BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 050001-EI
CONTINUING SURVEILLANCE AND REVIEW OF
FUEL COST RECOVERY CLAUSES OF ELECTRIC UTILITIES

Direct Testimony of
George M. Bachman, Mark Cutshaw,
Cheryl M. Martin
On Behalf of
Florida Public Utilities Company

16 Q. Please state your names, employer and business addresses.

17 A. George M. Bachman, Florida Public Utilities, Company, 401 South
18 Dixie Highway, West Palm Beach, FL 33401.

19 A. Mark Cutshaw, Florida Public Utilities Company, 2825 Pennsylvania
20 Avenue, Marianna, Fl 32448.

21 A. Cheryl M. Martin, Florida Public Utilities Company, 401 South
22 Dixie Highway, West Palm Beach, FL 33401.

23 Q. Have you previously testified in this Docket?

24 A. Bachman, Cutshaw, and Martin: Yes.

25 Q. What is the purpose of your testimony at this time?

26 A. Martin: I will briefly describe the basis for the computations that
27 were made in the preparation of the various Schedules that we have
28 submitted in support of the January 2006 - December 2006 fuel cost
29 recovery adjustments for our Consolidated Electric division and for
30 informational purposes, the two separate electric divisions. In
31 addition, I will advise the Commission of the projected differences
32 between the revenues collected under the levelized fuel adjustment
33 and the purchased power costs allowed in developing the levelized
34 fuel adjustment for the period January 2005 - December 2005 and to
35 establish a "true-up" amount to be collected or refunded during
36 January 2006 - December 2006.

37 Q. You are also proposing that the Commission allow FPUC to
consolidate their Fuel Cost Recovery Clause and fuel rates for

DOCUMENT NUMBER-DATE

08589 SEP-9 06

FPSC-COMMISSION CLERK

1 their two operating divisions (Northeast Florida-Fernandina Beach,
2 and Northwest Florida- Marianna) aren't you?

3 A. Martin: Yes we are. FPUC should be allowed to consolidate their
4 Fuel Cost Recovery Clause and fuel rates for the two operating
5 divisions. This would be consistent with the Commission's practice
6 within the State of Florida of other investor owned utilities.
7 Moreover, fuel consolidation is consistent with the Commission's
8 recent action to consolidate base and conservation rates for FPUC's
9 customers in 2004. We also feel this would also be beneficial to
10 all FPUC customers in the long term.

11 Q. Why does FPUC feel it is appropriate to allow consolidation of the
12 Fuel Cost Recovery Clause for their electric operations?

13 A. Bachman: FPUC feels it is appropriate to consolidate their Fuel
14 Cost Recovery Clause and fuel rates for several reasons.

15
16 First, as Cheryl previously mentioned, the consolidation of fuel
17 rates for all customers in a Company's operating divisions within
18 the State of Florida is consistent practice within the State of
19 Florida for all other investor owned electric utilities. All
20 electric utilities in the State of Florida have one set of fuel
21 rates for all retail customers regardless of the actual costs
22 associated with obtaining fuel for those individual customers.
23 Even if there is only one fuel contract to serve all customers in
24 their operating areas, those contracts have more than likely been
25 developed by averaging the actual cost to serve their customers
26 living in different areas into one set of weighted average rates.

27
28 Second, the Commission has allowed consolidation of FPUC's base and
29 conservation rates for many of the same reasons that apply to the
30 fuel rates. In our recent base rate proceeding, the Company

1 offered support for consolidation of all rates. See Docket No.
2 030438-EI and Docket No. 030002-EI for additional details on the
3 consolidation of these two rates.
4

5 Third, the consolidated fuel factor for FPUC will provide
6 additional savings to the FPUC ratepayers by reducing the cost
7 associated with preparing and filing the fuel adjustment factors.
8 The savings will include corporate accounting costs to prepare one
9 filing rather than two, division costs to prepare to file one
10 tariff revision rather than two and the legal costs to make one
11 filing rather than two. The quantifiable cost savings associated
12 with these activities are as follows:
13

Corporate Accounting Savings -	\$1,000
Division Savings -	\$1,250
Legal Savings -	\$ 500

14
15 Furthermore, one can reasonably expect that the FPSC and its staff
16 would experience savings in the areas similar to our savings
17 mentioned above relating to the review, audit, and administrative
18 work associated with the fuel filings. While we do not have a basis
19 to assess or measure these savings, the FPSC staff may be able to
20 guide the Commission in the assessment of the direct savings in the
21 on-going costs of this reduction that may materialize on the
22 regulatory agency side.
23

24 The final reason to consolidate fuel is the mitigation of price
25 risk inherent to wholesale markets. As discussed by our consultant
26 in our testimony in support of the Phase in of expected prices of
27 new contracts for fuel, price risk is costly to retail consumers,
28 and it is appropriate to mitigate price risk where possible. The

1 level and volatility of wholesale electricity prices are, to a
 2 substantial extent, determined by the level and volatility in the
 3 prices of primary fuels, particularly natural gas. In turn, price
 4 volatility of fuels is determined by the level of scarcity of
 5 supply in comparison to the level of demand. Although natural gas
 6 volatility is also sensitive to seasonal weather patterns - e.g., a
 7 cold snap in the Northeast - and unexpected supply shocks - e.g.,
 8 Hurricane Katrina - natural gas has also been relatively scarce
 9 beginning in the third quarter of 2005 as a result of continued
 10 pressure on supply. In summary, natural gas prices can be
 11 unusually volatile during periods of relative scarcity, in this is
 12 manifested directly in wholesale spot price volatility.

13
 14 An historical perspective is always useful, and shown below
 15 observed prices and volatility at commercial hubs within the
 16 Eastern Interconnection.

Year	PJM West		Florida-Ga Border		In-State Florida		SERC	
	Average Daily Prices	Variation In Daily Prices	Average Daily Prices	Variation In Daily Prices	Average Daily Prices	Variation In Daily Prices	Average Daily Prices	Variation In Daily Prices
1996	\$0.00	\$0.00			\$25.36	\$3.15	\$24.85	\$3.52
1997	\$0.00	\$0.00			\$28.59	\$6.45	\$26.23	\$8.33
1998	\$28.39	\$9.96	\$61.14	\$93.66	\$44.79	\$47.15	\$47.10	\$49.78
1999	\$38.79	\$20.78	\$49.52	\$43.96	\$54.57	\$54.40	\$50.60	\$50.71
2000	\$40.40	\$11.97	\$48.01	\$10.75	\$50.59	\$11.29	\$42.99	\$11.79
2001	\$40.39	\$12.49	\$41.75	\$7.41	\$46.23	\$7.53	\$38.08	\$8.48
2002	\$35.89	\$9.33	\$34.95	\$5.41	\$40.41	\$6.64	\$30.55	\$4.77
2003	\$48.63	\$10.13	\$45.12	\$8.50	\$52.58	\$9.12	\$42.00	\$7.96
2004	\$53.50	\$6.41	\$51.31	\$3.76	\$55.69	\$4.49	\$48.71	\$3.73
Average	\$40.85	\$11.58	\$47.40	\$24.78	\$49.27	\$20.09	\$42.86	\$19.60

17
 18 Currently prices are sharply higher than the prices shown above,
 19 and there appears to be little immediate relief in sight.

20
 21 This means that short-term volatility in primary fuel prices and
 22 thus wholesale power prices are likely to remain for some time.
 23 Accordingly, wholesale power suppliers are increasingly reluctant

1 to engage in long-term contracts without the appropriate mechanisms
2 to hedge risks. These mechanisms imply that it is likely that FPUC
3 will, within its new contracts, be shouldering some of costs of
4 price hedging, as incorporated within the commercial terms of the
5 new contracts. As envisioned, the provisions of the new contracts
6 will vary from one contract to another, and thus the integration of
7 the contracts under a common fuel clause umbrella means that retail
8 consumers can better hedge the price risk inherent in fuel
9 contracts, to the benefit of all.

10 Q. Please describe the regulatory treatment that FPUC would implement
11 for the true-up amounts that exist for each division at the end of
12 the last month prior to consolidating the two division's factors.

13 A. Martin: It is the intention of FPUC to incorporate the true up
14 amounts that exists for each division at the end of the last month
15 prior to consolidating the two division's factors into the
16 consolidated rate calculations. An alternative course of action
17 would be to exclude the respective true-up amounts from the
18 consolidated rate calculations then adjust the resulting
19 consolidated factor by each true up amount for the respective
20 divisions. The company would then collect from/refund to the
21 customers for a one year period or until the end of 2006.

22 Q. Were the schedules filed by your Company completed under your
23 direction?

24 A. Martin: Yes.

25 Q. Which of the Staff's set of schedules has your company completed
26 and filed?

27 A. Martin: We have filed Schedules E1, E1A, E2, E7, E8 and E10 for our
28 Consolidated Electric division. They are included in Composite
29 Prehearing Identification Number CMM-6. For informational and
30 analysis purposes only, we have filed Schedules E1, E1A, E2, E7,

1 and E10 for Northwest Florida (Marianna) and E1, E1A, E2, E7, E8,
2 and E10 for Northeast Florida (Fernandina Beach). They are
3 included in Composite Prehearing Identification Number CMM-3. We
4 have also prepared and filed Schedules E1 for our Consolidated
5 Electric division, Northwest division (Marianna) and Northeast
6 division (Fernandina Beach) with the special fuel surcharge
7 requested in Docket 050317-EI as Composite Prehearing
8 Identification Number CMM-5. Additional support for the surcharge
9 amount has been filed as Composite Prehearing Identification Number
10 CMM-4 (CONFIDENTIAL) as well as within this testimony and the
11 testimony filed in Docket No.050317-EI.

12
13 Schedule E1-B and E1-B1 for both Northwest Florida (Marianna) and
14 Northeast Florida (Fernandina Beach) were filed last month in
15 Composite Prehearing Identification Number CMM-2. These schedules
16 support the calculation of the levelized fuel adjustment factor for
17 January 2006 - December 2006. Schedule E1-B shows the Calculation
18 of Purchased Power Costs and Calculation of True-Up and Interest
19 Provision for the period January 2005 - December 2005 based on 6
20 Months Actual and 6 Months Estimated data.

21 Q. In derivation of the projected cost factor for the January 2006 -
22 December 2006, period, did you follow the same procedures that were
23 used in the prior period filings?

24 A. Martin: Yes, with the exception that we are now requesting one
25 consolidated electric Fuel Cost Recovery Clause and set of fuel
26 rates for both of our electric operating divisions. We are also
27 requesting permission, through Docket No. 050317-EI filed in May
28 2005, to include a fuel surcharge as an additional add-on to the
29 fuel factor to help minimize the significant future effects of fuel

1 contracts that are expiring at the end of 2007.

2 Q Why has the GSLD1 rate class for Northeast Florida (Fernandina
3 Beach) been excluded from these computations?

4 A. Martin: Demand and other purchased power costs are assigned to the
5 GSLD1 rate class directly based on their actual CP KW and their
6 actual KWH consumption. That procedure for the GSLD1 class has
7 been in use for several years and has not been changed herein.
8 Costs to be recovered from all other classes are determined after
9 deducting from total purchased power costs those costs directly
10 assigned to GSLD1.

11 Q. How will the demand cost recovery factors for the other rate
12 classes be used?

13 A. Martin: The demand cost recovery factors for each of the RS, GS,
14 GSD, GSLD, GSLD1 and OL-SL rate classes will become one element of
15 the total cost recovery factor for those classes. All other costs
16 of purchased power will be recovered by the use of the levelized
17 factor that is the same for all those rate classes. Thus the total
18 factor for each class will be the sum of the respective demand cost
19 factor and the levelized factor for all other costs.

20 Q. Please address the calculation of the total true-up amount to be
21 collected or refunded during the January 2006 - December 2006.

22 A. Martin: We have determined that at the end of December 2005 based
23 on six months actual and six months estimated, we will have under
24 recovered \$285,297 in purchased power costs in our Consolidated
25 Electric division. We will have under-recovered \$702,270 in
26 purchased power costs in our Northwest Florida division (Marianna).
27 In our Northeast Florida division (Fernandina Beach) we will have
28 over-recovered \$416,973 in purchased power costs.

29

1 Based on estimated sales for the period January 2006 - December
2 2006, it will be necessary to add .04204¢ per KWH to collect this
3 under-recovery in our Consolidated Electric division during the
4 January 2006 - December 2006 period (excludes GSLD1 customers).
5 For informational purposes, Northwest division's (Marianna)
6 separate factor would have been to add .21568¢ per KWH to collect
7 the under recovery, and Northeast division's (Fernandina Beach)
8 separate factor would have been to subtract .11814¢ per KWH
9 (excluding GSLD1 customers) to refund the over recovery. Page 3 and
10 of Composite Prehearing Identification Number CMM-3 and page 3
11 of Composite Prehearing Identification Number CMM-6 provides a
12 detail of the calculation of the true-up amounts.

13 Q. What are the final remaining true-up amounts for the period January
14 2004 - December 2004 for both divisions?

15 A. Martin: For our Consolidated Electric division, the final remaining
16 true up amount was an under-recovery of \$1,433,132. In our
17 Northwest division (Marianna) the final remaining true-up amount
18 was an under-recovery of \$966,951. The final remaining true-up
19 amount for our Northeast division (Fernandina Beach) was under-
20 recovery of \$466,181.

21 Q. What are the estimated true-up amounts for the period of January
22 2005 - December 2005?

23 A. Martin: For our Consolidated Electric division, the estimated true
24 up amount was an under-recovery of \$735,918. In our Northwest
25 Florida division (Marianna) the estimated true-up amount was an
26 under-recovery of \$246,528. The estimated true-up amount for our
27 Northeast Florida division (Fernandina Beach) was under-recovery of
28 \$489,390.

29 Q. What are the total true-up amounts to be collected or refunded

1 during the period January 2006 through December 2006?

2 A. Martin: In our Consolidated Electric division, there is an
3 estimated under recovery of \$285,297. In our Northwest Florida
4 division (Marianna), there is an estimated under-recovery of
5 \$702,270. The Northeast Florida division (Fernandina Beach) has an
6 estimated over-recovery of \$416,973.

7 Q. What will the total fuel adjustment factor, excluding demand cost
8 recovery, be for the Consolidated Electric division and for
9 informational purposes, both separate divisions for the period?

10 A. Martin: For our Consolidated Electric division, the total fuel
11 adjustment factor as shown on Line 43, Exhibit CMM-6, Schedule E1,
12 is 2.278¢ per KWH. In the Northwest Florida division (Marianna) the
13 total fuel adjustment factor as shown on Line 33, Exhibit CMM-3,
14 Schedule E1, is 2.819¢ per KWH. In the Northeast Florida division
15 (Fernandina Beach) the total fuel adjustment factor for "other
16 classes", as shown on Line 43, Exhibit CMM-3, Schedule E1, amounts
17 to 1.857¢ per KWH.

18 Q. What will the total fuel adjustment factor, excluding demand cost
19 recovery be for the Consolidated Electric division and for
20 information purposes; both separate divisions for the period if the
21 fuel surcharge is approved (Docket No. 050317-EI) and allowed to be
22 added to the fuel adjustment factor in 2006.

23 A. Martin: If the fuel surcharge is approved and allowed, the total
24 fuel adjustment factor for the Consolidated Electric division as
25 shown on Line 43, Exhibit CMM 5, Schedule E1, is 2.532¢ January
26 2006 through June 2006 and is 2.804¢ July 2006 through December
27 2006. The fuel adjustment factor for the Northwest Florida division
28 (Marianna) as shown on Line 33, Exhibit CMM5, Schedule E1 is 3.074¢
29 January 2006 through June 2006 and is 3.346¢ July 2006 through

1 December 2006. The fuel adjustment factor for the Northeast Florida
2 division (Fernandina Beach) as shown on Line 43, Exhibit CMM5,
3 Schedule E1 is 2.111¢ January 2006 through June 2006 and is 2.383¢
4 July 2006 through December 2006.

5 Q. Please advise what a residential customer using 1,000 KWH will pay
6 for the period January 2006 - December 2006 including base rates,
7 conservation cost recovery factors, and fuel adjustment factor and
8 after application of a line loss multiplier.

9 A. Martin: For our Consolidated Electric division, a residential
10 customer using 1,000 KWH will pay \$64.79, a decrease of \$4.76 in
11 our Northwest Florida division (Marianna) from the previous period,
12 and an increase of \$2.58 in our Northeast Florida division
13 (Fernandina Beach). For information purposes, if the separate fuel
14 factors were used then in our Northwest Florida division (Marianna)
15 a residential customer using 1,000 KWH would have paid \$71.48, an
16 increase of \$1.93 from the previous period. In our Northeast
17 Florida division (Fernandina Beach) a customer would have paid
18 \$58.97, a decrease of \$3.24 from the previous period.

19 Q. Please advise what a residential customer using 1,000 KWH will pay
20 for the period January 2006 - December 2006 including base rates,
21 conservation cost recovery factors, and fuel adjustment factor and
22 after application of a line loss multiplier if the fuel surcharge
23 is approved.

24 A. Martin: If the surcharge is allowed and added to the cost of fuel
25 for our Consolidated Electric division, a residential customer
26 using 1,000 KWH will pay \$67.39 from January 2006 through June 2006
27 and they will pay \$70.18 from July 2006 through December 2006. For
28 informational purposes if separate fuel factors were used with the
29 surcharge added, a residential customer using 1,000 KWH would pay

1 \$74.09 from January 2006 through June 2006 and would pay \$76.88
2 from July 2006 through December 2006 in our Northwest Florida
3 division (Marianna). In our Northeast Division (Fernandina Beach),
4 a residential customer using 1,000 KWH would pay \$61.58 from
5 January 2006 through June 2006 and would pay \$64.37 from July 2006
6 through December 2006.

7 Q. You have included a fuel surcharge in the fuel adjustment factor.
8 Could you explain that?

9 A. Bachman: Yes. Since the Company does not have any generating
10 capability we purchase all of the power which we provide customers.
11 Currently we have contracts to purchase power from JEA and the
12 Southern Co. ("Gulf Power"). Both of these have very favorable
13 rates which have benefited our customers for the past 8 years; in
14 fact, the contract rates are significantly below current market
15 rates. Both of these contracts expire on December 31, 2007, and we
16 know that there will be a sharp increase in power costs so we have
17 proposed a surcharge to be added to the adjustment factor to
18 mitigate those expected sharp increases.

19 Q. How would this surcharge be implemented?

20 A. Martin: The surcharge would be added to the cost of fuel for two
21 years and when the new contracts are effective the accumulated
22 amounts would be credited back to customers over a three-year
23 period.

24 Q. Would there be a separate account for the surcharge?

25 A. Bachman: All of the revenue collected from the surcharge would be
26 held in an interest bearing account and all of the accumulated
27 amounts plus interest would be flowed back to the customers. The
28 Company will not receive any of these revenues and the accumulated
29 surcharge would not be part of the working capital.

1 Q. How will this benefit customers?

2 A. Bachman: We know that there will be a sharp increase in the fuel
3 adjustment factor beginning January 1, 2008 and this proposal would
4 mitigate that increase. By collecting the surcharge now and
5 incurring the additional interest and then crediting these amounts
6 back to customers the increase can be phased in and we can mitigate
7 the rate shock to our customers.

8 Q. What is the amount of the surcharge for 2006 that has been added to
9 the fuel rates?

10 A. Bachman: Effective January 1, 2006, the Company will add a
11 surcharge of \$.00254 per KWh to the cost of fuel. Effective July
12 1, 2006, the Company will add a surcharge of \$.00526 per KWh to the
13 cost of fuel. This surcharge has been incorporated into our
14 requested fuel rates and schedules.

15 Q. Have you entered into new contracts that result in these amounts?

16 A. Bachman: No, we do not have the final contracts in place at this
17 time.

18 Q. What is the status of those contracts?

19 A. Bachman: We are reviewing and analyzing proposals at the present.

20 Q. Explain the process you established.

21 A. Bachman: We began looking at our options several months ago. We
22 recognize the importance of these contracts and we involved
23 Christensen Associates to assist in looking at our options and
24 helping with the RFP and negotiations. With their help, we invited
25 interested parties to provide proposals and we received a number of
26 responses and those are being evaluated. We expect to have
27 discussions with several of the responding parties and our
28 objective is to negotiate the most favorable contract that we can
29 for our customers.

1 Q. When will that be completed?

2 A. Bachman: Probably sometime in 2006.

3 Q. What is the basis for the surcharge you have proposed?

4 A. Bachman: We have detailed projections supporting expected future
5 price increases that more than justify the use of these
6 conservative fuel surcharge factors. Since we are still in the
7 process of negotiations for fuel contracts, our future fuel
8 expectations are confidential in nature. We have provided this
9 projection on a confidential basis, as Exhibit _____ (CMM-4). We
10 feel there is sufficient evidence to support the use of this
11 surcharge in 2006. Even without finalization of our fuel contracts
12 and completion of the bidding process, we are able to estimate what
13 market fuel costs are expected to be in the future, and fuel costs
14 are expected to be well above the amount of our requested 2006
15 surcharges. Since the surcharge is a gradual increase and a phase
16 in of the future expected price increases, the surcharge for 2006
17 is appropriate and is expected to provide for a gradual increase in
18 the fuel costs to our customers.

19 Q. Have you requested approval of this proposal in a separate
20 petition?

21 A. Martin: Yes, we have. We have filed a petition and testimony for
22 approval of the surcharge in Docket No. 050317-EI but we think it
23 appropriate to consider it in this docket since it is a component
24 of the fuel adjustment factor.

25 Q. You mentioned that you used Christensen Associates to assist in
26 this process. Have those costs been included in the calculation of
27 the proposed fuel adjustment factor?

28 A. Martin: Yes, they have.

29 Q. Should the Commission allow FPUC to recover fees paid to

1 Christensen Associates to perform FPUC's request for proposals for
2 wholesale capacity and energy commencing 2008 and develop a rate
3 smoothing surcharge for 2006 and 2007?

4 A. Martin: Yes. As I discussed, FPUC retained the consulting group,
5 Christensen Associates, to develop and manage the bidding process
6 for power supply beginning in 2008 for FPUC's electric operations.
7 This process organized by our consultants is a highly structured
8 process that casts a wide net in search of the best overall power
9 supply arrangement for our retail customers. The level of interest
10 in, and market response to, the Company's RFP has been good and, as
11 intended, a substantial level of contestability has developed. Our
12 company is not large enough to have this type of resource on staff
13 and the experience, knowledge, and expertise that they contribute
14 to the process helps us to obtain more favorable results. If we
15 were to expand our staff to include similar resources, the customer
16 impact would be great.

17 Q. How do the customers benefit from your use of the consultants?

18 A. Martin: By using a consultant in this process, we are able to
19 supplement our in-house resources with the experience and knowledge
20 the consultants have of the broad process. We believe that having
21 this resource available to us will result in a more favorable power
22 supply arrangement. Any reduction in the cost of fuel over the
23 life of the contract benefits the customers. For example, a \$.0001
24 per kWh reduction in the cost of fuel results in savings of over
25 \$400,000 in just five years and this well exceeds the cost for the
26 consultant in this process. We feel that the savings will be much
27 greater than this over the life of contracts through lower fuel
28 prices.

29 Q. Couldn't you negotiate new contracts with Company resources?

1 A. Martin: We could, but the market now is very different than it was
2 when the current contracts were negotiated and there may be more
3 options available to us now than there were then. Having the
4 advice and assistance of consultants who work with this process
5 more frequently strengthens our efforts and enhances our ability to
6 obtain contracts favorable to our customers.

7 Q. Are these consultant's costs included in your base rates?

8 A. Martin: No. These costs have not been recovered through our base
9 rates as they directly relate to the fuel and fuel costs. Since
10 these costs directly relate to our fuel costs and will likely
11 result in lower fuel costs to the customers, they are appropriate
12 to recover through the fuel cost recovery clause. These costs are
13 not the normal procurement and administrative costs that would be
14 associated with ongoing fuel purchases. It is possible upon award
15 of our new fuel contracts that administrative personnel will be
16 needed to manage and procure our fuel on an ongoing recurring
17 basis; however, we cannot determine whether this will be necessary
18 with our new fuel contracts at this time. The costs for the
19 services of Christensen Associates are nonrecurring special costs
20 associated directly with the cost of fuel and these probably would
21 not have been allowed for recovery through base rates since they
22 would not be in the test year and would not be recurring
23 expenditures. To disallow the recovery of these costs would
24 penalize the Company for acting in a prudent manner on behalf of
25 the customers for savings in their fuel costs.
26 If the Commission feels it would be more appropriate to recover
27 these costs through base rates, we would like to request permission
28 to defer these until our next rate proceedings and amortize the
29 costs at that time with the associated recovery of the costs.

1 Q. The audit report of the Fuel and Purchased Power Cost Recovery
2 Clause conducted by Staff contained a disclosure regarding payments
3 to Gulf Power for a transformer agreement that commenced in
4 November 2004. Can you explain that agreement?

5 A. Cutshaw: Yes. As previously discussed, FPUC currently purchases
6 all wholesale capacity and energy from Gulf Power/Southern Company
7 for the Northwest Division. At each of the delivery points, Gulf
8 Power provides all transmission, substation and transformer
9 facilities and associated equipment. FPUC only provides the
10 distribution facilities at each delivery point. In 2004,
11 additional facilities were needed to service a new "Family Discount
12 Distribution Center" and FPUC and Gulf Power entered into an
13 amendment to the current contract where Gulf Power provides a
14 transformer and associated equipment necessary to establish an
15 additional delivery point at our Marianna substation. The terms of
16 the five year agreement calls for Florida Public Utilities Company
17 to pay Gulf Power \$3,678 a month commencing November 2004. The
18 "South Marianna delivery point" was constructed to match the
19 facilities at the other delivery points in order to maintain the
20 integrity of the current contract.

21
22 Based upon the fact that the new transformer and associated
23 equipment at the "South Marianna delivery point" are owned and
24 operated by Gulf Power Company who currently provides wholesale
25 capacity and energy, it seems reasonable that these costs to FPUC
26 should be included for recovery through the fuel clause. Since
27 this delivery point was not included in the existing wholesale
28 power contract and was not included in the development of those
29 rates, it was determined that the cost to provide power to this

1 delivery point was not justified by the current contract price.
2 This resulted in the necessity for a facilities charge being added
3 to the current contract energy cost.

4 Q. Does this conclude your testimony?

5 A. Martin, Bachman, and Cutshaw: Yes.
