. Howell's testimony, the criteria was
13 last reviewed and deemed appropriate by the
14 Commission's consultant in Docket 860004-EU. As the
15 time approaches when there will be a need to commit to
16 new capacity, we believe it is appropriate to review
17 this criteria. Such a study is now under way.
18 Although the operating companies of Southern have
19 determined to maintain a minimum 20 percent planning
20 reserve margin guideline, commitments for capital
21 expenditures in 1990 for capacity additions have been
22 limited based on a 16 percent reserve margin until the
23 detailed study is completed, hopefully, later this
24 year. The consequences of committing these large
25 capital expenditures which may be later deemed to be

1 imprudent, with 20/20 hindsight, are too great to
2 justify moving forward without this additional detailed
3 examination of capacity requirements.

4 Short lead time demand side options and short term
5 capacity purchases will be utilized, if necessary, to
6 provide adequate reserves during the test year.

7
8 Q. On page 17 of his testimony, Mr. Larkin suggests that
9 the Caryville site should be excluded from rate base
10 because there is no plan to build a generating unit on
11 the Caryville site. Is he correct?

12 A. No. Caryville is still a viable, certified site for
13 future base load coal capacity in Gulf's system. As I
14 have previously stated, the Commission agreed with
15 Caryville's inclusion in rate base as plant held for
16 future use in Docket Nos. 800001-EI, 810136-EU,
17 820150-EU and 840086-EI. For example, in Order
18 No. 9628, the Commission supports this decision by
19 stating, "We agree with the Company that its plans for
20 the site are sufficiently definite to warrant its
21 inclusion, and that to deny the request would be to the
22 disadvantage of ratepayers in the long run." Inclusion
23 of the Caryville site in rate base for plant held for
24 future use is still a prudent decision by the
25 Commission.

1 Q. What is the value of this site to the customers of Gulf
2 Power?

3 A. An extensive site selection study was undertaken in the
4 late 1960's and early 1970's when Gulf projected the
5 need for a new generating plant site. Caryville was
6 determined to be the most viable of all the sites
7 analyzed. Because of the extreme difficulty in
8 certifying new sites due to stringent environmental
9 requirements, Caryville may well be the only available
10 site on which to locate future generation in Northwest
11 Florida; future generation which will be required as
12 our customers' needs grow.

13
14 Q. Is the present property owned by Gulf Power Company at
15 Caryville of a sufficient size to accommodate its
16 future generation needs?

17 A. No. The Caryville site was originally certified during
18 1976 for the initial construction of two 500 mw low
19 sulfur coal units. Again, as I have stated in my
20 direct testimony, changes in environmental regulations
21 since that time now require that flue gas
22 desulfurization equipment or scrubbers be installed on
23 any base load generating units constructed at the site.
24 Additional space will be required for the scrubbers,
25 limestone storage and the waste by-product. Additional

1 space will also be required for 500 kv transmission
2 lines and substations rather than the 230 kv systems
3 certified.

4

5 Q. Why is the additional land purchase important at this
6 time?

7 A. Again, as I have previously stated in my direct
8 testimony, since the units are not needed immediately,
9 Gulf can secure property adjacent to the Caryville site
10 as it comes on the market at a much lower price than if
11 we were to wait until construction begins. The extreme
12 difficulty anticipated in acquiring and certifying
13 sites in the future makes it necessary and prudent to
14 proceed with the purchase of additional property as it
15 comes on the market in order to enhance and protect the
16 viability of the site for future generation needs.

17

18 Q. What action will Gulf take if the Commission excludes
19 the site from the rate base?

20 A. This would indicate that the Commission does not
21 believe that this site has future value to Gulf's
22 customers. We would have to consider possibly selling
23 the property. A Commission decision such as this would
24 have a significant negative impact on Gulf's ability to
25 meet long-range generating capacity needs at a

1 reasonable cost. We are simply attempting, as the
2 Commission has encouraged us to do on many occasions,
3 to project future needs and, using sound reasoning, act
4 in advance so that we can save our customers' money.
5 We feel the purchase of additional land for this site
6 as it becomes available is a prudent action.

7
8 Q. On page 28, Mr. Larkin recommends excluding the
9 Caryville subsurface study from working capital. Do
10 you agree?

11 A. No. The subsurface investigation of the Caryville site
12 is still valid relative to the geological conditions.
13 This information will be utilized in the design of
14 foundations and placement of structures for future
15 generating capacity.

16
17 Q. Do you agree with Mr. Schultz's recommendation
18 beginning on page 28 of an adjustment of \$617,595 for
19 SCS expenses?

20 A. No. Mr. Schultz references OPC Interrogatory No. 53
21 and places undue emphasis on isolated items without
22 including the entire text of Gulf's response. For
23 example, Gulf does state that Southern Company Services
24 (SCS) "prepares estimates of its billings to Gulf";
25 however, that same paragraph goes on to detail how this

1 interaction takes place. As shown in this
2 interrogatory, this is a very detailed process in which
3 Gulf interacts with SCS personnel on a continuous basis
4 in the development and monitoring of the SCS budget and
5 actual expenses.

6
7 Q. On page 29, Mr. Schultz implies that indirect expenses
8 which are allocated to the operating companies based on
9 a set percentage "are not subjected to the same
10 scrutiny by the Company as that of the costs of a
11 specifically requested item." Do you agree with this
12 statement?

13 A. No. There is no statement in OPC Interrogatory No. 53
14 which indicates that only direct charges are handled in
15 the manner described. On the contrary, work orders
16 exist for the allocation of these indirect charges and
17 are monitored in the same method as direct charges.
18 The generic allocated work orders remain a standing
19 authorization of work to be performed, unless
20 termination of these work orders is recommended by the
21 various committees and/or operating companies.

22
23 Q. On page 2 of 3, line numbers 1 - 9 of Mr. Schultz's
24 Schedule HWS - 7, he recommends that the Commission
25 disallow SCS expenses related to a variety of research

1 projects and studies undertaken on behalf of Gulf Power
2 Company. Is this a duplication of work between Gulf,
3 SCS, and EPRI?

4 A. No. The recommended disallowance is based on the
5 incorrect presumption that these services are
6 duplicative of research managed by the Electric Power
7 Research Institute (EPRI). These services are, in
8 fact, complimentary and not duplicative. Some 600
9 member utilities fund EPRI's large-scale, cooperative
10 research and development programs. As a result, EPRI
11 undertakes research programs that are responsive to the
12 needs of the electric utility industry as a whole.
13 EPRI does not undertake individual utility specific
14 research nor does it apply its research only to
15 individual utility specific problems.

16 SCS assists Gulf Power Company in attaining
17 maximum benefit from EPRI's research. These research
18 and research management activities include:

- 19 a) participating in the EPRI advisory system to
20 ensure that EPRI's research meets the needs
21 of Gulf Power Company;
- 22 b) reviewing, summarizing, evaluating, and
23 communicating the results of EPRI research to
24 Gulf Power in order to ensure maximum benefit

25

1 from its investment in EPRI research
2 (Technology Transfer); and
3 c) conducting local, company-specific studies in
4 order to apply the results of key EPRI
5 research to specific Gulf Power Company
6 issues. In some cases this can include
7 co-funding EPRI projects conducted at Gulf
8 facilities or within Gulf's service
9 territory.

10 SCS also conducts site specific research at Gulf's
11 facilities on areas of concern not addressed by EPRI.
12 The majority of the research performed by SCS for Gulf
13 is specific to the needs of Gulf and the system.

14
15 Q. On page 34, Mr. Schultz recommends an adjustment
16 removing "the cost of SCS services which have been
17 budgeted at amounts substantially in excess of actual
18 average costs for such services." Do you agree?
19 A. No. We do not agree that excess costs have been
20 budgeted for SCS. Any budget approved by Gulf for SCS
21 work has been thoroughly reviewed by Gulf personnel
22 responsible for that activity. When the budget is
23 approved, it is our best estimate for required
24 manpower. That is the case in 1990. The budget is
25

1 reflective of conditions and work loads faced by our
2 Company under present circumstances.

3
4 Q. Why do SCS expenses for System Planning exceed the
5 benchmark?

6 A. The 1984 benchmark of allowed charges from SCS of
7 \$57,000 was developed from seven months of actual
8 charges (January through July of 1984) extrapolated to
9 the end of the year.

10 Although the actual charges were below the budget
11 for the first seven months, this relationship did not
12 hold true for the remainder of 1984 due to workload and
13 resource usage fluctuations. The actual charges for
14 1984 were \$157,000. Therefore, considering the entire
15 year of 1984, the base was lower than it should have
16 been.

17 A compound inflation multiplier of 1.2468 was used
18 to calculate a 1990 benchmark from the 1984 base.
19 Applying this same multiplier to the 1984 SCS actual
20 charges of \$157,000 would result in a 1990 adjusted
21 benchmark of \$196,000. The 1990 SCS budget for this
22 work order is \$167,000, which is 14.8 percent below the
23 adjusted benchmark.

24 These charges are for valuable services which SCS
25 delivers to Gulf in providing expert engineering

1 assistance for the planning of reliable, economical,
2 and flexible resources to meet the energy requirements
3 of Gulf Power. If SCS were not providing these
4 services, then, in order to perform these tasks, the
5 Company would either retain outside consultants, who
6 have less understanding of Gulf Power and the Southern
7 system, or have to increase the number of employees in
8 Gulf's System Planning Department.

9
10 Q. At page 37 of his testimony, Mr. Schultz argues that
11 expenses related to Atmospheric Fluidized Bed
12 Combustion and Living Lakes, Inc., are duplicative or
13 unnecessary. Is there any validity to his contention?

14
15 A. No. Mr. Schultz makes this statement but provides no
16 support for his recommendation. The research and
17 development charges as noted on MFR Schedule C-57,
18 page 3, are fully justified.

19 Future legislation requiring significant
20 reductions of sulfur dioxide emissions from coal-fired
21 utilities mandates the development of new, cleaner
22 combustion techniques. Atmospheric fluidized bed
23 combustion is such a technology and the TVA/Duke Power
24 project is a full scale development project for this
25 important new clean combustion system. The knowledge

1 gained in working with the TVA/Duke project will allow
2 the SCS engineers to evaluate future designs of the
3 system.

4 Living Lakes Inc. is a not-for-profit corporation
5 whose primary purpose is to demonstrate effective
6 technologies for the neutralization of acidified
7 surface water. Living Lakes, Inc., has developed
8 mitigation and investigative techniques for lowering
9 the acidity of lakes that become acidified, either from
10 natural or man induced causes. Living Lakes, Inc., has
11 successfully treated numerous lakes in the country and
12 restored them to a healthy condition at a fraction of
13 the cost of emission control projects currently being
14 debated in Congress.

15
16 Q. Beginning on page 49, Mr. Schultz recommends an
17 adjustment to disallow Gulf's nuclear power research
18 expenses associated with EPRI. Do you agree with this
19 adjustment?

20 A. No. Much of the costs incurred by EPRI relative to
21 nuclear power production research are also inherent to
22 steam production (turbines, feedwater heaters,
23 controls, condenser fouling, cooling towers,
24 valves, fans, etc.) and, therefore, advantageous
25 directly to Gulf. However, Gulf also benefits from the

1 remainder of the nuclear research because of its
2 participation in the Southern system pool. Benefits
3 received directly by other sister operating companies
4 also indirectly benefit Gulf through increased
5 efficiency of units and lower costs of purchased power.
6 Future generation requirements by Gulf's customers
7 dictate that new sources of power be evaluated to
8 determine which are most economical and efficient.
9 Nuclear projects should be a part of that evaluation.
10 It is essential that nuclear power research be funded
11 as we look forward to the future.

12
13 Q. Mr. Schults questions the fact that some research
14 expenses were zero during the benchmark period. Was
15 this a correct entry on Gulf's part?

16 A. Yes. Gulf prepared its benchmark based on the
17 Commission's instructions. Gulf summarized the total
18 variance on page 3 of MFR C-57 showing a variance of
19 \$210,000 for specific research and development expenses
20 in the Steam Production function. These expenses could
21 have been listed individually on page 3 but, because
22 they were related, they were grouped under this heading
23 just as we grouped all of Plant Daniel's expenses. As
24 shown on pages 4-9 of MFR C-57, there were no dollars
25 budgeted in 1984 for any of these expenses and

1 therefore, the base for calculation of the benchmark is
2 zero.

3
4 **Q.** Are any of Gulf's research and development costs a
5 duplication of research undertaken by EPRI?

6 **A.** No. Approximately 1700 different projects are
7 undertaken by EPRI annually. These projects are spread
8 over 60 different strategic programs. There is no way
9 Gulf or Southern could duplicate either the depth of
10 EPRI's research or the number of EPRI projects. Gulf
11 conducts research through SCS for site specific needs
12 at Gulf's system or through the FCG for Florida
13 specific issues. These projects are long term and
14 designed for meeting our customers' needs for continued
15 low cost power.

16 **Q.** On page 85 of his testimony, Mr. Schultz discusses
17 research expenses. Mr. Schultz seems to be suggesting
18 that the Company has merely shifted the focus of
19 research since 1984, and then used the new focus as the
20 justification for research variances over the
21 benchmark. Is this a fair characterization of what
22 Gulf has done?

23 **A.** Absolutely not. Again, the benchmark presented for
24 this docket was developed according to Commission
25 guidelines from prior rate cases and as instructed in

1 MFR C-57. What is reflected in our benchmark is not a
2 shift in focus but rather an increased scope. For
3 example, the electric magnetic fields (EMF) study is a
4 new project added since 1984.

5

6 Q. Was the EMF project undertaken by Gulf through the
7 Florida Electric Coordinating Group a duplication of
8 research done through either Southern Company Services
9 or the Electric Power Research Institute?

10 A. No. This was not a duplication of effort. EPRI's
11 research encompasses human health effects of exposure
12 to electric and magnetic fields. The goal of EPRI is
13 to provide measurement methods and equipment to assess
14 possible effects resulting from the exposure of workers
15 and the public to EMF. SCS acts as a coordinator,
16 interfacing with EPRI, to distribute information to the
17 operating companies. There was no further research
18 undertaken by SCS regarding the EMF issue.

19 At the state level, the Florida Department of
20 Environmental Regulation (DER) was mandated by the
21 legislature to investigate, develop, and adopt a
22 standard for EMF from new transmission lines for the
23 state of Florida. Since the standard for EMF was to be
24 common to all utilities within the state, the FCG
25 joined with the DER in providing expert testimony.

1 Gulf was actively involved in this process. In 1989,
2 as directed by the legislature, DER adopted a rule and
3 numerical standards and the utilities have begun to
4 implement this rule.

5

6 Q. On page 86 of Mr. Schultz' testimony, he infers that
7 \$47,452 was approved in Gulf's 1984 rate case for acid
8 rain monitoring. Is this a true assumption?

9 A. No. Gulf's 1984 rate case was based upon our 1984
10 budget. There were no dollars budgeted in 1984 for
11 this project. The expenses shown on Gulf's response to
12 Staff Interrogatory No. 101 from Docket No. 881167-EI
13 are the actual dollars spent for the Acid Rain Study
14 for the years 1981-1988. As Gulf specifically states
15 in MFR C-57, the acid rain monitoring costs are a
16 result of a request by the Florida Department of
17 Environmental Regulation and an independent scientific
18 review panel to continue this monitoring in order to
19 complement a growing data base on the acidity of wet
20 and dry deposition. This data base will provide
21 information which could be very critical to measuring
22 the success of new federal Clean Air Legislation.

23

24 Q. Mr. Parsons, an issue has also been raised regarding
25 Gulf's heavy oil inventory level. Would you please

1 discuss the basis for the Company's request?

2 A. Yes, the Company's inventory request of \$1,042,000
3 serves to protect Gulf's ratepayers from having three
4 of Gulf's generating units unavailable for use due to
5 an interruption in fuel supply. Without a supply of
6 heavy oil in inventory on the plant site, these units
7 could be considered non-firm generating capacity,
8 thereby not receiving full credit in the Intercompany
9 Interchange Contract (IIC). The primary fuel for these
10 units is pipeline natural gas, which is subject to
11 interruption or curtailment.

12 The plant receives oil only by truck. If an
13 emergency fuel situation developed and Units 1, 2, and
14 3 were required to run at full capacity, procurement
15 and delivery problems could prevent sustained
16 operation. The present oil in storage provides
17 adequate oil to allow the units to run for an emergency
18 period and simultaneously procure replacement oil.

19
20 Q. If Crist Units 1,2, and 3 are considered non-firm
21 capacity due to not having a sufficient quantity of
22 standby fuel available, does that affect Gulf Power's
23 IIC capacity payments?

24 A. Yes. The loss of 84.4 MW of fossil generating capacity
25 in the Intercompany Interchange Contract would result

1 in a net loss of over \$6 million in capacity payments
2 for 1990.

3
4 Q. Mr. Parsons, an issue has been raised as to whether the
5 Company's proposed inventory for No. 2 oil should be
6 adjusted. Would you please discuss this proposal?

7 A. Yes. Gulf is requesting a total of \$359,000 of No. 2
8 oil inventory to serve as fuel for the combustion
9 turbine and as lighter fuel at all five plants. The
10 inventory level advocated by Staff in their preliminary
11 position equates to a 68 percent reduction from the
12 Company's proposed level. No. 2 oil is not consumed at
13 a constant rate, but varies on a relatively
14 unpredictable basis from day to day. The usage depends
15 on peaking requirements, unit start-ups, and load
16 changes. This oil is delivered by trucks which
17 restricts the amount a plant can receive at any one
18 time. The requested oil inventory is necessary to
19 allow for variations in plant consumption and
20 procurement and to guard against market volatility and
21 supply disruptions.

22 Gulf has recognized the decreased likelihood of
23 supply disruptions and the minimal operation of the
24 combustion turbine. The requested combustion turbine
25

1 oil inventory is only 50 percent of available tank
2 capacity.

3

4 Q. Mr. Parsons, will you please summarize your testimony?

5 A. I have provided additional testimony supporting the
6 inclusion of Plant Scherer Unit 3 capacity in Gulf's
7 rate base. Again, this capacity was acquired for the
8 long-term benefit of our territorial customers and has
9 been deemed by the Commission in past dockets as a
10 prudent acquisition. In addition, I have addressed the
11 planning reserve margin guideline used by Gulf and
12 adopted by the Commission in prior dockets versus that
13 level proposed by Mr. Rosen. Also, I have supported
14 the continued inclusion of the current Caryville site
15 and future land purchases in plant held for future use
16 based on its value to territorial customers for future
17 generation needs at a reasonable cost. Next, I have
18 attempted to address several O & M issues raised by
19 Mr. Schultz. Testimony has been provided disputing the
20 incorrect presumption on the part of Mr. Schultz in his
21 prefiled testimony relative to a duplication of work
22 between Gulf, SCS and EPRI for various O & M costs and
23 research expenses. As I have stated earlier in my
24 testimony, these services are not duplicative. Gulf,
25 SCS and EPRI have taken great care to ensure all

1 programs compliment one another in order to attain the
2 maximum benefit from these projects. Finally, I have
3 addressed the issues relative to Gulf's oil inventory.
4 Without the requested inventory for heavy oil, Crist
5 Units 1, 2, and 3 could be considered non-firm
6 generating capacity and would result in a net loss of
7 over \$6 million in capacity payments through the IIC
8 for 1990. The No. 2 oil inventory is critical at all
9 five of Gulf's plants as lighter fuel and serves as a
10 primary fuel for the combustion turbine.

11 In conclusion, I would like to assure the
12 Commission that Gulf's Power Generation and
13 Transmission Department is manned with a highly
14 qualified and competent staff who take great pride to
15 ensure that every expenditure approved and every
16 decision made are in the long-term best interest of
17 Gulf's customers.
