DOCUMENT NUMBER-DATE  
**07052 AUG 11 8**  
FPSC-COMMISSION CLERK

1 I joined Tampa Electric in 1981 as an engineer and worked  
2 in the production and planning areas. I was promoted to  
3 Manager of Generation Planning in May 1986 and later  
4 served as Manager of Bulk Power and Generation Planning.  
5 I then became Director of Project Services for TECO Power  
6 Services ("TPS"), responsible for fuel procurement,  
7 environmental permitting and compliance, and power sales  
8 contract administration.

9  
10 In November 1994, I was promoted to Vice President of  
11 Regulatory Affairs for Tampa Electric, and in November  
12 1995, was named Vice President of Regulatory and Business  
13 Strategy for Tampa Electric. In March 1998, I was  
14 appointed Vice President of Finance and Chief Financial  
15 Officer of TECO Energy and Tampa Electric. In 2001, I  
16 was appointed Senior Vice President and Chief Financial  
17 Officer for TECO Energy.

18  
19 I was promoted to my current position of Executive Vice  
20 President and Chief Financial Officer of TECO Energy in  
21 July 2004. I also serve as the Senior Vice President and  
22 Chief Financial Officer of Tampa Electric. As Chief  
23 Financial Officer, I am responsible for financial  
24 planning and reporting, financing strategies and  
25 activities, and contact with the financial community,

1 including investors and rating agencies.

2  
3 **Q.** What is the purpose of your direct testimony?

4  
5 **A.** The purpose of my direct testimony is to provide  
6 financial background on Tampa Electric's base rate  
7 request by discussing some of the key financial, business  
8 and regulatory events that have occurred at the national  
9 and state levels and their impacts on Tampa Electric  
10 since its last base rate proceeding in 1992. I will  
11 describe how these events have affected the company's  
12 capital spending and the cost to serve customers. I will  
13 also explain the reasons for the requested base rate  
14 increase and the key financial components on which it is  
15 based. In addition, I will describe how Tampa Electric's  
16 projected 2009 through 2013 capital expenditure program  
17 will impact the need for external capital and explain the  
18 company's capital structure and financial targets.  
19 Finally, I will explain why a parent company debt  
20 adjustment is unwarranted.

21  
22 **Q.** Have you prepared an exhibit for presentation in this  
23 proceeding?

24  
25 **A.** Yes. Exhibit No. \_\_\_\_ (GLG-1) entitled "Exhibit of

1 Gordon L. Gillette", was prepared under my direction and  
2 supervision and consists of five documents. These  
3 documents include:

- 4 Document No. 1 List Of Minimum Filing Requirement  
5 Schedules Sponsored Or Co-Sponsored  
6 By Gordon L. Gillette  
7 Document No. 2 1992 - 2007 Relative Rate Base And  
8 Base Revenue Comparison  
9 Document No. 3 1992 - 2007 Relative Non-Fuel O&M  
10 And Base Revenue Comparison  
11 Document No. 4 Utility Credit Ratings  
12 Document No. 5 Tampa Electric's Credit Metrics  
13 (2004 - 2009 Test Year)

14  
15 **BACKGROUND**

- 16 **Q.** Provide a brief overview of the major changes in the  
17 electric industry since Tampa Electric's last rate case  
18 and how they have impacted the company and its customers.  
19  
20 **A.** Since the company's last rate case in 1992, there have  
21 been major industry developments in the areas of  
22 environmental regulation and legislation, generation  
23 pricing, national and state requirements for generation  
24 and transmission reliability, and transmission and  
25 distribution ("T&D") storm hardening. These developments

1 have impacted Tampa Electric's historical and current  
2 capital spending, operations and maintenance ("O&M")  
3 spending, and overall risk profile. As a result of these  
4 changes, Tampa Electric operates in a much riskier and  
5 more challenging environment than it did in 1992.

6  
7 **Q.** How have environmental legislation and regulation  
8 affected Tampa Electric's cost of serving its customers?

9  
10 **A.** Environmental legislation and regulation have affected  
11 the company in numerous ways, including in the areas of  
12 power plant site selection and permitting, new generating  
13 unit type selection, and transmission siting. For  
14 example, in response to claims by regulators under the  
15 Clean Air Act and New Source Review, the company settled  
16 with the Florida Department of Environmental Protection  
17 ("FDEP") in 1999 and with the U.S. Environmental  
18 Protection Agency ("EPA") in 2000, and began implementing  
19 a comprehensive \$1.2 billion capital program to  
20 dramatically decrease emissions from the company's coal-  
21 fired power plants, becoming the first utility in the  
22 country to resolve the issues raised by these  
23 environmental agencies. These settlements and the  
24 associated benefits are discussed in more detail in the  
25 direct testimonies of Tampa Electric witnesses Charles R.

1 Black and Mark J. Hornick.

2

3 **Q.** Please describe how generation costs have affected Tampa  
4 Electric.

5

6 **A.** As discussed in more detail by witness Hornick, per unit  
7 generation construction costs have increased  
8 significantly for all types of power plants due to  
9 increases in the price of steel and other construction  
10 materials and labor. These increasing costs affect all  
11 of Tampa Electric's planned and proposed future  
12 generation additions. For example, in 2000, the  
13 installed cost of a General Electric 7F based combustion  
14 turbine was approximately \$300/kW. Today, the projected  
15 installed cost for a similar turbine is approximately  
16 \$500/kW, which represents more than a 60 percent  
17 increase. Similar increases have been experienced for  
18 the costs of combined cycle units.

19

20 **Q.** Please describe how T&D costs have affected Tampa  
21 Electric.

22

23 **A.** As discussed in the direct testimony of Tampa Electric  
24 witness Regan B. Haines, the approximate per mile cost of  
25 a 230 kV transmission line has increased from \$700,000

1 per mile in 2000 to almost three times that amount today.  
2 Moreover, the company has experienced dramatic increases  
3 in the cost of basic components essential to T&D  
4 construction and operations. In addition, the siting of  
5 transmission lines has become more challenging for the  
6 entire industry.

7  
8 **Q.** Please provide an overview of the changing national and  
9 state requirements for generation and transmission  
10 reliability and T&D storm hardening and how they have  
11 impacted the cost to serve customers.

12  
13 **A.** In Florida, the requirements for generation and T&D  
14 system reliability have increased and become more  
15 codified in state and federal legislation. This, in  
16 turn, has led to a need for increased investment in  
17 generation and T&D infrastructure. In 1999, the required  
18 aggregate reserve margins for Tampa Electric and other  
19 Florida utilities increased from 15 to 20 percent as a  
20 result of the Florida Public Service Commission's  
21 ("Commission") investigation into electric generation  
22 planning reserves. Transmission has received significant  
23 scrutiny over the past several years, which has resulted  
24 in new Federal Energy Regulatory Commission and North  
25 American Electric Reliability Corporation mandates aimed

1 at strengthening the reliability of the current  
2 transmission system through expansions and upgrades.

3  
4 As discussed in more detail by witness Haines, the  
5 extensive storm damage and resulting power outages in the  
6 2004 and 2005 hurricane seasons led to an increased focus  
7 on T&D system hardening. The Commission issued a series  
8 of orders in an effort to improve the resilience of  
9 electric utility infrastructure to withstand severe  
10 weather. This has resulted in significant O&M and  
11 capital spending to comply with the required guidelines,  
12 which in turn, has increased external financing needs.  
13 As a result of these changes along with others, Tampa  
14 Electric currently operates in a much more costly and  
15 more risky environment than it did at the time of its  
16 last rate proceeding in 1992.

17  
18 **NEED FOR BASE RATE INCREASE**

19 **Q.** Describe any significant investments the company has made  
20 since its last rate proceeding in 1992.

21  
22 **A.** Tampa Electric has grown substantially since its last  
23 rate case due to significant investments, some of which  
24 were driven or impacted by the changes I described  
25 earlier. These investments have included the addition of

1 Polk Unit 1, the repowering of Gannon Station to the H.  
2 L. Culbreath Bayside Power Station, the addition of four  
3 combustion turbines at Polk Power Station, as well as  
4 numerous transmission, distribution, environmental and  
5 storm hardening projects.

6  
7 **Q.** How has Tampa Electric avoided a base rate proceeding for  
8 the last 16 years?

9  
10 **A.** The company has taken numerous actions and made  
11 significant changes to avoid a base rate increase. They  
12 include sound cost management, strong customer and  
13 revenue growth, innovative regulatory settlements,  
14 lowering of O&M costs through technology and process  
15 improvements, and the legislature's creation of the  
16 environmental cost recovery clause for recovering certain  
17 environmental related costs and investments that are not  
18 recovered through base rates.

19  
20 **Q.** Why is Tampa Electric making its base rate request now  
21 after so many years of successfully avoiding an increase?

22  
23 **A.** Tampa Electric is facing an extremely large capital  
24 expenditure program over the next five years. As a  
25 result, its credit parameters and return on equity

1 ("ROE"), which have been declining in recent years, are  
2 expected to decline even further absent rate relief. As  
3 discussed in the direct testimony of Tampa Electric  
4 witness Susan D. Abbott, a continuing decline in credit  
5 quality could threaten the company's ability to raise the  
6 capital needed to serve customers reliably. The company  
7 needs sufficient new revenues to ensure its credit rating  
8 and ROE are adequate to provide the company the necessary  
9 access to external debt and equity capital markets and to  
10 maintain its financial integrity.

11  
12 **Q.** Have you prepared any documents to help further explain  
13 the drivers causing this base rate filing?

14  
15 **A.** Yes. Document Nos. 2 and 3 of my exhibit compare  
16 historical non-fuel O&M and rate base to base revenues as  
17 reported on the company's Surveillance Report filings.  
18 The analyses illustrate the trends that helped the  
19 company during the 1990's and early 2000 timeframe to  
20 avoid a base rate increase. During this timeframe, the  
21 increase in customers resulted in base revenues keeping  
22 pace with, and even exceeding in some years, the increase  
23 in non-fuel O&M and rate base. However, the analyses  
24 also show that the increases in rate base and non-fuel  
25 O&M started to exceed the increases in base revenues in

1 2004 and 2006, respectively. This recent trend has led  
2 to declining credit parameters and lower returns on  
3 equity and is expected to accelerate, given the company's  
4 significant capital spending program planned for 2009  
5 through 2013, combined with slower base revenue growth.  
6

7 **Q.** What is the company's requested revenue requirement  
8 increase and what are the key components of the increase?  
9

10 **A.** The company is requesting a base revenue increase of  
11 \$228,167,000. The increase represents the amount  
12 necessary to raise the company's projected 2009 net  
13 operating income ("NOI") level to the required amount of  
14 \$322.5 million. The required NOI is based on the  
15 company's projected 2009 13-month average jurisdictional  
16 adjusted rate base of \$3.657 billion and a weighted  
17 average cost of capital of 8.82 percent. The 8.82  
18 percent weighted cost of capital assumes a jurisdictional  
19 adjusted 13-month average capital structure consisting of  
20 55.3 percent equity, assuming investor sources of  
21 capital, including off-balance sheet purchased power  
22 obligations. It also includes a ROE of 12.00 percent, a  
23 long-term debt rate of 6.80 percent, and a short-term  
24 debt rate of 4.63 percent. Tampa Electric witness Dr.  
25 Donald A. Murry, Ph.D. provides the support for the

1 company's requested ROE in his direct testimony and  
2 witness Abbott supports the need to improve the company's  
3 financial integrity profile. Tampa Electric witness  
4 Jeffrey S. Chronister's direct testimony explains the  
5 details of the company's revenue requirement based on the  
6 2009 projected test year, as well as the budget process  
7 used to develop sound and reliable projected test year  
8 financial statements.

9  
10 **Q.** How will this base rate increase affect Tampa Electric's  
11 financial integrity?

12  
13 **A.** The requested base rate increase will place Tampa  
14 Electric in an appropriate financial position to fund its  
15 significant capital program. Without the increase, the  
16 company will not be in a position to effectively raise  
17 the necessary capital to continue providing the high  
18 level of reliable service to its customer base that it  
19 has in the past. In order to raise the required capital,  
20 the company must be able to provide fair returns to  
21 investors commensurate with the risks they assume. The  
22 lowest cost and most reliable stream of external capital  
23 is achieved by maintaining a strong financial position,  
24 so that, in turn, the company's capital spending needs  
25 can be met in the most cost-effective and timely manner.

1 Financial strength is often referred to in regulatory  
2 circles as "financial integrity". If the company and its  
3 regulators act in ways that maintain or enhance the  
4 company's financial integrity, customers will ultimately  
5 benefit. The Commission has a history of performing the  
6 delicate balancing act between rate increases and  
7 maintaining financial integrity very well. The rating  
8 agencies and Wall Street alike have long recognized the  
9 Commission for its constructive regulatory decision  
10 making. The Commission is viewed by Wall Street and the  
11 public as being tough but fair in reaching an appropriate  
12 balance between the interests of customers and investors.

13  
14 **CREDIT RATING OBJECTIVE**

15 **Q.** What is Tampa Electric's current credit rating?  
16

17 **A.** Tampa Electric is currently rated in the BBB range by the  
18 three major rating agencies: Standard & Poor's ("S&P"),  
19 Moody's Investor Service ("Moody's") and Fitch Ratings  
20 ("Fitch"). In her direct testimony, witness Abbott  
21 explains in more detail how the rating agencies currently  
22 view Tampa Electric and how they have derived their  
23 ratings for the company.  
24

25 **Q.** What credit rating is the company targeting in the future

1 and why?

2

3 **A.** The company is targeting ratings in the single A range  
4 for two reasons. First, Tampa Electric is facing higher  
5 capital spending requirements and debt ratings in the  
6 single A range would ensure that Tampa Electric has  
7 adequate credit quality to raise the capital necessary to  
8 meet these requirements. Second, having ratings in the  
9 single A range will provide a ratings "safety net" in the  
10 event of a catastrophe, such as a hurricane.

11

12 **Q.** Why is a ratings "safety net" important?

13

14 **A.** Given the capital intensive nature of the utility  
15 industry, it is paramount that utilities maintain credit  
16 ratings well above the investment grade threshold to  
17 retain uninterrupted access to capital. The breakpoint  
18 between investment grade and non-investment grade is such  
19 that BBB- (S&P/Fitch) and Baa3 (Moody's) is the lowest  
20 investment grade rating and BB+ (S&P/Fitch) and Ba1  
21 (Moody's) is the highest non-investment grade rating. A  
22 company raising debt that has non-investment grade  
23 ratings is subject to occasional lapses in availability  
24 of debt capital, onerous debt covenants and higher  
25 borrowing costs. Given the high capital needs and the

1 obligation to serve existing and new customers that  
2 electric utilities have, having non-investment grade  
3 ratings is unacceptable. Since ratings in the single A  
4 range are above the BBB range, there would be sufficient  
5 room if an unanticipated event occurs, for the ratings to  
6 slip before becoming non-investment grade.

7  
8 Document No. 4 of my exhibit shows overall industry  
9 credit ratings along with the ratings of the southeastern  
10 U.S. utilities. Utilities across the southeast are  
11 confronted with hurricane risk and have maintained  
12 ratings that, on average, are higher than the electric  
13 industry as a whole. In addition to hurricanes, these  
14 utilities have experienced higher customer growth  
15 compared to the rest of the industry. The stronger  
16 credit ratings help ensure that the utilities in the  
17 southeast can meet the required capital spending levels  
18 associated with this growth and have a "safety net" in  
19 the event of a catastrophic hurricane.

20  
21 **Q.** Why are ratings in the single A range important in light  
22 of the company's future capital needs?

23  
24 **A.** In order to reliably serve its customers, Tampa Electric  
25 is planning a very substantial construction program for

1 the period 2009 through 2013. This capital expenditure  
2 program is driven by several factors including: 1) the  
3 need for continued investment in generation, 2) needed  
4 investment in hardening the T&D system to improve overall  
5 reliability, 3) funding the company's share of investment  
6 in transmission facilities supporting peninsular Florida  
7 and 4) continued compliance with environmental  
8 requirements mandated by the EPA and FDEP. The magnitude  
9 of this capital program is compounded by the impact of  
10 the significantly higher costs of materials and labor  
11 that have occurred in the last several years.

12  
13 **Q.** How will this substantial construction program impact  
14 Tampa Electric and its need for external capital?

15  
16 **A.** Tampa Electric has funded large capital programs in the  
17 past, but never as large as the one the company currently  
18 faces. Without base rate relief, only about half of the  
19 funding will come from internally generated funds on  
20 average over the next five years, with only 40 percent  
21 being internally generated in 2009 and 2010. The  
22 remainder of the funding must come from externally  
23 generated funds including debt from external capital  
24 markets and equity infusions from TECO Energy.

25

1 Q. Do the credit rating agencies publicly announce or  
2 publish what it takes to achieve certain credit ratings?

3  
4 A. No. The processes used by the rating agencies to  
5 determine credit ratings are complex and consider many  
6 qualitative and quantitative factors. The ratings  
7 process typically provides little transparency, and the  
8 rating agencies publish no precise guidelines regarding  
9 how to achieve a certain rating. S&P is the only rating  
10 agency that has even attempted to provide some level of  
11 quantitative guidance. Some years ago, S&P published a  
12 matrix that identified ranges of credit parameters, such  
13 as coverage ratios, necessary to achieve certain credit  
14 ratings. However, S&P has recently modified this matrix,  
15 broadening the ranges for the ratings and leaving more  
16 room for judgment on their part, but creating greater  
17 uncertainty on the part of debt issuers, like Tampa  
18 Electric, on the exact quantitative targets needed to  
19 achieve certain credit ratings. In addition, since the  
20 rating agencies consider qualitative factors as well,  
21 achieving the quantitative parameters does not ensure  
22 that a particular rating will actually be achieved.

23

24 **CAPITAL STRUCTURE**

25 Q. What capital structure is Tampa Electric proposing in its

1 test year?

2

3 **A.** Tampa Electric is projecting, for the 2009 test year, a  
4 jurisdictional adjusted 13-month average financial  
5 capital structure consisting of 44.7 percent debt,  
6 including off-balance sheet purchased power obligations,  
7 and 55.3 percent common equity. This 55.3 percent equity  
8 ratio is necessary since the company believes the  
9 combination of this capital structure and the resulting  
10 coverage ratios should enable the achievement of credit  
11 parameters commensurate with debt ratings in the single A  
12 range.

13

14 **Q.** What coverage ratios are important to rating agencies?

15

16 **A.** As part of their quantitative analyses, rating agencies  
17 focus on cash coverage ratios to determine a company's  
18 ability to meet its interest payments and debt  
19 obligations. Typical coverage ratios reviewed by the  
20 agencies are Funds from Operations to Interest  
21 (FFO/Interest) and Funds from Operations to Total Debt  
22 (FFO/Debt). Document No. 5 of my exhibit shows Tampa  
23 Electric's credit parameters on a historical and  
24 projected basis. It shows that there has been a  
25 significant deterioration in Tampa Electric's credit

1 metrics as used by the credit rating agencies. If Tampa  
2 Electric's requested rate increase was not granted and  
3 the capital structure remained at the 2007 level, there  
4 would be another significant decline in the credit  
5 parameters. For Tampa Electric to improve its credit  
6 metrics, equity infusions from TECO Energy and base rate  
7 relief are needed. In her direct testimony, witness  
8 Abbott further addresses these credit parameters and the  
9 effect these factors have on Tampa Electric's credit  
10 ratings.

11  
12 **Q.** Did you consider other credit parameters when targeting  
13 ratings in the single A range?

14  
15 **A.** Yes. Although the rating agencies tend to focus on cash  
16 coverage ratios, another commonly used parameter in the  
17 utility industry is an Earnings Before Interest and Taxes  
18 to Interest (EBIT/Interest) coverage ratio. This  
19 coverage ratio is included in the company's MFR Schedule  
20 D-9 and is reported in Schedule 5 of the company's  
21 monthly Surveillance Report filings. Tampa Electric's  
22 coverage ratio for EBIT/Interest has been declining and  
23 is projected to be 2.1 times in 2009. This same coverage  
24 ratio averaged 4.6 times in 1992 through 2000 and 3.5  
25 times in 2001 through 2007. The 2.1 times represents an

1 unacceptable level and is expected to continue to decline  
2 without rate relief. The company believes that, given  
3 its extensive five-year capital spending program, a more  
4 appropriate coverage ratio for 2009 is in the range of 4  
5 times, which can be achieved by providing the company's  
6 requested rate relief.

7  
8 **Q.** How does the company's proposed 55.3 percent equity ratio  
9 compare with the allowed capital structures of other  
10 investor-owned electric utilities in Florida?

11  
12 **A.** The proposed 55.3 percent equity ratio is consistent with  
13 past Commission decisions that approved equity ratios  
14 above the level requested in this case. In Tampa  
15 Electric's 1996 earnings review, the Commission capped  
16 the company's equity ratio at 58.7 percent. In Florida  
17 Power & Light's ("FP&L") recent rate settlement, the  
18 Commission confirmed an equity ratio of 55.83 percent.  
19 The Commission as part of Progress Energy Florida Inc.'s  
20 ("PEF") recent rate case settlement approved a similar  
21 equity ratio, capped at 57.83 percent.

22  
23 **Q.** Has Tampa Electric included in its capital structure the  
24 effect of off-balance sheet obligations, like long-term  
25 purchased power agreements?

1   **A.**   Yes.    Since the rating agencies consider portions of  
2           long-term fixed payments associated with purchased power  
3           agreements as debt and analyze company credit profiles  
4           with an adjustment to its credit parameters, the  
5           company's proposed capital structure reflects an  
6           adjustment for this imputation of additional debt.

7  
8   **Q.**   Using the S&P methodology, please describe the  
9           calculation for the additional debt that reflects the  
10          associated risk of long-term purchased power agreements  
11          in Tampa Electric's capital structure.

12  
13   **A.**   S&P discounts future capacity payments using a discount  
14          rate based on the cost of debt, and then applies a "risk  
15          factor" to determine the amount of imputed debt to  
16          include in the adjusted debt to total capital. For  
17          similarly situated electric utilities as Tampa Electric,  
18          S&P uses a risk factor of 25 percent. S&P also imputes  
19          an annual amount for interest expense in cash coverage  
20          ratios for the imputed debt.

21  
22   **Q.**   Using S&P's methodology, how much debt and interest  
23          expense has been imputed to recognize the impact of  
24          purchased power agreements on Tampa Electric's capital  
25          structure for 2009?

1 **A.** The present value to January 2009 of Tampa Electric's  
2 future capacity payments for its purchased power  
3 agreements is \$307 million, when multiplied by the S&P  
4 risk factor of 25 percent, results in approximately \$77  
5 million of imputed debt and \$5 million of additional  
6 interest expense.

7  
8 **Q.** Has the Commission recognized the effect of off-balance  
9 sheet obligations like purchased power agreements on a  
10 utility's capital structure in the past?

11  
12 **A.** Yes. Rule 25-22.081(7), Florida Administrative Code  
13 ("F.A.C."), Contents of Petition requires utilities to  
14 include a discussion of the potential for increases or  
15 decreases in its cost of capital associated with  
16 purchased power in a petition for determination for need  
17 for new generation. Also, in both FP&L's and PEF's  
18 recent rate settlements, the Commission allowed off-  
19 balance sheet obligations for purchased power to be  
20 incorporated into the capital structure and weighted  
21 average cost of capital.

22  
23 **Q.** Was Tampa Electric's capital structure adjusted to  
24 mitigate the effect of imputed debt associated with long-  
25 term purchased power contracts?

1   **A.**   Yes.   As the Commission has seen in the cases of other  
2           utilities in rate proceedings, Tampa Electric has  
3           adjusted its weighted average cost of capital to mitigate  
4           the effect of imputed off-balance sheet debt associated  
5           with long-term purchased power agreements.   This was  
6           accomplished by recognizing, on a pro forma basis and as  
7           included in the direct testimony of witness Chronister,  
8           \$77 million of additional equity necessary to offset the  
9           imputed debt.   This, in effect, leaves the capital  
10          structure at the same common equity ratio before and  
11          after the imputation of the debt to account for purchased  
12          power obligations.

13  
14   **Q.**   Given the company's proposed capital structure of 55.3  
15          percent equity, what are the equity infusions from TECO  
16          Energy for 2008 and 2009 that are necessary to achieve  
17          this capital structure?

18  
19   **A.**   The 2008 and 2009 planned equity infusions from TECO  
20          Energy to Tampa Electric are \$350 million and \$285  
21          million, respectively.   These significant equity  
22          infusions are in addition to the 2007 actual equity  
23          infusion of \$82 million.   Through July 2008, \$150 million  
24          of the total \$350 million of equity for 2008 has been  
25          contributed.

1 **Q.** What are TECO Energy's plans for making the remaining  
2 equity infusions in 2008 and 2009?

3  
4 **A.** The remaining 2008 equity infusions of \$200 million and  
5 the 2009 contribution of \$285 million will be made from  
6 available operating cash flows of TECO Energy. TECO  
7 Energy is committed to making these contributions and  
8 anticipates they will be completed by year-end 2009. The  
9 timing of these contributions will depend on TECO  
10 Energy's actual monthly cash flows, which can be impacted  
11 by unexpected events, such as higher under-recoveries of  
12 fuel at the utility companies. Hence, the timing of the  
13 actual equity contributions may not occur precisely as  
14 assumed in Tampa Electric's 2009 test year and could  
15 result in the company not reaching its targeted 13-month  
16 average 55.3 percent equity ratio. However, the company  
17 believes that with adequate levels of fuel recovery and  
18 base rate increases, the 55.3 percent equity ratio can be  
19 achieved before year-end 2009.

20  
21 **PARENT COMPANY DEBT**

22 **Q.** Did Tampa Electric make a parent company debt adjustment  
23 in accordance with F.A.C. Rule 25-14.004 F.A.C. ("Rule  
24 25-14.004" or "the Rule")?  
25

1   **A.**   No.     As in Tampa Electric's last rate case, an  
2           adjustment is inappropriate.  Although the TECO Energy  
3           parent company currently has \$404 million of long-term  
4           debt, this debt is related to TECO Energy's investments  
5           in its failed TPS merchant power projects and was not  
6           used to invest as equity in Tampa Electric.  TPS was a  
7           subsidiary of TECO Energy that is no longer in  
8           existence.

9  
10          The intent of the rule is to require an adjustment to  
11          the income tax expense of a regulated company to reflect  
12          the income tax expense benefit of the parent debt that  
13          may have been invested as equity of the subsidiary.  The  
14          rule also states that it shall be a rebuttable  
15          presumption that a parent's investment in any subsidiary  
16          or in its own operations shall be considered to have  
17          been made in the same ratios as exist in the parent's  
18          overall capital structure.  However, the rule allows a  
19          utility to demonstrate to the Commission that in certain  
20          circumstances it is appropriate not to make the  
21          adjustment.  TECO Energy did not raise debt to invest in  
22          Tampa Electric, nor did it invest the proceeds of the  
23          debt it did raise as equity in Tampa Electric.  
24          Therefore, a parent company debt adjustment is not  
25          appropriate.

1 **Q.** Please explain further why the Commission should not  
2 make the parent company debt adjustment in this  
3 proceeding.

4  
5 **A.** The Commission should not make the adjustment for the  
6 following reasons: 1) as stated above, the debt that  
7 exists at the parent was raised for TECO Energy's  
8 merchant power plant investments at TPS and was not used  
9 to invest in Tampa Electric, 2) imputing parent debt  
10 would result in an inappropriate imputed capital  
11 structure given how TECO Energy raises capital on behalf  
12 of its regulated and unregulated companies, 3) imputing  
13 debt for the cumulative equity infused to Tampa Electric  
14 over time ignores that the vast majority of the equity  
15 that exists at Tampa Electric was invested by TECO  
16 Energy in Tampa Electric during times when either no  
17 parent debt existed or at a time when parent debt was  
18 actually being repaid, and 4) TECO Energy's internal  
19 subsidiary 100 percent net income dividend policy  
20 results in an overstatement of the paid in capital  
21 equity amounts that have required the investment of  
22 parent capital as used in the parent company debt rule  
23 calculation.

24  
25 **Q.** How does TECO Energy support the funding needs for Tampa

Electric?

**A.** TECO Energy provides only equity contributions to Tampa Electric. Tampa Electric raises its own debt and has separate credit ratings for this purpose. Tampa Electric's credit ratings have been and are expected to remain higher than TECO Energy's ratings.

**Q.** How does TECO Energy fund its unregulated operations?

**A.** Since TECO Energy's unregulated companies do not have their own credit ratings, TECO Energy raises both debt and equity capital for these companies. A large amount of both equity and debt capital was raised at the parent company for investments in TPS to fund significant merchant power plant investments from 1998 through 2003, which subsequently failed and/or were sold. Some of this debt remains at the parent company, but should be ignored when considering the capital structure used to fund equity for Tampa Electric since this debt was raised for investment in TPS.

**Q.** Please describe the debt at TECO Energy.

**A.** Prior to 1998, the only debt at the parent was \$100

1 million and it was specifically related to the company's  
2 Employee Stock Option Plan trust. This debt existed  
3 during the time of the company's last rate case in 1992,  
4 and it was not imputed as debt to Tampa Electric. TECO  
5 Energy currently has about \$400 million of debt at the  
6 parent level associated with its investments in TPS.  
7 This debt is part of a larger amount of capital (both  
8 equity and debt) raised for investment in TPS.

9  
10 **Q.** You mentioned the \$400 million of existing debt was part  
11 of a larger overall capital amount raised for investment  
12 in TPS. Please describe this further.

13  
14 **A.** Beginning in 1998 and through 2003, the parent company  
15 raised a total of \$3.4 billion of external capital (both  
16 equity and debt) to invest in TPS and other unregulated  
17 operations. Specifically, the parent company raised  
18 approximately \$2.1 billion of debt and \$1.3 billion of  
19 equity and also had internally generated funds of \$300  
20 million.

21  
22 During this very same period, TECO Energy invested \$3.3  
23 billion in its unregulated operations. About \$3.1  
24 billion of the \$3.3 billion went to TPS, with the  
25 remainder being invested in the other unregulated

1 entities. During this time, \$285 million of equity was  
2 infused to Tampa Electric and \$119 million to Peoples  
3 Gas, the other regulated utility company. Since only  
4 \$2.1 billion of the total \$3.3 billion invested in the  
5 unregulated companies was raised in the form of debt,  
6 the remainder of the unregulated investment was made  
7 from external equity capital and internally generated  
8 funds. In addition, since Tampa Electric raised its own  
9 debt, the \$285 million of equity that it received from  
10 the parent company represented only a small portion of  
11 the \$1.4 billion of externally raised equity capital and  
12 \$300 million of internally generated funds.

13  
14 **Q.** Has the parent company raised any debt outside of this  
15 timeframe?

16  
17 **A.** No. The period from 1998 through 2003 was the only  
18 period of time since the company's last rate case when  
19 the parent company raised any amount of new incremental  
20 external debt. During the period from 2004 to 2007, the  
21 parent company actually paid down significant amounts of  
22 debt and wrote off equity associated with its failed TPS  
23 merchant power investments. Since 2003, TECO Energy has  
24 not increased and, in fact, has significantly decreased  
25 its debt obligations. Thus, the \$285 million of equity

1           infused to Tampa Electric during 1998 through 2003  
2           represents the only equity infusions that could have  
3           been possibly funded from debt at the parent level.  
4           Tampa Electric is projected to have a 13-month average  
5           paid in capital balance in 2009 of \$1.9 billion or \$2.0  
6           billion by year-end 2009. Hence, the vast majority of  
7           the equity that exists at Tampa Electric was infused by  
8           TECO Energy during times when either no parent debt  
9           existed or at a time when parent debt was actually being  
10          repaid. Out of the total paid in capital, the amount  
11          infused in 1998 through 2003 total \$285 million.

12  
13       **Q.** Was any part of the debt raised during 1998 through 2003  
14       actually used by TECO Energy to invest the \$285 million  
15       of equity in Tampa Electric?

16  
17       **A.** No. Although tracing funds is a complicated and  
18       difficult exercise, it is clear that the need for  
19       external capital was driven by the large investments in  
20       TPS. The equity infusions to Tampa Electric were funded  
21       with the parent company's internally generated funds and  
22       externally raised equity.

23  
24       **Q.** How much of the total \$2.1 billion of debt raised by  
25       TECO Energy still remains at the parent company?

1   **A.**   Only \$400 million.   Since 2003, the parent company has  
2       reduced the debt associated with the merchant power  
3       investment through a comprehensive debt management plan.  
4       Many unregulated operating companies of TECO Energy,  
5       including various subsidiaries of TPS and TECO  
6       Transport, were sold to generate cash to reduce the debt  
7       burden.   Most recently, TECO Energy used the proceeds  
8       from the sale of TECO Transport to execute a debt  
9       redemption and exchange offer that reduced the overall  
10      debt balance by another \$300 million, extended the  
11      maturity of \$300 million of debt and transferred, as  
12      part of a bond exchange offer, \$900 million of TECO  
13      Energy debt to TECO Finance.

14  
15   **Q.**   Why wasn't the \$400 million transferred to TECO Finance  
16      along with the \$900 million?

17  
18   **A.**   The majority of the \$400 million was included as part of  
19      the exchange offer to bondholders in 2007; however, not  
20      all bondholders chose to exchange their TECO Energy  
21      bonds for TECO Finance bonds.   Therefore, the \$400  
22      million of the debt raised at TECO Energy for TPS  
23      remains.

24  
25   **Q.**   You stated that TECO Energy's internal subsidiary 100

1 percent net income dividend policy results in an  
2 overstatement of the paid in capital equity amounts that  
3 have required the investment of parent capital as used  
4 in the parent company debt rule calculation. Please  
5 explain.

6  
7 **A.** TECO Energy's internal 100 percent dividend policy  
8 ("dividend policy") requires all subsidiaries, including  
9 Tampa Electric, to dividend to TECO Energy cash amounts  
10 equal to 100 percent of each subsidiary's net income.  
11 TECO Energy uses these internally generated funds for  
12 two purposes. It uses the majority of these funds to  
13 pay dividends to its shareholders. TECO Energy pays  
14 about 60 to 80 percent of its consolidated net income to  
15 its external shareholders in the form of a quarterly  
16 dividend. The remainder of the internal dividends from  
17 TECO Energy's subsidiaries is invested back in the  
18 subsidiaries.

19  
20 Although these funds are invested back in the regulated  
21 companies in the form of equity infusions, the  
22 accounting treatment changes the equity classification  
23 of this amount from retained earnings to paid in capital  
24 at the subsidiary level. By doing so, this  
25 inappropriately increases the impact of a parent company

1 debt adjustment under the rule. In other words, this  
2 simple reclassification of funds that were paid out of  
3 and then invested back into Tampa Electric causes the  
4 paid in capital balance at Tampa Electric to be  
5 effectively overstated and, in turn, the balance of  
6 retained earnings to be understated for these purposes.  
7 The accounting for the dividends and equity  
8 contributions does not change the source of these funds,  
9 i.e., the funds that were paid as dividends to TECO  
10 Energy and, in turn, reinvested, were actually  
11 internally generated by Tampa Electric and, in essence,  
12 did not require funding from the parent company.

13  
14 From most financial and regulatory perspectives, the  
15 distinction between retained earnings and paid in  
16 capital are not important. For instance, both retained  
17 earnings and paid in capital are considered to be  
18 owner's equity within the capital structure for  
19 regulatory and financial integrity purposes. However,  
20 in the instance of the parent company debt rule, the  
21 distinction is very important, due to the focus on paid  
22 in capital.

23  
24 Since the parent company debt rule excludes retained  
25 earnings and focuses solely on paid in capital, the

1 relative amount of owners' equity that is classified as  
2 retained earnings versus paid in capital becomes  
3 important. TECO Energy's internal dividend policy  
4 creates a situation whereby the imputation of any parent  
5 debt percentage would be incorrectly applied to a  
6 portion of owners' equity that has actually been  
7 internally generated.

8  
9 **Q.** What is Tampa Electric's paid in capital balance, and  
10 how has it been impacted by TECO Energy's dividend  
11 policy?

12  
13 **A.** The company's paid in capital balance is expected to be  
14 approximately \$1.9 billion by 2009. Because of the  
15 dividend policy, Tampa Electric's retained earnings  
16 balance has remained relatively flat since 1981, the  
17 year that TECO Energy was formed, and all of the  
18 company's growth in common equity has occurred in the  
19 form of paid in capital. Had Tampa Electric paid less  
20 dividends and "retained" more of its earnings, "paid in  
21 capital" would be less and, therefore, any potential  
22 adjustment under the rule would be less.

23  
24 **Q.** Why does the parent company debt rule focus solely on  
25 paid in capital?

1   **A.**   The intent of the rule is to focus on the external  
2           capital of the parent that may have been raised to  
3           support the external capital needs of the utility. To  
4           accomplish this goal, Rule 25-14.004 excludes the  
5           retained earnings of both the utility and the parent  
6           company. Since TECO Energy's dividend policy overstates  
7           paid in capital and the external capital needs of Tampa  
8           Electric, applying the Rule overstates the intended  
9           impact of the Rule. Hence, before any type of  
10          adjustment is considered under Rule 25-14.004, an  
11          adjustment should be made to reduce the paid in capital  
12          balance to reflect a dividend based on Tampa Electric's  
13          share of TECO Energy's dividend.

14  
15          As I stated above, of the \$1.9 billion of the "paid in  
16          capital" expected to reside on Tampa Electric's books by  
17          2009, only \$285 million was infused as equity by TECO  
18          Energy during the 1998 through 2003 period when it was  
19          raising debt and equity. If this \$285 million were  
20          adjusted using the Massachusetts Method of allocation to  
21          reflect only Tampa Electric's allocated share of TECO  
22          Energy's dividend, the net equity infusion requirement  
23          would be \$72 million. Thus, Tampa Electric's equity  
24          needs from 1998 through 2003, when adjusted to remove  
25          the dividend policy effects and net out internally

1 generated funds, were \$72 million. Even if a parent  
2 debt adjustment was to be applied, it should be applied  
3 to only \$72 million of "paid in capital".  
4

5 **Q.** Please summarize your position on the parent company  
6 debt adjustment.  
7

8 **A.** Although the TECO Energy parent company currently has  
9 \$400 million of debt, this debt is related to TECO  
10 Energy's investments in its failed TPS merchant power  
11 projects. When all of the facts and circumstances are  
12 considered, it is clear that this debt was not used to  
13 invest as equity in Tampa Electric. This debt exists  
14 because of the parent company's investments in its  
15 unregulated subsidiaries, specifically the failed TPS  
16 merchant power investments. The intent of Rule 25-  
17 14.004 is to adjust the tax expense of the regulated  
18 company when the holding company raises debt to invest  
19 as equity in the regulated company. TECO Energy did not  
20 raise debt to invest in Tampa Electric nor did it invest  
21 the proceeds from the debt it did raise as equity in  
22 Tampa Electric. Furthermore, given TECO Energy's and  
23 Tampa Electric's internal and external dividend  
24 policies, the application of the rule would impute  
25 parent company debt to an overstated paid in capital

1 balance. A parent company debt adjustment is  
2 inappropriate.

3  
4 **SUMMARY**

5 **Q.** Please summarize your direct testimony.

6  
7 **A.** Since its last base rate case in 1992, Tampa Electric has  
8 had significant customer and revenue growth and has  
9 worked to manage costs and undertake innovative  
10 regulatory settlements to avoid the need to raise base  
11 rates. This has been done in an environment in which  
12 significant generation additions were required to meet  
13 customer growth. The company has made these significant  
14 generation additions and other asset additions while  
15 being able to keep itself within its allowed ROE range  
16 and maintain its financial integrity until recently.

17  
18 More recently, the company has faced new environmental,  
19 reliability and storm hardening requirements. In  
20 addition, the cost for new equipment has increased  
21 considerably in recent years.

22  
23 These factors have now come together to make an increase  
24 in Tampa Electric's base rates necessary in order to stop  
25 significant recent erosion in Tampa Electric's financial

1 integrity. Tampa Electric needs to be financially strong  
2 to be able to raise the capital required to meet its  
3 significant capital investment requirements in 2009 and  
4 beyond.

5  
6 Tampa Electric is requesting a base revenue increase of  
7 \$228,167,000. The financial basis for this revenue  
8 requirement is a weighted cost of capital of 8.82  
9 percent, which includes a 12.00 percent ROE and a  
10 financial equity ratio, with appropriate purchased power  
11 adjustments, of 55.3 percent. The requested ROE and  
12 equity ratio are important for the company to maintain  
13 and enhance its financial position to target credit  
14 parameters and debt ratings in the single A range.  
15 Finally, a parent company debt adjustment is  
16 inappropriate in the case of Tampa Electric and TECO  
17 Energy, as all equity infusions to Tampa Electric in the  
18 relevant time periods were made from internally generated  
19 funds or externally raised equity at the parent level.

20  
21 **Q.** Does this complete your direct testimony?

22  
23 **A.** Yes.  
24
