close to retrieving a lure slow enough.

After a front moves through your area, the fish will seem to hold tight to cover and it is ever so important to work structure thoroughly, closely and slowly. You have to present your lure just about on the bass' nose to get him to strike. Bass won't move far to take a lure at this time. That's one reason an angler that flips seems to really excel during cold front conditions. It is probably the best technique to work an area thoroughly at this time.

When working severe cold front conditions, work a jig or worm down deep in the cover close to logs, brush piles and the like.

The second pattern in cold front conditions is to turn your graph on and start looking for drops. Fish are generally not in feeding mood during a bad cold front and will hold right on drops or ledges. Fish these areas with a crankbait, crank it down fast to get to the depth, and then slow down to a crawl.

If this doesn't work, try fishing a jig and pig or a spinnerbait very slowly. When fishing structure on drop offs during a cold front, select a longer rod than normal and lighter line, even as light as 8 pound test, to get the lure down deeper. If a crankbait gets down a little deeper, that will allow the angler to work it a little slower.

Another very important thing to remember is concentration. During severe cold front conditions, it is more important than at any other time. You have to face reality that you and everyone else are going to get fewer strikes than under normal conditions. You must make each one count.

The first cold front of the fall actually has a positive effect on fishing. Its cooling effect on the water and its signaling of the oncoming winter actually cause the fish to become much more aggressive and active about feeding. The only possible deterrent to the activity might be excessive wind. That wouldn't really hurt the fishing, only hinder the angler's ability to fish. Bass will group more after the front. The reduced fall fishing pressure, due to less anglers on the lake, will

DOCKET NO. 920807-GP
IN RE: APPLICATION FOR DETERMINATION OF NEED FOR INTRASTATE NATURAL GAS PIPELINE BY
SUNSHINE PIPELINE PARTNERS
ISSUED: MARCH 18, 1993

NOTICE is hereby given that the Florida Public Service Commission will hold a public hearing in the above docket at the time and place listed below. All persons who wish to be heard are urged to be present at the beginning of the hearing on May 10, 1993.

930 a.m., Monday, May 10, 1993
101 East Gaines Street
Room 106-Fletcher Building
Tallahassee, Florida 32399-0850

Tuesday, May 11, 1993, has been reserved for confirmation of the hearing, if necessary.

PURPOSE AND PROCEDURE

The purpose of this hearing will be to take evidence to determine the need, pursuant to Section 403.9422, Florida Statutes, for the construction and operation of a proposed intrastate natural gas pipeline in Florida. The pipeline would originate at a point in Okaloosa County and extend east and south through the following counties: Dixie, Gadsden, Gilchrist, Hardee, Hernando, Highlands, Holmes, Jackson, Jefferson, Lake, Leon, Levy, Madison, Marion, Okaloosa, Okeechobee, Pasco, Pinellas, Polk, Sumter, Taylor, Walton, and Washington.

Initially the pipeline will consist of approximately five hundred two (502) miles of mainline and laterals, having a capacity of 250,000 Mcf (thousand cubic feet) per day which will be operated without compression during the first three years of service scheduled to commence in February, 1995. Sunshine's thirty inch (30") mainline system will originate at the interconnection with the proposed Interstate natural gas pipeline system known as SunShine Interstate Transmission Company (SITCO) at a point in Okaloosa County, and will extend east and south to a termination point in Polk County. It is also proposed that lateral lines and branch lines off the lateral lines, which will vary in size from four inches (4") to twenty-four inches (24"), will extend from the SunShine mainline system in the following manner: a four inch (4") lateral originating in Marion County to the City of Ocala; an eight inch (8") lateral originating in Sumter County and extending into Lake County to the City of Leesburg; a twenty inch (20") lateral originating in Sumter County and extending through Hernando and Pasco Counties into Pinellas County, which will include a six inch (6") branch line into Hernando County and a six inch (6") and twelve inch (12") branch line into Pasco County; and a twenty-four inch (24") lateral from Sumter County extending through Lake County into Polk County. In order to meet increased delivery obligations commencing in 1998, SunShine will construct and place in-service in 1998, additional facilities consisting of approximately one hundred thirteen (113) miles of new lateral and two compressor stations having approximately ten thousand horsepower (10,000 H.P.) each. As part of this additional construction, the twenty-four inch (24") lateral will be extended, and two new branch lines will be built, one sixteen inch (16") in Polk County and one twenty inch (20") that will extend from Polk County through Hardee and Highlands Counties into Okeechobee County. These additional facilities will increase the system capacity to approximately 425,000 Mcf per day and the overall miles of the pipeline to approximately six hundred miles (615).

A further expansion of the capacity of the SunShine Pipeline will be placed in-service in 1999. This expansion will add three new compressor stations, two having approximately ten thousand forty-five thousand horsepower (10,450 H.P.) each, and the other having approximately five thousand horsepower (5,000 H.P.). This expansion will bring the total compression on the SunShine Pipeline to approximately

one hundred thirty-three (133) miles of new lateral and two compressor stations having approximately ten thousand horsepower (10,000 H.P.) each. As part of this additional construction, the twenty-four inch (24") lateral will be extended, and two new branch lines will be built, one sixteen inch (16") in Polk County and one twenty inch (20") that will extend from Polk County through Hardee and Highlands Counties into Okeechobee County. These additional facilities will increase the system capacity to approximately 425,000 Mcf per day and the overall miles of the pipeline to approximately six hundred miles (615).

Other issues relating to the need for the proposed intrastate natural gas pipeline and its associated facilities will be heard at the May 10, 1993 hearing. Separate public hearings will be held before the Division of Administrative Hearings and the Governor and Cabinet sitting as the Natural Gas Transmission Pipeline Siting Board to consider other matters required to be determined under the Natural Gas Transmission Pipeline Siting Act, Sections 403.9041-403.9425, Florida Statutes.

Members of the public who are not parties to the need determination proceeding will have an opportunity to present testimony regarding the need for the proposed pipeline. All witnesses will be sworn and will be subject to cross-examination at the conclusion of their testimony.

Written comments regarding the need for the pipeline may be sent to the Commission at the following address:

Steve Tribble
Director, Division of Records and Reporting

Florida Public Service Commission

Tallahassee, Florida 32399-0850

Re: Docket No. 920807-GP

Any person wishing to become a party to the need determination proceeding should file an appropriate petition pursuant to Rule 25-22.039, Florida Administrative Code with the Director of the Commission's Division of Records and Reporting at the address listed above. Copies of the petition should be sent by mail to all parties. Those wishing to intervene in these proceedings, unless appearing on their own behalf, must be represented by an attorney or other person who can be determined to be a qualified representative pursuant to Chapter 120, Florida Statutes, and Rule 25-22.008, Florida Administrative Code. Petitions for leave to intervene must be filed at least five (5) days before the final hearing. It must conform with Commission Rule 25-22.026 (7)(a), Florida Administrative Code, and substantial interests of the intervenor are subject to determination or will be affected through the hearing.

Any person requiring some accommodation at this hearing because of a physical impairment should call the Division of Records and Reporting at (904)488-8371 at least five (5) calendar days prior to the hearing. If you are hearing or speech impaired, please contact the Florida Public Service Commission using the Florida Relay Service which can be reached at 1-800-955-8771 (TDD).

PREHEARING CONFERENCE

A prehearing conference will be held at the following time and place:

1:00 p.m., Monday, May 3, 1993
101 East Gaines Street
Room 122 Fletcher Building
Tallahassee, Florida 32399-0850

The purpose of this prehearing conference will be to consider: (1) the simplification of the issues; (2) the identification of the positions of the parties on the issues; (3) the possibility of obtaining admissions of fact and documents which will avoid unnecessary proof; (4) the identification of exhibits; (5) the establishment of an order of witnesses; and (6) such other matters as may aid in the disposition of the action.

JURISDICTION

Jurisdiction over this determination of need is vested in the Commission by Chapter 366 and Section 403.9422, Florida Statutes. This proceeding will be governed by the provisions of Chapter 120, Florida Statutes, as well as Chapters 25-6 and 25-22, Florida Administrative Code.

APPLICATION

A copy of the Petition For A Determination of Need and supporting exhibits are available for public inspection during normal business hours at the following location:
