Florida- Fall 2019 IRP Refresh Update - Coal

No Carbon

********** Key Assumptions - PLEASE READ **********

1. Using the following CERA fundamental price forecast in Nominal dollars (see the "Coal Price Inputs" sheet):

   Source File: Base, Low High Commodity Coal Curves_FL

   Source Tab: Fundamentals - Ratio Method

   From: Michael Quinto

2. Vendors for the fundemental price curves changed in 2017 from EVA to CERA. With this change there was a reduction in the number of coal prices forecasts provided for each region. However, where transportation rates provided alternative delivery methods for the same coal price forecast a delivered price was calculated.
3. This is an evaluation of the delivered cost per mmbtu only (coal price plus transportation cost). See the "Master" sheet for the overall summary of the lowest cost alternatives by station by year (including cost and quality). Additional cost adjustments for scrubber costs, O&M, etc. could be added upon request.
4. The delivered cost per mmbtu was calculated for all coal alternatives that can be transported to each station (see the sheets for each station). The coal alternative with the lowest delivered cost was then able to be identified and chosen for each year. This format allows the reviewer to see the delivered costs for all alternatives, regardless of whether or not they were not chosen (enables quick review of cost deltas for the next lowest cost alternatives). Where the station cannot burn the single lowest cost alternative at 100%, the lowest cost blend was determined.
5. This update incorporates unit capability constraints (Min BTU, Max SO2, Max Ash, Max Chlorine, and Max Mercury) and current capacity for on-site blending as we know them today.
6. Does not include any other adders for sulfur removal costs, O&M impacts or anything else. However, please note these additional cost impacts can be incorporated into the analysis upon request.
7. The CSX rail transportation rates assume the current proposed rates based off of Aug. 2019 CSX rate proposal (with Fuel Surcharge calculations based on COB 9/12/2019 WTI fuel pricing and AII-LF based on the actual index numbers through Q3 2019). The rates are escalated at 2.0% annually for 2020 through 2050.
8. For additional rail and barge assumptions see tab " Transportation Rate assumptions".
9. Crystal River Units 1&2 retirement occurred 12/31/18

10 This IRP is for planning purposes only. Using fundamental pricing for coal and market estimates for transportation rates. This evaluation does not include the modeling of the existing contractual commitments for coal, transportation and trans-loading.

Rail Assumptions

1) CSX CAPP, NAPP, ILB and Western PRB/RM rates updated based on CSX indicitive bid received 8/2019
2) CSX West Kentucky equals CSX indicitive bid received 8/2019 for Cardinal 9, KY
3) CSX Galatia rate equals CSX indicitive bid received 8/2019 for White Oak
4) CSX Sullivan rate equals average CSX indicitive bid for ILB excluding Cardinal 9, KY received 8/2019
9) CSX UP (RM) equals CSX indicitive bid received 8/2019 including BSNF piece
10) CSX PRB equals CSX indicitive bid received 8/2019 including BSNF piece
11) Delivery of ILB 11,000 6# would typically be out of Central IL. ILB 11,000 6# transportation selection of CSX Sullivan based off of Peabody Bear Run 2017 Fall Term RFP offer. However, Station can not currently do a rail direct move as there is no on-site blending capabilities which would be needed to meet SO2 constraints

Barge Assumptions

12) Barge UP RM to Convent rate is the current UP agreement through 9/18 escalated at 5% (with Fuel Surcharge calculations based on COB 9/12/19 WTI fuel pricing), plus the current rates for the Convent Terminal fees which expired 12/31/18 escalated at 2% and Gulf Barge rates through 12/18 escalating 2% annually starting Jan 2025 through 2050.
13) Delivery of 11,800 4.5# coals would typically be off the Green River. Currently have a contract delivering off the Ohio.
14) ILB 11,000 6# transportation selection of OH River based off of Peabody bids going through Cora Terminal
15) Fixed cross-gulf costs excluded from transportation rates through FOF study period, Fees for one cross-gulf barge added 1/1/25. Second cross-gulf barge added 1/1/31. Variable cost to mid-stream coal from the river to the gulf is included starting 1/1/23 and is based off the current AT rate escalated at 2%. Mirrors current FOF assumptions.

Current FOF Gulf Barge assumptions: Margo Dale terminated 12/31/20, Winna Wilson assumed in-service through 12/31/23

Florida- Fall 2019 IRP Refresh Update - Coal

No Carbon

********** Key Assumptions - PLEASE READ **********

1. Using the following CERA fundamental price forecast in Nominal dollars (see the "Coal Price Inputs" sheet):

   Source File: Base, Low High Commodity Coal Curves_FL

   Source Tab: Fundamentals - Ratio Method

   From: Michael Quinto

2. Vendors for the fundemental price curves changed in 2017 from EVA to CERA. With this change there was a reduction in the number of coal prices forecasts provided for each region. However, where transportation rates provided alternative delivery methods for the same coal price forecast a delivered price was calculated.
3. This is an evaluation of the delivered cost per mmbtu only (coal price plus transportation cost). See the "Master" sheet for the overall summary of the lowest cost alternatives by station by year (including cost and quality). Additional cost adjustments for scrubber costs, O&M, etc. could be added upon request.
4. The delivered cost per mmbtu was calculated for all coal alternatives that can be transported to each station (see the sheets for each station). The coal alternative with the lowest delivered cost was then able to be identified and chosen for each year. This format allows the reviewer to see the delivered costs for all alternatives, regardless of whether or not they were not chosen (enables quick review of cost deltas for the next lowest cost alternatives). Where the station cannot burn the single lowest cost alternative at 100%, the lowest cost blend was determined.
5. This update incorporates unit capability constraints (Min BTU, Max SO2, Max Ash, Max Chlorine, and Max Mercury) and current capacity for on-site blending as we know them today.
6. Does not include any other adders for sulfur removal costs, O&M impacts or anything else. However, please note these additional cost impacts can be incorporated into the analysis upon request.
7. The CSX rail transportation rates assume the current proposed rates based off of Aug. 2019 CSX rate proposal (with Fuel Surcharge calculations based on COB 9/12/2019 WTI fuel pricing and AII-LF based on the actual index numbers through Q3 2019). The rates are escalated at 2.0% annually for 2020 through 2050.
8. For additional rail and barge assumptions see tab " Transportation Rate assumptions".
9. Crystal River Units 1&2 retirement occurred 12/31/18

10 This IRP is for planning purposes only. Using fundamental pricing for coal and market estimates for transportation rates. This evaluation does not include the modeling of the existing contractual commitments for coal, transportation and trans-loading.

Rail Assumptions

1) CSX CAPP, NAPP, ILB and Western PRB/RM rates updated based on CSX indicitive bid received 8/2019
2) CSX West Kentucky equals CSX indicitive bid received 8/2019 for Cardinal 9, KY
3) CSX Galatia rate equals CSX indicitive bid received 8/2019 for White Oak
4) CSX Sullivan rate equals average CSX indicitive bid for ILB excluding Cardinal 9, KY received 8/2019
9) CSX UP (RM) equals CSX indicitive bid received 8/2019 including BSNF piece
10) CSX PRB equals CSX indicitive bid received 8/2019 including BSNF piece
11) Delivery of ILB 11,000 6# would typically be out of Central IL. ILB 11,000 6# transportation selection of CSX Sullivan based off of Peabody Bear Run 2017 Fall Term RFP offer. However, Station can not currently do a rail direct move as there is no on-site blending capabilities which would be needed to meet SO2 constraints

Barge Assumptions

12) Barge UP RM to Convent rate is the current UP agreement through 9/18 escalated at 5% (with Fuel Surcharge calculations based on COB 9/12/19 WTI fuel pricing), plus the current rates for the Convent Terminal fees which expired 12/31/18 escalated at 2% and Gulf Barge rates through 12/18 escalating 2% annually starting Jan 2025 through 2050.
13) Delivery of 11,800 4.5# coals would typically be off the Green River. Currently have a contract delivering off the Ohio.
14) ILB 11,000 6# transportation selection of OH River based off of Peabody bids going through Cora Terminal
15) Fixed cross-gulf costs excluded from transportation rates through FOF study period, Fees for one cross-gulf barge added 1/1/25. Second cross-gulf barge added 1/1/31. Variable cost to mid-stream coal from the river to the gulf is included starting 1/1/23 and is based off the current AT rate escalated at 2%. Mirrors current FOF assumptions.

Current FOF Gulf Barge assumptions: Margo Dale terminated 12/31/20, Winna Wilson assumed in-service through 12/31/23

Florida- Fall 2019 IRP Refresh Update - Coal

No Carbon

********** Key Assumptions - PLEASE READ **********

1. Using the following CERA fundamental price forecast in Nominal dollars (see the "Coal Price Inputs" sheet):

   Source File: Fuel-Forecast_Fall_2019_IHS_New ILB

   Source Tab: Coal Fall 2019

   From: Andrew James via e-mail on 10/04/2019

2. Vendors for the fundemental price curves changed in 2017 from EVA to CERA. With this change there was a reduction in the number of coal prices forecasts provided for each region. However, where transportation rates provided alternative delivery methods for the same coal price forecast a delivered price was calculated.
3. This is an evaluation of the delivered cost per mmbtu only (coal price plus transportation cost). See the "Master" sheet for the overall summary of the lowest cost alternatives by station by year (including cost and quality). Additional cost adjustments for scrubber costs, O&M, etc. could be added upon request.
4. The delivered cost per mmbtu was calculated for all coal alternatives that can be transported to each station (see the sheets for each station). The coal alternative with the lowest delivered cost was then able to be identified and chosen for each year. This format allows the reviewer to see the delivered costs for all alternatives, regardless of whether or not they were not chosen (enables quick review of cost deltas for the next lowest cost alternatives). Where the station cannot burn the single lowest cost alternative at 100%, the lowest cost blend was determined.
5. This update incorporates unit capability constraints (Min BTU, Max SO2, Max Ash, Max Chlorine, and Max Mercury) and current capacity for on-site blending as we know them today.
6. Does not include any other adders for sulfur removal costs, O&M impacts or anything else. However, please note these additional cost impacts can be incorporated into the analysis upon request.
7. The CSX rail transportation rates assume the current proposed rates based off of Aug. 2019 CSX rate proposal (with Fuel Surcharge calculations based on COB 9/12/2019 WTI fuel pricing and AII-LF based on the actual index numbers through Q3 2019). The rates are escalated at 2.0% annually for 2020 through 2050.

8 For additional rail and barge assumptions see tab " Transportation Rate assumptions".

9 Crystal River Units 1&2 retirement occurred 12/31/18

10 This IRP is for planning purposes only. Using fundamental pricing for coal and market estimates for transportation rates. This evaluation does not include the modeling of the existing contractual commitments for coal, transportation and trans-loading.

Rail Assumptions

1) CSX CAPP, NAPP, ILB and Western PRB/RM rates updated based on CSX indicitive bid received 8/2019
2) CSX West Kentucky equals CSX indicitive bid received 8/2019 for Cardinal 9, KY
3) CSX Galatia rate equals CSX indicitive bid received 8/2019 for White Oak
4) CSX Sullivan rate equals average CSX indicitive bid for ILB excluding Cardinal 9, KY received 8/2019
9) CSX UP (RM) equals CSX indicitive bid received 8/2019 including BSNF piece
10) CSX PRB equals CSX indicitive bid received 8/2019 including BSNF piece
11) Delivery of ILB 11,000 6# would typically be out of Central IL. ILB 11,000 6# transportation selection of CSX Sullivan based off of Peabody Bear Run 2017 Fall Term RFP offer. However, Station can not currently do a rail direct move as there is no on-site blending capabilities which would be needed to meet SO2 constraints

Barge Assumptions

12) Barge UP RM to Convent rate is the current UP agreement through 9/18 escalated at 5% (with Fuel Surcharge calculations based on COB 9/12/19 WTI fuel pricing), plus the current rates for the Convent Terminal fees which expired 12/31/18 escalated at 2% and Gulf Barge rates through 12/18 escalating 2% annually starting Jan 2025 through 2050.
13) Delivery of 11,800 4.5# coals would typically be off the Green River. Currently have a contract delivering off the Ohio.
14) ILB 11,000 6# transportation selection of OH River based off of Peabody bids going through Cora Terminal
15) Fixed cross-gulf costs excluded from transportation rates through FOF study period, Fees for one cross-gulf barge added 1/1/25. Second cross-gulf barge added 1/1/31. Variable cost to mid-stream coal from the river to the gulf is included starting 1/1/23 and is based off the current AT rate escalated at 2%. Mirrors current FOF assumptions.

Current FOF Gulf Barge assumptions: Margo Dale terminated 12/31/20, Winna Wilson assumed in-service through 12/31/23
