

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Implementation of requirements arising)
from Federal Communications Commission) Docket No. 030851-TP
triennial UNE review: Local Circuit Switching)
for Mass Market Customers.)

**REBUTTAL TESTIMONY OF
MARK DAVID VAN DE WATER
ON BEHALF OF
AT&T COMMUNICATIONS OF THE SOUTHERN STATES, LLC**

JANUARY 7, 2004

REDACTED VERSION

DOCUMENT NUMBER-DATE
00267 JAN-7 3
FPSC-COMMISSION CLERK

1 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2 A. My name is Mark David Van de Water. My business address is 7300 East
3 Hampton Avenue, Room 1102, Mesa, AZ, 85208-3373.

4 **Q. ARE YOU THE SAME MARK DAVID VAN DE WATER WHO**
5 **PREVIOUSLY FILED DIRECT TESTIMONY IN THIS DOCKET ON**
6 **DECEMBER 4, 2003?**

7 A. Yes, I am.

8 **I. INTRODUCTION**

9 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

10 A. My testimony refutes the claims of BellSouth's and Verizon's witnesses that their
11 proposed batch processes are capable of providing high quality, seamless
12 migrations in sufficient volumes, and thus demonstrates that they do not remove
13 the impairment that manual hot cuts create for CLECs.

14 **Q. BEFORE ADDRESSING THE DETAILS, COULD YOU PLEASE**
15 **PROVIDE A HIGH LEVEL SUMMARY OF YOUR REACTION TO**
16 **BELLSOUTH'S PROPOSAL?**

17 A. In its purported effort to comply with the TRO, BellSouth offers the same manual
18 provisioning process from the 271 case, along with a batch ordering process, both
19 of which were created before, and make no effort to comply with, the TRO
20 mandates that govern this case. BellSouth unabashedly ignores the findings of the
21 FCC that rejected ILEC arguments regarding the relevance of 271 decisions and
22 current performance measurement results to the TRO hot cut requirements.
23 Moreover, it makes no effort to comply with the FCC's directive that the state

1 commissions establish a batch hot cut process. Instead, despite a national finding
2 of impairment, BellSouth maintains that nothing needs to be done to its existing
3 individual hot cut process. While it dresses up that process by adding the “batch”
4 tag to it, even BellSouth admits that its hot cut process is the same as it was before
5 the FCC issued the TRO.

6 BellSouth also ignores the FCC’s purpose for establishing a batch hot cut
7 process, to reduce the economic and operational barriers posed by the present hot
8 cut process. Instead, it offers the inadequate batch ordering/individual hot cut
9 provisioning process to be used to migrate the embedded base of UNE-P in the
10 event of a finding of no impairment. And, while BellSouth promises it will
11 achieve the anticipated increase in volumes, I have numerous concerns about un-
12 addressed issues and contradictory analyses I describe in more detail later in my
13 testimony. BellSouth’s feeble proposal exacerbates the “haves” and “have nots”
14 environment that removal of unbundled switching would create: CLECs will be
15 handicapped by a manual, high-cost process for their customers while BellSouth
16 enjoys an electronic, low-cost process for most of its customers.

17 BellSouth also ignores that its performance for hot cut migrations is
18 inferior to UNE-P migrations for ordering and provisioning, forcing CLECs and
19 their customers to inferior and inefficient service if unbundled local switching is
20 no longer available as an option. Finally, BellSouth ignores the basic reality that
21 its “batch” ordering process excludes customers who obtain DSL services via a
22 line-splitting arrangement and those who would like to move from one CLEC to
23 another.

1 In short, BellSouth's batch process falls short in a number of key aspects
2 of the TRO's mandates regarding the hot cut process.

3 **Q. WHAT IS YOUR REACTION TO VERIZON'S BATCH PROPOSAL?**

4 A. The major problems with Verizon's proposed Batch hot cut process include:

- 5 ■ It deprives CLECs of control over our end-user customer's experience in
6 three essential respects --
 - 7 ○ Inability to permit customers to make changes to their account for
8 up to over five weeks;
 - 9 ○ Inability to control the time of day, and day of week, that
10 customer's service will be interrupted – and put at risk for greater
11 interruption – by a hot cut;
 - 12 ○ Inability to monitor the quality of the cut during the critical period
13 between the cutover of the loop and the activation of the number
14 port at NPAC;
- 15 ■ No operational processes, methods and procedures, or system messages
16 have been defined, documented, tested or operationalized;
- 17 ■ There is no experience of “live production” operations in a real world
18 environment;
- 19 ■ There is no control over, and complete uncertainty with respect to the cost
20 of the “UNE-P like” service arrangement required to use the batch process
21 for new customers;
- 22 ■ There is a total lack of CLEC control over the sequence in which the lines
23 of a multi-line order are cut;
- 24 ■ An apparent lack of pre-wiring and dial-tone checks gives Verizon no
25 “margin of error” if something goes wrong on the day of the cut;
- 26 ■ There is no provision at all for handling IDLC loops within the Batch
27 process, and the proposed price under the Basic process for converting
28 IDLC loops is not commercially viable;

- 1 ▪ Verizon’s batch process does not accommodate line split or line share
- 2 orders; these plainly are higher revenue customers so obstructing access to
- 3 them is a particular concern;
- 4 ▪ There is no provision for handling CLEC-to-CLEC migrations; and
- 5 ▪ Lack of metrics and penalties that would ensure a Verizon commitment to
- 6 the process it proposes.

7 In short, AT&T has not asked, nor does it want Verizon to take control

8 over its customers’ experience. In proposing this process, Verizon is not offering

9 a better process nor is Verizon offering a process that AT&T would utilize.

10 Moreover, eliminating the ability of CLECs to control the experience of their new

11 customers means that the Verizon’s proposed process will not benefit customers.

12 **II. THE 271 CASE AND CURRENT PERFORMANCE RESULTS ARE**
13 **IRRELEVANT TO THIS PROCEEDING**

14 **Q. WHAT IMPACT DOES THE FLORIDA COMMISSION’S DECISION TO**
15 **RECOMMEND THAT BELLSOUTH BE PROVIDED 271 APPROVAL**
16 **HAVE ON ITS REVIEW OF THE ADEQUACY OF BELLSOUTH’S HOT**
17 **CUT PROCESS IN THIS PROCEEDING?**

18 A. Very little. The FCC noted that because of the new competitive environment

19 being considered (without CLEC access to unbundled local switching), decisions

20 made in 271 proceedings were not adequate to support a finding that competitive

21 carriers would not be impaired if they were required to rely on the hot cut process

22 to serve all mass market customers. The FCC specifically found that:

23 [T]he Commission’s prior findings in section 271 orders do

24 not support a finding here that competitive carriers would

25 not be impaired if they were required to rely on the hot cut

26 process to serve all mass market customers. . . . [T]hese

27 orders examined the adequacy of hot cuts at a time when

1 competitive LECs were principally using unbundled local
2 circuit switching to compete for mass market customers. . .
3 . Here, we must consider the adequacy of current hot cut
4 practices for handling the volumes that would be expected
5 if competitive LECs were denied unbundled access to
6 unbundled local circuit switching - something that was by
7 no means “reasonably foreseeable” in the context of the
8 section 271 orders. *The section 271 orders thus tell us*
9 *very little about a BOC’s ability to provision large batches*
10 *of cut overs in a timely and reliable manner under these*
11 *circumstances.*

12 TRO at n.1435 (emphasis added).

13 In spite of these very clear, explicit findings by the FCC, BellSouth starts
14 in exactly the place the FCC said this Commission should not start. BellSouth
15 goes to great lengths to repeatedly remind this Commission that it has previously
16 reviewed BellSouth’s hot cut process and found it sufficient to recommend 271
17 relief for BellSouth. (See Direct Testimony of BellSouth witnesses John Ruscilli
18 at page 17, Kenneth Ainsworth at pages 6 and 9, and Ronald Pate at page 13.)
19 BellSouth would have this Commission take its individual hot cut process
20 considered as part of the 271 review and apply it going forward, relying on
21 BellSouth’s promises that it can be scaled to handle the anticipated increase in
22 volume. However, as the FCC has said, BellSouth’s processes must be examined
23 anew to determine if they constitute impairment when considered in conjunction
24 with the elimination of the local circuit switch as an unbundled network element
25 that must be provided by ILECs.

26 **Q. DOES VERIZON ALSO RELY ON 271 APPROVAL?**

27 **A.** Yes. See page 24 of Verizon’s Direct Panel Testimony.

28

1 **Q. ON PAGE 14 OF HIS TESTIMONY, MR. PATE DISCUSSES THE**
2 **VOLUME TESTING CONDUCTED BY THE FLORIDA KPMG THIRD**
3 **PARTY TEST. DID KPMG CONDUCT VOLUME TESTING OF HOT**
4 **CUTS?**

5 A. No. The testing to which Mr. Pate refers was for ordering only; provisioning was
6 not subject to volume testing. Further, the types of orders tested do not appear to
7 be, for the most part, the type of orders involved in hot cuts. As page 263 of the
8 KPMG Final Report notes:

9 The majority of the orders transmitted during the test were
10 limited to those that flow through BellSouth's order
11 processing systems without human intervention.
12 Transactions submitted during the POP Volume
13 Performance Test (TVV2) did not go through the physical
14 provisioning process.

15 As I described in my direct testimony, only 24% of BellSouth's loop with
16 LNP orders did not require manual handling, and are therefore not representative
17 of the "majority" of the order types tested by KPMG. In other words, the results
18 of the volume testing do not reflect the ability of BellSouth to handle any volume
19 of hot-cut orders. Moreover, the third-party test did not even attempt to review
20 BellSouth's ability to provision any volume of hot cuts. Accordingly, although
21 the volume testing was a worthwhile part of the overall testing of BellSouth's
22 OSS, and was useful for the 271 proceedings, it has no relevance in this
23 proceeding.

24 **Q. WHAT IMPACT SHOULD BELLSOUTH'S CURRENT LEVEL OF**
25 **PERFORMANCE IN EXECUTING HOT CUTS AND PROVISIONING**
26 **LOOPS HAVE ON THIS COMMISSION'S REVIEW OF THE**
27 **ADEQUACY OF BELLSOUTH'S HOT CUT PROCESS IN THIS**
28 **PROCEEDING?**

1 A. As currently reported by BellSouth, it is of little value to the Commission for two
2 primary reasons. First, the FCC specifically rejected ILEC arguments that
3 performance data showed that current hot cut performance was satisfactory (the
4 same arguments BellSouth’s witnesses make in their direct testimony). The FCC
5 found “the issue is **not** how well the process works currently with limited hot cut
6 volumes” TRO at ¶ 469 (emphasis added). Second, in explaining why state
7 commission might review commercial performance data, the FCC noted that
8 “This review is necessary to ensure that customer loops can be transferred from
9 the incumbent LEC’s main distribution frame to a competitive LEC collocation **as**
10 ***promptly and efficiently as incumbent LECs can transfer customer using***
11 ***unbundled local switching.***” TRO at n. 1574 (emphasis added). The
12 performance data provided by BellSouth in this proceeding provides no such
13 analysis. It does not allow a comparison between the efficiency of transferring a
14 customer using unbundled local switching and the efficiency of transferring a
15 customer using a hot cut. For additional concerns with the performance data
16 provided by BellSouth, see the rebuttal testimony of AT&T witness Cheryl Bursh.

17 **III. THE INADEQUACY OF THE ILEC’S BATCH PROCESSES**

18 **A. Neither BellSouth nor Verizon Have Developed Viable Processes**

19 **Q. DOES BELLSOUTH’S HOT CUT PROVISIONING PROCESS**
20 **PROPOSED IN THIS PROCEEDING DIFFER FROM THE PROCESS IT**
21 **PROPOSED DURING THE FCC’S TRIENNIAL REVIEW**
22 **DELIBERATIONS?**

23 A. No. In spite of the FCC’s findings that “the overall impact of the current hot cut
24 process raises competitors costs, lowers their quality of services, and delays the

1 provisioning of service” (TRO at ¶ 473), BellSouth has made no effort to improve
2 its current hot cut process through the establishment of a batch hot cut
3 provisioning process. In fact, BellSouth’s witness Ainsworth admits “the
4 provisioning process I discuss here is the same process reviewed during the 271
5 case.” (See Ainsworth Direct at page 9) Indeed, BellSouth’s definition of a
6 “batch hot cut” does not even include provisioning as part of what must be done
7 in a batch: “[a] batch hot cut is like any other hot cut except for the ordering and
8 pre-ordering processes. For batch hot cuts the process is designed to facilitate
9 **ordering** large volumes of loop hot cuts simultaneously.” (See Varner Direct at
10 page37) (emphasis added) This definition is quite surprising since the TRO is
11 very clear that provisioning is an essential part of the batch hot cut process. TRO
12 at ¶ 489; *see also* ¶ 488 (“state commissions possess the competence to implement
13 a cost-effective and fast process for **provisioning** unbundled local
14 loops.”)(emphasis added).

15 **Q. HAS BELL SOUTH BEEN WILLING TO COLLABORATE WITH THE**
16 **CLEC COMMUNITY REGARDING THE DEVELOPMENT OF A**
17 **“BATCH” ORDERING PROCESS?**

18 A. No. In recent informal workshops held by the Alabama Public Service
19 Commission and the Tennessee Regulatory Authority, BellSouth indicated that it
20 felt its process was satisfactory and it saw no need to collaborate with CLECs
21 regarding changes to its process. Similarly, BellSouth has resisted efforts by
22 CLECs to have a batch process addressed in the Change Control Process (CCP)
23 meetings. (See Rebuttal Exhibit MDV-R1)

1 **Q. HAS VERIZON COLLABORATED WITH CLECS REGARDING ITS**
2 **“BATCH” PROCESS?**

3 A. No. AT&T and other CLECs have worked with Verizon in New York on a “large
4 job” or “project” process. It appears Verizon has proposed the essentially the
5 same batch process in Florida as it did in New York. It is my understanding that
6 the “batch” process appears to have been developed by Verizon for its own
7 purposes, without significant, and perhaps without any, input from CLECs.

8 **Q. HAVE OTHER ILECS MADE CHANGES TO THEIR BATCH HOT CUT**
9 **PROCESS IN RESPOSE TO CLEC COMMENTS?**

10 A. Yes. While these changes have not resolved all the issues between CLECs and
11 the ILEC regarding how batch hot cut processes should operate, they have
12 resulted in improvements to the process, and narrowed the scope of the issues to
13 be addressed by the state commissions. For example, SBC has proposed a batch
14 hot cut process that includes the following proposed advantages over their
15 existing process:

- 16 • Flexible scheduling
- 17 • Eliminates negotiation steps and time involved
- 18 • Provides defined interval to allow for CLEC resource planning
- 19 • Provides CLECs an ability to reserve time
- 20 • Wire center based to provide CLEC the ability to convert multiple
- 21 central offices on the same day
- 22 • Includes requests involving IDLC cuts
- 23 • Mechanized order flow
- 24 • Reservation tool
- 25 • Pre-order IDLC tool

26 **Q. ON PAGE 3 OF HIS TESTIMONY, MR. AINSWORTH STATES THAT**
27 **THE HOT CUT PROCESS IS NOT DIFFICULT OR CUMBERSOME. DO**
28 **YOU AGREE?**

1 A. No. As I described in detail in my direct testimony, hot cuts are much more
2 complex, manual, and costly than UNE-P migrations, requiring numerous steps
3 which must be coordinated if a cut is to be successful in limiting the time the
4 customer is out of service.

5 It is also noteworthy that BellSouth is not usually so dismissive of the
6 work activities associated with hot cuts. For example, in 271 testimony filed in
7 North Carolina, BellSouth witness Milner pointed out that coordinated loop
8 cutovers “involve a number of steps,” and that “the loop cutover is much more
9 complicated in terms of the work steps involved (on the part of both BellSouth
10 and the CLEC) than the number porting.” (See Rebuttal Exhibit MDV-R2)

11 **Q. ON PAGE 12 OF HIS TESTIMONY, MR. AINSWORTH INDICATES**
12 **THAT DURING 2003 THE END-USER HAS BEEN “WITHOUT**
13 **CALLING CAPABILITY” DURING A HOT CUT FOR AN AVERAGE OF**
14 **ONLY 2.39 MINUTES. IS THIS ACCURATE?**

15 A. First, this statement is accurate only for the capability to make outgoing calls. An
16 end-user will not have incoming call capability until BellSouth has notified the
17 CLEC that the cut-over is complete and the CLEC ports the telephone number to
18 its switch. Further, while BellSouth reports performance of under three minutes,
19 it insists in performance measures proceedings on being able to keep the customer
20 out of service for 15 minutes, should it so choose. In a mass market scenario
21 where thousands of residential customers will have their service disrupted through
22 loop migrations, it is likely that E-911 services will be needed, but inaccessible,
23 during this 15-minute period. The Commission should establish performance
24 standards that provide a greater level of consumer protection. For example, a

1 standard of 5 minutes would be more than adequate to provide BellSouth the time
2 it ostensibly needs, but puts the customer at less risk for an unnecessary service
3 outage.

4 Further, the performance described above only applies to those cuts that
5 go as expected. Based on BellSouth's own performance data, when service
6 outages occur during a cutover, the consequences for the customer are severe.
7 For example, in October 2003, even under the current minimal hot cut volumes
8 that BellSouth is completing in Florida, customers who experienced a service
9 outage during a coordinated hot cut were out of service an average of *seventeen*
10 hours; in November they were out an average of *eighteen and one-half* hours¹.
11 Further, based on BellSouth's most recent SQM report results of customer lines
12 involved with a hot cut that resulted in a trouble report on the line within seven
13 days of the hot cut,² BellSouth's hot cut process could result in the (lengthy) loss
14 of service for well over 1000 customers (1,174 customers) each month during its
15 conversion activity if the availability of unbundled switching is eliminated.³
16 These are outages that customers will have to bear simply because they were
17 naïve enough to believe that the industry was capable of transferring their local
18 service to another service provider in a seamless fashion as has been the case for
19 years when they wished to change their long distance carrier.

¹ (See BellSouth's MSS Reports for Measure P7-B, Coordinated Customer Conversions-Average Recovery Time)

²See BellSouth's November SQM results for Measure P7-C, Hot Cut Conversions--% Troubles Received Within 7 Days.

³ 91,755 monthly conversions as forecasted by BellSouth Witness Heartley in Exhibit AH-1 multiplied by 1.28%.

1 **Q. HAS VERIZON CONDUCTED AN ASSESSMENT OF WHAT THE**
2 **IMPACT ON CUSTOMER SERVICE WILL BE AS A RESULT OF ALL**
3 **OF THESE ADDITIONAL PEOPLE PERFORMING MANUAL WORK**
4 **ON CUSTOMER'S LINES?**

5 A. Apparently not. No such information was provided in its testimony.

6 **Q. IN YOUR DIRECT TESTIMONY, YOU POINTED OUT THAT**
7 **BELLSOUTH'S BATCH ORDERING PROCESS DID NOT PERMIT**
8 **TIME SPECIFIC CUTS. HAS BELLSOUTH CHANGED ITS POSITION?**

9 A. No. BellSouth still makes no commitments to provide time specific cuts.

10 BellSouth only says that a CLEC *may request* that *some* of their coordinated
11 conversions be converted within a specified window of time (See Ainsworth
12 Direct at page 24 (emphasis added).) BellSouth has no obligation to grant the
13 CLEC's request.

14 **Q. ON PAGE 4 OF HIS TESTIMONY, MR. PATE REFERENCES**
15 **LANGUAGE FROM AT&T'S NOVEMBER 2000 CHANGE REQUEST**
16 **FOR UNE TO UNE BULK MIGRATIONS. DID MR. PATE INCLUDE**
17 **ALL OF AT&T'S PROCESS DESCRIPTION?**

18 A. No. Mr. Pate's Exhibit RMP-1 is a copy of AT&T's change request. That
19 request includes the following additional language not mentioned by Mr. Pate.
20 "An option for doing the migrations (done by another ILEC) is that BellSouth and
21 AT&T would schedule the cuts by central office to take place over a weekend.
22 Our experience with this process has been a very low number of customer
23 outages." Unfortunately, BellSouth remains unwilling to implement a process
24 that permits CLECs and BellSouth together to select and manage the timing of the
25 cuts, despite the FCC's finding that "the record evidence strongly suggests that

1 the hot cut process could be improved if cutovers were done on a bulk basis, *such*
2 *that the timing and volume of the cutover is better managed.*” TRO at ¶ 474
3 (emphasis added).

4 **Q. DO YOU HAVE OTHER CONCERNS WITH BELLSOUTH’S PROPOSED**
5 **BATCH ORDERING PROCESS?**

6 A. Yes. As addressed in my direct testimony, BellSouth’s batch ordering process
7 does not include customers who obtain DSL services via a line-splitting
8 arrangement or those customers who would like to move from one CLEC to
9 another. Batch processes are to be established to reduce impairment, and no
10 customer groups should be left out.

11 **Q. ON PAGES 22-24 OF HIS TESTIMONY, MR RUSCILLI DISCUSSES CO-**
12 **CARRIER CROSS-CONNECTS, INCLUDING THE FACT THAT**
13 **BELLSOUTH “ALLOWS” CROSS-CONNECTS TODAY. IS**
14 **BELLSOUTH CURRENTLY MEETING THE REQUIREMENTS OF THE**
15 **TRO?**

16 A. No. As I discussed in my direct testimony, the FCC stated “we have also
17 determined that an incumbent LEC’s failure to *provide cross-connections*
18 between the facilities of two competitive LECs on a timely basis can result in
19 impairment.” TRO at ¶ 514 (emphasis added). The expensive and cumbersome
20 process described by BellSouth merely permits CLECs to install dedicated
21 cabling between their collocations; BellSouth does not *provide cross-*
22 *connections.*⁴ Absent efficient means of providing these cross-connections,

⁴ A CLEC needing to cross connect to multiple other CLECs must install dedicated cabling to each CLEC’s collocation.

1 CLECs will not be able to offer voice and data services by partnering with another
2 CLEC that provides data services.

3 **Q. BELLSOUTH ALSO STATES THAT BEGINNING IN THE FIRST**
4 **QUARTER 2004, IT WILL ALSO PROVIDE A CROSS CONNECT FOR**
5 **BOTH CLECS AT A DEMARCATION POINT. WILL THIS ADDRESS**
6 **THE FCC'S CONCERNS?**

7 A. No. BellSouth's new FCC tariffed "Special Access product" will require that the
8 CLECs wishing to have BellSouth provide a cross connection on BellSouth's
9 frame between a connecting facility assignment ("CFA") from one CLEC's
10 collocation to a CFA in a second CLEC's collocation to engage in "line splitting"
11 of a local loop (not otherwise subject to the FCC's jurisdiction) certify that the
12 traffic carried on that CFA to CFA connection (a frame jumper wire) meet the
13 FCC's de minimus (10%) interstate rule. This unnecessarily subjects a non-
14 complex POTS mass market line to cumbersome procedures such as certification
15 and audits, and irrelevant obligations such as the requirement that the line carry at
16 least 10% interstate traffic.

17 Further, BellSouth's new "product" cannot be ordered efficiently. UNE
18 local loops are ordered on a Local Service Request ("LSR"). When such a loop is
19 to be "split" between two CLECs, BellSouth will require that the connection
20 necessary to accomplish the "split" be ordered and provisioned out of its FCC
21 Access Tariff using an Access Service Request ("ASR"). There will be no means
22 of electronically ordering such an arrangement and the coordination, through
23 relating the LSR and ASR, that will be required to establish working services
24 (voice and ADSL) for the customer. Thus the voice CLEC must issue an LSR,

1 the data CLEC must issue an LSR, and one of the CLECs (depending on the
2 routing of the loop between the two) must issue an ASR. Manual processing will
3 be required for all three ordering documents. Such a manual and restrictive
4 process creates operational and economic barriers to providing DSL services to
5 mass market customers. BellSouth's proposed policies and practices for this
6 service are designed to complicate and hinder the provision of line splitting
7 service to CLEC customers and should be rejected by this Commission. TRO at
8 ¶ 514.

9 **Q. ON PAGE 2 OF HIS TESTIMONY, MR. AINSWORTH APPEARS TO**
10 **INDICATE THAT THE PURPOSE OF THE BATCH PROCESS IS TO**
11 **CONVERT THE EMBEDDED BASE OF UNE-P TO UNE-L**
12 **ARRANGEMENTS. DO YOU AGREE?**

13 A. No. As I described in my direct testimony, AT&T has attempted to obtain a
14 suitable bulk process from BellSouth to address customer service and cost issues,
15 even with the availability of unbundled switching. Further, the TRO is replete
16 with instances citing the need for a batch hot cut process. For example, in ¶ 487
17 the FCC found "that a seamless, low cost batch cut process or switching mass
18 market customers from one carrier to another *is necessary, at a minimum*, for
19 carriers to compete effectively in the mass market." I am unaware of any portion
20 of the TRO that directs the establishment of a batch hot cut process simply for the
21 use of migrating the embedded base of UNE-P. Indeed, given the FCC's findings
22 that the hot cut process creates operational and economic impairment, and that
23 "[a]fter a batch cut process has been put into place, we expect state commissions
24 in *subsequent* reviews to reevaluate the circumstances surrounding self

1 provisioning [of local switches],” it is clear that the FCC contemplated the
2 continuing use of batch hot cut process.⁵ TRO at ¶ 502 (emphasis added).

3 **Q. WHAT ARE YOUR CONCERNS REGARDING VERIZON’S BATCH**
4 **PROPOSAL?**

5 A. As an initial matter, I strongly disagree that Verizon is not obligated to provide a
6 batch process. (See Verizon Panel Testimony at page 36). Contrary to its
7 assertion, Verizon does not demonstrate in Part III of its testimony (which is
8 comprised only of an explanation of how it developed its exorbitant hot cut costs)
9 that it has satisfied its obligations regarding individual hot cuts. Verizon did not
10 provide the Commission with any evidence that its existing hot cut process does
11 not produce operational and economic impairment.

12 Secondly, as I described earlier in my testimony, Verizon has offered such
13 a flawed batch process that AT&T would not consider exposing its customers to
14 it.

15 **B. BellSouth and Verizon Have Not Demonstrated that they Could Perform**
16 **Hot Cuts at the Volumes that Will Be Required if Unbundled Local**
17 **Switching Is Not Available for Mass Market Customers.**

18 **Q. WHAT DID THE FCC FIND REGARDING THE ILEC’S ABILITY TO**
19 **HANDLE THE INCREASED VOLUME OF HOT CUTS THAT WOULD**
20 **BE EXPECTED IN THE ABSENCE OF UNBUNDLED SWITCHING?**

21 A. The FCC noted that “While incumbent LECs state that they have the capacity to
22 meet any reasonable foreseeable increase in demand for stand-alone loops that

⁵ As I indicated in my direct testimony, AT&T supports the voluntary use of a batch provisioning process for its use to migrate customers from UNE-P to UNE-L when it is otherwise feasible to do so.

1 might result from increased competitive LEC reliance on self-provisioned
2 switching, **there is little other evidence in the record to show that the**
3 **incumbent LECs could efficiently and seamlessly perform hot cuts on a**
4 **going-forward basis** for competitors who submit large volumes of orders to
5 switch residential subscribers.” TRO at n. 1437(emphasis added). The FCC also
6 found “incumbent LECs’ **promises** of future hot cut performance **insufficient** to
7 support a Commission finding that the hot cut process does not impair the ability
8 of a requesting carrier to provide the service it seeks to offer without at least some
9 sort of unbundled circuit switching.” *Id.* (emphasis added).

10 **Q. HAS BELLSOUTH PROVIDED ANYTHING OTHER THAN PROMISES**
11 **OF PERFORMANCE IN THIS PROCEEDING?**

12 A. No. While BellSouth made some assumptions about volume and used this
13 information in a force model, the net result is that they intend to “throw bodies” at
14 the problem. They provided no plans regarding quality improvement and
15 automation, hallmarks of progressive management throughout industry, indicating
16 instead their intention to attempt to custom design and manually implement mass
17 market services, and pass the unnecessary and prohibitive costs on to CLECs.

18 Further, BellSouth provided no results of independent analysis and testing
19 of this proposal. As I indicated in my direct testimony, BellSouth should be not
20 be permitted to rely on promises, but should required to prove it has the systemic
21 capability to handle the provisioning of hot cuts at volumes anticipated across all
22 its markets in the absence of unbundled local switching. Therefore, once
23 designed, the batch cut process must be subject to both pre-implementation and

1 post implementation testing. Pre-implementation testing should include third
2 party “time and motion” study of the hot cut process, and third party-monitored
3 ILEC testing using its own collocation and migration of significant numbers of its
4 own customers through hot cuts from direct connection to its switch to its
5 collocation equipment installed to operate as a pseudo-CLEC specifically for this
6 test. Post-implementation “testing” would include continuing commission review
7 to determine if the batch hot cut process meets the needs of commercial mass
8 markets in a manner that permits effective and efficient competition.⁶

9 **Q. ON PAGE 18 OF HIS TESTIMONY, MR. AINSWORTH ASSERTS THAT**
10 **BELLSOUTH’S CUTOVER OF OVER 200 LINES IN A SINGLE**
11 **CENTRAL OFFICE IN ONE DAY DEMONSTRATES BELLSOUTH’S**
12 **ABILITY TO PERFORM HOT CUTS AT FORESEEABLE VOLUMES.**
13 **DO YOU AGREE?**

14 A. No. First, Mr. Ainsworth’s testimony provides no information regarding the
15 quality of the work performed or the experience of the customers who lines were
16 cut over. It does not indicate whether these lines included IDLC, and if so how
17 those approximately 72 dispatches, each taking approximately one hour, were
18 handled. Additionally, this single event, which may have been achieved with
19 days of pre-work, around-the-clock scheduling, and other extraordinary means, is
20 no indication that the same volume work could be performed in that or any central
21 office on a day-in and day-out basis.

⁶ According to Mr. Ruscilli, only 82 lines have been converted using the batch process (See Rebuttal Exhibit MDV-R3)

1 Q. YOU MENTIONED THAT BELL SOUTH MADE A FORECAST OF HOT
2 CUT VOLUMES AND USED THAT INFORMATION IN A FORCE
3 PLANNING MODEL. DO YOU HAVE ANY OTHER CONCERNS
4 REGARDING THIS APPROACH?

5 A. Yes, I have several concerns about the forecast process used by Messrs.
6 Ainsworth and Heartley and the subsequent modeling outcomes. In BellSouth's
7 response to AT&T's Document Request No. 42, it stated that **BEGIN**
8 **CONFIDENTIAL **** **** END CONFIDENTIAL** daily UNE-P to UNE-
9 L conversions per day were forecast in Florida.⁷ This falls well short **BEGIN**
10 **CONFIDENTIAL **** **** END CONFIDENTIAL** of the 5,635 I
11 recommended in my direct testimony. BellSouth's forecast is based on current
12 levels of competition, while AT&T recommended that a truly competitive market,
13 long distance, be used as a model. BellSouth's restrictive view of the volumes to
14 be implemented in Florida will become a self-fulfilling prophecy due to the lack
15 of man-power available if manual hot cuts are required.

16 Second, BellSouth assumes that in 50% of the hot cuts will be non-
17 coordinated, despite the fact that from September 2002 through August 2003 less
18 than 3% of the total hot cut conversions were non-coordinated.⁸ BellSouth
19 provides no explanation for this dramatic change. This is a critical issue as it
20 takes 28% less central office work time to perform a non-coordinated cut than a
21 coordinated one. Therefore, underestimating the number of cutovers that will
22 require coordination will result in significant understaffing.

⁷ Despite the heading of "Daily UNE-P to UNE-L Conversions" in the force model, it appears that new loop migrations is included in the model and not just UNE-P to UNE-L conversions. If my assumption is incorrect, then staffing needs are under forecast.

1 Third, BellSouth's model assumes that there will be uniform distribution
2 of hot cuts to transfer the entire embedded base to UNE-L. For example, for each
3 of the three seven month periods during which BellSouth forecasts that one third
4 of the embedded base of UNE-Ps will be migrated to UNE-L, it assumes that an
5 equal amount will occur each month.⁹ BellSouth fails to take into account that in
6 many central offices the CLECs are not going to have the collocated facilities and
7 network equipment in place to support the migration of the embedded base of
8 UNE-P customers over to the CLECs' facilities. In fact, in many instances
9 CLECs will not even have a collocation arrangement in place to support these
10 migrations.¹⁰ Before these CLECs can issue their conversion orders, they will
11 need to establish new collocation facilities and/or augment existing arrangements.
12 The CLECs ability to do this to meet the balanced schedule that BellSouth
13 assumed will be gated by a number of factors outside of the CLECs' control.
14 These factors include: a CLEC's ability to raise the capital it will need for these
15 facilities; BellSouth's ability to manage and keep up with the collocation demand;
16 the ability of BellSouth's approved vendors to establish the required collocation
17 arrangements; and the CLEC's equipment manufacturer's ability to deliver and
18 install the equipment in the CLEC's new or expanded collocated space. The
19 CLECs cannot begin to negotiate a conversion schedule with BellSouth until the
20 CLECs have sufficient facilities to support the imbedded base of their UNE-P

⁸ In a non-coordinated cut, CLECs do not receive, for example, pre-due date verification and coordination and pre and post cut coordination on the due date.

⁹ See Exhibit KLA-3 of BellSouth Witness Ainsworth.

¹⁰ To compound the problem, many CLECs are currently UNE-P only providers. Unless a finding of non-impairment is intended to drive these CLECs out of business, the schedule must account for the time it will take these CLECs to get the funding they will need to purchase and install their network facilities (circuit switch, SS7 signaling capabilities, database access, collocated facilities, etc.).

1 customers. Because of the time it will take to establish these collocation
2 arrangements and install the necessary facilities, the conversions in the central
3 offices associated with these collocation augments may well need to be “back-
4 loaded” at the end of the schedule. BellSouth’s force model and its estimate on
5 how many additional staff members it will need for all aspects of the hot cut
6 process is based on BellSouth’s assumed even distribution of the embedded base
7 conversion. Having more of the conversions back-loaded at the end of the 27
8 month period specified by the FCC will result in an understatement of BellSouth’s
9 actual staffing needs.

10 Further it is unclear if and how BellSouth accounted in its forecast for the
11 following:

- 12 • Whether any analysis demonstrated there was sufficient physical
13 capacity at the central office to perform the forecasted volumes;
- 14 • Travel time to unmanned central offices;
- 15 • Number of shifts worked per day per central office;
- 16 • If all lines after the first one in the batch are considered as additional
17 lines for purposes of staffing and charges, or if only additional lines
18 for the individual end-users were considered;
- 19 • Whether the ratio of supervision to employees was applied evenly
20 across BellSouth territory or accounted for the geographic dispersion
21 of the central offices; and

- 1 • The impact of the shift in traffic off of its current local switch-to-local
2 switch network and onto the tandem transport network.

3 All of these issues have a direct bearing on the effectiveness of the model,
4 and its usefulness as a tool in managing the number of loop migrations required in
5 the absence of unbundled local switching as a UNE. Clearly the model's result
6 must be viewed with skepticism given these inadequacies.

7 **Q. DO YOU HAVE OTHER CONCERNS REGARDING BELL SOUTH'S**
8 **FORCE MODEL?**

9 A. Yes. While BellSouth's model churns out numbers of personnel "required," the
10 Commission can gain no assurance from BellSouth's testimony that the work
11 necessary could indeed be conducted in the central office. In certain instances,
12 insufficient information is offered; in others, inconsistent information is provided.
13 For example, Mr. Heartly's testimony on page 13 offered only general assurances
14 that central office limitations could be managed, and his supporting examples
15 cannot withstand scrutiny. First, he says that from 2 to 10 (or more) technicians
16 can work simultaneously on the same Main Distribution Frame ("MDF") without
17 negative impact on productivity. He provides no analysis of how often two
18 technicians at most can work simultaneously on BellSouth's MDFs throughout
19 the state versus ten technicians. Second, he says that when multiple loop
20 conversions are scheduled in a single day for a single central office, the pre-
21 wiring work can be done over several shifts in the days leading up to the due date.
22 However, this position does not account for the likelihood that multiple loop
23 conversions would need to occur **every** day in an environment that eliminated

1 switching as a UNE. In fact, Mr. Heartley's own force model calls for multiple
 2 conversions in a central office on a **daily** basis (See BellSouth Exhibit AH-1).
 3 Thus, pre-wiring work for one set of migrations to UNE-L would have to occur
 4 on the same day as the actual cutovers for another set of migrations to UNE-L.
 5 Both sets of activities would occur on the same day on the same MDF.

6 In addition to the lack of specific information in Mr. Heartley's testimony
 7 regarding the space limitations existing in central office, other information
 8 provided by BellSouth calls into question the non-specific information in Mr.
 9 Heartley's testimony. For example, BellSouth responded to AT&T Interrogatory
 10 No. 44 (See Rebuttal Exhibit MDV-R4) that it assumed that 12 technicians could
 11 work simultaneously on the frames of certain central offices. Many of those same
 12 central offices are also included in Mr. Heartley's Exhibit AH-1 and BellSouth's
 13 response to Interrogatory No. 45 (See Rebuttal Exhibit MDV-R5), in which a
 14 much smaller number of technicians is reported. The discrepancies are reported
 15 in the following table.

Central Office	Maximum simultaneous technicians	Maximum simultaneous technicians
BellSouth Exhibit AH-1	Interrogatory-44	Interrogatory-45
hlwdfpe	12	8
miamflhl	12	8
hlwdfwh	12	8
prnflma	12	10
pmbhfcs	12	8
wpbhfga	12	8
miamflca	12	10
ftldfloa	12	10
pmbhflma	12	8
ndadflbr	12	8

1 Additionally, in its response to AT&T Interrogatory No. 44, BellSouth
2 reports the conversions for central office HLWDFLPE to be 156 UNE-P to UNE-
3 L conversions per day, assuming the constant use of two shifts, and performing
4 some third-shift work. However, BellSouth reports in its Response to AT&T
5 Request for Production No. 42 it will now inexplicably be capable of performing
6 **BEGIN CONFIDENTIAL ** ** END CONFIDENTIAL** (a 25% increase)
7 UNE-P to UNE-L conversions per day in that central office. This commission is
8 asked to believe that this significant increase in the number of UNE-P to UNE-L
9 conversions that could be performed occurs despite the fact that the number of
10 technicians capable of working simultaneously has been revised downward (from
11 12 to 8 for a 33% decrease), and the number of conversions per technician per
12 shift remains at approximately 12.¹¹ In sum, BellSouth does not provide specific
13 analysis that illustrates that its central offices have physical capacity; in fact, the
14 data provided suggests the availability of adequate capacity is anything but clear
15 due to the conflicting or irreconcilable conclusions in the information provided.

16 **Q. DO YOU HAVE CONCERNS REGARDING VERIZON'S FORCE**
17 **MODEL AND ITS OUTPUTS?**

18 A. Yes. As an initial matter, it suffers from the same deficiency I noted earlier in
19 BellSouth's approach. It assumes a relatively even distribution of embedded base
20 migrations despite the practical realities that because of the time it will take to

¹¹ For example, according to BellSouth's force model a non-designed coordinated cut takes 36 minutes. Thus, a technician could perform 11.66 cuts during a seven hour shift. (Seven hours is extremely aggressive, but assumes two 15 minute breaks and a total of 30 minutes for health breaks and other non cutover-activity.) (See also Bellsouth response to Interrogatory No. 44 attached as Rebuttal Exhibit MDV-R4).

1 establish collocation arrangements and install the necessary facilities, so that the
2 conversions in the central offices associated with these collocation augments may
3 well need to be “back-loaded” at the end of the schedule. This would result in an
4 understatement of Verizon’s actual staffing needs.

5 Further, it is unclear whether the force model appropriately used the
6 forecasted number of hot cuts required in a scenario where UNE-P is unavailable
7 (“the incremental UNE-L adds”).

8 **Q. DO YOU HAVE OTHER CONCERNS WITH VERIZON’S CAPABILITY**
9 **TO PERFORM THE ADDITIONAL MANUAL ACTIVITY IN ITS**
10 **CENTRAL OFFICES CAUSED BY THE ELIMINATION OF SWITCHING**
11 **AS A UNE?**

12 A. Yes. For example, in response to a question on page 66 of Verizon’s Panel
13 Testimony regarding whether the additional work force will lead to crowding that
14 could interfere with normal work at the frame, Verizon responds, “The necessary
15 additional hiring would merely bring the level of frame activity closer to staffing
16 levels prevailing in earlier years, at which crowding was not a problem.”

17 It is not clear what “earlier years” Verizon is talking about in its response
18 to this question. One must keep in mind that the greater than **BEGIN**
19 **CONFIDENTIAL ** ** END CONFIDENTIAL** monthly hot cuts that
20 Verizon stated it must perform are in addition to current hot cut volumes and all
21 of the “normal” frame work that Verizon’s staff must perform each month. This
22 other frame work includes the normal day-to-day activity necessary to run the
23 business such as: new retail and wholesale customer service installations,
24 installation of additional lines to an existing customer, full or partial disconnects

1 of customer service and troubleshooting of customer service problems. It is
2 inconceivable that the people being added to Verizon's staff do this additional
3 work, *which is work that was never performed before in the history of the*
4 *telecommunications industry*, can bring "the frame activity closer to staffing
5 levels prevailing in earlier years" as Verizon claims .

6 **IV. BELLSOUTH AND VERIZON HAVE NOT SHOWN THEY CAN**
7 **IMPLEMENT A LOW COST BATCH PROVISIONING PROCESS**

8 **Q. WHAT DID THE FCC CONCLUDE ABOUT THE COSTS OF HOT**
9 **CUTS?**

10 A. The FCC stated that the "record evidence indicates that the non-recurring costs
11 associated with cutting over large volumes of loops would likely be prohibitively
12 expensive for a competitive carrier seeking to provide service without the use of
13 unbundled local circuit switching. TRO at ¶ 470. The FCC then found that a
14 seamless, *low-cost* batch cut process switching mass market customers from one
15 carrier to another is necessary, at a minimum, for carriers to compete effectively
16 in the market. TRO at ¶ 487 (emphasis added). This batch cut process must
17 "render the hot cut process more efficient and reduce per-line hot cut costs." RO
18 at ¶ 460.

19 **Q. HAS BELLSOUTH PROVIDED THIS COMMISSION A COST STUDY**
20 **DEMONSTRATING THAT ITS BATCH ORDERING PROCESS IS MORE**
21 **EFFICIENT, THEREBY REDUCING HOT CUT COSTS?**

22 A. No. In fact, BellSouth's rates for its batch process are very high. They are the
23 same as the rates for individual cuts. Mr. Ruscilli, in response to AT&T

1 Interrogatory No. 130, indicated that the results of the cost study reflected that the
2 efficiencies that may be realized as a result of performing the hot cuts were offset
3 by the cost of the project management. In other words, BellSouth offers nothing
4 to satisfy the FCC's direction that the process be "low-cost."

5 **Q. DIDN'T BELLSOUTH OFFER A 10% DISCOUNT OFF HOT CUT**
6 **RATES FOR HOT CUTS ORDERED IN BATCHES?**

7 A. Yes. However, I have a number of concerns with BellSouth's proposal. First, it
8 is inadequate to eliminate the high costs of a hot cut. As I indicated in my direct
9 testimony, the most utilized hot cut is \$83.11, compared to a UNE-P migration
10 cost of \$1.62. A reduction of \$8.31 makes very little progress in closing that gap.
11 And, although Mr. Ruscilli alludes on page 18 of his Direct Testimony to a cost
12 study (including the fact that certain rate elements in this study are actually lower
13 than the ordered rate including the 10% discount), BellSouth has not filed a study
14 in this case.

15 **Q. IF ITS OWN UNCONTESTED COST STUDIES SHOWED THAT THE**
16 **NEW RATES WERE IN SOME CASES BELOW A 10% REDUCTION IN**
17 **THE CURRENT RATES, WHAT ANALYSIS DID BELLSOUTH USE TO**
18 **ESTABLISH A REDUCTION RATE OF 10%?**

19 A. It is unclear. In response to AT&T Request for Production of Documents No. 40,
20 which asked for all supporting documentation for the 10% discount, BellSouth
21 responded that it had no responsive documents. (See Rebuttal Exhibit MDV-R6).

22 **Q. GIVEN BELLSOUTH'S OFFERED DISCOUNT, IS THE COST TO THE**
23 **CLECS FOR USING THE BATCH ORDERING PROCESS**
24 **SUBSTANTIAL?**

1 A. Yes. Because the hot cut process is manual, large numbers of personnel will be
2 required. The salary and benefits of the additional LCSC and CWINS personnel
3 required will be over \$40,000,000 dollars annually, and the salary, benefits, and
4 tools for the additional central office and field personnel will be over \$58,000,000
5 dollars annually. (See Rebuttal Exhibit MDV-R7) This does not include training
6 costs, real estate, etc. for these employees. This significant extra annual cost
7 (likely well over \$100,000,000) by BellSouth will of course be passed on to
8 CLECs, who will pay these extra charges *for no additional value* to the
9 consumers in Florida.

10 Importantly, these extra BellSouth personnel costs do not include other
11 costs such as the CLECs' internal costs for its own personnel, as well as the
12 network infrastructure required to be able to provide its own switching.

13 **Q. HAS VERIZON OFFERED A COST STUDY IN THIS PROCEEDING?**

14
15 A. Yes. The rates proposed by Verizon minimally reflect inadequate processes and
16 likely reflect costing methodologies that are not TELRIC based. In any event, the
17 rates proposed on page four of Exhibit III-A of Verizon's Panel Testimony are not
18 the low cost rates required by the FCC in the TRO and required by CLECs to be
19 able to operate in the mass market.

20 **Q. WHAT DO YOU RECOMMEND THE COMMISSION DO REGARDING**
21 **THE ESTABLISHMENT OF TELRIC PRICING FOR BATCH**
22 **PROCESSES FOR VERIZON AND BELLSOUTH?**

23 A. First, the Commission should establish appropriate batch processes based on
24 AT&T's recommendation described in my direct testimony. Once processes are

1 defined and BellSouth and Verizon implement the Commission's Order, then
2 TELRIC rates should be established. Until those rates are established, rates for
3 UNE-P migrations should be charged for loop migrations when using the
4 Commission approved batch process.

5 **V. BELLSOUTH'S AND VERIZON'S TESTIMONY DOES NOT**
6 **ADEQUATELY ADDRESS THE NEW OPERATIONAL ISSUES THAT**
7 **WILL ARISE IF LOCAL SWITCHING IS NO LONGER AVAILABLE TO**
8 **CLECS AS A UNE.**

9 **Q. ON PAGE 24 OF HIS TESTIMONY, MR. RUSCILLI ASSERTS THAT**
10 **TRANSITIONAL USE OF UNBUNDLING OF LOCAL SWITCHING IS**
11 **NOT NEEDED BECAUSE CLECS ARE NOT IMPAIRED. DO YOU**
12 **AGREE?**

13 **A.** No. The FCC directed state commissions to consider whether (or the extent to
14 which) temporary or "rolling access" to UNE-P would address all identified
15 impairment. TRO ¶ 524. Rolling or transitional access to UNE-P is clearly not
16 adequate to "cure" the many operational and economic issues for the reasons
17 described in this and other AT&T testimony. For example, rolling access would
18 not alleviate service outages caused by hot cuts; it would not resolve the
19 economic impairment that results from the collocation, digitization, concentration
20 and backhaul costs that a CLEC must incur to connect the ILEC loop to its
21 switch; it would not correct the inefficiencies and errors created by the manual hot
22 cut provisioning; and it would not overcome the capacity constraints which are
23 created by the volumes of hot cuts required and exacerbated by scenarios such as
24 IDLC, line splitting and CLEC-to-CLEC migrations. Moreover, we have not yet

1 seen what additional operational concerns will arise if unbundled local switching
2 is no longer available to CLECs.

3 **Q. PLEASE REMIND THE COMMISSION WHAT ADDITIONAL**
4 **OPERATIONAL CONCERNS YOU BELIEVE MAY OCCUR IF LOCAL**
5 **SWITCHING IS NO LONGER AVAILABLE TO CLECS.**

6 A. The two specific issues I addressed in my direct testimony were collocation space
7 and trunk blocking. It is likely we will see impacts in both of those areas if
8 unbundled local switching is no longer available to CLECs at cost-based rates.
9 More collocation space will be needed and traffic patterns within the network will
10 change such that more local traffic will be routed to the ILEC's tandem switch.

11 **Q. ON PAGES 19-21 OF HIS TESTIMONY, MR. RUSCILLI STATES THAT**
12 **COLLOCATION SPACE IS AVAILABLE AND THAT BELL SOUTH**
13 **PROVIDES COLLOCATION IN A TIMELY MANNER. PLEASE**
14 **COMMENT.**

15 A. Conspicuous for its absence is any discussion of the plans that BellSouth has
16 made to handle the surge of applications for new collocation arrangements and
17 augmentations of existing collocations, not to mention the need to plan and
18 construct necessary additions to its central office back-up power plants.
19 BellSouth's testimony also does not account for the additional staffing it will
20 likely need to support the surge in collocation requests it may receive. And, while
21 BellSouth claims it has space available in most locations, it does not say how
22 much, so the Commission has no information to understand how many additional
23 CLECs BellSouth's central offices can accommodate.¹²

¹²The FCC identified available collocation space as an issue for the state TRO proceedings. TRO ¶ 513.
"We find that the absence of sufficient collocation space in the incumbent central office or offices might in

1 Like its performance in other areas, BellSouth's performance results in
2 providing collocation space in today's environment, when there is little to no
3 activity, has little relevance in an environment much more dependent on timely
4 collocation installations. Yet BellSouth has provided no details on how it plans to
5 manage increased demand for collocation or what it estimates that demand to be.
6 Without an ability to efficiently provide increased amounts of collocation in a
7 timely manner, BellSouth's theoretical ability to perform hot cuts to non-existent
8 collocation arrangements, even if true, becomes beside the point.

9 **Q. HOW DID VERIZON ADDRESS THIS ISSUE?**

10 A. Verizon's Panel fails to address at all Verizon's capability to support the
11 additional requirements that would be placed on its collocation application and
12 implementation processes that a non-UNE-P environment would create.

13 **Q. EARLIER YOU EXPRESSED CONCERN ABOUT THE IMPACT OF THE**
14 **SHIFT IN TRAFFIC OFF OF BELLSOUTH'S CURRENT LOCAL**
15 **SWITCH-TO-LOCAL SWITCH NETWORK AND ONTO THE TANDEM**
16 **TRANSPORT NETWORK. PLEASE EXPLAIN WHAT YOU MEAN BY**
17 **THIS SHIFT IN TRAFFIC.**

some markets render competitive entry impossible and thus result in impairment. We therefore direct the state commissions to consider evidence concerning the costs and physical constraints associated with collocation in a particular market. We direct state commissions to consider whether competitive entry is inhibited, or is likely to be inhibited going forward, by the exhaustion of available collocation space in the incumbent LEC's central offices. Evidence relevant to this inquiry would include, for example, the amount of space currently available in those central offices; the expected growth or decline, if any, in the amount of space available; and the expected growth or decline, if any, of requesting carriers' collocation space needs, assuming that access to unbundled switching were curtailed. The state commissions shall consider this factor in determining whether to find that requesting carriers are not impaired without access to unbundled local circuit switching."

1 A. When a CLEC is using UNE-P it not only uses BellSouth's unbundled switching
2 but it also uses BellSouth's unbundled common transport.¹³ Because of the traffic
3 volumes and the community of interest between local switches that BellSouth has
4 as a result of its former monopoly status, much of the retail and UNE-P inter-
5 switch traffic is routed on direct trunk groups from the originating end office local
6 switch to the terminating end office local switch. However, because the CLECs
7 do not enjoy the same economies of scale as BellSouth does, most of the traffic
8 from the CLEC's local switches will have to be routed through BellSouth's
9 tandem switches for completion to the BellSouth end offices. Additionally, traffic
10 originated by BellSouth customers will need to be routed through its tandem
11 switches for completion to the CLEC's local switches when a BellSouth customer
12 is calling a CLEC customer.

13 As a result of the conversion of the embedded base of UNE-P customers
14 to the CLEC's switches there is going to be a tremendous shift in traffic volumes
15 off of the existing BellSouth end office-to-end office trunk groups and onto the
16 BellSouth tandem switches and the trunk groups between the tandem switches
17 and the BellSouth end offices. Unless BellSouth has properly engineered for this
18 growth in volumes on its tandem network, CLECs and their customers are going
19 to experience tandem congestion and the resulting call blocking.

20 **Q. BECAUSE BELL SOUTH WILL NEED TO USE ITS TANDEM**
21 **NETWORK TO COMPLETE ITS CUSTOMER'S CALLS TO THE**
22 **CLECs, WON'T THIS PROBLEM ALSO BE A CONCERN FOR THEM?**

¹³ Common transport is also known as shared transport.

1 A. Not necessarily. It is important to keep in mind that the customer being migrated
2 was already CLEC customer and may have been a CLEC customer for a
3 considerable amount of time. Because of the service outage and feature
4 functionality issues associated with a hot cut over to the CLECs facilities, the
5 CLECs are required to notify all of their UNE-P customers of the conversion to
6 UNE-L. This is typically accomplished via a letter to the customers informing
7 them of a “network upgrade” that will result in a brief (we hope) outage and will
8 potentially impact some of their feature functionality.¹⁴ After this “network
9 upgrade” is accomplished the customer, who never had a problem completing or
10 receiving calls before the “upgrade” and now experience these problems, will
11 assume that the CLEC dropped the ball on its “upgrade.” Even in cases where the
12 BellSouth’s customer gets blocked it is generally going to be a negative reflection
13 on the CLEC because people trying to call the CLEC’s customer did not have a
14 problem with call blocking prior to the “upgrade.” Unless BellSouth has planned
15 for and engineered its network for this major shift in traffic patterns, CLEC
16 customer service will be severely impacted and as a result the CLECs will lose
17 customers back to BellSouth.

18 **Q SHOULD BELLSOUTH BEGIN TO ENCOUNTER THIS CONGESTION**
19 **ON ITS TANDEM NETWORK CAN’T IT EASILY BE REMEDIED BY**
20 **THE ADDITION OF TRUNKS BETWEEN THE TANDEMS AND THE**
21 **END OFFICES?**

¹⁴ Some switch based features such as speed calling and remote call forwarding will have to be reprogrammed by the customer when the customer is converted from UNE-P to the CLEC’s switch.

1 A. If it is a simple matter of increasing the trunk group size and the spare facilities
2 are available to do so, then it is a relatively easy problem to fix. However, the
3 problem is not all that simple. First, BellSouth must determine whether its
4 tandem switches can handle the increased traffic load that they will be faced with.
5 If not, either the tandem switch will have to be augmented through an addition of
6 equipment and supporting software. In cases where BellSouth's tandems are
7 already performing at or near capacity then additional tandem switches may need
8 to be installed in the network. In either case both scenarios will take a
9 considerable amount of time, during which the CLEC's customers are continuing
10 to experience service problems. Additionally, there may be cases where the
11 tandem has the capacity but there are no spare facilities between the tandem and
12 the end offices to grow the existing trunk groups for the additional traffic load.
13 This scenario will also take time for BellSouth to install the interoffice facilities it
14 will need to support the offered traffic loads, all resulting in the same detrimental
15 impact to the CLEC's customers.

16 **Q. HOW DID VERIZON ADDRESS THIS ISSUE?**

17 A. It did not. Further, the concerns I expressed above about BellSouth also apply to
18 Verizon.

19 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

20 A. Yes, it does.

Subject: BellSouth Response to Question re: Bulk Migration Collaborative

CLECs,

In response to the question from Benni Almas (Neustar) regarding BellSouth's plans to establish a Bulk Migration collaborative with the CLEC community:

BellSouth has an effective, seamless Bulk Migration process in place. Consequently, BellSouth has no plans to establish a Bulk Migration collaborative at this time.

If this changes in the future, CCP will forward the invitation to the CLEC community.

Thanks,

Change Management Team

BELLSOUTH TELECOMMUNICATIONS, INC.
DIRECT TESTIMONY OF W. KEITH MILNER
BEFORE THE NORTH CAROLINA UTILITIES COMMISSION
DOCKET NO. P-55, SUB 1022
APRIL 12, 2001

Q. STATE YOUR NAME, YOUR BUSINESS ADDRESS, AND YOUR POSITION WITH BELLSOUTH TELECOMMUNICATIONS, INC. ("BELLSOUTH").

A. My name is W. Keith Milner. My business address is 675 West Peachtree Street, Atlanta, Georgia 30375. I am Senior Director - Interconnection Services for BellSouth. I have served in my present position since February 1996.

Q. PLEASE SUMMARIZE YOUR BACKGROUND AND EXPERIENCE.

A. My business career spans over 30 years and includes responsibilities in the areas of network planning, engineering, training, administration, and operations. I have held positions of responsibility with a local exchange telephone company, a long distance company, and a research and development company. I have extensive experience in all phases of telecommunications network planning, deployment, and operations in both the domestic and international arenas.

I graduated from Fayetteville Technical Institute in Fayetteville, North Carolina, in 1970, with an Associate of Applied Science in Business Administration degree. I later

1 Q. ARE CLPS ORDERING LINE SPLITTING?

2

3 A. No, not at this time. As stated above, however, BellSouth will facilitate line splitting for
4 any CLP that requests it.

5

6 **HOT CUTS**

7

8 Q. GENERALLY DESCRIBE THE PROCESS KNOWN AS A "HOT CUT."

9

10 A. Hot cuts involve the conversion of an existing BellSouth customer to the network of a
11 competitor by transferring the customer's in-service loop over to the CLP's network.
12 BellSouth has established hot cut procedures that ensure accurate, reliable, and timely
13 cutovers.

14

15 Q. DESCRIBE THE LOOP CUTOVER PROCEDURES ESTABLISHED BY
16 BELL SOUTH TO ENSURE ACCURATE AND TIMELY CUTOVERS.

17

18 A. BellSouth has implemented three hot cut processes, two involving coordination at the
19 time of the hot cut between BellSouth and the requesting CLP and one process that does
20 not involve such coordination. The two processes for coordinated loop cutovers are a
21 time-specific cutover, and a non-time-specific cutover. With a time-specific cutover, a
22 CLP can set a specific date and time for a loop conversion by ordering and paying for
23 time specific order coordination. Under this option, BellSouth commits to use best
24 efforts to complete the conversion as specified by the CLP at the ordered date and time.
25 *See ICG Agmnt., Att. 2, § 2.1.4. If unforeseen circumstances occur during the*

1 provisioning process which may cause the date or time of the conversion to be in
2 jeopardy, BellSouth notifies CLP as soon as the jeopardy is identified to allow the CLP to
3 respond to its customer as appropriate.

4
5 Under the second option, the CLP may request non-time specific coordination from
6 BellSouth. Under this option, BellSouth and a CLP mutually establish a date for the
7 conversion but do not pick a specific conversion time at the time BellSouth receives the
8 CLP's local service request. Then, 24 to 48 hours in advance of the date of the
9 conversion BellSouth and the CLP mutually set a time for the conversion. Like time-
10 specific coordination, if unforeseen circumstances occur that may jeopardize BellSouth's
11 ability to perform the conversion, BellSouth notifies the CLP as soon as the jeopardy is
12 identified.

13
14 As a third option, the CLP may prefer no coordination of any kind between BellSouth
15 and the CLP at the time of the hot cut. The CLP merely specifies the date upon which it
16 wishes BellSouth to perform its cutover activities and BellSouth notifies the CLP once
17 the hot cut is complete.

18
19 Q. DESCRIBE IN MORE DETAIL THE PROCESS FOR COORDINATED CUTOVERS.

20
21 A. Coordinated loop cutovers involve a number of steps. Exhibit WKM-2 shows, pictorially
22 and with a brief narrative, the various work steps involved in a typical coordinated loop
23 cutover. These photographs were taken in BellSouth's Norcross, Georgia, central office;
24 however, the work steps are identical in all nine states in BellSouth's region. Briefly, the
25 work steps involved are as follows:

- 1 • The BellSouth central office technician receives a call to begin cutover and asks
2 for the cable pair number of the loop to be cutover. This is shown on page 1 of
3 Exhibit WKM-2.
- 4 • The technician types the cable pair number into a database to find the loop
5 cutover work order number. This is shown on page 2 of Exhibit WKM-2.
- 6 • The technician retrieves a copy of the work order for the unbundled loop. This is
7 shown on page 3 of Exhibit WKM-2.
- 8 • The technician in the BellSouth central office responds to the BellSouth UNE
9 Center’s request to initiate coordination of the overall cutover of service from
10 BellSouth to the CLP. This is shown on page 4 of Exhibit WKM-2.
- 11 • The technician then verifies that the correct loop has been identified for cutover.
12 This is done using a capability referred to as Automatic Number Announcement
13 Circuit (“ANAC”). The technician plugs a test set onto the loop and dials a
14 special code. The telephone number associated with that loop is played audibly.
15 This is shown on page 5 of Exhibit WKM-2.
- 16 • Next, the technician locates the existing jumper on the BellSouth Main
17 Distributing Frame (“MDF”) running between the loop and the BellSouth switch
18 port. This is shown on pages 6-7 of Exhibit WKM-2.
- 19 • The technician locates and removes the end of the jumper connected to the
20 BellSouth cable pair. This is shown on page 8 of Exhibit WKM-2.
- 21 • The technician then locates and removes the end of the jumper connected to the
22 BellSouth switching equipment. This is shown on page 9 of Exhibit WKM-2.
- 23 • The technician then connects the one end of a new jumper between the loop and a
24 connector block on a cable rack with tie cables to the CLP’s collocation
25 arrangement. This is shown on page 10 of Exhibit WKM-2.

- 1 • The technician then weaves the new jumper wire through the cable rack to reach
2 the tie cables to the CLP's collocation arrangement. This is shown on page 11 of
3 Exhibit WKM-2.
- 4 • The technician connects the second end of the new jumper to the connector block
5 and thus the tie cable to the CLP's collocation equipment. This is shown on page
6 12 of Exhibit WKM-2.
- 7 • The technician next verifies that the loop is connected to the expected switch port
8 and telephone number in the CLP's switch, again using ANAC capabilities. This
9 is shown on page 13 of Exhibit WKM-2.
- 10 • Upon successful completion of the loop cutover, the technician verifies with the
11 CLP that the order was correctly worked, closes the work order, and notifies the
12 UNE Center. This is shown on page 14 of Exhibit WKM-2.
- 13 • Once the cutover is complete, the CLP sends appropriate messages to effect
14 number porting.

15
16 Q. DOES BELLSOUTH DO ANY TESTING IN ADVANCE OF THE CUTOVER DATE?
17

18 A. Yes, BellSouth does advance testing for all designed circuits which come with test points.
19 For such circuits, BellSouth will check the circuit 24 to 48 hours prior to the due date.
20 For non-designed circuits, BellSouth performs continuity tests within the central office
21 from the collocation to the BellSouth switch. For both designed and non-designed
22 circuits, BellSouth tests on the cutover due date for CLP dialtone.

23
24 On the due date, BellSouth tests for CLP dialtone for all circuits, whether designed or
25 nondesigned. BellSouth also monitors the line for use. If during the test, BellSouth does

1 not receive CLP dialtone, the cutover will not take place unless the CLP corrects the
2 problem within 15 minutes or pays for standby time. Otherwise, the CLP must elect to
3 reschedule the conversion.

4
5 Q. DOES BELLSOUTH PERFORM LOOP CUTOVERS SIMULTANEOUSLY WITH
6 NUMBER PORTING?

7
8 A. No. BellSouth does not perform loop cutovers simultaneously with number porting for
9 the very important reason that to do so leaves the end user customer at risk of the number
10 porting being completed early and calls bound for the end user customer being
11 misdirected to the CLP's switch. The loop cutover is much more complicated in terms of
12 the work steps involved (on the part of both BellSouth and the CLP) than the number
13 porting. BellSouth performs all "up front" work in anticipation of the loop cutover being
14 successfully completed. BellSouth's provisioning process is discussed in the testimony of
15 Mr. Ken Ainsworth. BellSouth's Local Number Portability ("LNP") process is discussed
16 further in the affidavit of Mr. Dennis L. Davis, Attachment E..

17
18 The cutover process can be even more unobtrusive to the end user customer if one of
19 several processes is followed. The CLP might, for example, schedule the cutover late at
20 night or on a weekend or any other time when the end user customer will not be using the
21 service. Other procedures such as pre-wiring cross connections in anticipation of
22 BellSouth's providing the unbundled network elements likewise minimize or eliminate
23 any inconvenience to the end user customer.

24

1 Q. DOES BELLSOUTH DOCUMENT ITS CUTOVER PROCESS SUCH THAT THE
2 CLPS CAN REVIEW IT?

3

4 A. Yes. BellSouth has developed a detailed flow chart depicting the entire process. This
5 process flow is attached to this testimony as Exhibit WKM-3.

6

7 Q. DOES BELLSOUTH HAVE METHODS AND PROCEDURES THAT DOCUMENT
8 THIS PROCESS FLOW?

9

10 A. Yes. BellSouth has developed methods and procedures (M&Ps) for its process flow.
11 BellSouth's M&Ps are attached to this testimony as Exhibit WKM-4 and address the
12 following:

- 13 • BellSouth's processes when a CLP orders a coordinated conversion and whether
14 the CLP wants to set the conversion time for an offered day or whether the CLP
15 elects to have the time mutually agreed to prior to conversion.
- 16 • BellSouth's requirements to contact the CLP at any point in the provisioning
17 process where a jeopardy condition might result in a conversion delay.
- 18 • BellSouth's commitment to contact the CLP 24 to 48 hours in advance of the cut
19 depending on the interval for the service ordered, to negotiate a non time specific
20 conversion and/or to verify the CLP's readiness to convert the customer's service
21 as ordered.
- 22 • BellSouth's pre-testing responsibilities prior to conversion as well as on the
23 conversion date to ensure the conversion is completed successfully.
- 24 • BellSouth's willingness to notify and cooperatively work with CLPs to correct
25 any wiring defects which BellSouth identifies while performing pre-testing

REQUEST: Refer to the Direct Testimony of John Ruscilli, p. 13, lines 21-24, where he states: "As of October 2003, there are 156,745 lines in Florida served by a combination of a BellSouth unbundled loop and a CLEC's switch, which demonstrates without doubt that BellSouth has a hot cut process that has been tested and that worked." With regard to this testimony:

- a. Explain what "testing" is referenced; and
- b. How many of the 156,746 lines were hot cut under BellSouth's batch hot cut process?

RESPONSE: a. Mr. Ruscilli based his determination that the hot cut process had been tested upon the data demonstrating the large quantity of commercial usage of hot cuts in the state of Florida.

b. There have been a total of 82 lines requested and converted from UNE-P to UNE-L using the batch hot cut process.

RESPONSE PROVIDED BY: John Ruscilli

REQUEST: In BellSouth's Ex Parte in FCC Docket 01-338, filed December 24, 2002, on page 7, a table sets forth BellSouth's calculation of the time required to convert the "Top 20 UNE-P wire centers" to UNE-L or EELs. Provide answers to the following questions regarding that table:

- (a) How many technicians were planned to work per shift, per wire center, to accomplish these conversions?
- (b) How many conversions were planned per technician, per shift in each of the twenty wire centers?
- (c) What is the maximum amount of new migrations BellSouth would be able to complete during the 3 -9 months these conversions would take place?
- (d) How many UNE-P customers exist in these 20 wire centers as of September 1, 2003?

- RESPONSE:
- (a) The assumption was that each of the Top 20 UNE-P wire centers, shown on page 7 of BellSouth's December 24, 2002, ex parte, have large frames and that there would typically be 6 technicians working on the frame during the normal day shift, with a maximum of 12 technicians able to work on the frame at any given time. Two shifts were assumed (except for the HLWDFLPE wire center where some third shift work was assumed) per day, with 6 technicians performing cuts during the day shift and 12 technicians performing cuts during the night shift, for an average of 9 technicians per wire center per day.
 - (b) The number of conversions per technician per shift in each of the twenty wire centers works out to be approximately 11.5, which results in approximately 104 conversions per wire center per day. In HLWDFLPE, assuming some third shift work, the number of conversions per technician per shift is approximately 13, which results in approximately 156 conversions per day.
 - (c) BellSouth's process is scalable depending on volumes.

BellSouth Telecommunications, Inc.
Florida Public Service Commission
Docket No. 030851-TP
AT&T's 3rd Request for Production
December 10, 2003
Item No. 40
Page 1 of 1

REQUEST: Referring to Direct Testimony of John Ruscilli, page 18, provide all supporting documentation for the 10% discount.

RESPONSE: BellSouth has no responsive documents.

REQUEST: Refer to the Direct Testimony of Kenneth Ainsworth, page 36, what is the combined annual salary (with benefits), for the 425 CWINS personnel and 105 service representatives in the LCSCs BellSouth proposes to add to provision loops in the absence of unbundled local switching?

RESPONSE: For the period 2005 through 2007, the projected annual salary (with benefits) costs for the 425 additional CWINS personnel and the 105 additional service representatives would be \$40,737,000 annually.

RESPONSE PROVIDED BY: Ken L. Ainsworth

REQUEST: Referring to Exhibit AH-1 attached to the Direct Testimony of Alfred Heartley, what is the combined annual salary (with benefits) for the 1000 additional personnel BellSouth is proposing to add to provision loops in Florida in the absence of unbundled local switching?

RESPONSE: Estimated expense due to salary, benefits, taxes and tools for 1,080 additional employees proposed in Florida is approximately \$83.2M annually.

The projected force will be reduced due to a correction made to the Force and Load Model to be included with the Rebuttal Testimony of Mr. Heartley. The revised requirement for Florida is 759 employees. The expense for the revised force is estimated to be \$58.5M annually.

The revised Force and Load Model is provided in BellSouth's response to AT&T's Third Request for Production, Item No. 42. The responsive document is proprietary and is being provided pursuant to the terms of the parties' protective agreement

RESPONSE PROVIDED BY: Alfred Heartley
