Subject: RE: Docket number 20240025: I urge to stop Duke Energy's rate increases and to retire harmful coal plants

Good Morning, Robert Norberg.

We will be placing your comments below in consumer correspondence in Docket No. 20240025, and forwarding them to the Office of Consumer Assistance and Outreach.

Thank you!

Toni Hover
Commission Deputy Clerk I
Florida Public Service Commission
2540 Shumard Oak Boulevard
Tallahassee, FL 32399

Dear Florida Public Service Commission,

I want my kids and grandkids to be able to live without fear of climate induced sea level rise and extreme heat. We need to make the inevitable transition NOW while there is still an opportunity to avoid the worst disaster the Earth has ever seen. Shutdown your coal and gas- fired plants today.

To the Florida Public Service Commission,

1) Duke must prioritize the retirement of outdated and environmentally harmful coal plants, particularly Crystal River Units 4 and 5, to mitigate air and environmental pollution.

- 2) The continued operation of these coal plants poses significant health risks to residents, including respiratory diseases, heart issues, and premature death, highlighting the urgent need for retirement.
- 3) Coal burning contributes to greenhouse gas emissions and exacerbates climate change, threatening Florida's coast and increasing the severity of hurricanes, necessitating a transition to cleaner energy sources.
- 4) Low-income communities, such as those near Crystal River, bear disproportionate health burdens from coal pollution, underscoring the need for equity in environmental decision-making.
- 5) Transitioning from coal to renewable energy sources not only reduces pollution but also lowers costs for consumers, aligning with both economic and environmental sustainability goals.

The retirement of coal units by 2030 is imperative for the health, environment, and economic well-being of Florida residents, requiring decisive action from Duke Energy.

Thank you for considering my comment.

Sincerely,

Robert Norberg
