BEFORE THE  
FLORIDA PUBLIC SERVICE COMMISSION

In re: DOCKET NO. 20250011-EI  
Petition for rate increase by  
Florida Power & Light Company.  
\_\_\_\_\_ /

VOLUME 9  
PAGES 1956 - 2066

PROCEEDINGS: HEARING  
COMMISSIONERS  
PARTICIPATING: CHAIRMAN MIKE LA ROSA  
COMMISSIONER GARY F. CLARK  
COMMISSIONER ANDREW GILES FAY  
COMMISSIONER GABRIELLA PASSIDOMO SMITH

DATE: Thursday, October 9, 2025

TIME: Commenced: 9:00 a.m.  
Concluded: 8:10 p.m.

PLACE: Betty Easley Conference Center  
Room 148  
4075 Esplanade Way  
Tallahassee, Florida

REPORTED BY: DEBRA R. KRICK  
Court Reporter

## I N D E X

WITNESS:	PAGE
JAMES M. COYNE	
Examination by Ms. Moncada	1958
Prefiled Direct Testimony inserted	1961
Direct Examination by Ms. Christian	2026

1 P R O C E E D I N G S

2 (Transcript follows in sequence from Volume  
3 8.)

4 CHAIRMAN LA ROSA: All right. Let's go ahead  
5 and take our seats and we will get started with the  
6 next witness.

7 All right. FPL, you can call your witness.  
8 It looks like the witness is already in the witness  
9 stand.

10 MS. MONCADA: He is seated. This is Mr. Jim  
11 Coyne for FPL.

12 CHAIRMAN LA ROSA: Mr. Coyne, do you mind  
13 standing and raising your right hand?

14 Whereupon,

15 JAMES M. COYNE

16 was called as a witness, having been first duly sworn to  
17 speak the truth, the whole truth, and nothing but the  
18 truth, was examined and testified as follows:

19 THE WITNESS: I do.

20 CHAIRMAN LA ROSA: Thank you.

21 MS. MONCADA: Thank you.

22 EXAMINATION

23 BY MS. MONCADA:

24 **Q Mr. Coyne, would you please state your full**  
25 **name and business address for the record?**

1           A     It is James M. Coyne, and my business address  
2     is 293 Boston Post Road, Marlborough, Massachusetts,  
3     01752.

4           **Q     Thank you.**

5                   **By whom are you employed, and can you please**  
6     **also explain your position?**

7           A     I am employed by Concentric Energy Advisors,  
8     where I am a Senior Vice-President, and I am an expert  
9     in utility economics and finance and related issues, and  
10    provide testimony on these issues before regulators in  
11    the United States and Canada.

12          **Q     Thank you.**

13                   **Did you prepare and cause to be filed 64 pages**  
14     **of direct testimony on February 28th?**

15          A     I did.

16          **Q     Do you have any changes or revisions to your**  
17     **direct testimony?**

18          A     No.

19          **Q     If I asked you the same questions contained in**  
20     **that testimony today, would your answers be the same?**

21          A     Yes.

22          **Q     Thank you.**

23                   MS. MONCADA: Mr. Chairman, I would like to  
24     move Mr. Coyne's direct testimony into the record.

25                   CHAIRMAN LA ROSA: So moved.

1                   (Whereupon, prefiled direct testimony of James  
2 M. Coyne was inserted.)

29

1 and studies on matters pertaining to rate policy, valuation, capital costs, and  
2 performance-based regulation. I have authored numerous articles on the energy  
3 industry, lectured on utility regulation for regulatory commission staff, and  
4 provided testimony before the Federal Energy Regulatory Commission (“FERC”)  
5 as well as state and provincial jurisdictions in the U.S. and Canada, including this  
6 Commission. I hold a B.S. in Business Administration from Georgetown  
7 University and an M.S. in Resource Economics from the University of New  
8 Hampshire. My educational and professional background is summarized more  
9 fully in Exhibit JMC-1.

10 **Q. Are you sponsoring any exhibits in this case?**

11 A. Yes. My analyses and recommendations are supported by the data presented in  
12 Exhibits JMC-2 through JMC-11, which have been prepared by me or under my  
13 direction. I am sponsoring the following exhibits:

- 14 • Exhibit JMC 2 – Comprehensive Summary of ROE Results
- 15 • Exhibit JMC-3 – Proxy Group Screening Analysis
- 16 • Exhibit JMC-4 – Constant Growth DCF Analysis
- 17 • Exhibit JMC-5.1 – Market Risk Premium
- 18 • Exhibit JMC-5.2 – CAPM Analysis
- 19 • Exhibit JMC-6 – Risk Premium Analysis
- 20 • Exhibit JMC-7 – Expected Earnings Analysis
- 21 • Exhibit JMC-8 – Capital Expenditures Analysis
- 22 • Exhibit JMC-9 – Regulatory Risk Assessment

- 1           • Exhibit JMC-10 – Flotation Cost Analysis
- 2           • Exhibit JMC-11 – Capital Structure Analysis

3 **Q. What is the purpose of your testimony?**

4 A. The purpose of my direct testimony is to present evidence and provide a  
5 recommendation for FPL’s return on equity (“ROE”). My direct testimony also  
6 discusses the Company’s capital structure in comparison to the proxy group  
7 companies supporting my analysis.

8

9 **II. OVERVIEW AND SUMMARY**

10 **Q. What is your conclusion regarding the appropriate cost of equity for FPL?**

11 A. I estimate four ROE models that produce a range of results. These models include  
12 the Discounted Cash Flow (“DCF”) model, the Capital Asset Pricing Model  
13 (“CAPM”), the Bond Yield Plus Risk Premium model, and the Expected Earnings  
14 model. As shown in Exhibit JMC-2, for each proxy company, I give equal weight  
15 to the four individual models. I then calculate the average of these four methods  
16 for the proxy group, which produces a base ROE of 11.83 percent. Adding nine  
17 basis points for flotation costs brings the total ROE to 11.92 percent. Based on my  
18 analysis, I recommend an ROE of 11.92 percent, which rounds down to 11.90  
19 percent, as just and reasonable for FPL for the 2026-2029 rate period.

20 **Q. Please provide a brief overview of the analyses that you conducted to support  
21 your ROE recommendation.**

22 A. My ROE recommendation is based on results produced from four modeling  
23 methodologies, the DCF model, the CAPM, the Risk Premium approach, and the

1 Expected Earnings analysis. Analysts and academics understand that ROE models  
2 are tools to be used in the ROE estimation process, and that strict adherence to any  
3 single approach, or the specific results of any single approach, can lead to flawed  
4 conclusions. No model can exactly pinpoint the correct cost of equity, but rather  
5 each model brings its own perspective and set of inputs that inform the estimate of  
6 the ROE. Therefore, my analysis considers the range of results produced by these  
7 four different models. From within that range, regulators use informed judgment  
8 to select an authorized ROE that takes into consideration the relevant risk factors,  
9 as well as capital market conditions and the management performance of the utility,  
10 in order to send appropriate market signals.

11

12 The DCF analysis estimates the cost of equity based on market data on dividend  
13 yields and analysts' projected earnings per share growth rates from reputable third-  
14 party sources. The CAPM analysis is based on both current and forecasted interest  
15 rates and a forward-looking market risk premium. The Risk Premium approach  
16 calculates the risk premium as the spread between authorized ROEs for integrated  
17 electric utilities and Treasury bond yields to estimate the ROE. The Expected  
18 Earnings approach estimates the cost of equity based on projected returns on book  
19 equity that investors expect to receive over the next three to five years. My ROE  
20 recommendation is ultimately based on the 4-model average ROE estimates  
21 produced by these methodologies, including a nine-basis point adjustment for  
22 flotation costs.

23

1 My recommendation also considers the general economic and capital market  
2 environment and the influence capital market conditions exert over the results of  
3 the models. In addition, I also consider the Company's business and regulatory  
4 risks in relation to the proxy companies to assist in the determination of the  
5 appropriate ROE and capital structure from within the range of my analytical  
6 results. I identify risk factors that indicate FPL is above average risk. While I have  
7 not made any explicit risk adjustment in my ROE or capital structure analysis,  
8 FPL's risk profile warrants such consideration.

9 **Q. Your ROE recommendation for FPL is higher than what was included in the**  
10 **Settlement Agreement in the Company's last rate case that was filed in March**  
11 **2021. Please summarize the primary factors that support this view.**

12 A. In Docket 20210015-EI, the Commission approved FPL's Settlement Agreement  
13 with an ROE of 10.60 percent, within a range from 9.70 percent to 11.70 percent.  
14 The Settlement Agreement included a provision that would raise the authorized  
15 ROE 20 basis points to 10.80 percent (within a range of 9.80 percent to  
16 11.80 percent) if the 30-year Treasury bond yield increased 50 basis points or more  
17 for six consecutive months after the date the Settlement Agreement was filed  
18 (August 10, 2021). On August 19, 2022, that provision was triggered and the  
19 Company filed notice with the Commission on August 23, 2022. On October 4,  
20 2022, the Commission approved the provision that increased the authorized ROE  
21 to 10.80 percent.

22

1 I first note that the current ROE was the result of a settlement with several  
2 components. Settlements invariably include gives and takes, so any one result is  
3 not necessarily representative of a litigated outcome. Further, yields on government  
4 and corporate bonds have increased significantly since I filed my direct testimony  
5 in the Company's last rate case in March 2021. As discussed in Section IV,  
6 government and utility bond yields have increased more than 200 basis points. The  
7 increase in the model results between my testimony in the Company's last rate case  
8 and this case support the conclusion that the cost of equity capital has risen. Longer  
9 term, the industry faces complex structural challenges associated with cyber  
10 security, grid modernization, and shifting consumer preferences. These challenges  
11 faced by the industry have not eased since I filed my direct testimony in Docket  
12 20210015-EI in March 2021.

13 **Q. How do the model results presented in this case compare to those submitted in**  
14 **Docket 20210015-EI in March 2021?**

15 A. As shown in Figure 1, each of the model results has increased. All but two of the  
16 proxy companies that were in my proxy group in the last rate case<sup>1</sup> are included in  
17 my proxy group in this proceeding. As Figure 1 illustrates, the model results have  
18 increased between 63 and 148 basis points since the time I prepared my analysis in  
19 the Company's last rate case.

---

<sup>1</sup> ALLETE, Inc. and Hawaiian Electric Industries. ALLETE was excluded due to its pending acquisition by the Canadian Pension Plan Investment Board and Global Infrastructure Management LLC. Hawaiian Electric Industries was downgraded to below investment grade after the Maui wildfire and ceased paying dividends. Therefore, neither meet my screening criteria. Two additional companies that meet my screening criteria were added: Southern Company, and TXNM Energy.

1 **Figure 1: Comparison of DCF, CAPM, Risk Premium, and**  
 2 **Expected Earnings Results**

Model	Docket 20210015-EI	Docket 20250011-EI <sup>2</sup>	Difference (basis points)
DCF	9.29%	10.28%	+99
CAPM	14.17%	15.65%	+148
Risk Premium	9.88%	10.51%	+63
Expected Earnings	10.22%	10.91%	+69

3

4 **Q. Does your recommendation consider the current interest rate environment**  
 5 **and expectations regarding the Federal Reserve’s changing stance on**  
 6 **monetary policy?**

7 A. Yes, it does. First, my analysis considers both current and projected interest rates.  
 8 Second, investors’ expectations regarding the future path of interest rates are  
 9 reflected in the market data in my analyses. For example, Federal Reserve (“the  
 10 Fed”) began reducing the Federal Funds target rate in early Fall 2024. More  
 11 recently, however, the Fed has signaled that it may slow the pace of rate cuts in  
 12 2025, and in fact held the Federal Funds rate steady in January 2025.<sup>3</sup> Lastly, the  
 13 Fed’s actions have a lesser effect on long-term interest rates than they do on short-  
 14 term interest rates. Therefore, long-term interest rates, like the 30-year Treasury  
 15 yield used in my analysis, have not declined commensurate with reductions in the  
 16 Federal Funds rate.

<sup>2</sup> CAPM and Risk Premium results presented in this case reflect the average of each model’s results using current and projected bond yields. The 2021 results reflect projected bond yields.

<sup>3</sup> Transcript of Chair Powell’s Press Conference, December 18, 2024, at 2-6.

<https://www.federalreserve.gov/newsevents/pressreleases/monetary20250129a.htm>

1 **Q. How is the remainder of your Direct Testimony organized?**

2 A. The remainder of my Direct Testimony is organized as follows. Section III  
3 provides background on the regulatory principles that guide the determination of  
4 ROE. Section IV presents a review of current and prospective economic and capital  
5 market conditions and the implications for utility cost of capital. Section V  
6 describes the criteria and approach for the selection of a proxy group of comparable  
7 companies. Section VI provides a description of the data and methodologies used  
8 to estimate the cost of equity, as well as the results of the various ROE estimation  
9 models. Section VII provides an assessment of the business and regulatory risk  
10 factors I have considered in arriving at an appropriate ROE for FPL. Section VIII  
11 reviews FPL's capital structure in the context of the proxy group. Finally, Section  
12 IX summarizes my results, conclusions, and recommendations.

13

14 **III. REGULATORY PRINCIPLES**

15 **Q. Please describe the guiding principles used in establishing the cost of capital**  
16 **for a regulated utility.**

17 A. The foundations of public utility regulation require that utilities receive a fair rate  
18 of return sufficient to attract needed capital to maintain important infrastructure for  
19 customers at reasonable rates. The basic tenets of this regulatory doctrine originate  
20 from several bellwether decisions by the United States Supreme Court, notably  
21 *Bluefield Waterworks and Improvement Company v. Public Service Commission of*  
22 *West Virginia*, 262 U.S. 679 (1923) ("*Bluefield*"), and *Federal Power Commission*

1           *v. Hope Natural Gas Company*, 320 U.S. 591 (1944) (“*Hope*”). In *Bluefield*, the  
2           Court stated:

3                     A public utility is entitled to such rates as will permit it to earn a  
4                     return on the value of the property which it employs for the  
5                     convenience of the public equal to that generally being made at the  
6                     same time and in the same general part of the country on investments  
7                     in other business undertakings which are attended by corresponding  
8                     risks and uncertainties . . .

9                     The return should be reasonably sufficient to assure investor  
10                    confidence in the financial soundness of the utility and should be  
11                    adequate, under efficient and economical management, to maintain  
12                    and support its credit and enable it to raise the money necessary for  
13                    the proper discharge of its public duties.

14           Later, in *Hope*, the Court established a standard for the ROE that remains the  
15           guiding principle for ratemaking regulatory proceedings to this day:

16                    [T]he return to the equity owner should be commensurate with  
17                    returns on investments in other enterprises having corresponding  
18                    risks. That return, moreover, should be sufficient to assure  
19                    confidence in the financial integrity of the enterprise, so as to  
20                    maintain its credit and to attract capital.

21   **Q.    Has the Commission provided similar guidance?**

22    A.    Yes, the Commission applies the precedents of the *Hope* and *Bluefield* decisions.  
23           For example, in a May 2008 decision for Florida Public Utilities, the Commission  
24           stated:

25                    The statutory principles for determining the appropriate rate of  
26                    return for a regulated utility are set forth by the U.S. Supreme Court  
27                    in its *Hope* and *Bluefield* decisions. These decisions define the fair  
28                    and reasonable standards for determining rate of return for regulated  
29                    enterprises. Namely, these decisions hold that the authorized return  
30                    for a public utility should be commensurate with return on  
31                    investments in other companies of comparable risk, sufficient to  
32                    maintain the financial integrity of the company, and sufficient to  
33                    maintain its ability to attract capital on reasonable terms.<sup>4</sup>

---

<sup>4</sup> Order No. PSC-08-0327-FOF-EI, Docket Nos. 070300-EI, 070304-EI, at 35.

1 More recently, the Commission again applied the *Hcpe* and *Bluefield* standard in  
2 its supplemental order approving FPL’s 2021 settlement agreement, Order No.  
3 PSC-2024-0078-FOF-EI issued March 25, 2024 in Docket 20210015-EI.

4 **Q. Please explain how these principles apply in the context of the regulated rate**  
5 **of return.**

6 A. Regulated utilities rely primarily on common stock and long-term debt to finance  
7 permanent property, plant, and equipment. The allowed rate of return for a  
8 regulated utility is based on its weighted average cost of capital, where the costs of  
9 the individual sources of capital (i.e., debt and equity) are weighted by their  
10 respective book values. The ROE represents the cost of raising and retaining equity  
11 capital and is estimated by using one or more analytical techniques that use market  
12 data to quantify investor requirements for equity returns. However, the ROE cannot  
13 be derived through quantitative metrics and models alone. To properly estimate the  
14 ROE, the financial, regulatory, and economic context must also be considered.

15  
16 The DCF, CAPM, Risk Premium, and Expected Earnings approaches, while  
17 fundamental to the ROE determination, are still only models. The results of these  
18 models cannot be mechanistically applied without also using informed judgment to  
19 consider economic and capital market conditions and the relative risk of FPL as  
20 compared to the proxy group companies.

21  
22 Based on these widely recognized standards, the Commission’s order in this case  
23 should provide FPL with the opportunity to earn a return on equity that is:

- 1           • Commensurate with returns on investments in enterprises having
- 2           comparable risks;
- 3           • Adequate to attract capital on reasonable terms, thereby enabling FPL to
- 4           provide safe, reliable service; and
- 5           • Sufficient to ensure the financial soundness of FPL's electric utility
- 6           operations.

7           Importantly, a fair return must satisfy all three of these standards. The allowed  
8           ROE should enable FPL to finance capital expenditures on reasonable terms and  
9           provide the Company with the ability to raise capital under a full range of capital  
10          market circumstances.

11   **Q.    What are your conclusions regarding regulatory principles?**

12   A.    The ratemaking process is premised on the principle that, in order for investors and  
13          companies to commit the capital needed to provide safe and reliable utility services,  
14          the utility must have the opportunity to recover invested capital and the market-  
15          required return on that capital. Because utility operations are capital-intensive,  
16          regulatory decisions should enable the utility to attract capital on favorable terms.  
17          The financial community carefully monitors the current and expected financial  
18          condition of utility companies as well as the regulatory environment in which they  
19          operate. In that respect, the regulatory environment is one of the most important  
20          factors considered by both debt and equity investors in their assessments of risk. It  
21          is therefore essential that the ROE authorized in this proceeding takes into  
22          consideration the current and expected capital market conditions that FPL faces, as  
23          well as investors' expectations and requirements regarding both risks and returns.

1 A reasonable ROE is required for FPL to continue to provide customers with  
2 superior service and to maintain confidence in Florida's regulatory environment  
3 among credit rating agencies and investors.

4

5 **IV. ECONOMIC AND CAPITAL MARKET CONDITIONS**

6 **Q. Why is it important to consider the effects of current and expected economic  
7 and financial market conditions when setting the appropriate ROE?**

8 A. It is important to consider current and expected conditions in the general economy  
9 and financial markets because the authorized ROE for a public utility should allow  
10 the utility to attract investor capital at a reasonable cost under a variety of economic  
11 and financial market conditions, as underscored by the *Hope* and *Bluefield*  
12 decisions. The standard ROE estimation tools, such as the DCF, CAPM, and Risk  
13 Premium models, each reflect the state of the general economy and financial  
14 markets by incorporating specific economic and financial data. These inputs are,  
15 however, only samples of the various economic and market forces that determine a  
16 utility's required return. Consideration must be given to whether the assumptions  
17 relied on in the current or projected market data are appropriate. If investors do not  
18 expect current market conditions to be sustained in the future, it is possible that the  
19 ROE estimation models will not provide an accurate estimate of investors' forward-  
20 looking required return. Therefore, an assessment of current and projected market  
21 conditions is integral to any ROE recommendation.

1 **Q. What are the key factors affecting the cost of equity for regulated utilities in**  
2 **the current and prospective capital markets?**

3 A. The cost of equity for regulated utilities is being affected by several key factors,  
4 including: (1) the interest rate environment and central bank monetary policy; (2)  
5 inflationary pressure and the longer-term outlook for inflation; and (3) uncertainty  
6 in the economic environment as a result of a change in administration at the federal  
7 level. In this section, I discuss each of these factors and how it affects the models  
8 used to estimate the cost of equity for regulated utilities.

9 **Q. Please discuss current economic and capital market conditions.**

10 A. Following the Company's last rate case, economic conditions were unsettled in  
11 2022 and 2023 due to ongoing inflationary pressure and the prospects for weaker  
12 economic growth or a possible recession as the Federal Reserve continued to  
13 tighten monetary policy to combat higher than expected inflation. Real Gross  
14 Domestic Product ("GDP") grew at an annual rate of 2.9 percent and 2.8 percent,  
15 respectively, in 2023 and 2024 compared to 2.5 percent in 2022. Figure 2 shows  
16 that real GDP growth ranged from -1.0 percent to 4.4 percent over the past twelve  
17 quarters and settled most recently at 2.3 percent in the fourth quarter of 2024.

1

**Figure 2: Percent Change in Real GDP (From Previous Quarter)<sup>5</sup>**

2

3 **Q. Please discuss the changes in monetary policy that have occurred.**

4 A. In 2022 and 2023, the Fed tightened monetary policy at the fastest pace in the last  
 5 40 years to slow economic growth and combat higher than expected inflation.  
 6 Specifically, the Fed raised the Federal Funds rate from a range of 0.00 percent to  
 7 0.25 percent in March 2022 to a range of 5.25 to 5.50 percent by July 2023 (see  
 8 Figure 3), which it held constant until September 2024.

1

**Figure 3: Federal Funds Rate Increases<sup>6</sup>**

2

3 At the December 2023 Federal Open Market Committee (“FOMC”) meeting, the  
 4 Fed signaled that it was likely finished raising the Federal Funds rate. Capital  
 5 markets interpreted this as an indication that the Fed would start cutting short-term  
 6 interest rates sooner than expected. However, throughout the first half of 2024,  
 7 Chair Jerome Powell reiterated repeatedly that the timing of future interest rate cuts  
 8 remained dependent on progress toward achieving the Fed’s goal of returning to  
 9 the 2 percent inflation target and that the FOMC was “prepared to maintain the  
 10 current target range for the federal funds rate for longer, if appropriate.”<sup>7, 8</sup>

11

12 In August 2024, Chair Powell signaled that the economic data on inflation and  
 13 unemployment was likely to lead to a reduction in short-term interest rates. During  
 14 his speech at Jackson Hole, Wyoming, Chair Powell stated:

<sup>6</sup> Federal Reserve Bank of St. Louis, Federal Reserve Economic Data (“FRED”) available at <https://fred.stlouisfed.org/>.  
<sup>7</sup> Transcript of Chair Powell’s Press Conference, March 20, 2024, at 3.  
<sup>8</sup> Semiannual Monetary Policy Report to Congress, Chair Jerome H. Powell, Before the Committee on Financial Services, U.S. House of Representatives, March 6, 2024.

1 Overall, the economy continues to grow at a solid pace. But the  
2 inflation and labor market data show an evolving situation. The  
3 upside risks to inflation have diminished. And the downside risks to  
4 employment have increased. As we highlighted in our last FOMC  
5 statement, we are attentive to the risks to both sides of our dual  
6 mandate.<sup>9</sup>

7 The FOMC subsequently cut the Federal Funds rate by 50 basis points in September  
8 2024 as the FOMC gained greater confidence that inflation was moving sustainably  
9 toward its two percent target, and that risks to achieving employment and inflation  
10 goals were roughly in balance. However, the FOMC noted that “the economic  
11 outlook is uncertain, and the Committee is attentive to the risks to both sides of its  
12 dual mandate.”<sup>10</sup> In November and December 2024, the FOMC further reduced  
13 the Federal Funds rate by 25 basis points in each meeting. In its press releases, the  
14 FOMC reiterated these points and noted that “inflation has made progress toward  
15 the Committee’s 2-percent objective but remains somewhat elevated.”<sup>11</sup> After the  
16 December 2024 meeting, Chair Powell signaled that the Fed would slow the pace  
17 of rate cuts in 2025, and the FOMC in fact held the Federal Funds rate steady at the  
18 January 2025 meeting.<sup>12</sup>

1 **Q. Please discuss the path of government bond yields and explain the**  
2 **implications for equity investors in the utility sector.**

3 A. As the U.S. economy improved and the Federal Reserve moved aggressively in  
4 2022 and 2023 to tighten monetary policy to fight stubbornly higher inflation,  
5 prevailing interest rates rose to their highest levels since 2010.<sup>13</sup> As shown in  
6 Figure 4, the 30-day average yield on 30-year Treasury bonds was 1.69 percent on  
7 January 11, 2021 (when FPL notified the Commission of its rate case) and  
8 2.02 percent as of October 26, 2021 (when the Commission voted to approve the  
9 Settlement Agreement in the 2021 rate case). As shown in Figure 4, as of December  
10 31, 2024, the 30-day average yield on the 30-year Treasury bond was 4.56 percent.  
11 As of December 2024, the 30-year Treasury yield is projected to be approximately  
12 4.5 percent in 2025<sup>14</sup> and 4.30 percent over the period from 2026-2030.<sup>15</sup> As shown  
13 in Figure 4, the underlying 30-day average 30-year Treasury bond yield has  
14 increased by 287 basis points, or nearly 170 percent, from January 11, 2021 to  
15 December 31, 2024. According to the U.S. Department of Treasury, the 30-year  
16 Treasury bond yield increased 312 basis points, or more than 180 percent, between  
17 January 2021 and December 2024.<sup>16</sup> The upward pressure on long-term interest  
18 rates cuts across all forms of capital, including that for utilities.

**Figure 41: Comparison of 30-Year Treasury Bond Yields<sup>17</sup>**

2

3

4

5

6

7

The same pattern exists for utility bond yields. As shown in Figure 5, Moody’s A-rated Utility Bond Index increased from 2.80 percent at the time FPL filed its last rate case to 5.57 percent as of December 31, 2024, a 99 percent increase. As with Treasury bond yields, utility bond yields are also expected to remain at elevated levels, if not increase in the near term.

<sup>17</sup> Sources: Federal Reserve Bank of St. Louis, FRED Economic Database, Blue Chip Financial Forecasts, Vol. 44, Issue No. 1, December 30, 2024, at 2, Blue Chip Financial Forecasts, Vol. 43, Issue No. 12, November 27, 2024, at 14.

1

**Figure 5: Comparison of Utility Bond Yields<sup>18</sup>**

2

3

4

5

6

7

8

As noted previously, long-term bond yields are less sensitive to the Federal Reserve’s monetary policy, and as such have not responded to the Federal Reserve’s reduction in the Federal Funds rate as short-term yields have. As shown in Figure 6, since the end of June 2024, the 1-year and 2-year Treasury yields have declined by 93 and 46 basis points, respectively, whereas the 10-year and 30-year Treasury yields have increased by 22 and 27 basis points, respectively.

<sup>18</sup> Sources: Federal Reserve Bank of St. Louis, FRED Economic Database, Blue Chip Financial Forecasts, Vol. 44, Issue No. 1, December 30, 2024, at 2, Blue Chip Financial Forecasts, Vol. 43, Issue No. 12, November 27, 2024, at 14. Projected Utility “A” bond yields are estimated from Blue Chip’s projected AAA corporate bond yields plus the average historical spread between A-rated corporate and utility bond yields over the last five years.

1 **Figure 6: U.S. Treasury Yields (June 2024 vs. December 2024)<sup>19</sup>**

	<b>1-year Treasury</b>	<b>2-year Treasury</b>	<b>10-year Treasury</b>	<b>30-year Treasury</b>
June 28, 2024	5.09%	4.71%	4.36%	4.51%
December 31, 2024	4.16%	4.25%	4.58%	4.78%
Change	-0.93%	-0.46%	0.22%	0.27%

2 Current long-term yields have not declined commensurately with reductions in the  
3 Federal Funds rate. These movements are consistent with the normalization of the  
4 yield curve, where long-term rates are expected to exceed short-term rates.

5 **Q. Please explain why these higher interest rates are important to the ROE**  
6 **analysis.**

7 A. The 30-year Treasury bond yield is a direct input to both the CAPM and the Risk  
8 Premium models. As yields increase, the cost of capital generally increases, and the  
9 ROE estimates from those two models also increase, although not on a one-to-one  
10 basis. Further, while interest rates are not a direct input to the DCF model, dividend  
11 yields on utility stocks must compete with yields on Treasury bonds. As interest  
12 rates on government bonds increase, utilities must offer a higher dividend yield to  
13 attract and retain investors, signaling an increase in the cost of equity for utilities.  
14 All else equal, higher dividend yields produce higher ROE estimates in the DCF  
15 model.

16 **Q. What has been the path of inflation since 2021?**

17 A. As shown in Figure 7, inflation levels are down significantly from the peak of  
18 9.1 percent in June 2022, but remain slightly elevated at 2.9 percent as of December

<sup>19</sup> Source: Spot yields reported by Federal Reserve Board of Governors, H15 Selected Interest Rates.  
<https://www.federalreserve.gov/datadownload/Choose.aspx?rel=H15>

1 2024, relative to the Federal Reserve’s target of 2.0 percent. Moreover, the  
 2 downward trend in inflation has reversed, increasing in each month in October,  
 3 November, and December 2024.

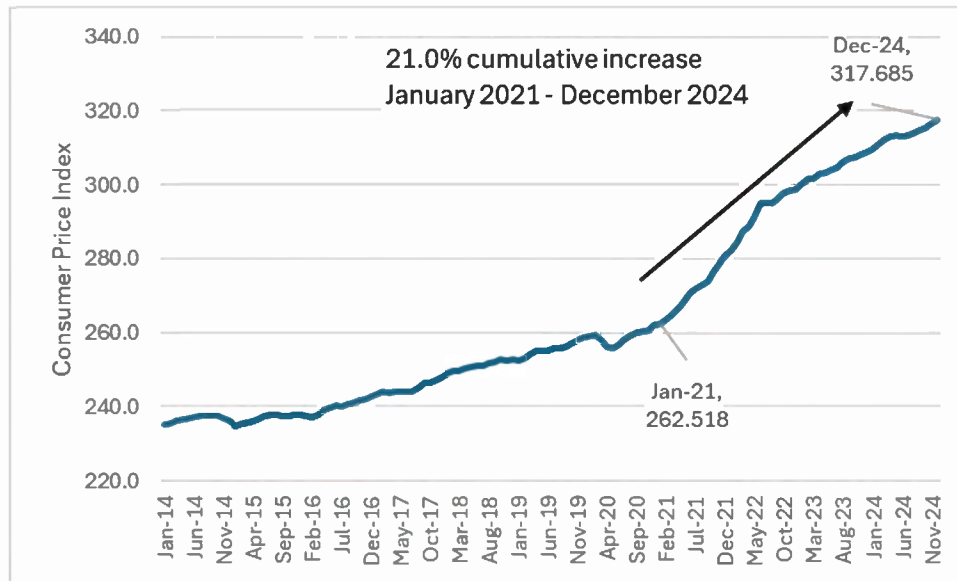

4 **Figure 7: Consumer Price Index, 12-month Percentage Change<sup>20</sup>**

5  
 6 As shown in Figure 8, on a cumulative basis, inflation has increased 21 percent  
 7 between January 2021 and December 2024.

<sup>20</sup> Source: Bureau of Labor Statistics, <https://www.bls.gov/charts/consumer-price-index/consumer-price-index-by-category-line-chart.htm>.

1 **Figure 8: Consumer Price Index, Cumulative Change (2014-2024)<sup>21</sup>**

2  
3 While inflation has subsided from the historic levels experienced in 2022, the era  
4 of record low interest rates and low inflation has likely ended. As noted above,  
5 long-term interest rates have increased considerably since the Federal Reserve  
6 began tightening monetary policy, and expectations for interest rates are markedly  
7 higher than in the five years prior to the pandemic. As Blue Chip Financial  
8 Forecasts explains:

9 Of particular interest is that even though the economy is expected to  
10 grow at around its potential rate and that inflation is expected to  
11 stabilize near the Fed’s target, these occur at markedly higher  
12 expected interest rate levels (both short- and long-term) than in the  
13 five years prior to the pandemic and marginally higher than the  
14 consensus envisaged last December. This points to a meaningfully  
15 higher neutral [Federal Funds Rate] and higher real interest rates  
16 over the longer term than experienced just prior to the pandemic.<sup>22</sup>

17 Furthermore, even though the pace of inflation has slowed, U.S. consumers  
18 continue to expect inflation to remain elevated. As the University of Michigan’s

<sup>21</sup> Source: Bureau of Labor Statistics, <https://www.bls.gov/charts/consumer-price-index/consumer-price-index-by-category-line-chart.htm>.

<sup>22</sup> Blue Chip Financial Forecasts, Vol. 43, No. 6, at 1 (June 1, 2024). Clarification added.

1 January 2025 survey explains regarding consumer sentiment on inflation: “[a]s of  
2 January 2025, long-run expectations remain modestly elevated relative to the two  
3 years pre-pandemic but exhibit substantial uncertainty, particularly in light of the  
4 presidential election.”<sup>23</sup> While inflation expectations have moderated since 2022,  
5 as of January 2025, they have not returned to pre-pandemic levels.<sup>24</sup>

6  
7 Additionally, the breakeven inflation rate provides another view of the market’s  
8 expectation for inflation. The breakeven rate is a measure of expected inflation  
9 derived from 10-year and 30-year Treasuries and is calculated as the difference  
10 between constant maturity Treasury securities and Treasury Inflation-Protected  
11 Securities (“TIPS”). The 10-year breakeven inflation rate implies what market  
12 participants expect inflation to be in the next 10 years, on average, whereas the 30-  
13 year measure reflects what market participants expect inflation to be in the next 30-  
14 years on average. As shown in Figure 9, both measures have increased since  
15 September, consistent with the recent uptick in inflation noted earlier.

1

**Figure 9: Breakeven Inflation Rate (2021-2025)<sup>25</sup>**

2

3 **Q. How might the change in administration affect inflation and bond yields?**

4 A. On February 1, 2025, President Trump issued an executive order implementing a  
 5 25 percent additional tariff on imports from Canada and Mexico, and a 10 percent  
 6 additional tariff on imports from China.<sup>26</sup> Further, on February 10, President  
 7 Trump restored a 25 percent tariff on steel and increased the tariff on aluminum to  
 8 25 percent.<sup>27</sup> Although the effect of these tariffs on the economy is uncertain,  
 9 economists generally agree that higher tariffs increase inflation by increasing the  
 10 cost of consumer goods. Higher inflation could complicate the Federal Reserve's  
 11 unwinding of restrictive monetary policies, as well as increase long-term bond  
 12 yields like the 30-year Treasury yield. Longer-term bonds are more sensitive to  
 13 inflation expectations because their value is eroded more by inflation; thus, as the

<sup>25</sup> Source: Federal Reserve Board H.15 Selected Interest Rates. January 1, 2021 – February 13, 2025.

<sup>26</sup> <https://www.whitehouse.gov/fact-sheets/2025/02/fact-sheet-president-donald-j-trump-imposes-tariffs-on-imports-from-canada-mexico-and-china/>

<sup>27</sup> <https://www.whitehouse.gov/fact-sheets/2025/02/fact-sheet-president-donald-j-trump-restores-section-232-tariffs/>

1 value (price) of bonds declines due to higher inflation expectations, the yield  
2 increases. Because utilities are capital intensive enterprises, higher inflation and  
3 interest rates tend to have a negative effect on utility stocks. If realized, all these  
4 factors would suggest that the cost of capital for utilities may increase in the future.

5 **Q. What are your conclusions regarding the effects of the current market**  
6 **environment on the cost of equity for FPL?**

7 A. Since the Company's last rate case was decided in 2021, yields on government and  
8 utility bond yields increased sharply. As a result, it is reasonable that equity  
9 investors would require a higher ROE to keep pace with the increases in lower-risk  
10 bonds and compensate them for the additional risks of owning common stock.  
11 These circumstances are reflected in the results of multiple models used to estimate  
12 the cost of equity. Additionally, although inflation has subsided from its peak in  
13 2022, inflation is expected to remain at higher levels than experienced prior to the  
14 COVID-19 pandemic. Lastly, although the effect of the new presidential  
15 administration on the economy is uncertain, proposals for higher tariffs, for  
16 example, could complicate investor expectations for lower inflation and interest  
17 rates. These factors emphasize the importance of considering the results of multiple  
18 models, and the use of both current and forecasted bond yields, as I have with my  
19 analysis.

20  
21  
22  
23

1 gas combined cycle power plants, as well as battery storage projects. In addition,  
2 FPL has a substantial capital expenditure program that is focused on improving the  
3 reliability of the electricity grid and increasing storm resiliency. FPL has long-term  
4 issuer ratings from S&P of A (Outlook: Stable), Moody’s Investors Service  
5 (“Moody’s”) of A1 (Outlook: Stable), and FitchRatings (“Fitch”) of A (Outlook:  
6 Stable).<sup>29</sup>

7 **Q. Please describe the specific screening criteria you have utilized to select a**  
8 **proxy group.**

9 A. I began with the 36 investor-owned domestic electric utilities covered by Value  
10 Line, an independent investment research firm, and then screened companies  
11 according to the following criteria:

- 12 1. Consistently pays quarterly cash dividends;
- 13 2. Maintains an investment grade long-term issuer rating (BBB- or higher)  
14 from S&P;
- 15 3. Is covered by more than one equity analyst;
- 16 4. Has positive earnings growth rates published by at least two of the  
17 following sources: S&P Capital IQ, Value Line, and Zack’s Investment  
18 Research (“Zacks”);
- 19 5. Owns regulated electric generation assets;
- 20 6. Regulated revenue and net operating income make up at least 60 percent  
21 of the consolidated company’s revenue and net operating income (based  
22 on a 3-year average from 2021-2023);

---

<sup>29</sup> *Ibid.*, at 47.

1           7. Regulated revenue and net operating income from regulated electric  
2           operations makes up at least 80 percent of the consolidated company's  
3           regulated revenue and net operating income (based on a 3-year average  
4           from 2021-2023); and

5           8. Is not involved in a merger or other transformative transaction for an  
6           approximate six-month period.

7   **Q. Did you include NextEra Energy, Inc. in your analysis?**

8   A. No, I did not. In order to avoid the circular logic that would otherwise occur, it is  
9       my practice to exclude the subject company, or its parent holding company, from  
10      the proxy group.

11 **Q. What is the composition of your resulting proxy group?**

12 A. Based on the screening criteria discussed above, I arrived at a proxy group  
13      consisting of the 15 companies shown in Figure 10. The results of my screening  
14      process are shown in Exhibit JMC-3.

1

**Figure 10: Proxy Group**

<b>Company</b>	<b>Ticker</b>
Alliant Energy Corporation	LNT
Ameren Corporation	AEE
American Electric Power Company, Inc.	AEP
Duke Energy Corporation	DUK
Edison International	EIX
Entergy Corporation	ETR
Evergy, Inc.	EVRG
IDACORP, Inc.	IDA
OGE Energy Corporation	OGE
Pinnacle West Capital Corporation	PNW
Portland General Electric Company	POR
PPL Corporation	PPL
The Southern Company	SO
TXNM Energy	TXNM
Xcel Energy Inc.	XEL

2

3 **Q. Do your screening criteria result in a group of companies that investors would**  
4 **view as comparable to FPL?**

5 A. Yes. I have selected this group of electric utilities to best align with the financial  
6 and operational characteristics of FPL. The proxy group screening criterion  
7 requiring an investment grade credit rating ensures that the proxy group companies,  
8 like FPL, are in sound financial condition. Because credit ratings take into account  
9 business and financial risks, the ratings provide a broad measure of investment risk  
10 for investors. I have only included companies in the proxy group that own regulated  
11 generation assets because vertically-integrated electric utilities have operating

1 characteristics and unique business risks that cause investors to require a higher  
2 return on equity to compensate for those risks. These unique risks are not shared  
3 by pure Transmission and Distribution utilities. Additionally, I have screened on  
4 the percent of revenue and net operating income from regulated operations to  
5 differentiate between utilities that are protected by regulation and those with  
6 substantial unregulated operations or market-related risks. Also, I have screened  
7 on the percentage contribution of the electric utility segment to regulated  
8 consolidated financial results to select companies that, like FPL, derive the majority  
9 of their revenue and operating income from regulated electric operations. These  
10 screens collectively reflect key risk factors that investors consider in making  
11 investments in electric utilities.

12 **Q. What is your conclusion with regard to the proxy group for FPL?**

13 A. My conclusion is that my group of 15 vertically integrated electric utilities  
14 adequately reflects the broad set of risks that investors consider when investing in  
15 a U.S.-regulated vertically integrated electric utility such as FPL. Later in my  
16 testimony, I will evaluate whether an adjustment should be made to the results of  
17 my ROE analyses to account for differences in FPL's company-specific risks  
18 relative to the proxy group companies.

19

20 **VI. DETERMINATION OF THE APPROPRIATE COST OF EQUITY**

21 **Q. What models did you use in your ROE analyses?**

22 A. I have considered the results of four ROE estimation models, including the DCF  
23 model, the CAPM, the Bond Yield Plus Risk Premium approach, and an Expected

1 Earnings analysis. When faced with the task of estimating the cost of equity,  
2 analysts gather and evaluate as much relevant data (both quantitative and  
3 qualitative) as can be reasonably obtained. Consistent with the *Hope* finding, “it is  
4 the result reached, not the method employed, which is controlling.”<sup>30</sup>

#### 6 A. Constant Growth DCF Model

7 **Q. Please describe the DCF approach.**

8 A. The DCF approach is based on the theory that a stock’s current price represents the  
9 present value of all expected future cash flows. In its simplest form, the DCF model  
10 expresses the ROE as the sum of the expected dividend yield and long-term growth  
11 rate:

$$12 \quad k = \frac{D(1+g)}{P_0} + g \quad [1]$$

13 Where “*k*” equals the required return, “*D*” is the current dividend, “*g*” is  
14 the expected growth rate, and “*P*” represents the subject company’s stock  
15 price.

16 Assuming a constant growth rate in dividends, the model may be rearranged to  
17 compute the ROE accordingly, as shown in Formula [2]:

$$18 \quad r = \frac{D}{P} + g \quad [2]$$

19 Stated in this manner, the cost of common equity is equal to the dividend yield plus  
20 the expected growth rate.

---

<sup>30</sup> *Hope op. cit.*

1 **Q. What are the assumptions underlying the Constant Growth DCF model?**

2 A. The Constant Growth DCF model is based on the following assumptions: (1) a  
3 constant average growth rate for earnings and dividends; (2) a stable dividend  
4 payout ratio; (3) a constant price-to-earnings multiple; and (4) a discount rate  
5 greater than the expected growth rate.

6 **Q. Please summarize your application of the DCF model.**

7 A. I calculated DCF results for each of the proxy group companies using the following  
8 inputs:

- 9 1. Average stock prices for the historical period, over 30-, 90-, and 180-  
10 trading days through December 31, 2024;
- 11 2. Annualized dividend per share as of December 31, 2024; and
- 12 3. Company-specific earnings growth forecasts for the term  $g$ .

13 My application of the model is provided in Exhibit JMC-.

14 **Q. Why did you use averaging periods of 30, 90, and 180 trading days?**

15 A. It is important to use an average of recent trading days to calculate the term  $P$  in  
16 the DCF model to ensure that the calculated ROE is not skewed by anomalous  
17 events that may affect stock prices on any given trading day. At the same time, it  
18 is important to reflect the conditions that have defined the financial markets over  
19 the recent past. In my view, consideration of those three averaging periods  
20 reasonably balances these interests.

21 **Q. Did you adjust the dividend yield to account for periodic growth in dividends?**

22 A. Yes, I did. Utility companies tend to increase their quarterly dividends at different  
23 times throughout the year, so it is reasonable to assume that such increases will be

1 evenly distributed over calendar quarters. Given that assumption, it is reasonable  
2 to apply one-half of the expected annual dividend growth rate for the purposes of  
3 calculating this component of the DCF model. This adjustment ensures that the  
4 expected dividend yield is representative of the coming 12-month period.  
5 Accordingly, the DCF estimates reflect one-half of the expected growth in the  
6 dividend yield.<sup>31</sup>

7 **Q. What sources of growth have you used in your DCF analysis?**

8 A. I have used the consensus analyst five-year growth estimates in earnings per share  
9 (“EPS”) from S&P Capital IQ and Zacks, as well as projected EPS growth rate  
10 estimates published by Value Line.

11 **Q. Why did you focus on earnings per share growth?**

12 A. The Constant Growth DCF model assumes that dividends grow at a constant rate  
13 in perpetuity. Accordingly, in order to reduce the long-term growth rate to a single  
14 measure, one must assume a constant payout ratio, and that earnings per share,  
15 dividends per share, and book value per share all grow at the same constant rate.  
16 Over the long term, however, dividend growth can only be sustained by earnings  
17 growth. As noted by Brigham and Houston in their text, *Fundamentals of Financial*  
18 *Management*: “Growth in dividends occurs primarily as a result of growth in  
19 *earnings per share* (EPS).”<sup>32</sup> It is therefore important to focus on measures of long-  
20 term earnings growth from credible sources as an appropriate measure of long-term  
21 growth in the DCF model.

---

<sup>31</sup> The expected dividend yield is calculated as  $d_1 = d_0 (1 + \frac{1}{2} g)$ .

<sup>32</sup> Eugene F. Brigham and Joel F. Houston, *Fundamentals of Financial Management* (Concise Fourth Edition, Thomson South-Western), at 317 (emphasis added).

1 **Q. What are the results of your DCF analysis?**

2 A. The results of my Constant Growth DCF analysis are provided in Exhibit JMC-4  
3 and summarized in Figure 11.

4 **Figure 11: DCF Results**

	<b>Mean Low</b>	<b>Mean</b>	<b>Mean High</b>
30-day average	8.94%	10.16%	11.18%
90-day average	8.99%	10.22%	11.24%
180-day average	9.22%	10.45%	11.47%

5

6 **Q. How did you calculate the Mean High, Mean Low, and Overall Mean DCF**  
7 **results?**

8 A. I calculated the Mean High DCF result using the maximum growth rate (i.e., the  
9 maximum of the S&P Capital IQ, Value Line, and Zacks EPS growth rates) in  
10 combination with the expected dividend yield for each of the proxy group  
11 companies. I used a similar method to calculate the Mean Low DCF results, using  
12 the minimum growth rate for each company. The Mean results reflect the average  
13 growth rate from each source for each company in combination with the expected  
14 dividend yield.

15

16 **B. CAPM Analysis**

17 **Q. Please briefly describe the general form of the Capital Asset Pricing Model.**

18 A. The CAPM is a risk premium approach that estimates the cost of equity as a  
19 function of a risk-free return plus a risk premium (to compensate investors for the

1 non-diversifiable or “systematic” risk of that security).<sup>33</sup> As shown in Equation  
2 [3], the CAPM is defined by four components, each of which must theoretically be  
3 a forward-looking estimate:

$$4 \quad K_e = r_f + \beta(r_m - r_f) \quad [3]$$

5 where:

6  $K_e$  = the required ROE for a given security;

7  $r_f$  = the risk-free rate of return;

8  $\beta$  = the Beta of an individual security; and

9  $r_m$  = the required return for the market as a whole.

10  
11 The term  $(r_m - r_f)$  represents the Market Risk Premium (“MRP”). According to the  
12 theory underlying the CAPM, since unsystematic risk can be diversified away,  
13 investors should be concerned only with systematic or non-diversifiable risk. Non-  
14 diversifiable risk is measured by Beta, which is defined as:

$$15 \quad \beta = \frac{\text{Covariance}(r_e, r_m)}{\text{Variance}(r_m)} \quad [4]$$

16 where:

17  $r_e$  = the rate of return for the individual security or portfolio.

18 The variance of the market return, noted in Equation [4], is a measure of the  
19 uncertainty of the general market, and the covariance between the return on a  
20 specific security and the market reflects the extent to which the return on that

---

<sup>33</sup> Systematic risks are fundamental market risks that reflect aggregate economic measures and therefore cannot be mitigated through diversification. Unsystematic risks reflect company-specific risks that can be mitigated and ultimately eliminated through investments in a portfolio of companies and/or market sectors.

1 security will respond to a given change in the market return. Thus, Beta represents  
2 the risk that the selected security will not be effective in diversifying systematic  
3 market risks.

4 **Q. What risk-free rate did you use in your CAPM analysis?**

5 A. I considered both the 30-day average yield on 30-year Treasury bonds as of  
6 December 31, 2024 (4.56 percent) and the Blue Chip forecast of the 30-year  
7 Treasury bond yield for 2026-2030 of 4.30 percent as my estimate of the risk-free  
8 rate.<sup>34</sup> That time period reflects a forward-looking view, which is the objective of  
9 the ROE analysis. Further, this time period aligns with FPL's proposed rate years  
10 under the multiyear rate plan.

11 **Q. What measures of Beta did you use in your CAPM analysis?**

12 A. As shown in Exhibit JMC-5.2, I considered two measures of Beta for the proxy  
13 group companies: (1) the Beta coefficients from Bloomberg (which I calculated  
14 using five years of weekly data against the S&P 500 Index); and (2) the reported  
15 Beta coefficients from Value Line (which are calculated using five years of weekly  
16 data against the New York Stock Exchange Composite Index).

17 **Q. What Market Risk Premium did you use in your CAPM analysis?**

18 A. I used the Constant Growth DCF model to estimate the total market return for the  
19 S&P 500 Index, using projected earnings growth rates and dividend yields from  
20 three sources: (1) S&P's Earnings and Estimates report; (2) Bloomberg  
21 Professional; and (3) Value Line. As of December 31, 2024, the average total

---

<sup>34</sup> Blue Chip Financial Forecasts, Volume 43, No. 12, November 27, 2024, at 14.

1 market return from these three sources is 16.68 percent, as shown in Figure 12 (also  
2 see Exhibit JMC-5.1).

3 **Figure 12: Total Market Return**

Source	Market Return
S&P Earnings & Estimates	17.08%
Bloomberg Professional	17.44%
Value Line	15.50%
Average	16.68%

4  
5 I then calculated the MRP by subtracting the risk-free rate from the total market  
6 return of 16.68 percent. My calculation as shown in Exhibit JMC-5.2 yielded a  
7 market derived ex-ante MRP of 12.11 percent using the current 30-day average  
8 risk-free rate (4.56 percent) and 12.38 percent using the projected interest rate  
9 (4.30 percent).

10 **Q. What are the results of your CAPM analyses?**

11 A. The CAPM results range from 15.34 percent to 15.95 percent as shown in Exhibit  
12 JMC-5.2 and summarized in Figure 13.

13 **Figure 13: CAPM Results**

	<b>Current Risk-Free Rate (4.56%)</b>	<b>Projected Risk-Free Rate (4.30%)</b>
Value Line Betas	15.95%	15.93%
Bloomberg Betas	15.37%	15.34%

14

1  $RP =$  Risk Premium (difference between allowed ROEs and the  
 2 30-Year Treasury Yield);  
 3  $a =$  Intercept term;  
 4  $b =$  Slope term; and  
 5  $Y =$  30-Year Treasury Yield.

6 Data regarding allowed ROEs were derived from 769 integrated electric utility  
 7 company rate cases from January 1992 through December 31, 2024, as reported by  
 8 Regulatory Research Associates.

9 **Figure 14: Risk Premium**

10  
 11 As illustrated by Figure 14, the risk premium varies with the level of bond yield,  
 12 and generally increases as the bond yields decrease, and vice versa. In order to  
 13 apply this relationship to current and expected bond yields, I consider three  
 14 estimates of the 30-year Treasury yield, including the current 30-day average, a  
 15 near-term Blue Chip consensus forecast for Q2 2025 – Q2 2026, and a Blue Chip

1 consensus forecast for 2026-2030. Based on the regression coefficients in Exhibit  
2 JMC-6, which allow for the estimation of the risk premium at varying bond yields,  
3 the results of my Risk Premium analysis are shown in Figure 15.

4 **Figure 15: Risk Premium Results Using 30-Year Treasury Yield**

	<b>Using 30-Day Average Yield on 30-Year Treasury Bond</b>	<b>Using Q2 2025–Q2 2026 Forecast for Yield on 30-Year Treasury Bond<sup>35</sup></b>	<b>Using 2026-2030 Forecast for Yield 30-Year Treasury Bond<sup>36</sup></b>
Yield	4.56%	4.48%	4.30%
Risk Premium	6.01%	6.05%	6.15%
Resulting ROE	10.57%	10.53%	10.45%

5

6 **D. Expected Earnings Analysis**

7 **Q. Have you conducted any other analysis to estimate the cost of equity for FPL?**

8 A. Yes. I have also conducted an Expected Earnings analysis to estimate the cost of  
9 equity for FPL based on the projected ROEs for the proxy group companies.

10 **Q. What is an Expected Earnings Analysis?**

11 A. The Expected Earnings methodology is a comparable earnings analysis that  
12 calculates the earnings that an investor expects to receive on the book value of a  
13 stock. The Expected Earnings analysis is a forward-looking estimate of investors'  
14 expected returns. The use of an Expected Earnings approach based on the proxy  
15 companies provides a range of the expected returns on a group of risk-comparable

<sup>35</sup> Blue Chip Financial Forecasts, Vol. 44, No. 1, December 30, 2024, at 2

<sup>36</sup> Blue Chip Financial Forecasts, Vol. 43, No. 12, November 27, 2024, at 14.

1 companies to the subject company. This range is useful in helping to determine the  
2 opportunity cost of investing in the subject company, which is relevant in  
3 determining a company's ROE.

4 **Q. How did you develop the Expected Earnings Approach?**

5 A. I relied primarily on the projected ROE for the proxy companies as reported by  
6 Value Line for the period from 2027-2029. I then adjusted those projected ROEs  
7 to account for the fact that the ROEs reported by Value Line are calculated on the  
8 basis of common shares outstanding at the end of the period, as opposed to average  
9 shares outstanding over the entire period. As shown in Exhibit JMC-7, the  
10 Expected Earnings analysis results in a mean of 10.91 percent and a median of  
11 10.27 percent.

12

13 **E. Evaluating the Model Results**

14 **Q. Please explain how you have considered the results of the DCF, CAPM, Risk**  
15 **Premium and Expected Earnings analysis to arrive at your ROE**  
16 **recommendation.**

17 A. For each proxy company, I calculate the 4-model average giving equal weight on  
18 the results of the DCF, CAPM, Bond Yield Risk Premium, and Expected Earnings  
19 analyses. My ROE recommendation is ultimately based on the average produced  
20 by these four methodologies. As shown in Figure 16 (and computed in JMC-2 as  
21 the 4-Model Average), I derive an average base ROE estimate for the proxy group  
22 companies of 11.82 percent to 11.85 percent using projected and current interest  
23 rates, respectively, for an average of 11.83 percent, excluding flotation costs.

1

**Figure 16: Base ROE Results**

	<b>ROE Estimate Using Current Interest Rates</b>	<b>ROE Estimate Using Projected Interest Rates</b>
DCF	10.28%	10.28%
CAPM	15.65%	15.63%
Risk Premium	10.57%	10.45%
Expected Earnings	10.91%	10.91%
Range	10.28% - 15.65%	10.28% - 15.63%
Proxy Group Average ROE	11.85%	11.82%

2

3 As discussed in the next Section of my testimony, this estimate serves as a base  
4 prior to consideration of relative business risks and flotation costs.

5

6

## **VII. BUSINESS RISKS AND FLOTATION COSTS**

7

**Q. Are there factors specific to FPL's risk profile that you also considered in  
8 developing your ROE recommendation?**

9

A. Yes, there are several factors that have a direct bearing on FPL's risk profile in  
10 relation to the proxy group. Those risk factors include: (a) the Company's  
11 substantial capital expenditure program; (b) FPL's nuclear generation fleet; (c) risk  
12 associated with storm damage and resulting outages; (d) regulatory risk relative to  
13 the proxy group companies; and (e) risk related to the term of FPL's proposed 4-  
14 year rate plan. In aggregate, those risk factors elevate FPL's risk profile relative to  
15 the proxy group and would support an authorized ROE above the mean, although I

1 have not made a risk adjustment above the mean. I also considered flotation costs  
2 associated with the issuance of common equity.

3

4 **A. Capital Expenditure Program**

5 **Q. Please discuss FPL's capital spending program.**

6 A. FPL projects that the Company will spend \$39.0 billion on capital projects over the  
7 period from 2025-2028, or approximately \$9.75 billion per year on average.<sup>37</sup> The  
8 primary purpose of these capital projects is to enhance the reliability of FPL's  
9 electric transmission and distribution system, to support customer growth, to meet  
10 the Company's generating capacity needs, and to harden the electrical system so as  
11 to further prepare for potential storm damage. FPL's projected capital expenditures  
12 represent approximately 56.86 percent of the Company's net utility plant of  
13 \$68.6 billion as of December 31, 2023.<sup>38</sup>

14 **Q. How is FPL's risk profile affected by its capital expenditure requirements?**

15 A. As with any utility facing substantial capital expenditure requirements, the  
16 Company's risk profile is affected in two significant and related ways: (1) the  
17 heightened level of investment increases the risk of under recovery or delayed  
18 recovery of the invested capital; and (2) an inadequate return would put downward  
19 pressure on key credit metrics.

---

<sup>37</sup> NextEra Energy, Inc. and Florida Power & Light Company, SEC Form 10-K, for the year ended December 31, 2024, at 108.

<sup>38</sup> S&P Capital IQ.

1 **Q. Do credit rating agencies recognize the risks associated with elevated levels of**  
2 **capital expenditures?**

3 A. Yes. From a credit perspective, the additional pressure on cash flows associated  
4 with higher levels of capital expenditures exerts corresponding pressure on credit  
5 metrics and, therefore, credit ratings. To that point, Moody’s explains the  
6 implications of large capital expenditure programs on utilities’ credit profiles and  
7 notes that “[h]igh capital expenditures were a key driver of most of [Moody’s]  
8 negative rating actions” in 2024:<sup>39</sup>

9 Credit pressure is emerging most acutely for companies with large,  
10 complex or multiyear projects or for those that are experiencing a  
11 delay in the recovery of investment costs. Unlike exogenous events  
12 of recent years – such as severe storms, commodity price spikes and  
13 the COVID-19 pandemic, which we viewed as temporary events –  
14 capital spending and related financings are core long-term financial  
15 policy issues. As such, we are not regarding them as temporary and  
16 believe they will likely continue to lead to negative rating actions if  
17 not sufficiently mitigated.<sup>40</sup>

18 S&P explains the importance of regulatory support for large capital projects:

19 When applicable, a jurisdiction’s willingness to support large capital  
20 projects with cash during construction is an important aspect of our  
21 analysis. This is especially true when the project represents a major  
22 addition to rate base and entails long lead times and technological  
23 risks that make it susceptible to construction delays. Broad support  
24 for all capital spending is the most credit-sustaining. Support for  
25 only specific types of capital spending, such as specific  
26 environmental projects or system integrity plans, is less so, but still  
27 favorable for creditors. Allowance of a cash return on construction  
28 work-in-progress or similar ratemaking methods historically were  
29 extraordinary measures for use in unusual circumstances, but when  
30 construction costs are rising, cash flow support could be crucial to  
31 maintain credit quality through the spending program. Even more

---

<sup>39</sup> Moody’s Ratings, Electric and Gas Utilities – US Sector In-Depth, “High capital spending will weigh on credit quality without supportive company actions,” at 3 (October 21, 2024).

<sup>40</sup> Moody’s Ratings, Electric and Gas Utilities – US Sector In-Depth, “High capital spending will weigh on credit quality without supportive company actions,” at 2 (October 2024)

1 favorable are those jurisdictions that present an opportunity for a  
2 higher return on capital projects as an incentive to investors.<sup>41</sup>

3 Therefore, to the extent that FPL's rates do not permit the Company an opportunity  
4 to recover its full cost of doing business, FPL will face increased recovery risk and  
5 thus increased pressure on its credit metrics. Maintaining access to capital markets  
6 on favorable terms is important for utilities and their customers, especially during  
7 periods of significant capital investment.

8 **Q. Have you analyzed how FPL's capital spending program compares to those of**  
9 **the proxy group companies?**

10 A. Yes. I compared the ratio of projected capital expenditures to net utility plant for  
11 FPL to the ratios for the proxy group companies. Figure 17 shows that FPL's ratio  
12 of projected capital expenditures to net utility plant is the fourth highest of the proxy  
13 companies and is 1.3 times higher than the median ratio for the proxy group of  
14 43.03 percent. As discussed in the Direct Testimony of FPL witnesses Bores,  
15 Laney, Broad, De Varona and others, the Company's capital expenditure program  
16 is designed to benefit and deliver value for customers but does slightly elevate the  
17 risk profile of FPL.

---

<sup>41</sup> S&P Global Ratings, "Assessing U.S. Investor-Owned Utility Regulatory Environments," August 10, 2016, at 7.

1 **Figure 17: Ratio of 2025-28 Capital Expenditures**  
2 **to 2023 Net Utility Plant**

3  
4 **Q. What is your conclusion regarding how FPL’s projected capital expenditure**  
5 **program affects the Company’s risk profile and cost of equity?**

6 A. My primary conclusion is that FPL is undertaking a substantial capital spending  
7 program through 2028 that will require the Company to maintain continuous access  
8 to capital markets on reasonable terms and conditions. FPL’s ratio of capital  
9 expenditure requirements to net utility plant is higher than the median ratio for the  
10 proxy group companies, and places pressure on the Company’s cash flows and  
11 credit metrics. For these reasons, it is important that the authorized ROE be set at  
12 a level that allows FPL to continue to attract both debt and equity under favorable  
13 terms under a variety of economic and financial market conditions.

14  
15 **B. Nuclear Generation Ownership**

16 **Q. Does the Company’s generation portfolio include nuclear generating assets?**

17 A. Yes. FPL’s generation portfolio includes approximately 3,479 MW of owned  
18 nuclear generating capacity. Specifically, the Company owns 1,821 MW of

1 existing net generating capacity at the St. Lucie plant (which excludes the Orlando  
2 Utilities Commission's and Florida Municipal Power Agency's 15 percent  
3 ownership interest in St. Lucie Unit No. 2) and 1,681 MW of existing net generating  
4 capacity at the Turkey Point plant.<sup>42</sup>

5 **Q. Please discuss the risk associated with nuclear generation ownership.**

6 A. Nuclear generation resources are regulated by the U.S. Nuclear Regulatory  
7 Commission ("NRC"). FPL is subject to NRC mandates to meet licensing and  
8 safety-related standards that may require increased capital spending and  
9 incremental operating costs to ensure the continued operation of this low cost and  
10 emission-free generating source. With respect to the risk associated with NRC  
11 regulation generally, NextEra Energy's SEC Form 10-K specifically notes that,  
12 "NRC orders or new regulations related to increased security measures and any  
13 future safety requirements promulgated by the NRC could require NEE and FPL to  
14 incur substantial operating and capital expenditures at their nuclear generation  
15 facilities and/or result in reduced revenues."<sup>43</sup> Further, NextEra Energy also notes  
16 the risk associated with new regulatory requirements from the NRC as follows: "A  
17 major incident at a nuclear facility anywhere in the world could cause the NRC to  
18 limit or prohibit the operation or licensing of any domestic nuclear generation  
19 facility. An incident at a nuclear facility anywhere in the world could also cause  
20 the NRC to impose additional conditions or other requirements on the industry, or

---

<sup>42</sup> NextEra Energy, Inc., 2024 SEC Form 10-K, at 8.

<sup>43</sup> NextEra Energy, Inc., 2024 SEC Form 10-K, at 31.

1 on certain types of nuclear generation units, which could increase costs, reduce  
2 revenues and result in additional capital expenditures for NEE and FPL.”<sup>44</sup>

3 **Q. Are there examples of the increased risk of new regulatory requirements that**  
4 **nuclear generation plant operators face?**

5 A. Yes. One example is the increased oversight and regulatory requirements put in  
6 place after the March 11, 2011 earthquake and tsunami which caused significant  
7 damage to the Fukushima Daiichi nuclear complex in Japan and threatened the  
8 public health. After the Fukushima accident, the NRC formed a task force to assess  
9 current regulations and determine if new measures were required to ensure safety.  
10 The task force issued a report in July 2011 that included a set of recommendations  
11 for NRC consideration, and NRC Staff issued the first set of related regulatory  
12 requirements in March 2012. The Fukushima accident clearly demonstrates that  
13 additional regulatory oversight and requirements, which affect the cost of operating  
14 FPL’s nuclear plants, can result from events wholly unrelated to FPL or its  
15 facilities.

16 **Q. How does the investment community view the risk associated with nuclear**  
17 **generation assets?**

18 A. Both equity analysts and credit rating agencies are aware of the operating and safety  
19 risks associated with nuclear generation assets. For example, Moody’s noted in its  
20 August 2024 report for FPL, “[t]he company’s nuclear generation fleet adds risks  
21 of waste management and pollution. While FPL has not had any problems with its  
22 nuclear fleet or nuclear waste to date, it remains an inherent risk for nuclear

---

<sup>44</sup> NextEra Energy, Inc., 2024 SEC Form 10-K, at 31.

1 operators in the industry.”<sup>45</sup> S&P Global Ratings made the following comments  
2 on the challenges for nuclear operators:

3 Nuclear energy has faced mounting criticism over security concerns,  
4 especially in the aftermath of the Fukushima disaster on March 11,  
5 2011. Nuclear operators face unique risks of low-probability, but  
6 high-impact catastrophic events. As a consequence, operators face  
7 increasing political and social pressures on safety, waste disposal,  
8 and storage. While profitability remains a key pillar of our business  
9 risk assessment of nuclear operators, we equally take these other  
10 risks into account. Furthermore, nuclear-related long-term liabilities  
11 typically represent a large portion of nuclear operators' overall S&P-  
12 adjusted debt.<sup>46</sup>

13  
14 UBS refers to FPL’s nuclear operating risk;<sup>47</sup> and BMO Capital Markets notes that  
15 the Company’s nuclear assets are subject to federal and state operational and safety  
16 standards.<sup>48</sup>

17 **Q. Do other companies in the proxy group also face nuclear generation risk?**

18 A. Yes. Ten of the 15 companies in the proxy group also own regulated nuclear  
19 generating assets. From that perspective, all other things equal, FPL has higher risk  
20 than five of the companies in the proxy group and comparable risk to ten of the  
21 companies in the proxy group. The extent of nuclear risk does vary by company  
22 according to the age, technologies, invested assets, fleet management capabilities,  
23 location, and other factors that would distinguish one company from another. FPL’s  
24 regulated generation operating capacity is 9.9 percent nuclear versus an average of  
25 9.3 percent for the proxy group, based on 2023 data. On a net generation basis,

---

<sup>45</sup> Moody’s Investors Service, Credit Opinion, Florida Power & Light Company, August 14, 2024, at 9.

<sup>46</sup> “The Energy Transition: Nuclear Dead or Alive,” S&P Global Ratings, November 11, 2019, p. 10.

<sup>47</sup> UBS, NextEra Energy Inc., July 24, 2024, at 2.

<sup>48</sup> BMO Capital Markets, “NextEra Energy: Origination Drives Outperformance – Focus Turns Now to Election and FPL Rate Case,” July 24, 2024, at 8.

1 FPL had a slightly higher proportion of nuclear generation in 2023 (20.1 percent)  
2 than the proxy group on average (19.9 percent). Further, FPL is the only investor-  
3 owned electric utility in Florida with nuclear generation. Considering that FPL has  
4 established a track record of safely operating its nuclear fleet, I conclude that FPL  
5 has comparable risk to the proxy group companies, on average, with respect to  
6 nuclear generating assets.

7  
8 **C. Severe Weather Risk**

9 **Q. Please explain the risk associated with severe weather in FPL's service**  
10 **territory.**

11 A. FPL faces the risk of sudden, unexpected damage from severe storms. The  
12 prevalence of hurricanes, such as Hurricane Ian, the second costliest hurricane in  
13 U.S. history,<sup>49</sup> make FPL's operating area an especially high-risk area for incurring  
14 weather-related infrastructure repair costs and service disruptions. As FPL witness  
15 Bores reports, hurricanes, and storms over 2016-2024 (including Matthew, Irma,  
16 Dorian, Isaias, Eta, Ian, Nicole, Debby, Helene and Milton) inflicted a total of more  
17 than \$4.6 billion of damage to FPL's system, before adjusting for inflation. Mr.  
18 Bores shows how these risks have grown substantially over the decades. The last  
19 four years have yielded the fourth (2023), third (2021), and most active (2020)  
20 Atlantic hurricane seasons in history. In the Atlantic Basin there were 30 named  
21 storms in 2020, of which 14 became hurricanes; 21 named storms in 2021, 7 of

---

<sup>49</sup> Source: Insurance Information Institute: <https://www.iii.org/fact-statistic/facts-statistics-hurricanes#U.S.%20Hurricane%20Wind%20Risk,%20Gulf%20and%20Atlantic%20States,%202024>

1 which became hurricanes; 14 named storms in 2022, of which 8 became hurricanes;  
2 and 20 named storms in 2023, of which 7 became hurricanes. In 2024 there were  
3 18 named storms, 11 of which became hurricanes and five strengthened into major  
4 hurricanes (category 3 or higher).<sup>50</sup>

5  
6 In addition to the need to fund repair costs, severe weather often leads to customer  
7 outages due to damage of transmission or distribution infrastructure, the disruption  
8 of generating capacity, or property damage so extensive that it prevents customers  
9 from taking service. Together, these effects can reduce FPL’s revenue and strain  
10 the Company’s operating cash flow. In order to continue to attract capital on  
11 reasonable terms, FPL must have the financial strength and flexibility to cover these  
12 severe weather costs until the Company is able to recover the costs from customers,  
13 which can take several years.

14 **Q. Have credit rating agencies commented on FPL’s risk related to severe**  
15 **weather?**

16 A. Yes. For example, Moody’s has noted that, “FPL’s credit profile considers its  
17 geographic concentration risk, as it operates solely in one state that is exposed to  
18 extreme weather events such as hurricanes and tropical storms.”<sup>51</sup>

---

<sup>50</sup> Source: National Oceanic and Atmospheric Association (“NOAA”)  
<https://www.nesdis.noaa.gov/news/2024-atlantic-hurricane-season-wraps>

<sup>51</sup> Moody’s Investor Service, Florida Power & Light Company Credit Opinion, August 14, 2024, at 1.

1 **Q. Does FPL have a regulatory mechanism that mitigates the risk related to**  
2 **severe weather?**

3 A. Yes. The approved settlement from the 2021 rate case provides that FPL’s future  
4 storm costs would be recoverable on an interim basis beginning 60 days from the  
5 filing of a cost recovery petition but in some cases its interim recovery for the first  
6 12 months could be capped at an amount that falls far short of what the Company  
7 incurs to complete restoration after a major hurricane. If storm restoration costs  
8 exceed \$800 million in any given calendar year, FPL was authorized to request an  
9 increase to the surcharge limit. As part of its four-year plan, FPL is proposing a  
10 similar mechanism that would allow FPL to petition for authority to recover costs  
11 over the cap, with the amounts and the recovery period to be determined by the  
12 Commission.

13  
14 In 2019, Florida enacted Florida Statute Section 366.96 entitled “Storm protection  
15 plan cost recovery,” a law that mandates the preparation of 10-year storm protection  
16 plans for utilities that must be updated every three years. According to the  
17 Commission:

18 Section 366.96, F.S., requires each investor owned electric utility  
19 (IOU) to file a transmission and distribution storm protection plan  
20 (storm protection plan) for the Commission’s review and directs the  
21 Commission to hold an annual proceeding to determine the IOU’s  
22 prudently incurred costs to implement the plan and allow recovery  
23 of those costs through a Storm Protection Plan Cost Recovery  
24 Clause (SPPCRC).<sup>52</sup>

<sup>52</sup> <http://www.psc.state.fl.us/library/filings/2019/08909-2019/08909-2019.pdf>

1 **Q. Do other companies in the proxy group also have storm-related risk?**

2 A. Several other companies in the proxy group have storm-related risk. However, the  
3 severe weather risk for FPL is greater in magnitude due to the potential for storm  
4 damage that may cause extended outages and cost a substantial amount to repair.  
5 As FPL witness Bores points out in his testimony, “Florida’s peninsular location  
6 within the subtropical latitudes and its topography exposes its electrical  
7 infrastructure to a higher likelihood of adverse weather events compared to most  
8 other parts of the country . . .”<sup>53</sup> Florida is consistently ranked among, or at the top,  
9 of the highest level of natural disaster risk in comparison to other U.S. states.  
10 Further, as Moody’s noted, the Company’s operations are concentrated solely in  
11 Florida, so it is not able to diversify its geographic, storm, or regulatory risk as the  
12 majority of other proxy companies are.

13 **Q. Is risk associated with severe weather an increasing concern for utilities and**  
14 **their investors?**

15 A. Yes. The credit rating agencies are increasingly concerned with growing physical  
16 risks to utilities associated with severe weather and climate events. In a November  
17 2023 report, S&P noted that the increasing frequency of extreme and devastating  
18 physical events is heightening risks for North American investor-owned utilities.<sup>54</sup>  
19 S&P commented that it “has downgraded more IOUs due to physical events (e.g.,  
20 hurricanes, storms, and wildfires) over the past six years by nearly 10 times

---

<sup>53</sup> Bores Direct.

<sup>54</sup> S&P Global Ratings, “A Storm Is Brewing: Extreme Weather Events Pressure North American Credit Quality,” November 9, 2023.

1 compared with the previous 13 years.”<sup>55</sup> From 2005-2017, S&P downgraded only  
2 two investor-owned utilities because of physical risks, but downgraded 19 between  
3 2018-2023. S&P further noted that on an inflation-adjusted basis, 2021 and 2022  
4 represented two of the top five most destructive years for extreme weather events  
5 since 1980, according to the National Oceanic and Atmospheric Administration. In  
6 its 2025 Industry Credit Outlook for the Utility Sector, S&P assumes that “these  
7 trends will persist, magnifying physical risks for the utility industry.”<sup>56</sup>

8  
9 Accentuating these reports, the 2020 Atlantic storm season was the most active on  
10 record for the number of named storms (30), exceeding the total of 27 in 2005.  
11 2021 and 2023 were the third and fourth most active on record. Prior to 2005, no  
12 season had exceeded 20 since reliable record keeping began in 1944, and only once  
13 prior to then in 1933, with 21.<sup>57</sup>

14 **Q. What is your conclusion with respect to FPL’s risk due to severe weather?**

15 A. My conclusion is that FPL has above average risk due to severe weather compared  
16 to the proxy group companies. As Moody’s observes, FPL provides service in a  
17 state that is exposed to extreme weather events such as hurricanes and tropical  
18 storms. Unlike other companies in the proxy group, FPL (as an operating company)  
19 is unable to diversify this risk through operations in other jurisdictions that are not  
20 exposed to severe weather. While FPL has a storm cost recovery mechanism that

<sup>55</sup> S&P Global Ratings, “A Storm Is Brewing: Extreme Weather Events Pressure North American Credit Quality,” November 9, 2023.

<sup>56</sup> S&P Global Ratings, Industry Credit Outlook 2025, “North America Regulated Utilities: Capex and climate change pressures credit quality,” at 9 (January 14, 2025).

<sup>57</sup> <https://www.ncdc.noaa.gov/sotc/tropical-cyclones/20051>

1 allows the Company to petition for recovery of costs associated with restoring  
2 service after severe weather events, depending on the level of storm costs, recovery  
3 above a modest threshold lies within the Commission's discretion in terms of both  
4 amount and period of recovery. In all cases, final cost recovery is often the subject  
5 of protracted litigation before the Commission. The storm hardening mandate  
6 under Section 366.96, Florida Statutes offers the ability to further mitigate these  
7 risks, but climate change increases the risk that severe weather events will increase  
8 in frequency and magnitude. As FPL witness Bores points out, "These risks have  
9 the potential to directly impact FPL's credit profile and, therefore, financial  
10 strength. Customers will be disadvantaged if the Company is unable to deploy the  
11 necessary capital to continue to mitigate these risks and respond quickly and  
12 efficiently when these events occur."<sup>58</sup> FPL is undertaking substantial capital  
13 spending over the next decade to improve the reliability and resiliency of its electric  
14 transmission and distribution system. When evaluating cost of capital, it is  
15 necessary for the Company to have an authorized ROE that will allow FPL to attract  
16 capital to finance these investments that other utilities are not required to make.

#### 17 18 **D. Regulatory Risk**

19 **Q. Have you performed an analysis of the regulatory mechanisms for FPL as**  
20 **compared to those for the proxy group companies?**

21 **A.** Yes. I have conducted an analysis of the regulatory mechanisms that are in place  
22 for FPL compared with those for the operating utility companies held by the proxy

---

<sup>58</sup> Bores Direct.

1 group. The results of my analysis are presented in Exhibit JMC-9. Specifically, I  
2 examined the following factors that affect the regulatory risk of FPL and the proxy  
3 group companies: (1) test year convention; (2) rate base convention; (3) revenue  
4 decoupling; (4) capital cost recovery; and (5) CWIP in rate base.

5  
6 As shown in Exhibit JMC-9, 60 percent of the operating companies in the proxy  
7 group like FPL provide service in jurisdictions that allow the use of a fully or  
8 partially forecasted test year. Further, 56 percent of the operating companies in the  
9 proxy group use average rate base like FPL, while 44 percent are allowed to use  
10 year-end rate base. FPL does not have any revenue protection against fluctuations  
11 in customer demand, while approximately 68 percent of the operating companies  
12 held by the proxy group have either full or partial revenue decoupling mechanisms  
13 that protect against volumetric risk. However, I recognize that FPL's requested  
14 Tax Adjustment Mechanism ("TAM") has the potential to stabilize its non-cash  
15 earnings and customer bills, similar to the Reserve Surplus Amortization  
16 Mechanisms previously approved for FPL. Generally, FPL's generation costs must  
17 be recovered through rate cases, although the generation base rate adjustment and  
18 solar and battery base rate adjustment mechanisms (known as GBRA and SoBRA)  
19 have allowed FPL to recover costs for certain units between rate cases when those  
20 mechanisms have been approved by the Commission. Approximately 22 percent  
21 of the operating companies in the proxy group have a cost recovery mechanism for  
22 generation capacity, and about 59 percent have cost recovery for other

1 infrastructure. Finally, FPL is allowed to include CWIP in rate base, similar to  
2 approximately 74 percent of the operating companies held by the proxy group.

3 **Q. Based on this analysis, what is your conclusion regarding the level of**  
4 **regulatory risk for FPL relative to that of the proxy group companies?**

5 A. As discussed above and as shown in Exhibit JMC-9, FPL has similar regulatory  
6 risk to the proxy group companies in terms of test year and rate base convention.  
7 Moreover, FPL has comparable regulatory risk with respect to cost recovery for  
8 large capital projects and the ability to include CWIP in rate base. However, FPL  
9 does not have protection against volumetric risk, while slightly more than  
10 68 percent of the operating companies held by the proxy group have revenue  
11 decoupling mechanisms that mitigate the effect on revenue of variations in demand.  
12 On balance, my conclusion is that FPL has comparable regulatory risk to the proxy  
13 group.

14

15 **E. Multi-Year Rate Plan**

16 **Q. Please explain the risk associated with FPL's proposed four-year rate plan.**

17 A. FPL is proposing a four-year rate plan under which the rates set in this proceeding  
18 would be in effect from 2026-2029. A multi-year rate plan has benefits for the  
19 Company and customers in terms of providing rate stability, but there are also  
20 certain risks associated with a longer-term rate plan. One of those risks relates to  
21 inflation. As evidenced over the past several years, both monetary policy from the  
22 Federal Reserve and fiscal policy from the U.S. Congress play pivotal roles in  
23 determining the levels of inflation. It remains to be seen how President Trump's

1 economic policies will impact the economy, but as mentioned previously, an  
2 aggressive stance on trade tariffs could spark a new round of inflationary pressure  
3 as tariffs are reflected into consumer goods.

4 **Q. Are there other risks related to a multi-year rate plan?**

5 A. Yes, in addition to the potential for higher interest rates over the term of the four-  
6 year rate plan, a multi-year rate plan limits the Company's ability to request a  
7 change in rates due to other factors. This inability to seek recovery of higher costs  
8 during the term of the rate plan increases the utility's risk. Further, if the cost of  
9 equity for FPL increases during the rate term, the Company will be required to wait  
10 to reflect that change in a subsequent rate proceeding.

11 **Q. What is your conclusion with regard to the multi-year rate plan?**

12 A. While FPL's proposed four-year rate plan provides rate certainty for both customers  
13 and the Company, there are attendant costs and risks of any multi-year rate plan.  
14 In particular, a multi-year stay-out agreement places certain risks on FPL's  
15 shareholders, including unexpected increases in costs or the cost of capital.

16

17 **F. Flotation Costs**

18 **Q. What are flotation costs, and how do they affect the cost of capital?**

19 A. Flotation costs are the costs associated with the sale of new issues of common stock.  
20 These costs include out-of-pocket expenditures for preparation, filing,  
21 underwriting, and other costs of issuance of common stock. To the extent that a  
22 company is denied the opportunity to recover prudently incurred flotation costs,  
23 actual returns will fall short of expected (or required) returns, thereby diminishing

1 the utility's ability to attract adequate capital on reasonable terms. To estimate  
2 flotation costs, the DCF calculation is modified to provide a dividend yield that  
3 reimburses investors for issuance costs. Based on the proxy group actual issuance  
4 costs shown in Exhibit JMC-10, flotation costs for the proxy companies have  
5 equaled roughly 2.51 percent of gross equity raised. To properly reflect these  
6 issuance costs in my cost of capital estimates, it is necessary to increase the  
7 authorized ROE by approximately nine basis points for FPL, as shown in Exhibit  
8 JMC-10.

9 **Q. Do your final results include an adjustment for flotation cost recovery?**

10 A. Yes. I add nine basis points to my base ROE recommendation of 11.83 percent for  
11 flotation costs, for a final ROE recommendation of 11.90 percent (rounded).

### 13 VIII. CAPITAL STRUCTURE

14 **Q. What is FPL's proposed capital structure?**

15 A. FPL is proposing a financial capital structure consisting of 59.6 percent common  
16 equity and 40.4 percent debt. In Florida, Accumulated Deferred Income Taxes are  
17 included in rate base and are part of the regulatory capital structure at 0 percent  
18 cost. Florida also includes customer deposits in the regulatory capital structure.  
19 FPL's proposed equity ratio using a regulatory capital structure is 48.04 percent in  
20 the 2026 and 2027 Projected Test Years. As explained by FPL witness Bores, this  
21 is the Company's actual capital structure and is how the Company has been  
22 financed for nearly twenty-five years.

1 **Q. How have you assessed the reasonableness of FPL’s proposed capital structure**  
2 **with respect to the proxy group?**

3 A. The proxy group has been selected to reflect comparable companies in terms of  
4 business and financial risks. Therefore, it is appropriate to compare the financial  
5 capital structures of the proxy group companies to the financial capital structure  
6 proposed by FPL in order to assess whether the Company’s capital structure is  
7 reasonable and consistent with industry standards for companies with  
8 commensurate risk. I calculated the weighted average capital structures for each of  
9 the proxy group operating companies for the three years ended 2023. Exhibit JMC-  
10 11 shows that the Company’s proposed common equity ratio of approximately  
11 59.6 percent on a financial basis is the upper end of the range of actual common  
12 equity ratios of 41.43 percent to 59.22 percent for the operating companies held by  
13 the proxy group over this period.

14 **Q. What is your conclusion regarding the appropriateness of FPL’s proposed**  
15 **capital structure in this proceeding?**

16 A. Based on the analysis presented in Exhibit JMC-11, my conclusion is that FPL’s  
17 proposed financial capital structure of 59.6 percent common equity and  
18 40.4 percent debt is reasonable. FPL’s equity ratio of 59.6 percent on a financial  
19 basis is the upper end of the range established by the operating companies held by  
20 the proxy group. Sufficient equity in the capital structure is an important factor for  
21 maintaining FPL’s financial integrity and investment grade credit rating. As noted  
22 by FPL witness Bores, “FPL has maintained the current equity ratio for nearly  
23 twenty-five years, and it is foundational to FPL’s current credit rating, financial

1 strength and flexibility to raise capital when needed to make long-term investments  
2 for the benefit of customers.”<sup>59</sup> This capital structure represents management’s  
3 decisions on how best to finance its operations. The Company’s proposed equity  
4 ratio is reasonable, given the additional risk borne by FPL relative to the proxy  
5 group—i.e., the Company’s projected capital expenditure requirements, risk  
6 associated with ownership of regulated nuclear generation assets, and storm-related  
7 risks.

8  
9 **IX. CONCLUSIONS AND RECOMMENDATION**

10 **Q. What is your conclusion regarding a fair ROE for FPL?**

11 A. As discussed throughout my testimony, it is important to consider a variety of  
12 quantitative and qualitative information in reviewing analytical results and arriving  
13 at a reasonable and appropriate ROE determination. Based on the quantitative  
14 analyses produced by the DCF, CAPM, Risk Premium, and Expected Earnings  
15 approach, I recommend a base authorized ROE for FPL of 11.83 percent equal to  
16 the average of the four methodologies, plus nine basis point adjustment for flotation  
17 costs, for a total of 11.92 which rounds down to my final recommendation of  
18 11.90 percent. As discussed herein, my recommendation considers the Company’s  
19 relative risk profile and the current economic and capital market environment.

---

<sup>59</sup> Bores Direct

1 **Q. What is your recommendation with regard to the capital structure for FPL in**  
2 **this proceeding?**

3 A. I support FPL's proposed financial capital structure of 59.6 percent common equity  
4 and 40.4 percent debt as reasonable, relative to the range of capital structures for  
5 the operating companies held by the proxy group companies, and consistent with  
6 the actual capital structure of the Company. This capital structure appropriately  
7 reflects FPL's substantial capital expenditure program, ownership of nuclear  
8 generation, and the Company's storm-related risk which place it at higher risk than  
9 the proxy companies. I recommend the Commission adopt FPL's proposed capital  
10 structure.

11 **Q. Does this conclude your Direct Testimony?**

12 A. Yes.

1 BY MS. MONCADA:

2 Q Mr. Coyne, are you also sponsoring exhibits  
3 JMC-1 through JMC-11 to your direct testimony?

4 A Yes.

5 Q And were those prepared under your direction  
6 or supervision?

7 A They were.

8 MS. MONCADA: Mr. Chairman, these have been  
9 pre-marked on staff's list as Exhibits 114 through  
10 124.

11 CHAIRMAN LA ROSA: Okay.

12 MS. MONCADA: Thank you.

13 BY MS. MONCADA:

14 Q And, Mr. Coyne, could you provide a summary of  
15 your testimony in a minute or less?

16 A I will. I know the hour is late.

17 Q Thanks.

18 A I appreciate the stamina of this commission  
19 and all parties.

20 My direct testimony presents evidence and  
21 provides a recommendation for FPL's return on equity and  
22 capital structure based on a comprehensive set of  
23 analyses that utilize market data and compare FPL to a  
24 proxy group of 15 industry peer companies.

25 No model can exactly pinpoint the correct cost

1 of equity, so my analysis considers the range of results  
2 produced by four models. From within that range, I take  
3 into consideration capital market conditions and  
4 relevant risk factors in order to arrive at a final  
5 recommendation for FPL.

6 Current market data indicate that the cost of  
7 equity has increased since the Commission approved the  
8 settlement in FPL's last rate proceeding in December of  
9 2021. Reflecting these factors, I find that a base ROE  
10 of 11.9 percent, and capital structure with a common  
11 equity ratio of 59.6 percent is both just and reasonable  
12 for shareholders and customers for the 2026 through 2029  
13 rate period.

14 I look forward to responding to your  
15 questions.

16 **Q Thank you.**

17 MS. MONCADA: Mr. Coyne is available for  
18 cross.

19 CHAIRMAN LA ROSA: OPC, you are recognized for  
20 questioning.

21 MS. CHRISTENSEN: Yes.

22 EXAMINATION

23 BY MS. CHRISTENSEN:

24 **Q Good evening, Mr. Coyne.**

25 A Good evening.

1 Q You filed direct testimony in this docket  
2 occupancy February 28th, 2025, correct?

3 A The direct testimony?

4 Q Correct.

5 A Yes.

6 Q Okay. And on page four of that testimony, you  
7 list the exhibits you are sponsoring, is that correct?

8 A Yes.

9 Q And you have been providing testimony on cost  
10 of capital issues for over 20 years, is that right?

11 A That's right.

12 Q And you would agree that the majority of your  
13 clients have been utilities, am I correct?

14 A That's correct.

15 Q Looking at your Exhibit JMC-1, and that is  
16 C61562. That's your curriculum vitae, correct?

17 A Yes.

18 Q Okay. And I wanted to ask you about a few of  
19 your cases on that curriculum vitae. If you turn to  
20 page 11 out of the 13. Do you see at the bottom of  
21 there, under the South Carolina Public Service  
22 Commission header, do you see Duke Energy Carolinas  
23 2024?

24 A I do, yes.

25 Q And do you recall that in that South Carolina

1 case for Duke, you filed testimony on May 17th, 2024, on  
2 the settlement that agreed to an ROE of 9.94 percent  
3 with a 51.21 percent equity ratio, is that correct?

4 A I recall the case. I would have to see the  
5 settlement to be able to confirm those numbers.

6 Q Okay. Did you want to take a look at a copy  
7 of your testimony that you filed in that, or would you  
8 take it subject to check?

9 A This is the settlement testimony in that case?

10 Q Correct.

11 A Okay. And the settlement you are citing was  
12 an ROE of?

13 Q 9.94 percent with a 51.21 percent equity  
14 ratio.

15 A Why don't I accept that subject to check?

16 Q Okay. And that was 56 basis points below your  
17 recommended ROE, correct?

18 A I don't have that in front of me.

19 Q Okay. Do you want me to pull it up -- well,  
20 let me ask you this question and we will see.

21 Subject to check, would you agree that your  
22 recommended ROE prior to the settlement was 10.5 percent  
23 in that case?

24 A Again, subject to check, yes.

25 Q Okay. And -- well, let me ask -- let me go

1 ahead and have you take a look at your testimony in that  
2 case? That would be F2-11783.

3 And does that look like the testimony that you  
4 filed in that case? Does that look familiar?

5 A Yes. Can we just go to -- is that your first  
6 page? Do you have a cover page?

7 Q I believe that was the first page -- no, there  
8 is the cover page.

9 A I have a little bit of a lag here on my  
10 screen.

11 MR. SCHULTZ: You should be able to use the  
12 mouse.

13 THE WITNESS: Oh, I see. I can actually  
14 mouse. Okay. Yes. It does.

15 BY MS. CHRISTENSEN:

16 Q Okay. And were the numbers that we were  
17 discussing earlier the correct numbers?

18 A The settlement numbers, 9.94 and 51.2 -- did  
19 you say -- I thought you said 51.25.

20 Q No. I said that the settlement number was  
21 9.94 percent ROE --

22 A Uh-huh.

23 Q -- with a 52 point -- or I am sorry, 51.21  
24 percent equity ratio. Do you see that?

25 A I see that here then. I thought you said 25.

1 Q No.

2 A But, yes, I see that and can confirm that.

3 Q Okay. And I believe in a portion of this  
4 testimony, it indicates that your initial recommendation  
5 was 10.0 -- or 10.5, on page -- basically the last page  
6 of the testimony, if you scroll down one more page.  
7 There you go. Do you see that? I am sorry, there were  
8 two, because there were two different cases, 10.7 and a  
9 10.50 respectively, do you see that?

10 A I do see that. Yes.

11 Q Okay. And then on page 13, going back to your  
12 curriculum vitae, which is JMC-1, and you have listed  
13 Northern States Power Company, is that correct?

14 A Yes.

15 Q Okay. And that's a subsidiary of Xcel Energy,  
16 is that correct?

17 A Yes.

18 Q Okay. And you also filed testimony in that  
19 case where you recommended an ROE of 10.25 with a 52.5  
20 percent equities ratio. Do you recall that?

21 A Which case are you referring to?

22 Q I'm -- well, let's pull up the case and then  
23 we will both be -- know specifically.

24 A Okay.

25 Q F2-11778, please? I believe it was the '23

1 case, but I wanted to confirm. Well, I think I took you  
2 to the last page with the equity ratio. Let me take you  
3 to the cover page, or closer to the cover page.

4 F2-11748.

5 A Okay. I am on that page with you.

6 Q Okay. And I believe if you scroll to the  
7 front of the document, it should have the title page for  
8 this case?

9 A I see that, yes.

10 Q And I believe that was testimony, it looks  
11 like you filed, was it '24 -- or '23, is that what it  
12 says --

13 A I believe --

14 Q -- or is that more recently?

15 A No, I believe it's 2023 --

16 Q '23.

17 A -- it should have a time stamp at the top.

18 Q Yeah. It looks like it was received April  
19 28th, 2023?

20 A Correct.

21 Q Okay. And do you recall recommending an ROE  
22 of 10.25 with a 52.5 percent equity ratio in this case?

23 A Yes.

24 Q Okay. Now, let's return to your direct  
25 testimony, page five, and that's C6-1492. Okay. And

1 your there?

2 A I am there.

3 Q Returning to that page number five, the  
4 purpose of your testimony is to present your  
5 recommendations for the return on equity for FPL,  
6 correct?

7 A That's right.

8 Q And you have a section later in your  
9 testimony, number, I believe it's nine, and you have a  
10 discussion of FPL's capital structure compared to your  
11 proxy group, is that correct?

12 A I do, yes. Which page reference are you  
13 referring to?

14 Q That would be page 10, line 11, and I believe  
15 that -- I may have -- I am sorry, section eight was  
16 where you discuss FPL's capital structure in the context  
17 of the proxy group, is that correct?

18 A Yes.

19 Q Okay. Now, looking back at your testimony,  
20 would it be fair to say you did not consider the  
21 affordability of FPL's rates for customers as a specific  
22 section within your testimony?

23 A As a specific section, no. As I mentioned at  
24 the outset, it's my belief that that -- in setting a  
25 fair return, it's the Commission's obligation to set a

1 return that's fair and balanced in the interest of both  
2 shareholders and for customers. But it's not an  
3 intrinsic element of the cost of capital analysis.  
4 That's a market-based analysis.

5 **Q Okay. And you would agree that this**  
6 **commission, in citing the Florida Supreme Court, has**  
7 **said that they recognize the balance between the**  
8 **utility's interest and the customer's interest, and the**  
9 **resolution that rates are to be neither insufficient for**  
10 **the utility nor excessive for customers, correct?**

11 A I recognize that language, and it's consistent  
12 with the public interest standards that generally guide  
13 commissions across the country.

14 **Q And would it be fair to say that, other than**  
15 **applying the Supreme Court Hope and Bluefield standards,**  
16 **you did not consider the affordability of FPL's in**  
17 **your -- rates in your analysis?**

18 A That's right. It's not intrinsic to a cost of  
19 capital analysis.

20 **Q And while you would agree that FPL's**  
21 **management is sensitive to the issue of affordability,**  
22 **you did not make any changes to your approach to your**  
23 **ROE recommendation, correct?**

24 A No. It's based on capital markets.

25 **Q Okay. And speaking of the capital markets, to**

1 make your ROE recommendation, you applied the standard  
2 ROE estimation tools such as discounted cash flow model,  
3 the capital asset pricing model, risk premium models,  
4 correct?

5 A Yes, I did.

6 Q And would you agree that each of these models  
7 reflect the state of the general economy and financial  
8 market by incorporating specific economic and financial  
9 data?

10 A In general, yes.

11 Q And if you look at page 14 of your direct  
12 testimony, specifically lines 14 through 17, you say  
13 that these inputs are, however, only samples of various  
14 economic and market forces that determine a utility's  
15 required return. Consideration must be given to whether  
16 the assumptions rely on the current or projected market  
17 data, and whether they are appropriate, correct?

18 A That's right.

19 Q And to do that, you use a proxy group of  
20 companies that you determined best approximated FPL in  
21 the marketplace by applying specific screening criteria,  
22 which are listed on page 29 of your direct testimony; is  
23 that correct?

24 A Yes. That's correct.

25 Q And one of the listed criteria that you

1 applied on page 29, and I think it's going over to the  
2 following page, specifically bullet point number eight,  
3 is that a company not be involved in a merger or other  
4 transformative transaction for approximately six months,  
5 correct?

6 A Yes.

7 Q And your list of proxy groups is contained on  
8 JMC-3, in figure 10 on page 31, correct?

9 A That's right.

10 Q And you said you picked this group because it  
11 best aligns with the financial and operational  
12 characteristics of FPL, in that, they are investment  
13 grade and in sound financial condition, correct?

14 A Those were among the factors that I  
15 considered. All the factors were listed in those eight  
16 criteria.

17 Q Okay. And you included the TXNM Energy as  
18 part of your proxy group, is that correct?

19 A That's right.

20 Q And TXNM Energy announced that it was being  
21 acquired on May 19th, 2025, right?

22 A I don't know the date. I am aware of the  
23 acquisition, yes.

24 Q Okay. And that announcement was made after  
25 you did your initial analysis and choosing your proxy

1 **group?**

2 A It was. Yeah. And that's why I changed my  
3 proxy group in my rebuttal testimony.

4 Q Okay. And we will get their tomorrow, I am  
5 sure, or a few days.

6 A Okay.

7 Q Turning back to 29, lines three through six.  
8 Is it your testimony that FPL has long-term issuer  
9 ratings from S&P of A with a stable outlook, or Moody's  
10 of an A1 with a stable outlook, and Finch of A with a  
11 stable outlook?

12 A That's my understanding. Yes.

13 Q In developing your selected proxy group, you  
14 only used S&P for screening, not Moody or Finch's  
15 long-term credit ratings, is that correct?

16 A That's right.

17 Q And in creating your proxy group, you used  
18 investment grade utilities rather than screening for  
19 only utilities with BB+ or stronger; is that also  
20 correct?

21 A That's right.

22 Q And although the prox -- although a proxy  
23 group with a B+ or better would have produced utilities  
24 with more similar credit rating characteristics to FPL  
25 than investment grade only, you chose to keep the

1 **investment grade criteria for the proxy group as being**  
2 **representative for FPL, right?**

3 A That's right. When I choose proxy groups, I  
4 start with a screen that is designed to produce what I  
5 consider to be a robust enough proxy group to give me a  
6 good sample statistically, and also from a risk analysis  
7 perspective to compare it to the target company. And  
8 these are the typical rate that I use.

9 I would add that most of the companies are  
10 ranked in the BBB or BBB+ range or higher, but I do  
11 start with BBB-. There aren't many utilities that are  
12 at that level.

13 **Q Okay. Would you agree that a company's credit**  
14 **rating refers to the risk of repayment to debt**  
15 **investors?**

16 A Yes.

17 **Q And would you agree that the higher the**  
18 **company credit rating reflects a lower risk of it's not**  
19 **repayment -- if it's not repaying to debt investors?**

20 A In general, yes, but the -- let's underscore  
21 your language and mine, that we are talking about debt  
22 investors. So what I am trying to do here is to create  
23 a proxy group based on these eight criteria, that's one  
24 of them, that give me a sufficient window into an equity  
25 investor's required return. So these are criteria

1 designed to select a proxy group that I can then begin  
2 to work with for my analysis.

3 Q Okay. And I think, as you just said, that it  
4 was one of the criteria that you looked at, correct?

5 A I am sorry, could you repeat the question?

6 Q The credit rating of the companies you chose,  
7 that was one of the things you looked at, was the credit  
8 rating?

9 A Yes. Yes. That's one of the eight.

10 Q Okay. And although equity investors look at  
11 earnings growth and earning volatility, things of that  
12 nature, you would agree that equity investors also look  
13 at the company's credit ratings as well?

14 A I believe they do. Yes.

15 Q Okay. And you would agree that the purpose of  
16 the screening criteria you selected is to find a group  
17 of companies that will tell you what the appropriate  
18 rate of return is for a company like FPL, not its parent  
19 company, that has other risk factors that FPL does not  
20 have, correct?

21 A That's right. If we could pause there, I  
22 would like to take you to my exhibits.

23 Q Well, I don't think I have a pending question,  
24 so unless --

25 A But I have a pending response.

1           **Q**     Well, yeah, but if you have a further  
2     **explanation, I am sure your counsel will be happy to ask**  
3     **you a follow-up question.**

4           A     Well, if I may, the question that I believe  
5     that I was answering for you was the relevance of the  
6     credit profile of these companies to an equity investor  
7     like FPL.

8                   CHAIRMAN LA ROSA:  If counsel would want  
9     further --

10                  MS. CHRISTENSEN:  No --

11                  CHAIRMAN LA ROSA:  If counsel would want  
12     further explanation, then you can ask a follow-up  
13     question.

14     BY MS. CHRISTENSEN:

15           **Q**     Right.  And I think my question was a little  
16     **bit more narrow than that, Mr. Coyne.  It was just**  
17     **whether or not the screening criteria you selected to**  
18     **find the company will tell you the appropriate rate of**  
19     **return is for a company like FPL, not the parent**  
20     **company, that has other risk factors.  I think you**  
21     **agreed with that.**

22           A     Well, no, that's not the question as I heard  
23     it.

24           **Q**     Well, that was the question that I asked.  So  
25     **if you could answer that question, that would be**

1 **wonderful. Thank you.**

2 A It would be helpful to me to repeat the  
3 question, then.

4 **Q Absolutely.**

5 **Would you agree that the purpose of the**  
6 **screening criteria you selected is to find a group of**  
7 **companies that would tell you what the appropriate**  
8 **return on return is for a company like FPL, not its**  
9 **parent company, that has other risk factors that FPL**  
10 **does not have?**

11 A Well, the screening criteria -- okay, now that  
12 I have heard your question more carefully. The  
13 screening criteria will not tell me the required return.  
14 What the screening criteria will do is to give me a  
15 group of companies that I can then analyze, and through  
16 that analysis, produce a required -- an estimated equity  
17 return for companies with a similar risk profile to that  
18 proxy group. And then -- and then as an analyst, it is  
19 my role to look at the risk profiles of those utilities  
20 compared to FPL to see if there is any adjustment that's  
21 required.

22 So that would be a more fulsome answer to your  
23 question as I now fully understand it.

24 **Q Okay. And I just wanted to make sure that I**  
25 **am clear and that I understood your answer. That**

1 this -- the idea of the proxy group is to match FPL, not  
2 its parent company, correct?

3 A Well, I wouldn't use the word match. Again --

4 Q Well, I mean, to a proxy -- I mean, you are  
5 putting it together to create similar risk for FPL, not  
6 for the proxy -- for the parent company, correct?

7 A Sufficiently similar risk to the target  
8 company, which is FPL, and not the parent company.  
9 That's correct.

10 Q Okay. That's all I was asking for. Thank  
11 you.

12 A Okay.

13 Q Now, let's discuss a little bit your  
14 discounted cash flow model. You use that as part of  
15 your analysis, correct?

16 A I do.

17 Q And if we look at, I think it's your DCF model  
18 results from JMC-2, page one of one, and that's C6-1565,  
19 and have you go there.

20 Okay. And this lists your DCF results, is  
21 that correct?

22 A I do, yes. I am looking for my hard copy as  
23 well.

24 Q Okay.

25 A I am with you.

1 Q Okay. And the DCF model results are from  
2 10.16 percent to 10.45 percent with the average being  
3 10.28 percent, is that correct?

4 A Those are the averages for the proxy group.

5 Q Okay. And if I take you then again back to  
6 page 33 of your direct testimony, you use a constant  
7 growth DCF model, is that right?

8 A That's right.

9 Q And it's your testimony that the constant DCF  
10 model is based on the following assumptions: One, a  
11 constant average growth rate for earnings and dividends;  
12 two, a stable dividend payout ratio; three, a constant  
13 price to earnings multiple; and, four, a discount rate  
14 greater than expected growth rate; is that correct?

15 A That's correct. Yeah.

16 Q Okay. Now, you chose a constant growth DCF  
17 model because FPL is at a mature stage of its life  
18 cycle, right?

19 A As a utility compared to other companies, it  
20 would be considered so, yes.

21 Q And you would agree that the long-term growth  
22 rate should theoretically be the growth rate that a  
23 company can sustain into perpetuity, correct?

24 A That is an assumption of the constant growth  
25 model. Yes.

1           **Q**     And would you also agree that often, gross  
2 domestic product growth for the risk-free rate can serve  
3 as a proxy for that growth rate?

4           A     As a growth rate for which?

5           **Q**     For a long-term sustainable growth rate into  
6 perpetuity?

7           A     For which company? I am not sure if I am with  
8 you in your question.

9           **Q**     Well, if you are doing the DCF model and you  
10 are doing it for a company like FPL, and you are looking  
11 at a long-term growth rate, you could use the gross  
12 domestic product as a substitute for the risk-free rate,  
13 correct, people do do that?

14          A     I don't know why you would ever use a gross  
15 domestic product number as a substitute for a risk-free  
16 rate. That would make no economic sense.

17          **Q**     Well, would you at least agree that in the  
18 long-term, that it is not realistic for a company's  
19 growth to outpace the growth of the general economy?

20          A     Could you repeat your question for me?

21          **Q**     Sure.

22                    Would you agree that over the long-term, that  
23 it is not realistic for a company's growth to outpace  
24 that of the overall general economy?

25          A     Well, I would disagree with that.

1           **Q**     **Okay.**

2           A     Better companies do all the time. The S&P 500  
3 companies do all the time. Utilities do.

4           **Q**     **Well, let me ask you this: For your DCF**  
5 **evaluation, isn't it true that a constant growth rate is**  
6 **also known as the terminal growth rate, and it's**  
7 **typically assumed to be two percent and four percent to**  
8 **reflect a realistic and sustainable growth rate which**  
9 **mirrors GDP growth rate or the risk-free rate?**

10          A     There is a lot in your question. Could you  
11 break -- let's break it down to pieces, if you could.

12          **Q**     **Okay.**

13          A     So you are asking me -- in the beginning of  
14 your question, you are asking me if a growth rate of  
15 what numbers?

16          **Q**     **I said, isn't it true that a constant growth**  
17 **rate is also known as a terminal growth rate, which is**  
18 **typically assumed to be between two percent and four**  
19 **percent to reflect a realistic sustainable rate, which**  
20 **often mirrors GDP growth for the risk-free rate?**

21          A     It's -- that's a generic statement. If you  
22 are applying it to utilities, I would say absolutely  
23 not. If you look at the utilities in my -- in this  
24 proxy group, they are all growing at rates of multiples  
25 of that. And if you look at the electric utility

1 industry at a time of unprecedented growth in terms of  
2 capital requirements for the industry, there is --  
3 there -- it would be a very unrealistic assumption that  
4 two- to four-percent is earnings growth rate, because we  
5 know that rate base has to grow faster than that just to  
6 accommodate all the requirements of our electric grid  
7 that are today, and on the horizon, some might argue  
8 that that is -- that that's appropriate. There is  
9 nothing in the data that I see that would support that.

10 **Q Okay. But let me ask you this: Have you used**  
11 **and relied on multistage DCF analysis in your testimony**  
12 **filed in other regulatory jurisdictions?**

13 A Yes, I have used the multistage model at  
14 times, yes.

15 **Q Okay. And would you agree that one of the**  
16 **reasons that you have used a multistage DCF analysis in**  
17 **other proceedings is because there may be concerns about**  
18 **the sustainability of growth rates?**

19 A Yes, I hear that there I may be concerns about  
20 sustainability of growth rates, and I will, at times,  
21 introduce the multistage model to show what those  
22 results would look like if they were tempered so.

23 I am also aware that this commission, in its  
24 most recent order for TECO, examined this issue, and  
25 accepted the argument that I believe that utilities

1 operate in mature industries, and that it is appropriate  
2 to use the constant growth model form of the DCF model  
3 for these purposes. So I think I am aligned with the  
4 Commission's finding in that regard.

5 **Q Well, it also has not made a finding that**  
6 **multistage DCF approach is inappropriate, correct?**

7 A I have not seen that, but to me, that's a  
8 reciprocal side of the same issue.

9 **Q Okay. And on page 36 of your testimony, you**  
10 **show the results of your DCF model and the average of**  
11 **the mean load -- low growth is 9.05 percent, right?**

12 A Which page of my testimony are you on?

13 **Q I am on page 36, if you look at figure 11.**

14 A Yeah.

15 **Q And if you look at the column that states mean**  
16 **low. And if you average those results for the 30-day**  
17 **average, the 90-day average and the 180-day average, you**  
18 **would end up with a 9.05 percent, would you agree to**  
19 **that, subject to check?**

20 A I would prefer just to go ahead and do that  
21 math.

22 **Q If you have a calculator, please do check my**  
23 **math. I am an attorney, so subject to correction.**

24 A I would, rather than to come back later. I  
25 know it's late in the evening, but if the Commission

1 will bear with me, I will. I hadn't realized you wanted  
2 to take an average of those numbers.

3 **Q** **Yep, just a simple average.**

4 **A** I get that number. The average of those three  
5 numbers is 9.05 percent.

6 **Q** **Okay. And then the mean column, the average**  
7 **for that column would be 10.28 percent, correct?**

8 **A** That looks about right.

9 **Q** **Okay. And then for the mean high column, if**  
10 **you took the average of that column, it would be**  
11 **11.30 percent, correct?**

12 **A** Again, it looks about right.

13 **Q** **Okay. And in your figure 16 on page 44 of**  
14 **your testimony, you show the 10.28 ROE figure for your**  
15 **DCF results, correct?**

16 **A** I do. Yeah.

17 **Q** **Okay. And then you also used a capital asset**  
18 **pricing model, correct?**

19 **A** I do.

20 **Q** **And I believe your analysis, or your**  
21 **discussion of that starts on page 36 of your testimony?**

22 **A** Yes, it does.

23 **Q** **And in your constant -- or in your CAPM**  
24 **modeling, you used the constant growth DCF model to**  
25 **system the total market return for the S&P 500 Index**

1 using projected earnings growth rates and dividend  
2 yields, is that correct?

3 A I did.

4 Q And with regard to the overall methodology for  
5 using the DCF model, the method you have used to  
6 calculate the forward-looking market risk premium is you  
7 claim is consistent with the methodology used by FERC in  
8 opinion number 531-B, is that correct?

9 A Where are you in my testimony?

10 Q I am looking at, I believe -- I am not sure if  
11 this was your discussion that we had in deposition or  
12 if -- where it says it exactly in your testimony. But  
13 would you agree that the -- it's your position that  
14 using the DCF constant growth model and the S&P 500  
15 Index, that would be consistent with the calculation for  
16 the forward-looking market risk premium methodology used  
17 by FERC in its opinion 531-B?

18 A I think of it as being similar to FERC's  
19 methodology in 569-A and B, and I lay this out in great  
20 detail in my rebuttal testimony exactly what the  
21 similarities are and what the differences are.

22 Q Okay. So there are differences between your  
23 approach and what FERC does as part of their  
24 methodology?

25 A There are differences, yes.

1           **Q**     Okay. And the method you used to calculate  
2     the forward-looking market risk premium for the S&P 500  
3     market risk premium includes both dividend paying and  
4     non-dividend paying companies, correct?

5           A     In my analysis?

6           **Q**     Correct.

7           A     Yes.

8           **Q**     And you would agree that FERC, in its opinion  
9     531-B, excludes the non-dividend paying companies in its  
10    application when calculating the total S&P 500 MRP,  
11    right?

12          A     They did, and I have testified -- I provided  
13    evidence to FERC on that issue pointing out what I  
14    believe are the flaws in that approach, but, yes, that  
15    was -- that was -- that's where FERC is on this issue  
16    even now.

17          **Q**     Okay.

18          A     And I point out the inconsistency between that  
19    approach and the use of beta, which is actually based on  
20    the entire market, and the flaws with excluding many  
21    companies from the market that are going into the same  
22    CAPM model. So it's an issue that, in my mind, FERC has  
23    yet to adequately resolve.

24          **Q**     However, FERC --

25                   MR. BURNETT: Mr. Chairman, I am sorry, brief

1 interruption. We are getting into rebuttal issues,  
2 which we don't mind at all. We are happy to bang  
3 those two together and have rebuttal and direct at  
4 the same time, if it's helpful for counsel. I  
5 believe we had asked earlier and gotten declined.

6 CHAIRMAN LA ROSA: We did. Is that -- would  
7 counsel agree, OPC, that we are going into rebuttal  
8 segment or discussion?

9 MS. CHRISTENSEN: I don't -- I think these are  
10 probably fair questions, because his direct  
11 testimony talks about how he calculates the CAPM  
12 using the S&P 500, and how he does that. And so I  
13 am testing whether or not it's consistent with  
14 FERC. If counsel would prefer, we can save these  
15 questions for rebuttal.

16 MR. BURNETT: Thank you, Mr. Chairman. I  
17 don't prefer at all. We asked earlier if we could  
18 merge the two together for efficiency, and we were  
19 told no by OPC. If they want to do it now, they  
20 changed their mind, we would love it.

21 CHAIRMAN LA ROSA: Yeah.

22 MS. CHRISTENSEN: I mean, I don't think that  
23 they are, you know, encroaching solely on rebuttal  
24 testimony. I can ask my questions, I won't -- I  
25 don't think it will be going into the same area in

1           rebuttal so we can do now or we can do it later. I  
2           don't really care. Would you prefer that I --

3                   CHAIRMAN LA ROSA: I am sorry?

4                   MS. CHRISTENSEN: I said I am happy to defer  
5           the questions on the FERC order until we get to  
6           rebuttal.

7                   CHAIRMAN LA ROSA: Yeah, let's do that.

8                   MS. CHRISTENSEN: Okay. Let me just take a  
9           look real briefly.

10          BY MS. CHRISTENSEN:

11                **Q     Okay. Now, let me ask you about the CAPM.**  
12                **That uses three inputs. First is the risk-free rate of**  
13                **interest, usually long-term bonds such as the 30-year**  
14                **U.S. Treasury, correct?**

15                A     That's right.

16                **Q     An the S&P 500 has a beta of .1, and a company**  
17                **above .1 is usually considered more risky than the stock**  
18                **market, and below .1 is less risky, is that correct?**

19                A     The beta for the market is 1.0.

20                **Q     All right. 1.0, sorry. It's getting late, I**  
21                **am getting a little tired, but -- okay.**

22                    **So 1.0 is the S&P 500. Above 1.0 is usually**  
23                **considered more risky, and below 1.0 is usually**  
24                **considered less risky than the market, correct?**

25                A     Generally so, yes.

1           **Q**     **Okay. And you would agree that the financial**  
2           **components of a CAPM is the expected equity or market**  
3           **risk premium which is often -- which is often the most**  
4           **difficult input to measure, correct?**

5           A     I would say that all three inputs to the CAPM  
6           are difficult to measure. The beta, the market equity  
7           risk premium and, for that matter, the risk-free rate.  
8           So that's one of the challenges of the model, is that  
9           all three are difficult to estimate, and there is a  
10          great amount of debate about both the robustness of the  
11          model and sources of those inputs. That's one of the  
12          things that we deal with when we use the model.

13          **Q**     **Okay. But generally speaking, the 30-year**  
14          **U.S. Treasury, that's something that you can find that's**  
15          **published by the U.S. government on a daily basis,**  
16          **correct?**

17          A     I have been in long dragged out debates  
18          regarding the future of the risk-free rate. So I would  
19          love to say the answer to your question is yes, but not  
20          in say experience, even that is subject to considerable  
21          scrutiny and debate, whether or not you use a current or  
22          forward-looking risk-free rate is an issue.

23                   And just look at, since this commission last  
24          set the ROE for Florida Power & Light in 2021, when the  
25          risk-free rate was below two percent, you know, it's now

1 been hovering between 4 and 5 percent. So I wouldn't  
2 restrict the difficulty to just the market equity risk  
3 premium.

4 Q All right. Fair enough.

5 You would -- if you look at figure 13 on page  
6 39 of your direct testimony, this shows the results of  
7 your CAPM, correct?

8 A Yes.

9 Q And your results of your CAPM using Bloomberg  
10 and -- the result are you CAPM using the Bloomberg  
11 current risk-free rate of 4.56 percent results in a  
12 15.37 percent end result with an implied risk premium of  
13 10.82 percent, correct?

14 A The 15.37 and the implied risk premium, where  
15 are you getting that from?

16 Q Correct. If you look at figure 13 --

17 A Uh-huh.

18 Q -- and you say the current risk-free rate,  
19 4.56 percent, correct?

20 A Yes.

21 Q And if you look at the Bloomberg betas, that's  
22 15.37, so if you subtract the risk-free rate from the  
23 Bloomberg rate, you end up with an implied risk premium  
24 of 10.81, correct, subject to check?

25 A Yes.

1 Q Okay. And subject to check, looking at the  
2 CAPM results using the Bloomberg projected risk-free  
3 rate of 4.30, and taking that from the 15.34 percent,  
4 you would end up with an implied risk premium of 11.04,  
5 correct?

6 A Yes.

7 Q Okay. And looking at, then, the Value Line  
8 betas, if you look at the current risk-free rate column  
9 and subtract that from the Value Line beta of 15.95, you  
10 would end up with an implied risk premium of 11.04,  
11 correct, subject to check?

12 A Subject to check, yes.

13 Q And subject to check, on the projected  
14 risk-free rate of 4.30 using the Value Line betas of  
15 15.93, if you subtract that, would you end up with an  
16 implied risk premium of 11.63 percent, correct?

17 A Yes.

18 Q Okay. And if you averaged out the implied  
19 risk premiums that we just discussed, subject to check,  
20 the average of your implied risk premiums in the CAPM is  
21 11.21 percent, correct?

22 A Well, subject to check. You have thrown a lot  
23 of math at me there that I haven't done.

24 Q I understand.

25 Are you familiar with Kroll and its market

1 risk premium?

2 A Yes.

3 Q Okay. And can I ask to go to F2-12323? And  
4 this would show the recommended U.S. equity risk premium  
5 and corresponding risk-free rates to be used in  
6 computing the cost of capital January 2008 to present,  
7 would you agree?

8 A That's the title, yes.

9 Q Okay. And it shows a 5.5 percent estimated  
10 risk premium, correct?

11 A I don't see it on the screen, but --

12 Q If you scroll down and you see in big green  
13 letters 5.5 percent current U.S. ERP, do you see that?

14 A I see it now, yes.

15 Q Okay. And would you agree that you have  
16 estimated risk premiums that are at least five percent  
17 higher than that of Kroll's?

18 A Well, they are different numbers, but not only  
19 are they different numbers, they don't even represent  
20 the same thing.

21 Q Let me ask you this --

22 A May I explain why they are different?

23 Q I accept that, but I think further explanation  
24 you might need to wait for your counsel to redirect you  
25 on that.

1           A     Okay.

2           Q     Let me ask you this: The risk premium is the  
3 investment return an asset is expected to yield in  
4 excess of the risk free rate of return, is that a fair  
5 statement?

6           A     Could you repeat it but more slowly?

7           Q     Certainly.

8                     The risk premium is the invested -- investment  
9 one return an asset is expected to yield in excess of  
10 the risk-free rate of return, is that a fair statement?

11          A     That's reasonable.

12          Q     Okay. On page 40 of your testimony, lines 16  
13 and 17, you say that you relied on the authorized  
14 returns from a large sample of vertically integrated  
15 electric utilities companies, correct?

16          A     That's right.

17          Q     And then on page 42 of your testimony, figure  
18 15, this shows your risk premium result, correct?

19          A     Yes.

20          Q     And the first row shows the yield for the  
21 30-year treasury bond rate depending on which ones you  
22 looked at, correct?

23          A     Yes.

24          Q     And the second row shows the risk premium,  
25 where you have a risk premiums of 6.01 percent, 6.05

1 percent and 6.15 percent, correct?

2 A Yes.

3 Q And then the third row, that shows the -- what  
4 you labeled the resulting ROE of 10.57 percent, 10.53  
5 percent and 10.45 percent, correct?

6 A That's right. That's one of the models I  
7 used.

8 Q Okay. And looking at your Exhibit JMC-6, this  
9 shows the average of the authorized electric ROEs in the  
10 fourth quarter of 2024, and that would be C6-1601, and  
11 have you go there. Are you there?

12 A I am there.

13 Q Okay. And if you go to the last page, that  
14 shows the most recent average authorized electric ROEs,  
15 is that correct?

16 A Most recent available at the time I submitted  
17 my direct testimony, yes.

18 Q Okay.

19 A Yeah.

20 Q And if you look at the fourth quarter of 2024,  
21 that shows the average authorized electric ROE was 9.88  
22 percent, correct?

23 A Yes.

24 Q And would you agree that the average  
25 authorized electric ROEs have not been above 11 percent

1 **for the last 20 years?**

2 A Yes. If you go to JMC-6, page two of four,  
3 that same exhibit, the last time that I could see that  
4 the average was over 11 was the fourth quarter of  
5 2004 --

6 **Q Okay.**

7 A -- when the U.S. government treasury yield was  
8 4.86 percent.

9 **Q Right.**

10 A Today, that treasury yield is 4.75 percent,  
11 almost exactly what was then, and that's an important  
12 point.

13 **Q Right. And if you look at 2005 for the first**  
14 **yachter, that average ROE started dropping to 10.63**  
15 **percent when the U.S. treasury was 4.69 percent?**

16 A I see that.

17 **Q Okay. And in note one, I believe, of this**  
18 **exhibit, you say that the source for this information**  
19 **was the Regulatory Research Associates through December**  
20 **31st, 2024; is that correct?**

21 A Yes.

22 **Q Now, going back to your testimony, which**  
23 **should be somewhere around page 43. This is where you**  
24 **start -- or I am sorry, page 42, D, you talk about your**  
25 **expected earnings results, is that correct?**

1 A Yes.

2 Q Okay. And on 43, you say your mean result for  
3 this analysis is a mean of 10.91 percent and a median of  
4 10.27 percent, is that correct?

5 A Yes.

6 Q And on page 44, if you look at the results for  
7 all of your modeling, the DCF, the CAPM, the risk  
8 premium and the expected earnings model, right, that  
9 shows all your results?

10 A Yes.

11 Q In looking at the figure, the only average  
12 model result in this chart with a result higher than  
13 11 percent is your CAPM model result, correct?

14 A For an average result, yes, average or median,  
15 yes.

16 Q Okay.

17 CHAIRMAN LA ROSA: Ms. Christensen, I am going  
18 to call it a night in a second, but I don't want to  
19 stop your momentum, so I just kind of maybe want to  
20 give you, like, a two-minute warning.

21 MS. CHRISTENSEN: I -- well, I have -- right  
22 now, I have about three-and-a-half pages left to  
23 go, so it, I mean, if you are willing to push  
24 through, I probably could finish my cross tonight,  
25 but that's up to you. I mean, I think it's only

1           probably about another 30 minutes, but I leave that  
2           to your discretion.

3           CHAIRMAN LA ROSA:   Yeah, I would rather start  
4           fresh in the morning.

5           MS. CHRISTENSEN:   Okay.

6           CHAIRMAN LA ROSA:   I want to find a good pivot  
7           point.  If it's a few more minutes, great.  If it's  
8           now, wonderful.

9           MS. CHRISTENSEN:   Let me get to my next  
10          subject break --

11          CHAIRMAN LA ROSA:   Sure.

12          MS. CHRISTENSEN:   -- and that would be good?

13          CHAIRMAN LA ROSA:   Sure.  Yeah, that was my  
14          intention.

15   BY MS. CHRISTENSEN:

16           **Q     Okay.  Subject to check, the CAPM result using**  
17           **the current interest rates is 4.74 points above the**  
18           **highest result, your expected earnings results, correct?**

19           A     Above the next highest, is that your question?

20           **Q     If you take the difference between your 15.65**  
21           **and the expected earnings, which is your next highest**  
22           **result of 10.91, that difference, using the current**  
23           **interest rates, is 4.7 percent higher, correct?**

24           A     Yes.

25           **Q     And then if you move over to the ROE estimate**

1 using projected interest rates, the difference between  
2 the CAPM and the next highest, the expected earnings of  
3 10.91 is 4.72 percent, correct?

4 A That's right.

5 Q And if you look at your CAPM results -- if you  
6 look at your CAPM results as an outlier and eliminate it  
7 from the results, you would agree that, subject to  
8 check, the average of your results using the current  
9 interest rates would be around 10.59 percent?

10 A You are asking me to make an assumption that I  
11 wouldn't make, and that is that my CAPM results are  
12 outliers. They are higher than the others, but that  
13 doesn't mean it's an outlier. It's a commonly used  
14 model for estimating the cost of capital for utilities,  
15 and I weight it equally with the other models, but I  
16 don't consider it an outlier, which is the premise of  
17 your question.

18 Q Well, if -- let's assume you didn't consider  
19 the 15.65 percent in this determination and just used  
20 the average of the three remaining results, you would  
21 agree that the average from the three remaining results  
22 would be 10.59 percent, correct?

23 A I would have to do that math.

24 Q Okay.

25 A But, of course, if I take a high number away

1 from three numbers that are lower, the average will be  
2 lower. It's just the reciprocal would be true, if I  
3 took out the low end of the numbers, the 10.28, the  
4 average would be higher. So that's just a fact.

5 **Q Right. And the fact would be that that would**  
6 **be 10.59 percent if the CAPM was removed under the**  
7 **current interest rates and 10.5 percent if you are using**  
8 **projected interest rates, subject to check, as just**  
9 **mathematically the way it was fall out, correct?**

10 A Well, if you have done the math, then I will  
11 say, yes, subject to check.

12 **Q Okay. And if you substituted the Kroll**  
13 **estimated market risk premium of 5.5 percent, your**  
14 **elevated current risk market premium of 12.11 percent,**  
15 **or the projected market risk premium in your CAPM**  
16 **results would be in the nine percent to 10 percent**  
17 **range, correct?**

18 A I cannot respond to that question the way you  
19 have asked it, because you are now asking me to  
20 substitute something from Kroll, which is an overall  
21 market premium, into the CAPM model. And the numbers  
22 that you discussed earlier deriving an implied market  
23 premium, were for the utility group not for the market  
24 as a whole. So you are mixing apples with oranges at a  
25 minimum, and I really couldn't make the conclusion you

1 are trying to ask me to make.

2 Q Well, let's take the -- well, I think for  
3 right now, I think I will stop there for tonight and  
4 avoid some more complicated math at this late hour and  
5 start fresh in the morning.

6 CHAIRMAN LA ROSA: Okay. Excellent.

7 All right. So tomorrow, we will start at 9:00  
8 a.m. Obviously, we will pick up right where we  
9 left off this evening.

10 Still have a few witnesses, obviously, to work  
11 through tomorrow, and then a schedule, a few for  
12 Monday and Tuesday. Of course, we will continue to  
13 keep track and just kind of check in as things are  
14 moving along tomorrow to figure out what time we  
15 can finish.

16 I just want to say this, I know that working  
17 sometimes a little bit later can be a little more  
18 difficult. I appreciate everyone's professionalism  
19 as we are trying to move, you know, through things.  
20 So thank you guys for working with me and working  
21 until past eight o'clock now.

22 MS. MONCADA: Thank you.

23 MS. EATON: Sure. I wanted to say, our  
24 witnesses for Walmart are here, and we have talked  
25 with FPL's counsel, and they are willing to, when

1 we complete this examination, to have our witnesses  
2 come on the stand. And I know it's in the middle  
3 of their case, but that way they can go ahead and  
4 testify and then we can deep going with the FPL  
5 case --

6 CHAIRMAN LA ROSA: Okay.

7 MS. EATON: -- if that's okay with the  
8 Commission?

9 CHAIRMAN LA ROSA: You are talking about for  
10 tomorrow?

11 MS. EATON: For tomorrow, correct. For  
12 tomorrow.

13 CHAIRMAN LA ROSA: Okay. All right.

14 MS. EATON: Yeah. Not tonight. Definitely  
15 not tonight.

16 CHAIRMAN LA ROSA: You made it sound like they  
17 were here.

18 MS. EATON: Oh, sorry. No, that would be  
19 tomorrow after he is completed.

20 CHAIRMAN LA ROSA: Yes.

21 MS. EATON: Yeah. Thank you.

22 CHAIRMAN LA ROSA: All right. No problem.

23 Any other housekeeping? All right.

24 Excellent.

25 All right, see you have guys tomorrow. Thank

1           you.

## CERTIFICATE OF REPORTER

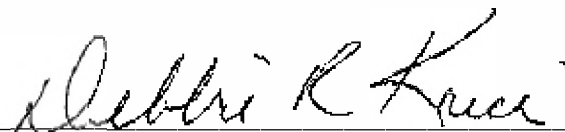

STATE OF FLORIDA     )  
COUNTY OF LEON     )

I, DEBRA KRICK, Court Reporter, do hereby  
certify that the foregoing proceeding was heard at the  
time and place herein stated.

IT IS FURTHER CERTIFIED that I  
stenographically reported the said proceedings; that the  
same has been transcribed under my direct supervision;  
and that this transcript constitutes a true  
transcription of my notes of said proceedings.

I FURTHER CERTIFY that I am not a relative,  
employee, attorney or counsel of any of the parties, nor  
am I a relative or employee of any of the parties'  
attorney or counsel connected with the action, nor am I  
financially interested in the action.

DATED this 25th day of October, 2025.

  
DEBRA R. KRICK  
NOTARY PUBLIC  
COMMISSION #HH575054  
EXPIRES AUGUST 13, 2028
