			Total Water System Meter Equivalents			

Calculation of the Water System Equivalent Residential Connections

Provide a calculation used to determine the value of one water equivalent residential connection (ERC).

Use one of the following methods:

(a) If the actual flow data are available from the preceding 12-months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.

(b) If no historical flow data are available, use:

$$ERC = (\text{Total SFR gallons sold (omit ,000)} / 365 \text{ days}) / 350 \text{ gallons per day}$$

ERC Calculation:

619,601,000	Annual Demand (Gals)
365	Days
1,697,537	Gals/Day
350	Gals/ERC
4,850	ERCs

Calculation of the WasteWater System Equivalent Residential Connections

Provide a calculation used to determine the value of one wastewater equivalent residential connection (ERC).
Use one of the following methods:

- (a) If the actual flow data are available from the preceding 12-months, divide the total annual single family residence (SFR) gallons sold by the average number of single family residence customers for the same period and divide the result by 365 days.
- (b) If no historical flow data are available, use:
ERC = (Total SFR gallons sold (omit .000) / 365 days) / 300 gallons per day

NOTE: Total gallons treated includes both treated and purchased treatment.

ERC Calculation:

315,616,000 Annual Demand (Gals)
365 Days
865,249 Gals/Day
300 Gals/ERC
2,884 ERCs
