

REQUEST: With reference to Mr. Milner's rebuttal testimony, page 6, please provide hourly trunk servicing details for the Macon, Georgia, trunk group for May 2001.

RESPONSE:

The May 2001 hourly traffic data for BellSouth's reciprocal trunk group to _____ in Macon is attached.

Study period data is provided for the interval from November 2000 through June 2001. Standard trunk engineering processes utilize study period data, rather than raw hourly data, to size trunk groups. Study period data consists of the average traffic parameters for a period typically from 20 days to a month.

RESPONSE PROVIDED BY:

Keith Milner

Trunk Group Service Detail
NewSouth Trunks in Macon, GA

Trunks Managed by	State	Trunk Group Identification					
		ACNA	TGSN	Trunk Type	LocA	LocZ	Signaling
BLS	GA						

- Notes: 1. This is a 1-way trunk group - calls originate at the BellSouth office and terminate at the office.
 2. CCS denotes Centum Call Seconds or Hundred Call Seconds; 1 CCS equals 100 seconds of usage.
 3. Trunks Made Busy, also known as busied out trunks, are trunks that are out-of-service. Trunks may have been taken out of service automatically by the switch due to any number of trunk, switch or facility problems at either end of the trunk group or manually by a technician for testing or trouble isolation or to remove from service trunks which are causing service problems until the problem can be resolved. A trunk that is made busy will generate usage data for the entire time that it is out-of-service, just like a working trunk that is busy due to traffic. Actual call related usage is obtained by subtracting Maintenance Usage from Traffic Usage.
 4. Holding Time is the average duration of calls for the measurement hour.
 5. PC denotes Peg Count or the number of call attempts.
