Adam J. Teitzman Commission Clerk Florida Public Service Commission 2540 Shumard Oak Boulevard Tallahassee, FL 32399-0850

Re: Docket No. 20240033-EU - Joint Petition for Approval of Territorial Agreement between Sumter Electric Cooperative, Inc. and the City of Ocala, d/b/a Ocala Electric Utility.

Dear Mr. Teitzman:

Sumter Electric Cooperative, Inc. ("SECO") and the City of Ocala, d/b/a Ocala Electric Utility ("OEU") hereby jointly respond to Staff's Second Data Requests dated April 9, 2024 ("2nd Data Requests"). For ease of reference, the 2nd Data Requests are repeated verbatim herein, with the response immediately following.

- 1. Please refer to the Petitioners' response provided to Staff's Data Request 1, No. 1(e), which references "minor re-draws" to the territorial boundary lines.
  - a. Is it correct that the proposed "re-draws" discussed in the Petitioners' response do not involve the transfer of current customers for either utility? Please explain.

Response: That is correct. The "minor re-draws" of the Petitioners' territorial boundary line do not involve the transfer of actual existing customers. In negotiating their territorial agreement, the Petitioners agreed to make minor modifications to their existing boundary line only where it was equitable to do so, and only in those limited areas where: (i) where one utility had facilities and the other did not and had no intention of building out, and it was more efficient for the current utility to continue serving those accounts rather than duplicating facilities and transferring the accounts back to the other utility; or (ii) a re-draw was needed to keep the territorial boundary line from "splitting" a development parcel. In contrast, the transfers of customers contemplated under the Agreement preserves the existing territorial boundary line and are simply designed to clean up encroachments

where one utility has inadvertently served customers in another utility's service area where the other utility has facilities. See Joint Petitioners' Response to Staff's First Data Requests 1.c. & 1.d.

b. Is it correct that the "re-draws" referenced in the response are to intended address geographic areas that in some instances have serving facilities, while in other instances, there is lack of serving facilities? Please explain.

Response: Not exactly. As explained above, the parties agreed to make minor modifications to their existing boundary line only for those areas where (i) one utility had facilities and the other didn't and it was more efficient for the current utility to continue serving those accounts rather than duplicating facilities and transferring the accounts back to the other utility, or (ii) a redraw was needed to keep the territorial boundary line from "splitting" a development parcel.

c. Is it correct that the "re-draws" will adjust boundaries to greatly reduce or eliminate spitting parcels? Please explain.

**Response:** Yes. See prior response to Requests 1.a. & 1.b.

d. Please discuss why SECO and Ocala did not "redraw" the boundaries for the 52 and 17 customers that are proposed to be transferred between the utilities in each direction, thereby negating customer transfers?

Response: As a general ground-rule for their service territory negotiations, the parties sought to avoid the confusion associated with making wholesale changes to their existing territorial boundary line which the Commission previously approved. Instead, the parties agreed to make minor modifications to their existing boundary only where specific conditions were met. First, the parties had to agree that the swap of previously established service territory was equitable. Second, the parties agreed to swap only those areas where (i) one utility had facilities and the other did not and it was more efficient for the current utility to continue serving those accounts rather than duplicating facilities and transferring the accounts back to the other utility, or (ii) a redraw was needed to keep the territorial boundary line from "splitting" a development parcel. The areas where the customers are proposed to be transferred did not meet those conditions, thus they were not part of the service area swap. For those service areas that were not swapped, the parties were unable to agree on an equitable method to calculate future load (growth) value of other undeveloped parcels that could have been swapped to make the other utility whole for relinquishing parts of its previously established service territory.

e. As a result of the proposed "re-draws," how many customers located in Ocala's territory, but currently inadvertently served by SECO, are proposed to remain SECO customers via a boundary change? (If known, to what class of service do these customers subscribe?)

#### Response: 51. See Attachment No. 1.

f. As a result of the proposed "re-draws," how many customers located in SECO's territory, but currently inadvertently served by Ocala, are proposed to remain Ocala customers via a boundary change? (If known, to what class of service do these customers subscribe?)

#### Response: 34. See Attachment No. 2.

g. Is it correct that the deployment of modern mapping tools (such as GIS and/or web-mapping) have significantly reduced the number of inadvertent service connections beginning in 2008 and are expected to continue to do so in the future?

#### Response: Yes, that is correct.

2. At this point in time, have the joint petitioners developed construction cost estimates or detailed engineering plans to execute the proposed customer transfers?

### Response: Not at this time.

3. If the Commission approves the petition, please describe the expected sequencing and timeframe for executing the proposed customer transfers.

<u>Response:</u> Once the Commission approves the joint petition, SECO and OEU have agreed to work together to plan and schedule the customer transfers, which are to be completed over the 36-month period as described in the Agreement.

- 4. Please refer to the Petition, Attachment 1 (Territorial Agreement), Composite Exhibit A, including a series of maps (identified as Mapbook 1 through Mapbook 17).
  - a. For the maps that collectively include the majority of the proposed 52 customer transfers from SECO to Ocala, please provide scaled diagrams showing the geophysical location of Ocala's existing and proposed electric grid assets (secondaries, primaries, transformers, etc.) required to serve the customers' points of delivery. Existing and proposed assets should be separately identified. Please include the approximate distances between the customer locations and the current location of Ocala grid facilities needed to serve these 52 customers. Provide any additional information necessary to understand the relative approximate impacts to construction

costs, overhead/underground conversions, adequacy of the facilities to accommodate load growth, and reliability that justify the replacement of SECO facilities with Ocala facilities to these customers. If facilities between the point of delivery and the customer meter require replacement, please include related replacement information as available (e.g., approximate length of service drops, cost impacts, etc.). Please provide a verbal description of symbols used in the diagrams, if applicable.

### **Response:** See Composite Attachment 3.

b. For the maps that collectively include the majority of the proposed 17 customer transfers from Ocala to SECO, please provide scaled diagrams showing the geophysical location of SECO's existing and proposed electric grid assets (secondaries, primaries, transformers, etc.) required to serve the customers' points of delivery. Existing and proposed assets should be separately identified. Please include the approximate distances between the customer locations (point of delivery) and the current location of SECO's grid facilities needed to serve these 17 customers. Provide any additional information necessary to understand the relative approximate impacts to construction costs, overhead/underground conversions, adequacy of the facilities to accommodate load growth, and reliability that justify the replacement of Ocala facilities with SECO facilities to these customers. If facilities between the point of delivery and the customer meter require replacement, please include related replacement information as available (e.g., approximate length of service drops, cost impacts, etc.). Please provide verbal descriptions of symbols used in the diagrams, if applicable.

### **Response:** See Composite Attachment 4.

5. If the customers proposed to be transferred from SECO to Ocala will incur any additional charges associated with the transfer not otherwise identified in the petition's sample letters, please identify the expected amount and description of all such charges.

<u>Response:</u> OEU will not impose additional charges on those customers being transferred, provided the customer does not request any unnecessary relocation of existing secondary or service facilities, that would substantially increase the interconnection costs to OEU.

6. If the customers proposed to be transferred from Ocala to SECO will incur any additional charges associated with the transfer not otherwise identified in the petition's sample letters, please identify the expected amount and description of all such charges.

**Response:** SECO will not impose additional charges on those customers that will be transferred.

Adam Teitzman, Esq. April 30, 2024 Page 5

Should you have any questions regarding the foregoing, please do not hesitate to contact me. Thank you for your consideration.

Sincerely,

**HOLLAND & KNIGHT LLP**
