

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

In the Matter of:

DOCKET NO. 090392-WS

APPLICATION FOR INCREASE IN WATER
AND WASTEWATER RATES IN LAKE COUNTY
BY UTILITIES INC. OF PENNBROOKE.

PROCEEDINGS:

AGENDA CONFERENCE
ITEM NO. 8

COMMISSIONERS
PARTICIPATING:

CHAIRMAN NANCY ARGENZIANO
COMMISSIONER LISA POLAK EDGAR
COMMISSIONER NATHAN A. SKOP

DATE:

Tuesday, June 1, 2010

TIME:

Commenced at 11:37 a.m.
Concluded at 12:54 p.m.

PLACE:

Betty Easley Conference
Center
Room 148
4075 Esplanade Way
Tallahassee, Florida

REPORTED BY:

LORI DEZELL, RPR

DOCUMENT NUMBER DATE

04674 JUN-4 2010

FPSC-COMMISSION CLERK

P R O C E E D I N G S

1
2 **CHAIRMAN ARGENZIANO:** If everyone would take
3 seats. Okay. I believe we have Mr. Auger on the
4 line.

5 **MR. AUGER:** Hello. Yes, I'm here.

6 **CHAIRMAN ARGENZIANO:** Okay. Hang on, Mr.
7 Auger. Hold on, please. We need to turn up the
8 volume. Okay. Thank you. And it seems like
9 everybody is ready and we'll go to staff, please.
10 Mr. Deason.

11 **MR. DEASON:** Yes, Commissioners. I'm Jared
12 Deason with Commission staff. Item 8 concerns an
13 application for an increase in water and wastewater
14 rates by Utilities Inc. of Pennbrooke. Pennbrooke
15 is a class B water and waste water utility located
16 in Lake County. The utility's rates were last
17 established in 2006.

18 Staff has an oral modification. This
19 modification and all of its fall-out changes has
20 previously been provided to all parties.

21 Lorne Hunsberger, consultant for the Pennbrooke
22 homeowners association, George Auger, a customer of
23 Pennbrooke, Charlie Beck from the Office of Public
24 Counsel, as well as Marty Friedman, counsel for
25 Pennbrooke, are here to address the Commission.

1 And we are prepared to answer any questions the
2 Commissioners may have.

3 **CHAIRPERSON ARGENZIANO:** Thank you. Any
4 questions? Okay. Staff is done. Mr. Hornsberger?

5 **MR. HUNSBERGER:** Hunsberger.

6 **CHAIRMAN ARGENZIANO:** Hunsberger. Yes, thank
7 you. Mr. Beck?

8 **MR. BECK:** Yes. Thank you, Madam Chairman and
9 Commissioners. Chairman, we'd like to ask if
10 Mr. Auger who's on the phone could address you
11 first to be followed by Mr. Hunsberger and then
12 we'll have a few comments.

13 **CHAIRMAN ARGENZIANO:** Mr. Auger, welcome. Can
14 you hear us okay? Uh-oh. Okay. We'll hang on a
15 second and wait and see if we can reconnect.

16 (Pause.)

17 **CHAIRPERSON ARGENZIANO:** Mr. Auger, are you
18 there?

19 **MR. AUGER:** Yes, I'm here.

20 **CHAIRMAN ARGENZIANO:** Okay.

21 **MR. AUGER:** Sorry. I was trying to get as
22 close as I could to the phone and I think I
23 accidentally hit a button.

24 **CHAIRMAN ARGENZIANO:** That's okay. We've got
25 you now. So if you could proceed. Welcome.

1 **MR. AUGER:** Thank you. First I'd like to
2 thank the Commissioners and the PSC staff for
3 making it possible for me to address this
4 conference today. and I'd especially like to thank
5 Patricia Merchant and the members of the OPC staff
6 for their fine cooperation and assistance in
7 dealing with the rate case.

8 I have two main areas I'd like to address.
9 First, there are a number of items that the staff
10 of in its recommendation that I would like to
11 highlight. I'll give you specific references.

12 In Issue No. 3 on page 12 concerning
13 adjustments to the utility test year plant in
14 service, the PSC staff addresses changes to ERC
15 calculations due to the sale of several systems and
16 adjustments to the 2008 ledger.

17 The staff states, "UI calculation was only for
18 plant additions and not for accumulated
19 depreciation which caused an overstatement of
20 allocated net plant."

21 Then further, Pennbrooke, the utility,
22 provided further corrected calculations to staff
23 but staff was not able to reconcile the numbers.
24 Also, the utility provided another calculation that
25 did not match its own audit response.

1 Then in Issue No. 5 on page 16 concerning
2 adjustments to pro forma plant addition, the PSC
3 staff states, "The utility has been unable to
4 provide the executed agreements for the electrical
5 equipment at the utility's WTP. Therefore, staff
6 recommends that plant be reduced by \$37,250."

7 Further, on page 17, the staff states, "The
8 utility failed to provide the documentation for the
9 associated retirement."

10 Then in Item No. 11 on page 25 concerning
11 annualized revenue adjustments, the staff
12 recommendation states that the revenues reported
13 for water and wastewater should be increased by
14 \$40,970 and \$43,909 respectively, for a total
15 \$84,879. The utility had reported total
16 adjustments of 13,244; therefore, their revenue
17 adjustments were understated by 71,635.

18 In addition, the staff states that the utility
19 had not reported any revenue for the sale of re-use
20 water to the Pennbrooke Fairways golf course. So
21 the staff imputed additional income in the amount
22 of \$22,648, bringing the total adjustment of
23 revenue to \$94,283.

24 In the MFR under the B1 schedule, the utility
25 reported total adjusted operating revenues for the

1 2008 test year of \$735,013. **Revenue was therefore**
2 **underreported on the MFR by more than 11 percent.**

3 In Issue No. 13 on page 28 concerning
4 adjustments to utility's salaries and wages
5 expense, the PSC staff states, "However, to date,
6 the utility failed to provide staff with any
7 adjustments to salaries and wages related to these
8 cost savings."

9 And I'll save what I want to say about
10 adjustments and salaries and wages to my next item.

11 In Issue No. 15 on page 31 concerning
12 adjustments to transportation expenses, the PSC
13 staff states, "However, that belief, the balance
14 reported on the Pennbrooke work papers are
15 unreliable."

16 Issue No. 18 on page 36 concerning the
17 appropriate amount of current rate case, the staff
18 states, "Staff has determined that the
19 \$4,000 filing fee was counted twice, thus should be
20 removed from the legal fees."

21 Also on page 37 staff states, "Because of the
22 duplicative request before the utility finally
23 provided the executive contract, that staff
24 believed there was unwarranted and duplicative rate
25 case expense incurred to respond to staff's data

1 request in this matter."

2 Also on page 39 concerning WFP expenses to Fed
3 Ex copies and miscellaneous cost, the staff states,
4 "The utility estimated \$12,000 for these items."
5 And in the January 19th, 2010 response letter, the
6 utility states that only \$14 has been incurred.
7 The utility provided no further breakdown or
8 support for the remaining \$11,986."

9 These excerpts from the staff recommendation
10 detail a number of errors made by the utility and
11 failures to respond that is really troubling to me.
12 But it goes further. The Office of public Counsel
13 communicated areas that they felt should be
14 addressed and several of these remain unanswered or
15 only partially answered. If the Commissioners want
16 details on that, Patricia Merchant of the Office of
17 Public Counsel can provide specifics.

18 And there's more. Over the past several
19 years, the utility has failed to make adjustments
20 as directed by the Public Service Commission and
21 they have even been required to answer why they
22 shouldn't be made to pay fines for their failures.
23 The utility responded in writing that they would
24 make the adjustment but they did not follow through
25 and actually make them. Again, Patricia Merchant

1 has the specifics.

2 The second item I'd like to address is
3 allocated expenses. In the 2005 test year for the
4 2006 MFR, corporate expenses of \$8,050,000 were
5 reported on schedule B12. Of this amount, 58,541
6 was allocated to Pennbrooke.

7 In the 2008 test year, corporate expenses
8 increased \$14,173,323 to 22,223,365. And
9 Pennbrooke's Pennbrooke allocation increased to
10 279,153, an increase of \$220,612, or 377 percent.
11 In part, the utility justified this increase by
12 stating that the number of affiliates had
13 decreased.

14 At the customer meeting held in Pennbrooke in
15 February with the PSC staff, I brought this item to
16 the staff's attention. I read to them from two
17 pages of prepared notes and gave them four copies
18 of those notes.

19 What I asked then and what I ask today is how
20 could the utility increase corporate spending from
21 \$8 million in 2005 to over \$22 million in 2008
22 during the time when the number of affiliates was
23 decreasing substantially. Taken to the extreme, if
24 the utility were to sell off all of its affiliates
25 except for Pennbrooke, would we be required to bear

1 the full burden of \$22 million for corporate
2 expense?

3 I subsequently mailed a note to the PSC staff
4 asking how the allocation of overhead was
5 calculated. They responded that ERCs were used to
6 do these calculations and that the Commission is
7 required to set rates that are just, reasonable,
8 compensatory and not unfairly discriminatory. I
9 ask is it just and reasonable for the utility to
10 increase corporate spending from \$8 million to over
11 \$22 million at a time when a number of customers'
12 reserve has dropped substantially? And is it just
13 and reasonable for the utility to increase
14 Pennbrooke's expenses by 377 percent?

15 The PSC staff partially addressed this item in
16 Issue No. 13 where they recommended decrease in
17 salaries and related benefits in the amount of
18 \$106,959. On page 29 they state, "The requested
19 increase in salaries and wages expense is
20 excessive. Also, staff believes Pennbrooke has not
21 demonstrated any substantial benefit to the utility
22 as a result of the additional allocated personnel
23 since the last rate case."

24 Apparently staff agrees that these overhead
25 costs are not just and reasonable. Unfortunately,

1 staff only addressed salaries, wages and the
2 corresponding benefits and payroll taxes.

3 To fully address this issue, the same type of
4 adjustment needs to be applied to all O&M expenses.
5 For example, Issue No. 14 concerning relocation
6 expense on page 30 states that the utility spent
7 \$156,647 to relocate one headquarter's employee.
8 And that's one expensive moving van.

9 I suggest that a just and reasonable approach
10 to corporate allocations would be to freeze them as
11 a 2005 level of 58,541 and apply the CPIU for the
12 years from 2005 to 2009. At the time the document
13 was prepared, the CPIU for 2009 was unknown but it
14 is now. And since the new rates go into effect in
15 2010, I believe that it would be just and
16 reasonable to apply the CPIU from 2005 to 2009.

17 To do so would increase the Pennbrooke
18 allocation by 9.7 percent, from 58,541 to 64,208,
19 which is \$214,945 lower than the amount used in the
20 MFR.

21 The staff reduction for salaries and wages of
22 106,959 in Issue 13 would be deducted from this
23 amount requiring a further reduction of 107,986 to
24 cover all other corporate overhead items.

25 That's the extent of my input for now. Thank

1 you for your time. And I believe that Mr. Lorne
2 Hunsberger has items he'd like to address.

3 **CHAIRPERSON ARGENZIANO:** Thank you. Thank you
4 very much.

5 **MR. AUGER:** You're welcome.

6 **CHAIRPERSON ARGENZIANO:** Mr. Hunsberger? Any
7 questions from Mr. Auger? Mr. Hunsberger?

8 **MR. HUNSBERGER:** Good morning. My name is
9 Lorne Hunsberger. I'm a CPA from Tampa. I've been
10 working with water and sewer utility rates since
11 1968. I was admitted to practice as a Class B
12 practitioner before this Commission in 1976. I
13 currently serve as Hillsborough County's consultant
14 in regulating the privately-owned franchises that
15 are -- reside within Hillsborough County.

16 I've testified as an expert witness before
17 this Commission, various hearing examiners, various
18 boards of county commissioners and city councils
19 and in circuit court and federal courts.

20 Since 19-- since 2004 I've represented
21 Hillsborough County in the investigation of three
22 rate cases and two limited proceedings on Utilities
23 Inc.'s subsidiaries that operate within
24 Hillsborough county. I've been retained by
25 Pennbrooke Homeowners Association in this case.

1 When I review the case, I see three items that
2 drive this case. The first item is the increased
3 amount of allocation cost from UI corporate in
4 Illinois and in Florida, operations center in
5 Altamonte Springs in 2008. The second item is the
6 Phoenix accounting system which is also allocated
7 based upon customers. And the third is the
8 reduction in the customer base used to allocate
9 assets, expenses, depreciation expense, taxes other
10 than income due to the divestiture of various
11 systems by UI corporate.

12 Due to those divestitures, we'll miss the big
13 picture if we only look at what has been recorded
14 on the books in the year 2008. To get the big
15 picture, I compared the annual reports filed by
16 Utilities Inc. with the Commission for 2005, 2006,
17 2007, 2008 and 2009. And when you set these
18 figures up side by side, and you've got the
19 schedules in front of you, there are three pages
20 for water and three pages for wastewater, you can
21 see what has happened to the expenses from year to
22 year.

23 Per page 10E, 10A of the annual reports,
24 Utilities Inc. reports that the categories of
25 expenses that are allocated from the home office

1 and what -- and the Florida office in Altamonte
2 Springs.

3 Per the annual reports, the operating income
4 of Pennbrooke in 2007 was 55,000. In 2008 there
5 was a loss of 13,000. In 2009 there was an income
6 of 34,000. Per the same annual reports for
7 wastewater in 2007, there was income of 37,000; in
8 2008 income of 26,000; and in 2009, 41,000.

9 In the operating expenses for water, in 2008
10 they increased by 40 percent over 2007. In 2009
11 the operating expenses decreased by 16 percent when
12 compared to 2008. In 2008 the operating expenses
13 for wastewater increased by 6 percent when compared
14 to 2007, and in 2009 they decreased by 17,000 --
15 excuse me, 17 percent when compared to 2008.

16 The last rate case for Pennbrooke was 2005 as
17 the test year. When the operating expenses for the
18 water operations for 2008 are compared to 2005, we
19 find that the water expenses are up 97 percent when
20 compared to 2005. When the operating expenses for
21 wastewater are -- for 2008 are compared with the
22 2005 expenses, we see that the wastewater expenses
23 are up 47 percent when compared to 2005.

24 My analysis of the annual report indicates
25 that the calendar year 2008, the test year for this

1 rate case, was truly the opportunity rate case year
2 because the expenses were up. There was a spike in
3 the operating expenses, there was a smaller
4 customer base used to allocate expenses. Beautiful
5 time for a rate case.

6 Salaries and benefits for water were up in
7 2008 by 35 percent when compared to 2007. In 2009
8 salary expenses for water were down when -- by
9 20 percent when compared to 2008. In 2008
10 wastewater salaries and benefits were up 23 percent
11 when compared to 2007. In 2009 wastewater salaries
12 and benefits were down 20 percent when compared to
13 2008. We have a pattern.

14 When water salaries and benefits for 2008 are
15 compared to 2005, they are up 100 percent. When
16 the wastewater salaries and benefits for 2008 are
17 compared to 2005, they're up 81 percent. When I
18 look at contractual services, transportation,
19 insurance and miscellaneous expenses, the pattern
20 was the same.

21 The water expenses for 2008 for these items
22 were up 87 percent over 2007. The water expenses
23 for 2009 were down 14 percent when compared to
24 2008. The wastewater expenses for 2008 for these
25 categories were up 74 percent when compared to

1 2007. The wastewater expenses for 2009 were down
2 11 percent when compared to 2008.

3 When the above expenses for water for 2008
4 were compared to 2005 -- and again that was the
5 last test year -- they are up 188 percent. The
6 wastewater expenses for those categories in 2008
7 when compared to 2005 were up by 150 percent. From
8 2005 to 2008 the water equivalent units went from
9 1452 to 1472. The wastewater equivalent units went
10 from 1250 to 1251. Therefore, the increase in
11 operating expenses from 2005 to 2008 cannot be
12 explained by increasing customers.

13 On Schedule B7 and B8 of the MFR, Frank
14 Seidman @ says that one of the reasons the expenses
15 have increased since the last rate case is the
16 number of affiliated companies have decreased.
17 There are many assets and expenses that are
18 allocated to Pennbrooke based upon the equivalent
19 customer computation.

20 There's an impact on rate base as well as
21 operating expenses and thus an impact on the
22 monthly user rates when there are fewer customers
23 to share the cost of the assets and the operating
24 and other expenses.

25 The Pennbrooke customers did not have a vote

1 on the UI divestitures of their operating
2 subsidiaries. That decision was made by UI
3 corporate. The Pennbrooke customers do not share
4 in the benefits of the proceeds of those
5 divestitures. UI corporate benefited from those
6 proceeds.

7 The monthly user rates of Pennbrooke should
8 not be inflated for a corporate decision made by UI
9 to sell off systems.

10 In their report dated May 19, 2010, the PSC
11 staff in Issue No. 4 on pages 13 through 15
12 allocated some of the cost of the Phoenix
13 accounting system to the divested systems. I back
14 that. I propose to take their allocation
15 concerning the divested systems a step further.

16 In accounting we have what we call the
17 matching principle. We match revenues with the
18 expenses as that is the only way to measure the
19 operations of an entity. Since UI corporate
20 received all of the benefits from the sale of the
21 systems, the matching principle would dictate that
22 UI corporate should be allocated the rate base
23 assets, operating expenses, depreciation, taxes
24 other than income, et cetera, that would have been
25 allocated to those divested systems.

1 This change in allocations will make changes
2 to the rate base and most of the operating expenses
3 and depreciation.

4 Based on my review of the documents available,
5 I don't see where UI has adequately explained or
6 justified the huge increase in operating expenses
7 from 2005 to 2008. Nor has UI explained the jump
8 in operating expenses from 2007 to 2008 and then
9 the reduction of those operating expenses in 2009.
10 Again I say to you that 2008 was an opportune test
11 year for you to either request an increase in the
12 monthly user rates of Pennbrooke.

13 Even though staff has gone through the 2008
14 expenses, their adjustments do not take into
15 consideration the reduction of the expenses in 2009
16 per the annual reports. To set rates looking at
17 the adjusted 2008 will cause a -- will reward
18 Pennbrooke higher rates to the detriment of the
19 Pennbroke's customers and those rates would not be
20 just and reasonable.

21 Because 2008 expenses appear to be inflated
22 when compared to 2007 and 2009 and because 2008
23 expenses are so dramatically increased over the
24 operating expenses used to set the rates in 2005, I
25 would suggest that this Commission might take an

1 alternative position on the determination of the
2 operating expenses when setting the monthly user
3 rates.

4 The alternatives I would suggest would be to
5 take the operating expenses used to set the rates
6 in 2005, adjust those rates for the CPI which is
7 10.24 percent, we call that benchmarking, and
8 increase the -- use that CPI to apply it against
9 the 2005 and impute those expenses for 2008.

10 If we do that, the 10.2 -- 10.24 percent is
11 considerably less than the 97 percent increase in
12 operating expenses that we see from 2005 to 2008 in
13 water and considerably less than 47 percent we see
14 for wastewater. I will say that I do support the
15 staff removing the well which was Item No. 5.
16 That's on page 16 of their report. And I certainly
17 support staff on Issue No. 29 which says that UI
18 should file within 90 days a statement and proof
19 that they have recorded adjustments.

20 I had a problem with UI in the case in
21 Hillsborough County where they did not record the
22 adjustments that we went through until the second
23 rate case was prepared. And that caused me
24 considerable time and effort trying to figure out
25 what they did versus what had been done in that

1 prior rate case.

2 And at this point I thank you and I'll stand
3 open for any questions you may have.

4 **CHAIRMAN ARGENZIANO:** Thank you. Questions?
5 Mr. Beck.

6 **MR. BECK:** Thank you, Madam Chairman,
7 Commissioners. My name is Charlie Beck with the
8 Office of Public Counsel.

9 Commissioners, I'd first like to thank
10 Mr. Auger for calling in today and providing his
11 comments to the Commission. And Mr. Hunsberger for
12 his very detailed analysis. We support the
13 customers and Mr. Hunsburger's positions on the
14 issues that they presented.

15 I'd also like to thank staff because they've
16 obviously put in a lot of investigation and
17 analysis in this case and a lot of hard work and
18 have come to an end result that we believe is
19 reasonable.

20 Now that's not to say that we don't disagree
21 with some specific issues that staff has raised,
22 and that's not to say that we don't have other
23 issues that we would ask you to take up if this
24 becomes a contested proceeding. But I'd like to
25 tell you that the bottom line is, and what we'd

1 like to ask you to do today, is to vote out staff's
2 recommendation as is as a proposed agency action.
3 And I can tell you if you do that, we will not
4 protest it.

5 We do have a bunch of issues to raise. What
6 I'd like to ask is that perhaps shift it over the
7 Utilities, see their positions on it, and if they
8 pursue issues that they want you to deviate from
9 the staff's recommendation, then we would like to
10 respond and raise our issues as well.

11 **CHAIRPERSON ARGENZIANO:** Okay. Mr. Friedman?

12 **MR. FRIEDMAN:** Thank you very much.

13 Martin Friedman, law firm of Rose, Sundstrom &
14 Bentley. We represent Utilities Inc. of
15 Pennbrooke. Also with me is Christian Marcelli,
16 one of the other attorneys in our firm, and Patrick
17 Flynn, as I said before, and also John Williams.

18 We're going to address Issues 4, 13, 22 and
19 24. And I'll start with Issue 3. This is the
20 allocation of Project Phoenix that we went through
21 a little bit in the last -- the last discussion.
22 But because of the deferral, we didn't -- you
23 didn't have to address -- you didn't have to make a
24 decision on it. And so at this point I'm going
25 to -- I'm going to -- I'll just -- since I made

1 that argument, let me just hit a couple of points
2 and I won't regurgitate the whole argument.

3 But the point is is that the only time when
4 the issue of the correct amortization period for
5 Project Phoenix has been argued before the --
6 before the three of you was in the 2007 rate cases,
7 and the determination was made that six years,
8 which is the Commission rule, should be followed,
9 notwithstanding the fact that the company may have
10 used an eight year.

11 And I would suggest to you that now the staff
12 recommending to go from that six years to ten years
13 without any real support and contrary to your rule
14 would not be appropriate, and I would ask that you
15 not accept the ten-year amortization period and go
16 back to the six-year which is that -- which you
17 made and the only contested argument that we've
18 had. And Mr. Marcelli is going to address again
19 the second part of the Project Phoenix issue.

20 **MR. MARCELLI:** Good afternoon. In the 2009
21 rate cases for Wedgefield and Miles Grant, those
22 systems were allocated a portion of the Project
23 Phoenix cost. Those systems that were sold were
24 less than a year after that -- the orders came out
25 on those.

1 Now, staff wants to reduce the amount of
2 Project Phoenix recovery by the amounts previously
3 allocated to Wedgefield and Miles Grant despite the
4 fact that Wedgefield and Miles Grant do not
5 actually contribute to Project Phoenix.

6 So how can staff produce Pennbrooke's rate
7 base based on the monies that are being collected
8 from Wedgefield? And actually Wedgefield was sold
9 so how can they reduce Pennbrooke's rate base based
10 on monies that are not even being collected from
11 Wedgefield.

12 The answer of course is the gain on sale.
13 That's essentially what Mr. Hunsburger's matching
14 principle is, that the gain on sale should be
15 reflected on an equal entry, so to speak,
16 benefiting the customers. And the problem with
17 that is of course that Florida has a statute,
18 section 367.0813, which prohibits just that.
19 Gains -- that statute says that gains or losses
20 flow to the shareholders. It doesn't make an
21 exception saying that some gains, you know, can be
22 recovered for the benefit of the customers.

23 Essentially the statute was passed to confirm
24 that the state's policy is that those gains or
25 losses flow to the shareholders. So it is

1 inappropriate to attempt to recover those gains on
2 sales based on going a different -- different path
3 to recovering those gains on sales.

4 And I also wanted to reiterate that no part of
5 Project Phoenix was sold as a part of the
6 divestitures of those systems. And also staff
7 included the divestiture of Hutchinson Island in
8 there. That system has not had a rate case in a
9 long enough time so that Project Phoenix was not a
10 part of that rate structure.

11 Essentially staff wants to use the updated ERC
12 counts in order to allocate the costs for Project
13 Phoenix and -- but they don't want to accept the
14 consequences of updating that.

15 Essentially audit staff recommended that the
16 utility use 2009 ERCs to allocate the costs
17 among -- the primary I'm addressing is Project
18 Phoenix. But audit staff did not recommend
19 removing any systems, and we don't -- we don't
20 think it's wise to do that at this point.

21 And -- and I would just -- I would just raise
22 the point that staff -- they -- they -- their
23 theory does not -- would never be applied both
24 ways. For example, if the utility lost money on
25 the divested systems, staff would never suggest

1 that the current utility systems would -- should
2 compensate the shareholders for that loss.

3 Furthermore, when the ERC base is expanding,
4 staff is okay with that, as they mentioned that
5 there was a purchase of a Louisiana system and they
6 want to include those ERCs but they won't go the
7 other way and give it the same treatment when the
8 utility divests a system.

9 And essentially utility rate making is a
10 prospective venture. Rates are set to recover the
11 cost of prudent investments. Project Phoenix has
12 been approved as a prudent investment in a number
13 of rate cases previously and it should be put --
14 the recovery should be based on the ERC count as
15 audit staff recommended. And the amounts
16 previously allocated to Wedgefield Miles -- and
17 Miles Grant shouldn't be arbitrarily removed.

18 Thank you.

19 **CHAIRMAN ARGENZIANO:** Thank you.

20 Mr. Friedman?

21 **MR. FRIEDMAN:** Thank you. Yes, Commissioners.
22 You know, in summary, one of the mantras that you
23 all have probably heard me say many, many times
24 before is just to have a balance. If it's going to
25 go one way, it's got to go the other way. It's got

1 to be fair to both. So as Christian pointed out,
2 the problem is that the staff looks at it from the
3 way that reduces the rates but wouldn't look at it
4 in the opposite and equal way if that same
5 principle increased the rates. And it's clearly
6 inappropriate to take the gain on sale on any
7 system and allocate it to the benefit of the
8 customers of Pennbrooke. They -- it's just -- it's
9 just wrong. And I think it's legally incorrect
10 also.

11 And so we would suggest that that -- on Issue
12 No. 4, that the Project Phoenix cost be reallocated
13 consistent with their position we've made.

14 The second issue I want to address is Issue
15 13, and I briefly touched on that a minute ago in
16 my other argument, and that's dealing with the
17 salaries. The staff has made substantial
18 adjustments to the salary. Instead of using the
19 actual salaries, the staff has recommended making
20 up the salary based upon an amount taking the
21 amount of the salaries in the last rate case and
22 just benchmarking it up to the current year,
23 similar to what Mr. Hunsberger said they ought
24 to -- that you ought to do with all of the
25 expenses.

1 And unfortunately that's not regulatory
2 principles and not very good regulatory policy. If
3 you were going with the benchmarking of every
4 expense and every salary, then you wouldn't need --
5 you wouldn't need rate cases.

6 Now, the staff's position is wrong on this
7 denial of salaries for a couple of reasons. First,
8 the staff says that Pennbrooke has not demonstrated
9 any benefit to personnel that had been added since
10 the last rate case, and they point out four or five
11 persons who had been added. These additions
12 include the regional VP, business manager and a
13 cross connection specialist.

14 Interestingly, these personnel have been
15 approved by this Commission in the '08 rate cases.
16 And so it's hard to fathom why the staff had
17 recommended in those rate cases that these
18 employees were necessary and reasonable and then
19 turn around in this rate case and say, oh, we
20 didn't say why they were necessary and reasonable.

21 And incidentally, in response to staff's third
22 data request, the company provided a substantial
23 filing discussing this issue and including the --
24 and including the discussion of the job functions
25 of the new employees. But apparently the staff

1 didn't take any of this into consideration.

2 And I want -- I wish you -- I wish I could go
3 through and read all of this because you could see
4 how much detail there really is and why these
5 people -- why these people are necessary, but I
6 don't want to spend an hour reading that and would
7 ask that you -- that you take that into
8 consideration.

9 You know, particularly you look at this
10 cross-section control specialist. And I know you
11 all get the clipping services like I do. And the
12 cross-connection and backflow prevention issue is
13 one that is in the forefront. DEP has, in the last
14 couple of years has begun strictly enforcing their
15 backflow prevention and cross-connection control
16 making sure that the utilities force the customers
17 to test their backflow prevention devices on an
18 annual basis as DEP requires. And as a result of
19 that, the company has added a specialist in
20 cross-connection control to make sure that its
21 Florida subsidiaries are always in compliance with
22 those requirements.

23 That's one of the employees that the staff has
24 said isn't necessary or that we haven't justified
25 that person's existence.

1 Second, the staff says that Pennbrooke failed
2 to provide the staff with adjustments to salaries
3 and wages as a result of cost savings from the
4 consolidation of its call centers. It consolidated
5 its call centers, and there is a savings to that.

6 Well, that statement is just wrong. If you
7 look at the staff -- at the response to the staff's
8 third data request, it includes exactly that. It
9 includes an allocation showing that there was a
10 cost savings and it does include that cost savings
11 in the revised MFR schedules as to the employees.
12 So I don't know why the staff couldn't find that
13 information that was in the data request or the
14 response to the data request.

15 And finally, the staff uses the easy out
16 response to -- excuse me -- by saying that it's a
17 burden on the utility to prove and to justify its
18 salaries and the company hasn't justified its
19 salaries. That's always the easy answer to -- when
20 they don't think that they want to do what the
21 company wants to do, that's the easy out. You
22 haven't shown us where you can.

23 The staff in doing so has ignored the -- has
24 ignored the response to the third data request that
25 clearly sets forth the reasons for these new

1 employees and why those salaries have increased
2 more so than the cost of living.

3 As I mentioned, it's interesting that these
4 salary, salary personnel that we've added are the
5 same that the staff recommended be approved in
6 prior rate cases, like the 2008 rate cases. And,
7 in fact, which this Commission has found are just
8 and reasonable in the 2008 rate case. And so it's
9 inexplicable to me how they could have said they
10 were reasonable to have in those -- for those
11 utilities and you had all agreed and then to say in
12 this rate case no, they're not. And there's no
13 explanation for why they made that 180-degree turn,
14 and I think it's -- it is an inappropriate
15 adjustment to make.

16 Our next issue would be Issue 22 which is rate
17 structure, and John Williams is going to address
18 that issue.

19 **MR. WILLIAMS:** Good afternoon. Our concern is
20 basically with the level of the water-based
21 facility charge. The -- our primary concern is the
22 staff's efforts to prevent conservation through
23 price signals and the fact that they're basically
24 abandoning the recognition of cost causation that
25 results in revenue instability for the company.

1 From a historic perspective going back many,
2 many years, traditionally the Commission sets a
3 base facility charged and then a gallonage charge
4 for water service.

5 The base charge is an attempt to cover the
6 fixed cost of the utility, and then the variable
7 costs are generally to come from the gallonage
8 charge.

9 In Pennbrooke -- could you pass around the
10 schedules -- there is -- we're going to pass out a
11 revenue allocation schedule which is prepared by
12 the staff in every case, which basically attempts
13 to -- to allocate the revenue requirement between
14 the fixed and variable expenses.

15 This shows that in Pennbrooke on the water
16 side, and again I'm only talking on water, about
17 45.88 percent of the costs are relatively fixed.
18 And under a traditional rate structure would be
19 recovered through the base charge.

20 In Pennbrooke the staff is overtly only
21 allowing a 20 percent recovery in the base charge
22 or fixed charge and they're doing that deliberately
23 to enhance the gallonage charge to encourage
24 conservation.

25 And again primarily, you know, we are all for

1 conservation, but you have to recognize that when
2 you only allow a recovery of approximately
3 20 percent of the revenue requirement in the base
4 charge, that does put the utility at very much a
5 risk of not even recovering the fixed cost of doing
6 business.

7 As I said, about 45.88 percent of the costs
8 are relatively fixed and the staff is only allowing
9 a 20 percent recovery of that in the base facility
10 charge. The company -- and typically the PSC
11 memorandum of understanding for the water
12 management districts encourages conservation, and
13 typically 40 percent has been the number targeted
14 to go into fixed expenses.

15 And again the staff in this case is
16 recommending 20 percent to encourage conservation.
17 The company believes it ought to be maybe not quite
18 at 40 but it ought to be at least up to 35 percent
19 to be recovered in the fixed charge. Again it's a
20 matter of balancing, encouraging conservation
21 versus revenue stability for the company. And
22 again this relates only to the water rates where
23 the rates designed for wastewater are acceptable to
24 the company.

25 **CHAIRPERSON ARGENZIANO:** Commissioner Skop?

1 **COMMISSIONER SKOP:** Thank you, Madam Chairman.
2 At the appropriate time, again I had that same
3 concern looking at the Cypress Lakes had used a
4 recommendation of 30 percent BCF and 20 in this.
5 So I'd look to staff at the appropriate time to
6 gain a little bit more insight into why those
7 things were done as opposed to not being consistent
8 not only between the properties, but also perhaps
9 consistent with what the Commission has done in
10 other recent water cases. Thank you.

11 **CHAIRPERSON ARGENZIANO:** Well do you want to
12 ask the question now?

13 **COMMISSIONER SKOP:** If staff can briefly
14 explain.

15 **MR. FLETCHER:** Is that with the rate case
16 expense, Commissioner?

17 **COMMISSIONER SKOP:** No, that was with the --
18 determining the percentage to assign cost to the
19 base facility charge, or BCF.

20 **MR. STALLCUP:** Commissioner, I'm Paul Stallcup
21 with Commission staff. Two factors would end to
22 setting the BFC at 20 percent as opposed to 40 or
23 even 35 like Mr. Williams was suggesting.

24 First of all, the system has a very high level
25 of discretionary usage. I can't remember the

1 number right off the top of my head but I think
2 it's around 18,000. Let's see --

3 **COMMISSIONER SKOP:** Just as a follow-up, too,
4 I saw in the amended oral modification on Issue 22
5 that staff has provided some alternatives that
6 tweak the base facility charge and the staff could
7 speak to those. I think it's on pages 2 and 3 of
8 the staff handout, the oral modification. That
9 might be helpful. Thank you.

10 **MR. STALLCUP:** Okay. The utility's customer
11 base has a fairly high level of usage of around
12 8,000 K gallons per month. So there is some
13 discretionary usage there that from a water
14 conservation point of view you would want to
15 address.

16 The other thing that we take a look at when
17 we're setting the BFC allocation is whether or not
18 the customer base is seasonal. For this particular
19 utility, about 80 percent of the customers are
20 there year-round according to the bill and analysis
21 that we looked at. What that means is that there's
22 a revenue stream that will go to the company year
23 round from the sale of water, not just from the BFC
24 charge.

25 So I would think differently than Mr. Williams

1 that there is a stable revenue stream such that the
2 financial integrity of the company is not in
3 jeopardy using the 20 percent.

4 **COMMISSIONER SKOP:** Okay. And just as a
5 follow-up to that on page 2 and 3 of the staff oral
6 modification on Issue 22, on table 22-1 for the
7 water rates recommended rate structure and rates
8 BCF of 20.22 percent versus the 20, and then
9 looking at the alternate one which is a 30 percent
10 BCF.

11 **MR. STALLCUP:** Yes.

12 **COMMISSIONER SKOP:** Okay. And let's just look
13 at the average household for a second, say 6,000
14 kilo gallons, something like that. I don't know
15 what the -- do you have an idea what the usage is?
16 You said highly discretionary.

17 **MR. STALLCUP:** It is a little over 8,000.
18 Between 8 and 9 thousand.

19 **COMMISSIONER SKOP:** Okay. Just for the sake
20 of discussion let's look at the 3 to 6 kilo
21 gallons as a basic requirement for a small house.
22 On the recommended rate structure, it's showing
23 dollar point -- \$1.95, I believe, for 3 to 6
24 thousand -- or actually, I'm sorry, the BCF. I'm
25 having trouble looking at this. It says BCF of

1 520 versus BCF of \$7.71 dollars, right?

2 **MR. STALLCUP:** Correct.

3 **COMMISSIONER SKOP:** And the gallonage charge
4 at 3 to 6 K gallons is \$1.95 under a 20 percent BCF
5 versus a lower amount of \$1.71 on 3 to 6 on the
6 alternate one; is that correct?

7 **MR. STALLCUP:** Yes.

8 **COMMISSIONER SKOP:** Okay. Thank you.

9 **CHAIRPERSON ARGENZIANO:** Were you finished?
10 Okay. Mr. Friedman.

11 **MR. FRIEDMAN:** Thank you. And Mr. Flynn is
12 here. Mr. Flynn will address our comments on Issue
13 24.

14 **MR. FLYNN:** Madam Commissioner, Issue 24
15 addresses the monthly rates for water, wastewater
16 and re-use systems for the utility. One of the
17 things that caught our eye was the fact that there
18 is an imputation that the rates for re-use
19 residential -- for re-use at all, revenues should
20 go up to 85 cents a thousand from the existing 90
21 cents per thousand.

22 I want to address that in a couple of
23 different ways. One is that Pennbrooke is an
24 isolated community. It's a snowbird community
25 primarily for plus 55 folks in a golf course

1 setting. It's isolated from many adjacent water
2 systems or sewer systems. It's all by its
3 lonesome.

4 The system is pretty much built out with about
5 1500 customers. The average daily flow generated
6 by the wastewater use is about 75,000 gallons per
7 day that's used by the golf course. Another
8 smaller amount is used or disposed of through our
9 percolation ponds on our plant site.

10 The golf course demand is such that they
11 actually use a heck of a lot more than 75,000
12 gallons per day to meet their irrigation
13 requirements. The golf course has a consumptive
14 use permanent allowing use of surface water as well
15 as an augmentation well because our wastewater
16 plant doesn't have the means to provide solely all
17 of its irrigation needs.

18 There's an agreement between the golf course
19 and the utility where the golf course is supposed
20 to use all re-use first if it's free, and there is
21 a separate golf -- separate re-use agreement with
22 the homeowners' association which was established
23 in case there was ever an opportunity for re-use to
24 be provided to the reuse -- to the residential
25 community. There never has been because there

1 simply isn't enough re-use available to meet
2 additional customer demand.

3 What we have is a situation where the golf
4 course takes all of the re-use that we can deliver
5 on a routine basis. If we were to see a jump in
6 rate from 9 cents per thousand to 85 cents per
7 thousand as staff recommends, that would be an
8 increase of about tenfold in what would be the golf
9 course impact.

10 The utility did not actually charge the golf
11 course for re-use to the extent that we were able
12 to provide it in order to make sure that we had the
13 means to dispose of our affluent adequately and not
14 be in conflict or in competition with the golf
15 course's other water sources.

16 If, in fact, the staff rec was to be approved
17 and an 85 cents per thousand rate was established,
18 the golf course would most likely take heed of the
19 fact that their expenses would go up about \$22,000
20 a year and would utilize their other resources in
21 place of re-use. And that in turn would impact the
22 utility by virtue of us having to use percolation
23 ponds to a greater degree. And, in fact, our
24 existing percolation pond capacity isn't sufficient
25 for it to be the sole disposal method.

1 So we would have to expand our disposal
2 capacity in some fashion. That's going to be a
3 cost incurred by the utility and certainly passed
4 on to the ratepayers in some future proceeding.

5 It's also important to remember that the golf
6 course users are primarily the utility's customers.
7 The golf course is plagued primarily by the folks
8 that live in the community. So shifting the cost
9 around in such a way that it doesn't net anything
10 materially beneficial doesn't seem like a good
11 policy decision.

12 And potentially it makes things worse by
13 having the utility forced to make investments in
14 additional percolation -- pond disposal capacity
15 unnecessarily both financially and environmentally.
16 Because we certainly want to maximize the use and
17 re-use in the community, and that would be the most
18 appropriate way to do that would be with the golf
19 course continuing to use re-use at no cost, or at
20 minimal cost.

21 So I would recommend that that be reconsidered
22 in the fact that the 85 cents per thousand rate was
23 arbitrarily determined. From what I can tell,
24 there was not any input from the golf course as to
25 what impact that would have on their operations.

1 The utility wasn't requested to provide any
2 information specifically about that either. And in
3 fact the previous docket Pennbroke, the issue of
4 re-use was established as 9 cents per thousand
5 being a nominal amount of about \$2,000 per year in
6 revenue that would be appropriate. To go from 9
7 cents per thousand to 85 cents per thousand seems
8 to be inappropriate and not -- and without
9 foundation. That's all I have, if you have any
10 questions.

11 **CHAIRMAN ARGENZIANO:** Commissioners, any
12 questions?

13 Mr. Friedman?

14 **MR. FRIEDMAN:** Yeah. That's all the comments
15 that the company has at this time. We would like
16 to make comments based upon whatever issues maybe
17 staff or somebody else addresses as appropriate.
18 Thank you.

19 **CHAIRPERSON ARGENZIANO:** Mr. Beck?

20 **MR. BECK:** Yes. Thank you, Madam Chairman.
21 Patricia Merchant will start off for us, please.

22 **MS. MERCHANT:** Good afternoon. We have
23 several comments about the utility's comments and
24 then we have -- I just want to mention briefly some
25 of the issues that we're not making more detailed

1 comments on that we do have issues with. But since
2 we are going to agree with the staff's
3 recommendation, we're just not going to focus on
4 them as much.

5 But the first regarding Phoenix is the
6 affiliate allocations. There was an audit finding
7 on this. First on the amortization period, they
8 were correct that they brought this issue to the
9 Commission in 2007 and at that time Mr. Williams
10 came before the Commission and told the Commission
11 that everybody in all of the companies in the whole
12 United States, all of their systems, Utilities Inc.
13 systems were using six years so we shouldn't
14 deviate. That was the first thing that we said.

15 The next thing that comes up is later we find
16 out that the company as a whole is using eight
17 years. And then as mentioned in staff's
18 recommendation, in the Nevada case, which is a
19 pretty big system that they have, Utilities Inc.
20 agreed to a ten-year amortization in that case.

21 So also, Generally Accepted Accounting
22 Principles tell you to amortize plant over the
23 useful life of an asset. And hopefully something
24 that costs \$21 million is not going to be amortized
25 over a short time and hopefully it will be useful

1 for quite some time. So we think at a minimum, 10
2 years is reasonable so we want to support staff in
3 their recommendation on that.

4 Also regarding Phoenix and the adjustment that
5 staff made, we certainly agree with the allocation
6 assignment to nonutility below the line for the
7 divestiture of the subsidiaries. There are other
8 things that -- you know, all the other affiliate
9 costs other than Phoenix have not been adjusted.
10 So there are a whole lot of affiliate common costs
11 that have not been shared below the line, that have
12 not been addressed by staff. So it's just Phoenix
13 that's been adjusted here.

14 While we agree with that, we could take that
15 further and say that there were, you know,
16 buildings or other miscellaneous expenses and
17 things like that should have also been shared below
18 the line.

19 In the audit finding where the auditors
20 mention the affiliate allocations for Phoenix, they
21 also mentioned that Utilities Inc. depreciate other
22 computer equipment, some at three years and some at
23 four years which is in violation of the
24 Commission's rule on computers. And staff does not
25 address that but that's something that should be

1 looked at because those are violations of the rule.
2 And to get a change in depreciation rate, you have
3 to come in and specifically address that before the
4 Commission and not just change it on your own.

5 Let's see. Regarding the salaries, the
6 salaries, as we mentioned earlier, the salaries
7 have gone down dramatically in 2009. And that's
8 across the board. That's not just Pennbrooke, it's
9 in Cypress Lakes, it's in all the systems that are
10 here before you today.

11 So we certainly agree with staff's
12 recommendation. One other adjustment that we
13 believe could be made to staff's analysis is that
14 they used a 17 percent increase in the CPI. And
15 it's more like 10 percent for the time frame. I
16 believe staff used the number that the company put
17 in their filing and we could not replicate that
18 number and we went to the government, United States
19 government source for our CPIU. So it's about
20 10 percent. So not only do we support staff, but
21 it could be a lower number if you applied the
22 current increase in the CPIU.

23 Some other issues that we have not looked at
24 or that the company hadn't addressed but we would
25 like to address are the rate of return on equity.

1 The current leverage formula which is on this
2 agenda is based on current cost. And as we all
3 know, the current costs of equity have gone down
4 dramatically. And the old leverage formula
5 generates a rate of return of 11.13 percent. The
6 new formula, if you apply it to Pennbrooke, would
7 be about 10.84 percent. And we think that that is
8 reflective of costs on a going-forward basis and
9 that that could certainly be used in this case as
10 well.

11 The cost of short-term debt in the company's
12 filing in 2008 was a lot higher than it is in
13 2009 -- or was in 2009. In 2009 their annual
14 report says it went to 3.75 percent, and the filing
15 the MFR filing for 2008 is 5.25 percent.

16 Transportation expenses have gone down. Rate
17 case expense. Rate case expense, we have a lot of
18 affiliate -- Water Services Corporation, that's
19 their affiliate service company. A lot of invoices
20 for employees for WSC that have been allocated a
21 rate case expense, we believe -- Office of Public
22 Counsel believes that there's been no justification
23 and showing that that requested rate case expense
24 does not duplicate what was already included in the
25 salaries. The company has gone through and

1 annualized all of their salaries for all of their
2 folks that do work for Utilities Inc., Pennbrooke
3 in this case, and they have just not shown that
4 adding in those salary charges for rate case
5 expense is not a duplicate charge. It's also an
6 adjustment that other states have made that explain
7 that Utilities Inc. has not justified their use of
8 employee time for rate case expense and they've
9 disallowed that. They've given them the salaries,
10 but not allowed them to duplicate that in rate case
11 expense.

12 And one final point I want to make is
13 something that Mr. Auger mentioned earlier about --
14 and certainly Mr. Hunsberger too. It's a
15 continuing problem that we've seen. This has been
16 a problem since -- in the mid '90s. And when I was
17 on staff we had this problem that Utilities, Inc.
18 would not adjust their books and records for
19 Commission orders. We had case after case after
20 case after case. It was just going on and on and
21 on.

22 Finally, I think it was in 2004, Commission
23 staff and Utilities Inc. agreed -- there were a lot
24 of show cause orders, and any time there was a show
25 cause order, the company would come in say, no,

1 we're going to fix it, we're going to fix it, we're
2 going to fix it, and they just continually did not
3 fix it.

4 And in 2004 we all got together, and this is
5 just staff and the utility I believe at that time,
6 and the company agreed to about a 3-page letter of
7 things that they would do on a going forward
8 basis to avoid a show cause penalty. And one of
9 those things is that they were -- one of the
10 primary things is that they would adjust their
11 books to reflect Commission-ordered adjustments in
12 their general leverage. And there's actually an
13 issue in every single case that says you have 90
14 days to show us that you've made these adjustments.

15 Well, the company historically, and they
16 continue to this day, to not make those adjustments
17 and it creates a tremendous burden on the staff and
18 the auditors and the audit staff having to figure
19 out what's the right rate base to start with.

20 And, you know, now they've got this very
21 expensive computer program. I mean, we would think
22 if those costs are appropriately allocated to the
23 customers, that that money spent on that system
24 should have fixed these problems. And here we are
25 again. It's not an issue in this case, but here we

1 are again today with -- if you look at their
2 adjustments to the rate base, they have a lot of
3 adjustments going in and out. And if you look at
4 the audit work papers, you can see how much time
5 the auditors spent reconciling these numbers.

6 And we just really believe that they have not
7 gotten the message, that they have to -- their
8 annual report has to match their books and their
9 minimal filing requirements. And it's all clean
10 and good when they file a rate case. It's easy to
11 start from that point forward and go -- and look at
12 the real issues in the rate case. And that's all I
13 have right now.

14 **CHAIRMAN ARGENZIANO:** Mr. Beck?

15 **MR. BECK:** Ever so briefly, Madam Chairman.
16 The staff recommendation contains a substantial
17 rate increase that the customers in our office have
18 essentially agreed to. It's over 16 percent for
19 both water and waste water, an increase in revenue
20 requirement.

21 We don't come to the conclusion to accept that
22 lightly. That's a big increase. And we have -- on
23 top of that we have a lot of issues that we would
24 love to litigate and are ready to litigate. But we
25 think over -- you know, litigation is expensive and

1 customers wind up having to pay litigation
2 expenses. And when we weigh that, I think that
3 weighed heavily into the decision to accept this
4 rate increase.

5 So again we urge you to vote out the staff rec
6 as is and, you know, we will live with it because
7 overall the customers can feel that it's a
8 reasonable result. Thank you.

9 **CHAIRPERSON ARGENZIANO:** Any questions?

10 Commissioner Skop?

11 **COMMISSIONER SKOP:** Thank you, Madam Chairman.

12 I had a question for Public Counsel I believe in
13 some of the concerns that Public Counsel would like
14 to see addressed, and correct me if I'm wrong.

15 One of the most important ones would be to
16 avail one's self of the lower cost of capital in
17 the 2010 leverage formula. Is that generally
18 correct or is there more to it than that?

19 **MR. BERMAN:** Yes.

20 **COMMISSIONER SKOP:** All right. Thank you.

21 **CHAIRMAN ARGENZIANO:** Commissioner Edgar?

22 **COMMISSIONER EDGAR:** Thank you. Could I ask
23 our staff to speak to the issue that was raised
24 regarding Issue 4 and the Phoenix Project or update
25 as to the six-year time period being what's

1 required under the rule versus the ten-year that's
2 staff's recommendation and whether that is in
3 keeping with the rule that we have.

4 **MR. FLETCHER:** Yes, Commissioner. In Rule
5 25-30.140, it does have a guideline rate for
6 computers of six years. And again the title of the
7 depreciation rule is an average, or based on
8 guideline, average depreciation rates. Some go
9 more, some go less.

10 And at the time, it was mentioned earlier, in
11 the '07, that was correctly stated We were iteming
12 6 pursuant to that rule. Given that the company
13 had used eight year service life in some of its
14 other subsidiaries at that time the auditors made
15 that a finding and recommended a year at utility
16 accepted that in the four 2008 rate case and
17 subsequent to that, as mentioned in the staff's
18 recommendation, on page 14, we have the other
19 reasons that we believe that it should be going to
20 ten now.

21 And another is as -- one of them is what
22 Patricia Merchant from opposite mentioned, is that
23 in the Nevada case, a recent case of the sister
24 companies, a huge system out there that they
25 wrapped up a rate case where the company had used

1 ten years. And in their response to the Nevada
2 commission, they stated -- Utilities Inc. stated
3 that fixed asset for software can be anywhere
4 between 4 and 10.

5 And we believe due to the magnitude of the
6 investment being that it's \$21.6 million
7 approximately, a little bit more than that, and
8 also because it's a tailor-made system. It's not
9 like a little small Windows package or a QuickBooks
10 where they get updated every -- you want to update
11 and go to the newer version probably every four,
12 maybe five years. This is a tailor-made for
13 Utilities Inc. financial and customer Oracle care
14 system that they have developed. And we believe
15 that it's going to be at least ten years before
16 they'd have to replace it again.

17 **COMMISSIONER EDGAR:** Follow-up briefly. So is
18 it the position of our staff that the
19 recommendation for the ten-year amortization is --
20 is in keeping with our rule?

21 **MR. FLETCHER:** I believe because the rule is a
22 guideline, depreciation rate and you have average,
23 that's an average service life, that lots of stuff
24 goes in that computer. And I believe that, you
25 know, six years, it may have been more for the

1 hardware type whenever the rule was initially
2 developed, actually the computer hardware system,
3 not as you see today the more software. And that's
4 the reason why --

5 **COMMISSIONER EDGAR:** Are you saying that our
6 rule is out of date?

7 **MR. FLETCHER:** I'm saying that it's a
8 guideline and it doesn't encompass everything.
9 Like every fixed asset that you can think of at the
10 time. And that's the reason why it is entitled the
11 guideline and you averages. Some go beyond the six
12 years, some go less.

13 **COMMISSIONER EDGAR:** Could I just ask the
14 company to respond to that -- that narrow point
15 briefly?

16 **MR. FRIEDMAN:** Well, first of all, yeah, I
17 will. And I will point out that the company did
18 not propose ten years in Nevada. They proposed
19 eight years in Nevada and the Nevada Commission
20 imposed ten years on them because that's what they
21 had done in an electric power case.

22 So just to clear up that, the company didn't
23 come in there saying, yeah, we'll accept ten. The
24 eight years as we have consistently said since the
25 beginning has been the in-house amortization

1 period.

2 **COMMISSIONER EDGAR:** Okay. And to the
3 point -- I thought I heard you say, and if I'm
4 misstating, I apologize and correct me, of course.
5 But I thought earlier, Mr. Friedman, I heard you
6 say that the ten years is contrary to our rule.

7 **MR. FRIEDMAN:** Your rule says 6 percent -- I
8 mean six years. Six years is what we argued, you
9 know, back in '08, I guess, when we argued this.

10 **COMMISSIONER EDGAR:** So is it your position
11 that the result of applying the rule is more
12 specific than as a guideline?

13 **MR. FRIEDMAN:** Well, I guess any -- any
14 guideline can be changed. And we all -- you all
15 went to eight years because that's what the company
16 did internally. And I guess because that's what
17 the auditor said to go to. And it just seems like
18 it's creeping up every -- every -- every year we do
19 a rate case it's creeping up. It's ten years.
20 Next time we do one it will be 12 years. And I
21 think it needs to be based on some reasonable
22 assumption.

23 Just because it's not an off-the-shelf package
24 doesn't mean that it doesn't continue to need
25 ongoing work as you move from year to year because

1 those type of systems also need updating.

2 **COMMISSIONER EDGAR:** Thank you.

3 **MR. FLYNN:** Commissioners, if I may. I just
4 wanted to point out the other basis that's
5 explained on page 14, is that their last legacy
6 system, software package, that was in service for
7 21 years. So this is less than half of what the
8 former system was in service.

9 **CHAIRPERSON ARGENZIANO:** Mr. Beck?

10 **MR. BECK:** Thank you. Briefly.

11 **MS. MERCHANT:** Commissioners, there is a
12 provision in that depreciation rule that allows the
13 Commission to deviate from the guideline rates.
14 They have to have a showing, they have to have
15 evidence to deviate from that. So it's not in --
16 where all the rates are listed. It's behind that.
17 But it does provide for upon reasonable showing of
18 evidence that you can change that rate. Any rate
19 actually. But, you know, it just gives you the
20 methodology the Commission can use to analyze that.

21 **CHAIRMAN ARGENZIANO:** I suggest we might want
22 to take a look at the rule again, if it needs
23 revisions or not. Commissioner Skop?

24 **COMMISSIONER SKOP:** Thank you, Madam Chair.
25 Just a question directed to our general counsel.

1 With respect to using the -- or setting the return
2 on equity and the cost of capital in this case,
3 today marks another instance where we are resetting
4 the leverage formula in conjunction with deciding
5 the appropriate return on equity and cost of
6 capital for various water cases and wastewater
7 cases before us.

8 What is the Commission precedent? It's
9 important to me that we move consistently on this
10 with what has been done in the past.

11 **MS. HELTON:** My understanding is that the
12 Commission precedent is that we have used the
13 leverage formula that is in effect and final at the
14 time of your vote, with one exception, and that was
15 for Laboratory Utilities, I can't remember exactly
16 when that was, but in that case, the difference
17 between what the current final leverage formula was
18 and what you had voted out.

19 I think that day or around that time period
20 but was not yet final, was 100 -- greater than 100
21 basis points. So there was a substantial
22 difference to the utility and to the customers for
23 what -- in that instance, it's my understanding
24 that today the utilities in cases that you're
25 looking at, there is that great deviation. It's --

1 it's -- it's not there.

2 **COMMISSIONER SKOP:** Don't want to rely on my
3 memory. I seem to recall perhaps one or two cases
4 where this came up at the same time last year, and
5 the Commission again recognized that the cost of
6 equity and the weighted average cost of capital had
7 either dropped off or increased substantially on a
8 year-to-year basis.

9 What is -- to staff, what is the difference if
10 we were to apply the 2010 leverage formula, please,
11 for both the return on equity and the weighted
12 average cost of capital.

13 **MR. FLETCHER:** Yes, Commissioner. If the
14 Commission were to apply the 2010 recommended
15 leverage formula, it would result in a 48 basis
16 points reduction in staff's recommended return on
17 equity and a subsequent 20 base point reduction in
18 the overall rate of return. This would result in a
19 reduction of \$2,713 for the water revenue
20 requirement and a \$3,000,793 reduction in the
21 wastewater revenue requirement.

22 **COMMISSIONER SKOP:** Okay. And just,
23 Madam Chair, as a follow-up to Public Counsel,
24 Mr. Beck in light of what may have done -- been
25 done previously, do you think that regulatory

1 certainty is an important consideration that needs
2 to be addressed, notwithstanding the fact of making
3 sure that we're consistent with what we do?

4 In this case, can you cite any precedence
5 supporting your argument as to why the 2010
6 leverage formula should be adopted that supports
7 your position? I think there were specific terms
8 why the Commission may have departed in the past
9 but I'm looking to get a better handle of that on
10 the fly.

11 **MR. BECK:** I don't have any cases here in
12 front of me, Commissioner. I mean, you're in a bit
13 of an incongruous position. If you vote out the
14 PAA in this case, you're voting out one rate of
15 return as being appropriate for rate setting
16 purposes for future rates, and then when you get to
17 Item 13, the number is going to be different.

18 So, I mean, I realize Item 13 could be
19 protested and may not be the final order. And I
20 understand the staff's logic for not applying it.
21 But it does seem that since this is a PAA as well,
22 it would be appropriate to do the same thing you're
23 going to do on Item 13.

24 Again, though, we have -- the bottom line is
25 we've accepted the staff recommendation in total as

1 an end result. But if we were to protest this
2 case, I think that would be a gimme issue
3 because -- because we would then be in a place
4 where your new leverage graph is in effect. So
5 this -- this would be a real easy one for us if we
6 litigated it.

7 **COMMISSIONER SKOP:** I understand. And I want
8 to be fair to Public Counsel but equally fair to
9 the company. And I think that's the struggle that
10 I've had at least two years in a row now, is to
11 when we get to setting the leverage formula, not
12 surprisingly there's multiple rate cases for water
13 and wastewater companies that are either positively
14 impacted or adversely impacted on that given day.

15 So you'd think you'd put the horse before the
16 cart. But unfortunately that's one of these
17 questions that always comes up when we have the
18 same -- same items on the same docket. So thank
19 you, Madam Chair.

20 **CHAIRPERSON ARGENZIANO:** Any other questions?
21 Do we have a motion?

22 **COMMISSIONER SKOP:** Madam Chairman, I don't
23 know if the preference of the Commission would be
24 to move the staff recommendation as a whole or if
25 there's specific issues that Commissioners have

1 concerns on.

2 **CHAIRPERSON ARGENZIANO:** Commissioner Edgar?

3 **COMMISSIONER EDGAR:** I'm comfortable moving
4 forward with the item in its entirety at this time.

5 **COMMISSIONER SKOP:** Okay. Madam Chair, any
6 concerns?

7 **CHAIRPERSON ARGENZIANO:** Fine.

8 **COMMISSIONER SKOP:** All right. With that,
9 Madam Chair, with respect to the disposition of
10 Item 8 before the Commission, I would move to
11 approve the staff recommendations for issues 1
12 through 30 incorporating the corrections contained
13 within the oral modifications to Issues 20, 21, 22,
14 23, 24 and 27.

15 **COMMISSIONER EDGAR:** Second.

16 **CHAIRPERSON ARGENZIANO:** Okay. All those in
17 favor say aye.

18 (Unanimous.)

19 **CHAIRMAN ARGENZIANO:** Opposed? Okay. It's
20 adopted. Thank you very much.

21 (Discussion concluded.)
