\* An ERC is determined based on one of the following methods:  
(a) If actual flow data are available from the preceding 12 months:  
Divide the total annual single family residence (SFR) gallons sold by the average number of single family residents (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.  
(b) If no historical flow data are available use:  
ERC = (Total SFR gallons sold (omit 000/365 days/280 gallons per day).
