### **Broadband**

8. Do you offer broadband to residential customers in Florida? Please check the applicable answer.

- Yes
- No

9. If you do offer broadband to residential customers in Florida, please provide your best estimate of the percentage of residential end user premises in your Florida service area for which your broadband services are available.

**RESPONSE:** As of December 31, 2007, Verizon made available its DSL service to █% of its residential customers. This figure does not include broadband services made available through Verizon's FiOS deployment. As of December 31, 2007, Verizon's fiber-to-the-premises network passed █ households in Hillsborough, Pasco, Pinellas, Manatee, Sarasota and Polk counties. Verizon projects that its fiber-to-the-premises network will pass an additional █ households in 2008.

For your Florida territory in which you currently do not offer broadband, what percentage of these customers do you plan to provide broadband availability to in the next 5 years?

**RESPONSE:** Verizon continues to invest in its state-of-the-art fiber optic network in Florida. As stated above, Verizon expects to pass an additional █ households by the end of 2008, bringing the total households passed to approximately █, out of █ households in Verizon's Florida service territory, as estimated in U.S. census data. Any future network deployment is difficult to predict for a number of reasons, including financial, operational and managerial considerations.

10. How many residential broadband subscribers do you have in Florida? \_\_\_\_\_

**RESPONSE:** As of December 31, 2007, the number of residential subscribers was:

**Company Name:**

**Company Code\*:**

\* Your Company code is shown on the label affixed to the envelope in which this was mailed and on the cover letter.

**THIS TABLE IS TO ONLY CAPTURE VoIP LINES. DO NOT INCLUDE LINES REPORTED IN TABLE 1.**

Complete Table 5 if you provided VoIP service to Florida *end users* via one or more *voice-grade equivalent (VGE)* lines or wireless *VGE* channels.

An access line connects the end user's customer premises equipment (CPE) to the serving switch and allows the end user to originate and/or terminate local telephone calls on the public switched telephone network (PSTN). The access line counts in Table 5 below must be based on **all** of your different types of access lines (including fixed wireless) that are used to provide VoIP service.

Each field must be populated. All entries must be made without quotation marks.

**TABLE COLUMN INSTRUCTIONS:**

Column (a). List Exchanges in alphabetical order corresponding to the primary location where service is provided. **Reported exchange data should not be based on secondary service locations (i.e., where service has been moved temporarily to a secondary location such as a vacation home).**

Column (b). Enter the abbreviation **Res** for Residential lines or **Bus** for Business lines. **Residential lines and business lines must be entered in separate rows.**

Column (c). Enter line count as *voice-grade equivalents (VGEs)*. Report *VGEs* based on how the customer is billed. If the customer is billed for a dynamic bandwidth VoIP product, the line count would be the maximum number of VoIP lines available. If the customer is billed for a specific number of VoIP lines, or a range of lines, the VoIP line count would be the number of VoIP lines or the highest number of the range, respectively. **Each line count must be entered in separate rows.**
