Ms. Blanca S. Bayo, Director
Division of Records and Reporting
Florida Public Service Commission
2540 Shumard Oak Boulevard
Tallahassee, FL 32399-0850

Re: Determination of regulated earnings of Tampa Electric Company pursuant to stipulations for calendar years 1995 through 1999; FPSC Docket No. 950379-EI

Dear Ms. Bayo:

Enclosed for filing in the above docket, on behalf of Tampa Electric Company, are the original and fifteen (15) copies of each of the following:

- 1. Prepared Direct Testimony and Exhibit (DMB-1) of Delaine M. Bacon. 05327-01
- 2. Prepared Direct Testimony of James W. Sharpe. 05328-01

Please acknowledge receipt and filing of the above by stamping the duplicate copy of this letter and returning same to this writer.

Thank you for your assistance in connection with this matter.

Sincerely,

RECEIVED & FILED

FPSC-RECORDS REPORTING

1 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2 PREPARED DIRECT TESTIMONY

3 OF

4 DELAINÉ M. BACON

5
6 Q. Please state your name, address, occupation and employer.

7
8 A. My name is DeLaine M. Bacon. My business address is 702
9 North Franklin Street, Tampa, Florida, 33602. I am the
10 Director, Financial and Strategic Analysis for TECO
11 Energy, Tampa Electric Company's ("Tampa Electric" or
12 "company") parent.

13
14 Q. Please provide a brief outline of your educational
15 background and business experience.

16
17 A. I received a Bachelor of Science in Accounting from St.
18 Leo College and a Masters of Business Administration from
19 the University of Tampa. I am a Certified Public
20 Accountant and a member of the Florida Institute of
21 Certified Public Accountants. I joined Tampa Electric in
22 October 1984 where I have held various positions within
23 the Regulatory Affairs department, including the Director
24 of Utility Financial Analysis until July 2000 when I was
25 promoted to my current position. I am responsible for

1 strategic and financial-related issues for TECO Energy,
2 as well as developing TECO Energy's long-term financial
3 forecasts.

4
5 Q. What is the purpose of your testimony?

6
7 A. The purpose of my testimony is to address the approach
8 and validity of the company's cost/benefit analysis. The
9 cost/benefit analysis was developed to demonstrate the
10 net benefits that customers received from certain tax
11 positions taken by Tampa Electric that were later
12 disputed by the Internal Revenue Service ("IRS"). I will
13 also address the consistency of the cost/benefit analysis
14 with the intent of the settlement agreement dated
15 September 25, 1996 between the Office of Public Counsel
16 ("OPC"), the Florida Industrial Power Users Group
17 ("FIPUG") and the company (the "Stipulation").

18
19 Q. Have you provided any exhibits to support your testimony?

20
21 A. Yes. My Exhibit No. _____ (DMB-1) consists of two
22 documents.

23
24 Q. Why would a cost/benefit analysis be used?

1 A. A cost/benefit analysis is generally used to either
2 determine the best approach for making a decision on a
3 prospective basis or to confirm whether a previous
4 decision was appropriate.

5
6 Q. Please describe the basis used in the cost/benefit
7 analysis for determining the treatment of Tampa
8 Electric's tax deficiency interest expense.

9
10 A. The cost/benefit analysis examined Tampa Electric's past
11 tax positions to determine the appropriateness of
12 including tax deficiency interest expense in the
13 calculation of 1999 earnings. These tax positions created
14 deferred taxes that were included in the company's last
15 rate case and in the calculations of deferred revenues
16 that benefit customers.

17
18 The basis of the cost/benefit analysis, therefore, is to
19 determine whether the deferred tax benefits resulting
20 from Tampa Electric's tax positions outweighed the
21 eventual cost of associated tax deficiency interest
22 expense. It is important to recognize that the deferred
23 taxes and tax deficiency interest expense included in
24 Tampa Electric's cost/benefit analysis are related to the
25 very same tax positions. The cost/benefit analysis is

1 included as Document No. 1 of my exhibit.
2

3 **Q.** Did Tampa Electric's cost/benefit analysis include all of
4 the tax positions that were contested by the IRS,
5 including those unrelated to the tax deficiency interest
6 expense booked in 1999?
7

8 **A.** No. The company took a very conservative approach to its
9 cost/benefit analysis by only including deferred taxes
10 that were linked to the balance of tax deficiency
11 interest included in its 1999 surveillance report. There
12 were additional deferred tax benefits for ratepayers on
13 issues contested by the IRS that did not lead to tax
14 deficiency interest because the issues were resolved in
15 the company's favor.
16

17 The approach for Tampa Electric was more conservative
18 than the approach referenced by the Florida Public
19 Service Commission ("Commission") when approving the tax
20 deficiency interest for Florida Power Corporation ("FPC")
21 in Docket No. 910890-EI, Order No. PSC-92-1197-FOF-EI.
22 Document No. 2 of my exhibit shows the \$17.8 million
23 benefit that the Commission cited for approving FPC's tax
24 deficiency interest. This \$17.8 million result included
25 the deferred taxes related to all issues raised in the

1 IRS Revenue Agent's Reports ("RAR"), regardless of
2 whether the issues were later resolved for lesser
3 amounts. This provided a larger deferred tax balance to
4 compare to the tax deficiency interest. In contrast,
5 Tampa Electric made a decision to narrow the benefits to
6 only include those deferred taxes that were directly
7 related to the interest expense included in its 1999
8 surveillance report. The benefits would have been
9 greater if analyzed consistent with FPC's approach.

10
11 **Q.** Has the cost/benefit analysis approach utilized for Tampa
12 Electric been accepted by the Commission in other cases?

13
14 **A.** Yes. The Commission required a cost/benefit analysis
15 from FPC in its last rate case. The Commission also
16 required an analysis from Peoples Gas System ("PGS") in
17 Docket No. 971310-GU for determining whether tax
18 deficiency interest expense should be allowed for
19 determining the amount of over-earnings subject to refund
20 for 1996. The Commission examined the benefits provided
21 to customers from including deferred taxes in PGS' last
22 rate case compared to the cost of the tax deficiency
23 interest.

24
25 **Q.** Please explain the approach of the cost/benefit analysis

1 used for determining the prudence of tax deficiency
2 interest expense in 1999 for Tampa Electric.

3
4 **A.** The cost/benefit analysis for Tampa Electric considered
5 two separate rate impacts to customers. First, it looked
6 at the revenue requirements used in determining the
7 company's current, permanent base rates. Second, the
8 analysis considered the costs used in determining the
9 deferred revenues and eventual refunds designated by the
10 Stipulation.

11
12 The approach of the cost/benefit analysis was to examine
13 the impact of the company's tax positions on these two
14 separate rate impacts. The analysis first evaluated
15 whether the tax positions taken by the company up to its
16 last rate case resulted in lower permanent rates. The
17 tax positions were then analyzed to determine their
18 impact on the deferred revenue refunds provided to
19 customers under the Stipulation.

20
21 The analysis proved that the company's actions leading up
22 to its rate case, and for each year of the Stipulation
23 period, lowered Tampa Electric's cost of capital. The
24 lower cost of capital provided benefits to customers in
25 excess of the tax deficiency interest expensed in 1999.

1 Q. How was the company's cost of capital reduced as a result
2 of its tax positions?

3
4 A. The company's tax positions increased its deferred taxes,
5 which are considered a cost-free source of funds and are
6 included in the capital structure at a zero cost. If
7 deferred taxes resulting from the company's tax positions
8 were not utilized, then the company would have had to
9 fund investments with other sources of capital such as
10 debt and equity. These higher cost sources of funds
11 would have increased revenue requirements for the rate
12 case and for refund calculations under the Stipulations.

13
14 Q. What is the impact to customers in the cost/benefit
15 analysis from deferring less taxes?

16
17 A. As shown in Document No. 1, the results of the
18 cost/benefit analysis proved that customers enjoyed a
19 \$12.4 million nominal net benefit (\$18.3 million if the
20 historical benefits were brought to 1999 dollars with the
21 opportunity cost of funds) as a direct result of Tampa
22 Electric's tax positions on the specific issues included
23 in the tax deficiency interest. In the cost/benefit
24 analysis, the deferred taxes associated with the
25 contested tax positions were removed from the capital

1 structure and replaced with other external sources of
2 funds, which resulted in an increased cost of capital.

3
4 The cost/benefit analysis measures the impact of how much
5 higher rates would have been and how much less the
6 deferred revenue refunds would have been during the
7 Stipulation period if the company had not taken its tax
8 positions. The higher permanent rates that were avoided
9 and the potential for lower refunds were then compared to
10 the actual cost for the tax deficiency interest to
11 determine if customers received a net benefit (or cost)
12 from the tax positions taken by the company.

13
14 Q. Would the cost/benefit analysis prove benefits for
15 customers if the rate case impacts were ignored?

16
17 A. Yes. The cost/benefit analysis would still provide net
18 benefits to customers even if the rate case items were
19 ignored. If the rate case impacts were excluded from the
20 cost/benefit analysis and only the deferred revenue years
21 were analyzed, a \$6.8 million net benefit would have been
22 realized for customers.

23
24 Q. Is Tampa Electric requesting that the net benefits to
25 customers resulting from the cost/benefit analysis be

1 used to offset refunds for 1999?

2

3 **A.** No. The cost/benefit analysis proves that customers have
4 already received more refunds than they otherwise might
5 have because of the company's tax positions, and that
6 customers have enjoyed lower base rates. However, Tampa
7 Electric is not requesting that these benefits be
8 returned to the company in 1999.

9

10 The reason for identifying the benefits is simply to
11 prove that customers received net benefits from the
12 company's tax positions despite the fact that the company
13 incurred tax deficiency interest expense as a result of
14 ultimately losing those positions. Since a \$12.4 million
15 net benefit over and above the tax deficiency interest is
16 proven, the above-the-line treatment of tax deficiency
17 interest expense for 1999 is fair and reasonable.

18

19 **Q.** In its protest, OPC states that "Tampa Electric wants to
20 recover purportedly foregone revenues related to deferred
21 taxes, which had not been requested previously, in the
22 form of reduced refunds for the future." Is this
23 correct?

24

25 **A.** No. The net benefits to customers related to the tax

1 issues being addressed are \$12.4 million. If the company
2 sought to recover "foregone revenues," i.e., the \$12.4
3 million of benefits that customers have enjoyed over and
4 above the tax deficiency interest expense, there
5 certainly would be no 1999 refund. In simple terms,
6 Tampa Electric has proven quantitatively that its tax
7 positions have been in the best interest of customers,
8 and its decision making should not be penalized when some
9 of those tax positions are disputed by the IRS.

10
11 **Q.** OPC's protest contends that since FPC asked for tax
12 deficiency interest expense in its last rate case and
13 Tampa Electric did not, then Tampa Electric is precluded
14 from recording the expense. Could you please address
15 that position?

16
17 **A.** Yes. OPC suggests that if a balance of tax deficiency
18 interest is not included in base rates, then no tax
19 deficiency interest can be placed as an above-the-line
20 expense in the future. This type of policy would not
21 reflect reality. FPC's current rates include
22 \$1.2 million of tax deficiency interest expense. OPC's
23 logic implies that FPC could record no more than this
24 balance in the future. In reality, FPC recorded
25 \$1.8 million in 1995, \$2.5 million in 1996, \$3.6 million

1 in 1997, \$4.2 million in 1998 and \$6.0 million in 1999.
2 What FPC recorded was appropriate as long as it was
3 prudently incurred.

4
5 In addition, Tampa Electric had no tax deficiency
6 interest to claim during its last rate case. To penalize
7 Tampa Electric because another company did have current
8 tax deficiency interest expense during their rate case
9 would not be logical or fair.

10
11 In no way are the expenses presented in the utilities'
12 rate cases meant to represent the only recoverable
13 expenses in future years. Expenses for each period under
14 review are examined for prudence. A cost/benefit
15 analysis is a Commission method for determining whether
16 tax deficiency interest is a prudent expense.

17
18 **Q.** Since the Stipulation specifically allowed tax deficiency
19 interest related to the Polk Power Station, does this
20 mean that all other tax deficiency interest expense is
21 disallowed?

22
23 **A.** No. One of the controlling events surrounding the
24 Stipulation was the construction of the Polk Power
25 Station. The reference to tax deficiency interest for

1 the Polk Power Station was included to address the tax
2 position that the company was taking on its seven-year
3 tax life. Through the language proposed by the Company
4 in the Stipulation, Tampa Electric sought assurance from
5 the parties to the Stipulation that the Polk tax life
6 decision would be supported if the IRS disagreed with
7 this specific tax position. The provision in the
8 Stipulation was never intended to exclude or limit other
9 similar expenses.

10
11 OPC's argument also falls short when you take it one step
12 further. For example, the Stipulation addresses the
13 inclusion of the Polk Power Station in rate base.
14 Obviously, the fact that the Stipulation specifically
15 allowed for the investment in the Polk Power Station did
16 not mean that all of Tampa Electric's other new
17 construction projects should be excluded from rate base.

18
19 Q. OPC contends that "there would have been no reason to
20 state that tax deficiency interest related to the Polk
21 Power Station would be recoverable since all such
22 expenses would be allowable pursuant to the second
23 sentence of Paragraph 11" of the Stipulation. Could you
24 respond to this statement?

1 A. Yes. Paragraph 11 does not allow for any and all tax
2 deficiency interest expense. It allows for reasonable
3 and prudent expenses. The actual language in Paragraph
4 11 states:

5
6 The calculations of the actual ROE for
7 each calendar year will be on an "FPSC
8 Adjusted Basis" using the appropriate
9 adjustments approved in Tampa Electric's
10 full revenue requirements proceeding. All
11 reasonable and prudent expenses and
12 investment will be allowed in the
13 computation and no annualization or
14 proforma adjustments shall be made.

15
16 Therefore it is inaccurate to say that Paragraph 11
17 required guaranteed above-the-line treatment by the
18 Commission for Tampa Electric's expenses.

19
20 Q. Could you please respond to other assertions made by OPC
21 regarding the intent of the Stipulations?

22
23 A. Yes. OPC's arguments can be easily refuted by focusing
24 on the language OPC chose to add when describing the
25 Stipulation. OPC makes the following statement in its

1 protest:

2
3 "A fair reading of these provisions,
4 giving effect to each, should require
5 Tampa Electric to calculate its 1999
6 earnings by first recognizing any interest
7 expense on a tax deficiency assessment
8 related to the Polk Power Station and then
9 by using only adjustments consistent with
10 those used in the last rate case. All
11 reasonable and prudent expenses within
12 these categories would be allowed to
13 derive the excess earnings to be
14 refunded." (Emphasis added)

15
16 OPC's position would alter the Stipulation language in
17 two important places. OPC states "only" adjustments
18 consistent with the last rate case can be used. The
19 Stipulation referenced by OPC does not contain the term
20 "only." OPC then states that reasonable and prudent
21 expenses "within these categories" would be allowed.
22 Once again, OPC has added limiting language because the
23 second sentence of Paragraph 11 does not contain the
24 words "within these categories." When reading the entire
25 agreement, it is clear that several investments and

1 expenses were listed with no intent to include or exclude
2 any other items within the same categories.

3 OPC also wrote in its Statement of Position on
4 Appropriate Treatment of Interest Expense on Tax
5 Deficiencies that "Tampa Electric is faced with the first
6 sentence of Paragraph 11 limiting adjustments to those
7 with the last rate case," and "the surveillance report is
8 first limited to adjustments consistent with the last
9 rate case." Paragraph 11 of the Stipulation does not
10 include the terms "limiting" or "limited."

11
12 The Stipulations were not designed as a "limit" to
13 exclude all costs that were not specifically identified
14 in its provisions. If so, there would have been no
15 reason to state that all reasonable and prudent expenses
16 will be allowed. Just because Polk-related tax
17 deficiency interest expense was specifically mentioned in
18 the Stipulation does not infer that all other tax
19 deficiency interest is disallowed, whether prudent or
20 not.

21
22 A more appropriate reading of the Stipulation would
23 require that adjustments made in the last rate proceeding
24 must be made in determining the return on equity during
25 the deferred revenue period. Then, all reasonable and

1 prudent expenses will be allowed. This is, in fact, the
2 rationale approved by the Commission and explained on
3 page 18 of its Order No. PSC-01-0113-PAA-EI.
4

5 **Q.** OPC has also made statements that tax deficiency interest
6 expense beyond that related to the Polk Power Station
7 cannot be allowed because it was never negotiated. Could
8 you please respond?

9
10 **A.** Yes. OPC has stated that "nothing outside the
11 stipulations can be relevant to calculations consistent
12 with the stipulations," and "something not contemplated
13 by the stipulations could not have any effect, positive
14 or negative, on the amounts deferred pursuant to the
15 stipulations' explicit terms." If this were so, then all
16 adjustments made by the Commission to date that were not
17 contemplated in the Stipulations would not be allowed and
18 should be removed. For example, this would include the
19 adjustments to the company's equity ratio, its short-term
20 debt rate, and to its capital structure for specifically
21 identifying deferred revenues. None of these adjustments
22 were specified in the Stipulations nor included as
23 adjustments in the last rate proceeding, but have been
24 made by this Commission based upon a "reasonable and
25 prudent" criteria.

1 As mentioned on page 18 of the Commission Order No. PSC-
2 01-0113-PAA-EI, "the interpretation urged by OPC could
3 lead to an unintended result." Using OPC's logic, the
4 Commission would be required to reverse its decisions on
5 several adjustments made over the Stipulation period to
6 the detriment of customers. Tampa Electric does not
7 believe any reversals are necessary, though, because the
8 Commission's decision to not adjust for tax deficiency
9 interest expense was consistent with its decisions to
10 make the other adjustments. As in the past and as it
11 should be in this instance, the Commission has examined
12 the prudence of all expenses and investments for Tampa
13 Electric and has included what is deemed reasonable in
14 the calculation of deferred revenues.

15
16 Q. Please summarize your testimony.

17
18 A. Tampa Electric's actions in taking certain deductions on
19 its tax returns benefited its customers despite the fact
20 that the IRS rejected some of these positions by the end
21 of 1999. The company's cost/benefit analysis shows that
22 the tax deficiency interest expense was much less than
23 the benefits that accrued to customers as a result of the
24 company's tax positions. This tax deficiency interest
25 was properly considered in the calculation of 1999

FLORIDA POWER CORPORATION
RESPONSE TO FPSC STAFF AUDIT DISCLOSURE NO. 14
DOCKET NO. 910890-EI

The Company has included interest on tax deficiencies as a recoverable expense. The Company included interest as a recoverable expense because the Company's ratepayers are direct beneficiaries of the its tax administration policies. The Commission recognized that ratepayers are the primary beneficiaries of tax planning and established a precedent for allowing such costs in rates in its Order Number 13948 in Docket No. 830465. In this Order, the Commission allowed Florida Power & Light to recognize in cost of service the amortization of interest on tax deficiencies. Although Order No. 13948 was not a generic Order, the issue involved and the underlying principles are equally applicable to all other investor-owned utilities.

Tax deficiencies and the related interest expense arise primarily because of varying interpretations of the tax laws, rules, regulations, etc. by taxpayers and taxing authorities. As discussed in the testimony of Mr. John Scardino, Jr. on pages 69 and 70, the tax law is very complex. While the Company makes a good faith effort to remain in compliance with the tax law, it will understandably interpret the tax law to protect the interests of its customers. The Company has used the term "aggressive" in this response to denote the preparation of tax returns in this manner. The IRS and the Department of Revenue, on the other hand, seek to protect the revenue position of the Treasury and other governmental entities of which they are a part. This divergence of interests and constituencies inevitably causes taxpayers and taxing authorities to have differing opinions as to the true tax liability that is due. In order to protect the interests of our customers, the Company prepares its returns to conserve cash flow and defer the need for external financing.

If the Company prepared its return as conservatively as a taxing authority may propose, the ratepayers would incur substantial additional financing and tax cost as will be subsequently demonstrated. The Company is considered by the IRS to be a "large case" taxpayer and consequently, its returns for each tax year will be subjected to audit. The Company is aware that when these audits occur, the IRS and other taxing authorities will take extremely conservative positions on issues that arise during the audits. Although the Company prevails on most of the positions that are taken in its returns, the taxing authorities prevail on some issues, thus giving rise to deficiencies and related interest.

It is important to note the process in which tax deficiencies are determined and agreed upon. As the agents conduct their audits, many issues are raised. For most issues, additional information or explanation will lead to their resolution. However, when the

DOCKET NO. 910890-EI

Company and agents remain at an impasse because of differing perceptions of the facts or interpretations of the law, the tax authority and the Company will settle some issues on a negotiated basis. Typically, the Company will settle issues for some percentage of the original amount suggested by the agents. When issues cannot be resolved with the audit agents, the Company will avail itself of the appeals process. The appeals process is designed by the IRS to provide administrative relief to taxpayers without litigation. As stated in Mr. Scardino's testimony, it is important to note that even though the Company does not prevail on all issues it takes to Appeals, the final tax liability negotiated in Appeals is typically less than that originally proposed by the IRS.

It is also important to note two additional points. The first point is that many issues that the Company takes an aggressive position on are never raised by a taxing authority. For those issues, there is a benefit created that does not require any additional expense or effort to defend. The second point is that on the positions that are questioned, had the Company never taken the controversial position in its return, it would never have been granted the compromise position that it receives from the agents or at Appeals. For example, the Company asserted in its tax return for 1982 that approximately \$15 million spent on landfill at the Crystal River site was both depreciable and eligible for investment tax credit. The IRS in its audit report asserted that none of the landfill was depreciable or eligible for investment tax credit. In Appeals, the Company reached a settlement that allowed depreciation and investment tax credit on 72% and 70%, respectively. Clearly, being aggressive in the preparation of tax returns conserves cash flow and defers the need for external financing. However, being aggressive in the preparation of tax returns inevitably leads to tax deficiencies and related interest expense.

One of the concerns raised by some is that the ratepayers pay the same tax expense, under normalization, whether or not a company aggressively prepares its return. Therefore, the ratepayers receive no benefit from aggressive preparation of a return and thus should not have to bear any associated cost. It should be noted that while interest expense on tax deficiencies is a direct result of aggressive tax planning, it is, nevertheless, a true cost of capital. When the Company is required to pay interest on a deficiency, it is because the Company has withheld cash payments from a taxing authority and has used the cash to displace external capital financing. To the extent that other capital financing has been displaced, the cost of the capital displaced presents a savings to the ratepayers of the Company.

FLORIDA POWER CORPORATION
RESPONSE TO FPSC STAFF AUDIT DISCLOSURE NO. 14
DOCKET NO. 910890-EI

The following example demonstrates the concept that tax deficiencies displace capital financing and lead to a direct benefit to ratepayers:

For the purpose of this example, a hypothetical utility has a \$1,000,000 rate base and \$100,000 of test year operating expenses. The rate base is supported by a capital structure comprising \$500,000 of debt at a cost rate of 10% and \$500,000 of equity at a cost rate of 15%; the overall cost of capital is thus 12.5%. The utility has an arguable position that, for tax purposes, it can deduct an additional \$100,000 by, for example, deducting an item that is capitalized per books. However, its operating expenses for ratemaking purposes will not be affected by whether this deduction is taken. Finally, the income tax rate is 50%.

If the utility does not take the additional deduction, its revenue requirements will be as follows:

| | | |
|------------------|---|--|
| \$100,000 | - | operating expenses |
| 125,000 | - | required after-tax return on \$1,000,000 rate base at 12.5% cost of capital |
| <u>75,000</u> | - | income taxes on pre-tax equity return (equal to after-tax equity return of \$500,000 x 15% = \$75,000) |
| <u>\$300,000</u> | | |

However, if the utility aggressively pursues the arguably available deduction, its revenue requirements will be reduced even with normalization because the required return on the rate base and the income tax expense will be less:

| | | |
|------------------|---|---|
| \$100,000 | - | operating expenses |
| 118,750 | - | required after-tax return on \$1,000,000 rate base at 11.875% cost of capital (effect of cost-free capital) |
| <u>71,250</u> | - | income taxes on pre-tax equity return (equal to after-tax equity return of \$475,000 x 15% = \$71,250) |
| <u>\$290,000</u> | | |

FLORIDA POWER CORPORATION
RESPONSE TO FPSC STAFF AUDIT DISCLOSURE NO. 14
DOCKET NO. 910890-EI

The required return on rate base would be lower because some of the debt and equity originally supporting the rate base is supplanted by the deferred taxes resulting from the \$100,000 additional tax deduction:

| | | |
|--------------------|---|--|
| \$475,000 | - debt | |
| 475,000 | - equity | |
| <u>50,000</u> | - deferred taxes (\$100,000 deduction x 50% tax rate) | |
| <u>\$1,000,000</u> | | |

Since the deferred taxes are included at a zero cost, the overall cost of capital is lowered accordingly:

| | | |
|-------|--------------------------|-----------|
| 47.5% | - debt at 10% = | 4.75% |
| 47.5% | - equity at 15% = | 7.125% |
| 5% | - deferred taxes at 0% = | <u>0%</u> |
| | | 11.875% |

As the example clearly demonstrates, the ratepayers have clearly benefitted from the utility's cost-free use of the deficiencies until such time as the amount must be paid to the IRS. It is important, therefore, to emphasize that the "real" cost or benefit to the ratepayers of taking certain positions in the Company's tax returns and ultimately having to concede those positions to the IRS is the differential between the interest owed to the government and the cost of capital the Company was able to avoid by having the use of the money during the period the tax liability was outstanding. The aggressive positions that were sustained and not conceded provide additional avoided cost benefits.

The Company has prepared an analysis which shows the cost of the federal tax deficiencies, the displaced cost of capital related to the deficiencies, and the benefit of aggressive positions sustained for the tax years 1982 - 85. A copy of the analysis is attached. This audit period was selected for analysis because these are the latest closed years for which we have been assessed interest on deficiencies. The displaced cost of capital was computed using short-term interest rates incurred by the Company. Although short-term interest rates are not theoretically correct (a blended cost of capital, using debt and equity, would have been theoretically correct), they were used as a conservative measure of the displaced cost of capital without distorting the overall results. The difference between the interest on deficiencies and the interest expense that would have been incurred if the deficiencies were replaced by short-term borrowings for tax years 1982 through 1985

DOCKET NO. 910890-EI

is a net cost of \$2 million. If the theoretically correct blended capital structure cost had been used, the computations would actually reflect a net benefit of \$2.1 million.

The avoided cost benefits related to aggressive positions that were sustained were also computed using short-term borrowing rates rather than blended capital rates for simplicity. In order to determine the cost benefit of positions sustained, the Company compared major issues in the Revenue Agent's Report (RAR) where deficiencies were asserted, that were subsequently resolved at Appeals for lesser amounts. Comparing RAR audit assessments to Appeals settlements provides a very conservative estimate of the true benefits of planning. As previously stated, many aggressive positions are never questioned by the agents. Many issues that are questioned by the agents are settled at lesser amounts than the agents originally proposed and are never included in the RAR. Finally, many audits are settled at the agent level and are never appealed. Again, the RAR assessments were used to provide simplicity and objectivity for our analysis.

The net cost savings from aggressive positions that were sustained at Appeals were \$19.8 million for tax years 1982 - 1985. The savings represent a combination of permanent tax savings such as investment tax credit on 70% of the Crystal River landfill and avoided interest expense on timing differences such as accelerated depreciation on 72% of the landfill.

To summarize, the cost or benefit of aggressive positions taken in the Company's tax returns is the differential between the IRS underpayment rate and the Company's avoided capital cost rate. This cost or benefit, however, is far outweighed by savings that were only realized because the Company took the controversial positions in its original returns.
