9. AT&T DIGITAL LINK

9.1 DESCRIPTION

9.1.1 General

AT&T Digital Link is a Local Exchange Service which permits outward and inward local calling capability from a Customer's premises utilizing Direct Outward Dialing (DOD), Direct Inward Dialing (DID) and Main Listed Number (MLN)* over dedicated digital facilities (as described in AT&T's Business Services Guide) and Originating Toll Free Service 8YY. The Customer's premises must have a Customer provided compatible Private Branch Exchange (PBX) system or multi-line terminating system to originate and terminate the calls. AT&T Digital Link also permits outward local calling capability from a Customer's premises utilizing Direct Outward Dialing (DOD) over an external Local Exchange Company (LEC) provided Centrex Service. The Customer will be responsible for obtaining all necessary Centrex Service Automatic Route Selection (ARS) reprogramming. DOD, DID, 8YY and MLN* capability is available where facilities and operating systems exist.

T

T

AT&T Digital Link Service (ADL) supports both line and trunk applications for customers. The Company will determine whether a Customer requires a line or a trunk application based upon: 1) the quantity of telephone numbers at a customer location and 2) Customer's existing service requirements, unless Customer requests a change to existing requirements.

N

Line applications exhibit lower levels of network occupancy. With line applications there is commonly a relationship of one (1) telephone number per channel.

To adjust for the levels of Customer usage, AT&T will apply a ratio of DID Channel charges to telephone numbers. The specific ratio(s) to be applied is located in the Price List. The Customer may request a full facility charge as an alternative to multiple channel charges.

Trunk applications typically exhibit a multiple telephone numbers per channel relationship. Charges will apply in a ratio of one (1) DID Channel charge per trunk. The Customer may request a full facility charge as an alternative to multiple channel charges.

N

M

* Main Listed Number (MLN) is not available for new installations after July 1, 2003.

N

9. AT&T DIGITAL LINK

9.1 DESCRIPTION

9.1.1 General

AT&T Digital Link is only available at locations where Customers subscribe to one or more of the following intrastate services: AT&T SDN OneNet Service, Software Defined Network Service, AT&T Business Network-UniPlan Service - Special Access, AT&T Business Network-UniPlan Basic Service Option - Special Access, AT&T Business Network-UniPlan Service FlatRate Pricing Option - Special Access, AT&T Business Network-UniPlan OneRate Service - Special Access, AT&T Business Network-UniPlan OneRate Service Option II, AT&T Virtual Telecommunications Network Service (VTNS), AT&T CustomNet Service - Special Access, AT&T Business Network Service or ACC Business Service provided under this Company's Custom Network Services Price List.

AT&T Digital Link calls using special access will be rated from the originating rate center to the terminating rate center.

AT&T Digital Link does not include any of the following: Operator Assisted Services, Special Service Codes or Special Access Codes. The Customer is responsible for securing individual business lines, or other appropriate facilities, to access these services and/or codes, including:

T
T

Conference Calls

Calls to Special Service Codes including 500, 700, 900, 976, or N11 (where N = 2-6 and 8-9) or other special access codes that may be created

CANCELS ORIGINAL PAGE 3

9. AT&T DIGITAL LINK

9.1 Description (Cont'd)

9.1.3 AT&T Digital Link Direct Inward Dialing Service (DID)

AT&T Digital Link Direct Inward Dialing Service provides inward calling service from the telecommunications network to the Customer's premises for use in connection with PBX dial switching equipment. DID is not available with an external LEC provided Centrex Service. Unless otherwise requested by the Customer, DID service transmits the dialed digits for all incoming calls to the Customer's PBX or multi-line terminating system allowing the Customer's PBX or multi-line terminating system to route the incoming calls to the desired station(s). In order to subscribe to DID Service, the Customer must also subscribe to DOD Service.

T
|
|
|
T

AT&T Digital Link Direct Inward Dialing Service requires a subscription to DID number groups. When dialed, these numbers are routed over available DID arranged channels of the digital access facilities to the Customer's premises. DID number groups may be ordered in an initial group of 20 and additional groups of 10. Additionally, Customers may request less than 20 DID numbers for a particular facility.

N
N

AT&T Digital Link DID Service is not available to Customers with Terminating Switched Access Arrangement functionality or Access Value Arrangement functionality with AT&T.

The Customer will make available to AT&T sufficient capacity on the dedicated digital facilities between its premises and AT&T's network to allow AT&T to terminate all calls to that Customer, including calls originated by Interexchange Carriers and other local service providers.

A. AT&T Incoming Call Re-Direct

AT&T Digital Link (ADL) Direct Inward Dialing (DID) Customers may choose to redirect their incoming calls to an alternate ADL DID location within the local calling area, designated by the Customer, for completion during a network failure lasting more than four hours, a customer premise problem that causes an out-of-service condition, or a customer-scheduled interruption.

When re-directing calls the Customer will be responsible for ensuring that the receiving number(s) has the necessary capacity to handle the additional calling load. The Customer may re-direct their calls to either a single number or multiple numbers. If the customer opts to direct their calls to more than one number, the customer may re-direct up to five numbers to be routed to a maximum of five alternate routing numbers. The choice of five alternate routing numbers is applicable per location T1.5, not per trunk group (a "limited re-direct"). If the customer opts to direct their calls to a single number, the customer may re-direct any portion of their numbers to that single routing number (a "complete redirect").

NOTE: The revisions on this page have been in effect since July 1, 2003.

N

9. AT&T DIGITAL LINK

9.2 REGULATIONS

9.2.1 Provision of AT&T Digital Link

AT&T Digital Link may be utilized by Customers only for the completion of AT&T local calls that both originate and terminate within the AT&T Digital Link Local Service Area. Calls which terminate or originate outside the AT&T Digital Link Local Service Area are provided under other appropriate price lists.

9.3 Rates and Charges

AT&T Digital Link DOD Usage Based Calling Plan rates include usage-based charges which are billed in arrears and apply to all AT&T Digital Link DOD calls associated with any of the intrastate long distance services listed in 9.1.1 at their applicable price list rate. The AT&T Digital Link Flat Rate Calling Plan charges allow the Customer to make local calls for a fixed monthly fee billed in advance. Charges are based upon a combination of the facility capacity used by the Customer and the Customers' associated long distance plan. The fixed monthly fee is based upon an equivalent of full DS1 and/or half DS1 for all Flat Rate Calling Plans except for those customers whose AT&T Digital Link service is associated with VTNS (non-ISDN). Facility capacity for Customers whose AT&T Digital Link Service is associated with VTNS (ISDN) will be calculated based upon DSOs with a minimum quantity of 12 DSOs (Half DS1) or 24 DSOs (Full DS1) and in multiples of half DS1 or Full DS1 thereafter. Facility capacity for Customers whose AT&T Digital Link Service is associated with VTNS (Non-ISDN) will be calculated based upon a minimum of 12 channels of DOD Flat Rate per trunk group (1/2 DS1 of Flat Rate). Channel quantities greater than 12 on a group can be ordered individually and will incur the appropriate incremental number of DOD Flat Rate channel charges; however, all voice channels in such trunk group must be provisioned with DOD Flat Rate. For Customers with multiple locations in a state that are associated with different long distance plans, charges will be calculated by location based on the Flat Rate Calling Plan selected by the Customer and their associated long distance service at that location.

VTNS Non-ISDN Customers who order a minimum of 12 Channels or Half DS1 will be entitled to 40,000 minutes of Flat Rate calling usage per calendar month. Additional DSO channels may be purchased and will provide 3,000 incremental minutes of Flat Rate calling usage per DSO per calendar month. For all other Long Distance Platforms (excluding ACC Business Customers), the Customer will be entitled to 40,000 minutes of usage for each Half DS1 of Flat Rate and 80,000 minutes of usage for each Full DS1 of Flat Rate per calendar month.

NOTE: The revisions on this page have been in effect since July 1, 2003.
