2.17.1 General

Different rates may be applicable to an intrastate call at a different time of the day and on certain days of the week as specified in the appropriate rate schedule for that call. The rate periods shown below apply. All times shown are local time at the calling station in case of an outbound call and at the called station in case of an inbound call.

2.17.2 Plan S Rate Schedule C

SECTION 2 - RULES AND REGULATIONS

2.18 Mileage Measurements

2.18.1 General

Each rate center or POP has a unique set of assigned vertical and horizontal (V&H) coordinates which are used by the Underlying Carrier for calculating mileage. Calculation of mileage is in accordance with the V&H coordinate system. Mileage measurements for calls billed to one of the Company's calling card services will be determined by the interexchange carrier that carries the call billed to the calling card.

2.18.2 Plan S - Operator Toll Assistance

Rates for service between points are based on airline mileage between rate centers of the calling and called stations.

2.18.3 Other Mileage Sensitive Services

The distance is measured using the V&H coordinates associated with either the rate centers of the originating and terminating stations or the V&H coordinates associated with the originating and terminating POP of the underlying carrier. The type of access determines which V&H coordinates are used.

If a call is originated or terminated via switched access, the distance is measured using the V&H coordinates associated with the rate centers of the originating or terminating station. If the call is originated or terminated via dedicated access, the distance is measured using the V&H coordinates associated with the originating or terminating POP of the underlying carrier.

The rate for a call between access lines associated with stations that use the same central office is the rate for zero miles.

SECTION 2 - RULES AND REGULATIONS

2.19 Determination of Airline Mileage

2.19.1 Calls Mileaged by Underlying Carrier 1

For the purpose of determining airline mileage, vertical and horizontal grid lines have been established across the state. The spacing between adjacent vertical grid lines and between horizontal grid lines represents a distance of one coordinate unit. The unit is the square root of 0.1, expressed in airline miles. A vertical (V) and a horizontal (H) coordinate is computed for each rate center from its latitude and longitude location by use of appropriate map-projection equations. A pair of V&H coordinates locates a rate center, for determining airline mileage, at a particular intersection of an established vertical grid line with an established horizontal grid line. The distance between any two rate centers is the airline mileage computed as explained as follows.

To determine the rate distance between any two rate centers proceed as follows:

- (A) Obtain the "V" and "H" coordinates for each rate center.
- (B) Obtain the difference between the "V" coordinates of the two rate centers. Obtain the difference between the "H" coordinates. The difference is always obtained by subtracting the smaller coordinate from the large coordinate.
- (C) Divide each of the differences in B preceding by three, rounding each quotient to the nearer integer.

SECTION 2 - RULES AND REGULATIONS

2.19 Determination of Airline Mileage (continued)

2.19.1 Calls Mileaged by Underlying Carrier 1 (continued)

- (D) Square these two integers and add the two squares. If the sum of the squares is greater than 1777, divide the integers obtained in C preceding by three and repeat Step D. Repeat this process until the sum of the squares obtained in Step D is less than 1778.
- (E) The number of successive division by three in Steps C and D determines the value of "N". Multiply the final sum of the two squares obtained in Step D by the multiplier specified in the following table for the value of "N" preceding.

N	Multiplier	Minimum Rate Mileage
1	0.9	-
2	8.1	41
3	72.9	121
4	656.1	361

SECTION 2 - RULES AND REGULATIONS

2.19 Determination of Airline Mileage (continued)

2.19.1 Calls Mileaged by Underlying Carrier 1 (continued)

- (F) Obtain square root of product in E preceding and with any resulting fraction, round up to the next higher integer. This is the message rate mileage except that when the mileage so obtained is less than the minimum rate mileage show in E preceding, the minimum rate mileage corresponding to the "N" value is applicable.

2.19.2 Calls Mileaged By Underlying Carrier 2

Calculation of distance is in accordance with the V&H coordinate system. The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal (V&H) coordinates associated with the rate centers involved. The Company uses the rate centers and associated vertical and horizontal coordinates that are produced by Bell Communications Research in its NPA-NXX V & H Coordinates Tape and in NECA Tariff No. 4.
