Phase II Monitoring

Overview of June 2010 Monitoring Reports

June 2010

Aqua Utilities Florida, Inc.

Overview of June 2010 Monitoring Reports

AUF's Phase II monitoring reports for the month of June 2010 reflect good quality of service. The following addresses data reported in the Aged Service Orders and the Management Quality Performance Reports, which indicate a slight increase in customer complaints and in service orders that remain open past 7 days. It is important to note that AUF's internal goal is to close out all service orders within 7 days if possible; however, this is not always possible. It is also important to note that AUF's monitoring system may indicate that certain service order requests remaining open when, in fact, those service orders have been closed. Indeed, in June there were several instances where service orders were intentionally left open to ensure that the appropriate follow-up occurred. In those cases, although the orders were actually cancelled, AUF's system still tracked those items as open in order to confirm that all follow up work had been performed. With that background information, AUF offers the following specific information for the Aged Service Orders and the Management Quality Performance Reports for June 2010:

- In the Interlachen system there was a slight increase in the service order requests for "Other Water Quality." This was primarily caused by a planned outage due to the replacement of a hydropneumatic tank in the system.
- In the Lake Gibson Estates system there was a slight elevation in "no water" service orders. This was primarily due to repairs being made to the system in June.
- In the Valencia Terrace system there was an increase in the amount of "no water" service orders due to a break which occurred on June 11, 2010. The main break was contained through isolation valves. The initial main break caused 10 customers to be without water. However, during the repair process, it became necessary to move to another isolation valve to make the repairs. This caused a total of 60 customers to be affected. Each of the affected customers received a Boil Water Notice. The repairs were completed that evening and service was restored.
- For the Summerfield / Fairfax Hills subdivision located in our Ocala Oaks system, there was a slight increase in the number of "no water" service orders, which was primarily caused by a planned outage due to the replacement of a hydropneumatic tank in the system.
- In the Orange Hill system there was an increase in the "no water" service orders caused by a main break which occurred on June 1, 2010 and June 6, 2010.
- In the Sunny Hills system, there was an increase of "color lab" service orders due to a line break that stirred things up and caused a number of color complaints. These were resolved by flushing the lines.
