Re: Resolution of Petition(s) to Establish Non-discriminatory Rates, Terms, and Conditions for Interconnection Involving Local Exchange Companies and Alternative Local Exchange Companies Pursuant to Section 364.162, Florida Statutes (Docket No. 950985-TP)

Dear Ms. Bayo:

Enclosed for filing in the above-styled docket are the original and fifteen (15) copies of the Rebuttal Testimony of Timothy Devine on behalf of Metropolitan Fiber Systems of Florida, Inc.

Please acknowledge receipt and filing of the above by stamping the duplicate copy of this letter and returning it in the enclosed self-addressed envelope.

Thank you for your assistance in this matter.

Sincerely,

James C. Falvey

REBUTTAL TESTIMONY OF TIMOTHY T. DEVINE
ON BEHALF OF
METROPOLITAN FIBER SYSTEMS OF FLORIDA, INC.

Docket No. 950985-TP

DOCUMENT NUMBER-DATE

09701 SEP 29 1995

FPSC-RECORDS/REPORTING

**REBUTTAL TESTIMONY OF TIMOTHY T. DEVINE
ON BEHALF OF
METROPOLITAN FIBER SYSTEMS OF FLORIDA, INC.
Docket No. 950985-TP**

1 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2 **A. My name is Timothy T. Devine. My business address**
3 **is MFS Communications Company, Inc. ("MFS"), 250**
4 **Williams St., Ste. 2200, Atlanta, Georgia 30303.**

5 **Q. ARE YOU THE SAME TIMOTHY DEVINE WHO PREVIOUSLY FILED**
6 **TESTIMONY IN THIS PROCEEDING?**

7 **A. Yes.**

8 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS**
9 **PROCEEDING?**

10 To respond to the various compensation and other
11 proposals offered by the parties in the direct
12 testimony in this proceeding, and to address other
13 interconnection issues identified in this docket.

14 **I. THE APPROPRIATE INTERCONNECTION RATE FOR THE**
15 **EXCHANGE OF LOCAL TRAFFIC BETWEEN TELEPORT AND**
16 **SOUTHERN BELL IS BILL AND KEEP**

17 **Q. COULD YOU SUMMARIZE THE MFS BILL AND KEEP PROPOSAL?**

18 **A. As I explained in my direct testimony, under "bill**
19 **and keep," each carrier would be compensated in two**
20 **ways for terminating local calls originated by**
21 **customers of other local exchange carriers. First,**
22 **each carrier would receive the reciprocal right to**
23 **receive termination of local calls made by its own**
24 **customers to subscribers on the other local exchange**

1 carrier's network without cash payment. This is
2 often referred to as payment "in kind." In
3 addition, the terminating carrier is compensated for
4 call termination by its own customer, who pays the
5 terminating carrier a monthly fee for service,
6 including the right to receive calls without
7 separate charge.

8 **Q. WHY DOES MFS SUPPORT "BILL AND KEEP"?**

9 **A.** Unlike the proposals advocated by other parties, and
10 particularly as compared with the per-minute charge
11 advocated by BellSouth, bill and keep economizes on
12 costs of measurement and billing, which could
13 increase prices for all customers. It is also the
14 only method proposed by any of the parties that
15 provides an ironclad guarantee that a price squeeze
16 will not foreclose local exchange competition in
17 Florida. The bill and keep method of compensation
18 also provides incentives to carriers to adopt an
19 efficient network architecture, one that will enable
20 the termination of calls in the manner that utilizes
21 the fewest resources. As a result of these
22 advantages, some form of bill and keep has been
23 adopted by several states and is currently in use in

1 many states for the exchange of traffic between
2 LECs.

3 **Q. IN YOUR DIRECT TESTIMONY, YOU MENTIONED THAT SOME**
4 **FORM OF BILL AND KEEP HAS BEEN ADOPTED IN**
5 **CALIFORNIA, MICHIGAN, AND IOWA. ARE YOU AWARE OF**
6 **OTHER STATES THAT HAVE ADOPTED BILL AND KEEP?**

7 **A.** Yes. In a recent order, Connecticut adopted bill
8 and keep on an interim basis, and Texas has also
9 adopted bill and keep on an interim basis. The
10 adoption of bill and keep in these states has
11 permitted them to keep pace with other states that
12 are forging ahead with local exchange competition
13 without lengthy hearings and proceedings as to an
14 appropriate interconnection rate.

15 **Q. HAVE OTHER PARTIES SUPPORTED THE IMPLEMENTATION OF**
16 **BILL AND KEEP RECIPROCAL COMPENSATION IN FLORIDA?**

17 **A.** Yes. AT&T Communications of the Southern States,
18 Inc. ("AT&T"), MCI Metro Access Transmission
19 Services, Inc. ("MCI Metro"), and the Florida Cable
20 Telecommunications Association ("FCTA") all
21 supported identical bill and keep proposals. AT&T
22 Testimony at 13-14; MCI Metro Testimony at 10-20;
23 FCTA Testimony at 8-10. These parties emphasized

1 the same benefits of administrative simplicity, the
2 elimination of the possibility a price squeeze, and
3 the efficiency incentives created by bill and keep.

4 **Q. PLEASE SUMMARIZE BELLSOUTH'S COMPENSATION PROPOSAL**
5 **AS PRESENTED IN ITS DIRECT TESTIMONY.**

6 **A.** The essence of BellSouth's compensation proposal is,
7 as suggested by TCG, to charge ALECs the switched
8 access rates developed for the termination of
9 interexchange traffic. These access rates are
10 currently under attack by interexchange carriers as
11 both excessive and arbitrary. Banerjee Testimony at
12 3. Significantly, BellSouth's usage-sensitive
13 rates, unlike bill and keep, will create a price
14 squeeze, and one that is exacerbated for the more
15 lucrative, higher volume customers.

16 **Q. WHY ARE SWITCHED ACCESS RATES THE WRONG BASIS FOR**
17 **LOCAL INTERCONNECTION RATES?**

18 BellSouth readily admits that, "as the provider of
19 interconnection services, [it] must have an
20 opportunity to earn normal profits . . . and
21 contributions toward the additional costs of special
22 obligations that are borne uniquely by it."

1 Banerjee Testimony at 20. "Contribution" is defined
2 in the industry as the difference between the
3 incremental cost of a service and the price charged
4 for that service. Forcing ALECs to pay
5 contribution, actually compels them to charge their
6 customers not only their own overhead costs, but
7 also a portion of BellSouth's overhead costs. Under
8 the BellSouth proposal, even when competition is
9 introduced in Florida, BellSouth's overhead costs
10 would be completely insulated from the forces of
11 competition, and current inefficiencies would be
12 locked in to the cost floor for local exchange
13 service. Moreover, including substantial
14 contribution in interconnection charges would incent
15 carriers to try to "game" the system by capturing
16 customers with high terminating usage.

17 **Q. WHY WERE SWITCHED ACCESS RATES DEVELOPED FOR**
18 **INTEREXCHANGE CARRIERS?**

19 **A.** LECs' recovery of large amounts of contribution from
20 interexchange carriers ("IXCs") in its switched
21 access rates was initially justified by the fact
22 that LECs, but not IXCs, bore the presumed burden of
23 providing subsidized service to certain customers,

1 including Lifeline customers. This presumably is
2 the "special obligation" alluded to by BellSouth. A
3 separate docket has been established, however, to
4 determine whether a LEC universal service subsidy
5 exists and if it is required. To the extent that
6 this subsidy has yet to be quantified, there is
7 absolutely no justification for arbitrarily imposing
8 switched access charges on ALECs. Moreover,
9 BellSouth's plan envisions a separate "universal
10 service support" charge. Banerjee Testimony at 6.
11 It is therefore unclear what "special obligations"
12 BellSouth is recovering in its access charges, nor
13 why it would be good public policy to permit
14 BellSouth such recovery.

15 **Q. WHY IS BELLSOUTH'S ASSUMPTION THAT IT HAS A RIGHT TO**
16 **A "NORMAL PROFIT" ERRONEOUS?**

17 **A.** The Florida Legislature has mandated competition as
18 being in the public interest. To the extent that
19 interconnection with the public switched network is
20 required for competition to develop, BellSouth, as
21 the beneficiary of a monopoly franchise for decades,
22 should not earn a profit off the introduction of
23 competition by imposing costs on ALECs.

1 Q. DOES BELLSOUTH MAKE OTHER ERRONEOUS ASSUMPTIONS IN
2 ITS TESTIMONY?

3 A. Yes. BellSouth states that the switched access rate
4 structure "is fair and allows all parties to compete
5 on a [sic] equitable basis. The switched access
6 structure would be very difficult to change, at
7 least in the short term" Banerjee Testimony
8 at 9. There is widespread disagreement as to
9 whether the current access rate structure is "fair,"
10 as IXCs have challenged this structure at the state
11 and federal levels as including excessive
12 contribution. It therefore makes no sense to extend
13 switched access to other markets at this time.

14 Moreover, while long distance competition may
15 be taking place under the switched access regime,
16 local competition is not and cannot. All long
17 distance carriers pay the same switched access rates
18 and can pass them through to consumers without being
19 put at a competitive disadvantage. ALECs, however,
20 would be at a distinct disadvantage if they had to
21 pay switched access rates that LECs do not impute
22 into their own local rates. Contrary to BellSouth's
23 assertion, local competition would in fact, as I

1 discuss below, be precluded by the extension of
2 switched access to the local exchange market.

3 **Q. DO YOU AGREE THAT THE SWITCHED ACCESS STRUCTURE**
4 **WOULD BE "VERY DIFFICULT TO CHANGE?"**

5 **A.** We are not suggesting that switched access for toll
6 calls be changed. In fact, adopting a bill and keep
7 mechanism leaves switched access intact for all calls
8 to which it currently applies. Extending switched
9 access to local calling would, contrary to
10 BellSouth's claim, require the adoption of new and
11 untried billing and measurement systems between
12 ALECs and LECs which will simply add to the cost of
13 local exchange service, with no concomitant benefit
14 to society.

15 **Q. COULD YOU ELABORATE FURTHER ON THE PRICE SQUEEZE**
16 **THAT WOULD BE CREATED UNDER A SWITCHED ACCESS**
17 **REGIME?**

18 **A.** As I discussed in my direct testimony, BellSouth is
19 proposing to charge switched access rates (Banerjee
20 Testimony at 7), or \$0.4793/minute (Chart in TCG
21 Testimony at 32), to terminate local calls. TCG's
22 chart not only demonstrates that these rates will
23 not permit ALECs to compete, but also highlights the

1 point that the price squeeze is exacerbated for high
2 volume customers, and particularly in a flat-rate
3 LEC pricing environment. TCG Testimony at 33.
4 Accordingly, ALECs will have an even more difficult
5 time competing for customers with 800 monthly
6 minutes of use than for customers with 600 or 460
7 minutes of use. TCG Testimony at 33. It is
8 therefore not surprising that BellSouth has rejected
9 two proposals that lack a usage-based component
10 (bill and keep and TCG's flat-rate port proposal),
11 and offered only a usage-based proposal to ensure
12 that it retains a stranglehold on all of its
13 customers.

14 **Q. PLEASE DESCRIBE BELLSOUTH'S INTERIM FUNDING**
15 **PROPOSAL FOR UNIVERSAL SERVICE.**

16 **A.** BellSouth urges the Commission to adopt a
17 "universal service preservation charge" and
18 offers three alternatives for calculating this
19 charge. Under the first alternative, the
20 incumbent LECs would tariff a flat rated
21 element for each ALEC and interexchange carrier
22 ("IXC") designed to recover the implicit
23 support currently built into their rate

1 structures. This amount would be reduced to
2 reflect the incumbent LECs' own contribution to
3 support universal service and carrier of last
4 resort obligations. The incumbent LECs would
5 bulk bill the remaining amount directly to
6 ALECs and IXCs based on their individual shares
7 of intrastate revenues less access and
8 universal service revenues. BellSouth
9 estimates that ALECs would pay approximately
10 \$7.50 per month per access line with this
11 scenario. LECs would then reduce their
12 switched access rates by the amount of the
13 universal service charges they receive from
14 ALECs and IXCs.

15 Under the second alternative, each
16 incumbent LEC would tariff a per minute
17 interconnection charge, estimated at \$.01865
18 per minute, to recover the implicit support
19 built into its rates. Under the third
20 alternative, the incumbent LECs would also
21 tariff a per minute interconnection charge.
22 This charge, estimated to be approximately
23 \$.01822 per minute, would be calculated by

1 adding the average Carrier Common Line charge
2 and the average interconnection charge
3 associated with switched access transport. The
4 charges imposed under Alternatives 2 and 3
5 would total approximately \$8 per month per
6 access line, would be assessed against ALECs
7 only and would be in addition to the direct
8 cost of local interconnection. There would be
9 no reduction in switched access charges with
10 these scenarios. Banerjee at 5-7.

11 **Q. DOES THE UNIVERSAL SERVICE COMPONENT ALONE IN THE**
12 **BELLSOUTH PROPOSAL ALSO CREATE A PRICE SQUEEZE?**

13 **A.** Yes. As I demonstrated in my rebuttal testimony in
14 the universal service docket, assuming the second or
15 third alternatives are adopted, MFS would have to
16 pay a universal service charge of approximately
17 \$8.00/month per access line to BellSouth.
18 BellSouth's average charge for residential flat-
19 rated service is \$10.04 per month (BellSouth
20 Response to FPSC Staff's Interrogatory No. 5 at p.
21 21 (Docket no. 950696-TP)). If an ALEC had to pay
22 BellSouth \$8.00 per month as a surcharge for serving
23 a residential customer, it would have a margin of

1 only \$2.04 to cover all of its costs in providing
2 local exchange access service. In addition to the
3 ALEC's own network investments, these costs would
4 include, at the very least, the rates (as yet
5 undetermined) the ALEC must pay the incumbent LECs
6 to interconnect with their networks and terminate
7 traffic (and which, as proposed by BellSouth, would
8 themselves create a price squeeze). They would also
9 include charges imposed by the LECs for unbundled
10 loops, cross connection and other bottleneck network
11 components that the ALEC must obtain from the LEC in
12 order to provide service. Assuming that the ALEC
13 operated as efficiently as BellSouth and that
14 BellSouth's residential service rates are close to
15 its costs in providing service, the only way that
16 the ALEC could match BellSouth's end user rates
17 (which it must do in order to compete with a
18 monopolist incumbent) would be to price its
19 residential service substantially below cost.

20 **Q. WHY IS THIS PRICE SQUEEZE WORSE IN A FLAT-RATE**
21 **ENVIRONMENT?**

22 **A.** In order to compete with Bell's flat rates, ALECs
23 must offer flat rates to their customers, as well.

1 As demonstrated by the chart provided by TCG, ALECs
2 paying usage-based rates to Bell and offering
3 service at a flat rate will inevitably be caught in
4 a price squeeze. As I have noted, it is the largest
5 customers that ALECs will lose the most money on.

6 **Q. WHICH CARRIER SHOULD COLLECT THE CHARGES FOR**
7 **TERMINATION OF TRAFFIC ON ITS NETWORK WHEN A CALL IS**
8 **RECEIVED VIA NUMBER RETENTION?**

9 **A.** Only if the customers' carrier collects these
10 revenues will competition be stimulated by interim
11 number portability. Allowing the incumbent LEC to
12 retain toll access charges for calls terminated to a
13 retained number belonging to a customer of another
14 carrier would have three adverse consequences.
15 First, it would reward the incumbent LEC for the
16 lack of true local number portability, and therefore
17 provide a financial incentive to delay true number
18 portability for as long as possible. Second, it
19 would help reinforce the incumbent LEC bottleneck on
20 termination of interexchange traffic, and thereby
21 stifle potential competition in this market. Third,
22 it would impede local exchange competition by
23 preventing new entrants from competing for one

1 significant component of the revenues associated
2 with that service, namely toll access charges.
3 / MFS does not subscribe to the LEC conventional
4 wisdom that access charges "subsidize" local
5 exchange service, since there is no evidence that
6 the forward-looking economic cost of the basic local
7 exchange service exceeds its price as a general
8 matter (aside from special circumstances such as
9 Lifeline, where a subsidy may exist). Nonetheless,
10 access charges clearly provide a significant source
11 of revenue -- along with subscriber access charges,
12 local flat-rate or usage charges, intraLATA toll
13 charges, vertical feature charges, and perhaps
14 others -- that justify the total cost of
15 constructing and operating a local exchange network,
16 including shared and common costs. It is
17 unrealistic to expect new entrants to make the
18 substantial capital investment required to construct
19 and operate competitive networks if they will not
20 have the opportunity to compete for all of the
21 services provided by the LECs and all of the
22 revenues generated by those services. As long as
23 true local number portability does not exist, the

1 new entrants' opportunity to compete for access
2 revenue would be severely restricted if they had to
3 forfeit access charges in order to use interim
4 number portability arrangements.

5 **Q. SHOULD COMPENSATION ARRANGEMENTS FOR THE EXCHANGE OF**
6 **LOCAL OR TOLL TRAFFIC BETWEEN LECS VARY DEPENDING ON**
7 **WHETHER INTERIM NUMBER PORTABILITY WAS IN PLACE ON A**
8 **GIVEN CALL?**

9 **A.** No. Temporary number portability is a technical
10 arrangement that will permit competition to take
11 root in Florida. The purpose of temporary number
12 portability is to permit new entrants to market
13 their services to customers by permitting customers
14 to retain their phone numbers when switching to a
15 new provider. Because it is necessary to bring to
16 the public the benefits of competition at this time,
17 temporary number portability benefits all callers,
18 and has absolutely nothing to do with compensation.
19 These issues should not be mixed, and compensation
20 should not vary depending on whether temporary
21 number portability is in place or not.

22 **Q. WHAT COMPENSATION ARRANGEMENT SHOULD APPLY TO**
23 **REDIRECTED CALLS UNDER TEMPORARY NUMBER PORTABILITY?**

1 A. The four major LECs (Southern Bell, General
2 Telephone, Sprint Centel, and Sprint United)
3 ("MLECs") should compensate the new entrant as if
4 the traffic had been terminated directly to the new
5 entrant's network, except that certain transport
6 elements should not be paid to the new entrant to
7 the extent that the MLECs will be transporting the
8 call on their own networks. Thus, for LATA-wide
9 calls originating on the MLEC networks and
10 terminating on the new entrant's network, the
11 effective inter-carrier compensation structure at
12 the time the call is placed should apply. Traffic
13 from IXCs forwarded to the new entrant via the
14 temporary number portability service should be
15 compensated by the MLECs at the appropriate
16 intraLATA, interLATA-intrastate, or interstate
17 terminating access rate less those transport
18 elements corresponding to the use of the MLECs
19 network to complete the call. In other words, MLECs
20 should receive entrance fees, tandem switching, and
21 part of the tandem transport charges. The new
22 entrant should receive local switching, residual
23 interconnection charge, Carrier Common Line charges,

1 and part of the transport charge. (The pro-rata
2 billing share to be remitted to the new entrant
3 should be identical to the rates and rate levels as
4 non-temporary number portability calls.) The MLECs
5 will bill and collect from the interexchange carrier
6 and remit the appropriate portion to the new
7 entrant.

8 **Q. WHY ARE BELLSOUTH'S DIRE PREDICTIONS OF UNBALANCED**
9 **TRAFFIC UNLIKELY TO BE BORNE OUT IN THE MARKETPLACE?**

10 **A.** Bell suggests that separate financial arrangements
11 may be necessary if ALECs position themselves so
12 that they have a heavy volume of inward calling.
13 Scheye Testimony at 8-9. In fact, ALECs face an
14 uphill battle to gain market share in a market
15 dominated by incumbent LECs, and are not likely to
16 turn away any prospective customers, regardless of
17 their calling patterns. Furthermore, in New York,
18 MFS's experience is that traffic is basically in
19 balance with MFS terminating somewhat more calls for
20 NYNEX. Bell's predictions of unbalanced traffic are
21 therefore unsupported and unwarranted.

1 Q. IF TRAFFIC IS LIKELY TO BE IN BALANCE, IS BILL AND
2 KEEP PREFERABLE TO OTHER TERMINATING ACCESS
3 PROPOSALS?

4 A. Yes. As I discussed in my direct testimony, the TCG
5 proposal will not completely preclude a price
6 squeeze. In fact, the bill and keep proposal is the
7 only proposal that ensures widespread competitive
8 entry by foreclosing the possibility of a price
9 squeeze. Bill and keep is the only proposal to
10 attract proponents from several telecommunications
11 sectors: CAP/co-carriers (MFS), IXCs (AT&T and
12 MCI), and cable providers (FCTA). Bill and keep is
13 by far the most efficient, economical and fair
14 terminating access solution, and should be adopted by
15 the Commission.

16 II. UNBUNDLING OF THE LOCAL LOOP IS NOT GERMANE TO THIS
17 PROCEEDING

18 Q. WILL YOU ADDRESS UNBUNDLING OF THE LOCAL LOOP IN
19 THIS PROCEEDING?

20 A. No. While MFS supports unbundling of the local loop
21 into reasonably priced links and ports, this issue
22 is not properly before the Commission in this
23 docket. The testimony of BellSouth and others on

1 this issue, as well as issues such as number
2 portability, is clearly beyond the scope of the
3 issues identified in this proceeding and should
4 therefore not be considered by the Commission or
5 Commission Staff at this time.

6 **III. OTHER CO-CARRIER ARRANGEMENTS**

7 **Q. DID YOU ADDRESS OTHER CO-CARRIER ARRANGEMENTS IN**
8 **YOUR DIRECT TESTIMONY?**

9 **A.** No. To the extent that TCG held out the possibility
10 of a settlement on these issues, I did not.
11 However, I will address each of the appropriate
12 issues in turn at this time.

13 **Q. SHOULD SOUTHERN BELL TARIFF THE INTERCONNECTION**
14 **RATE?**

15 **A.** Bill and keep arrangements should be stated in Bell
16 tariffs. If other solutions are approved by the
17 Commission, these should also be tariffed and
18 offered on a nondiscriminatory basis to all
19 certificated ALECs. Other co-carrier arrangements
20 should also be offered on a tariffed,
21 nondiscriminatory basis.

1 Q. WHAT ARE THE APPROPRIATE TECHNICAL AND FINANCIAL
2 BILLING ARRANGEMENTS WHICH SHOULD GOVERN
3 INTERCONNECTION BETWEEN TCG AND BELL SOUTH FOR THE
4 DELIVERY OF CALLS ORIGINATED AND/OR TERMINATED FROM
5 CARRIERS NOT DIRECTLY CONNECTED TO TCG'S NETWORK?

6 A. MFS advocates a system based on a neutral point of
7 interconnection for the exchange of traffic in each
8 LATA and meet-point tandem subtending billing.

9 Q. HOW SHOULD TRAFFIC EXCHANGE ARRANGEMENTS BETWEEN
10 LOCAL EXCHANGE NETWORKS BE ACCOMPLISHED?

11 A. To effectuate the exchange of traffic, MFS proposes
12 that at least one single neutral point of
13 interconnection be established within each LATA for
14 the exchange of traffic. Within each LATA, all
15 competing carriers and BellSouth should jointly
16 establish at least one mutually acceptable
17 geographic location as a traffic exchange point of
18 interconnection ("POI"), at which carriers can
19 exchange traffic. A POI could be established at a
20 BellSouth tandem office, which is the most obvious
21 and most efficient POI location, or at some other
22 location. This POI would be the geographic location
23 at which trunks would be connected. The physical

1 location of the POI does not necessarily determine
2 how calls are routed; for example, there could be
3 ten or twenty different trunk groups at a single POI
4 carrying calls to ten or twenty different locations
5 throughout the LATA.

6 Although one POI is the minimum necessary for
7 connectivity, more than one POI could be established
8 if mutually acceptable, but should not be mandated.
9 Moreover, if an additional mutually acceptable POI
10 is established, as I discuss further below, the cost
11 of terminating a call to that POI should be
12 identical to the cost of terminating a call to the
13 POI. Any two carriers could establish specialized
14 POIs to guarantee redundancy. To ensure network
15 integrity and reliability to all public switched
16 network customers, it is desirable to have at least
17 two POIs. In this way, if one set of trunks is put
18 out of service for any reason, such as a failure of
19 electronic components or an accidental line cut,
20 traffic could continue to pass over the other set of
21 trunks and the impact upon users would be minimized.
22 Each carrier should be responsible for establishing

1 the necessary trunk groups from its switch or
2 switches to the designated POI(s).

3 At a minimum, each carrier should be required
4 to establish facilities between its switch(es) and
5 the POI in each LATA in sufficient quantity and
6 capacity to deliver traffic to and receive traffic
7 from other carriers.

8 **Q. SHOULD ALL CARRIERS EXCHANGE TRAFFIC AT THE POI?**

9 **A.** Yes. At the POI, all ALECs and LECs should cross-
10 connect their facilities to one another for the
11 exchange of traffic. The traffic would not have to
12 be switched by BellSouth at its access tandem switch
13 because all parties will be connected in the
14 building.

15 **Q. HOW DOES MFS' TRAFFIC EXCHANGE PROPOSAL MAXIMIZE THE**
16 **EFFICIENCY OF THE NETWORK?**

17 **A.** MFS' proposal permits the interconnecting
18 parties—who understand their networks best and have
19 the greatest incentive to achieve efficiencies—to
20 determine where interconnection should take place.
21 At the same time, minimum interconnection
22 requirements are established to ensure that
23 interconnection will take place between all

1 carriers. MFS opposes any interconnection plan that
2 mandates too specifically where interconnection
3 should take place. If carriers are not given
4 flexibility as to where they can interconnect,
5 inefficiencies will result. MFS would therefore
6 oppose any proposal that does not permit carriers to
7 maximize the efficiency of their networks.

8 **Q. WHAT DO YOU MEAN BY "MEET-POINT TANDem SUBTENDING**
9 **ARRANGEMENTS"?**

10 **A.** MFS proposes that an incumbent LEC operating an
11 access tandem serving a LATA in which a
12 competing LEC operates should be required, upon
13 request, to provide tandem switching service to
14 any other carrier's tandem or end office switch
15 serving customers within that LATA, thereby
16 allowing the other carrier's switch to
17 "subtend" the tandem. Tandem subtending
18 arrangements are required to permit
19 interexchange carriers to originate and
20 terminate interLATA calls on a new entrant's
21 network without undue expense or inefficiency.
22 Similar arrangements already exist today among
23 LECs serving adjoining territories -- there are

1 many instances in which an end office switch
2 operated by one LEC subtends an access tandem
3 operated by a different LEC in the same LATA.
4 TCG claims to be near agreement with BellSouth
5 on this issue.

6 **Q. HOW SHOULD INTERCARRIER BILLING BE HANDLED WHEN**
7 **TANDEM SUBTENDING ARRANGEMENTS ARE USED?**

8 **A.** Where tandem subtending arrangements exist,
9 LECs divide the local transport revenues under
10 a standard "meet-point billing" formula
11 established by the national Ordering and
12 Billing Forum ("OBF") and set forth in FCC and
13 state tariffs. The same meet-point billing
14 procedures should apply where the tandem or end
15 office subtending the tandem is operated by a
16 competing LEC as in the case of an adjoining
17 LEC.

18 ALECs and BellSouth should establish meet-point
19 billing arrangements to enable the new entrants to
20 provide switched access services (e.g., Feature
21 Group B, Feature Group D, 800 access, and 900
22 access) to third parties via a BellSouth access
23 tandem switch, in accordance with the Meet-Point

**Rebuttal Testimony of Timothy T. Devine
Metropolitan Fiber Systems of Florida, Inc.
September 29, 1995
Page 25**

1 Billing and Provisioning guidelines adopted by the
2 OBF. For each NXX code assigned to the new entrant,
3 the new entrant should designate within the
4 geographic numbering plan area ("NPA") with which
5 the NXX code is associated, a service area within
6 which the new entrant will offer Local Exchange
7 Services bearing that NPA-NXX designation. (As
8 employed herein, the term Local Exchange Services
9 refers to all basic access line, PBX trunk, Centrex
10 and Centrex-like services, or any other services
11 offered to end users which provide end users with a
12 telephonic connection to, and a unique telephone
13 number address on, the public switched
14 telecommunications network, and which enable such
15 end users to place or receive calls to all other
16 stations on the public switched telecommunications
17 network.) ALECs and BellSouth should arrange for
18 the new entrant to sub-tend the BellSouth access
19 tandem to which BellSouth's own end offices which
20 serve the same service area sub-tend for the
21 provision of switched access services. ALECs should
22 designate on their network a point of
23 interconnection ("POI") which should serve as the

1 rating point for the NXX code. At the ALEC's
2 discretion, the meet-point connection for the tandem
3 sub-tending arrangement should be established at
4 that POI, at a co-location facility maintained by
5 the ALEC at the BellSouth access tandem, or at any
6 point mutually agreed to by the ALEC and BellSouth.
7 Common Channel Signalling ("CCS") should be utilized
8 in conjunction with meet-point billing arrangements
9 to the extent available. ALECs and BellSouth
10 should, individually and collectively, maintain
11 provisions in their respective federal and state
12 access tariffs sufficient to reflect this meet-point
13 billing arrangement. To bill third parties for such
14 traffic, the carriers will need to exchange call
15 detail records relating to such calls.

16 **Q. WHAT OTHER BILLING ARRANGEMENTS SHOULD CARRIERS HAVE**
17 **WITH ONE ANOTHER?**

18 **A.** If the Commission adopts a reciprocal compensation
19 proposal other than bill and keep, carriers will
20 need to bill one another for terminating traffic on
21 each others' networks. For example, in New York,
22 MFS and NYNEX have agreed to bill each other during
23 each calendar quarter based upon the percentage of

1 use (percentage of calls terminated on the other's
2 network, reported separately for interstate,
3 intrastate non-local and intraLATA local, by LATA)
4 from the preceding quarter, with no "true-up"
5 between anticipated and actual traffic usage.

6 **Q. WHAT ARRANGEMENTS ARE NECESSARY TO ENSURE THAT TCG**
7 **CAN BILL AND CLEAR CREDIT CARD, COLLECT, THIRD PARTY**
8 **CALLS AND AUDIOTEXT CALLS?**

9 **A.** Consolidated billing should be required where
10 appropriate by, for example, providing for a single
11 master bill for each wire center for calls provided
12 by BellSouth's interim number portability service,
13 that will enable TCG to re-bill its end users for
14 collect, calling card, third-party billed and
15 audiotext calls. Carriers should also be required to
16 enter into mutual billing and collection agreements
17 so that each provider can accept the other's calling
18 card, and can bill collect or third party calls to a
19 number serviced by the other provider. Similar
20 cooperation is required for directory assistance and
21 call completion services. Both carriers should also
22 be required to provide the other with access to line
23 information databases so that the other carriers can

1 verify that collect and third party calls are
2 permitted to a particular number, and can validate
3 the calling card. This function is a necessary
4 element to the smooth utilization of integrated
5 networks by consumers.

6 Carriers should exchange billing records and
7 tapes to ensure billing accuracy. If any charges
8 are made for such records, they should be at LRIC.
9 While there should be standard billing procedures
10 (like the existing carrier access billing system
11 format) for all new network elements that result
12 from competitive local exchange service, MFS hopes
13 that the industry can work out appropriate
14 procedures without Commission intervention.

15 **Q. WHAT ARE THE APPROPRIATE TECHNICAL AND FINANCIAL**
16 **REQUIREMENTS FOR THE EXCHANGE OF INTRALATA 800**
17 **TRAFFIC WHICH ORIGINATES FROM A TCG CUSTOMER AND**
18 **TERMINATES TO AN 800 NUMBER SERVED BY BELLSOUTH?**

19 **A.** New entrants have no ability to route 800 numbers to
20 the appropriate local or long distance carrier.
21 BellSouth should therefore be required to do a
22 database dip and route TCG 800 number calls to the
23 appropriate carrier.

1 Q. WHAT ARE THE APPROPRIATE TECHNICAL ARRANGEMENTS FOR
2 THE INTERCONNECTION OF TCG'S NETWORK TO BELLSOUTH'S
3 911 PROVISIONING NETWORK SUCH THAT TCG'S CUSTOMERS
4 ARE ENSURED THE SAME LEVEL OF 911 SERVICE AS THEY
5 WOULD RECEIVE AS A CUSTOMER OF BELLSOUTH?

6 A. MFS currently has an agreement with NYNEX which MFS
7 believes would work effectively between BellSouth
8 and TCG. The following description is based on this
9 arrangement: BellSouth should provide to TCG a list
10 consisting of each municipality in the state of
11 Florida that subscribes to Basic 911 service. The
12 list should provide the E911 conversion date and, if
13 available, a ten digit directory number representing
14 the appropriate emergency answering position for
15 each municipality subscribing to Basic 911 service.
16 TCG would arrange to accept 911 calls from its
17 customers in municipalities that subscribe to Basic
18 911 service and translate the 911 call to the
19 appropriate 10 digit directory number as stated on
20 the list provided by BellSouth and route that call
21 to BellSouth at the appropriate tandem or end office
22 over the same trunk group(s) that other local
23 traffic is sent. When a municipality converts to

**Rebuttal Testimony of Timothy T. Devine
Metropolitan Fiber Systems of Florida, Inc.
September 29, 1995
Page 30**

1 E911 service, TCG will discontinue the Basic 911
2 procedures and begin the E911 procedures.

3 For E911 service, TCG would connect Feature
4 Group D trunks, to be jointly determined between
5 BellSouth and TCG, from TCG's switch to each E911
6 tandem serving the areas in which TCG provides local
7 exchange service, including the designated secondary
8 E911 tandem. If a municipality has converted to
9 E911 service, TCG would forward "911" calls to the
10 appropriate E911 primary tandem, along with ANI,
11 based upon the current E911 end office to tandem
12 homing arrangement. If the primary tandem trunks
13 are unavailable, TCG would alternate-route the call
14 to the designated secondary E911 tandem. If the
15 secondary tandem trunks are unavailable, TCG would
16 alternate-route the call to the appropriate
17 BellSouth TOPS (operator service) tandem. In order
18 to ensure the proper working of the system, along
19 with accurate customer data, TCG would provide daily
20 updates to the E911 database. BellSouth and TCG
21 would work cooperatively to define record layouts,
22 media requirements, and procedures for this process.

1 Q. HOW WOULD COMPENSATION FOR EMERGENCY CALLS BE
2 HANDLED?

3 A. 911 service should be funded by the imposition of a
4 monthly per-line 911 charge on each customer's bill,
5 as is done in many other states.

6 Q. SHOULD BELLSOUTH PROVIDE ON-LINE ACCESS FOR
7 IMMEDIATE ELECTRONIC UPDATES OF THE E911 DATABASE?

8 A. Yes. Given the public health and safety issues
9 involved, it is essential that customers of new
10 carriers should receive the same immediate
11 protection provided by E911 as new customers of the
12 incumbent.

13 Q. WHAT PROCEDURES SHOULD BE IN PLACE FOR THE TIMELY
14 EXCHANGE AND UPDATING OF TCG CUSTOMER INFORMATION
15 FOR INCLUSION IN APPROPRIATE E911 DATABASES?

16 A. In general, all LECs should be required to update
17 their 911 and directory assistance databases with
18 data provided by those competitors on at least as
19 timely a basis as they update these databases with
20 information regarding their own customers.

21 Q. UNDER WHAT TERMS AND CONDITIONS SHOULD BELLSOUTH BE
22 REQUIRED TO LIST TCG'S CUSTOMERS IN ITS DIRECTORY

1 **ASSISTANCE DATABASE, AND ITS UNIVERSAL WHITE AND**
2 **YELLOW PAGES DIRECTORIES?**

3 **A.** Clearly, it is in the public interest that all
4 persons be able to obtain telephone listing
5 information for a given locality by consulting only
6 one printed directory or one directory assistance
7 operator. No useful purpose would be served by
8 publishing a separate directory for each competing
9 carrier's customers. If each carrier publishes a
10 separate directory, persons seeking telephone
11 listing information would be greatly inconvenienced
12 by having to consult numerous different directories,
13 or call numerous different directory assistance
14 operators, in order to find the telephone number of
15 a single residence or business in Florida.

16 In a fully competitive market, there would be
17 no need for regulatory intervention to achieve this
18 result. The widespread availability of directory
19 information would be in every carrier's self-
20 interest, since customers would use the information
21 to place calls that would generate revenues for the
22 carriers. This is analogous to the airline
23 industry, where competing carriers willingly provide

1 detailed flight schedules to publishers (such as the
2 Official Airline Guide) who combine it with the
3 schedules of competing airlines to provide the
4 public with a single, convenient source of schedule
5 information.

6 Because the market is not yet fully or
7 effectively competitive, however, an incumbent
8 conceivably could restrict access to its directories
9 in order to disadvantage new entrants, and restrict
10 use of its listings by third-party publishers in
11 order to deny new entrants any alternative method of
12 disseminating their listings. As the Staff of the
13 New York Public Service Commission recently
14 observed: "[S]haring of the databases and daily
15 updated information is crucial for developing
16 competition...." "Level Playing Field Issues, A
17 Staff Report in Module 2," Case 94-C-0095,
18 N.Y.P.S.C., February 15, 1995. In order to prevent
19 these potential harms from occurring, the Commission
20 should require incumbent LECs to list competing
21 carriers' customers in their White and Yellow Pages
22 directories and in their directory assistance
23 databases and should require all LECs (both

1 incumbent and new entrants) to make their directory
2 listings available to one another.

3 **Q. SHOULD THE DIRECTORY PUBLISHED BY BELLSOUTH INCLUDE**
4 **INFORMATION ABOUT ALECS?**

5 **A.** Yes. It is not practical to assume that new
6 entrants or third parties will publish separate
7 directories immediately upon the inception of
8 competition. New entrants' customers should be able
9 to receive directories that contain the most basic
10 information explaining their phone service, such as
11 calling areas, rates, and contact phone numbers.
12 That information can come only from the incumbents'
13 directories.

14 **Q. WHO SHOULD DELIVER DIRECTORIES TO ALEC CUSTOMERS AND**
15 **ON WHAT TERMS?**

16 **A.** BellSouth should deliver the directories on the same
17 terms as it delivers the directories to its own
18 customers. Those terms should include terms for the
19 delivery of out-of-area directories or multiple
20 directories.

21 **Q. SHOULD CUSTOMERS OF NEW ENTRANTS HAVE THE SAME**
22 **OPTIONS WITH RESPECT TO THEIR DIRECTORY LISTINGS AS**
23 **THE INCUMBENT'S CUSTOMERS?**

1 A. Yes. Those options include bolding, indentation,
2 and multiple numbers. The incumbent should charge
3 for those options at the same rates as it charges
4 its own customers.

5 Q. **WHAT ROLE, IF ANY, SHOULD A NEW ENTRANT HAVE IN THE**
6 **PROVISION OF YELLOW PAGES ADVERTISING TO THE NEW**
7 **ENTRANT'S CUSTOMERS?**

8 A. The new entrant should have the right to (1) serve
9 as a billing and collection agent; (2) coordinate
10 the inclusion of the customer's listing (for which
11 it would receive a reasonable fee); and (3)
12 establish a commissioned sales agency relationship
13 with the Yellow Pages publisher. It would be truly
14 anomalous for the new entrant's salesperson to have
15 to respond to a customer's inquiry about Yellow
16 Pages advertising by stating that the new entrant
17 cannot assist the customer in acquiring such
18 advertising. Furthermore, a new entrant should
19 receive reasonable royalty payments from BellSouth
20 for Yellow Pages revenues generated from the new
21 entrant's customers.

22 Q. **SHOULD LECS BE REQUIRED TO COMPENSATE ONE ANOTHER**
23 **FOR EXCHANGING LISTINGS?**

1 A. No. The New York Commission recently concluded that
2 new entrants should not be required to compensate
3 incumbent LECs for including customer listings in
4 their directories:
5 "The inclusion of new entrant listings in incumbent
6 directories enhances the value of the incumbent
7 directories. This enhanced value, with its
8 consequently increased yellow pages revenues, which
9 would be retained by the incumbents, should fairly
10 compensate the incumbents for any costs of including
11 the new entrants listings in their directories and
12 providing copies to the new entrants for their
13 customers' use. New entrants receive the value of a
14 comprehensive directory, without charge."
15 *Proceeding on Motion of the Commission to*
16 *Examine Issues Related to the Continued*
17 *Provision of Universal Service and to Develop a*
18 *Framework for the Transition to Competition in*
19 *the Local Exchange Market, Order Requiring*
20 Interim Number Portability Directing a Study of
21 the Feasibility of a Trial of True Number
22 Portability and Directing Further Collaboration
23 at 6 (March 8, 1995), Exhibit D hereto.

1 In fact, the New York Commission also found
2 that "any additional revenues related to the sale of
3 directory listings to third parties should be shared
4 between the new entrant and incumbent. . . ." *Id.*

5 **Q. ARE THE CONSIDERATIONS WITH RESPECT TO DIRECTORY**
6 **ASSISTANCE SIMILAR TO THE CONSIDERATIONS WITH**
7 **RESPECT TO DIRECTORY PUBLISHING?**

8 **A. Yes. As in the case of published directories, any**
9 LEC that provides directory assistance ("DA")
10 service should be able and required to compile a
11 complete list of all telephone customers within a
12 relevant service territory. Therefore, all LECs,
13 both incumbents and new entrants, should be required
14 to provide DA listing information to one another at
15 no charge (or at charges based solely on the direct
16 costs incurred). DA listing data is different from
17 the published directory listings in three respects:
18 first, the DA database includes non-published
19 listings; second, the DA database includes the
20 customer's full name and address, which may be
21 abbreviated or partially omitted in the published
22 directory; and third, the DA database is updated at
23 least daily while the published directory only needs

1 to be updated once a year. In addition, all LECs
2 should be required to update their DA and 911
3 databases with data provided by those competitors on
4 at least as timely a basis as they update these
5 databases with information regarding their own
6 customers.

7 MFS believes that, in the long term, the
8 development of DA competition should eliminate any
9 need to regulate the provision of DA services by
10 incumbent LECs. Rather, the only long term
11 obligation should be for all carriers to make their
12 DA-quality listing data available, on a daily basis
13 and in machine-readable form, to all other carriers
14 or the other carriers' agents. Each carrier would
15 then be free either to provide its own DA service,
16 contract with another carrier for use of the
17 latter's DA services, or contract with a third-party
18 DA provider.

19 In the short term, however, MFS would propose
20 that, for at least two years, BellSouth should be
21 required to provide branded and unbranded DA service
22 (and, where available, call completion) to
23 competitive LECs at LRIC. After two years, the

1 Commission should revisit this issue to determine
2 whether DA competition has developed sufficiently to
3 undermine BellSouth's monopoly power. After that,
4 if BellSouth faces competition in the DA service
5 market, the prices it charges to other LECs will be
6 constrained by the market and regulation should be
7 unnecessary.

8 **Q. SHOULD BELLSOUTH BE REQUIRED TO PROVIDE TCG SPACE IN**
9 **THE FRONT OF THE YELLOW AND WHITE PAGE INFORMATIONAL**
10 **SECTIONS TO EXPLAIN TCG SERVICES, CALLING AREAS, AND**
11 **SO ON?**

12 **A.** The confusion non-discrim access to directories
13 just as Southern Bell access to BellSouth's separate
14 sub that does white and yellow pages. Ordered in
15 Connecticut

16 **Q. WHAT DOES MFS PROPOSE WITH RESPECT TO TRUNKING,**
17 **SIGNALLING, AND OTHER IMPORTANT INTERCONNECTION**
18 **ARRANGEMENTS?**

19 **A.** BellSouth should exchange traffic between its
20 network and the networks of competing carriers using
21 reasonably efficient routing, trunking, and
22 signalling arrangements. ALECs and BellSouth should
23 reciprocally terminate LATA-wide traffic originating

1 on each other's network, via two-way trunking
2 arrangements. These arrangements should be jointly
3 provisioned and engineered. (The term "LATA-wide
4 traffic" refers to calls between a user of local
5 exchange service where the new entrant provides the
6 dial tone to that user, and a user of a BellSouth-
7 provided local exchange service where BellSouth
8 provides the dial tone to that user and where both
9 local exchange services bear NPA-NXX designations
10 associated with the same LATA.)

11 Moreover, each local carrier should be required
12 to engineer its portion of the transmission
13 facilities terminating at a POI to provide the same
14 grade and quality of service between its switch and
15 the other carrier's network as it provides in its
16 own network. At a minimum, transmission facilities
17 should be arranged in a sufficient quantity to each
18 POI to provide a P.01 grade of service. Carriers
19 should provide each other the same form and quality
20 of interoffice signalling (e.g., in-band, CCS, etc.)
21 that they use within their own networks, and SS7
22 signalling should be provided where the carrier's
23 own network is so equipped.

1 ALECs and BellSouth should provide LEC-to-LEC
2 CCS to one another, where available, in conjunction
3 with LATA-wide traffic, in order to enable full
4 inter-operability of CLASS features and functions.
5 All CCS signalling parameters should be provided,
6 including automatic number identification,
7 originating line information, calling party
8 category, charge number, etc. BellSouth and new
9 entrants should cooperate on the exchange of
10 Transactional Capabilities Application Part messages
11 to facilitate full inter-operability of CCS-based
12 features between their respective networks. CCS
13 should be provided by Signal Transfer Point-to-
14 Signal Transfer Point connections. Given that CCS
15 will be used cooperatively for the mutual handling
16 of traffic, link facility and link termination
17 charges should be prorated 50% between the parties.
18 For traffic for which CCS is not available, in-band
19 multi-frequency, wink start, and E&M channel-
20 associated signalling will be forwarded. The
21 Feature Group D-like ("FGD-like") trunking
22 arrangements used by either party to terminate LATA-
23 wide traffic may also be employed to terminate any

1 other FGD traffic to that party, subject to payment
2 of the applicable tariffed charges for such other
3 traffic, e.g., interLATA traffic.

4 In addition to transmitting the calling party's
5 number via SS7 signalling, the originating carrier
6 should also be required to transmit the privacy
7 indicator where it applies. The privacy indicator
8 is a signal that is sent when the calling party has
9 blocked release of its number, either by per-line or
10 per-call blocking. The terminating carrier should
11 be required to observe the privacy indicator on
12 calls received through traffic exchange arrangements
13 in the same manner that it does for calls originated
14 on its own network.

15 Each carrier should be required to provide the
16 same standard of maintenance and repair service for
17 its trunks terminating at the traffic exchange POI
18 as it does for interoffice trunks within its own
19 network. Each carrier should be required to
20 complete calls originating from another carrier's
21 switch in the same manner and with comparable
22 routing to calls originating from its own switches.
23 In particular, callers should not be subject to

1 diminished service quality, noticeable call set-up
2 delays, or requirements to dial access codes or
3 additional digits in order to complete a call to a
4 customer of a different carrier.

5 **Q. SHOULD CARRIERS BE REQUIRED TO USE TWO-WAY TRUNKING**
6 **ARRANGEMENTS?**

7 **A.** Carriers should be required to interconnect using
8 two-way trunk groups wherever technically feasible.
9 Use of two-way trunking arrangements to connect the
10 networks of incumbent LECs is standard in the
11 industry. Two-way trunk groups represent the most
12 efficient means of interconnection because they
13 minimize the number of ports each carrier will have
14 to utilize to interconnect with all other carriers.

15 **Q. SHOULD LECS AND ALECS BE REQUIRED TO PROVIDE**
16 **BLV/I TRUNKS TO ONE ANOTHER?**

17 **A.** Yes. Because ALECS and BellSouth should be able to
18 interrupt calls in emergency situations, BellSouth
19 should provide LEC-to-LEC Busy Line Verification and
20 Interrupt ("BLV/I") trunks to one another to enable
21 each carrier to support this functionality. ALECS
22 and BellSouth should compensate one another for the
23 use of BLV/I according to the effective rates listed
