

JOHN T. BURNETT  
Associate General Counsel  
Progress Energy Service Company, LLC

July 31, 2006

Ms. Blanca S. Bayó, Director  
Division of the Commission Clerk  
And Administrative Services  
Florida Public Service Commission  
2540 Shumard Oak Boulevard  
Tallahassee, Florida 32399-0850

Re: Cost of Service Load Research Study

Dear Ms. Bayó:

Pursuant to Rule 25-6.0437(7), F.A.C., please find enclosed for filing on behalf of Progress Energy Florida, Inc. an original and seven (7) copies of its Cost of Service Load Research Study for the twelve month period ending March 31, 2006.

Please acknowledge your receipt of the above filing on the enclosed copy of this letter and return to the undersigned. A 3 ½ inch diskette containing the above-referenced document in Word format is also enclosed.

Thank you for your assistance in this matter.

Respectfully,  
  
John T. Burnett

## **STUDY BACKGROUND AND OBJECTIVES**

The purpose of this study is to meet the requirements of the Cost-of-Service Load Research Rule, Docket No. 820491-EU, Order No. 13026, adopted as Rule 25-6.0437 on February 23, 1984, by the Florida Public Service Commission.

The rule requires that every rate class which accounts for more than one percent of the utility's annual retail sales be sampled every three years. The load research studies must be designed to provide estimates within plus or minus 10% relative accuracy at the 90% confidence level for the summer and winter peak demands and the average of the twelve monthly coincident peaks (15% relative accuracy for the General Service Non-Demand Rate Class.

## **REPORTING PERIOD**

The new sample points were selected during the fall of 2004 and mass memory interval recording meters were installed in the winter of 2004/2005. Formal data collection began on April 1, 2005 and continued through March 31, 2006.

## RESIDENTIAL RATE CLASS SAMPLE

The Residential Rate Class had over 1,400,000 customers when the data collection commenced. Nearly 410,000 customers were on the load management rate at that time. Due to the large number of residences on load management, independent and equal sized samples were drawn for both the load management residential rate and the standard residential rate. Past experience indicated that a residential sample of 350 would be more than enough to exceed the target accuracy goal. Combined ratio estimation was used for expansion to the class level.

The residential load management and non-load management samples were stratified by housing type:

- 1) single family detached
- 2) mobile/manufactured homes
- 3) multi-family (apartments, townhouses, condos etc)

The following table shows the stratum design for the Residential Rate Class sample.

Error! Bookmark not defined. <b>Stratum</b>	<b>Load Management Residential Rate</b>	<b>Standard Residential Rate</b>
Single Family Detached	85	85
Mobile / Manufactured Home	45	45
Multi-Family (Apartments)	45	45
Total	175	175

Table 1 - Residential Sample Design

## GENERAL SERVICE NON-DEMAND RATE CLASS SAMPLE

At the time of sample selection in the winter of 2004, the General Service Non-Demand Rate Class consisted of over 119,000 customers. By April 2005 when data collection officially began, Progress Energy Florida had 126,046 General Service Non-Demand customers.

Two dimensional stratification and combined ratio expansion were used for this rate class sample. The technique involved stratification using the billed energy for the winter peak month (January, 2004) and the summer peak month (July, 2003). The Dalenius-Hodges cumulative square root "uf" technique was applied to the class billed energy for the peak month to establish stratum boundaries. The following table shows the stratum design for the General Service Non-Demand Rate Class sample.

Error! Bookmark not defined.Stratum	Sample Size
1 - Jan 04 billed energy > 1,400 kWh & Jul 03 energy < 1,700 kWh	33
2 - Jan 04 billed energy > 1,400 kWh & Jul 03 energy > 1,700 kWh	56
3 - Jan 04 billed energy < 1,400 kWh & Jul 03 energy < 1,700 kWh	463
4 - Jan 04 billed energy < 1,400 kWh & Jul 03 energy > 1,700 kWh	39
5 - Census Stratum – customers over >40,000 kWh / month	33
Total	624

Table 2 - General Service Non-Demand Sample Design

## GENERAL SERVICE DEMAND RATE CLASS SAMPLE

Two dimensional stratification and combined ratio expansion were used for the General Service Demand Rate Class sample. The technique involved stratification using the summer peak month (July, 2003) billed kW and the revenue class data. The Dalenius-Hodges cumulative square root "uf" technique was applied to the class billed demand for the peak month to establish stratum boundaries. All customers over 1000 kW did not require sampling because each customer in this stratum is metered with a mass memory interval recording meter for billing purposes. Table 3 outlines stratum design for the General Service Demand Rate Class sample.

<b>Stratum</b>	<b>Sample Size</b>
1 – Customers with a July 03 billing demand less than 40 kW	203
2 – Customers with a July 03 billing demand between 40 kW & 190 kW	67
3 – Customers with a July 03 billing demand between 190 kW & 1,000 kW	13
4 – Customers with a July 03 billing demand greater than 1000 kW	267
Total	548

Table 3 - General Service Demand Sample Design

## **INTERRUPTIBLE RATE CLASS**

The Interruptible Rate Class did not require sampling because each customer in this class is metered with a mass memory interval recording meter for billing purposes. At the beginning of data collection in April 2005, there were 151 customers in the Interruptible Rate Class.

## **METERING OF SAMPLE MEMBERS**

The sample customer's conventional meter was replaced with a solid-state meter. The solid-state meter records the customer's usage every 15 minutes and stores it in a mass memory chip within the meter. The data from these meters was translated and validated for accuracy in the MV-90 5.0 software package. Load data was analyzed on a calendar month basis using the MV90 Load Research Package to derive the data contained in this report.

## **SELECTION OF REPLACEMENTS**

During the course of the study, a small number of sample points had to be replaced for various reasons. To minimize the amount of replacement necessary, Progress Energy Florida's policy is not to request permission from the customer before load research meters are installed. The selection of replacements was handled differently depending on the rate class.

Replacements for the Residential Rate Class were picked from a list of randomly selected alternates that was generated at the same time the original sample was drawn. When a replacement was needed, it was selected as the first available alternate on the list from within the same stratum as the original sample.

Two replacement lists for the General Service Non-Demand Rate Class were selected. At the time the original sample was drawn, additional random samples were drawn to be used as replacements. The replacement samples were stratified and then ordered by the January 2004 billed energy and matched to the original (ordered) sample by strata.

Two replacement lists for the General Service Demand Rate Class were selected. At the time the original sample was drawn, additional random samples were drawn to be used as replacements. The replacement samples were stratified and then ordered by the January 2004 billed demand and matched to the original (ordered) sample by strata.

#### **STATISTICAL ACCURACY ACHIEVED**

Tables 4 through 7 contain the estimated class demands for the coincident and non-coincident peaks for the Residential, General Service Non-Demand, General Service Demand, and Interruptible Rate Classes. Also included are the 90% confidence intervals around the monthly peak demands and their relative accuracy in percentage. The twelve coincident peak averages for all rate classes, their 90% confidence intervals and their relative accuracy are computed for the twelve month period ending March, 2006. The statistics shown in tables 4-7 were obtained using MV90's Load Research software package.

The winter peak hour during the study period occurred at hour ending 0800 on Tuesday, February 14, 2006 and the summer peak hour occurred at hour ending 1800 on Tuesday, August 16, 2005. The target level of statistical accuracy of plus or minus 10% error at the 90% confidence level for the system summer and winter peak was met for the Residential and General Service Demand Rate

Classes. The target level of statistical accuracy of plus or minus 15% error at the 90% confidence level for the system summer and winter peak was met for the General Service Non-Demand Rate Class.

## RESIDENTIAL RATE CLASS HOURLY LOAD DATA

The following pages contain the hourly Residential Rate Class load data required under Sections (7) and (8) of Rule 25-6.0437. This hourly data covers the 8,760 hours from April, 2005 through March, 2006 and is adjusted for Daylight Savings Time. The format of the data is the standard "EEI" format normally used in the electric utility industry.
