RE: Florida Power & Light Proposed \$10 Billion Rate Increase

I am writing to respectfully urge you to reject Florida Power & Light (FPL) proposal for a \$10 Billion rate increase.

While I recognize the importance of maintaining reliable energy infrastructure, this increase would place a heavy burden on many Floridians who are already struggling with high cost of living.

Although some customers may be able to afford this increase, countless households on fixed incomes, as well as single-parent families, will find it extremely difficult to absorb yet another rise in utility rates.

For these residents, electricity is not a luxury – it is a necessity!!

The scale of this proposed increase is excessive and risks deepening financial hardship across our communities.

I strongly believe FPL should prioritize operational efficiency, explore alternative funding mechanisms, and adopt cost-saving innovations before turning to consumers to shoulder such a significant financial load.

The Florida PSC has an obligation to balance the needs of utility providers with the well-being of the citizens you serve.

I RESPECTFULLY ASK THAT YOU REJECT this proposed \$10 Billion rate increase and PROTECT Florida's families from further financial strain.

Thank you for your time and consideration. Personally when I moved to my home in Daytona Beach, 2020 my electric cost monthly was \$85-90/month...my bill for June was \$175.00 and July was \$270.00!!! I don't use my dish washer, my dryer, my oven, my hot water heater is off daily and only turned on for 5 minutes once a week...my A/C has been set at 79 and now is set a 83!! I have all LED bulbs and have replaced all light fixtures... I never thought electric costs would be so out of control for FPL users. I am from Maryland and we have a choice of 4-5 different utility companies to chose from which has lowered costs for all in MD...my tenant I in my house in MD has a monthly electric bill averaging \$270.00 for a family of 4 and they use all of their appliances.

Somehow Florids PSC and FLPL needs to be more mindful of residents...I know FPL has received huge profits each year and should have been funding reserves for these massive data centers which residents should not be bearing the cost.

Sincerely,

  
Sharon A Myers Jordan

Greetings,

**I am 100% against FPL's requested rate hikes to pay for unreliable solar farms and battery storage facilities. This is further proof that "green energy" is costly.**

Florida Power & Light (FPL), the state's largest utility provider, has asked regulators to approve a series of base rate increases that could leave customers paying nearly \$10 billion more between 2026 and 2029 compared with today's rates. If approved, advocates say it would mark the largest utility rate hike in U.S. history.

This solar farm in Lake Placid, Florida, in the photo below, was destroyed by a tornado.

Consumers should not be paying for intermittent and fragile energy sources. Expanding or building new fossil fuel-powered plants is a far less costly and more reliable solution.

Dear Commissioner La Rosa:

I hope this message finds you well. I am writing as a concerned Florida resident regarding the potential increase in utility rates by Florida Power & Light (FPL). At a time when many Floridians are already dealing with rising cost of living, already high electric bills, many greater than \$650 + per month, an increase in electricity fares would place an even greater burden on households across the state. Consider retirees having to deal with this increase. So many of them are already choosing to reduce food and other necessities just to afford electricity which is absolutely needed in the Florida temperatures. FPL provides a vital service, and while maintaining infrastructure and innovation is important, these goals must be balanced with the economic realities faced by residents. In addition, as part of the Florida community, businesses should include maintenance expenses as part of their responsibility and not just pass that off only to the consumers. They need to share the cost of upgrades and maintenance. Many families are struggling to make ends meet, and utility costs are a major part of their monthly expenses. For some families, the electric bill takes almost half of their paychecks. I respectfully urge you and the Public Service Commission to reject any proposed rate increases from FPL. Furthermore, I encourage the Commission to explore any possible opportunities for reducing rates or increasing affordability for customers, particularly for low, middle-income families, the disabled and senior citizens

I trust that as a public servant who cares and understands the struggles of Florida residents, you will act in accordance to your promise to stand by the residents of Florida. Thank you for your time and your commitment to serving the people of Florida. I trust that you will ensure that utility rates reflect the understanding that electricity is a need not a luxury.

Sincerely,

Vivian Martinez
