**Inspector's Attestation As To Data Accuracy  
 Pertaining To  
 Triennial Review Response Inspection  
 CLEC Fiber Based Collocation & CATT Inspections**

This is to attest that, to the best of my knowledge and belief, the field inspection input, as displayed on *Triennial Review Inspection* spreadsheets, for the specific collocation arrangements listed below are accurate and reliable data for inclusion with Verizon's anticipated regulatory response to the FCC Triennial Review Order.

Detailed inspection data for each listed arrangement is recorded on the "Triennial Review Inspection Spreadsheets" which have been submitted separately.

The Inspection data has been collected in accordance with the "Triennial Review Inspection Process Steps" document, which was distributed, to all inspectors.

Inspection results are based upon physical observations of:

- a) CLEC's fiber as placed in each identified collocation node,
- b) CLEC's fiber run as it exits from the CLEC's equipment in the identified collocation node to the collocation common area
- c) CLEC's fiber run from the collocation common area to the ASA or vault and interfaces:
  - o A CATT splice enclosure in the vault or
  - o A CATT splice shelf in the ASA) or
  - o Conduit which exits the vault via conduit to manhole zero
