HAND DELIVERED

IN REPLY REFER TO

Tallahassee

Ms. Blanca S. Bayo, Director  
Division of Records and Reporting  
Florida Public Service Commission  
101 East Gaines Street  
Tallahassee, Florida 32399-0850

Re: Conservation Cost Recovery Clause  
EPSC Docket No. 950002-EG

Dear Ms. Bayo:

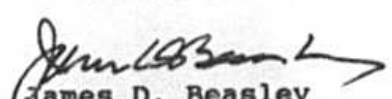

Enclosed for filing in the above docket, on behalf of Tampa Electric Company, are the original and fifteen (15) copies of each of the following:

- 02053-95 1. Prepared Rebuttal Testimony of John E. Currier.
- 02054-95 2. Prepared Rebuttal Testimony of Raymond E. Patenaude.
- 02055-95 3. Prepared Rebuttal Testimony of John T. Putnam.

Please acknowledge receipt and filing of the above by stamping the duplicate copy of this letter and returning same to this writer.

Thank you for your assistance in connection with this matter.

Sincerely,

  
James D. Beasley

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that a true copy of the foregoing Testimony, filed on behalf of Tampa Electric Company, has been furnished by U. S. Mail or hand delivery (\*) on this 21<sup>st</sup> day of February, 1995 to the following:

Mr. Robert Elias\*  
Ms. Sheila L. Erstling\*  
Staff Counsel  
Division of Legal Services  
Florida Public Service Commission  
101 East Gaines Street  
Tallahassee, FL 32301

Mr. Jeffrey A. Stone  
Beggs & Lane  
Post Office Box 12950  
Pensacola, FL 32576

Mr. Charles A. Guyton  
Steel Hector & Davis  
215 S. Monroe Street  
Suite 601  
Tallahassee, FL 32301

Mr. Joseph A. McGlothlin  
Ms. Vicki Gordon Kaufman  
McWhirter, Reeves, McGlothlin,  
Davidson & Bakas  
315 S. Calhoun Street, Suite 716  
Tallahassee, FL 32301

Mr. James A. McGee  
Senior Counsel  
Florida Power Corporation  
Post Office Box 14042  
St. Petersburg, FL 33733

Mr. Jack Shreve  
Office of Public Counsel  
Room 812  
111 West Madison Street  
Tallahassee, FL 32399-1400

Mr. John W. McWhirter, Jr.  
McWhirter, Reeves, McGlothlin,  
Davidson & Bakas  
Post Office Box 3350  
Tampa, Florida 33601-3350

Mr. Wayne L. Schiefelbein  
Gatlin, Woods, Carlson & Cowdery  
1709-D Mahan Drive  
Tallahassee, FL 32308

Ms. Debbie K. Stitt  
St. Joe Natural Gas Company  
Post Office Box 549  
Port St. Joe, FL 32456-0549

Mr. Norman H. Horton, Jr.  
Messer, Vickers, Caparello,  
Madsen, Lewis, Goldman & Metz  
Post Office Box 1876  
Tallahassee, FL 32301-1876

Mr. Robert Scheffel Wright  
Landers & Parsons  
310 East College Avenue  
Post Office Box 271  
Tallahassee, FL 32302

Q. Please state your name and business address.

A. My names is John T. Putnam. My business address is 702 North Franklin Street, Tampa, Florida 33602

Q. By whom are you employed and in what capacity?

A. I am employed by Tampa Electric Company as a Consulting Engineer.

Q. Please summarize your educational background and business experience.

A. I received a Bachelor of Science degree in Mechanical Engineering from the University of South Florida in 1988. I have attended numerous continuing education seminars in air conditioning applications, refrigeration applications and energy conservation. I am a registered Professional Engineer in the State of Florida.

DOCUMENT NUMBER-DATE  
02055 FEB 21 95  
FPSC-RECORDS/REPORTING

1 Q. What are your principal duties as a consulting engineer  
2 with Tampa Electric Company?  
3

4 A. My primary responsibilities are providing energy consulting  
5 for our commercial, industrial and residential customers.  
6 Additionally, I provide support to the development of our  
7 demand side management programs.  
8

9 Q. Have you now had an opportunity to review the Supplemental  
10 Direct\Intervenor Testimony of Maury J. Blalock?  
11

12 A. Yes I have.  
13

14 Q. Mr. Blalock has commented on approximately 20 different  
15 areas of Tampa Electric's relative efficiency analysis.  
16 Would you please respond to those items addressing matters  
17 within your area of responsibility?  
18

19 A. Yes I will. Beginning on page 10, item number 20, Mr.  
20 Blalock questions Tampa Electric's production energy unit  
21 cost of \$0.00943/KWh. This figure represents our average  
22 system production energy cost and not a "marginal fuel  
23 expense" and was determined by our Regulatory Affairs  
24 Department using standard rate methodologies.  
25

- 1 Q. What is the next item you wish to respond to?  
2
- 3 A. On page 11, in item 1, Mr. Blalock refers to the gas engine  
4 chiller example used in the electric technologies brochure.  
5 He questions the heat rate of 8.6 KBtu/ton used for the  
6 engine driven system. This heat rate is reflective of  
7 current market applications. The efficiency ratings of 1.7  
8 to 2.0 COP that Mr. Blalock references do not reflect  
9 American Refrigeration Institute (ARI) rating values and  
10 are not practical for this region.  
11
- 12 Q. What is the next item you wish to respond to?  
13
- 14 A. On page 11, in item 2, Mr. Blalock states that Tampa  
15 Electric Company used "Part-Load Curves" that were not  
16 representative of the latest high efficiency gas equipment.  
17 The Part-Load Curves used for that analysis are appropriate  
18 for the temperatures and ambient conditions of Tampa  
19 Electric's service territory. In fact, they represent  
20 actual operating conditions for customers within our  
21 region.  
22
- 23 Additionally, many of the part-load efficiencies values  
24 published by gas equipment manufacturers do not take into  
25 consideration the extremely humid conditions of Central

1 the analysis for the Tampa region. Those numbers were  
2 established directly from the operating conditions of the  
3 University of South Florida's central plant. Part of the  
4 reason behind that is they base load their high efficiency  
5 electric chillers to try to optimize their overall  
6 operating efficiency and cost. The absorption technology  
7 they have installed in the plant has a lower relative  
8 efficiency, so when they can displace that load, they do.  
9

10 Q. What is the next item you wish to respond to?  
11

12 A. On page 12, in item 5, Mr. Plalock states that the cost  
13 comparison for the large electric and gas chiller equipment  
14 was not reflective of the EPRI data within the exhibits.  
15 We rely heavily on EPRI data whenever possible and normally  
16 we find it to be accurate. However, gas technologies are  
17 new in the marketplace and the cost varies significantly  
18 throughout the nation. The cost figures used are  
19 reflective of actual construction bids related to these  
20 types of projects. These costs are substantially higher  
21 than the EPRI data and more appropriately reflect averages  
22 within Tampa Electric's service area.  
23

24 Q. What is the next item you wish to respond to?  
25

1 Q. On page 13, in item 6, Mr. Blalock challenges the  
2 operating savings at the University of South Florida  
3 derived by replacing gas chiller equipment with electric  
4 equipment. Mr. Blalock overstates the claimed savings and  
5 erroneously references a 1990 replacement date. In a  
6 previous exhibit of Tampa Electric, we included a summary  
7 table from which we derived these numbers based on the May  
8 1991 installation date.

9

10 Q. What is the next item you wish to respond to?

11

12 A. On page 13, in item 7, Mr. Blalock refers to the emission  
13 comparisons between various electric power generating  
14 equipment types and various electric and gas end use  
15 equipment types.

16

17 Tampa Electric utilized the emissions rates of one of our  
18 newer and larger units since many of our analyses are  
19 directed at new applications serving the growth needs of  
20 our customers. The power plants serving the growth needs  
21 of our customers will be higher efficiency and more  
22 environmentally compatible generating units.

23

24 Q. What is the next item you wish to respond to?

25

1 A. On page 14, in item 8, Mr. Blalock questions Tampa  
2 Electric's installed cost differential between gas and  
3 electric equipment. My response is similar to what I  
4 stated in response to item 5 on page 12 of his testimony.  
5 In the commercial HVAC equipment example for Cypress  
6 Gardens, the installed cost is not reflective of the EPRI  
7 average national cost data. Again, the numbers we used  
8 here varied from the EPRI value because we had specific  
9 customer bids for this application and other customer  
10 applications that were very similar.

11  
12 Q. What is the next item you wish to respond to?

13  
14 A. On page 14, in item 9, Mr. Blalock states that the monthly  
15 and annual energy use profiles were not reflective of our  
16 region and because of that they created a bias in favor of  
17 the electric technology. In fact, the monthly and annual  
18 energy profiles used were based on the characteristics of  
19 the University of South Florida Central Plant and other  
20 institutional applications that would typically involve  
21 large chillers. It is important to note here that the high  
22 load factor profiles used actually benefit the higher first  
23 cost options, which in this case would be the gas options.  
24 This is a very conservative approach.
