**REBUTTAL TESTIMONY  
AND EXHIBITS  
OF  
A. E. SCARBROUGH**

**DOCUMENT NUMBER-DATE  
04452 MAY 21 1990  
FPSC-RECORDS/REPORTING**

GULF POWER COMPANY

Before the Florida Public Service Commission  
Rebuttal Testimony of  
Arlan E. Scarbrough  
In Support of Rate Relief  
Docket No. 891345-EI  
Date of Filing May 21, 1990

1  
2  
3  
4  
5  
6 Q. Are you the same Arlan E. Scarbrough who testified  
7 earlier in this proceeding?

8 A. Yes, I am.  
9

10 Q. What is the purpose of your testimony?

11 A. The purpose of my testimony is to rebut the testimony  
12 of Ms. Bass, Mr. Larkin, Mr. Seery, and Mr. Schultz  
13 and positions taken by them with respect to the  
14 issues raised in this proceeding.  
15

16 Q. Have you prepared an exhibit that contains  
17 information to which you will refer in your  
18 testimony?

19 A. Yes.

20 Counsel: We ask that Mr. Scarbrough's  
21 Exhibit (AES-2), comprised of  
22 1 schedule, be marked as  
23 Exhibit \_\_\_\_\_.  
24

25 Q. Mr. Scarbrough, Ms. Bass has recommended that a

DOCUMENT NUMBER-DATE  
04452 MAY 21 1990  
FPSC-RECORDS/REPORTING

1 return on equity penalty be imposed on the Company  
2 for mismanagement. Do you agree?

3 A. No. Mr. McCrary has clearly shown that an equity  
4 penalty is not justified. The fact is, we have been  
5 and currently are being financially penalized as a  
6 result of the various investigations. Obtaining rate  
7 relief adequate to maintain our financial integrity  
8 has been delayed at least a year as a result of our  
9 voluntary dismissal of the 1989 rate case. For 1989,  
10 our jurisdictional return on equity was 10.81  
11 percent. Now, even granting the full requested  
12 increase in this case will result in the Company  
13 earning only 9.47 percent jurisdictional return on  
14 equity for 1990. As I stated on pages 9 - 11 in my  
15 direct testimony, and as shown on Schedule 12 of my  
16 exhibit (AES-1), the rating agencies are extremely  
17 concerned about the Company's financial position.  
18 Failure of the Company to obtain rate relief  
19 sufficient to earn a reasonable return on equity in  
20 this proceeding will only worsen the situation. If  
21 this occurs, not only will the Company and its  
22 shareholders suffer, but our customers will suffer as  
23 well from higher financing costs in the future.

24  
25 Q. On page 22, line 11, Mr. Larkin has recommended the

1 disallowance of the acquisition adjustment related to  
2 Plant Scherer common facilities. Please discuss this  
3 transaction.

4 A. The Commission should consider the value received for  
5 the dollar paid in determining the appropriate amount  
6 to approve for recovery. Effective November 19,  
7 1987, Gulf Power Company purchased production plant  
8 facilities common to all four units commensurate with  
9 its previously acquired 25 percent ownership position  
10 in Unit #3 of Plant Scherer. Georgia Power Company  
11 sold their undivided ownership in Plant Scherer  
12 Common Facilities to Oglethorpe Power Corporation and  
13 Dalton in 1980 and 1977, respectively. In addition,  
14 Oglethorpe and Dalton incurred subsequent  
15 construction expenditures and carrying costs until  
16 the date of the sale to Gulf. Gulf Power Company  
17 purchased 6.25 percent (.25 units x .25 ownership in  
18 one unit) of the common facilities from Oglethorpe  
19 Power Corporation and the City of Dalton for  
20 \$25,841,510 and \$3,290,340, respectively.

21

22 Q. How is the purchase of common facilities recorded on  
23 the Company books?

24 A. We recorded the purchase according to the guidelines  
25 prescribed in Electric Plant Instruction No. 5. This

1 rule requires that, when an electric plant  
2 constituting an operating unit or system is acquired  
3 by purchase, the costs of acquisition, including  
4 expenses incidental thereto properly includible in  
5 electric plant, be charged to Account 102, Electric  
6 Plant Purchased or Sold. The accounting for the  
7 acquisition is completed as follows:

8 (1) The original cost of plant, estimated if  
9 not known, is credited to Account 102, Electric Plant  
10 Purchased or Sold, and concurrently charged to the  
11 appropriate electric plant-in-service accounts.

12 (2) The depreciation and amortization  
13 applicable to the original cost of the properties  
14 purchased is charged to Account 102, Electric Plant  
15 Purchased and Sold, and concurrently credited to the  
16 appropriate account for accumulated provision for  
17 depreciation or amortization.

18 (3) The amount remaining in Account 102,  
19 Electric Plant Purchased or Sold, is then closed to  
20 Account 114, Electric Plant Acquisition Adjustments.

21

22 Q. What does the acquisition adjustment of \$8,680,507  
23 represent?

24 A. The \$8,680,507 acquisition adjustment amount is made  
25 up of three components: interest or carrying cost in

1 the amount of \$4,865,444, Accumulated Depreciation  
2 \$3,796,376, and A & G Cost (legal) in the amount of  
3 \$18,687.

4 Electric Plant Instruction No. 5 in the Code of  
5 Federal Regulations states that "the depreciation and  
6 amortization applicable to the original cost of  
7 properties purchased shall be charged to Account 102,  
8 Electric Plant Purchased or Sold." It was necessary  
9 for the Company to re-compute the accumulated depreciation  
10 reserve balance for the following reasons:

11 (1) City of Dalton carried no depreciation on  
12 their books,

13 (2) Oglethorpe Power Corporation vintaged the  
14 majority of original cost of common facilities in year  
15 1984; whereas, the correct in-service date for the  
16 facilities was 1982, and

17 (3) If the Company had used the data as submitted  
18 by Oglethorpe Power Corporation and Dalton, the Florida  
19 Public Service Commission (FPSC) would re-allocate the  
20 accumulated depreciation reserve using Gulf's rates to  
21 be filed in its next Depreciation Study in 1991. The  
22 reason for this re-allocation is because the  
23 accumulated depreciation reserve would have been  
24 understated by using Oglethorpe's and Dalton's reserve  
25 balance.

1           The acquisition adjustment of \$8,680,507 was  
2 recorded in accordance with the Plant Accounting  
3 Instructions applicable to this purchase. The  
4 Federal Energy Regulatory Commission (FERC) accepted  
5 the Company's proposal to clear Account 102, Electric  
6 Plant Purchased or Sold, including depreciation, on  
7 November 2, 1988.

8           The purchase of the common facilities was in  
9 accordance with the agreement to purchase a  
10 25 percent interest in Plant Scherer Unit #3. The  
11 \$8.7 million is a prudent cost relating to Plant  
12 Scherer and should be included in rate base. To  
13 illustrate this point and the significant value to  
14 our customers, it is estimated that Plant Scherer's  
15 Unit #3 depreciated book cost for 1990 will be \$760  
16 per kw, which is well under the \$1,163 estimated per  
17 kw cost to construct a new coal unit in 1990, a  
18 savings of approximately \$85.4 million.

19  
20 Q. On page 23, Mr. Larkin states that the acquisition  
21 adjustment "artificially inflates the cost to be  
22 borne by ratepayers. In this instance, the benefit  
23 flows to the Southern Company through Georgia's  
24 Power's inflation of the purchase price which Gulf  
25 paid for the Scherer Unit." Is this a fair

1 characterization of these transactions?

2 A. Absolutely not. There was no net book gain or  
3 economic gain to Georgia Power Company or Southern  
4 Company related to the purchase of Plant Scherer  
5 Unit #3 or any of the related common facilities  
6 purchased by Gulf from Oglethorpe and Dalton.

7  
8 Q. The issue of accounting for the Caryville "sod farm"  
9 has been raised by staff. How does Gulf account for  
10 the "sod farm"?

11 A. Gulf's revenues and expenses from the Caryville "sod  
12 farm" are recorded in Account 417 - Revenues from  
13 Non-Utility Operations 'below the line' on the books  
14 and records of the Company. Income Taxes are  
15 recorded in Account 409-2 Income Taxes - Other Income  
16 and Deductions and Payroll Taxes are recorded in  
17 Account 408-2 Taxes Other Than Income Taxes - Other  
18 Income and Deductions. The investment in the trailer  
19 and equipment is recorded in Account 121 - Non-Utility  
20 Property and the lease payment for use of the land  
21 paid by the sod farm to Gulf is credited to the  
22 electric department Account 455 - Interdepartmental  
23 Rents.

24

25 Q. The issue of allocating all of the appropriate

1 investment and expenses to its appliance division has  
2 been raised by staff. How does Gulf allocate the  
3 investment and expenses to its appliance division?

4 A. Gulf records all merchandising revenues and expenses  
5 as well as the income and payroll taxes of the  
6 Appliance Sales and Service operation 'below the  
7 line.' The rate base is adjusted to remove the  
8 investment in plant and equipment related to  
9 merchandising.

10

11 Q. Mr. Larkin has proposed the disallowance of all of  
12 Gulf's investment in the Tallahassee Office. Is this  
13 appropriate?

14 A. No. All of the State agencies that regulate Gulf  
15 Power are located in Tallahassee. The Tallahassee  
16 office is routinely and regularly used as office  
17 space and conference facilities by Company employees  
18 and representatives who participate in Commission or  
19 other governmental hearings, workshops, meetings, or  
20 other activities which occur in the State's capital  
21 city. For example, in 1988 there were over 50  
22 occasions when more than 65 individual Gulf employees  
23 or representatives, other than Mr. Henderson or Mr.  
24 Connell, were involved in hearings, meetings, and  
25 workshops with PSC Staff. This does not include the

1 use of the office by other Gulf employees who were  
2 meeting with staffs of the Departments of Revenue,  
3 Environmental Regulation, Natural Resources, etc.  
4 Moreover, none of Mr. Connell's work involves  
5 lobbying, and much of what Mr. Henderson does out of  
6 this office does not constitute lobbying. These  
7 facilities are used primarily for regulatory and  
8 other administrative work, and are properly included  
9 in rate base as a reasonable and prudent utility  
10 investment. In the interest of removing unnecessary  
11 controversy from this docket, we have agreed to  
12 remove 25 percent of the office space allocated to  
13 Mr. Henderson's location from rate base. The  
14 remaining investment should be allowed.

15  
16 Q. Is Mr. Larkin's adjustment to exclude prepaid pension  
17 cost justified?

18 A. No. In 1988, the Company recorded \$1,385,000 of  
19 pension expense on its books. This amount was  
20 calculated using the "projected unit credit"  
21 actuarial method that is required by the Financial  
22 Accounting Standards Board (FASB) Statement No. 87.  
23 However, the Company is allowed under section 404 (a)  
24 (6) of the Internal Revenue Code to claim a larger  
25 tax deduction for the 1987 tax year if the

1            actuarially determined maximum tax deduction for the  
2            1987 year is funded to the plan prior to September  
3            15, 1988. The Company decided to take advantage of  
4            this provision to maximize the tax deduction (based  
5            on the higher 1987 Federal income tax rates) and,  
6            therefore, funded an amount in excess of the expense  
7            determined for book purposes in order to secure the  
8            increased tax deduction. The prepayment included in  
9            working capital is the thirteen month average of the  
10           difference between the amount funded and the amount  
11           expensed. The customer receives the benefit of the  
12           related deferred taxes in the capital structure.  
13           This was a prudent decision by the Company and the  
14           prepayment should be included in working capital.

15

16    Q.    Beginning on page 50, Mr. Schultz talks about  
17           non-recurring expenses for rebuilds. Has the  
18           Commission addressed the issue of capitalizing versus  
19           expensing in a generic docket?

20    A.    Yes. In 1984, the Commission opened Docket  
21           No. 840204-EI to address the broad spectrum of  
22           retirement units and the issue of capitalizing versus  
23           expensing. A recommendation was made that an  
24           approved list of retirement units be developed for  
25           the electric utilities in Florida.

1           This process was completed when the Florida  
2           Administrative Code was updated to include the new  
3           procedures in the Revision dated August 1987. A list  
4           of Retirement Units (Electrical Plant) was also  
5           issued in 1987 by the FPSC. We believe that the  
6           Company is in compliance with the rules for expensing  
7           versus capitalizing addressed in Docket  
8           No. 840204-EI. To follow the recommendations of  
9           Mr. Schultz would be in direct conflict with FPSC and  
10          FERC Rules and Procedures.

11

12   Q.   Are the Rules of the FERC and FPSC specific on  
13          retirement unit accounting and expensing versus  
14          capitalizing?

15   A.   Yes. In the maintenance instruction contained in the  
16          FERC Section of the Code of Federal Regulations, Item  
17          3 provides that work performed specifically for the  
18          purpose of preventing failure, restoring  
19          serviceability or maintaining life of plant is  
20          chargeable to expense, not plant. Item 8 in the same  
21          section states that replacing or adding minor items  
22          of plant which do not constitute a retirement unit is  
23          an expense process.

24

25   Q.   On page 50 of Mr. Schultz's testimony, he has

1 recommended that certain items be capitalized rather  
2 than charged to operation and maintenance expenses.  
3 Please address this recommendation.

4 A. As indicated in Mr. Schultz's testimony on page 50,  
5 Gulf has begun rebuilding its heavy line vehicles.  
6 Prior to Gulf performing this work, an outside  
7 contractor would perform the work for Gulf. The  
8 outside contractor would replace the cab and chassis  
9 of the vehicle, a retirement unit for Gulf, and  
10 reinstall the old hydraulic lift systems. The cost  
11 of the new cab and chassis was capitalized and the  
12 replaced cab and chassis were retired. Currently,  
13 the work performed by Gulf involves the replacement  
14 of items such as transmissions and brakes or the  
15 rebuilding of engines, etc.; all of which involve the  
16 replacement of less than a retirement unit. The FPSC  
17 Rule that addresses this situation is Rule 25-6.0142  
18 of the Florida Administrative Code which states:

19 When a minor item is replaced independently  
20 of the retirement unit of which it is a part,  
21 the cost of replacement shall be charged to the  
22 maintenance account appropriate for the item,  
23 except that if the replacement affects a  
24 substantial betterment (the primary aim of  
25 which is to make the property affected more  
useful, more efficient, of greater durability,  
or of greater capacity) the excess cost of the  
replacement over the estimated cost at current  
prices of replacing without betterment shall be  
charged to the appropriate plant account.

1           Since the rebuilding process simply replaces  
2           minor items of property on the vehicles in question,  
3           the process is nothing more than maintenance under  
4           the above rule. A retirement unit for Gulf relating  
5           to vehicles, except as noted, is generally nothing  
6           short of the entire vehicle. Special bodies,  
7           truck-mounted hydraulic systems, air compressors, and  
8           etc., are treated as retirement units when  
9           transferred from one vehicle to another or retired  
10          from service. The cost of replacing any item less  
11          than a complete vehicle or the above mentioned items  
12          are properly chargeable to the automotive clearing  
13          account which is then allocated to Operation and  
14          Maintenance (O & M) expenses or capitalized based on  
15          vehicle usage.

16  
17       Q.   Is Mr. Schultz's proposed adjustment of Operation and  
18           Maintenance expense in the amount of \$116,500 related  
19           to vehicle rebuilds proper?

20       A.   No. As I have stated earlier, Gulf is accounting for  
21           the work being performed in accordance with FERC  
22           System of Accounts which has been adopted by this  
23           Commission. Mr. Schultz's adjustment proposes  
24           accounting treatment contrary to the Commission's  
25           accounting regulations.

1 Q. Is there any basis for Mr. Schultz's concern that  
2 "the rebuilds are expensed and also included in the  
3 absorption rate"?

4 A. No. The operation and maintenance costs of vehicles  
5 are charged into clearing accounts since the vehicles  
6 are used for various jobs, many of which may have  
7 different account classifications. The costs are  
8 then cleared to the proper Operation and Maintenance  
9 or Capital Account by applying an absorption factor  
10 based on the actual mileage or hours used.

11 The costs of minor component rebuilding of the  
12 heavy equipment are treated as any other vehicle  
13 maintenance cost and are charged to the clearing  
14 account. These costs are included when developing  
15 the absorption rate and are cleared by applying that  
16 rate. There is no "double-counting" of these  
17 expenditures.

18  
19 Q. On page 84 of Mr. Schultz's testimony, he has  
20 recommended that certain recurring expenses relating  
21 to Underground Network System Repair be capitalized  
22 rather than charged to Operation & Maintenance  
23 expenses. Please address this recommendation.

24  
25 A. Mr. Schultz indicates plant in service should be

1 increased by \$90,000 for the "remanufacturing" of  
2 network protectors and maintenance of network  
3 transformers. As I indicated previously in my  
4 testimony relating to truck rebuilds, the FPSC rule  
5 that relates to this situation is Rule 25-6.0142 of  
6 the Florida Administrative Code. Since the  
7 "remanufacturing process" simply replaces minor items  
8 of property on each of the 22 network protectors, the  
9 process is nothing more than maintenance under the  
10 above rule. Remanufacturing is synonymous with  
11 maintenance, as are other words used in the electric  
12 industry such as renovate, revitalize, restore,  
13 update, modify, refurbish, overhaul and the like.

14 In Docket No. 830525-EI, Generic Investigation of  
15 Production Plant Increases, the FPSC was very  
16 specific about their concerns regarding capitalizing  
17 projects that relate to maintenance. In its  
18 Memorandum dated February 7, 1985, the FPSC Staff  
19 stated in Item 5,

20 There are some cases of capitalization which  
21 are questionable, based on the companies'  
22 descriptions of the operations. These  
23 include cases described as 'restoration,'  
24 'repair,' repaint.

25 The expensing of the remanufacturing of the network  
protectors and the maintenance of network  
transformers (repainting and regasketing) clearly

1 fall within the intent of Item 5.

2

3 Q. Mr. Scott Seery, on page 18, and Mr. Hugh Larkin, on  
4 page 11, of their respective testimonies, recommend  
5 removing non-utility investment from the capital  
6 structure directly from equity rather than by a  
7 weighted average cost of capital method. Is this  
8 appropriate?

9 A. Absolutely not. First of all, funds are fungible as  
10 stated by Mr. Seery. They cannot be traced to each  
11 individual investment or expense. Mr. Seery argues  
12 that the cost of capital should be based on the  
13 capital required to provide electric service. He  
14 also argues that regulated utilities are of relatively  
15 low risk, that there are few industries of lower risk  
16 and therefore any investments in non-regulated  
17 subsidiaries will increase the utility's cost of  
18 capital, thereby increasing the cost to the customer  
19 and subsidizing the non-utility operation. Mr. Seery's  
20 conclusion is inappropriate because, as stated by Dr.  
21 Morin on page 61 of his direct testimony, Gulf Power's  
22 non-utility operations represent a negligible proportion  
23 of its total operations and, therefore, investors would  
24 not perceive that they should expect a higher return  
25 because of Gulf's small investment in diversified

1 activities. Gulf's stockholders should not be  
2 penalized as a result Mr. Seery's generalization.

3  
4 Q. Public Counsel has raised an issue regarding the  
5 Company's corporate goal to increase its level of  
6 equity in relation to other sources of capital. Is  
7 this goal appropriate?

8 A. Gulf Power has adopted a long-term goal of attaining  
9 a common equity ratio of 40-45 percent. The timing  
10 at which this goal is achieved is dependent upon a  
11 number of factors, including the annual external  
12 financing requirements of Gulf Power Company. The  
13 common equity target reflects Gulf Power's desire to  
14 maintain a strong 'A' bond rating.

15  
16 Q. Why is it important that Gulf maintain a strong bond  
17 rating?

18 A. The bond rating is the single most important and  
19 visible indicator of creditworthiness for a utility.  
20 The ratings are primarily the products of three  
21 rating agencies (Moody's Investors Service,  
22 Standard & Poor's, and Duff & Phelps) which rate debt  
23 and preferred stock securities for investors  
24 according to the degree of risk to the investor.  
25 Generally speaking, the higher the rating the lower

1 the interest and dividend rate.

2 Standard & Poor's (S & P) has developed financial  
3 standards for rating investor-owned electric utility  
4 bonds. One of the standards, debt leverage, has a  
5 44-52 percent debt ratio established for the 'A'  
6 rating. It is apparent that a 40-45 percent common  
7 equity target in conjunction with a 10 percent  
8 preferred stock component results in a debt target  
9 which falls within the S & P standard for a single  
10 'A' utility. Gulf's debt and preferred stock were  
11 downgraded by S & P in 1987, from "A+ and A" to "A  
12 and A-", due primarily to a highly leveraged capital  
13 structure, after issuing the \$60 million of debt used  
14 in the Daniel Coal Buyout.

15 The 'A' bond rating is the lowest rating that  
16 permits Gulf Power the constant access to financial  
17 markets necessary for Gulf to meet its obligations to  
18 provide electricity in a growing economy. In the  
19 1970's, 'BBB' rated companies were often shut out of  
20 the market even though 'BBB' is considered investment  
21 grade. Many institutional investors have established  
22 a policy of not investing in bonds with ratings lower  
23 than 'A'. When credit market conditions tighten,  
24 'BBB' rated companies often have great difficulty  
25 selling their securities as investors attempt to

1 upgrade their holdings. The 'A' bond rating also  
2 provides a buffer that allows a utility to finance  
3 ongoing capital requirements even if unexpected  
4 adverse developments result in a downgrade.

5 The 'A' rating will provide for an overall lower  
6 cost of service. When tight credit conditions exist,  
7 utilities rated lower than 'A' are often required to  
8 cut back construction, delay investments, or complete  
9 them at higher costs resulting from inefficiencies  
10 and cost escalations occurring with construction  
11 delays. 'A' ratings will thus require somewhat lower  
12 revenue requirements over the long term.

13 A strong 'A' rating will provide Gulf Power with  
14 frequent and ready access to the security markets at  
15 desirable terms and conditions almost all times.  
16 When considering the additional benefits of lower  
17 revenue requirements, maintenance of a strong 'A'  
18 rating is even more imperative. The attainment of a  
19 capital structure which adheres to the standards for  
20 an 'A' rated investor-owned electric utility has thus  
21 been adopted as a corporate goal.

22  
23 Q. What are the Post-Retirement Benefits discussed on  
24 page 41 of Mr. Schultz's testimony?

25 A. They are medical and life insurance benefits provided

1 by the Company to its retired employees.

2

3 Q. How does the Company account for these benefits?

4 A. In 1987, the Company implemented FASB Statement  
5 No. 87, "Employer's Accounting for Pensions," which  
6 required the use of the "projected unit credit"  
7 actuarial method for financial reporting purposes.  
8 At that time, FASB also began to concentrate on  
9 accounting for other post-retirement benefits.  
10 Therefore, the Company decided to review its  
11 accounting for all retirement benefits. As a result  
12 of this review, we determined that it is more  
13 appropriate to recognize these benefits on an accrual  
14 basis using the "aggregate cost" actuarial method  
15 which spreads the expected cost of such benefits over  
16 the remaining periods of employees' service as a  
17 level percentage of payroll costs.

18

19 Q. What method has Mr. Schultz proposed for the

20 accounting and ratemaking treatment of these costs?

21 A. Mr. Schultz has proposed that the Company account for  
22 these costs on a "cash basis." That is, he proposes  
23 that we not recognize the expense until the employee  
24 has retired and is receiving the benefits.

25

1 Q. Do you agree with Mr. Schultz's proposal?

2 A. No. The accrual basis is the only proper method for  
3 use in the regulatory process. Post-retirement  
4 benefits reward Gulf's employees for effective  
5 service and enable Gulf to attract and retain  
6 qualified people to provide electric service to the  
7 citizens of Northwest Florida. As with other  
8 expenses, such as pensions and depreciation expense,  
9 the accrual basis recognizes the expense in the  
10 proper period pursuant to the generally accepted  
11 "matching" principle and provides for recovery of the  
12 costs from the customers that receive the benefit of  
13 service. The cash basis method inappropriately  
14 shifts cost recovery for present services to future  
15 customers.

16  
17 Q. What is the status of the FASB's deliberations on the  
18 accounting for other post-retirement benefits?

19 A. The FASB has issued its exposure draft which would  
20 require accrual accounting. In other words, the FASB  
21 proposal, as drafted, will require accrual of the  
22 costs over each employee's working life. It is  
23 expected that a final FASB statement will be issued  
24 by the end of this year requiring accrual accounting  
25 for Post Retirement Medical and Life Insurance

1 benefits in 1991.

2

3 Q. On page 40, lines 13 through 18, Mr. Schultz  
4 suggested that an additional adjustment of \$628,000  
5 may be necessary. Please comment on this.

6 A. Apparently, there is some confusion between funding  
7 and actual payments to retirees. If the additional  
8 adjustment Mr. Schultz suggests was made, the Company  
9 would not be allowed to recover any costs related to  
10 post-retirement medical and life benefits. The  
11 \$628,000 represents the Company's estimate of actual  
12 payments to retirees during 1990, not a funding of  
13 the reserve.

14

15 Q. Has the Company funded any of these benefits

16 A. Yes. The Company funded \$2.1 million for  
17 post-retirement medical benefits in 1989. However,  
18 the Company has never been able to fund the reserve  
19 for post-retirement life benefits.

20

21 Q. Please comment on Mr. Schultz proposed adjustment to  
22 uncollectible expenses which is discussed on pages 37  
23 and 38 of his testimony.

24 A. On page 37, Mr. Schultz acknowledges that the amount  
25 budgeted "...produces a representative amount for

1 1990. Therefore, I am not recommending that the 1990  
2 budget for uncollectibles be adjusted." His  
3 statement is correct in that, because rates are being  
4 set for the future, no adjustment should be made in  
5 this proceeding.

6 However, he goes on to state that the accounting  
7 adjustment made in 1989 should be amortized over four  
8 years on the assumption that the rate payers were  
9 charged for this over-accrual. This assumption is  
10 totally incorrect. In Gulf's last rate case (Order  
11 No. 14030), the Commission allowed bad debt expense  
12 of \$523,000. For the period of 1985 through 1988,  
13 the Company's accrual to the reserve for  
14 uncollectible expense far exceeded the allowed amount  
15 in each year, averaging \$782,670 per year.  
16 Therefore, his basic assumption that, "the accounting  
17 charge that resulted in a credit to the 1989 O&M  
18 expense in the amount of \$813,000 was charged to the  
19 ratepayers over a period of years," is incorrect.

20  
21 Q. Does Mr. Schultz take issue with Gulf's request for  
22 amortization of rate case expense for this Docket  
23 No. 891345-EI?

24 A. Yes. He believes an amortization period of five years,  
25 instead of two years, is representative based on the

1 fact that Gulf's last rate case began in 1984 and the  
2 current case was not filed until the end of 1989.

3

4 Q. Why does Gulf believe a two year amortization period  
5 is proper?

6 A. Gulf filed requests for rate increases in 1979, 1981,  
7 1982, 1984 and 1989. This equates to approximately  
8 one case in every two years since 1979. Based upon  
9 this historical analysis, two years is appropriate.

10

11 Q. On page 28 of Mr. Schultz's testimony, he questions  
12 the amount of input Gulf has in determining the  
13 appropriate Southern Company Services (SCS) expense  
14 budget for Gulf. On page 34 of his testimony,  
15 Mr. Schultz believes an adjustment to Gulf's budget  
16 for SCS is warranted because of lack of support for  
17 SCS specific budget amounts. Do you agree?

18 A. No. As discussed in Mr. Gilbert's rebuttal  
19 testimony, Gulf has significant involvement in the  
20 SCS budget preparation, review, and approval process.

21 Each SCS department prepares and maintains  
22 working papers to substantiate its budget amounts.  
23 These budget amounts become the basis for each  
24 operating company's SCS Work Order Billing Budget.  
25 Gulf relies on SCS to maintain the appropriate level

1 of workpapers to support the 1990 Billing Budget.  
2 Gulf maintains its copy of the SCS Work Order Billing  
3 Budget as the basis for its 1990 SCS budget.

4  
5 Q. Has Mr. Schultz supported his recommendation on page  
6 37 that \$734,595 budgeted SCS expenditures be  
7 disallowed?

8 A. No. Mr. Schultz bases his recommendation on  
9 information obtained from a three year old review  
10 related to a rate proceeding in another  
11 jurisdiction. Mr. Schultz has not performed such a  
12 review of the 1990 SCS budget support in conjunction  
13 with this proceeding.

14 The Commission should base its decision on the  
15 allowance of SCS expenditures based upon the  
16 justification provided for SCS variances in MFR C-57  
17 and in the direct and rebuttal testimony of Mr. Lee  
18 and Mr. Parsons.

19  
20 Q. Mr. Scarbrough, would you like to comment on whether  
21 duplicative functions exist at SCS and the sister  
22 companies, including Gulf Power?

23 A. Yes, I would. The services provided by SCS do not  
24 duplicate but complement activities of Gulf Power  
25 Company and other companies of the Southern electric

1 system. The purpose of Southern Company Services is  
2 to provide certain professional and technical  
3 services, at cost, and in a more efficient manner  
4 than would otherwise be possible. The sharing of  
5 knowledge and resources within the system has  
6 resulted in cost savings for both Gulf Power Company  
7 and our customers. Economies of scale have made it  
8 possible for certain functions to be provided to each  
9 operating company with less duplication, more  
10 consistency, a higher level of expertise, and at a  
11 lower cost. An example of this is the Customer  
12 Accounting System utilized by the operating  
13 companies. Southern Company Services processes  
14 customer meter readings, produces customer bills, and  
15 posts payments and other transactions to the  
16 customers' accounts. On-line access to account  
17 information is also provided in order to promptly  
18 respond to customer inquiries. The benefits derived  
19 from the use of the standard Customer Accounting  
20 System are greater than could otherwise be possible  
21 if each company maintained its own hardware and  
22 software.

23 Centralized fuel procurement has allowed the  
24 Southern electric system to benefit from its large  
25 buying power and realize lower cost and improved

1 service.

2 Economic load dispatching has resulted in lower  
3 fuel cost for our customers as well as greater  
4 overall system reliability. The operating companies  
5 within the Southern electric system have agreed to  
6 plan and operate their generation and transmission  
7 facilities from a common control center as if those  
8 facilities were part of a single electric utility.  
9 Because of this commitment, the common dispatch power  
10 pools provide each operating company, including Gulf  
11 Power Company, with more reliable power at less cost  
12 than would otherwise be possible.

13 So, rather than duplicating functions, SCS  
14 provides services which complement the operating  
15 companies, including Gulf Power Company, thus  
16 providing a means by which each of the operating  
17 companies can avoid, to a great extent, duplicative  
18 functions.

19

20 Q. In his testimony pages 19-23, Mr. Schultz states that  
21 the Company does not seem to be able to control its  
22 costs related to Plant Daniel and Plant Scherer. Can  
23 you please describe the processes by which the  
24 Company controls both the budgeted and actual costs  
25 related to these plants?

1 A. Yes. There are numerous controls in place which, in  
2 the aggregate, enable us to rely on both the budgeted  
3 and actual costs related to our ownership of Plant  
4 Daniel and Plant Scherer. I will first describe  
5 those controls which relate to budget information. I  
6 will then describe the procedures in place to monitor  
7 the actual costs which are billed to Gulf.

8 Both Plant Daniel's and Plant Scherer's budgets  
9 are developed using sophisticated budgeting  
10 techniques and management review processes similar to  
11 those used at Gulf. As discussed in his testimony,  
12 Mr. Lee is Gulf's representative on the Plant Daniel  
13 supervisory committee. This Committee has  
14 significant input to decisions concerning operating  
15 expenses and future planned expenditures. In  
16 addition, our Corporate Planning Department and Power  
17 Generation Department review the budgets for  
18 reasonableness paying particular attention to  
19 significant variations from prior budget and actual  
20 amounts.

21 To monitor actual results, Gulf's operating  
22 personnel, as well as its accounting personnel,  
23 maintain open and frequent communications with their  
24 Mississippi Power Company and Georgia Power Company  
25 counterparts. Significant new or unusual issues are

1 reviewed with all parties to ensure proper resolution  
2 in accordance with the provisions of the operating  
3 agreements. Gulf also reviews actual operating  
4 results in comparison to budget estimates on a  
5 quarterly basis. Gulf's Corporate Planning and Power  
6 Generation Departments, with input from Gulf's  
7 Accounting Department, assist in analyzing differences  
8 between budget estimates and actual costs of Plant  
9 Daniel and Plant Scherer.

10 Periodic audits of the joint ownership agreements  
11 are performed by the Southern Company Service  
12 Internal Auditing Department. These audits include  
13 reviews of applicable intercompany billings for  
14 proper computations, adequate support, and compliance  
15 with the operating agreements. The most recently  
16 issued audit report for the audit performed at Plant  
17 Daniel was for the 15 month period ended September 30,  
18 1988, while the last issued report for the audit of  
19 the Plant Scherer operating agreement was for the 12  
20 month period ended December 31, 1988. Reviews of  
21 intercompany receivable and payable balances are  
22 performed by the Company's external auditors in their  
23 annual audits. Discrepancies in intercompany  
24 balances are reported to management and all  
25 significant differences are resolved.

1 Q. Mr. Schultz has stated on page 21 of his testimony  
2 that the Company does not perform audits of  
3 Mississippi Power Company to verify the propriety of  
4 Plant Daniel related charges to Gulf. Is this  
5 correct?

6 A. No. Although Gulf Power's internal audit personnel  
7 do not perform audits of Mississippi Power Company,  
8 Georgia Power, the SCS Internal Audit Department, at  
9 Gulf's request, performs scheduled audits of the  
10 jointly-owned plants' operating agreements. Such  
11 audits allow for an objective third party to make  
12 observations and recommendations as to compliance  
13 with the terms of the operating agreements.

14  
15 Q. On page 23 of Mr. Schultz's testimony, he proposes an  
16 adjustment to Gulf's Production expenses associated  
17 with Plant Daniel in the amount of \$646,000. Is this  
18 adjustment appropriate?

19 A. No. The basis for Mr. Schultz's recommendation is  
20 his opinion as to the adequacy of controls over Plant  
21 Daniel's budget and expenditures. As I have stated  
22 above, Gulf performs adequate reviews of the Plant  
23 Daniel budget amounts and has effective control over  
24 Plant Daniel expenditures.

25 As is emphasized by Mr. Lee in his testimony, we

1 have adequately justified the Plant Daniel benchmark  
2 variance in MFR C-57, demonstrating the need for the  
3 budgeted Plant Daniel expenditures. Mr. Schultz  
4 makes his recommendation without even attempting to  
5 address any of the justifications provided by the  
6 Company regarding the benchmark variances, but rather  
7 bases his recommendation on an inaccurate assertion  
8 that Gulf has no control over Plant Daniel's O & M  
9 expenditures. In addition to Gulf's controls I have  
10 previously mentioned, his assertion also ignores the  
11 fact that Mississippi Power controls its own  
12 expenditures.

13  
14 Q. On page 23 of his testimony, Mr. Schultz suggests  
15 that it is not appropriate to include in the  
16 benchmark calculation \$425,000 of expenses for Plant  
17 Daniel Transmission Facilities charges which were  
18 excluded in Gulf's 1984 rate case. Please explain  
19 this adjustment and why it is appropriate to add the  
20 Plant Daniel Transmission Line Rentals adjustment to  
21 the benchmark.

22 A. As I have explained in my direct testimony beginning  
23 on page 24, line 14, and continuing through page 29,  
24 line 8, the Plant Daniel Transmission Line Rental  
25 disallowance in the 1984 Rate Order of \$425,000 was

1 the result of an improper benchmark calculation.  
2 Schedule 1 of my exhibit shows the inappropriate  
3 methodology used by the Company to calculate the  
4 transmission benchmark for 1984 and compares it to  
5 the appropriate methodology. It also shows how staff  
6 backed into the disallowance of \$425,000 by dividing  
7 the improperly calculated transmission benchmark by  
8 the customer growth factor. Had the appropriate  
9 methodology been used, no adjustment to Plant Daniel  
10 Transmission Facility charges would have been made.  
11 The total 1984 requested amount for the Daniel  
12 Transmission Facility charges was \$1,380,929. The  
13 Commission did not find the amount to be unreasonable  
14 or imprudent, only that Gulf used the customer growth  
15 multiplier incorrectly. Yet, it allowed Gulf to  
16 recover only \$956,329 of the amount it needed to pay  
17 for its contractual obligation for Daniel  
18 Transmission Facility charges. The transmission  
19 facility charges were shown to be the best  
20 alternative for transmitting electricity generated by  
21 Plant Daniel to Gulf Power's customers and,  
22 therefore, the total cost of \$1,380,929 should have  
23 been allowed in 1984.

24  
25 Q. Mr. Schultz has recalculated the Production-related

1 A & G benchmark by removing Plant Daniel A & G  
2 disallowed in the last case and the 1990 Plant  
3 Scherer A & G of \$263,000 from his calculation. In  
4 his opinion, Gulf has a Production-related A & G  
5 benchmark excess of \$1,435,000. Mr. Schultz  
6 recommends on page 25 of his testimony that an  
7 adjustment be made for Plant Daniel A & G of  
8 \$1,172,000 (Schultz benchmark excess of \$1,435,000  
9 less 1990 Plant Scherer A & G of \$263,000). Are  
10 these adjustments appropriate?

11 A. No. Mr. Schultz has not calculated the benchmark  
12 appropriately. In the 1984 case, Gulf  
13 inappropriately escalated total Administrative and  
14 General expenses by customer growth and inflation.  
15 In this case, Gulf has separated the A & G into  
16 production-related and other A & G and escalated the  
17 production related A & G by inflation only in order  
18 to avoid double-counting the addition of new plants  
19 (capacity) and customer growth. As explained in my  
20 prefiled testimony on pages 29 through 34 and clearly  
21 portrayed in my Exhibit Schedule 7, the Commission's  
22 disallowance of the Plant Daniel A & G expenses in  
23 Order No. 14030 was based solely on Gulf's  
24 misapplication of the customer growth factor and  
25 justification related to new plant.

1 Q. By separating production-related A & G from other  
2 A & G, does Gulf eliminate double-counting for  
3 customer growth and new plant?

4 A. Yes. Gulf escalates new plant by inflation only.  
5 This is the same rationale used by Gulf for separating  
6 Transmission Facility Charges (production-related  
7 transmission) from other transmission expenses, and  
8 escalating them by inflation only as instructed by  
9 the Commission in Order No. 14030.

10

11 Q. Why does Mr. Schultz recommend the disallowance of  
12 Plant Scherer in A & G?

13 A. He states on page 28 that "All of Plant Scherer costs  
14 should be removed because Plant Scherer capacity is  
15 all for unit power sales." This, as the Commission  
16 knows, is an inaccurate statement. Sixty-three of  
17 the 212 mw of Scherer is for Gulf's territorial  
18 customers. Gulf has added the Scherer A & G to the  
19 benchmark because it is associated with the addition  
20 of new plant and is not accounted for in the Gulf's  
21 benchmark calculation by customer growth.

22

23 Q. Has Gulf stipulated to removing lobbying and other  
24 expenses of its registered lobbyists budgeted in the  
25 test year?

1 A. Yes. Gulf inadvertantly included \$101,977 of  
2 lobbying expenses in the 1990 test year which should  
3 be removed pursuant to Commission policy to disallow  
4 lobbying expenses even though these expenses are for  
5 the purposes of establishing and maintaining  
6 reasonable laws to ensure that the ratepayers are not  
7 burdened with unreasonable costs. Gulf has also  
8 agreed to remove \$151,288 of expenses related to the  
9 information gathering and administrative activities  
10 of its registered lobbyists.

11

12 Q. Should \$6,600 of expenses associated with Tax  
13 Services for Executives be removed?

14 A. No. \$6,600 is a small price to pay for ensuring that  
15 executive level employees do not make inadvertent  
16 errors on complicated tax returns which would take  
17 them away from their work to respond to Internal  
18 Revenue Service questions.

19

20 Q. The issue of the portion of Edison Electric Institute  
21 (EEI) dues, which are spent on lobbying, has been  
22 raised by staff. To your knowledge what percent of  
23 EEI dues should be considered lobbying?

24 A. EEI informs Gulf each year of the appropriate amount  
25 of the dues to be allocated to lobbying expenses.

1 For 1990, EEI has informed Gulf that approximately 1  
2 percent of the dues should be considered lobbying.  
3 This information is the most recent and reliable  
4 available.

5  
6 Q. Mr. Scarbrough, would you please summarize your  
7 testimony?

8 A. Yes. Gulf Power Company needs and deserves the rate  
9 relief requested in these proceedings. By the time  
10 of the Commission decision in this case, Gulf will  
11 have already experienced two years of inadequate  
12 earnings.

13 The disallowances to the Company's rate base and  
14 its expenses recommended by Public Counsel witness  
15 Larkin and Schultz are unsupported and unreasonable.  
16 Rates based on their version of rate base and  
17 expenses would be totally inadequate and confiscatory.

18 The Company's proposed rate base and expenses  
19 have been fully justified and are reasonable and  
20 necessary in order for the Company to continue to  
21 provide low cost, reliable and sufficient electric  
22 service to the citizens of Northwest Florida.  
23 Without the requested rate relief, the Company's  
24 earnings will continue to be inadequate.

25

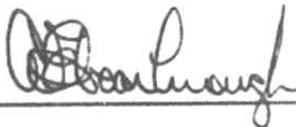

1 Q. Does this conclude your testimony?  
2 A. Yes.

Gulf Power Company  
Transmission Expense Analysis  
1984 Rate Order 14030

Inappropriate  
Methodology used by  
Gulf in calculating  
the benchmark in  
the 1984 Rate Case

Description	Total Transmission
1 1979 Actual (Base for 1984 case)	\$1,443,572
2 Compound Multiplier for 1979 to 1984 (1)	1.7332
3 1984 Benchmark	2,501,999
4 1984 Transmission Request	3,993,684
5 Variance	\$1,491,685
6 (1) Inflation & Customer Growth multiplier	
7 Justifications provided in 1984 Case	System
8 Plant Daniel Transmission Facility Charges	1,380,929
9 System Planning Studies Capitalized in 1979, Expensed in 1984	111,000
10 Total Justifications	1,491,929
11 Disallowances in 1984 Rate Order 14030	System
12 Salaries	(120,000)
13 Consumer Price Index Change from 4.8 to 4.3	(12,000)
14 Southern Company Services	(29,000)
15 Transmission System Planning Studies	(111,000)
16 Plant Daniel Transmission Line Rents	(424,600)
17 Total Disallowed in 1984 Order 14030	(696,600)
18 Calculation of the 1984 Disallowance Related to Plant Daniel 19 Transmission Line Rents (Facility Charges)	System
20 Benchmark with customer growth	a 2,501,999
21 Divided by: Customer growth only multiplier	/ 1.20439
22 Benchmark without customer growth	b 2,077,399
23 This difference was inappropriately disallowed See Page 2	a-b 424,600

Gulf Power Company  
 Transmission Expense Analysis  
 Appropriate Methodology as  
 Established by the FPSC in  
 Order 14030

Appropriate Benchmark Methodology

	1 Production Related Transmission Rents Acct 567 (a)	2 Other Transmission (b)	3 Total Transmission
1979 Actual (Base for 1984 case)	\$6,382	\$1,437,190	\$1,443,572
Multiplier for 1979 to 1984	1.4379	1.7332	
1984 Benchmark before adding new facilities charges	9,177	2,490,938	2,500,114
Transmission Facility Charges related to Plant Daniel (New Plant)	1,380,929		1,380,929
1984 Benchmark including Facility Charges	1,390,106	2,490,938	3,881,043
1984 Transmission Request	1,386,880	2,606,804	3,993,684
Variance	(\$3,226)	\$118,866	\$112,641

- a. Production Related Transmission expense is multiplied by inflation factor only
- b. Other Transmission expense is multiplied by inflation & customer growth factor

This analysis shows that Plant Daniel Facilities Charges were in fact the major reason that Transmission costs had risen so dramatically from 1979 to 1984.

This analysis does not double count customer growth and Plant Daniel Transmission Facility Charges.

This analysis provides the necessary evidence that an inappropriate adjustment of \$424,600 of the \$1,380,929 contractual obligation of Gulf to pay for the facilities necessary to obtain electricity from its new plant was made in the 1984 Rate Order 14030.
