ADMITTED

Duke Energy Florida
Storm Protection Plan Cost Recovery Clause
Estimated-Actual Filing
January 2025 - December 2025

Project Description and Progress Report

Activity Title: Feeder Hardening - Distribution

Description : The Feeder Hardening program will enable the feeder backbone to better withstand extreme weather events. This includes strengthening structures, updating BIL (basic insulation level) to current standards, updating conductor to current standards, relocating difficult to access facilities, replacing oil filled equipment as appropriate, and will incorporate the company's pole inspection and replacement activities

Accomplishments :

Fiscal Expenditures: DEF expects to incur $152.1M on engineering and construction for the Feeder Hardening work plan through December 31, 2025. In addition, DEF expects to spend an additional $7.4M in 2025 on engineering and materials for the 2026 work plan.

Progress Summary: DEF expects to harden 198 feeder line miles in 2024. In addition, engineering and material costs for the 2025 work plan will be incurred allowing for construction to begin in January 2025.

Project Description and Progress Report

Activity Title: Feeder Hardening - Wood Pole Replacement & Inspection - Distribution

Description : Per Commission Order No. 2006-0144-PAA-EI, pole inspection is performed on an 8-year cycle. These inspections determine the extent of pole decay and any associated loss of strength. The information gathered from these inspections is used to determine pole replacements and to effectuate the extension of pole life through treatment and reinforcement.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $37.0M on engineering and construction for the Feeder Hardening Pole Replacement and Feeder Hardening Inspections work plan through December 31, 2025.

Progress Summary: DEF expects to replace 3,319 feeder poles while also inspecting 31,264 feeder poles and applying pole treatments as needed in 2025. DEF will maintain continous flow of replacements of poles not passing inspection throughout the year as inspections are completed.

Activity Title: Lateral Hardening - Overhead

Description : The overhead hardening strategy will include structure strengthening, deteriorated conductor replacement, removing open secondary wires, replacing fuses with automated line devices, pole replacement (when needed), line relocation, and/or hazard tree removal.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $104.4M on engineering and construction for the Lateral Hardening Overhead work plan through December 31, 2025. In addition, DEF expects to spend an additional $8.1M in 2024 on engineering and materials for the 2026 work plan.

Progress Summary: DEF expects to harden 143 miles of lateral overhead lines in 2025. In addition, engineering and material costs for the 2026 work plan will be incurred allowing for construction to begin in January 2026.

Activity Title: Self-Optimizing Grid (SOG) - Automation

Description :

The current grid has limited ability to reroute and rapidly restore power. The SOG program is established to address both of these issues. The SOG program consists of three (3) major components: capacity, connectivity, and automation and intelligence. The SOG program redesigns key portions of the distribution system and transforms it into a dynamic smart-thinking, self-healing network.

SOG Automation projects provide intelligence and control for the SOG operations; Automation projects enable the grid to dynamically reconfigure around trouble and restore customers not impacted by an outage.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $57.7M on engineering and construction activities for the SOG-Automation work plan through December 31, 2025. In addition, DEF expects to spend an additional $1.3M in 2025 on engineering and design for the 2026 work plan.

Progress Summary: DEF expects to install 911 automated switching devices in 2025. In addition, engineering on the 2026 targets is ongoing, allowing for construction of the 2026 work plan to begin in January 2026.

Activity Title: Self-Optimizing Grid (SOG) - Capacity and Connectivity (C&C)

Description :

The current grid has limited ability to reroute and rapidly restore power. The SOG program is established to address both of these issues. The SOG program consists of three (3) major components: capacity, connectivity, and automation and intelligence. The SOG program redesigns key portions of the distribution system and transforms it into a dynamic smart-thinking, self-healing network.

The SOG Capacity projects focus on expanding substation and distribution line capacity to allow for two-way power flow. SOG Connectivity projects create tie points between circuits.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $46.7M on engineering and construction activities for the SOG-C&C work plan through December 31, 2025. In addition, DEF expects to spend an additional $1.0M in 2025 on engineering and design for the 2026 work plan.

Progress Summary: DEF expects to complete Self-Optimizing Grid capacity and connectivity work on 96 circuits in 2025. In addition, engineering on the 2026 targets is ongoing, allowing for construction of the 2026 work plan to begin in January 2026.

Project Description and Progress Report

Activity Title: Underground Flood Mitigation - Distribution

Description :

Underground Flood Mitigation will harden existing underground line and equipment to withstand storm surge through the use of DEF's current storm surge standards. This involves the installation of specialized stainless-steel equipment, submersible connections and concrete pads with increased mass. The primary purpose of this hardening activity is to minimize the equipment damage caused by storm surge and thus reduce customer outages and/or expedite restoration after the storm surge has receded.
For selected locations, DEF would utilize a concrete pad with increased weight and stainless steel tiedowns and change all the connections to waterproof (submersible) connections. Conventional switchgear would be replaced with submersible switchgears that are able to withstand the storm surge.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $2.7M on engineering and construction activities for the Underground Flood Mitigation work plan through December 31, 2025. DEF expects spend an additional $0.1M engineering on the 2026 targets, allowing for construction of the 2026 work plan to begin in January 2026.

Progress Summary: DEF expects to complete construction work at 4 locations during 2025.

Project Description and Progress Report

Activity Title: Lateral Hardening - Underground

Description :

Lateral segments that are most prone to damage resulting in outages during extreme weather events will be placed underground. Doing so will greatly reduce both damage costs and outage duration for DEF customers. Lateral Undergrounding focuses on branch lines that historically experience the most outage events, contain assets of greater vintage, are susceptible to damage from vegetation, and/or often have facilities that are inaccessible to trucks. These branch lines will be replaced with a modern, updated, and standard underground design of today.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $115.7M on engineering and construction activities for the Lateral Hardening Underground work plan through December 31, 2025. In addition, DEF expects to spend an additional $0.2M in 2025 on engineering and design for the 2026 work plan.

Progress Summary: DEF expects to underground 56 miles of lateral overhead lines in 2025. In addition, engineering for the 2026 targets is ongoing, allowing for construction of the 2026 work plan to begin in January 2026.

Activity Title: Structure Hardening - Transmission: Wood to Non-Wood Pole Replacement

Description :

This activity will upgrade wood poles to non-wood material such as steel or concrete. Wood pole failure has been the predominate structure damage to the transmission system during extreme weather. This strengthens structures by eliminating damage from woodpeckers and wood rot. The new structures will be more resistant to damage from extreme weather events. Other related hardware upgrades will occur simultaneously, such as insulators, crossarms, switches, and guys.

Accomplishments :

Fiscal Expenditures:

DEF expects to incur $117.2M on engineering, materials, and construction activities for the 2025 SPP Structure Hardening - Transmission: Wood to Non-Wood Pole Replacement work plan by December 31, 2025. In addition, DEF expects to spend an additional $2.0M in 2025 on engineering and materials for the 2026 work plan.

Progress Summary:

DEF expects to replace 1,853 poles from January 1, 2025 to December 31, 2025.

Project Description and Progress Report

Activity Title: Structure Hardening - Transmission: Tower Upgrades

Description :

Tower Upgrade will prioritize towers based on inspection data and enhanced weather modeling.
The upgrade activities will replace tower types that have previously failed during extreme weather events. Over 700 towers have been identified as having this design type.

In addition, the tower upgrade activities will upgrade lattice towers identified by visual ground inspections, aerial drone inspections and data gathered during cathodic protection installations. This will improve the ability of the transmission grid to sustain operations during extreme weather events by reducing outages and improving restoration times. Other related hardware upgrades will occur simultaneously such as insulators, cathodic protection, and guys.

Accomplishments :

Fiscal Expenditures:

DEF expects to incur $19.5M on engineering, materials, and construction activities for the 2025 SPP Structure Hardening - Transmission: Tower Upgrades work plan by December 31, 2025. In addition, DEF expects to spend an additional $0.5M in 2025 on engineering and materials for the 2026 work plan.

Progress Summary:

DEF expects to replace 78 towers from January 1, 2025 to December 31, 2025.

Project Description and Progress Report

Activity Title: Structure Hardening - Transmission: Tower Cathodic Protection

Description :

The purpose of the Cathodic Protection (CP) activities will be to mitigate active groundline corrosion on the lattice tower system. This will be done by installing passive CP systems comprised of anodes on each leg of lattice towers. The anodes serve as sacrificial assets that corrode in place of structural steel, preventing loss of structure strength to corrosion. Each CP project will address all towers on a line from beginning point to end point.

Accomplishments :

Fiscal Expenditures:

DEF expects to incur $2.2M on engineering, materials, and construction activities for the 2025 SPP Structure Hardening - Transmission: Tower Cathodic Protection work plan by December 31, 2025. In addition, DEF expects to spend an additional $0.3M in 2025 on engineering and materials for the 2026 work plan.

Progress Summary:

DEF expects to install 273 Cathodic Protection measures on its towers from January 1, 2025 to December 31, 2025.

Activity Title: Structure Hardening - Transmission: Tower Drone Inspections

Description :

DEF will conduct drone inspections on targeted lattice tower lines. The intent of this additional inspection is to identify otherwise difficult to see structure, hardware, or insulation vulnerabilities through high resolution imagery. DEF is incorporating drone patrols into the inspections because drones have the unique ability to provide a close vantage point with multiple angles on structures that is unattainable through aerial or ground patrols with binoculars.

Accomplishments :

Fiscal Expenditures:

DEF expects to incur $105K of O&M expenses on inspection activities for the 2025 SPP Structure Hardening - Transmission: Tower Drone Inspections work plan by December 31, 2025. This program does not expect to incur any Capital costs.

Progress Summary:

DEF expects to inspect 798 towers from January 1, 2025 to December 31, 2025.

Activity Title: Structure Hardening - Transmission - GOAB

Description : The Gang Operated Air Break (GOAB) line switch automation project is an initiative that will upgrade switch locations with modern switches enabled with remote-control capabilities. The GOAB upgrades increase the number of remote-control switches to support faster isolation of trouble spots on the transmission system and more rapid restoration following line faults.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $4.1M on engineering, materials, and construction activities for the 2025 SPP Structure Hardening - Transmission - GOAB work plan by December 31, 2025. In addition, DEF expects to spend an additional $2.5M in 2025 on engineering and materials for the 2026 work plan.

Progress Summary: DEF expects to automate 6 GOAB switches on its system from January 1, 2025 to December 31, 2025.

Activity Title: Structure Hardening - Transmission - Overhead Ground Wire

Description :

The Overhead Ground Wires standards-based activity targets replacement of transmission overhead ground wire susceptible to damage or failure with optical ground wire (OPGW). OPGW improves grounding and lightning protection and provides high speed transmission of data for system protection and control and communications.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $19.6M on engineering, materials, and construction activities for the 2025 SPP Structure Hardening - Transmission - Overhead Ground Wire work plan by December 31, 2025. In addition, DEF expects to spend an additional $0.7M in 2025 on engineering and materials for the 2026 work plan.

Progress Summary: DEF expects to replace 61 miles of Overhead Ground wire in its transmission system from January 1, 2025 to December 31, 2025.

Activity Title: Substation Hardening- Transmission - Breaker Replacements and Electro-Mechanical Relays

Description :

Substation Hardening will address two major components:1) Upgrading oil breakers to state-of-the-art gas or vacuum breakers to mitigate the risk of catastrophic failure and extended outages during extreme weather events; and 2) Upgrading electromechanical relays to digital relays will provide communications and enable DEF to respond and restore service more quickly from extreme weather events.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $14.8M on engineering, materials, and construction activities for the 2025 SPP Substation Hardening- Transmission - Breaker and Electro-Mechanical Relay Replacements work plan by December 31, 2025. In addition, DEF expects to spend an additional $2.4M in 2025 on engineering and materials for the 2026 work plan.

Progress Summary: DEF expects to install 33 Breaker and Electro-Mechanical Relay replacement measures on its transmission system from January 1, 2025 to December 31, 2025.

Activity Title: Vegetation Management - Transmission

Description :

DEF's Transmission fully Integrated Vegetation Management (IVM) program is focused on ensuring the safe and reliable operation of the transmission system by minimizing vegetation-related interruptions and adequate conductor-to-vegetation clearances, while maintaining compliance with regulatory, environmental, and safety requirements or standards. The program activities focus on the removal and/or control of incompatible vegetation within and along the right of way to minimize the risk of vegetation-related outages and ensure necessary access within all transmission line corridors. The IVM program includes the following activities: planned threat and condition-based work, reactive work that includes hazard tree mitigation, and floor management (herbicide, mowing, and hand cutting operation).

Accomplishments :

Fiscal Expenditures: DEF expects to incur $10.8M on capital activities and $12.1M of O&M activities for the 2025 SPP Vegetation Management - Transmission work plan by December 31, 2025.

Progress Summary: DEF expects to complete transmission IVM activities on 648 miles from January 1, 2025 to December 31, 2025.

Activity Title: Vegetation Management - Distribution

Description :

DEF will continue to utilize a fully Integrated Vegetation Management (IVM) focused on trimming feeders and laterals on average 3 and 5-year cycles, respectively, to minimize the impact of vegetation on the distribution assets. This corresponds to trimming approximately 1,913 miles of feeder backbone and 2,471 miles of laterals annually. The IVM program consists of the following: routine maintenance “trimming”, hazard tree removal, herbicide applications, vine removal, customer requested work, and right-of-way brush “mowing” where applicable. The IVM program incorporates a combination of both cycle-based maintenance and reliability-driven prioritization of work to reduce event possibilities during extreme weather events and enhance overall reliability.

Accomplishments :

Fiscal Expenditures: DEF expects to incur $2.3M on capital activities and $49.0M of O&M activities for the 2025 SPP Vegetation Management - Distribution work plan through December 31, 2025.

Progress Summary: DEF expects to complete distribution IVM activities on 4,599 miles by December 31, 2025.

Purpose

To: Florida Public Service Commission

We have performed the procedures described later in this report to meet the objectives set forth by the Office of Industry Development & Market Analysis in its audit service request dated January 7, 2025. We have applied these procedures to the attached summary exhibit and to several related schedules prepared by Duke Energy Florida, LLC in support of its 2024 filing for the Storm Protection Plan Cost Recovery Clause in Docket No. 20250010-EI.

The report is intended only for internal Commission use.

Objectives and Procedures

General

Definitions

Duke/Company refers to Duke Energy Florida, LLC.

SPPCRC refers to the Storm Protection Plan Cost Recovery Clause.

Background

On April 1, 2025 Duke Energy Florida, LLC filed support for its Storm Protection Plan Cost Recovery factor, for the period January 2024 through December 2024, and the 2024 Storm Protection Plan Accomplishments.

Rate Base

Plant

Objectives: The objective was to determine that the plant additions, retirements, and adjustments for the year ended December 31, 2024, related to the Storm Protection Plan Cost Recovery Clause (SPPCRC) programs.

Procedures: We obtained the plant additions and retirements of SPPCRC for 2024. We recalculated the total plant additions by program, and reconciled to Form 7A. We judgmentally selected plant transactions of each program for sample testing, and traced to the supporting documentation. We obtained the supporting documentation of plant additions and transfer adjustments, and traced to Form 7A. No exceptions were noted.

Capital Investment

Objectives: The objectives were to determine whether: 1) The capital investment for Feeder Hardening, Distribution Lateral Undergrounding, and Transmission Wooden Pole Replacement programs were properly booked and recorded, 2) The corresponding Plant-in-Service and Depreciation Base are appropriately recorded, 3) CWIP Non Interest Bearing Accounts are calculated correctly for the test year ended December 31, 2024.

Procedures: We recalculated the capital investment activities for each program, and reconciled to Forms 6A and 7A. We selected a judgmental sample from the Feeder Hardening, Distribution Lateral Undergrounding, and Transmission Wooden Structure Hardening programs and reconciled the transactions to supporting documentation. No exceptions were noted.

True-up

Objective: The objective was to determine if the True-Up and Interest Provision, as filed, was properly calculated for SPPCRC.

Procedures: We traced the December 31, 2023, True-Up Provision to Order PSC-2024-0459-FOF-EI. We recalculated the True-Up and Interest Provision amounts as of December 31, 2024,

FPSC EXH NO. 26
ADMITTED

using the Commission-approved beginning balance as of December 31, 2023, the applicable Commercial Paper rates, and the 2024 revenues and costs. Audit staff determined that the Utility did not use the Commission-approved Commercial Paper rate for several months. See Finding 1.

Net Operating Income

Operating Revenue

Objectives: The objectives were to determine whether the revenue filed by the Company is supported by Company documentation and agrees to the general ledger.

Procedures: We computed revenues using the factors in the Order PSC-2024-0459-FOF-EI and actual Kilowatt Hours (kWh) sales from the Revenue Reports and reconciled them to the general ledger and the SPPCRC. We selected a sample of residential and commercial customers' bills for the period and recalculated each to verify the use of the correct tariff rate. No exceptions were noted.

Operation and Maintenance Expense

Objectives: The objectives were to determined the actual kWh sold for the period January 1, 2024, through December 31, 2024, and whether the Company applied the Commission approved cost recovery factor to actual kWh sales for the SPPCRC.

Procedures: We recalculated the Overhead Hardening, Vegetation Management, Undergrounding Laterals and Implementation O&M program expenses from the general ledger, and reconciled to Forms 4A and 5A. We performed a judgmental sample for Implementation costs - G&I, Overhead Hardening O&M Programs, Underground O&M Programs, Vegetation Management O&M Programs, and traced them to the supporting documentation. No exceptions were noted.

Depreciation and Amortization Expenses

Objectives: The objective was to determined that the most recent Commission-approved depreciation rates and amortization periods were used in the Company's Storm Protection Plan schedules and the amounts were calculated correctly for the period ended December 31, 2024.

Procedures: We traced all depreciation rates used by project number from the Company's supporting documentation to the approved Depreciation Rates in Order No. PSC-2021-0202A-AS-EI. We obtained all deprecation rates used for Distribution Lateral Undergrounding Program, Transmission Asset Upgrades Program and Distribution Overhead Feeder Hardening Program, and traced to the Commission-approved depreciation rates. Audit staff determined that the Company has not performed a calculation to determine the amount of depreciation expense savings related to the retirement of existing plant resulting from its SPP programs. No exceptions were noted.

Accounting Practices

Objectives: The objectives were to: 1) Substantiate if the Company changed any of its accounting practices, procedures, or guidelines for purposes of implementing cost recovery

FPSC EXH NO. 26
ADMITTED

through the Storm Cost Recovery Clause, and 2) Determine if the Company changed any of its allocation practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause.

Procedures: We requested and reviewed the accounting practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Protection Plan Cost Recovery Clause. We reviewed whether the Company changed any of its allocation practices, procedures, or guidelines for purposes of implementing cost recovery through the Storm Cost Recovery Clause. We confirmed that the Company has no change to its allocation method. No exceptions were noted.

Audit Findings

Finding 1: Interest Provision

Audit Analysis: Audit staff recalculated and reconciled the company's True-Up and Interest Provision to the Utility filing and determined that the Company did not use the Commission-approved Financial Commercial Paper Rate for the months from January through July 2024. See Table 1.

Table 1

	Interest Rate (First Day of Reporting Month)		Interest Rate (First Day of Subsequence Month)		Interest Provison for Month	
	Per Audit	Per Utility	Per Audit	Per Utility	Total Per Audit	Total Per Utility
January	5.34%	5.32%	5.34%	5.32%	$ 149,031	$ 148,362
Feburary	5.34%	5.32%	5.29%	5.29%	$ 143,425	$ 143,099
March	5.29%	5.29%	5.33%	5.33%	$ 134,933	$ 134,929
April	5.33%	5.33%	5.34%	5.30%	$ 126,077	$ 125,506
May	5.34%	5.30%	5.31%	5.31%	$ 121,272	$ 120,719
June	5.31%	5.31%	5.30%	5.35%	$ 123,634	$ 124,184
July	5.30%	5.35%	5.31%	5.28%	$ 132,997	$ 133,291
					Total Adjustment	$ 1,306

Effect on the General Ledger: To be determined by the company.

Effect on the Filing: The difference between Amount per Audit and Amount per Company is $1,306. However, the effect on the filing is minimal.

1. Please refer to the April 1, 2025 testimony of Witness C. David Sweat page 3, lines 16-25, and page 4, lines 1-12. For the company's 499 Distribution Lateral Undergrounding projects that were in progress in 2024, please provide:

a. The number of projects actually engineered.

b. The number of projects that began construction in 2024.

c. The number of projects that completed construction in 2024.

d. The primary factors resulting in work on projects from previous years being carried over into 2024

ANSWER:

a. Tampa Electric actually engineered 96 projects.

b. Tampa Electric began construction on 93 projects in 2024.

c. Tampa Electric completed construction on 89 projects in 2024.

d. Timing and scope are the primary factors that cause projects to carry over from one year into the next. The company may begin work on a project late in one year and complete it during the next year. Other projects may carry over from one year to the next due to their large size. Finally, some projects span multiple years because the company must complete engineering work on the project before construction can begin. Each of these factors contributed to the carry-over of some projects from 2023 to 2024.

2. Please refer to the April 1, 2025 testimony of Witness C. David Sweat page 7, lines 20-25, and page 8, lines 1-8.

a. How many transmission asset upgrade projects were projected to be completed, not just worked, in 2024?

b. How many of the completed 5 projects were started in 2024?

c. Across the remaining 5 projects, how many poles still need to be upgraded?

ANSWER:

a. Tampa Electric projected it would initiate or begin engineering work for 10 new projects (circuits) in 2024 that would account for 472 poles. The company also projected that it would complete construction of 472 poles that were engineered prior to 2024. In 2024, the company completed construction of five projects from prior years, as well as construction on several other partial projects, which accounted for a total of 428 poles.

b. The five completed projects referenced in witness Sweat's testimony are projects that were engineered prior to 2024 and constructed in 2024. None of the five completed projects were started in 2024. Typically, Transmission Asset Upgrade projects span multiple years from the time engineering work begins until construction is complete.

c. As discussed in the company's response to Interrogatory 2(a), above, the 472 poles that Tampa Electric projected it would upgrade in 2024 were not part of the 10 new projects. The 472 poles projected to be upgraded were in addition to the initiation of the 10 new projects. The remaining 44 poles of the 472 projected poles will be competed in 2025.

a. What materials were delayed?

b. Why were these materials delayed?

c. What quarter of 2025 will the unfinished project be completed?

ANSWER:

a. The substation control house and elevated platform were delayed.

b. The delivery of the materials was delayed due to Hurricanes Helene and Milton.

c. The company estimates that the remaining work for the unfinished project will be completed by the end of Q3 2025.

4. Please refer to the April 1, 2025 testimony of Witness C. David Sweat page 11, lines 16-17. Of the 79 projects that were projected to be in progress during 2024, how many of these projects were started in 2024 and how many were started before 2024?

ANSWER:

Tampa Electric had 79 projects in progress in 2024. Tampa Electric began work on 22 of these projects in 2024. The remaining 57 projects began before 2024. The 57 projects include work that was engineered in the prior year(s), projects carried over in construction from the previous year(s), and projects that were completed in the previous year(s) and had financial activities posted in 2024.

STAFF'S FIRST SET OF INTERROGATORIES
INTERROGATORY NO. 5
BATES PAGE(S): 5
MAY 21, 2025

5. Please refer to the April 1, 2025 testimony of Witness C. David Sweat page 15, lines 6-15.

a. What existing processes are the company referring to that made the mentioned activities be deemed duplicative?

b. How long were these duplicative activities occurring before the contract refinement?

c. Were the costs associated with these existing processes recovered through base rates or through the SPPCRC?

d. Will the company make adjustments to future SPPCRC filings to account for this contract refinement?

ANSWER:

a. The existing processes discussed on page 15 of Witness Sweat's testimony were the comprehensive clearance assessment and visual inspection of non-wood poles. A comprehensive clearance assessment is a visual verification of the overhead primary energized lines to identify NESC clearance violations. Tampa Electric determined that company personnel could complete visual verification during normal evaluations and were no longer required from the contractor.

b. These activities occurred during 2022 and 2023.

c. The costs for inspections were recovered through the Storm Protection Plan Cost Recovery Clause "SPPCRC".

d. The company accounted for this adjustment in the 2026 – 2035 SPP filing. However, the removal of the activities was offset by the increase in unit prices in the new contract.

a. Is TECO planning to fill the SPP manager position vacancy?

b. If yes, when?

c. If no, will the position be removed from future calculations?

ANSWER:

a. Yes, Tampa Electric filled the SPP manager position.

b. The SPP manager (Manager Regulatory Rates) position was filled on September 30, 2024.

c. N/A

STAFF'S FIRST SET OF INTERROGATORIES
INTERROGATORY NO. 7
BATES PAGE(S): 7
MAY 21, 2025

7. Please refer to Exhibit ASL-1 of Witness A. Sloan Lewis' April 1, 2025 testimony. Please explain the 31.4% variance in Asset Upgrade O&M costs.

ANSWER:

The company had higher than expected costs to transfer the existing lines to the new transmission poles. The 2024 O&M budget for line transfers was established using historical averages from prior years. The circuits that were constructed in 2024 have a higher number of line transfers which resulted in higher O&M expenses.

BATES PAGE(S): 8
MAY 21, 2025

8. Please refer to the April 1, 2025 testimony of Witness C. David Sweat page 7, lines 3-9.

a. What factors resulted in the contract default of one of TECO's vegetation management contractors?

b. What steps are being taken to replace the mentioned contract?

c. Will there be any increased costs associated with the replacement of the mentioned contract?

ANSWER:

a. The contract default was a result of contractor management turnover and resource challenges. Key members of the contractor's leadership team left the company, which created gaps in the oversight of the day-to-day operations. These gaps led to delays in hiring of field personnel, maintenance of equipment, and quality control. As such, the contractor could not complete the assigned work in accordance with contract specifications.

b. Tampa Electric issued a request for proposal in the third quarter of 2024 to replace the contractor. In addition to replacing the vendor, the company added a new vendor, increasing the vendor count from three to four.

c. No. Tampa Electric does not anticipate any increased costs associated with the addition of the new contractor or replacement of the mentioned contractor. The scope of the vegetation management work is not changing, just the number of vendors contracted to complete the work.

BATES PAGE(S): 11
JULY 7, 2025

10. Please refer to Form E-6 of Exhibit ASL-2 from the May 1, 2025 testimony of Witness A. Sloan Lewis. Please explain the 41% variance in actual/estimated capital investment costs for the Substation Extreme Weather Program.

ANSWER:

The 41 percent variance in capital investment costs for the Substation Extreme Weather Program is due to Tampa Electric moving up the project timeline for several substation projects. These substation projects were originally scheduled for later years; however, as a result of the historical flooding events that occurred in 2024, these projects were accelerated to 2025. This work will provide much needed resilience from storm surge and water intrusion at vulnerable substations including Jackson Road and Port Sutton stations; two of the substations that experienced severe flooding during hurricanes Helene and Milton.

JULY 7, 2025

11. Please refer to page 7, lines 1-14 of the May 1, 2025 testimony of Witness Kevin E. Palladino. Does the reduction of the Distribution Lateral Undergrounding Program's targeted mileage in 2025 and 2026 keep TECO compliant with the Commission-approved 2022-2031 SPP?

ANSWER:

Yes, Tampa Electric's reduction of mileage is still compliant with the Commission-approved 2022-2031 Storm Protection Plan ("2022-2031 SPP"). The company's 2022-2031 SPP included a projected or estimated budget and revenue requirement for each program for each year. Since the company's 2022-2031 SPP was approved, the company has experienced cost increases for labor, equipment, and boring costs and expects that upward pressure on costs to continue. The company made the decision to remain consistent with the budget estimates for 2025 and 2026 even though the cost to complete projects has increased, which required reducing the targeted underground conversion mileage for 2025 and 2026.

However, the reduction in the targeted mileage in 2025 and 2026 is still within the target range of between 75 and 100 miles that was approved in the 2022-2031 SPP.

12. Please refer to page 10 lines 14-18 of the May 1, 2025 testimony of Witness Kevin E. Palladino. Why were the transfers of underground distribution wire not completed in previous years when the poles were originally replaced?

ANSWER:

The transfer of underground distribution wires was not completed in previous years when the transmission poles were originally replaced as Tampa Electric transmission crews, tools and vehicles are set up to maintain operational efficiency for the crews as they go from transmission pole to transmission pole and the work required for underground distribution transfer requires different types of crews and equipment. Tampa Electric originally planned to complete underground transfers when the proper distribution crews, tools and vehicles were available.

13. Please refer to page 10 lines 20-24 of the May 1, 2025 testimony of Witness Kevin E. Palladino. Does the reallocation of one million dollars from the 2026 budget to the 2025 budget of the Transmission Asset Upgrade Program maintain TECO's compliance with the Commission-approved 2022-2031 SPP?

ANSWER:

Yes, Tampa Electric is still in compliance with the Commission-approved 2022-2031 SPP plan. Tampa Electric is revising the Direct Testimony & Exhibit of Kevin E. Palladino to remove the reference to reallocation as that statement was included in error. Tampa Electric did not shift any costs from 2026, rather Tampa Electric increased the number of poles being replaced in 2025 to harden a greater percentage of the company's transmission system before the 2026 storm season. The company's proposed number of pole replacements in 2025 is still in compliance with the proposed range/scope of work for this Program in 2025 as contemplated in the 2022-2031 SPP.

ANSWER:

Transmission wood pole/groundline inspections are conducted annually, covering one-eighth of the company's circuits each year. Each circuit has a different number of poles. The number of poles inspected each year varies based on the number of remaining wood poles on those circuits identified for inspection that year. For the circuits being inspected in 2025 and 2026, 122 wood poles and 326 wood poles are scheduled for inspection, respectively.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Storm Protection Plan Cost Recovery Clause	DOCKET NO. 20250010-EI FILED: September 22, 2025

TAMPA ELECTRIC COMPANY'S ANSWERS TO STAFF'S THIRD SET OF INTERROGATORIES (NOS. 16-19)

Pursuant to Rule 106.206, Florida Administrative Code, and Florida Rule of Civil Procedure 1.350, Tampa Electric Company ("Tampa Electric" or the "company"), hereby answers the Staff of the Florida Public Service Commission's ("Staff") Third Set of Interrogatories (Nos. 16-19), served September 2, 2025 ("Staff's Third Interrogatories").

General Objections

1. Tampa Electric objects to each interrogatory in Staff's Third Interrogatories ("Set") to the extent that it seeks information that is duplicative, not relevant to the subject matter of this docket, and is not reasonably calculated to lead to the discovery of admissible evidence.

2. Tampa Electric objects to each Set to the extent it is vague, ambiguous, overly broad, imprecise, or utilizes terms that are subject to multiple interpretations but are not properly defined or explained for purposes of such Set. Tampa Electric will seek clarification from Staff if a Set is not clear, but Tampa Electric will answer questions subject to, and without waiving, this objection.

3. Tampa Electric objects to each Set to the extent it requires Tampa Electric to produce information that is already in the public record before the Florida Public Service Commission ("FPSC" or the "Commission") or other public agency and available to Staff through normal procedures or is readily accessible through legal search engines.

FPSC EXH NO. 29
ADMITTED

4. Tampa Electric objects to each Set to the extent that it calls for data or information protected by the attorney-client privilege, the work product doctrine, the accountant-client privilege, the trade secret privilege, or any other applicable privilege or protection afforded by law. Tampa Electric will describe the nature of the privileged material, if any, in a privilege log that will accompany its responses.

5. Tampa Electric objects to producing paper copies on the grounds that doing so would be unduly burdensome.

6. Tampa Electric objects to each Set to the extent it requires the company to provide information that it believes is "proprietary confidential business information" as described in Section 366.093, Florida Statutes.

7. Tampa Electric objects to each Set, instruction, or definition in that purports to expand Tampa Electric's obligations under applicable law.

8. Tampa Electric objects to each Set to the extent it requests Tampa Electric to prepare information in a particular format or create data or information that it otherwise does not possess as unduly burdensome and as purporting to expand Tampa Electric's obligations under applicable law.

9. Subject to Section 366.093(1), Florida Statutes, Tampa Electric objects to any definition or Set that requests documents from persons or entities who are not parties to this proceeding, that seek information from affiliates unrelated to transactions or cost allocations involving Tampa Electric, or that are not otherwise subject to discovery under applicable rules.

10. Tampa Electric objects to any Set requiring the company to provide additional information beyond that obtained through a reasonable and diligent search.

FPSC EXH NO. 29
ADMITTED

General Answer

Subject to and without waiving its general objections, which are incorporated by reference in each of its specific answers, Tampa Electric serves its answers below.

The company's specific answers will identify interrogatories that call for answers that contain (a) information for which the company asserts a legal privilege and/or (b) "proprietary confidential business information" as defined in Section 366.093, Florida Statutes.

An answer that contains information for which the company asserts a legal privilege will be identified in the privilege log attached as Exhibit A.

An answer that contains information the company asserts to be "proprietary confidential business information" will be provided subject to a request for confidential classification, motion for temporary protective order and/or a non-disclosure agreement.

Specific Answers

TAMPA ELECTRIC COMPANY.
DOCKET NO. 20250010-EI
STAFF'S THIRD SET OF INTERROGATORIES
INTERROGATORY NO. 16
BATES PAGE(S): 27
SEPTEMBER 22, 2025

16. Please refer to the revised direct testimony of A. Sloan Lewis and Exhibit ASL-2. (Document No. 05576-2025), filed 7/10/2025.

a. Please provide a complete description of the methodology used for each forecast supporting the billing determinants appearing in the revised direct testimony of A. Sloan Lewis, Exhibit ASL-2, Document No. 1.

b. Please list the date(s) of all underlying forecasts that were used to formulate the billing determinants appearing in the revised direct testimony of A. Sloan Lewis, Exhibit ASL-2, Document No. 1.

c. Please also provide any changes introduced to such forecast methodologies compared to those forecast methodologies used in preparing the billing determinants in Docket No. 20240010-EI.

ANSWER:

a. Tampa Electric provided a complete description of the methodology used, for each forecast supporting the billing determinants in Exhibit ASL-2, Document No. 1 in the company's Ten-Year Site Plan filed on April 1, 2025. Chapter II: Tampa Electric Company Forecasting Methodology, pages 8-21, of that Plan provide a detailed explanation of the methodology.

b. Tampa Electric finalized all underlying forecasts used to formulate the billing determinants appearing in Exhibit ASL-2, Document No. 1 on June 9, 2025.

c. There have been no changes in methodology to those used in preparing the billing determinants in Docket No. 20240010-EI. The methodology used to prepare the billing determinants was approved as part of the company's most recent base rate proceeding in Docket 20240034-EI. In Order No. PSC-2025-0038-FOF-EI, the Commission stated: "Based on the above analysis, we find that TECO's forecast of customers, energy sales (as measured in kWh) and demand (as measured in kW) are reasonable and are hereby approved."

SEPTEMBER 22, 2025

18. Please refer to the revised direct testimony of A. Sloan Lewis, Exhibit ASL-2, Document No. 1.

a. For each forecast of energy and demand for 2025 and 2026 used to support the listed billing determinants for 2026, please provide a comparison of monthly forecasts to monthly actual demand and energy for the months of January through June 2025.

b. Regarding the comparisons provided in response to Interrogatory No. 18.a., please provide reasons for any monthly average deviations that exceed +/- 20 percent.

ANSWER:

a. Tampa Electric is answering this interrogatory in full by producing a document as allowed under Florida Rule of Civil Procedure 1.340(c); the document reflecting a comparison of monthly forecasts to monthly actual demand and energy for the months of January through June 2025 for each forecast of energy and demand for 2025 and 2026 used to support the billing determinants for 2026 is being provided in the Excel file "(BS 30) IRR18.xlsx."

b. Please see the Excel file in response to subpart (a) above, tab "Causative Explanations."

IRR No. 18 Please refer to the revised direct testimony of A. Sloan Lewis, Exhibit ASL-2, Document No. 1.

a. For each forecast of energy and demand for 2025 and 2026 used to support the listed billing determinants for 2026, please provide a comparison of monthly forecasts to monthly actual demand and energy for the months of January through June 2025.

Please refer to the following tabs in this file:
Customers Side-by-Side
Energy Sales Summary
Average Use Side-by-Side
Peak Demands Side-by-Side

b. Regarding the comparisons provided in response to Interrogatory No. 18.a., please provide reasons for any monthly average deviations that exceed +/- 20 percent.

Please refer to the Causative Explanations tab in this file.

INTERROGATORY NO. 20
BATES PAGE(S): 32
SEPTEMBER 23, 2025

20. Please explain the main driver behind why and how TECO's 2026 SPPCRC residential recovery factor of .717 cents/kWh, reported on page 15 of Witness A. Sloan Lewis' revised testimony filed July 10, 2025, is .005 cents/kWh less than the 2025 SPPCRC residential recovery factor of .722 cents/kWh.

ANSWER: The main driver behind the .005 cents/kWh decrease in the 2026 SPPCRC residential recovery factor is the over-recovery of $18,640,846. This over-recovery is derived from the following: a 2024 true-up over-recovery of $9,284,909 and an estimated 2025 true-up over-recovery of $9,355,937. This over-recovery reduced the 2026 projected revenue requirement by $18,640,846, resulting in a 2026 SPPCRC residential recovery factor of .717 cents/kWh that is less than the 2025 SPPCRC residential recovery factor of .722 cents/kWh.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Storm Protection Plan Cost Recovery Clause	DOCKET NO. 20250010-EI FILED: September 22, 2025

TAMPA ELECTRIC COMPANY'S RESPONSE TO STAFF'S FIRST REQUEST FOR PRODUCTION OF DOCUMENTS (NOS. 1-3)

Pursuant to Rule 106.206, Florida Administrative Code, and Florida Rule of Civil Procedure 1.350, Tampa Electric Company ("Tampa Electric" or the "company"), hereby responds to the Staff of the Florida Public Service Commission's ("Staff") First Request for Production of Documents (Nos. 1-3), served September 2, 2025 ("Staff's First POD").

General Objections

1. Tampa Electric objects to each Request for Production in Staff's First POD ("Request") to the extent that it seeks information that is duplicative, not relevant to the subject matter of this docket, and is not reasonably calculated to lead to the discovery of admissible evidence.

2. Tampa Electric objects to each Request to the extent it is vague, ambiguous, overly broad, imprecise, or utilizes terms that are subject to multiple interpretations but are not properly defined or explained for purposes of such Requests. Tampa Electric will seek clarification from Staff if a request is not clear, but Tampa Electric will produce documents subject to, and without waiving, this objection.

3. Tampa Electric objects to each Request to the extent it requires Tampa Electric to produce information that is already in the public record before the Florida Public Service Commission ("FPSC" or the "Commission"), or other public agency and/or available to Staff through normal procedures or is readily accessible through legal search engines.

FPSC EXH NO. 31
ADMITTED

4. Tampa Electric objects to each Request to the extent that it calls for data or information protected by the attorney-client privilege, the work product doctrine, the accountant-client privilege, the trade secret privilege, or any other applicable privilege or protection afforded by law. Tampa Electric will describe the nature of the privileged material, if any, in a privilege log that will accompany its responses.

5. Tampa Electric objects to producing paper copies on the grounds that doing so would be unduly burdensome.

6. Tampa Electric objects to each Request to the extent it requires the company to provide information that it believes is "proprietary confidential business information" as described in Section 366.093, Florida Statutes.

7. Tampa Electric objects to each Request to the extent it requests Tampa Electric to prepare information in a particular format or create data or information that it otherwise does not possess as unduly burdensome and purports to expand Tampa Electric's obligations under applicable law.

8. Subject to Section 366.093(1), Florida Statutes, Tampa Electric objects to any definition or Request that requests documents from persons or entities who are not parties to this proceeding, that seek information from affiliates unrelated to transactions or cost allocations involving Tampa Electric, or that are not otherwise subject to discovery under applicable rules.

9. Subject to Section 366.093(1), Florida Statutes, Tampa Electric objects to any definition or Request that requests documents from persons or entities who are not parties to this proceeding, that seek information from affiliates unrelated to transactions

FPSC EXH NO. 31
ADMITTED

or cost allocations involving Tampa Electric, or that are not otherwise subject to discovery under applicable rules.

10. Tampa Electric objects to any Request requiring the company to provide additional information beyond that obtained through a reasonable and diligent search.

General Response

Subject to and without waiving its general objections, which are incorporated by reference in each of its specific responses, Tampa Electric will produce documents responsive to the Requests as specified in its specific responses shown below.

The company's specific responses will identify Requests that call for documents that contain (a) information for which the company asserts a legal privilege and/or (b) "proprietary confidential business information" as defined in Section 366.093, Florida Statutes.

Documents responsive to a Request that contains information for which the company asserts a legal privilege will be identified in the privilege log attached as Exhibit A.

Documents responsive to a Request that contain information the company asserts to be "proprietary confidential business information" will be provided in the Confidential portion of the SharePoint subject to a request for confidential classification, motion for temporary protective order and/or a non-disclosure agreement.

Specific Responses

FPSC EXH NO. 31

Specific Responses

1. Similar to as was provided for 2026, please provide TECO's 2025 forecasted billing determinants that were utilized in this proceeding.

Response:

Please see Excel file provided labeled, "(BS 20) SPPCRC 2025 rates 10.5 ROE".

2. Please provide all documents used to prepare/calculate/evaluate the forecasted 2025 and 2026 billing determinants utilized in this proceeding.

Response:

Please see Excel files provided labeled, "(BS 21) Fcst2026_Billing Determinants 2026-2027 (Monthly & Yearly)_ROUTING" and "(BS 22) Fcst2026_Billing Determinants 2026-2027 (Monthly & Yearly)_PREP."

3. Please refer to the following documents:

i) TECO witness Lewis's Direct Testimony and Exhibit ASL-1, Form A-7, pages 22 through 9 of 29, filed on April 1, 2025,

ii) Witness Lewis's Direct Testimony Exhibit ASL-2, Form P-3, pages 12 through 20 of 44, filed on July 10, 2025.

a) Please provide Forms A-7 and P-3 in MS Excel format with formulas intact.

b) Please provide a MS Excel file showing the breakdown of SPP depreciation rates used to calculate the depreciation expenses on lines 8a and 8b for each of the afore-referenced pages, by project, plant account, and depreciation group.

Response:

a) Please see Excel files labeled, "(BS 23) 2026 SPPCRC Form P_Final – HC" and "(BS 24) Final_2024 SPPCRC Form A_HC."

b) Please see Excel files labeled, "(BS 25) Form A-7 Depr Rates" and "(BS 26) Form P-3 Depr Rates".

ADMITTED

This file reflects the Fcst2026 ***Billing Determinants, created Summer 2025,*** **on a monthly basis for 2026 and 2027. Annual totals are on the far right of each tab.**

The rates are seperated into the following categories:

RS Rate Class
RSD Rate Class
CS Rate Class
GS Rate Class
GSD Rate Class
GSDT Rate Class
GSD Option Rate Class
SBD Rate Class
SBD Supplemental Rate Class
SBD Standby (SB) Rate Class
SBDT Rate Class
SBDT Supplemental Rate Class
SBDT Standby (SB) Rate Class
GSLD Primary (PR) Rate Class
GSLD Subtransmission (SU) Rate Class
GSLDT Primary (PR) Rate Class
GSLDT Subtransmission (SU) Rate Class
SBLD Primary (PR) Rate Class
SBLD Subtransmission (SU) Rate Class
SBLDT Primary (PR) Rate Class
SBLDT Primary (PR) Supplemental Rate Class
SBLDT Primary (PR) Standby (SB) Rate Class
SBLDT Subtransmission (SU) Rate Class
SBLDT Subtransmission (SU) Supplemental Rate Class
SBLDT Subtransmission (SU) Standby (SB) Rate Class
LS1 & LS2 Rate Class

This file reflects the Fcst2026 *Billing Determinants, created Summer 2025,* on a monthly basis for 2026 and 2027. Annual totals are on the far right of each tab.

The rates are seperated into the following categories:

RS Rate Class
RSD Rate Class
CS Rate Class
GS Rate Class
GSD Rate Class
GSDT Rate Class
GSD Option Rate Class
SBD Rate Class
SBD Supplemental Rate Class
SBD Standby (SB) Rate Class
SBDT Rate Class
SBDT Supplemental Rate Class
SBDT Standby (SB) Rate Class
GSLD Primary (PR) Rate Class
GSLD Subtransmission (SU) Rate Class
GSLDT Primary (PR) Rate Class
GSLDT Subtransmission (SU) Rate Class
SBLD Primary (PR) Rate Class
SBLD Subtransmission (SU) Rate Class
SBLDT Primary (PR) Rate Class
SBLDT Primary (PR) Supplemental Rate Class
SBLDT Primary (PR) Standby (SB) Rate Class
SBLDT Subtransmission (SU) Rate Class
SBLDT Subtransmission (SU) Supplemental Rate Class
SBLDT Subtransmission (SU) Standby (SB) Rate Class
LS1 & LS2 Rate Class

FPSC EXH NO. 31

ADMITTED

File Location: \FORECASTING\MetrixND_2026 Fcst\Projects\Revenues\7_Output\Billing Determinates (kwh, kw) for Base Rates & ClausePreparers\
Source: Fcst2026_Billing Determinants 2026-2027 (Monthly & Yearly).xlsx
Report: BillingDeterminants_1, BillingDeterminants_2, BillingDeterminants_3

Instructions

1. Copy and paste the 3 reports (BillingDeterminants_1, BillingDeterminants_2, BillingDeterminants_3) in the designated Input tabs (Input_BD_1, Input_BD_2, Input_BD_3).
2. Enter in the "Monthly & Annual BDs" tab cell B4 the first year of data you need. Currently this file is set up to provide 3 years of monthly and annual data.
3. Ensure the checks on the "Monthly & Annual BDs" tab , cells K2, L2, and M2 are zero, which confirms all the data in the 3 reports was transposed to the tab using Index & Match formula
4. Open the TECOSales.NDM model and copy and paste the sales energy (KWh) and customer count data into column L and R below. See notes on cell J16 and R16 for more info and resources.
5. Ensure the checks on the "Monthly & Annual BDs" tab and cells AP339:AR339 and AV339:AX339 are low numbers and as close to zero. (acceptable difference is 20 kwh and 7 customers)
6. The "Monthly & Annual BDs FUEL ONLY" tab, copies the data from the "Monthly & Annual BDs" tab and subtracts to the highlighted in orange rows the Sunselect to display FUEL ONLY.
7. Ensure the checks on the "Monthly & Annual BDs FUEL ONLY" tab on column AT are zero. The only exception are Monthly_Sales_Forecast.RS and Monthly_Sales_Forecast.GSDm, which may not be exactly zero (0), because of rounding. (Number should be small thou
6. Route the 3 tabs to the allocated list: README, Monthly & Annual BDs, and Monthly & Annual BDs FUEL ONLY. Erase the checks on the "Monthly & Annual BDs" tab and "Monthly & Annual BDs FUEL ONLY" tab for the routing list.

Routing List for the Clause and Base rate team:

- Jordan Williams
- Lisa Grant
- Ashley Sizemore - Clean Energy Transition Mechanism (CETM) Director
- Rob Johnston - Conservation Clause Manager
- Erika Perez - Conservation Clause
- Sloan Lewis - SPP Clause Manager
- Leslie Silvey - SPP Clause
- Zel Jones - Fuel & Capacity and Environmental Clause Manager
- Richard Camargo - Fuel & Capacity Clause
- Krystal Chisolm - Environmental Clause

Program Description and Progress Report

Activity Title: *Title used by the Company in identifying the Program and allocating costs and charges to the Program.*

Description : *Describe the Program. Identify the location(s) of affected facilities and/or route. Provide site reference to the Approved Storm Protection Plan where the Program is explicitly identified. Explain how the Program is consistent with the Program identified.*

Accomplishments :

Fiscal Expenditures: *Discuss the three-year amounts relevant to the Clause and variances, if any. Note the method used to identify only those costs not recovered through base rates or any other cost recovery mechanism.*

Progress Summary: *Note status of completion consistent with the scope of the Program identified in the approved Storm Protection Plan.*

Projections: *If the project is completed state "Completed". Otherwise, highlight of the types of costs and future amounts for completion.*

Calculation of Annual Revenue Requirements for O&M Programs
(in Dollars)

Instructions:
List the name/identifier of each O&M Program showing the calculation of monthly revenue requirements and whether the program is aTransmission (T) or Distribution (D) program. Group the programs by Overhead Hardening, Undergrounding, and Vegetation Management. Identify adjustments that are necessary to ensure net costs exclude costs recovered through base rates or any other cost recovery mechanism. Show the allocation of costs to energy and demand.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Storm protection plan cost recovery clause.	DOCKET NO. 20250010-EI DATED: June 17, 2025

FLORIDA PUBLIC UTILITIES COMPANY'S RESPONSES TO STAFF'S FIRST SET OF INTERROGATORIES (NOS. 1-13)

Florida Public Utilities Company ("FPUC" or "Company"), hereby submits its Responses to the First Set of Interrogatories (Nos. 1-13) served on the Company on May 27, 2025, by the Staff of the Florida Public Service Commission. The individual responses follow this cover sheet.

Respectfully submitted,

Beth Keating
Gunster, Yoakley & Stewart, P.A.
215 South Monroe St., Suite 601
Tallahassee, FL 32301

INTERROGATORY 1(a)

Responses

1. Please refer to lines 14 to 16 on page 4 of Witness Cutshaw's April 4, 2025, direct testimony. The witness states that the reduction in expense was due in part to the "over estimation of the expense related to the hardening programs and the delay in completion of the 2024 transmission inspection."

a. Why was the expense related to the hardening programs over estimated?

Response: FPUC estimates a certain percentage of the total cost of a job will be O&M associated with expense type activities that are typically not capitalized. The specifics of these activities are not known at the time cost projections are generated, hence why a percentage estimate is used as a placeholder. As jobs get completed, costs associated with these expense type activities are captured and are to be allocated appropriately. The proper allocation of these costs in 2024 did not occur for all Programs. Additionally, allocation of expense costs between Programs, specifically the Overhead Feeder and Lateral Hardening Programs, were not properly done.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 1(b)

b. What adjustments has FPUC made to reduce such over estimations in the future?

Response: FPUC has set up a review process to ensure the expense related to this type of work is revised in order to more accurately match the job and to properly allocate that expense to the correct program.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 1(c)

c. Why was there a delay in completion of the 2024 transmission inspection?

Response: The inspection was scheduled for the second half of 2024 but was delayed due to storms and other obligations from the inspection contractor. The field inspections began and were completed in 2024 with the data reviewed and report being produced in early 2025 which resulted in the cost being pushed into 2025 which resulted in no expense to this program in 2024.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 1(d)

d. What adjustments has FPUC made to prevent a recurrence of such delays in the future?

Response: During the next six-year inspection to be conducted, the inspection will be scheduled for earlier in the year to avoid delays that could occur due to storms during the fall of the year.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 2(a)

2. Please refer to lines 6 to 10 on page 5 of Witness Cutshaw's April 4, 2025, direct testimony. The witness states that the variance occurred "as a result of FPUC working to ramp up the construction activities for projects that have been previously engineered and original cost estimates being understated based on the actual work that was performed in these areas. Access to the facilities, traffic control, energized work, vegetation management activities and material cost increases all contributed to the overrun on costs."

a. Why were the original cost estimates understated?

Response: As described above, prior to 2024 preliminary engineering and estimates were established for the work to be performed in 2024. During the time lapse there were increases in material costs that were not anticipated, as well as, work conditions that changed requiring additional energized work and traffic control. These conditions resulted in increased cost from a material and labor perspective.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 2(b)

b. What adjustments has FPUC made to prevent recurrence of similar cost estimate understatements?

Response: During 2024, FPUC was able to get the full-time equivalent position to focus on the SPP, which included a review of the estimates being produced and the actuals that are occurring. Cost projections provided in 2025 account for adjustments in unit cost estimates made as part of this effort.

Respondent: Mark Cutshaw

INTERROGATORY 3

3. Please refer to lines 16 to 18 on page 5 of Witness Cutshaw's April 4, 2025, direct testimony. The witness states that during 2024, FPUC was able to acquire "a full-time equivalent position to focus on the SPP Program Management which will allow continued improvement in the projections and efficiency of the overall SPP." In what ways will the new hire improve efficiency and projections?

Response: **This new position will be able to focus on aspects of the SPP in order to ensure estimates are appropriate, charges occur to the correct project, capital and expense percentages are accurate and the overall efficiency is monitored.**

Respondent: Mark Cutshaw

INTERROGATORY 4

4. Please refer to lines 20 to 21 on page 5 of Witness Cutshaw's April 4, 2025, direct testimony. The witness states that the variance "will be incorporated into the 2025 and 2026 capital projects to re-align SPP investments with the 10-year projected totals reflected in the SPP." Please explain in further detail.

Response: Projects within FPUC's ten-year plan are adjusted year over year as a result of cost variances to maintain alignment with cost estimates provided as part of the approved SPP.

Respondent: Mark Cutshaw

INTERROGATORY 5(a)

5. Please refer to lines 16 to 23 on page 3 and lines 1-5 on page 4 of Witness Baker's May 2, 2025, revised direct testimony. The witness states that "the costs for pole inspection and vegetation management reported on Form 5A represent the total amount spent by the Company on these projects, including the amount already recovered in base rates."

a. Why are adjustments made to reduce SPPCRC revenue requirement for costs that are being recovered through base rates only for pole inspection and vegetation management?

Response: These are expenses included in our last rate case and therefore recovered in base rates. The adjustments are done to avoid double recovery. Ultimately only the portion not recovered through base rates is included for recovery through the SPPCRC.

Respondent: Brittnee Baker

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 5(b)

b. Are similar adjustments needed for any other program in the company's SPPCRC filing?

Response: No, no other adjustments are needed for any other program in the company's SPPCRC filing.

Respondent: Brittnee Baker

INTERROGATORY 6(a-c)

6. Please refer to line items 1.1, 1.2, 1.3, 1.4, 2.1, and 3.2 of SPPCRC Form 4A of Revised Exhibit No. BB-1 of Witness Baker's May 2, 2025 revised testimony.

a. Please explain the variance between actual and estimated actual Overhead Hardening O&M Program costs for Overhead Feeder Hardening.

Response: Please see response to 1(a) above.

Respondent: Mark Cutshaw

b. Please explain the variance between actual and estimated actual Overhead Hardening O&M Program costs for Overhead Lateral Hardening.

Response: Please see response to 1(a) above.

Respondent: Mark Cutshaw

c. Please explain the variance between actual and estimated actual Overhead Hardening O&M Program costs for Distribution Pole Inspection and Replacement.

Response: The O&M costs associated with this program are associated with pole inspections performed by a contractor. Annual costs vary depending on number of inspections completed and items of remediation found and repaired in the field.

Respondent: Mark Cutshaw

INTERROGATORY 6(d-e)

d. Please explain the variance between actual and estimated actual Overhead Hardening O&M Program costs for Transmission System Inspection and Hardening.

Response: Please see response to 1(c) above. The variance is due to 2024 inspection costs being realized in 2025.

Respondent: Mark Cutshaw

e. Please explain the variance between actual and estimated actual Undergrounding O&M Program costs for Overhead Lateral Undergrounding.

Response: Since this program typically removes all overhead facilities and installs new underground facilities, there should be very little to no O&M expense. The original estimate was in error.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 6(f)

f. Please explain the variance between actual and estimated actual Vegetation Management O&M Program costs for Transmission Vegetation Management.

Response: FPUC trims transmission ROW at the same time it trims the distribution underbuilt and vice versa. Due to proposed distribution SPP work, FPUC accelerated some of the proposed Transmission trimming within the four (4) year cycle to take advantage of these efficiencies.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 7(a)

7. Please refer to lines 1.2 and 1.4 of SPPCRC Form 6A of Revised Exhibit No. BB-1 of Witness Baker's May 2, 2025 revised testimony.

a. Please explain the variance between actual and estimated actual Overhead Hardening Capital Investment Program costs for Overhead Lateral Hardening.

Response: Preliminary engineering and estimates were established for the work to be performed in 2024 during the 2023 or 2022 time period. Observed variances are due to the time lapse involving increases in material costs that were not anticipated, as well as, work conditions that changed requiring additional energized work, enhanced traffic control, difficult access to facilities and additional vegetation growth all of which increased costs. These conditions resulted in increased cost from a material and labor perspective.

Respondent: Mark Cutshaw

INTERROGATORY 7(b)

b. Please explain the variance between actual and estimated actual Overhead Hardening Capital Investment Program costs for Transmission System Inspection and Hardening.

Response: Preliminary engineering and estimates were established for the work to be performed in 2024 during the 2023 or 2022 time period. Observed variances are due to the time lapse involving increases in material costs that were not anticipated, as well as, work conditions that changed requiring enhanced traffic control, night time work, difficult access to facilities and unusual geotechnical issues. The geotechnical issues resulted in the existing equipment being incapable of digging the holes resulting in the mobilization of specialty equipment being needed to dig the holes for the poles. These conditions resulted in increased cost from a material and labor perspective.

Respondent: Mark Cutshaw

INTERROGATORY 8(a)

8. Please refer to the final sentences in the "Progress Summary" and "Fiscal Expenditures" sections of SPPCRC Form 8A Page 1 of 6 of Revised Exhibit No. BB-1 of Witness Baker's May 2, 2025 testimony. The witness states that during 2024 "there were 73 poles identified as failing the inspection and 142 poles replaced or eliminated, reducing the backlog to 40 poles from the previously reported 72 poles." The witness also states that the variance between 2024 project costs and the previously project amount is due in part to "to the continuation of reducing the backlog of pole replacements."

a. What caused the backlog of pole replacements to occur?

Response: The Company initially reported 142 poles replaced but in actuality the number of poles replaced in 2024 was 140. As an update on this issue, please see the table below with numbers effective May 2025. The third eight-year pole inspection cycle began in 2024.

Prior Backlog*	New Failures	2024 Replacements	Remaining Backlog	2025 Projected	2026 Projected
204	73	140	137	212	75

The backlog occurred due to an unanticipated number of poles that failed the inspections and other critical work that was necessary during that time.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 8(b-c)

b. When will FPUC fully resolve the backlog?

Response: At the end of 2025, FPUC plans to have replaced all the backlog of poles plus the anticipated pole inspection failures from 2025. Replacements will be up to date during 2026.

Respondent: Mark Cutshaw

c. How many of the completed 142 pole replacements or eliminations are from the backlog?

Response: As noted in response 8 (a) above, pole replacements in 2024 was 140 instead 142 as previously reported. All 140 poles were from the backlog. New pole failures identified during 2024 are not considered backlog poles.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 8(d)

d. What difficulties did FPUC encounter in predicting the number of pole replacements that can be done in a year?

Response: None. FPUC originally projected replacing 147 poles in 2024 and replaced 140. The backlog adjustments were the result of database reviews and corrections as we updated the historical replacements performed.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 8(e)

e. How will FPUC improve on its estimation of the number of poles it will replace each year?

Response: Since the backlog of poles to be replaced should be eliminated during 2025, the expectation will be to replace all poles that fail inspection within one year from the date of obtaining the results of the inspections.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 9(a)

9. Please refer to the final two sentences in the "Fiscal Expenditures" section of SPPCRC Form 8A Page 2 of 6 of Revised Exhibit No. BB-1 of Witness Baker's May 2, 2025 testimony. The witness states that the variance between 2024 project costs and the previously project amount is due to "unanticipated work conditions related to traffic control and worksite limitations which increased the amount of auxiliary services required and overtime work." The witness also states that "(w)orkforce mobilization was required twice due to unforeseen geotechnical issues which increase cost as well."

a. Please give examples of the unanticipated work conditions related to traffic control and worksite limitations that the company experienced.

Response: A significant change in work conditions were the enhanced traffic controls required and work at night that was necessitated by local requirements based on the location of the work. This was not anticipated during the initial estimate. Also, the replacement of a pole ended up being more difficult to access which also included unusual geotechnical issues. The existing equipment being used to dig the hole was not capable of properly preparing the hole due to a layer of soil/rock that was encountered. This resulted in locating and obtaining specialty equipment that resulted in a re-mobilization of equipment needed to dig the hole for the pole. These conditions resulted in increased cost from a material and labor perspective.

Respondent: Mark Cutshaw

INTERROGATORY 9(b-c)

b. What lessons will apply from encountering the previously referenced unanticipated work conditions to minimize future variance?

Response: It is now understood that the location of work on certain roadways will require additional expense in order to accomplish the work. There will also be additional focus on the soil conditions and any backfill that may be needed which will be factored into the estimate.

Respondent: Mark Cutshaw

c. What unforeseen geotechnical issues occurred?

Response: Please see 9(a) above.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 9(d)

d. How might variance from unforeseen geotechnical issues be mitigated in the future?

Response: Please see 9(b) above. Additionally, although this may add to the cost, the consideration of performing soil boring and analysis may occur as needed.

Respondent: Mark Cutshaw

INTERROGATORY 10(a)

10. Please refer to the two sentences in the "Fiscal Expenditures" section of SPPCRC Form 8A Page 4 of 6 of Revised Exhibit No. BB-1 of Witness Baker's May 2, 2025 testimony. The witness states that there was a variance of $1.92M over original projections. The witness also states that the variance between 2024 project costs and the previously project amount is due in part to "a continuation to work on the engineered projects in order to continue the ramp up in construction activities which were delayed in the early years of the SPP."

a. Please explain the variance in Overhead Feeder Hardening of $1.92M over original projections.

Response: Preliminary engineering and estimates were established for construction work during 2022 and 2023 for work to be performed in 2024. During the time lapse there were increases in material costs that were not anticipated, as well as, work conditions that changed requiring additional energized work and traffic control. These conditions resulted in increased cost from a material and labor perspective.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 10(b)

b. Please explain how FPUC will minimize this variance in the future.

Response: As previously mentioned, there is now a manager over the SPP that will be focused on the SPP in total and will be able to better monitor progress and estimate future cost. Additionally, unit cost estimates have since been adjusted to account for these lessons learned.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 10(c)

c. Why were the construction activities delayed in the early years of the SPP?

Response: As has been described, the "ramp-up" of the activities was purposeful to allow time to ensure efficiency of the activities within the SPP. The word "delay" in the context of our response describes an intentional postponement in the start of the construction activities relative to the start of other necessary activities that must occur before construction and is thus not reflective of a schedule delay.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 10(d-e)

d. Why did FPUC decide to devote more resources to engineering construction projects than previously projected?

Response: During the "ramp-up" of the SPP it was necessary to devote more resources to engineering so that construction projects could seamlessly move forward at the appropriate time and without delay. This action allowed us to build a healthy backlog of construction projects that facilitates construction resources being able to move between jobs in order to avoid mobilization and demobilization costs from unexpected project delays or lack of construction ready projects.

Respondent: Mark Cutshaw

e. When does FPUC expect to complete remaining delayed construction activities from the early years of the SPP?

Response: Please see response to 10(c) above. The intent moving forward is to have engineering and material acquisition performed in a consistent manner ahead of the construction to ensure efficiency of the workforce. This results in a "delay" of construction activities relative to other project activities but is not reflective of schedule delays or deferred work.

Respondent: Mark Cutshaw

INTERROGATORY 11(a-c)

11. Please refer to the final sentence in the "Fiscal Expenditures" section of SPPCRC Form 8A Page 5 of 6 of Revised Exhibit No. BB-1 of Witness Baker's May 2, 2025 testimony. The witness states that there was a variance of $0.95M over original projections, The witness also states that the variance between 2024 project costs and the previously project amount is due in part to "a continuation to work on the engineered projects in order to continue the ramp up in construction activities which were delayed in the early years of the SPP."

a. Please explain the variance in Overhead Lateral Hardening of $0.95M over original projections.

Response: Please see response to 10(a) above.

Respondent: Mark Cutshaw

b. Please explain how FPUC will minimize this variance in the future.

Response: Please see response to 10(b) above.

Respondent: Mark Cutshaw

c. Why were the construction activities delayed in the early years of the SPP?

Response: Please see response to 10(c) above.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 11(d-e)

d. Why did FPUC decide to devote more resources to engineering construction projects than previously projected?

Response: Please see response to 10(d) above.

Respondent: Mark Cutshaw

e. When does FPUC expect to complete remaining delayed construction activities from the early years of the SPP?

Response: Please see response to 10(e) above.

Respondent: Mark Cutshaw

FPSC EXH NO. 32
ADMITTED

INTERROGATORY 12

12. Please refer to the final sentence in the "Fiscal Expenditures" section of SPPCRC Form 8A Page 6 of 6 of Revised Exhibit No. BB-1 of Witness Baker's May 2, 2025 testimony. The witness states that the small variance between 2024 project costs and the previously project amount is due to "continued difficulty in completion of this type project due to customer interactions that sometimes delay the completion." How will FPUC better account for customer interactions in the future?

Response: The Overhead Lateral Undergrounding program did involve a learning process for FPUC and contractors. While much of the SPP is performed on public rights of way the impact to the customers is somewhat minimal. However, with the Overhead Lateral Undergrounding program, a significant amount of the work is performed on private property with increased levels of customer involvement. FPUC has improved the information and communications provided to customers for these types of projects.

Respondent: Mark Cutshaw

INTERROGATORY 13

13. Please fill out the following table with the project costs that are recovered through base rates and amounts that are recovered through the SPP Cost Recovery Clause for each of the respective SPP programs for the year 2024.

Response:

Base Rates	Dollars	Percentage
Distribution Lateral Undergrounding Program		
Transmission and Distribution Vegetation Management Program	$852,743	4%
Distribution Overhead Lateral Hardening		
Distribution Pole Inspection and Replacement	$122,762	1%
Distribution Overhead Feeder Hardening Program		
Transm. System Inspect, and Hardening		
Legacy Storm Hardening Initiatives Program		
SPPCRC		
Distribution Lateral Undergrounding Program	$4,302,763	21%
Transmission and Distribution Vegetation Management Program	$1,645,650	8%
Distribution Overhead Lateral Hardening	$3,251,730	16%
Distribution Pole Inspection and Replacement	$1,004,602	5%
Distribution Overhead Feeder Hardening Program	$7,316,690	36%
Transm. System Inspect, and Hardening	$1,615,642	8%
Legacy Storm Hardening Initiatives Program

FLORIDA PUBLIC UTILITIES COMPANY'S RESPONSES TO STAFF'S SECOND SET OF INTERROGATORIES (NOS. 14-25)

Florida Public Utilities Company ("FPUC" or "Company"), hereby submits its Responses to the Second Set of Interrogatories (Nos. 14-25) served on the Company on July 15, 2025, by the Staff of the Florida Public Service Commission. The individual responses follow this cover sheet.

Respectfully submitted,

Beth Keating

ADMITTED

INTERROGATORY 14(a)

Responses

14. Please refer to lines 4 to 15 on page 3 of Witness Cutshaw's May 1, 2025, direct testimony. The witness states that FPUC's focus in 2025 is "to continue to execute on the "ramp up" methodology and then begin to stabilize the program in 2026 going forward."

a. Please elaborate on the meaning of "stabilize the program."

Company Response: Stabilization refers to maintaining a relatively consistent level of investment, sans inflation, year over year.

Respondent: Mark Cushaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 14(b)

b. What are the steps FPUC has taken to ensure this stabilization?

Company Response: Stabilization is achieved by maturing our relationships with contractors and vendors as well as optimizing our internal processes. This ensures there is a consistent flow of engineering projects ready for construction in a methodological way that minimizes demobilization and remobilization of contractors, unnecessary rework or downtime, and ensures the realization of the benefits contemplated in the SPP.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 14(c)

c. Does program stabilization result in more accurate cost estimates or completed work estimates?

Company Response: Yes, we believe that as part of achieving stabilization, our estimates will be closer to realized actuals on projects.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 14(d)

d. Please detail the "ramp up" methodology.

Company Response: The "ramp up" methodology was detailed in FPUC's first SPP, as well as its most recently filed SPP, and entails a strategic ramp up of investments that started with engineering-only projects during FPUC's first year of the SPP (2022), followed by an initial crew complement to begin executing on the SPP. At that time, we were simultaneously starting to build a backlog of engineering projects that allowed for additional construction resources to be mobilized, thereby allowing us to "ramp up" the speed of projects and level of investments to those contemplated in the SPP.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 15(a)

15. Please refer to lines 6 to 11 on page 4 of Witness Cutshaw's May 1, 2025 direct testimony. The witness states that the variance between current actual/estimated 2025 expenditures and the previously projected approved amount for the Distribution Overhead Feeder Hardening program is due to "additional resources added in the second half of 2024 as part of the continued ramping up of the previously engineered projects" and also due in part to "adjustments in unit cost projections performed during late 2024 in line with acquired program to date experience."

a. What adjustments were made in unit cost projections?

Company Response: FPUC analyzed realized actual project costs against initial cost estimates across all projects and updated the unit cost projections utilized in creating the 10-year SPP. Original unit cost estimates utilized were developed in 2021 as part of developing FPUC's first SPP. These cost estimates were derived from comparisons to costs from other utilities that were executing on mature SPPs. FPUC had not executed projects of this magnitude and scale and thus the unit cost projections used in developing the first SPP and subsequently updating projections in the 2023 and 2024 SPPCRC were short and needed to be adjusted to reduce observed variances.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 15(b)

b. What were the additional resources added in the second half of 2024?

Company Response: FPUC added one additional overhead construction crew to assist with the Overhead Feeder Hardening program.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 15(c)

c. Were these adjustments in unit cost projections used for 2026 projections?

Company Response: Yes. FPUC utilized these updated cost projections in filing its most recent SPPCRC in May of 2025.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 15(d)

d. Were the adjustments in unit cost used in the company's 2026 Storm Protection Plan (SPP)?

Company Response: Yes. As noted in the SPP, these cost projections were utilized in developing estimates as part of the 10-year projections covering years 2026 through 2035.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 16(a)

16. Please refer to lines 13 to 16 on page 4 of Witness Cutshaw's May 1, 2025 direct testimony. The witness states that "project design activities will continue, allowing for systematic material procurement orders allowing for the start of planned project construction activities the following year."

a. What construction activities start in 2027?

Company Response: Projects engineered in prior years across all SPP programs will be available to start in 2027.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 16(b)

b. Has the company started any project construction activities at this time? If yes, on which programs?

Company Response: Yes. Construction activities are occurring on all six (6) SPP programs.

Respondent: Mark Cutshaw

INTERROGATORY 17(a)

17. Please refer to lines 14 to 17 on page 5 of Witness Cutshaw's May 1, 2025 direct testimony. The witness states that the variance between current actual/estimated 2025 expenditures and the previously projected approved amount for the Pole Inspection & Replacement program was mostly due to "an error in the calculation of previously reported 2025 projected costs."

a. What was the error in previously reported 2025 projected costs?

Company Response: An oversight occurred when the capital portion of the 2025 projected cost was included in Appendix A during the filing process. As can be seen below a $0.08 M projection was reported which is not in alignment with projections for prior and future years.

		2022 Actual	2023 Actual	[illegible]	[illegible]	2026	2027	2028	2029	2030	2031	Total

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 17(b)

b. What was the cause of the error?

Company Response: This was simply an oversight in the entry of this amount.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 17(c)

c. Has the error been corrected?

Company Response: Yes, the error has been corrected and is properly reflected on Page 9 Line 1 of the Revised direct testimony of P. Mark Cutshaw dated 7/7/25 as part of this Docket.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 18(a)

18. Please refer to lines 6 to 11 on page 6 of Witness Cutshaw's May 1, 2025 direct testimony. The witness states that the Transmission & Distribution Vegetation Management program is in the third year of the transition from a three-year feeder trim cycle and six-year lateral trim cycle to a four-year trim cycle on all overhead primary transmission and distribution lines. The witness also states that the variance between current actual/estimated 2025 expenditures and the previously projected approved amount for the Transmission & Distribution Vegetation Management program was mostly due to "a change in vegetation management contractor resources needed to improve efficiency moving forward."

a. When will the change to a four-year trim cycle on all overhead primary transmission and distribution lines be complete?

Company Response: FPUC is tracking towards executing the first four (4) year Vegetation Management cycle completion that will cover the 2023 through 2026 time period. Though currently behind on execution, we still expect to close the variance to mileage estimates and deliver on our commitment for the four-year trim cycle.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 18(b)

b. Please describe the change in vegetation management contractor resources.

Company Response: FPUC experienced some quality and schedule concerns with the former vegetation management contractor that were not rectified to FPUC's full satisfaction. As a result, FPUC sought to enlist the services of a different contractor who was awarded the trimming contract for the four-year vegetation management program in 2025.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 19

19. Please refer to lines 5 to 7 on page 7 of Witness Cutshaw's May 1, 2025 direct testimony. The witness states that FPUC has realized that "labor resources and supply chain issues have had a large impact on the accomplishment of goals within the SPP." Please elaborate on labor resources and supply chain issues.

Company Response: Prior to the SPP, FPUC was set up to manage the necessary construction work and growth within the service territory from a construction and materials perspective. After the SPP began, both construction labor resources and material availability were limited as the gradual ramp up of activities occurred. As the construction resources increased, which exceeded the size of existing workforce, the coordination and space for these resources were challenging. Also, as SPP gradual ramp up occurred, construction efforts required more than twice the previous purchase of materials for construction which offered challenges given the small staff, very limited warehouse space and impacts on vendors that were already strained.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 20(a)

20. Please refer to lines 3 to 4 on page 8 of Witness Cutshaw's May 1, 2025 direct testimony. The witness states that "during 2026, FPUC is projecting total SPP expenditures of $23.85M compared to a projected expenditure in 2026 of $13.44M against original SPP projections included in Docket 20220049-EI."

a. Is a variance of $10.41 million (77.5 percent) compliant with Rule 25-6.031, Florida Administrative Code?

Company Response: Yes, this variance compares the 2026 projections filed as part of FPUC's 2026-2035 SPP against the 2026 projections approved as part of FPUC's 2022-2031 SPP. Note that in Docket No. 20250017-EI, FPUC reached a Joint Stipulation Agreement with OPC that reduced the 2026 projections to $21.30M.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 20(b)

b. Does a $10.41 million (77.5 percent) variance keep FPUC in compliance with its 2022 SPP?

Company Response: Yes, this revised variance discussed above of $7.86 million (58.5%) will keep FPUC in compliance with both the 2022 SPP as it contains the unit cost adjustments discussed in question 15 above as well as aligns with the Joint Stipulation Agreement of FPUC's 2026 SPP.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 21(a)

21. Please refer to BB-2, Form 6E, line 2.1 Lateral Undergrounding Design, of Witness Baker's May 1, 2025 direct testimony.

a. Please explain the 49.6% variance for Lateral Undergrounding design.

Company Response: The variance is representative of the continued ramping up of cost for this program. This ability to gain public acceptance has begun to allow additional back logged projects to be completed which resulted in this positive variance projection for 2025.

Respondent: Mark Cushaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 21(b)

b. Is lateral undergrounding design found in FPUC's 2022 SPP?

Company Response: Yes, it is found in the FPUC 2022 SPP.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 22(a)

22. Please refer to Declarant: P. Mark Cutshaw's response to Question 1.a. on page 2 in Florida Public Utilities Company's Responses to Staff's First Set of Interrogatories (Nos. 1-13). The Declarant states "proper allocation of these [O&M associated with expense type activities] costs in 2024 did not occur for all Programs" and that "allocation of expense costs between Programs, specifically the Overhead Feeder and Lateral Hardening Programs, were not properly done."

a. Please elaborate on what the Witness means when he states that proper allocation of O&M costs associated with expense type activities for all programs and expense costs between the Overhead Feeder and Lateral Hardening Programs were not done.

Company Response: As noted on SPPCRC Form 4A in Docket No. 20250010-EI, all the actual O&M Expense for Feeder and Lateral hardening was included on the Overhead Feeder Hardening program with nothing shown for the Overhead Lateral Hardening program. The O&M expense associated with both programs are very similar in nature and include transferring of conductors and transformers to new poles that have been placed. As such this type of expense should have been included in both programs.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 22(b)

b. Was cost allocation properly done for other programs?

Company Response: Yes. It appears the allocation to O&M expenses to the other programs was correct.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 23(a)

23. Please refer to Declarant: P. Mark Cutshaw's response to Question 1.b. on page 3 in Florida Public Utilities Company's Responses to Staff's First Set of Interrogatories (Nos. 1-13). The Declarant states that FPUC "set up a review process to ensure the expense related to this type of work is revised in order to more accurately match the job and to properly allocate that expense to the correct program."

a. What does the review process entail?

Company Response: FPUC conducts a review of the necessary expense-related accounts to ensure the correct O&M related charges are reflected in the appropriate SPP program. This information is communicated to those involved in the SPP and reviews invoiced charges to ensure proper allocation of costs.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 23(b)

b. How will this guarantee more accurate expense estimations?

Company Response: There are no guarantees as we are dealing with estimates, but a review of actual charges can be incorporated into future estimates in order to improve the accuracy of estimates in the future. Also, any variances are subsequently refunded or collected through the over/under recovery.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 24(a)

24. Please refer to Declarant: P. Mark Cutshaw's response to Question 6.e. on page 13 in Florida Public Utilities Company's Responses to Staff's First Set of Interrogatories (Nos. 1-13). The declarant states that "there should be very little to no O&M expense" and that the "(t)he original estimate was in error."

a. Please explain how FPUC made this error.

Company Response: The inclusion of this estimated O&M expense was an oversight in the development of the Overhead Lateral Undergrounding program.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 24(b)

b. Was the error only on the PSC filing from FPUC or was it made on the company's accounting sheets?

Company Response: The amounts were estimates developed for budgeting purposes over the course of developing the program. Since this was only an estimate and not actual charges, there were no erroneous accounting entries made on the Company's books.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 24(c)

c. How has FPUC corrected this error?

Company Response: This estimated amount for the Overhead Lateral Undergrounding program will be removed from this program accounting going forward.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
ADMITTED

INTERROGATORY 25(a)

25. On page 6 lines 21-22 of the May 1st direct testimony of P. Mark Cutshaw, he states: "adjustments in initial cost estimating assumptions were performed as FPUC gained experience in executing these SPP projects" in relation to "escalated expenditures".

a. Which SPP projects have been executed so far?

Company Response: All SPP projects have been reviewed based on the most recent actual cost data so that information can be incorporated into future estimates. The FPUC 2026–2035 SPP, Docket No. 20250017-EI, was filed and approved recently where the most up to date estimate information has been included.

Respondent: Mark Cutshaw

FPSC EXH NO. 33
Docket No. 20250010-EI
ADMITTED

INTERROGATORY 25(b)

b. How have the adjustments made in SPP projects that have been completed impacted the plans for 2026-2035?

Company Response: As previously mentioned, the most up to date estimate information has been included in the 2026-2035 SPP.

Respondent: Mark Cutshaw

INTERROGATORY 26(a)

Responses

26. Please refer to the revised direct testimony of Jessica Husted and Exhibit JH-1 (Document No. 05468-2025), filed 7/7/2025.

a. Please provide a complete description of the methodology used for each forecast supporting the billing determinants appearing in the revised direct testimony of Jessica Husted, Exhibit H-1, Form 5P.

Company Response:

In developing the forecast to support the billing determinants for 2026, the Company developed projected growth rates for each customer class by using historical trends across the classes. The Company applied these growth rates to each rate class in order to project the number of customers. Then, for each customer class, the Company calculated an average usage per customer based on a three-year average of usage per customer class for all classes except industrial and outdoor lights. For these customers, the Company calculated the projected usage based upon the prior year historical usage. Then the projected average usage per customer was multiplied by the projected customer count to get the projected billing determinants. Adjustments to the estimates may be in order to account for known factors or trending actuals.

Respondent: *Jessica Husted*

FPSC EXH NO. 34
ADMITTED

INTERROGATORY 26(b & c)

b. Please list the date(s) of all underlying forecasts that were used to formulate the billing determinants appearing in the revised direct testimony of Jessica Husted, Exhibit JH-1, Form 5P.

Company Response:

The forecast is based on the Company's 2025 budget (approved in December 2024) adjusted for actuals through February 2025. The 2026 budget had not been developed at the time of this filing.

Respondent: *Jessica Husted*

c. Please also provide any changes introduced to such forecast methodologies compared to those forecast methodologies used in preparing the billing determinants in Docket No. 20240010-EI.

Company Response:

There are no changes in methodologies.

Respondent: *Jessica Husted*

28. Please refer to the revised direct testimony of Jessica Husted, Exhibit JH-1, Form 5P.

a. For each forecast of energy for 2025 and 2026 used to support the listed billing determinants for 2026, please provide a comparison of monthly forecasts to monthly actual energy for the months of January through June 2025.

Company Response:

Please see Attachment B.

Respondent: *Jessica Husted*

b. Regarding the comparisons provided in response to Interrogatory No. 28.a., please provide reasons for any monthly average deviations that exceed +/- 20 percent.

Company Response:

The calculated Industrial usage differs by more than 20% from the projection data primarily due to the customers' decision to generate more of its own power during those periods and the customers' fluctuations in purchasing non-firm energy versus firm energy from FPUC. The outdoor lights usage differs by more than 20% from the projection data primarily due to a delay in the LED light conversions that were forecasted to begin in early 2025 but delayed until later in the year. The LED light conversions are expected to reduce usage when installed. The commercial large usage for June differs by more than 20% from the projection data primarily due to a billing adjustment that was booked to credit one customer's account in June to true up estimated billings from prior months.

Respondent: *Jessica Husted*

INTERROGATORY 29

29. Please identify all closed and open Commission dockets and all non-docketed Commission matters in which the same load forecast used to support the Company's billing determinants appearing in the revised direct testimony of Jessica Husted, Exhibit JH-1, Form 5P, has been submitted for approval to the Commission.

Company Response:

The Company has not used this same load forecast in any other open or closed dockets before the Commission. The open dockets have been updated to reflect the billing determinants forecasted at that time.

Respondent: *Jessica Husted*

In re: Storm protection plan cost recovery clause.	DOCKET NO. 20250010-EI DATED: September 22, 2025

FLORIDA PUBLIC UTILITIES COMPANY'S RESPONSES TO STAFF'S THIRD AND FOURTH SETS OF INTERROGATORIES (NOS. 26-29) AND (NO. 30) AND FIRST REQUESTS FOR PRODUCTION OF DOCUMENTS (NOS. 1-2)

Florida Public Utilities Company ("FPUC" or "Company"), hereby submits its Responses to the Third Set of Interrogatories (Nos. 26-29) and Fourth Set of Interrogatories (No. 30), as well as the Responses to the First Requests for Production of Documents (Nos. 1-2) served on the Company on September 2 and 3, 2025, by the Staff of the Florida Public Service Commission. The individual responses follow this cover sheet.

Respectfully submitted,

INTERROGATORY 30

30. Staff calculation of the over/under recovery for period January through December 2025 results in $1,420,503, which is calculated as the sum of the capital and O&M variances. FPUC has this number listed as $2,180,977. Please provide the explanation for the difference between staff's number and FPUC's number and as part of your response please provide your calculation in excel format.

Company Response:

The difference between staff's number and FPUC's number of $760,474 ($2,180,977 less $1,420,503) is due to a change in the projection of the adjustment to remove costs already being recovered through base rates. In the 2025 projection filing in Docket No. 20240010-EI, FPUC projected an adjustment to remove costs already in base rates of ($975,504) in Form 1P, line 1e. In the 2025 estimated true-up filing in Docket No. 20250010-EI, FPUC had an actual/estimated adjustment to remove costs already in base rates of ($215,030) in Form 2E, line 4d. This was a reduction in the costs in base rates between the projection and true-up of $760,474. The 2025 estimated true-up only includes the costs for pole inspection and vegetation management that was already recovered in base rates for January through March 2025. As of March 2025, and consistent with ORDER NO. PSC-2025-0114-PAA-EI, DOCKET NO. 20240099-EI approving the Company's most recent rate case, these expenses are no longer included in base rates and therefore are now being fully recoverable through the SPPCRC. Therefore, for the months of April through December 2025, there is no adjustment for costs recovered in base rates. Please see file 'Attachment C' for the calculation in excel format.

REQUESTS FOR PRODUCTION

1. Please provide all documents used to prepare/calculate/evaluate the forecasted 2025 and 2026 billing determinants utilized in this proceeding.

Company Response:

The Company uses historical data to prepare the 2025 and 2026 forecasted billing determinants as described in the methodology in the Company's response to question 26(a) of Staff's third set of interrogatories. This calculation is done within the UI system, therefore, there are no additional documents used to calculate the forecasted billing determinants. Please see attached file '1-FPU Electric UI Report' for the system generated report of the summary of data used.

2. Please refer to the following documents:

(i) FPUC witness B. Baker's Direct Testimony and Exhibit BB-1, Form 7A, pages 3 through 8 of 8, filed on April 4, 2025,

(ii) FPUC Witness J. Husted Direct Testimony and Exhibit JH-1, Form 3P, pages 1 through 6 of 6, filed on July 7, 2025, and

a. Please provide Forms 7A and 3P in MS Excel format with formulas intact.

b. Please provide a MS Excel file to show the breakdown of SPP depreciation rates used to calculate the depreciation expenses on line 6(1) on each of the afore-referenced pages, by project, plant account, and depreciation group.

FPSC EXH NO. 36
ADMITTED

Company Response:

a. A revision to the document noted above as (i) was filed on May 1, 2025. Please see attached Form 7A in MS Excel with formulas intact from that revision at file '2a-2024 SPPCRC Form A_FILED_REVISED_05012025' and Form 3P in MS Excel with formulas intact at file '2b-2026 SPPCRC Form P and E_REVISED FILED.'

b. For the projected depreciation in Form 3P, the excel provided in the response to 2(a) includes the calculation of depreciation. For Form 7A, please see attached file '2c-SPP Depreciation by FERC' for a breakout of depreciation expense by project, plant account and depreciation group.

Notes:
(a) The equity component for the period is 5.25% and is based upon the amount approved in Order No. PSC-2024-0459-FOF-EI . The gross up factor is 1.3395 and includes the federal tax rate of 21% and state tax rate of 5.5%.
(b) The debt component for the period is 1.4900% and is based on the most recent financial forecast.
(c) Depreciation groups for additions are accounts 364, 365 and 368 for Overhead Storm Hardening project estimates and their applicable rates are 2.9%, 2.1% and 2.3%, respectively.
Depreciation groups for additions are accounts 366, 367 and 368 for Undergrounding project estimates and their applicable rates are 1.5%, 2.0% and 2.3%, respectively.
(d) Property tax rate of 2% was applied
(e) Excludes costs recovered in Base Rates

Project Description and Progress Report

Activity Title: *Distribution Pole Inspection and Replacement*

Description : *This project involves the inspection and replacement of all distribution wood poles. The inspections are conducted throughout the system on an eight-year rotating cycle in alignment with FPSC Order No. PSC-06-0144. Extreme wind loading, as specified in rule 250C and figure 250-2(d) of the NESC, has been adopted for replacement poles that fail the inspection. The detailed description in included in section 3.4 of the FPUC Storm Protection Plan.*

Accomplishments :

Progress Summary: *The inspection portion of this program is ongoing and conducted on an eight-year rotating cycle. 2024 marked the completion of the second cycle. Pole replacements are demand based driven by the results of the inspections. During 2024 there were 73 poles identified as failing the inspection and 142 poles replaced or eliminated, reducing the backlog to 40 poles from the previously reported 72 poles.*

Fiscal Expenditures: *2024 project costs were $1.13M compared to the previously projected amount of $0.96M which represents a variance of $0.17M over original projections. This variance is due in part to the continuation of reducing the backlog of pole replacements.*

Projections: *2025 will begin the third cycle of the eight-year inspection program. FPUC anticipates normalized pole failure and replacement volumes following backlog reduction acceleration conducted in 2024.*

Project Description and Progress Report

Activity Title: *Transmission System Inspection and Hardening*

Description : *This project involves the inspection of all transmission system structures and proactive replacement of wood transmission poles with concrete poles. These inspections are conducted throughout the system every six years. The inspections ensure that all transmission structures and other transmission line supporting equipment are structurally sound and firmly attached*

Accomplishments :

Progress Summary: *This is an ongoing program of which inspections occur every six-years. All structures are inspected during the same calendar year. Most recent inspection cycle occurred during 2024 with reports being issued in 2025. There were 12 wooden transmission poles replaced with concrete poles during 2024 as FPUC finalized designs, received materials and began replacing*

Fiscal Expenditures: *2024 project costs were $1.62M compared to the previously projected amount of $1.10M which represents a variance of $0.52M over original projections. This variance is due to unanticipated work conditions related to traffic control and worksite limitations which increased the amount of auxiliary services required and overtime work. Workforce mobilization was required twice due to unforeseen geotechnical issues which increase cost as well.*

Projections: *Material orders placed in 2024 are on track to arrive mid-2025 allowing for the continuation of construction activities necessary to replace 12 wooden transmission poles with concrete poles.*

Project Description and Progress Report

Activity Title: *Transmission and Distribution Vegetation Management*

Description : *This project involves the vegetation management activities conducted on the transmission and distribution facilities. The transmission system not containing distribution underbuilt, is monitored each year and vegetation management conducted as needed in order to provide for reliability of the relatively short line. The distribution system is set up on a four-year trim cycle for vegetation management activities. The detailed description is included in section 3.6 of the FPUC Storm Protection Plan.*

Accomplishments :

Progress Summary: *This is an ongoing program which will perform vegetation management activities on the transmission system as needed and on the distribution system on a four-year cycle. During 2024, vegetation management activities were performed on 151.20 miles of distribution and 1.71 miles of transmission line for a total 152.91 miles trimmed compared to a projected amount of 175.85 miles of distribution and 1.25 miles of transmission for a total of 177.10 miles trimmed. This reduction in mileage trimmed resulted in some modifications to the overall vegetation management contractor resources needed to improve efficiency moving forward.*

Fiscal Expenditures: *2024 project costs were $2.50M compared to the previously projected amount of $2.59M which represents a variance of $0.09M under original projections. Additional focus was placed on this program during 2024 which resulted in the minimal variance.*

Projections: *During 2025 FPUC is committed to improving the overall efficiency in order to achieve the four-year trim cycle mileage in the approved SPP.*

Project Description and Progress Report

Activity Title: *Overhead Feeder Hardening*

Description : *This project involves the hardening of overhead distribution feeders throughout the FPUC system. As part of the hardening of the overhead lines, each line segment is analyzed leveraging specialized software to ensure adherence to current NESC 250C extreme wind standards in place at the time of analysis. The detailed description is included in section 3.1 of the FPUC Storm Protection Plan.*

Accomplishments :

Progress Summary: *During 2024, designs for 18.82 miles and construction on 7.48 miles of Overhead Feeder Hardening were completed. Future year target identification was also performed in alignment with approved prioritization model.*

Fiscal Expenditures: *2024 project costs were $7.32M compared to the previously projected amount of $5.40M which represents a variance of $1.92M over original projections. This variance is due in part to a continuation to work on the engineered projects in order to continue the ramp up in construction activities which were delayed in the early years of the SPP.*

Projections: *2025 will focus on the continuation of design and construction activities of feeders in both divisions in alignment with the prioritization model*

Project Description and Progress Report

Activity Title: *Overhead Lateral Hardening*

Description : *This project involves the hardening of multi-phase overhead distribution laterals throughout the FPUC system. As part of the hardening of the lateral overhead lines, each line segment is analyzed leveraging specialized software to ensure adherence to current NESC 250C extreme wind standards in place at the time of analysis. The detailed description is included in section 3.2 of the FPUC Storm Protection Plan.*

Accomplishments :

Progress Summary: *During 2024, designs for 12.6 miles and construction of 0.68 miles of Overhead Lateral Hardening were completed. Future year target identification was also performed in alignment with approved prioritization model*

Fiscal Expenditures: *2024 project costs were $3.25M compared to the previously projected amount of $2.30M which represents a variance of $0.95M over original projections. This variance is due in part to a continuation to work on the engineered projects in order to continue the ramp up in construction activities which were delayed in the early years of the SPP.*

Projections: *2025 will focus on the finalization of construction of the Jasmine Phase 1 in NE FL and Cottondale Phase 2 in NW FL laterals and the design of additional lateral hardening jobs in both divisions*

Project Description and Progress Report

Activity Title: *Overhead Lateral Undergrounding*

Description : *This project involves the systematic undergrounding in place or relocation and undergrounding of the single phase overhead electric facilities, many of which are located in heavily vegetated areas, environmentally sensitive areas, or in areas where upgrading the overhead construction to NESC extreme wind standards is not practical or consistent with industry design standards. The detailed description is included in section 3.3 of the FPUC Storm Protection Plan*

Accomplishments :

Progress Summary: *During 2024, there were 13.49 miles designed and 1.20 miles constructed for the Overhead Lateral Undergrounding program. Future year target identification was also performed in alignment with approved prioritization model*

Fiscal Expenditures: *2024 project costs were $4.30M compared to the previously projected amount of $4.45M which represents a variance of $0.15M under original projections. This small variance is due in part continued difficulty in completion of this type project due to customer interactions that sometimes delay the completion.*

Projections: *2025 will focus on the construction of the Jasmine and Bailey Road laterals. Construction for projects in NW FL will begin late second quarter in 2025 since materials and contractor acquisition has been completed.*

	4. Retail SPPCRC Expenses Allocated to Demand		$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -	$ -

Notes:
(a) The equity component for the period is 5.7196% and is based on the most recent financial forecast. The gross up factor is 1.3395 and includes the federal tax rate of 21%, state tax rate of 5.5%.
(b) The debt component for the period is 1.97% and is based on the most recent financial forecast.
(c) Depreciation groups for additions are accounts 364, 365 and 368 for Overhead Storm Hardening project estimates and their applicable rates are 2.9%, 2.1% and 2.3%, respectively.
Depreciation groups for additions are accounts 366, 367 and 368 for Undergrounding project estimates and their applicable rates are 1.5%, 2.0% and 2.3%, respectively.
(d) Property taxes estimated at 2%
(e) Excludes costs recovered in Base Rates

Notes:
(a) The equity component for the period is 5.7732% and is based on the most recent financial forecast. The gross up factor is 1.3395 and includes the federal tax rate of 21%, state tax rate of 5.5%.
(b) The debt component for the period is 2.03% and is based on the most recent financial forecast.
(c) Depreciation groups for additions are accounts 364, 365 and 368 for Overhead Storm Hardening project estimates and their applicable rates are 2.9%, 2.1% and 2.3%, respectively.
Depreciation groups for additions are accounts 366, 367 and 368 for Undergrounding project estimates and their applicable rates are 1.5%, 2.0% and 2.3%, respectively.
(d) Property taxes estimated at 2%
(e) Excludes costs recovered in Base Rates

s)	INDIAN RIVER	GRACEWOOD	$(2,634,951)	-88%

RESPONSE:
The percent variances identified in FPL Exhibit MJ-1 are largely the product of the timing of when the actual costs were incurred as compared to when they were projected to be incurred in FPL's actual/estimated filing approved in Docket No. 20240010-EI. Nearly all of the projects identified

FPSC EXH NO. 37
ADMITTED

on Exhibit MJ-1 are multi-year SPP projects, and the costs reported on Exhibit MJ-1 are only the actual costs incurred during calendar year 2024. Thus, the costs reported on Exhibit MJ-1 do not reflect the total project cost or the extent of variance in the total cost for any SPP project.

As further explained in the direct testimony of FPL witness Jarro submitted on April 1, 2025, the SPP project variances for 2024 are typically the result of one or more of three occurrences: (i) an acceleration of a project; (ii) a project delay; or (iii) a change to the project scope or estimate. A detailed list and explanation of each of these drivers is provided in Exhibit MJ-2.

- Accelerated projects result in a greater proportion of the overall project cost being incurred sooner rather than later, but the overall estimated cost for the project typically remains substantially the same. An accelerated project could result in greater costs being incurred for a project during an earlier year and less costs incurred in a later year.

- Delayed projects result in a proportion of the overall project cost being incurred later than originally estimated, but the overall estimated cost for the project typically remains substantially the same. A delayed project could result in less costs being incurred for a project during an earlier year and more costs incurred in a later year.

- Unlike the drivers that result in a change in costs incurred during the year due to the timing of when the work is being completed (either being accelerated or delayed), changes to a project estimate may result in a change to the overall cost of a project.

Importantly, as explained in the direct testimony of FPL witness Jarro submitted on April 1, 2025, FPL managed the SPP projects during 2024 at the program level in order to maximize efficiency while still achieving the overall objectives of the SPP programs. As a result, FPL effectively managed the 2024 SPP projects at the program level to ensure that the total 2024 SPP program costs remained consistent with the costs projected in the Commission-approved SPPs and SPPCRCs.

The project level detail and actual 2024 costs for the FPL SPP programs and projects are provided in Exhibit MJ-1, which includes details for over approximately 7,300 individual SPP projects. For each 2024 SPP project, including those identified in Staff's First Set of Interrogatories, No. 1, FPL provided both a category of project variance and an explanation for each material variance in Exhibit MJ-1. Notwithstanding, FPL provides further details below for each of the SPP projects identified in Staff's First Set of Interrogatories, No. 1:

QUESTION:
Please refer to page 5, lines 18-23 and page 6, lines 1-3 of Witness Jarro's April 1, 2025 testimony. Witness Jarro states that generally the acceleration of a project does not impact the total project cost.

a. Were any total overall project costs impacted by project acceleration in 2024?

b. If so, please list these projects and explain how the total project cost was impacted.

RESPONSE:
a.-b. Exhibit MJ-1 does not report on total overall project costs, nor do the variances shown in Exhibit MJ-1 reflect impacts to the total overall project cost. Consistent with 25-6.031(7)(a), F.A.C, Exhibit MJ-1 reports on the actual cost incurred during calendar year 2024 and the variances in those costs as compared to the 2024 actual/estimated filing approved in Docket No. 20240010-EI.

As explained by FPL Witness Michael Jarro's testimony filed on April 1, 2025, accelerated projects do not typically impact the total overall project cost. Accelerated projects result in a greater proportion of the overall project cost being incurred sooner rather than later, but the overall estimated cost for the project typically remains substantially the same unless there was also a project scope change or some other factor, which would be identified in the category and explanation columns of Exhibit MJ-1.

Please refer to the attached responsive document for identification of projects that were accelerated in 2024 as compared to the 2024 actual/estimated filing approved in Docket No. 20240010-EI and resulted in a material variance in the cost projected to be incurred during calendar year 2024.

Notes:

(1) Start date reflects the projected and revised actual/estimated year when initial project costs will begin to accrue (e.g., preliminary engineering/design, site preparations, or customer outreach, if applicable).

(2) Completion year reflects the projected and revised actual/estimated date when project will be completed.

(3) The total Clause Capital can be seen in Exhibit RLH-1.

(4) Explanations provided for material variances.

(5) Base capital IT Equipment in support of Hardening program

(6) This cost is associated with concrete poles used for feeder hardening projects stored at the contractor holding site.

When poles are transferred from storage yard to construction work order the storage yards will be credited and the pole costs will be allocated to specific project where the pole will be installed.

Notes:
(1) Start year reflects the projected and revised estimated/actual year when initial project costs will begin to accrue (e.g., preliminary engineering/design, site preparations, or customer outreach, if applicable).
(2) Completion year reflects the projected and revised estimated/actual when the project will be completed.
(3) The total Clause Capital can be seen in Exhibit RLH-1.
(4) Explanations provided for material variances.
(5) Costs associated with the Northwest Lateral Hardening Building and Equipment. All of the cost associated to this project are in Base, not in SPPCRC.
(6) Costs associated with 'uTrack', which is virtual augmentation reality application that is only being utilized by the SPP Distribution Lateral Hardening Program - these costs are recovered in base rates. This IT tool was originally referenced in the Commission approved 2023-2032 SPP, and allows FPL to better illustrate to customers where the facilities will be installed, as well as to better respond to customers questions and concerns in a timely fashion.

Notes:

(1) Start year reflects the projected and revised estimated/actual year when initial project costs will begin to accrue (e.g., preliminary engineering/design, site preparations, or customer outreach, if applicable).

(2) Completion year reflects the projected and revised estimated/actual date when the project will be completed.

(3) The total Clause Capital can be seen in Exhibit RLH-1.

(4) Explanations provided for material variances.

(5) Cost associated with Transmission Inspection Program were originally estimated as part of the Transmission Hardening Program project. These costs will be reclassed and transferred to the Transmission Inspection Program in 2025 and reflected in Actual/Estimated True-Up.

(6) Cost associated with Transmission Inspection Program were originally estimated as part of the Transmission Hardening Program project. These costs were reclassed and transferred to the Transmission Inspection Program in 2024 and reflected in Actual/Estimated True-Up.

(7) Project was removed from SPPCRC because it was completed through a non-SPP program.

QUESTION:
Please refer to page 6, lines 4-12 of Witness Jarro's April 1, 2025 testimony. Witness Jarro states that generally the delay of a project does not impact the total project cost.

a. Were any total overall project costs impacted by project delays in 2024?

b. If so, please list these projects and explain how the total project cost was impacted.

RESPONSE:
a.-b. Exhibit MJ-1 does not report on total overall project costs, nor do the variances shown in Exhibit MJ-1 reflect impacts to the total overall project cost. Consistent with 25-6.031(7)(a), F.A.C, Exhibit MJ-1 reports on the actual cost incurred during calendar year 2024 and the variances in those costs as compared to the 2024 actual/estimated filing approved in Docket No. 20240010-EI.

As explained by FPL Witness Michael Jarro's testimony filed on April 1, 2025, delayed projects do not typically impact the total overall project cost. Delayed projects result in a proportion of the overall project cost being incurred later than originally estimated, but the overall estimated cost for the project typically remains substantially the same unless there was also a project scope change or some other factor, which would be identified in the category and explanation columns of Exhibit MJ-1.

Please refer to the attached responsive document for identification of projects that were delayed in 2024 as compared to the 2024 actual/estimated filing approved in Docket No. 20240010-EI and resulted in a material variance in the cost projected to be incurred during calendar year 2024.

Sub Total Capital Expenditures			**13**					**1,800,000**	**433,094**	**(1,366,906)**			

Notes:

(1) Start date reflects the projected and revised actual/estimated year when initial project costs will begin to accrue (e.g., preliminary engineering/design, site preparations, or customer outreach, if applicable).

(2) Completion year reflects the projected and revised actual/estimated date when project will be completed.

(3) The total Clause Capital can be seen in Exhibit RLH-1.

(4) Explanations provided for material variances.

(5) Base capital IT Equipment in support of Hardening program

(6) This cost is associated with concrete poles used for feeder hardening projects stored at the contractor holding site.
When poles are transferred from storage yard to construction work order the storage yards will be credited and the pole costs will be allocated to specific project where the pole will be installed.

Sub Total Capital Expenditures

Notes:
(1) Start year reflects the projected and revised estimated/actual year when initial project costs will begin to accrue (e.g., preliminary engineering/design, site preparations, or customer outreach, if applicable).
(2) Completion year reflects the projected and revised estimated/actual when the project will be completed.
(3) The total Clause Capital can be seen in Exhibit RLH-1.
(4) Explanations provided for material variances.
(5) Costs associated with the Northwest Lateral Hardening Building and Equipment. All of the cost associated to this project are in Base, not in SPPCRC.
(6) Costs associated with 'uTrack', which is virtual augmentation reality application that is only being utilized by the SPP Distribution Lateral Hardening Program - these costs are recovered in base rates. This IT tool was originally referenced in the Commission approved 2023-2032 SPP, and allows FPL to better illustrate to customers where the facilities will be installed, as well as to better respond to customers questions and concerns in a timely fashion.

QUESTION:
Please refer to page 6, lines 13-20 of Witness Jarro's April 1, 2025 testimony. Do all project estimate changes made by FPL in 2024 keep compliance with FPL's 2023 commission-approved SPP?

RESPONSE:
Yes. FPL effectively managed the 2024 projects at the program level to ensure that the total program costs remained consistent and in compliance with the costs projected in FPL's Commission-approved FPL 2023 SPP.

FPSC EXH NO. 37
ADMITTED

QUESTION:
Please refer to page 6, lines 21-23 and page 7, lines 1-12 of Witness Jarro's April 1, 2025 testimony.

a. Are any allowances made to anticipate and make provisions for impacts that extreme weather events have on SPP projects?

b. If yes, please explain. If no, why not?

RESPONSE:
No. FPL cannot and does not forecast extreme weather events and, therefore, does not project allowances or include contingencies for potential impacts of unknown future extreme weather events. To the extent that extreme weather events occur in any given year, any impacts to SPP projects, including delays or timing when the costs are incurred, are reflected in the actuals for that year and would be included in FPL's SPPCRC actual true-up filing for that year. Technically, the impacts of a storm could be reflected in FPL's SPPCRC actual/estimated filing if the storm occurred prior to the date of the filing. However, given that the annual SPPCRC actual/estimated filing is typically submitted in early May and prior to the hurricane season, there is a low likelihood that an extreme weather event would have a material impact to FPL's SPP projects by the time the SPPCRC actual/estimated filing is prepared.

Staff's First Set of Interrogatories
Interrogatory No. 6

QUESTION:
Please refer to page 7, lines 14-22 and page 8, lines 1-2 of Witness Jarro's April 1, 2025 testimony. Witness Jarro states that an increase in the costs of materials and supplies due to inflation impacted costs associated with SPP projects, as well as contractor labor.

a. What specific supply chain constraints increased the costs of materials or supplies in 2024?

b. Does FPL take steps to account for inflation and other rising costs in its SPP project projections?

c. If yes, please explain.

RESPONSE:
a. The following are some specific examples of supply chain constraints that led to increased costs of materials or supplies in 2024:

- Labor strikes in key logistics hubs in North America, Germany, and Canada.
- Skilled labor shortages significantly increased manufacturing labor rates.
- Driver and rig shortages in North America significantly increased transportation costs.
- Raw material scarcity resulted in higher index price increases for resin, steel, and aluminum.

b.-c. Yes. Nationwide inflation has continued to increase the cost of materials and supplies over the last few years. FPL has seen and continued to see an increase in the material and labor used for capital projects, including SPP programs and projects. However, as explained in the direct testimony of FPL witness Jarro, to help mitigate the impacts of these inflationary pressures, FPL's supply chain organization has negotiated long-term contracts with multiple manufacturers to help secure more inventory at lower average costs. Additionally, the SPP work is based on competitive solicitations and other contractor and supplier negotiations to ensure that FPL selected the best qualified contractors and equipment suppliers at the lowest evaluated costs. These efforts helped mitigate the impacts of inflation and supply chain constraints in 2024.

FPSC EXH NO. 37
ADMITTED

QUESTION:
Please refer to Form 4A of exhibit RLH-1 from the April 1, 2025 testimony of Witness Hume.

a. Please explain the $2,294,047 variance in the Distribution Feeder Hardening Program O&M costs.

b. Please explain the (22.30%) variance in the Distribution Inspection Program O&M costs.

c. Please explain the (110.36%) variance in the Transmission Hardening Program O&M costs.

d. Please explain the 25.32% variance in the Transmission Vegetation Management Program O&M costs.

e. Please explain the (99.79%) variance in the Distribution Lateral Hardening Program O&M costs.

RESPONSE:
a. The O&M included within the actual spend of the Distribution Feeder Hardening Program is mostly related to the timing between when the Work Request ("WR") is engineered and the time the WR progresses in the Work Management System. Once the WR is in pre-closing status the O&M will shift to Capital. As of year-end 2024, not all of the projects have been closed, because many of these are multi-year projects.

As per FERC ruling issued November 19, 2024, in Docket No. AC24-146-000, FPL was granted an extension of its limited duration waiver of the accounting requirements of Account 593, Maintenance of Overhead Lines, for anticipated asset transfer costs related to the Company's storm hardening efforts. This waiver created a change in Feeder Hardening and Lateral Hardening accounting treatment of capitalization resulting in a shift from O&M to Capital.

b. The decrease in O&M costs for the Distribution Inspection Program was mainly attributed to a reduced split for O&M versus Capital work for the program.

The cost to execute the Distribution Inspection Program depends on various factors, such as, but not limited to, the local region of inspection, the pole composition (*i.e.,* concrete or wood), and if trussing is a reasonable and appropriate option to reinforce the pole which can ultimately impact the split between the cost that are capitalized vs expensed.

FPSC EXH NO. 37
ADMITTED

c. The decrease in O&M costs for the Transmission Hardening Program was mainly attributed to material inventory credit.

The variance in the 2024 actual vs estimated costs was driven by the final close-out process of completed jobs, which includes a reconciliation and return of material inventory that resulted in a credit to O&M costs for the Transmission Hardening Program.

d. The increase in O&M costs for the Transmission Vegetation Management Program was primarily tied to more prescriptive trimming work performed that year as identified by Vegetation Management's 100% visual inspection program. Visual Inspections resulted in more prescriptive trimming miles than 2023 (832 additional miles were trimmed in 2024 versus 2023).

Variability is normal and can be influenced by the work mix that varies from year to year depending on the degree of difficulty, type of work being performed (*e.g.,* mowing, spraying, tree removal, tree trimming, etc.) and number of locations to be addressed. The annual prescription plan varies based on inspection findings. Some locations require less work to meet specification while others require more time, impacting costs. For example, some locations are more readily accessible and can be reached with a trimming bucket truck, while inaccessible locations require the utilization of specialized equipment *(e.g.,* flooded locations require amphibious "marsh masters" or "all terrain" equipment) or climbing crews due to inaccessibility. All these factors contribute to variation in time to trim, and therefore may impact cost of work performed in the annual vegetation management plan.

e. The decrease in O&M cost for the Distribution Lateral Hardening Program was mainly attributed to a reduced split for O&M versus capital work for the program.

The cost to execute the Distribution Lateral Hardening Program depends on various factors, such as corresponding connection work on poles to facilitate the conversion to underground and the approved FERC capitalization waiver explained in subpart a of this response.

FPSC EXH NO. 37
ADMITTED

Florida Power & Light Company
Docket No. 20250010-EI
Staff's First Set of Interrogatories
Interrogatory No. 8

QUESTION:
Please refer to Form 6A of exhibit RLH-1 from the April 1, 2025 testimony of Witness Hume. Please explain the 31.38% variance in the Distribution Vegetation Management Capital Investment Program costs.

RESPONSE:
The increase in capital investments associated with FPL's Distribution Vegetation Management Program are tied to FPL's LiDAR (Light Detection and Ranging) technology platform. The investment is helping FPL gain a better understanding of how much vegetation is near our conductors. This supports FPL's ability to execute the vegetation preventative maintenance, corrective maintenance and mid-cycle trimming programs more efficiently.

For mid-cycle and critical infrastructure feeder (CIF) vegetation maintenance, FPL is using LiDAR to change the way work is scoped and issued to the field. Work is now scoped through the use of LiDAR from a computer desktop versus traditional foot patrols reducing the time it takes to get work to contractors in the field and sending them to the areas where trimming is needed. As a result, arborists are able to better oversee field execution and quality of work rather than spend time patrolling feeders.

Ultimately, the investments in technology and advanced analytics have the potential benefit of further reducing vegetation-related outages during extreme weather events through performing efficient and timely trimming on circuits.

Interrogatory No. 9

QUESTION:
Please refer to page 29 of Exhibit MJ-1 from the April 1, 2025 testimony of Witness Jarro. Please explain the absence of the Dade County Dumfoundling project from the Substation Storm Surge/Flood Mitigation Program - Capital Expenditure table.

RESPONSE:
Every Substation Storm Surge / Flood Mitigation project is custom engineered in accordance with the unique conditions specific to that substation. As a result, the scope of work is subject to change/modification based on field conditions once engineering and construction is officially underway. The Dumfoundling substation has an updated estimated date of completion of 2030 and no work was performed in 2024 as shown in MJ-1. The Dumfounding substation project will install approximately 960 linear feet of sheet pile cut-off wall, 10-foot storm surge wall with flood protection to five feet above grade and ten feet below grade seepage cut off barrier. Additionally, the project will install flood walls, flood gates, and additional drainage to mitigate storm surge and/or flooding during extreme weather events. However, FPL notes that it is still actively looking at alternatives due to the physical constraints of the current location (Miami-Dade county).

RESPONSE:
The percent variances identified in FPL Exhibit MJ-4 are largely the product of the timing of when the 2025 actual/estimated costs were and will be incurred as compared to when they were projected to be incurred in FPL's 2025 projection filing approved in Docket No. 20240010-EI. Nearly all of the projects identified on Exhibit MJ-4 are multi-year SPP projects, and the costs reported on Exhibit MJ-4 are only the actual/estimated costs projected to be incurred during calendar year 2025. Thus, the costs reported on Exhibit MJ-4 do not reflect the total project cost or the extent of variance in the total cost for any SPP project.

As further explained in the direct testimony of FPL witness Jarro submitted on April 1, 2025, the SPP project variances are typically the result of one or more of three occurrences: (i) an acceleration of a project; (ii) a project delay; or (iii) a change to the project scope or estimate. As the detailed list and explanation of each of these drivers is provided in Exhibit MJ-2 filed on April 1, 2025.

- Accelerated projects result in a greater proportion of the overall project cost being incurred sooner rather than later, but the overall estimated cost for the project typically remains substantially the same. An accelerated project could result in greater costs being incurred for a project during an earlier year and less costs incurred in a later year.

- Delayed projects result in a proportion of the overall project cost being incurred later than originally estimated, but the overall estimated cost for the project typically remains substantially the same. A delayed project could result in less costs being incurred for a project during an earlier year and more costs incurred in a later year.

- Unlike the drivers that result in a change in costs incurred during the year due to the timing of when the work is being completed (either being accelerated or delayed), changes to a project estimate may result in a change to the overall cost of a project.

Importantly, as explained in the direct testimony of FPL witness Jarro submitted on May 1, 2025, FPL has and will continue to manage the SPP projects during 2025 at the program level in order to maximize efficiency while still achieving the overall objectives of the SPP programs. As a result, FPL will effectively manage the 2025 SPP projects at the program level to ensure that the total 2025 SPP program costs remain consistent with the costs projected in the Commission-approved SPP and SPPCRCs.

Further, FPL's SPPCRC forecasts are based on the best information available at the time the forecast is prepared. The actual/estimated costs included in Exhibit MJ-4 are forecasts based on the best information available as of February 2025. Of course, no one can predict the future with absolute precision and, as to be expected with any major construction project, project schedules and cost estimates may change due to events and circumstances that are largely beyond the utility's control, which may impact the number of projects and associated costs to be undertaken during a calendar year. In other words, forecasting by definition always includes an element of uncertainty.

ADMITTED

The project level detail and actual/estimated 2025 costs for the FPL SPP programs and projects are provided in Exhibit MJ-4, which includes details for approximately 5,000 individual SPP projects. For each 2025 SPP project, FPL provided both a category of project variance and an explanation for each material variance in Exhibit MJ-4. Notwithstanding, FPL provides further details below for each of the SPP projects:

QUESTION:
Please refer to the two tables on page 4 of Exhibit MJ-3. In 2024, there were 180,000 projects and the cost of removal was $23.5M. The projected number of projects for 2026 remained at 180,000, but the estimate for cost of removal increased to $42.6M. Please identify the primary drivers for this increase of $19.1M.

RESPONSE:
The forecasted increase in pole replacement, remediation, or removal volumes is primarily driven by the merger and consolidation of the former Gulf Power Company ("Gulf") service area within and becoming a part of the FPL service area effective January 1, 2022. As a result, in FPL's Commission-approved 2023 SPP, FPL included the former Gulf service area in the Distribution Inspection Program and began inspecting distribution poles located in this area consistent with the program standards and methodology.

Additionally, as part of this program, FPL identified that the average pole failure rate in the former Gulf service area (~10.2%) was significantly higher than legacy FPL's average pole failure rate (~6.1%). For historical context, this higher average pole failure rate in the former Gulf service area is similar to the average failure rate for the legacy FPL service during its first 8-year inspection cycle that began after the 2004-2005 hurricane season.

Further, there has been a notable increase in both material and labor costs due to inflation. The costs of poles, crossarms, insulators, and other components have risen significantly, influenced by market conditions and supply chain challenges. As a result, the incremental cost increases resulted in a backlog of poles requiring replacement, remediation, or removal. FPL has continued to address critical poles requiring replacement in a timely manner.

FPSC EXH NO. 38
ADMITTED

QUESTION:
Please refer to the two tables on pages 7 and 8 of Exhibit MJ-3. In 2025, FPL plans to complete 194 feeder projects and spend $669.3M in total costs. The projected number of feeder projects for 2026 is 265, but the total costs are estimated to be $311.8M. Please explain how the total costs are expected to go down by $357.5M when the number of feeder projects is increasing by 71.

RESPONSE:
The feeder hardening projects are multi-year projects and the time to complete a project can vary for a number of factors, including, but not limited to: scope and size of the project; weather impacts; contractor availability; time required to obtain any permits and approvals necessary to do the work; and other similar factors that are beyond FPL's reasonable control. The estimated costs for the Distribution Feeder Hardening Program for 2025 and 2026, as shown on pages 7 and 8 of Amended Exhibit MJ-3, are not limited to the projects estimated to be completed during the relevant calendar year (*i.e.*, 194 feeder projects in 2025 and 265 feeder projects in 2026). Rather, the annual costs include actual and/or estimated costs for all activities and work to be performed under the Distribution Feeder Hardening Program in a given year. The program activities will include all hardening projects that are in the planning and engineering stages, in various stages of construction, or completed and closed out.

As shown on pages 1 through 16 of Exhibit MJ-4, FPL is projecting to work on a total of 773 feeder hardening projects and 26 automation projects during calendar year 2025 and is projecting to complete 194 feeder hardening projects and 26 automation projects during that same year. The total estimated cost for all Distribution Feeder Hardening work in 2025 is $669.3 million, which includes all 799 feeder and automation projects to be worked on during calendar year 2025 and not just those projects that will be completed in 2025.

As shown on pages 1 through 6 of Amended Exhibit MJ-5, FPL is projecting to work on a total of 415 feeder hardening projects and 20 automation projects during calendar year 2026 and is projecting to complete 265 feeder hardening projects and 20 automation projects during calendar year 2026. The total estimated cost for all Distribution Feeder Hardening work in 2026 is $311.8 million, which includes all 435 feeder and automation projects to be worked on during calendar year 2026 and not just those projects that will be completed in 2026.

FPSC EXH NO. 38
ADMITTED

QUESTION:
Please refer to the two tables on page 13 of Exhibit MJ-3. In 2025, FPL plans to complete 18,041 miles of work and spend $7.6M in Capital Costs on their Distribution Vegetation management program. The projected number of miles to be completed in 2026 is 18,055, and the projected amount of Capital costs is $2.0M. Please explain why Capital Costs are expected to go down by $5.6M given the expected increase in miles to be completed.

RESPONSE:
Total costs for FPL's Distribution Vegetation Management program for 2025 and 2026 are similar. The difference in the capital costs for 2025 and 2026 is largely driven by and is subject to utilization of LiDAR technology. This includes the frequency of how often that data gets collected (cycle collection times) to understand existing vegetation species and their associated growth rates, and then over time to monitor and validate conditions. The $2 million in capital costs for the Distribution Vegetation Management Program reflect the estimated fluctuation in LiDAR usage and validation for calendar 2026. FPL notes that these capital costs will be updated in next year's actual/estimated filing in 2026 and the final true-up filing in in 2027.

FPSC EXH NO. 38
ADMITTED

QUESTION:
Please refer to the two tables on pages 16 and 17 of Exhibit MJ-3. In 2025, FPL plans to complete 2 projects and spend $8.5M in Capital Costs on their Substation Storm Surge/Flood Mitigation Program. For 2026, FPL projects that they will complete 1 project and spend $8.5M in Capital Costs on their Substation Storm Surge/Flood Mitigation Program. Please explain why 1 project in 2026 is projected to have the same amount of Capital Costs as 2 projects in 2025.

RESPONSE:
Every Substation Storm Surge/Flood Mitigation project is custom engineered in accordance with the unique conditions specific to that substation. As a result, the scope of work is subject to change/modification based on field conditions once engineering and construction is officially underway.

As reflected in FPL's Exhibit MJ-4, FPL currently estimates the following Substation Storm Surge/Flood Mitigation projects to be completed in 2025:

- *Chambers* – Install approximately 640 linear feet of 10-foot above grade storm surge wall with flood protection to 5 feet above grade and 10 feet below grade seepage cut off barrier. Install corresponding flood gates and additional drainage to mitigate storm surge and/or flood during extreme weather events.

- *Lewis* – Install approximately 1,040 linear feet of 10-foot above grade storm surge wall with flood protection to 5 feet above grade and 10 feet below grade seepage cut off barrier. Install corresponding flood gates, and additional drainage to mitigate storm surge and/or flood during extreme weather events.

As reflected in FPL's Amended Exhibit MJ-5, FPL currently estimates the following Substation Storm Surge/Flood Mitigation project to be completed in 2026:

- *Port* Orange – Relocate load to nearby existing substations out of the flood zone as a result of flooding during multiple extreme weather events and Port Orange substation will potentially be retired as a result of persistent flooding.

Florida Power & Light Company
Docket No. 20250010-EI
Staff's Second Set of Interrogatories
Interrogatory No. 15

QUESTION:
Please refer to page 21 of Exhibit MJ-4. The actual/estimated completion year for the Substation in Gracewood is listed as 2029. Please explain why the actual/estimated completion year for this Substation is being pushed back from 2025 to 2029.

RESPONSE:
FPL encountered challenging field conditions associated with Gracewood substation when performing the substation flood and storm surge mitigation efforts. FPL identified unsuitable soil conditions during the engineering stage, which resulted in higher-than-expected costs, scope changes, and construction delays due to permitting requirements. Additionally, flooding during Hurricane Ian and recent storms at Port Orange and Iona substations resulted in FPL to reprioritizing these projects ahead of Gracewood substation. As explained in the FPL's Commission approved 2026-2035 SPP in Docket No. 20250014-EI, *"FPL will also continue to monitor storm surge and flooding at all its substations and, where appropriate and necessary, re-prioritize substation projects or identify additional substations that require storm surge/flood mitigation measures in the future."*

FPSC EXH NO. 38
ADMITTED

Florida Power & Light Company
Docket No. 20250010-EI
Staff's Second Set of Interrogatories
Interrogatory No. 16

QUESTION:
Please refer to the second paragraph on page 16 of Exhibit MJ-3, and page 11 of Exhibit MJ-5. Witness Jarro states that in addition to the 2 Substations FPL plans to complete work on in 2025, FPL has identified five more Substations that need to be addressed due to recent extreme weather events. Please explain why these 5 Substations mentioned are not included in the table on page 11 of MJ-5.

RESPONSE:
As shown on Amended Exhibit MJ-5, FPL projects to start Substation Storm Surge/Flood Mitigation work on the Port Orange substation in 2025 and is currently projecting to complete that work in 2026. The Port Orange substation is one of the five identified substations added to FPL's 2026-2035 SPP and referenced on page 16 of Amended Exhibit MJ-3. The other four new substation projects are:

- Iona
- Estero
- Capri
- Naples

FPL currently estimates that the Substation Storm Surge/Flood Mitigation work for these four substations will occur in 2029-2031. As a result, these additional four substation projects are properly not included on page 16 of Amended Exhibit MJ-3 or and page 11 of Amended Exhibit MJ-5, which exhibits are limited to 2025 and 2026 projects.

FPSC EXH NO. 38
ADMITTED

Florida Power & Light Company
Docket No. 20250010-EI
Staff's Second Set of Interrogatories
Interrogatory No. 17

QUESTION:
Please refer to Exhibit RLH-2 Form 4E. Please explain (beyond the categorical assignments described in MJ-2) the 23.4% variance in FPL's Transmission Vegetation Program, and the 20.1% variance in FPL's Transmission O&M costs.

RESPONSE:
The 23.4% variance in the Transmission Vegetation Management Program O&M costs shown on Form 4E of Exhibit RLH-2 for 2025 is the product of comparing FPL's 2025 projected costs filed on May 1, 2024 with FPL's 2025 actual/estimated costs filed on May 1, 2025. Both the projected and the actual/estimated Transmission Vegetation Management Program O&M costs were based on the best information and data that was available at the time these cost estimates were prepared.

The primary drivers for the increase in the 2025 actual/estimated Transmission Vegetation Management Program O&M costs as compared to the projection filing are the actual costs incurred for the Transmission Vegetation Management Program in 2024 and the rising labor and equipment costs. These inflationary pressures have the effect of increasing the overall cost of SPP projects. FPL expects these inflationary pressures will continue to impact the 2025 SPP projects and associated costs. As such, FPL's actual/estimated 2025 projects and costs reflect the estimated impact of these inflationary pressures. However, FPL is continuously seeking opportunities to reduce cost through process efficiency, competitive bidding, and, where possible, renegotiating vendor contracts.

The 20.1% variance in the allocation of the Transmission O&M costs shown on Form 4E of Exhibit RLH-2 for 2025 is primarily the result of the increase in the actual/estimated Transmission Vegetation Management Program O&M costs described above.

QUESTION:
Please refer to the supplemental testimony of Richard L. Hume, Amended Exhibit RLH-3 and new Exhibit RLH-5 (Document No. 05622-2025), filed 07/11/2025.

a. Please provide a complete description of the methodology used for each forecast supporting the billing determinants appearing in Amended Exhibit RLH-3, Form 5P.

b. Please list the date(s) of all underlying forecasts that were used to formulate the billing determinants appearing in Amended Exhibit RLH-3, Form 5P.

c. Please explain any changes introduced to the referenced forecast methodologies in the current docket, compared to those methodologies used in preparing the billing determinants in Docket No. 20240010-EI.

RESPONSE:
a-b. The methodology used for developing the sales and load forecasts supporting the billing determinants is consistent with the forecast in FPL's 2025 Ten-Year Site Plan (TYSP). A complete description of the methodology and forecast process can be found in Chapter II of the 2025 TYSP found on the Commission's website.

https://www.floridapsc.com/pscfiles/website-files/PDF/Utilities/Electricgas/TenYearSitePlans//2025/Florida%20Power%20and%20Light%20Company.pdf

These forecasts are developed on a revenue class basis and must be allocated to the rate schedule level for use in the revenue forecast.

The allocation of customers and kWh sales by rate schedule is developed based on the historical relationship between the number of customers and sales by rate schedule, and customers and sales by revenue class. Historical percentages are applied to the forecast of customers and sales by revenue class. The result is an estimate of sales and customers by retail rate schedule for the appropriate time periods.

Lastly, monthly ratios of each rate class's historical CP, GNCP, and NCP to actual kWh sales are developed for each year of actual load research data. These ratios are then applied to the sales forecast by rate class to derive the forecasted CP, GNCP, and NCP demands for each class. For demand-metered rate schedules, billing demands are based on the NCP for each rate class.

c. The input data included in each model is updated to reflect the most current and accurate information available at the time the forecast is prepared. However, the methodology used for each forecast supporting the billing determinants has not changed since those used in Docket No. 20240010-EI.

QUESTION:
Please refer to the supplemental testimony of Richard L. Hume, Amended Exhibit RLH-3, Form 5P for the following questions.

a. For each forecast of energy and demand for 2025 and 2026 used to support the listed billing determinants for 2026, please provide a comparison of monthly forecasts to monthly actual demand and energy for the months of January through June 2025.

b. Regarding the comparisons provided in response to Interrogatory No. 20.a., please provide reasons for any monthly average deviations that exceed +/- 20 percent.

RESPONSE:
a. Please see the attached responsive document for the comparison of the monthly forecast to the monthly actual demand and energy for the months of January through June 2025.

b. Energy and Demand Variances exceeding 20 percent for the period: The SST rate classes have kWh and kW variances that exceed 20 percent. FPL is a backup provider to these customers and therefore sales to these customers is highly volatile and variable in nature.

Demand Variances exceeding 20 percent for the period: The MET rate class has a kW variance that exceeds 20 percent. This rate schedule is applicable to only one customer and the demand variance is due change in that customer's usage.

Interrogatory No. 21

QUESTION:
Please identify all closed and open Commission dockets and all non-docketed Commission matters in which the same load forecast used to support the Company's billing determinants appearing in the supplemental testimony of Richard L. Hume, Amended Exhibit RLH-3, Form 5P, has been submitted for approval to the Commission.

RESPONSE:
FPL prepares its load forecast annually and generally uses that forecast for all docketed and non-docketed filings with the Commission, including all 2025 clause proceedings and the 2025 Ten-Year Site Plan.

DECLARATION

I, Richard Hume, sponsor the answers to Interrogatory Nos. 18-21 from **STAFF'S THIRD SET OF INTERROGATORIES (NOS. 18-21)** to Florida Power & Light Company in Docket No. 20250010-EI. The responses are true and correct based on my personal knowledge.

Under penalties of perjury, I declare that I have read the foregoing declaration and the interrogatory answers identified above, and that the facts stated therein are true.

Richard Hume

[(a)] JEA/Southern loss payback and the non-firm and short-term wheeling losses are excluded from the transmission loss percentage calculation because the flows that create these losses are not in the flow to transmission. However, because these are real losses, they are included in the flow to distribution.

DATA SUMMARY
December 2025 - FORECAST (Sept 2022 LF)

FPL 000018
20250010-EI

VOLTAGE LEVEL		DEMAND EXPANSION FACTOR	ENERGY EXPANSION FACTOR	ENERGY LOSS %
TRANSMISSION		1.020034	1.016043	1.5790%
PRIMARY		1.034629	1.027062	2.6349%
SECONDARY		1.061512	1.047230	4.5100%

COMPANY USE - DEMAND:

GSD-1 Delivered Sales (MWH) /	28,708,710
Hours in Year /	8,760
GSD-1 12CP (MW)	4,407
GSD-1 Load Factor	0.743638
Company Use - MWH /	155,812
Hours in Year /	8,760
GSD-1 Load Factor	0.743638
COMPANY USE - 12CP DEMAND (MW)	24

CALCULATION OF NET ENERGY TO TRANSMISSION:

Net Energy for Load (NEL)	141,646,472
+ Seminole Load Received	2,074,257
+ St. Lucie Entitlement Received	518,837
+ Power Wheeled for Others	7,617,080
- Southern JEA / Transfers Loss Payback	(21,449)
- Non-Firm Wheeling Losses	(66,614)
- Short Term Firm Wheeling Losses	(91,078)
SUBTOTAL: Firm Power Wheeled for Others - Southern JEA/LP - NF/STF:	10,031,033
NET ENERGY TO TRANSMISSION (MWH)	151,677,505

LINE LOSS TOTALS USING BILLED SALES:

NEL	141,646,472
Prior Month Unbilled	5,372,861
SUBTOTAL	147,019,333
Billed Sales	(135,054,996)
Company Use	(155,812)
Current Month Unbilled	(5,493,233)
ENERGY LOST OR UNACCOUNTED FOR	6,315,292
% LOST OR UNACCOUNTED FOR	4.4585%

TOTAL DELIVERED TO BILLED SALES RATIO:

Total Delivered MWH	135,175,369
Total Billed MWH	135,054,996
TOTAL DELIVERED TO BILLED SALES RATIO	1.00089

NET	(0)				

[a] JEA/Southern loss payback and the non-firm and short-term wheeling losses are excluded from the transmission loss percentage calculation because the flows that create these losses are not in the flow to transmission. However, because these are real losses, they are included in the flow to distribution.

QUESTION:
Please refer to the following documents:

i. FPL witness R. Hume's Direct Testimony and Exhibit RLH-1, Form 7A, pages 9 through 16 of 17, filed on April 1, 2025;

ii. Witness R. Hume's Direct Testimony and Exhibit RLH-2, Form 7E, pages 8 through 12 of 15, filed on May 1, 2025; and

iii. Witness Hume's Supplemental Testimony and Amended Exhibit RLH-3, Form 3P pages 6 through 13 of 16, filed on July 11, 2025.

a. Please provide Forms 7A, 7E and 3P in MS Excel format with formulas intact.

b. Please provide a MS Excel file showing the breakdown of SPP depreciation rates referenced in footnote (c) on each of the afore-referenced pages, by project, plant account, and depreciation group.

RESPONSE:
Please see responsive documents provided.
