FPSC EXH NO. 42
ADMITTED

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Storm protection plan cost recovery clause.	Docket No. 20250010-EI Dated: May 28, 2025

DUKE ENERGY FLORIDA, LLC'S RESPONSE TO
STAFF'S FIRST SET OF INTERROGATORIES (NOS. 1-12)

Duke Energy Florida, LLC ("DEF") responds to the Staff of the Florida Public Service Commission's ("Staff") First Set of Interrogatories to DEF (Nos. 1-12) as follows:

INTERROGATORIES

1. Please refer to the April 1, 2025, testimony of Witness A. Christopher Menendez Form 4 A, Exhibit No. (CAM-1), page 4.
   a. Please explain the variance of 430.6% for Feeder Hardening – Distribution.

   b. Please explain the variance of 605.9% for Lateral Hardening - O/H.

   c. Please explain the variance of 100% for Structure Hardening - Trans – GOAB.

   d. Please explain the variance of 98.6% for UG - Lateral Hardening.

Response:

a. DEF reviews O&M expenses monthly to reflect the correct rate of 0.08% CapEx for Feeder Hardening under the FERC waiver. A late O&M expense was booked in June 2024 after the adjustments had already been made. This resulted in expenses totaling $434,785 being recorded as O&M instead of CapEx. The actual variance should be 52.6% rather than the 430.6% observed, which is in keeping with the capital variance.

b. DEF reviews O&M expenses monthly to reflect the correct rate of 0.08% CapEx for Lateral Hardening Overhead under the FERC waiver. A late O&M expense was booked in June 2024 after the adjustments had already been made. This resulted in expenses totaling $383,192 being recorded as O&M instead of CapEx. The actual variance should be -7.3% rather than the 605.9% observed, which is in keeping with the capital variance.

c. On occasion the automation of the GOAB switches may require replacement of the existing pole which triggers the need to transfer previously attached conductors and static wire to the new pole. Per our Capitalization Guidelines, transferring existing conductors and static wires constitute operating and maintenance (O&M) activities. However, for 2024 none of the automation projects funded under SPP included

replacing the existing pole. Therefore, no O&M was charged under this program for the year in review.

d. DEF continued Engineering Lateral Hardening Underground in 2024 which does not have an O&M component. Given the limited construction occurring in 2024, this led to an outsized impact of the CapEX Engineering spend relative to the O&M during construction.

2. Please refer to the April 1, 2025, testimony of Witness A. Christopher Menendez Form 6 A, Exhibit No. (CAM-2), page 30. Please explain the variance of 54.4% for UG - Flood Mitigation.

Response:
DEF performed additional engineering in 2024, but construction did not occur due to material availability. See ROG 1-04 c, d, e, and f - transformer material availability.

3. Please refer to the April 1, 2025, testimony of Witness E. Robert McCabe page 4, lines 1-18. For the company's distribution feeder hardening projects that were in progress in 2024, please provide:

a. Please explain why DEF completed 34 fewer miles of lateral lines, but added 57 more distribution circuits than previously projected.

b. Please explain why DEF completed a higher number of circuits (174) than originally planned (117).

c. How did the modifications in the number of miles and circuits impact the overall project costs?

d. Please explain what project activities were completed on the 57 additional distribution circuits in 2024.

e. Does DEF plan on updating their projection models to improve the accuracy of future estimates?

f. Please explain the primary factors that resulted in a variance in the projected number of rejected poles compared to the number of actually rejected poles.

g. Why did DEF encounter fewer feeder poles that needed to be rejected?

h. Why did DEF have a higher percentage of variance in estimated number of rejected feeder poles than last year?

i. Will DEF adjust estimates to minimize future variances on number of poles rejected?

j. Can you clarify why DEF considers a feeder mile complete only when the entire circuit is hardened, rather than accounting for partial work completed on portions of feeders?

k. Please explain the Feeder Hardening Capital spend variance of 48.4M and the O&M variance of 0.3M.

l. Please explain why DEF does not have separate transformers allocated for storm restoration and SPP activities.

Response:

a. Of the 34 fewer miles not included in the 2024 Feeder Hardening actual units completed, there were 22 miles that had construction completed but not placed in service due to various tasks such as site restoration and tree trimming. The remaining 12 miles not completed are the result of schedule delays due to hurricanes Helene and Milton. None of the 57 additional circuits had units completed in 2024.

b. DEF completed construction on 54 circuits in 2024. DEF completed partial construction on 63 circuits. This adds up to the noted 117 circuits. DEF completed Engineering activities but no construction on 57 circuits which are represented in the 2025 Engineering line item. These add to the 174 circuits noted.

c. No impact.

d. DEF completed incremental engineering for future year projects including easement review, surveying, and OH allocations.

e. DEF has been continuing to improve estimating accuracy. Steps taken include adding an estimating team that uses present value labor and material modeling in addition to reviewing historical data from completed projects. DEF is advancing timelines for engineering to allow forecasting to be completed based on completed engineering designs rather than only using estimates of labor and material needs.

f. DEF's reject rate has been decreasing since the beginning of the Cycle 3 inspections in 2022 thanks in part to the SPP hardening and upgrade projects that have been completed. However, the 2024 actual reject rate of 6.24% varies by less than 10% of the projected reject rate of 6.9%. Also, our replacement program lags about 3-months behind our inspections. This may also contribute to the perceived lower reject rate as not all rejects get replaced within the same calendar year as the inspection.

g. The feeder poles on the circuits inspected in 2024 were in better condition than the previous year feeder pole inspection list.

h. As noted in answer f, the 2024 actual reject rate of 6.24% varies by less than 10% of the projected reject rate of 6.9%. Although DEF attempts to best estimate anticipated reject rates, the actual percentages are not always known until inspections are completed.

FPSC EXH NO. 42
ADMITTED

i. Yes. That was done for 2026 and beyond estimates. DEF is reviewing circuits to be inspected to determine how many of them are already storm hardened and therefore may have a lower rejection rate.

j. DEF considers the feeder unit construction complete when the assigned construction is done. However, for the entire feeder to be in service, used, and useful, DEF has a substation or substation bank approach where all associated work related to the Storm Protection Plan must have construction complete for all the individual components for it to be considered used and useful and therefore in service.

k. DEF's capital variance of $48.4M is due to $61M spent on projects under construction but not yet finished where capital was spent but no units were recorded as complete. In addition, there is an off set of ($13M) for unspent capital in the pole replacement / pole inspection programs as discussed in ROG 1-3 (f through i). DEF's O&M variance of $0.3M is due to $.5M for FH O&M journaling issues as discussed in ROG 1-1 (a) and offset by ($.2M) in Pole Inspections as DEF had fewer inspection only poles than estimated.

l. DEF maintains a reserve of pad mount transformers for storm restoration purposes. The extreme flooding associated with Hurricane Helene exhausted the set aside reserve and required utilizing transformers originally planned for SPP implementation to restore power following the extreme weather event.

4. Please refer to the April 1, 2025, testimony of Witness E. Robert McCabe page 5, lines 1-23. For the company's distribution lateral hardening projects that were in progress in 2024, please provide:

a. Please explain why DEF completed fewer miles of overhead lateral hardening, but added 55 more distribution circuits than previously projected.

b. Please provide an estimate of when DEF will complete the projected miles of feeder poles, and what percentage is complete of DEF's Feeder Hardening - Distribution program for 2024.

c. Please provide more details on the transformer shortage and how it specifically delayed the Lateral Hardening Undergrounding work.

d. Given DEF's knowledge in 2023 that padmount transformer availability would be an issue until 2025, did DEF take steps to mitigate the impacts of the shortage for the year 2024?

e. Does DEF plan on updating their projection models to improve the accuracy of future estimates?

f. With the transformer availability issue and other delays, is DEF revising its approach or forecast for future lateral hardening undergrounding projects?

g. Does DEF foresee supply shortages for SPPCRC for 2025 and 2026? If not, when does DEF anticipate the resolution of supply shortages?

Response:

a. Of the 55 additional circuits, 44 circuits had Engineering spend to allow for construction to begin in 2025. The other 11 circuits where construction was completed but not placed in service was due to various tasks such as site restoration and tree trimming.

b. Response assumes the request is associated with lateral hardening overhead (LHO). For the 3 miles of LHO estimated but not completed in 2024, 2 miles are complete and the remaining 1 mile is scheduled to be complete in Q2 of 2025. DEF is 99% complete on the 2024 estimated miles.

c. As DEF has noted in the previous filing, the Company has been working with our suppliers to establish timelines for transformer availability. DEF had originally expected padmount transformers to begin to become available in Q1 2024, but the transformers actually began to arrive during Q2 2024. DEF held back securing contract crews to complete the underground work until sufficient padmount transformer stock was available. However, the impacts of Hurricane Helene and the related coastal flooding led to reallocation of the transformers and underground crews to restoration purposes. Without sufficient transformers available, DEF was unable to complete the underground work.

d. DEF reviewed the planned 2024 lateral hardening underground work and reset construction timelines for each of the individual work requests. Cost estimates were validated for accuracy given delays and customers were advised of the planned construction timeline changes.

e. DEF has a continuous improvement model to review missed forecasts and inaccuracies and adjust for future work plans. DEF follows up to validate the changes made are providing improvement to the workflow process. Some specific changes include adding a dedicated estimating team to provide individual estimates for work streams by feeder rather than only using historical completion data, implementing P6 scheduling to improve scheduling forecast and accuracy, and monitoring changes in the numbers of units installed as work moves from planning to design to construction completion. DEF is also actively working on completing design work sooner for future work to improve unit and cost accuracy.

f. DEF is currently seeing resolution to the transformer supply constraints and expects the Lateral Hardening program work to be completed as outlined in the current Storm Protection Plan Cost Recovery Clause filing and the proposed SPP 2026 filing.

FPSC EXH NO. 42
ADMITTED

g. The only current supply constraints observed are padmount reclosing devices noted as automated switching devices ("ASDs") in DEF's filings. DEF is actively working to resolve the issue and is not anticipating a delay in the SOG program as a result.

5. Please refer to the April 1, 2025, testimony of Witness E. Robert McCabe page 5, lines 22-23. For the company's SPP self-optimizing grid program that was in progress in 2024, please provide:

a. Please provide what quarter of 2025 the remaining 205 automated switching devices will be completed and placed in-service.

b. Were there any areas or circuits prioritized over others for the installation of these automated switching devices?

c. Please explain how DEF prioritizes certain circuits over others.

Response:

a. In Q1 of 2025, DEF placed 143 of the 205 reclosers in service. In Q2 of 2025, DEF is scheduled to place the remaining 62 of the 205 reclosers in service.

b. Yes. See below in c.

c. Circuits were prioritized to complete in-flight projects in order to begin realizing planned reliability benefits.

6. Please refer to the April 1, 2025, testimony of Witness E. Robert McCabe page 6, lines 1-7.

a. Please explain the SOG Capital spend was variance of 25.2M.

b. Please list what quarter of 2025 the remaining 2024 SOG scope will be complete.

c. Did DEF undertake any additional projects or tasks within the SOG program that were not originally planned, contributing to the variance?

Response:

a. DEF estimated 2024 capital spend at a blended rate of $89,439 per recloser. The 2024 projects have capital actuals coming in at a blended rate of $95,842 per recloser. This is mainly driven by more than anticipated pad mount reclosers after designs were completed as well as inflationary costs. Additionally, 81 more reclosers were placed in-service than originally estimated.

b. DEF will complete the remaining 2024 SOG scope in Q4 of 2025.

FPSC EXH NO. 42
ADMITTED

c. DEF did not add any additional tasks, scope or projects that were not originally planned to the SOG program, which would contribute to any variance.

6. Please refer to the April 1, 2025, testimony of Witness E. Robert McCabe page 6, lines 16-23. Please explain how DEF prioritizes transformer inventory.

Response:
DEF prioritizes transformer usage first for restoration from outages (including inventory set aside for storm season), second for customer load growth, third for planned improvements such as storm protection plan and finally for non-emergent grid improvements. Material need dates are considered as part of the prioritization.

8. Please refer to the April 1, 2025, testimony of Witness E. Robert McCabe page 7, lines 20-23 and page 8.
a. When did DEF implement the usage of Maximo & PowerPlan systems?

b. Are any prior year SPPCRC expenditures affected by this program error?

c. What adjustments were made within Maximo and PowerPlan to correct this issue?

d. Did these errors impact any transmission SPP programs or only the distribution SPP programs?

Response:
a. DEF converted to a new Duke Energy instance of PowerPlan as part of the integration that occurred after the merger of Duke Energy and Progress Energy in 2012. DEF implemented Maximo in November 2017.

b. The estimated reduction in 2024 CapEx shown in the testimony of Robert McCabe is an estimate of all CapEx incorrectly stated prior to 2024. These costs were generalized as "2023 costs" in the testimony as that is the primary time the costs were incurred; however, costs prior to 2023 were also included in analysis.

c. As mentioned in the testimony, the errors were caused by issues with cost adders and fixed price contracts. Regarding the cost adder issue, Maximo was changed to stop sending the zero percent RWIP estimate associated with cost adders. This 0% estimate incorrectly superseded the correct estimate previously and is no longer being sent to PowerPlan.

Regarding the fixed price contract issue, the fixed price contracts do not have an estimate RWIP percentage in the contract, which sends a 0% estimate to PowerPlan. Maximo now has a daily task that ensures the estimated RWIP comes from the estimated labor rather than from the contract ensuring estimated RWIP is not incorrectly set to zero.

The monthly monitoring that was referenced in witness Bob McCabe's testimony is still ongoing.

d. These errors did not impact Transmission SPP.

9. Please refer to the April 1, 2025, testimony of Witness E. Robert McCabe page 9, lines 6-18. What are DEF's procedures for moving material resources & personnel between SPP work and storm restoration work during extreme weather events?

Response:
Any materials charged out to SPP but needed for storm restoration would be returned to regular inventory from the storm protection plan work orders then reallocated towards storm usage. Any crews assigned to SPP would stop charging to the SPP work orders and instead charge their time directly to storm restoration.

10. Please refer to the April 1, 2025, testimony of Witness Robert Brong page 4, lines 3-5.
a. Please explain how the transmission programs did not see material spend variances for 2024, but had spend variances for 2023.

b. Were there any non-material variances in this program?

Response:
a. DEF considers a material variance a program variance higher than +/-10% from previously program filed values. DEF's 2024 spend variance for Transmission programs was less than -4% for all 3 Transmission programs: Structure Hardening, Substation Hardening, and Substation Flood Mitigation. However, DEF in 2023 had a material spend variance of –48% for the Substation Hardening Program. Please refer to the April 1, 2024, testimony of Witness Robert Brong page 4, lines 1-9.

b. Yes. DEF saw a non-material spend variance of –1% for Structure Hardening and -4% for Substation Hardening Programs. The Substation Flood Mitigation Program saw no variance.

11. Please refer to the April 1, 2025, testimony of Witness Robert Brong page 5, lines 19-23 and page 6, lines 1-6. Witness Brong states that DEF's actual units completed in their Transmission GOAB Automation subprogram was six, which is one unit less than the estimated seven. Witness Brong also states that DEF's actual Capital spend was approximately $5.4M compared to the estimated $8.2M and there was no actual O&M expenditure.
a. What is the average cost per unit completed in the Transmission GOAB Automation subprogram?

b. Does DEF expect to spend approximately $2.8M, or approximately 34% of the originally estimated capital spend, to complete the final unit?

c. Why was there no actual O&M expenditure given the forecasted $40K?

Response:

a. The 2024 GOAB subprogram completed projects' actual cost per unit is currently $0.9M. We expect to recognize approximately $0.1M of additional cost per unit in 2025 related to the final close out of those projects, adding a total unit cost per project of $1M. The GOAB subprogram consists of projects with different complexities. The 2024 projects were considered low complexity projects.

b. For the remaining unit, DEF expects to spend approximately $0.7M more in 2025 to complete the work. DEF has already recognized $0.3M as in 2024 for this project, this will equate to a total unit cost of $1M.

c. Please refer to DEF's response to ROG 1-01(c).

12. Please fill out the following table with the project costs that are recovered through base rates and amounts that are recovered through the SPP Cost Recovery Clause for each of the respective SPP programs for the year 2024.

Base Rates	Dollars	Percentage
Distribution Lateral Undergrounding Program		
Distribution Vegetation Management Program		
Transmission Vegetation Management Program		
Transmission Asset Upgrade Program

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Storm protection plan cost recovery clause.	Docket No. 20250010-EI Dated: July 14, 2025

DUKE ENERGY FLORIDA, LLC'S REDACTED RESPONSE TO STAFF'S SECOND SET OF INTERROGATORIES (NOS. 13-20)

Duke Energy Florida, LLC ("DEF") responds to the Staff of the Florida Public Service Commission's ("Staff") Second Set of Interrogatories to DEF (Nos. 13-20) as follows:

INTERROGATORIES

13. Please refer to page 5, lines 6-12 of Witness Menendez's May 1, 2025, testimony. Witness Menendez states that DEF will record costs related to increased workload in areas such as IT, billing, legal, regulatory, and accounting in the deferred account for SPPCRC.

    a. Is recording costs related to IT, billing, legal, regulatory, and accounting in a deferred account compliant with Rule 25-6.031?

    b. Does DEF plan to record any of these costs in a deferred account for the company's 2026 SPP?

    c. What other costs, if any, are also included in the deferred account?

Response:

a. At the time of this filing, DEF did not anticipate having any incremental costs related to IT, billing, legal, or regulatory. Should DEF incur such costs, it is DEF's intention to use the deferred accounting treatment as provided by Rule 25-6.031(4).

b. No.

c. None. See response a.

14. Please refer to the May 1, 2025, testimony of Witness Menendez Form 4 E, Exhibit No. (CAM-2), page 4.

    a. Please explain the variance of 31.9% for Feeder Hardening – Distribution.

    b. Please explain the variance of -72.9% for FH - Wood Pole Replacement & Inspection.

c. Please explain the variance of -70.5% for LH - Wood Pole Replacement & Inspection.

d. Please explain the variance of -100% for Structure Hardening - Trans – GOAB.

e. Please explain the variance of -80.9% for SPP Implementation Costs.

Response:

a. As stated in Witness McCabe's direct testimony filed on May 1, 2025, in Docket No. 20250010-EI, DEF is planning to complete an additional 67 miles of Feeder Hardening subprogram work in 2025 when compared to the 2025 projection filed on May 1, 2024. Bringing forward these projects drove an increased spend projection in both Capital and O&M for this subprogram.

b. As stated in Witness McCabe's direct testimony filed on May 1, 2025, in Docket No. 20250010-EI, the variance for Feeder Hardening O&M is estimated to be lower than the previous forecast with the primary driver being the reallocation of costs related to pole treatments during inspections. This adjustment is to recognize that pole treatment extends the useful life of the pole and is therefore properly a capital cost.

c. As stated in Witness McCabe's direct testimony filed on May 1, 2025, in Docket No. 20250010-EI , the variance for Lateral Hardening O&M is estimated to be lower than the previous forecast with the primary driver being the reallocation of costs related to pole treatments during inspections. This adjustment is to recognize that pole treatment extends the useful life of the pole and is therefore properly a capital cost.

d. As stated in response to staff's first set of interrogatories (Nos. 1-12), in DEF's answer to 1.c., on occasion the automation of the GOAB switches may require replacement of the existing pole which triggers the need to transfer previously attached conductors and static wire to the new pole. Per Duke Energy's Capitalization Guidelines, transferring existing conductors and static wires constitute operating and maintenance (O&M) activities. However, for 2024, none of the automation projects funded under SPP included replacing the existing pole. Therefore, no O&M was charged under this program for the year of review.

e. SPP Implementation Costs are forecasted to be 81% lower than filed in Docket No. 20240010-EI for the year 2025 primarily due to a shift in timing of work into 2024. The overall cost between 2024 and 2025 are expected to be in alignment with the original total forecast.

15. Please refer to the May 1, 2025, testimony of Witness Menendez Form 6 E, Exhibit No. (CAM-2), page 21.

a. Please explain the variance of -15.5% for FH - Wood Pole Replacement & Inspection.

b. Please explain the variance of -20.9% for LH - Wood Pole Replacement & Inspection.

FPSC EXH NO. 43
ADMITTED

c. Please explain the variance of -30.0% for Structure Hardening - Trans - GOAB.

d. Please explain the variance of 100% for Substation Flood Mitigation.

e. Please explain the variance of -38.2% for UG - Flood Mitigation.

f. Please explain the variance of -45.0% for UG - Lateral Hardening.

Response:

a. As stated in Witness McCabe's direct testimony filed on May 1, 2025, in Docket No. 20250010-EI, distribution pole replacement subprograms within the Feeder and Lateral Hardening program are estimates based upon potential failure rates during inspection. As discussed in Witness McCabe's direct testimony filed on April 1, 2025, in Docket No. 20250010-EI, fewer feeder and lateral poles were rejected in 2024 than previously estimated. As discussed in DEF's response to Staff's first set of interrogatories question 3 subparts f and g, DEF's reject rate has been decreasing since the beginning of the Cycle 3 inspections in 2022 thanks in part to the SPP hardening and upgrade projects that have been completed. DEF's estimated spend for these subprograms are decreasing because of these expected decreased failure rates which drive replacements of poles within the Feeder and Lateral Hardening – Wood Pole Replacement subprograms. These updates were included in DEF's filings on May 1, 2025, as reflected in Exhibit No. (CAM-2).

b. Please see DEF's response to subpart (a) above.

c. DEF's underspend in 2024 and forecasted underspend in 2025 are driving the -30.0% variance for the Structure Hardening - Trans – GOAB subprogram. Per Witness Brong's direct testimony in this docket, this variance is due to a 2024 carryover unit and the refinement of project construction scope.

d. The driver for the 100% variance for Substation Flood Mitigation program is the forecasted capital spend in 2025 of $0.5M that was not previously projected in DEF's SPPCRC 2025 Projection, Docket 20240010-EI. As stated in Witness Brong's direct testimony in this filing, this Capital spend is necessary due to the timing of procuring material and equipment as well as engineering work required to perform Substation Flood Mitigation work in 2026 and 2027, consistent with DEF's 2026-2035 SPP, as approved in Docket No. 20250015-EI.

e. The Underground Flood Mitigation Program's Form 7E variance is primarily driven by delays in work execution as described in Witness McCabe's direct testimony filed April 1, 2025. During 2024, transformers expected to be used for this program were needed to address high priority work such as new customers, storm restoration work, etc.

FPSC EXH NO. 43
ADMITTED

f. As stated in Witness McCabe's direct testimony filed on May 1, 2025, in Docket No. 20250010-EI, the Lateral Hardening Underground subprogram variance is primarily driven by 23 fewer miles of overhead removed.

16. Please refer to page 5, lines 5-8 of Witness McCabe's May 1, 2025, testimony. Witness McCabe states that DEF had briefly transitioned from wood to spun concrete poles due to a lack of wood pole availability. Which service areas and which geographic regions received spun concrete poles instead of wood poles during this period?

Response:
All distribution service areas (North Coastal, South Coastal, North Central and South Central Zones) received some level of spun concrete poles installed instead of only wood poles during this period.

17. Please refer to page 5, lines 13-15 of Witness Brong's May 1, 2025, testimony. Witness Brong states that DEF is evaluating long-term strategies to mitigate material and labor availability. Please elaborate on which specific strategies DEF is using to mitigate material and labor availability.

Response:
DEF is actively implementing several strategies to mitigate material and labor availability challenges as part of its long-term supply chain resilience efforts. These strategies include:

REDACTED

Materials

[redacted]

Labor

FPSC EXH NO. 43
ADMITTED

[redacted]

[redacted]

[redacted] Through Duke Energy Florida's efforts and efficiencies, market and evaluation time has been reduced.

These efforts reflect a coordinated approach across Supply Chain and operational teams to ensure continuity of service, manage project execution risk, and support the company's overall reliability and cost-effectiveness goals.

18. Please refer to page 7, lines 19-23 of witness Brong's May 1, 2025, testimony. Witness Brong states that the variance in DEF's Substation Flood Mitigation program is "due to the timing of procuring material and equipment as well as engineering work necessary to perform Substation Flood Mitigation work in 2026 and 2027 consistent with DEF's SPP 2026."
    a. Will recovery of costs in this docket for engineering work on projects that are approved in DEF's 2026 SPP to begin work in 2026 and 2027 keep DEF in compliance with the company's Commission approved 2022 SPP?

    b. Will a request for a recovery of costs for engineering work in 2025 for projects that are in a plan that is approved to go into effect January 1, 2026, keep DEF in compliance with Rule 25-6.031?

Response:

a. Yes, recovery of costs in this docket is consistent and in compliance with the company's 2023 SPP, approved as amended in Order No. PSC-2022-0388A-FOF-EI, which covered plan years 2023-2032. As shared in Witness Brong's direct testimony in Docket No. 20240010-EI, and DEF's response to Staff ROG 3-23, DEF did not anticipate beginning work on the Substation Flood mitigation program in 2023 or 2024. DEF stated that the company may have an opportunity to undertake work on the program in 2025 pending the results of the ongoing reevaluation.

b. Yes, recovery of costs is consistent and in compliance with Rule 25-6.031. Additionally, DEF's 2026 SPP, approved in Order No, PSC-2025-0217-FOF-EI, includes Substation Flood Mitigation program, please refer to Docket No. 20250015-EI, Exhibit No. (BML-1), which states that "The Substation Flood Mitigation Program is now scheduled to begin in 2025 and estimated to take approximately 12 years to complete."

FPSC EXH NO. 43

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Storm protection plan cost recovery clause.	Docket No. 20250010-EI Dated: August 4, 2025

DUKE ENERGY FLORIDA, LLC'S RESPONSE TO
STAFF'S THIRD SET OF INTERROGATORIES (NOS. 21-26)

Duke Energy Florida, LLC ("DEF") responds to the Staff of the Florida Public Service Commission's ("Staff") Third Set of Interrogatories to DEF (Nos. 21-26) as follows:

INTERROGATORIES

21. Please refer to the May 1, 2025 testimony of Witness E. Robert McCabe page 4, lines 21-23, and page 5, lines 1-8

a. Does DEF foresee an ongoing availability challenge for pad mount transformers and reclosers past Q1 2025? If so, please explain why?

b. Does DEF have a contingency plan in place if the pad mount transformers or reclosers continue to have availability issues that extend beyond the current expectations?

c. Does DEF plan on maintaining any level of spun concrete poles as a contingency for going forward?

d. How will the transition back to wood poles impact procurement lead times and construction?

e. What are the anticipated cost differences between spun concrete and wood poles for feeder hardening work?

f. How many spun concrete poles were purchased during the shortage?

Response:

a. DEF has seen improved availability of pad mounted transformers since Q1 and continues to work with its supply chain partners to bolster availability for all DEF work, including SPP. While pad mount reclosers are still limited in availability, DEF is receiving what is needed to complete planned work.

b. DEF has had ongoing meetings with its supply chain partners to review material availability and validate planned inventory is able to meet expected demand. Pad mount

FPSC EXH NO. 44
ADMITTED

reclosers are still in limited supply but a need timeline has been set up with DEF's vendors and the vendors indicate the proposed timelines can be met.

c. The vendors used for spun concrete poles have not had supply constraints and have been able to meet needs for construction. Should spun concrete poles be needed in the future, DEF believes the vendors would be able to meet the need.

d. As part of discussions with the wood pole suppliers, DEF supplied estimated quantities and sizes needed and were advised the demand could be met. DEF has been building wood pole inventory levels in preparation for the transition back to wood poles. DEF does not currently expect any impact on construction timelines.

e. The approximate average total installation cost is $1.04 million per mile using wood feeder poles and $1.37 million per mile using concrete feeder poles.

f. DEF installed 6,155 concrete poles in 2024 and has installed another 3,565 concrete poles year-to-date in 2025 with the expectation of another 3,500 to be installed during the remainder of 2025. DEF expects a decline of concrete pole usage in 2026 as the projects designed using wood poles begin construction.

22. Please refer to the May 1, 2025 testimony of Witness E. Robert McCabe page 5, lines 12-23.

a. What does DEF mean when they say temporal variations?

b. Can DEF provide and give specific details on which feeder and lateral hardening projects will be carried over from the prior years?

c. What percentage of the 2025 scope for these programs represent carryover work versus newly initiated projects?

d. How does DEF ensure that these annual variances remain consistent with the overall goals of the 10-year SPP?

e. Do the changes in project timing have any impacts on the overall budget or financial forecasts for the feeder and lateral hardening programs?

Response:

a. DEF is advising there were temporary adjustments to the timing and quantities of the individual projects due to reasons previously discussed in the Docket No. 20250010-EI July 11, 2025 testimony of Witness Robert E. McCabe. DEF's intent is to still meet the goals of the 10-year plan outlined in the filed 2023 Storm Protection Plan in Docket No. 20220050-EI even though timing of certain project work may be either brought forward or shifted out.

FPSC EXH NO. 44
ADMITTED

b. DEF uses multi-year timelines for construction of Feeder and Lateral Hardening Overhead subprograms as part of the Substation Optimization process, so "carry over" is expected in a sense. The Lateral Hardening Underground work was shifted out for completion while the Feeder and Lateral Hardening Overhead programs were brought forward. The following is a list of the Lateral Hardening Underground work currently underway in 2025 which had been previously planned for 2024:

Circuit ID	Substation
W0805	Deland
W0806	Deland
W0807	Deland
W0808	Deland
W0809	Deland
W1103	Deland East
W1105	Deland East
W1109	Deland East
C202	Port Richey West
C205	Port Richey West
C207	Port Richey West
C208	Port Richey West
C209	Port Richey West
C210	Port Richey West
W0391	Pinecastle
X101	FIFTY-FIRST STREET
X102	FIFTY-FIRST STREET
X108	FIFTY-FIRST STREET
X213	PASADENA
X219	PASADENA

c. DEF has multi-year projects initiated in 2024 continuing into 2025 for Feeder Hardening and Lateral Hardening Overhead subprograms. In addition, new Feeder Hardening and Lateral Hardening Overhead work was initiated in 2025 with the planned completion in 2026. DEF did not defer any planned Lateral Hardening Overhead or Feeder Hardening from previous years into 2025, so the percent deferred from 2024 to 2025 for these subprograms is zero.

DEF originally planned 61 miles of Lateral Hardening Underground work to be completed in 2024 but instead completed 2 miles in 2024. Please note for the lateral hardening underground subprogram , DEF considers miles complete when all the subordinate work requests under a parent work request are complete. Therefore, while DEF has completed additional work under multiple work requests, it is not considered miles complete and in-service until all the subordinate work requests under the parent

FPSC EXH NO. 44
ADMITTED

are complete. DEF expects 100% of this remaining Lateral Hardening Underground subprogram work to be carried forward from previous years.

d. DEF monitors how much work was completed as planned in the assigned timeline and which work streams or locations were completed in their place if the timeline was adjusted. DEF can then seek to complete any work streams not completed in the planned timeline in the following years to align with the 10-year Storm Protection Plan.

e. DEF does not expect the Feeder Hardening and Lateral Hardening programs changes in timing to have impacts to the overall budget or financial forecast for any of the Storm Protection Plan Programs at this time.

23. Please refer to the May 1, 2025 testimony of Witness E. Robert McCabe page 6, lines 10-13.

a. What are the key factors that led to the decision to expand the feeder hardening scope by 67 additional miles and 1,360 additional pole replacements?

b. Please provide DEFs breakdown of cost per additional mile and per pole replacement?

c. Are the added miles and pole replacements focused in specific regions or circuits, and if so, what criteria were used for prioritization?

Response:

a. DEF had planned Feeder Hardening work for completion in 2024 but was impacted by the hurricanes in the Fall of 2024, thus this 2024 feeder work will be or has been completed in 2025 in addition to the full scope of the previously planned 2025 feeder hardening work. Because DEF considers miles complete only when the entire circuit is hardened, a portion of the 67 miles under discussion were already underway in 2024. As a result, the 67 miles of Feeder Hardening include work that was partially completed in 2024. DEF also had Feeder Hardening Pole Replacement work available to complete due to the higher number of poles inspected and rejected. DEF expected to be ramping up the Lateral Hardening Underground subprogram until the start of Q2 2025 due to transformer availability after the 2024 storm season. Therefore, Lateral Hardening Underground was not a good candidate for the same expedited treatment. As stated in Witness McCabe's July 11, 2025 testimony in Docket No, 20250010-EI, these adjustments will allow DEF to continue valuable grid hardening projects for the benefit of our customers.

b. The additional 67 miles in 2025 were estimated at approximately $1.2M per mile. As those projects reach full completion, it is anticipated that there will be no cost difference per mile for the additional 67 miles as compared to the originally planned mileage. The additional 1,360 poles for the pole replacement program are estimated to 0.5% more than the original estimate, which is $52 per pole. That variance in the estimate is based

FPSC EXH NO. 44
ADMITTED

on historical actuals from the prior year for identical work. This will be the rate for both previously planned pole replacement work along with the additional 1,360 poles.

c. DEF used the priority model outlined in the Storm Protection Plan 2023 filing in Docket No. 20220050-EI to determine which feeders would be addressed without a specific focus on regions or circuits.

24. Please refer to DEF's response to Staff's First Set of Interrogatories No. 1a. The Company states that the variance of 430.6% for Distribution Feeder Hardening should be 52.6% due to $434,785 being misreported as O&M instead of CapEx.

a. Please explain the actual variance of 52.6% for Distribution Feeder Hardening.

b. Please explain how this adjustment affected the variance in CapEx for Distribution Feeder Hardening.

c. Please list any other instances in which revenues or expenses were misreported as O&M instead of CapEx.

Response:

a. The actual variance of 52.6% in O&M for 2024 for Distribution Feeder Hardening equates to $60,461, which is the result of the following:

1. $44,687 is the O&M driven by the Capital spend variance.
2. $15,774 is due to timing of project costs and project close-out activities. These projects typically last longer than one year, and portions of O&M actuals will vary based upon construction and completion timing.

b. The CapEx actuals for 2024 for the Feeder Hardening subprogram were $218.7M. If the $434,785 amount had been filed as CapEx instead of O&M, it would have contributed 0.2% variance to the CapEx for Feeder Hardening.

c. Other than the Lateral Hardening Overhead subprogram discussed in question 25, there are no other known instances in which revenues or expenses were charged as O&M instead of CapEx.

25. Please refer to DEF's response to Staff's First Set of Interrogatories No. 1b. The Company states that the variance of 605.9% for O/H Lateral Hardening should be -7.3% due to $383,192 being misreported as O&M instead of CapEx.

a. Please explain the actual variance of -7.3% for O/H Lateral Hardening.

b. Please explain how this adjustment affected the variance in CapEx for O/H Lateral Hardening.

FPSC EXH NO. 44
ADMITTED

Response:

a. The actual variance of –7.3% O&M for Distribution Lateral Hardening Overhead equates to -$4,591 which is the result of the following:

1. -$11,095 is the O&M variance driven by the Capital spend variance.
2. $6,503 due to timing associated with project cost and project close-out activities These projects typically last longer than one year, and portions of O&M actuals will vary based upon construction and completion timing.

b. The CapEx actuals for 2024 for the Lateral Hardening Overhead subprogram were $71.9M. If the $383,192 amount had been filed as CapEx instead of O&M, it would have contributed 0.5% variance to the CapEx for Lateral Hardening Overhead.

26. Please refer to the May 28, 2025 response to staff's first set of Interrogatories page 6, question 6b. The Company states that they will complete the remaining 2024 SOG scope in Q4 of 2025.

a. Please explain why the work for 2024 was delayed until Q4 of 2025?

b. What process improvements or controls are being implemented to improve forecasting accuracy in future projects?

Response:

a. DEF interpreted question 6b as referring to remaining 2024 SOG scope implying when every device should be installed and in-service. Planned SPP distribution work coordinates with other work streams on the system including non-SPP work and customer requested work, which may have construction expectations outside the SPP timelines. Planning delays, construction delays related to the Fall 2024 hurricanes, and necessary coordination with other work all contributed to the delay in construction and unit completion.

b. DEF currently has a weekly SOG call to discuss construction progress and team commissioning. DEF has also focused on aligning the SOG execution plan, the SOG team deployment, and the maintenance of existing SOG teams to validate DEF is on track to meet implementation goals. In addition, DEF has Project Managers dedicated to tracking SOG progress and working as liaisons for materials, scheduling, engineering, and construction.

DUKE ENERGY FLORIDA, LLC'S RESPONSE TO
STAFF'S FOURTH SET OF INTERROGATORIES (NOS. 27-30)

Duke Energy Florida, LLC ("DEF") responds to the Staff of the Florida Public Service Commission's ("Staff") Fourth Set of Interrogatories to DEF (Nos. 27-30) as follows:

INTERROGATORIES

27. Please refer to DEF's Modified Petition for Approval of 2025 Actual/Estimated True-Up, 2026 Projected Costs and Storm Protection Plan Cost Recovery Factor for the Period January 2026 through December 2026; the Amended Direct Testimony of Christopher A. Menendez to the May 1, 2025, Actual Estimated and Projection filing with Amended Exhibit No. (CAM-3); and Amended Direct Testimony of Robert McCabe to the May 1, 2025, Actual Estimated and Projection filing. (Document No. 05615-2025), filed 7/11/2025.

a. Please provide a complete description of the methodology used for each forecast supporting the billing determinants appearing in Form 6P of Amended Exhibit No. (CAM-3).

b. Please list the date(s) of all underlying forecasts that were used to formulate the billing determinants appearing in Form 6P of Amended Exhibit No. (CAM-3).

c. Please also provide any changes introduced to such methodologies compared to those forecast methodologies used in preparing the billing determinants in Docket No. 20240010-EI.

Response:

a. The forecast billing determinants are based on the forecast kWh, by rate class, by month from the 2024 Fall Forecast. The forecast kWh is allocated to billing determinants with historical billing component data for the most recent full calendar year. The forecast total kWh by month, by rate class is allocated to rate schedules and rate categories based on the relative percent of the historic kWh by rate class, by rate schedule, by rate category to the total historic sales for the month.

b. 2024 Fall Forecast (finalized on September 30, 2024) used for Projected kWh sales for the period January 2026 to December 2026. DEF allocates forecasted kWh to meter

FPSC EXH NO. 45
ADMITTED

levels by rate class using historical (i.e., Actual) sales data. Average 12CP load factor based on load research study filed April 28, 2023, and NCP load factor based on load research study filed April 28, 2023.

c. There were no changes in the methodology used in determining the billing determinants in the Direct Testimony of Christopher A. Menendez, Form 6P of Exhibit No. CAM-3, compared to those used in preparing the billing determinants in Docket No. 20240010-EI.

28. For each energy and demand forecast used to support the Company's billing determinants appearing in Form 6P of Amended Exhibit No. (CAM-3), please provide the annual actuals for calendar years 2019-2024 and the annual projections for 2025 and 2026.

Response:
Please see the attached document bearing Bates Nos. 20250010-DEF-000002 through 20250010-DEF-000003. The Excel file is also attached.

29. Please refer to the Amended Direct Testimony of Christopher A. Menendez, Form 6P, Amended Exhibit No. (CAM-3) for the following questions:

a. For each forecast of energy and demand for 2025 and 2026 used to support the listed billing determinants for 2026, please provide a comparison of monthly forecasts to monthly actual demand and energy for the months of January through June 2025.

b. Regarding the comparisons provided in response to Interrogatory No. 29.a., please provide reasons for any monthly average deviations that exceed +/- 20 percent.

Response:
a. Please see the attached document bearing Bates Nos. 20250010-DEF-000004 through 20250010-DEF-000011. The Excel file is also attached.

b. DEF has identified instances where monthly average deviations that exceed +/- 20 percent. DEF's projections are based on weather normalized forecasts. The primary drivers that caused actual sales to vary from projected sales include customer usage, change in customer load profile, economic factors, and change in population. Due to their business needs, a customer no longer needed to be served by the Curtailable Rate Class in 2025, which drove the largest deviation from forecasted kWh (energy) and effective KW (demand).

30. Please identify all closed and open Commission dockets and all non-docketed Commission matters in which the same load forecast used to support the Company's billing determinants appearing in Amended Direct Testimony of Christopher A. Menendez, Form 6P, Amended Exhibit No. (CAM-3) has been submitted for approval to the Commission.

FPSC EXH NO. 45
ADMITTED

Response:
DEF used the 2024 Fall Forecast for its Petition for Recovery of Incremental Storm Restoration Costs Related to Hurricanes Debby, Helene, and Milton (Docket No. 20240173-EI) which was originally filed on December 27, 2024, and subsequently approved on February 24, 2025, by Order No. PSC-2025-0061-PCO-EI.

DEF used the 2024 Fall Forecast for its 10 Year Site Plan filed with the Commission on April 1, 2025.

AFFIDAVIT

STATE OF FLORIDA

COUNTY OF PINELLAS

I hereby certify that on this 16th day of September, 2025, before me, an officer duly authorized in the State and County aforesaid to take acknowledgments, personally appeared CHRISTOPHER A. MENENDEZ, who is personally known to me, or produced _____ as identification and he acknowledged before me that he provided the answers to interrogatory numbers 27 through 30, from Staff's Fourth Set of Interrogatories to Duke Energy Florida, LLC (Nos. 27-30) in Docket No. 20250010-EI, and that the responses are true and correct based on his personal knowledge.

In Witness Whereof, I have hereunto set my hand and seal in the State and County aforesaid as of this 16th day of September, 2025.

Christopher A. Menendez

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Storm protection plan cost recovery clause.	Docket No. 20250010-EI Dated: September 23, 2025

DUKE ENERGY FLORIDA, LLC'S RESPONSE TO STAFF'S FIFTH SET OF INTERROGATORIES (NO. 31)

Duke Energy Florida, LLC ("DEF") responds to the Staff of the Florida Public Service Commission's ("Staff") Fourth Set of Interrogatories to DEF (No. 31) as follows:

INTERROGATORIES

31. Staff added capital and O&M variances for the period January through December 2025 finding the over/under recovery value to be $20,034,373. In Exhibit CAM-2, Form 2E, line 5, Duke calculated the over/under recovery for this period to be $20,032,588. Please explain the variance between staff and Duke's over/under recovery values, and please provide the value's calculation in excel format.

Response:
The $20,032,588 over/under amount of the filed in CAM-2 on Form 1E Line 1, is correct, therefore no adjustment is necessary for the SPPCRC Filings in Docket No. 20250010-EI.

DEF recognizes that there was a pointing issue on the O&M page for a summary line that it does not use for rate making purposes (Line 11 on the 5E), which incorrectly showed $62,057,239 instead of $62,059,24 - which led to Staff's figure of $20,034,373.

DEF references information on Form 5E Lines 12 – 16 for ratemaking on Form 2E, which correctly totaled $62,059,024. DEF notes that lines 12 – 16 are not dependent on Line 11, but rather they are calculated individually, and this difference was a not an issue for ratemaking purposes.

The difference of $1,785 that Staff points out is noted and reconciled in the attached document bearing Bates numbers 20250010-DEF-000306 through 20250010-DEF-000307. The Excel file is also attached.

(1,786)

FILED FOR RATE MAKING

Note 1: These amounts represent the costs paid in 2025 related to the development of DEF's 2026 Storm Protection Plan filing, made January 15, 2025, covering the 10 year period (2026-2035).

Distribution O&M Allocated to Demand	51,705,456
Transmission O&M Allocated to Demand	10,353,568
TOTAL	62,059,024

* No Variance to figures used in DEF's Over-Under Recovery Revenue Requirments are taken from Lines 12-16.

AFFIDAVIT

STATE OF FLORIDA

COUNTY OF PINELLAS

I hereby certify that on this 16th day of September, 2025, before me, an officer duly authorized in the State and County aforesaid to take acknowledgments, personally appeared CHRISTOPHER A. MENENDEZ, who is personally known to me, or produced _____ as identification and he acknowledged before me that he provided the answer to interrogatory number 31, from Staff's Fifth Set of Interrogatories to Duke Energy Florida, LLC (Nos. 31) in Docket No. 20250010-EI, and that the response is true and correct based on his personal knowledge.

In Witness Whereof, I have hereunto set my hand and seal in the State and County aforesaid as of this 16th day of September, 2025.

Christopher A. Menendez

In re: Storm protection plan cost recovery clause.	Docket No. 20240010-EI Dated: July 14, 2025

DUKE ENERGY FLORIDA, LLC'S RESPONSE TO STAFF'S FIRST REQUEST FOR PRODUCTION OF DOCUMENTS (NO. 1)

Duke Energy Florida, LLC ("DEF") responds to the Staff of the Florida Public Service Commission's ("Staff") First Request for Production of Documents to DEF (No. 1) as follows:

DOCUMENTS REQUESTED

1. Please refer to Exhibit CAM-2 Form 8E Pages 128-144. For each Progress Summary on pages 128-144, DEF states what the company expects to see going forward rather than what actual work has been completed. For each of these pages, please provide a summary of what work was planned and what work has been completed for its respective project.

Response:
Please see the information in document bearing Bates number 20250010-DEF-000001.

Staff's First Request for Production of Documents to Duke Energy Florida, LLC. (No. 1)
POD 1-1

8E Pages Activity Title:	Page # in Exhibit No. (CAM-2):	Units Completed 01/01/25 - 05/31/2025:	Units Forecasted 01/01/25 - 12/31/2025 supporting 05/01/2025 SPPCRC Estimated/Actual Filing in Docket No. 20250015-EI:
Feeder Hardening - Distribution	128	64 miles	198 miles
Feeder Hardening - Wood Pole Replacement & Inspection - Distribution	129	251 feeder poles, 16,452 inspections/treatments	3,319 feeder poles, 31,264 inspections/treatments
Lateral Hardening - Overhead	130	75 miles	143 miles
Lateral Hardening - Wood Pole Replacement & Inspection - Distribution	131	1,904 feeder poles, 39,496 inspections/treatments	5,802 feeder poles, 99,260 inspections/treatments
Self-Optimizing Grid (SOG) - Automation	132	405 automated switching devices	911 automated switching devices
Self-Optimizing Grid (SOG) - Capacity and Connectivity (C&C)	133	18 miles	61 miles to be deployed over 96 circuits
Underground Flood Mitigation - Distribution	134	5 padmount transformers	142 padmount transformers to be deployed over 4 locations
Lateral Hardening - Underground	135	5 miles	56 miles
Structure Hardening - Transmission: Wood to Non-Wood Pole Replacement	136	850 poles	1,853 poles
Structure Hardening - Transmission: Tower Upgrades	137	5 towers	78 towers
Structure Hardening - Transmission: Tower Cathodic Protection	138	263 tower legs*	273 tower legs*
Structure Hardening - Transmission: Tower Drone Inspections	139	798 inspections	798 inspections
Structure Hardening - Transmission - GOAB	140	0 switches	6 switches
Structure Hardening - Transmission - Overhead Ground Wire	141	30 miles	61 miles
Substation Hardening- Transmission - Breaker Replacements and Electro-Mechanical Relays	142	18 upgrades	33 upgrades
Vegetation Management - Transmission	143	280 miles	648 miles
Vegetation Management - Distribution	144	2,050 miles	4,599 miles

*This will be done by installing passive CP systems comprised of anodes on each leg of the towers.

DUKE ENERGY FLORIDA, LLC'S RESPONSE TO STAFF'S SECOND REQUEST FOR PRODUCTION OF DOCUMENTS (NOS. 2-3)

Duke Energy Florida, LLC ("DEF") responds to the Staff of the Florida Public Service Commission's ("Staff") Second Request for Production of Documents to DEF (Nos. 2-3) as follows:

DOCUMENTS REQUESTED

2. Please provide all documents used to prepare/calculate/evaluate the forecasted 2025 and 2026 billing determinants utilized in this proceeding.

Response:
Please see the attached document bearing Bates numbers 20250010-DEF-000012 through 20250010-DEF-000014.

3. Please refer to the following documents:

(i) DEF witness Menendez's Direct Testimony and Exhibit CAM-1, Form 7A, pages 57 - 145 of 163, filed on April 1, 2025, and

(ii) Witness Menendez's Amended Direct Testimony and Amended Exhibit CAM-3, Form 7E, pages 35 through 124 of 127, filed on July 11, 2025.

a. Please provide Forms 7A and 7E in MS Excel format with formulas intact.

b. Please provide an MS Excel file showing the breakdown of SPP depreciation rates used to calculate the depreciation expenses on line 8a on each of the afore-referenced pages, by project, plant account, and depreciation group.

Response:
a. Please see the attached document bearing Bates numbers 20250010-DEF-000015 through 20250010-DEF- 000304. The Excel versions are also attached.
b. Please see the attached document bearing Bates numbers 20250010-DEF-000305. The Excel version is also attached.

Prior to August 2024, DEF used the AA financial 30-day rate on the Federal Reserve site (see link below) for the First Day of the Reporting Month and First Day of the Subsequent Month interest rates. If those specific days were not available (i.e. first day rate not listed), then DEF used the most recent available day.

(A) Line (6 x 7)/12. Refer to Form 9A for details.
(B) Line 9a x Line 10
(C) Line 9b x Line 11
(D) Cost of Removal Adjustment. Asset retirement (cost of removal) was not being reflected correctly in Distribution financials, specifically the allocation of costs between (CWIP) and Retirement (RWIP) that subsequently overstated the amount of CapEx that was SPPCRC eligible. These figures generate a credit of interest expense ($357,303) that would have otherwise been charged incorrectly to customers in 2024, if not for this adjustment. DEF used this tab to capture the net effect of all Feeder Hardening projects impacted

(D) Cost of Removal Adjustment. Asset retirement (cost of removal) was not being reflected correctly in Distribution financials, specifically the allocation of costs between (CWIP) and Retirement (RWIP) that subsequently overstated the amount of CapEx that was SPPCRC eligible.
These figures generate a credit of interest expense ($338,813) that would have otherwise been charged incorrectly to customers in 2024, if not for this adjustment.
DEF used this tab to capture the net effect of all Overheard Lateral Hardening projects impacted

(D) Cost of Removal Adjustment. Asset retirement (cost of removal) was not being reflected correctly in Distribution financials, specifically the allocation of costs between CapEx (CWIP) and Retirement (RWIP) that subsequently overstated the amount of CapEx that was SPPCRC eligible.
These figures generate a credit of interest expense ($107,750) that would have otherwise been charged incorrectly to customers in 2024, if not for this adjustment.
DEF used this tab to capture the net effect of all Lateral Underground Hardening projects impacted

(B) Line 9a x Line 10
(C) Line 9b x Line 11
(D) Cost of Removal Adjustment. Asset retirement (cost of removal) was not being reflected correctly in Distribution financials, specifically the allocation of costs between CapEx (CWIP) and Retirement (RWIP) that subsequently overstated the amount of CapEx that was SPPCRC eligible.
These figures generate a credit of interest expense ($1,295) that would have otherwise been charged incorrectly to customers in 2024, if not for this adjustment.
DEF used this tab to capture the net effect of all Self Optimizing Grid projects impacted

(B) Line 9a x Line 10
(C) Line 9b x Line 11
(D) Cost of Removal Adjustment. Asset retirement (cost of removal) was not being reflected correctly in Distribution financials, specifically the allocation of costs between CapEx (CWIP) and Retirement (RWIP) that subsequently overstated the amount of CapEx that was SPPCRC eligible.
These figures generate a credit of interest expense ($71) that would have otherwise been charged incorrectly to customers in 2024, if not for this adjustment.
DEF used this tab to capture the net effect of all Underground Flood Mitigation projects impacted

True-Up Filing
January 2024 - December 2024

Project Description and Progress Report

Activity Title: Feeder Hardening - Distribution

Description :

The Feeder Hardening program will enable the feeder backbone to better withstand extreme weather events. This includes strengthening structures, updating BIL (basic insulation level) to current standards, updating conductor to current standards, relocating difficult to access facilities, replacing oil filled equipment as appropriate, and will incorporate the company's pole inspection and replacement activities.

Accomplishments :

Fiscal Expenditures: DEF incurred $218.7M on engineering and construction for the Feeder hardening work plan in 2024.

Progress Summary: DEF completed 164 miles of feeder hardening in 2024 out of the planned 198 miles. DEF plans to complete the balance of the 2024 work plan in 2025.

January 2024 - December 2024

Project Description and Progress Report

Activity Title: Feeder Hardening - Wood Pole Replacement & Inspection - Distribution

Description :

Per Commission Order No. 2006-0144-PAA-EI, pole inspection is performed on an 8-year cycle. These inspections determine the extent of pole decay and any associated loss of strength. The information gathered from these inspections is used to determine pole replacements and to effectuate the extension of pole life through treatment and reinforcement.

Accomplishments :

Fiscal Expenditures: DEF incurred $8.5M on engineering and construction for the Feeder Pole Replacement work plan in 2024.

Progress Summary: 21,366 Distribution feeder poles were inspected in 2024 out of the planned 28,221 feeder poles to be inspected in 2024. DEF had estimated 1,955 feeder poles would have failed inspection and require replacement in 2024. DEF replaced 855 feeder poles in 2024. The poles are experiencing a lower actual rejection rate, leading to fewer poles needing to be replaced.

Project Description and Progress Report

Activity Title: Lateral Hardening - Overhead

Description :

The overhead hardening strategy will include structure strengthening, deteriorated conductor replacement, removing open secondary wires, replacing fuses with automated line devices, pole replacement (when needed), line relocation, and/or hazard tree removal.

Accomplishments :

Fiscal Expenditures: DEF incurred $71.9M on engineering and construction for the Lateral hardening Overhead work plan in 2024.

Progress Summary: DEF completed 94 miles of lateral hardening overhead work in 2024 out of the planned 101 miles. DEF plans to complete the balance of the 2024 work plan in 2025.

The information gathered from these inspections is used to determine pole replacements and to effectuate the extension of pole life through treatment and reinforcement.

Accomplishments :

Fiscal Expenditures: DEF incurred $43.8M on engineering and construction for the Lateral Pole Replacement work plan in 2024.

Progress Summary: 69,667 Distribution lateral poles were inspected out of the planned 72,569 lateral poles to be inspected in 2024. DEF replaced 5,639 lateral poles in 2024 out of the planned 6,545 poles. The poles are experiencing a lower actual rejection rate, leading to fewer poles needing to be replaced.

Project Description and Progress Report

Activity Title: Self-Optimizing Grid (SOG) - Automation

Description : The current grid has limited ability to reroute and rapidly restore power. The SOG program is established to address both of these issues. The SOG program consists of three (3) major components: capacity, connectivity, and automation and intelligence. The SOG program redesigns key portions of the distribution system and transforms it into a dynamic smart-thinking, self-healing network.

SOG Automation projects provide intelligence and control for the SOG operations; Automation projects enable the grid to dynamically reconfigure around trouble and restore customers not impacted by an outage.

Accomplishments :

Fiscal Expenditures: DEF incurred $66.3M on engineering and construction activities for the SOG-Automation work plan in 2024.

Progress Summary: DEF has completed installation of 739 units of the planned 944 automated switching devices in 2024. The balance is expected to be completed in 2025. DEF has installed many of the devices as planned but they were not fully commisioned so are not considered complete.

Project Description and Progress Report

Activity Title: Self-Optimizing Grid (SOG) - Capacity and Connectivity (C&C)

Description :

The current grid has limited ability to reroute and rapidly restore power. The SOG program is established to address both of these issues. The SOG program consists of three (3) major components: capacity, connectivity, and automation and intelligence. The SOG program redesigns key portions of the distribution system and transforms it into a dynamic smart-thinking, self-healing network.

The SOG Capacity projects focus on expanding substation and distribution line capacity to allow for two-way power flow. SOG Connectivity projects create tie points between circuits.

Accomplishments :

Fiscal Expenditures: DEF incurred $38.1M on engineering and construction activities for the SOG-C&C work plan in 2024.

Progress Summary: DEF planned to complete 36 miles of Capacity and Connectivity work in 2024 but completed 26. DEF anticipates completing the remaining 2024 Capacity and Connectivity scope in 2025.

January 2024 - December 2024

Project Description and Progress Report

Activity Title: Underground Flood Mitigation - Distribution

Description :

Underground Flood Mitigation will harden existing underground line and equipment to withstand storm surge through the use of DEF's current storm surge standards. This involves the installation of specialized stainless-steel equipment, submersible connections and concrete pads with increased mass. The primary purpose of this hardening activity is to minimize the equipment damage caused by storm surge and thus reduce customer outages and/or expedite restoration after the storm surge has receded.

For selected locations, DEF would utilize a concrete pad with increased weight and stainless steel tiedowns and change all the connections to waterproof (submersible) connections. Conventional switchgear would be replaced with submersible switchgears that are able to withstand the storm surge.

Accomplishments :

Fiscal Expenditures: DEF incurred -$294K on engineering and construction activities for the Underground Flood Mitigation work plan in 2024. The program reflects a credit for 2024 due to returning transformers into DEF's inventory as these materials were needed to address high priority work such as new customers, storm restoration work, etc.

Progress Summary: DEF currently has completed engineering on prioritized circuits but was delayed in constructing projects due to material availability. DEF plans to begin construction on this program's work in 2025.

Project Description and Progress Report

Activity Title: Lateral Hardening - Underground

Description : Lateral segments that are most prone to damage resulting in outages during extreme weather events will be placed underground. Doing so will greatly reduce both damage costs and outage duration for DEF customers. Lateral Undergrounding focuses on branch lines that historically experience the most outage events, contain assets of greater vintage, are susceptible to damage from vegetation, and/or often have facilities that are inaccessible to trucks. These branch lines will be replaced with a modern, updated, and standard underground design of today.

Accomplishments :

Fiscal Expenditures: DEF incurred $13.3M on engineering and construction activities for the SPP Lateral Hardening Underground Program work plan in 2024.

Progress Summary: DEF converted approximately 2 miles of the planned overhead 61 miles of line to underground as part of the 2024 Lateral Hardening Underground subprogram.

Project Description and Progress Report

Activity Title: Vegetation Management - Distribution

Description :

DEF Distribution will continue a fully IVM program focused on trimming feeders and laterals on an average 3 and 5-year cycles respectively. This corresponds to trimming approximately 1,930 miles of feeder backbone and 2,455 miles of laterals annually. The IVM program consists of the following: routine maintenance “trimming”, hazard tree removal, herbicide applications, vine removal, customer requested work, and right-of-way brush “mowing” where applicable. The IVM program incorporates a combination of condition, time since last trim and reliability-driven prioritization of work to reduce event possibilities during extreme weather events and enhance overall reliability.
Additionally, a hazard tree patrol is conducted every year on all three-phase circuits. Hazard trees are defined as trees that are dead, dying, structurally unsound, diseased, leaning or otherwise defective.
DEF will optimize the IVM program costs against reliability and storm performance objectives to harden the system for extreme weather events.

Accomplishments :

Fiscal Expenditures: DEF incurred $2.3M on capital activities and $45.5M of O&M activities for the SPP Vegetation Management - Distribution work plan in 2024.

Project Description and Progress Report

Activity Title: Structure Hardening - Transmission: Wood to Non-Wood Pole Replacement

Description :

This activity will upgrade wood poles to non-wood material such as steel or concrete. Wood pole failure has been the predominate structure damage to the transmission system during extreme weather. This strengthens structures by eliminating damage from woodpeckers and wood rot. The new structures will be more resistant to damage from extreme weather events. Other related hardware upgrades will occur simultaneously, such as insulators, crossarms, switches, and guys.

Accomplishments :

Fiscal Expenditures:

DEF incurred $122.2M on engineering and construction activities for the SPP Structure Hardening - Transmission: Wood to Non-Wood Pole Replacement work plan in 2024.

Progress Summary:

DEF replaced 1,961 poles from January 1, 2024 to December 31, 2024.

Project Description and Progress Report

Activity Title: Structure Hardening - Transmission: Tower Upgrades

Description : Tower Upgrades will prioritize towers based on inspection data and enhanced weather modeling. The upgrade activities will replace tower types that have previously failed during extreme weather events.

In addition, the tower upgrade activities will upgrade lattice towers identified by visual ground inspections, aerial drone inspections and data gathered during cathodic protection installations (discussed below). This will improve the ability of the transmission grid to sustain operations during extreme weather events by reducing outages and improving restoration times. Other related hardware upgrades will occur simultaneously such as insulators, cathodic protection, and guys.

Accomplishments :

Fiscal Expenditures:

DEF incurred $12.7M on engineering and construction activities for the SPP Structure Hardening - Transmission: Tower Upgrades work plan in 2024.

Progress Summary: DEF replaced 53 Towers from January 1, 2024 to December 31, 2024.

Project Description and Progress Report

Activity Title: Structure Hardening - Transmission: Tower Cathodic Protection

Description :

The purpose of the Cathodic Protection (CP) activities will be to mitigate active groundline corrosion on the lattice tower system. This will be done by installing passive CP systems comprised of anodes on each leg of lattice towers. The anodes serve as sacrificial assets that corrode in place of structural steel, preventing loss of structure strength to corrosion. Each CP project will address all towers on a line from beginning point to end point.

Accomplishments :

Fiscal Expenditures:

DEF incurred $2.6M on engineering and construction activities for the SPP Structure Hardening - Transmission: Tower Cathodic Protection work plan in 2024

Progress Summary:

DEF installed 267 Cathodic Protection measures on its Towers from January 1, 2024 to December 31, 2024.

Activity Title: Structure Hardening - Transmission: Tower Drone Inspections

Description : DEF will continue to conduct drone inspections on targeted lattice tower lines. The intent of these continued inspections is to identify otherwise difficult to see structure, hardware, or insulation vulnerabilities through high resolution imagery. DEF has incorporated drone patrols into the inspections because drones have the unique ability to provide a close vantage point with multiple angles on structures that is unattainable through aerial or ground patrols with binoculars.

Accomplishments :

Fiscal Expenditures:

DEF incurred $74K of O&M expenses on inspection activities for the SPP Structure Hardening - Transmission: Tower Drone Inspections work plan in 2024. This program did not incur any Capital costs.

Progress Summary: DEF inspected 852 Towers from January 1, 2024 to December 31, 2024.

Project Description and Progress Report

Activity Title: Structure Hardening - Transmission - GOAB

Description :

The GOAB line switch automation subprogram will upgrade switch locations with modern switches enabled with SCADA communication and remote-control capabilities. Automation will add resiliency to the transmission system. Later years will include adding new switch locations to add further resiliency to the transmission system. Transmission line switches are currently manually operated and cannot be remotely monitored or controlled. Switching, a grid operation often used to section off portions of the transmission system in order to perform equipment maintenance or isolate trouble spots to minimize impacts to customers, has historically required a technician to go to the site and manually operate one or more-line switches. The GOAB upgrade increases the number of remote-controlled switches to support faster isolation of trouble spots on the transmission system and more rapid restoration following line faults.

Accomplishments :

Fiscal Expenditures: DEF incurred $5.4M on engineering and construction activities for the SPP Structure Hardening - Transmission - GOAB work plan in 2024.

Progress Summary: DEF upgraded 6 GOAB line switch locations from January 1, 2024 to December 31, 2024.

Project Description and Progress Report

Activity Title: Structure Hardening - Transmission - Overhead Ground Wire

Description :

Florida is known for a high concentration of lightning events, which continually stress the existing grid protection. Deteriorated overhead ground wire reduces the protection of the conductor and exposes the line to repeated lightning damage and risk of failure impacting the system. This initiative will also reduce the safety risk due to the required removal of OHGW prior to any restoration work on the system. By targeting deteriorated OHGW on lines with high lightning events, the benefit of this activity will be maximized. An added benefit is upgrading to fiber optic OHGW, facilitating high-speed relaying and enhanced communication and control between stations and centralized control centers.

Accomplishments :

Fiscal Expenditures: DEF incurred $8.7M on engineering and construction activities for the SPP Structure Hardening - Transmission - Overhead Ground Wire work plan in 2024.

Progress Summary: DEF replaced 48 miles of Overhead Ground wire in its transmission system from January 1, 2024 to December 31, 2024.

Activity Title: Substation Hardening- Breaker Replacements and Electro-Mechanical Relays

Description :

Substation Hardening will address two major components:1) Upgrading oil breakers to state-of-the-art gas or vacuum breakers to mitigate the risk of catastrophic failure and extended outages during extreme weather events; and 2) Upgrading electromechanical relays to digital relays will provide communications and enable DEF to respond and restore service more quickly from extreme weather events.

Accomplishments :

Fiscal Expenditures:

DEF incurred $11.2M on engineering and construction activities for the SPP Substation Hardening- Breaker and Electro-Mechanical Relay Replacements work plan in 2024.

Progress Summary:

DEF replaced 22 Breakers and Electro-Mechanical Relays groups on its distribution and transmission systems from January 1, 2024 to December 31, 2024.

Activity Title: Vegetation Management - Transmission

Description :

DEF's Transmission IVM program is focused on ensuring the safe and reliable operation of the transmission system by minimizing vegetation-related interruptions and adequate conductor-to-vegetation clearances, while maintaining compliance with regulatory, environmental, and safety requirements or standards. The program activities focus on the removal and/or control of incompatible vegetation within and along the right of way to minimize the risk of vegetation-related outages and ensure necessary access within all transmission line corridors. The IVM program includes the following activities: planned threat and condition-based work, reactive work that includes hazard tree mitigation, and floor management (herbicide, mowing, and hand cutting operation).

Accomplishments :

Fiscal Expenditures: DEF incurred $13.3M on capital activities and $10.4M of O&M activities for SPP Vegetation Management - Transmission work in 2024.

Purpose

To: Florida Public Service Commission

We have performed the procedures described later in this report to meet the objectives set forth by Office of Industry Development & Market Analysis in its audit service request dated January 6, 2025. We have applied these procedures to the attached summary exhibit and to several related schedules prepared by Tampa Electric Company in support of its 2024 filing for the Storm Protection Plan Cost Recovery Clause in Docket No. 20250010-EI.

The report is intended only for internal Commission use.

ADMITTED

Objectives and Procedures

General

Definition

TECO/Company refers to the Tampa Electric Company.
SPP refers to the Storm Protection Plan Cost Recovery Clause.

Background

On April 1, 2025 Tampa Electric Company filed support for its Storm Protection Plan Cost Recovery factor, for the period January 2024 through December 2024, and the 2024 Storm Protection Plan Accomplishments.

Rate Base

Plant

Objectives: The objective was to determine that the plant additions, retirements, and adjustments for the year ended December 31, 2024, related to the Storm Protection Plan Cost Recovery Clause (SPPCRC) programs.

Procedures: We obtained the plant additions and retirements of SPPCRC for 2024. We recalculated the total plant additions by program, and reconciled to Form A7. We judgmentally selected plant transactions of each program for sample testing, and traced to the supporting documentation. We obtained the supporting documentation of plant additions and transfer adjustments, and traced to Form A7. No exceptions were noted.

Capital Investment

Objectives: The objectives were to determine whether: 1) The capital investment for Feeder Hardening, Distribution Lateral Undergrounding, and Transmission Wooden Structure Hardening programs were properly booked and recorded, 2) The corresponding Plant-in-Service and Depreciation Base are appropriately recorded, 3) CWIP Non Interest Bearing Accounts are calculated correctly for the test year ended December 31, 2024.

Procedures: We recalculated the capital investment activities for each program, and reconciled to Forms A6 and A7. We selected a judgmental sample from the Feeder Hardening, Distribution Lateral Undergrounding, and Transmission Wooden Structure Hardening programs and reconciled the transactions to supporting documentation. No exceptions were noted.

True-up

Objective: The objective was to determine if the True-Up and Interest Provision, as filed, was properly calculated for SPPCRC.

FPSC EXH NO. 49
ADMITTED

Procedures: We traced the December 31, 2023, True-Up Provision to Order PSC-2024-0459-FOF-EI. We recalculated the True-Up and Interest Provision amounts as of December 31, 2024, using the Commission-approved beginning balance as of December 31, 2023, the applicable Commercial Paper rates, and the 2024 revenues and costs. No exceptions were noted.

Net Operating Income

Operating Revenue

Objectives: The objectives were to determine whether the revenue filed by the Company is supported by Company documentation and agrees to the general ledger.

Procedures: We computed revenues using the factors in the Order PSC-2024-0459-FOF-EI and actual Kilowatt Hours (kWh) sales from the Revenue Reports and reconciled them to the general ledger and the SPPCRC. No exceptions were noted.

Operation and Maintenance Expense

Objectives: The objectives were to determined the actual kWh sold for the period January 1, 2024, through December 31, 2024, and whether the Company applied the Commission approved cost recovery factor to actual kWh sales for the SPPCRC.

Procedures: We recalculated the Overhead Hardening, Vegetation Management, Undergrounding Laterals and Implementation O&M program expenses from the general ledger, and reconciled to Forms A4 and A5. We performed a judgmental sample for Implementation costs - G&I, Overhead Hardening O&M Programs, Underground O&M Programs, Vegetation Management O&M Programs, and traced them to the supporting documentation. No exceptions were noted.

Depreciation and Amortization Expenses

Objectives: The objective was to determined that the most recent Commission-approved depreciation rates and amortization periods were used in the Company's Storm Protection Plan schedules and the amounts were calculated correctly for the period ended December 31, 2024.

Procedures: We traced all depreciation rates used by project number from the Company's supporting documentation to the approved Depreciation Rates in Order No. PSC-2021-0324-FOF-EI. We obtained all deprecation rates used for Distribution Lateral Undergrounding Program, Transmission Asset Upgrades Program and Distribution Overhead Feeder Hardening Program, and traced to the Commission-approved depreciation rates. Audit staff determined that the Company has not performed a calculation to determine the amount of depreciation expense savings related to the retirement of existing plant resulting from its SPP programs. No exceptions were noted.

Accounting Practices

Objectives: The objectives were to: 1) Substantiate if the Company changed any of its accounting practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause, and 2) Determine if the Company changed any of its

FPSC EXH NO. 49
ADMITTED

allocation practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause.

Procedures: We requested and reviewed the accounting practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Protection Plan Cost Recovery Clause. We reviewed whether the Company changed any of its allocation practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause. We confirmed that the Company has no change to its allocation method. No exceptions were noted.

Purpose

To: Florida Public Service Commission

We have performed the procedures described later in this report to meet the objectives set forth by Office of Industry Development & Market Analysis in its audit service request dated January 7, 2025. We have applied these procedures to the attached summary exhibit and to several related schedules prepared by Florida Public Utilities Company in support of its 2024 filing for the Storm Protection Plan Cost Recovery Clause in Docket No. 20250010-EI.

The report is intended only for internal Commission use.

FPSC EXH NO. 50
ADMITTED

Objectives and Procedures

General

Definition

FPUC/Company refers to the Florida Public Utilities Company.
SPP refers to the Storm Protection Plan Cost Recovery Clause.

Background

On May 2, 2025 Florida Public Utilities Company filed support for its Storm Protection Plan Cost Recovery factor, for the period January 2024 through December 2024, and the 2024 Storm Protection Plan Accomplishments.

Rate Base

Plant

Objectives: The objective was to determine that the plant additions, retirements, and adjustments for the year ended December 31, 2024, related to the Storm Protection Plan Cost Recovery Clause (SPPCRC) programs.

Procedures: We obtained the plant additions and retirements of SPPCRC for 2024. We recalculated the total plant additions by program, and reconciled to Form 7A. We judgmentally selected plant transactions of each program for sample testing, and traced to the supporting documentation. We obtained the supporting documentation of plant additions and transfer adjustments, and traced to Form 7A. No exceptions were noted.

Capital Investment

Objectives: The objectives were to determine whether: 1) The capital investment for Feeder Hardening, Distribution Lateral Undergrounding, and Transmission Wooden Structure Hardening programs were properly booked and recorded, 2) The corresponding Plant-in-Service and Depreciation Base are appropriately recorded, 3) CWIP Non-Interest Bearing Accounts are calculated correctly for the test year ended December 31, 2024.

Procedures: We recalculated the capital investment activities for each program, and reconciled to Forms 6A and 7A. We selected a judgmental sample from the Feeder Hardening, Distribution Lateral Undergrounding, and Transmission Wooden Structure Hardening programs and reconciled the transactions to supporting documentation. No exceptions were noted.

True-up

Objective: The objective was to determine if the True-Up and Interest Provision, as filed, was properly calculated for SPPCRC.

FPSC EXH NO. 50
ADMITTED

Procedures: We traced the December 31, 2023, True-Up Provision to Order PSC-2024-0459-FOF-EI. We recalculated the True-Up and Interest Provision amounts as of December 31, 2024, using the Commission approved beginning balance as of December 31, 2023, the applicable Commercial Paper rates, and the 2024 revenues and costs. No exceptions were noted.

Net Operating Income

Operating Revenue

Objectives: The objectives were to determine whether the revenue filed by the Company is supported by Company documentation and agrees to the general ledger.

Procedures: We computed revenues using the factors in the Order PSC-2024-0459-FOF-EI and actual kWh sales from the Revenue Reports and reconciled them to the general ledger and the SPPCRC. No exceptions were noted.

Operation and Maintenance Expense

Objectives: The objectives were to determine the actual Kilowatt Hours (kWh) sold for the period January 1, 2024, through December 31, 2024, and whether the Company applied the Commission approved cost recovery factor to actual kWh sales for the SPPCRC.

Procedures: We recalculated the Overhead Hardening, Vegetation Management, Undergrounding Laterals and Implementation O&M program expenses from the general ledger, and reconciled to Forms 4A and 5A. We performed a judgmental sample for Implementation costs - G&I, Overhead Hardening O&M Programs, Underground O&M Programs, Vegetation Management O&M Programs, and traced them to the supporting documentation. No exceptions were noted.

Depreciation and Amortization Expenses

Objectives: The objective was to determine that the most recent Commission-approved depreciation rates and amortization periods were used in the Company's Storm Protection Plan schedules and the amounts were calculated correctly for the period ended December 31, 2024.

Procedures: We traced all depreciation rates used by project number from the Company's supporting documentation to the approved Depreciation Rates in Order No.PSC-2014-0517-S-EI. We obtained all deprecation rates used for Distribution Lateral Undergrounding Program, Transmission Asset Upgrades Program and Distribution Overhead Feeder Hardening Program, and traced to the Commission-approved depreciation rates. Audit staff determined that the Company has not performed a calculation to determine the amount of depreciation expense savings related to the retirement of existing plant resulting from its SPP programs. No exceptions were noted.

Accounting Practices

Objectives: The objectives were to: 1) Substantiate if the Company changed any of its accounting practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause, and 2) Determine if the Company changed any of its

FPSC EXH NO. 50
ADMITTED

allocation practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause.

Procedures: We requested and reviewed the accounting practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Protection Plan Cost Recovery Clause. We reviewed whether the Company changed any of its allocation practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause. We confirmed that the Company has no change to its allocation method. No exceptions were noted.

Objectives and Procedures

General

Definition

FPL/Company refers to the Florida Power & Light Company.
SPP refers to the Storm Protection Plan Cost Recovery Clause.

Background

On April 1, 2025 Florida Power & Light Company filed support for its Storm Protection Plan Cost Recovery factor, for the period January 2024 through December 2024, and the 2024 Storm Protection Plan Accomplishments.

Rate Base

Plant

Objectives: The objective was to determine that the plant additions, retirements, and adjustments for the year ended December 31, 2024, related to the Storm Protection Plan Cost Recovery Clause (SPPCRC) programs.

Procedures: We obtained the plant additions and retirements of SPPCRC for 2024. We recalculated the total plant additions by program, and reconciled to Form 7A. We judgmentally selected plant transactions of each program for sample testing, and traced to the supporting documentation. We obtained the supporting documentation of plant additions and transfer adjustments, and traced to Form 7A. No exceptions were noted.

Capital Investment

Objectives: The objectives were to determine whether: 1) The capital investment for Feeder Hardening, Distribution Lateral Undergrounding, and Transmission Wooden Structure Hardening programs were properly booked and recorded, 2) The corresponding Plant-in-Service and Depreciation Base are appropriately recorded, 3) CWIP Non Interest Bearing Accounts are calculated correctly for the test year ended December 31, 2024.

Procedures: We recalculated the capital investment activities for each program, and reconciled to Forms 6A and 7A. We selected a judgmental sample from the Feeder Hardening, Distribution Lateral Undergrounding, and Transmission Wooden Structure Hardening programs and reconciled the transactions to supporting documentation. No exceptions were noted.

True-up

Objective: The objective was to determine if the True-Up and Interest Provision, as filed, was properly calculated for SPPCRC.

FPSC EXH NO. 51
ADMITTED

Procedures: We traced the December 31, 2023, True-Up Provision to Order PSC-2024-0459-FOF-EI. We recalculated the True-Up and Interest Provision amounts as of December 31, 2024, using the Commission-approved beginning balance as of December 31, 2023, the applicable Commercial Paper rates, and the 2024 revenues and costs. No exceptions were noted.

Net Operating Income

Operating Revenue

Objectives: The objectives were to determine whether the revenue filed by the Company is supported by Company documentation and agrees to the general ledger.

Procedures: We computed revenues using the factors in the Order PSC-2024-0459-FOF-EI and actual Kilowatt Hours (kWh) sales from the Revenue Reports and reconciled them to the general ledger and the SPPCRC. We selected a sample of residential and commercial customers' bills for the period and recalculated each to verify the use of the correct tariff rate. No exceptions were noted.

Operation and Maintenance Expense

Objectives: The objectives were to determined the actual kWh sold for the period January 1, 2024, through December 31, 2024, and whether the Company applied the Commission approved cost recovery factor to actual kWh sales for the SPPCRC.

Procedures: We recalculated the Overhead Hardening, Vegetation Management, Undergrounding Laterals and Implementation O&M program expenses from the general ledger, and reconciled to Forms 4A and 5A. We performed a judgmental sample for Implementation costs - G&I, Overhead Hardening O&M Programs, Underground O&M Programs, Vegetation Management O&M Programs, and traced them to the supporting documentation. No exceptions were noted.

Depreciation and Amortization Expenses

Objectives: The objective was to determined that the most recent Commission-approved depreciation rates and amortization periods were used in the Company's Storm Protection Plan schedules and the amounts were calculated correctly for the period ended December 31, 2024.

Procedures: We traced all depreciation rates used by project number from the Company's supporting documentation to the approved Depreciation Rates in Order No. PSC-2021-0446-S-EI. We obtained all deprecation rates used for Distribution Lateral Undergrounding Program, Transmission Asset Upgrades Program and Distribution Overhead Feeder Hardening Program, and traced to the Commission-approved depreciation rates. Audit staff determined that the Company has not performed a calculation to determine the amount of depreciation expense savings related to the retirement of existing plant resulting from its SPP programs. No exceptions were noted.

Accounting Practices

Objectives: The objectives were to: 1) Substantiate if the Company changed any of its accounting practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause, and 2) Determine if the Company changed any of its allocation practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause.

Procedures: We requested and reviewed the accounting practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Protection Plan Cost Recovery Clause. We reviewed whether the Company changed any of its allocation practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause. We confirmed that the Company has no change to its allocation method. No exceptions were noted.
