MEMORANDUM

April 25, 1991

TO : DIRECTOR, DIVISION OF RECORDS AND REPORTING

FROM: DIVISION OF ELECTRIC & GAS (RENDELL, HAKIN, McCORMICK) *AP* *CH* *JPW*
DIVISION OF LEGAL SERVICES (PALECKI) *MA*

RE : DOCKET NO. 910086-BG WEST FLORIDA NATURAL GAS COMPANY,
PETITION FOR APPROVAL OF CONSERVATION PLAN

AGENDA: 05/07/91 - CONTROVERSIAL AGENDA - PROPOSED AGENCY
ACTION

CASE BACKGROUND

West Florida Natural Gas Company (West Florida or the Company) submitted its proposed plan, entitled Energy Conservation and Promotional Program with certain modifications on January 25, 1991. Staff requested additional information and clarification February 12, 1991. West Florida responded March 5, 1991.

DISCUSSION OF ISSUES

ISSUE 1: Should the Commission approve any or all of the conservation programs contained in the West Florida Natural Gas Company's conservation plan entitled Energy Conservation and Promotional Program?

RECOMMENDATION: Yes, the Commission should approve West Florida Natural Gas Company's conservation plan entitled Energy Conservation and Promotional Program, as modified by West Florida's March 5, 1991 letter to Commission Staff and further modified by revised conservation program schedules also filed March 5, 1991.

STAFF ANALYSIS: Conservation program approval has long hinged on three criteria; policy objectives, monitorability, and cost-effectiveness. Order 22176 reiterated those three criteria as follows:

1. Does each component program advance the policy objectives set forth in Rule 25-17.001 and the FECCA statute?

DOCUMENT NUMBER-DATE

03959 APR 25 1991

FPSC-RECORDS/REPORTING

2. Is each component program directly monitorible and yield measurable results?
3. Is each component program cost-effective?

Criterion 1 - Policy Objectives: West Florida's plan appears to meet the first criterion in all component programs.

Criterion 2 - Monitorability: See Issue 2.

Criterion 3 - Cost-effectiveness: The Company's plan shows cost-effectiveness to the state as a whole through savings realized by avoiding the building of new power plants and generating fuel savings. The Company's analysis shows benefits of \$72,029,695 (present value) flowing to electric utility ratepayers (Attachment 1).

In the past, Commission has recognized that the benefit of gas utility conservation inures to gas ratepayers because they also use electricity. That remains true, but demands further analysis as the Commission decides whether to approve new conservation programs that can be expected to be in place for several years. FEECA addresses the efficient use of electricity and natural gas. The Company's analysis further shows direct benefits of \$15,957,142 (present value) flowing to the Company's gas customers (Attachment 1).

Direct benefits to gas ratepayers have been calculated by adding the incremental revenue effect on existing ratepayers from added customer charge revenues, contribution to gross margin from increased commodity-related sales, spreading of fixed demand charges over a larger number of therms sold, and, where applicable, any savings associated with not having to cut and cap existing dormant service lines. Costs of new service lines and meter sets are applied as offsets against the projected direct savings although the Company's practice is to capitalize service lines. The net present value of twenty years of benefits were then calculated. Although the programs are projected to be in effect only ten years, the benefits are presumed to continue.

The modified conservation plan is made up of the following six programs:

Residential Electric Resistance Appliance & Oil Heating Replacement
Residential Home Builder
Gas Appliance Energy Savings Payback

DOCKET NO. 910086-EG
APRIL 25, 1991

**Gas Water Heater Load Retention
Gas Space Conditioning Allowance
Commercial Electric Resistance Appliance Replacement**

The spreadsheet at Attachment 1 shows a direct benefit to gas ratepayers of \$22,537,141, less program costs of \$6,579,999 to be borne by gas utility ratepayers for a net direct benefit to gas utility ratepayers of \$15,957,142. Added to that is the total benefit to electric ratepayers, shown as \$72,029,695, for a total net benefit to the state, projected by West Florida to be a net present value of \$87,986,837 in benefits over twenty years.

Component programs of West Florida's modified Conservation Plan are similar to existing programs in the residential sector. New programs have been added to attack inefficiencies in the commercial sector. These programs include the Gas Space Conditioning Allowance Program and the Commercial Electric Resistance Appliance Replacement Program.

The submitted plan does not include clarifying wording provided by the Company in its response to a Staff inquiry nor the revised conservation program schedules. Commission approval of West Florida's modified Plan should include the revised conservation program schedules submitted in a March 5, 1991 letter from Cindy Arnold (Attachment 3), with modifications contained in a March 5, 1991 letter from Patti Smith of West Florida Natural Gas Company to William Troy Rendell of Commission Staff (Attachment 4). Commission's approval should also include the monitoring plan discussed in Issue 2, which was submitted on April 4, 1991 in Document No. 3307.

ISSUE 2: Should the Commission require West Florida Natural Gas Company to file its monitoring data with the Commission Staff?

RECOMMENDATION: Yes, West Florida Natural Gas Company should be required to file monitoring data at least annually.

STAFF ANALYSIS: The Company, at the request of Staff, has outlined a monitoring plan in Document No. 3307 filed April 4, 1991. The information specified in that plan, unless filed more often under another Commission rule or order, should be filed with the Commission Staff by March 31 of each year for the preceding calendar year, in a format to be agreed upon by Staff and the Company.

ISSUE 3: Should the Commission require West Florida Natural Gas Company to establish an accounting system for conservation

DOCKET NO. 910086-EG
APRIL 25, 1991

programs to permit detailed auditing by the Commission Staff?

RECOMMENDATION: Yes, if the Plan is approved, the order approving the Plan should include the following wording:

"The system of internal accounting controls for each conservation program shall be adequate to provide the company and the Commission with reasonable assurance that conservation program assets are safeguarded against loss from unauthorized use or disposition, that transactions are executed in accordance with the Commission's authorization and are recorded properly to permit the preparation of financial conservation cost recovery exhibits in accordance with generally accepted accounting principles. Further, West Florida shall obtain an opinion from a Florida CPA firm that the conservation system of internal controls meets the above objective for each of its programs."

STAFF ANALYSIS: The Commission's Division of Auditing and Financial Analysis has requested the Division of Electric and Gas to recommend that orders approving conservation programs include specific wording on accounting controls. In the past Commission Staff auditors have found that an adequate audit trail does not always exist for transactions in utilities' conservation programs. The proposed wording would ensure that the objective of adequate accounting for conservation programs is met. The same wording will be proposed for each gas utility that requests voluntarily participation in Energy Conservation Cost Recovery. The Commission order approving Peoples' Gas System's revised conservation plan (Order 23462, dated September 11, 1990) contained the wording recommended here.

ISSUE 4: Should this docket be closed?

RECOMMENDATION: Yes.

ELECTRIC AND GAS

March 5, 1991

Mr. Troy Rendell
Electric and Gas Bureau
101 East Gaines Street
Tallahassee, FL 32399-0865

Dear Troy:

Enclosed please find the revised conservation program schedules we discussed on the phone.

If you have any questions, please call me at 904-872-6151.

Sincerely yours,

A handwritten signature in cursive script that reads "Cindy Arnold".

Cindy Arnold
Conservation Clerk

REVISED

**PROGRAM BACKGROUND AND COST
EFFECTIVENESS ANALYSIS ASSUMPTIONS**

A direct benefit to gas ratepayers of \$22,537,141 (present value), less a program cost of \$6,579,999 (present value) to be paid by the West Florida Natural Gas Company ratepayers for a net direct benefit to the ratepayers of \$15,957,142 (present value) is shown in the section headed "Summary of Program Costs/Benefits to Electric and Gas Ratepayers." Electric ratepayers receive a \$72,029,695 (present value) net benefit, to comprise a total net benefit to the State, projected by West Florida Natural Gas Company at a net present value of \$87,986,837 in benefits over twenty (20) years.

The assumptions and basic data utilized in the preparation of the benefit/cost analysis contained in this document are as follows:

The average consumption data for gas appliances is based on information taken from customer historical use patterns in Northwest and Central Florida and are as follows:

Residential Energy Efficient	Water Heaters	300 Therms/Yr
	Range	110 Therms/Yr
	Dryer	120 Therms/Yr
	Furnace	380 Therms/Yr
Commercial Energy Efficient	Water Heaters	2,300 Therms/Yr
	Range	630 Therms/Yr
	Fryer	880 Therms/Yr
	Dryer	660 Therms/Yr

REVISED

IV. Cost Effectiveness Methodology

Based on the cost effectiveness methodology used in currently approved conservation programs, and using the assumptions listed, a benefit/cost ratio of 7.17 to 1 with a payback period of .14 years will be achieved for the State of Florida. The ratepayers of West Florida Natural Gas Company will receive a benefit/cost ratio of 3.01 to 1 with a payback period of .34 years. The cost effectiveness calculations follow Table A-2.

V. Program Monitoring and Evaluation

The progress of the West Florida Natural Gas Company Electric Resistance Appliance and Oil Heating Replacement Program is monitored monthly at both branches of the company. The Panama City office also submits a semi-annual report to the Florida Public Service Commission for both divisions. Feedback received from both branches is constantly evaluated and any necessary revisions will be proposed to the program based upon these evaluations. Allowances paid to eligible participants under the program guidelines are based upon documentation and information necessary for Florida Public Service Commission audit purposes.

SUMMARY SHEET ITEM NUMBER 6

REVISED

the past and projections for future residences eligible under the program guidelines are listed on Table A-2.

Based on historical construction data and on projections for future construction trends, first year costs are anticipated to be:

Per Customer	\$4.42 / 52,260	Total Customers
Administrative	\$49,875	
Incentives	\$180,950	

IV. Cost Effectiveness Methodology

Based on the cost effectiveness methodology used in currently approved conservation programs, and using the assumptions listed, a benefit/cost ratio of 13.31 to 1 with a payback period of .08 years will be achieved for the State of Florida. The ratepayers of West Florida Natural Gas Company will receive a benefit/cost ratio of 2.67 to 1 with a payback period of .37 years.

V. Program Monitoring and Evaluation

The progress of the West Florida Natural Gas Company Residential Home Builder Program is monitored monthly at both divisions of the company. The Panama City office also submits a semi-annual report to the Florida Public Service Commission for both divisions. Feedback received from both divisions is constantly evaluated, and any revisions will be proposed to the program based upon these evaluations. Allowances paid to eligible participants under the program guidelines are based upon documentation and information necessary for Florida Public Service Commission audit purposes.

IV. Cost Effectiveness Methodology:

Based on the cost effectiveness methodology used in currently approved conservation programs, and using the assumptions listed, a benefit/cost ratio of 57.1 to 1 with a payback period of .02 years will be achieved for the State of Florida. The ratepayers of West Florida Natural Gas Company will receive a benefit/cost ratio of 7.48 to 1 with a payback period of .13 years. The cost effectiveness calculations follow Table A-2.

V. Program Monitoring and Evaluation:

The progress of West Florida Natural Gas Company Gas Appliance Energy Savings Payback Program is monitored monthly at both divisions of the company. The Panama City office also submits a semi-annual report to the Florida Public Service Commission for both divisions. Feedback from both divisions is constantly evaluated and any necessary revisions will be proposed to the program based upon these evaluations. Allowances paid to eligible participants under the program guidelines are based upon documentation and information necessary for Florida Public Service Commission audit purposes.

SUMMARY SHEET ITEM NUMBER 6

REVISED

COP of .8 or above. Although the program is open to residential customers, commercial customers will receive the most benefit due to installations of high tonnage units in larger commercial establishments.

The allowance is \$100.00 per ton, payable to a maximum 100 tons per project.

III. Benefits and Costs

The following effects in decreasing summer peak KWD and annual KWH consumptions are expected with the replacement of 1 (one) ton of electric space conditioning with energy efficient natural gas space conditioning:

<u>Tonnage</u>	<u>KWD Displacement</u>	<u>Annual KWH Consumption</u>
1 (one) Ton	1	2,500

Company-wide projections of the program with demand and energy savings are shown on Table A-1.

The number of customers anticipated to participate are shown as projections on Table A-2.

Based on projections of customers expected to participate in the program, first year costs are anticipated as follows:

Per Customer	\$.76/52,260	Total Customers
Administrative	\$13,250.00	
Incentives	\$28,500.00	

REVISED

IV. Cost Effectiveness Methodology

Based on the cost effectiveness methodology used in currently approved conservation programs, and using the assumptions listed, a benefit/cost ratio of 8.29 to 1 with a payback period of .12 years will be achieved for the State of Florida. The ratepayers of West Florida Natural Gas Company will receive a benefit/cost ratio of 3.34 to 1 with a payback period of .30 years.

V. Program Monitoring and Evaluation

The progress of the West Florida Natural Gas Company Gas Space Conditioning Allowance Program will be monitored monthly at both divisions of the company. The Panama City office will also submit a semi-annual report to the Florida Public Service Commission for both divisions. Feedback received from both divisions will be constantly evaluated, and any revisions will be proposed to the program based upon these evaluations. Allowances paid to eligible participants under the program guidelines are based upon documentation and information necessary for Florida Public Service Commission audit purposes.

March 5, 1991

Mr. William Troy Rendell
Regulatory Analyst
Florida Public Service Commission
Fletcher Building, 101 East Gaines Street
Tallahassee, Florida 32399-0850

Dear Mr. Rendell:

Enclosed please find the responses to the data requested in your February 12, 1991 letter regarding our newly proposed conservation programs. The responses were formulated by Ron Sott, Cindy Arnold or Tom Goodwin, and each answer is so noted.

1. **The conservation programs refer to "energy efficient gas appliances." Define the energy efficiency of appliances eligible for use in your programs using a measurable level of efficient performance, such as AFUE or some other readily identifiable term.**

Answer: West Florida Natural Gas used the phrase "energy efficient gas appliances" to refer to the fact that virtually any natural gas appliance is more energy efficient than a comparable electric appliance. However, because of our belief that it is necessary to continue to become even more energy efficient, we set criteria in the Residential Electric Resistance Appliance & Oil Heating Replacement Program as stipulated on page 14, numbers 1, 2 and 3. Rather than set any specific rating to be carried on throughout the program, we chose to comply with the minimum AFUEs for central furnaces and efficiency ratings for water heaters as listed in the Florida Energy Efficiency Code for Building Construction. Efficiency ratings developed by the Florida Department of Community Affairs sets a minimum rating of .68 for furnaces in 1991. Water heater efficiency is presently .56.

William Troy Rendell
March 5, 1991
Page 2

These appliances, as well as minimum ratings for central air conditioning units, minimum insulation in walls and ceilings and other minimums for the entire home envelope are reviewed and have been increased every other year since the Code's inception. West Florida Natural Gas has adopted these minimums and will increase them as they are increased in Section 9 of the Florida Energy Code. This will allow us to be in compliance with Florida Building Codes as well as increase our minimums for appliances without undue hardship on those who participate in the program. (Sott)

2. **Provide the calculations referenced in your assumption number 2 on page 6, used to calculate the weighted average therm usage by appliances type.**

Answer: The calculations which were used to calculate the weighted average therm usage are detailed on attachment A. (Arnold)

3. **In addition to the programs submitted, is WFNG involved in support of industry research, development, and demonstration of state-of-the-art efficient appliances?**

Answer: WFNG supports industry research, development, and demonstration of state-of-the-art efficient appliances through contribution and support of the Florida Gas Research Institute, Florida Natural Gas Association, Southern Gas Association and American Gas Association. (Sott)

4. **What forms of gas technology are anticipated to be implemented in the Electric Resistance Commercial Program?**

Answer: Minimum state energy ratings will be applied in this program which target the replacement of electric heating systems, high and low pressure boilers, water heaters, and cooking equipment such as ranges, fryers and ovens. (Sott)

5. **Provide an explanation as to why different escalation rates were used for Personnel and Advertising costs from program to program.**

Answer: We believe that programs will grow at different rates. Experience with existing programs was used to project growth as was a review of the future

William Troy Rendell

March 5, 1991

Page 3

expansion of the marketplace. (Sott)

- 6. Provide detailed justification and assumptions for the 25% escalation rate for personnel costs in the Natural Gas Space Conditioning Allowance Program.**

Answer: We anticipate that the Gas Space Conditioning Allowance Program will begin small and experience tremendous growth as technological advances in equipment are made available to the public. Initial efforts will be to educate potential residential and commercial customers. We project a growth rate of 25% from the relatively small 1991 projected figure. (Sott)

- 7. Provide the average wage and salary increases for the years 1987, 1988, 1989 and 1990.**

Answer: WFNG conservation personnel are paid on a bonus basis based on the number and kinds of appliances under each program, therefore historically no wages or salaries have been charged to the program. (Sott)

- 8. What are the average costs of piping and venting a home for appliances for each conservation program?**

Answer: The customer incentive payments are approximately equal to the labor and material costs for installation of appliances in each program.

We have a unique situation at WFNG with divisions in Ocala and Panama City, Florida. Overall, labor costs are higher in Ocala. For example, labor and material for gas piping and venting for replacing an electric water heater with a natural gas water heater costs between \$250 and \$300 in Ocala and \$175 to \$225 in Panama City. We have averaged the costs in the two divisions to get the Company average. (Sott)

- 9. How were these averages obtained?**

Answer: Averages were obtained from bills for work submitted by customers and charges from independent gas contractors, as well as actual experience with existing conservation programs. (Sott)

- 10. Do the proposed incentive payments cover the entire amount of piping and**

William Troy Rendell
March 5, 1991
Page 4

venting for the respective appliances for each program?

Answer: The incentive payments usually cover the entire amount for piping and venting in Panama, but not in Ocala. (Sott)

11. **Provide documentation, including calculations, to support the projected Personnel and Advertising Costs for each conservation program. Include a breakdown of these cost by program.**

Answer: The Personnel costs were determined by taking the first year projected units and multiplying them by the corresponding load bonus amount. In addition to this, we have included an amount to cover legal and professional fees, as well as 27% of our Conservation Clerk's salary. Advertising calculations for the three existing programs are consistent with figures obtained from the previous five years of operating the Energy Conservation Program. Advertising costs for the water heater retention, commercial replacement and gas space conditioning program were based on the same percentages used by Peoples Gas System, Inc. in their 1991 approved conservation program. See attachment B. (Arnold, Sott)

12. **Are the Incentives that are paid through the Residential Electric Resistance Appliance & Oil Heating Replacement Program to be applied to the piping and venting costs only, or are these incentives also intended to help cover the cost of the appliance?**

Answer: As stated in the response to question 10, incentives are designed to apply to piping and venting costs. In many cases, they do not cover the entire amount of these costs. (Sott)

13. **Explain the "Demand Charges" listed as assumption #10 for the Gas Ratepayers Cost Effectiveness Analysis for the conservation programs.**

Answer: The "Demand Charges" listed as assumption #10 for the Gas Ratepayers Cost Effectiveness Analysis are a reservation fee included in Florida Gas Transmission's tariff (approved by FERC) to recover the cost, to the pipeline, of reserving capacity on the pipeline for movement of West Florida Natural Gas

Company requirements. (Goodwin)

14. Explain why the Cumulative Therm Usage on Table 3 remains constant after the year 2000, in the Gas Ratepayers Cost Effectiveness Analysis, while it decreases in the Annual Fuel Consumption - Natural Gas Table for the Electric Ratepayers Cost Effectiveness Analysis.

Answer: Methodology used in calculations on the table followed that used in the Peoples Gas System approved plan. (Sott)

15. Explain the "Cut & Cap Savings" listed in Table 4 of the Gas Ratepayers Cost Effectiveness Analysis for the conservation programs.

Answer: If through participation in one of these conservation programs, we can influence an individual to install a gas appliance, we will not have to remove the natural gas service line from his property after five consecutive years of inactivity, as stipulated by Florida law. This would save the ratepayers from having to bear the burden of cost of removal of the service line. (Sott)

16. Does WFNG plan to hire additional personnel to implement, manage, and/or promote its proposed conservation programs? If so, how many and at what salary?

Answer: If the programs are successful and grow, staff will be added to handle the extra work. No additional salaries were included in the program projections, since additional staff would also be paid on the load bonus plan. (Sott)

17. Does WFNG have written policies and procedures in which to operate its proposed conservation programs? If so, provide copies. If not, provide a date when they will be available.

Answer: Yes, a written procedure exists for the three current conservation programs. Written procedures for the new programs will be available within thirty days after their approval. See Attachment C. (Sott)

18. How did WFNG determine the amount of incentives for its proposed conservation programs?

William Troy Rendell
March 5, 1991
Page 6

Answer: We used a combination of factors to determine proposed incentives. Actual experience with the existing programs have helped us, together with actual invoices for work submitted by customers and charges submitted by independent gas contractors. We also relied upon independent gas contractor invoices for certain projects such as the water heater retention program. (Each commercial job is unique in that one might require only minimal labor and material, while others may require a hundred feet of gas piping, 10" vent pipe and other materials costing much more than is actually being offered through incentives.) We also relied heavily upon the Peoples Gas program and knowledge of WFNG service personnel and outside contractors to determine gas space conditioning costs. (Sott)

- 19. Explain the necessity of the Gas Water Heater Load Retention Program if the Company's proposed Gas Appliance Energy Savings Payback (ESP) Program is approved?**

Answer: The Gas Water Heater Retention Program is designed to promote the continued use of gas for water heating rather than to have a "quick fix" electric water heater replace the natural gas water heater. The Energy Savings Payback Program is designed to promote the replacement of standard gas appliances (such as a pilot type range) and electric ranges, with pilotless ignition type appliances which are even more energy efficient. With regard to the water heater portion of the program, a replacement water heater would have to be of a deluxe energy saver type, far exceeding the minimum requirements under the state code, in order to warrant a \$50 rebate in addition to the \$100 water heater retention rebate. (Sott)

- 20. Explain how the Residential Electric Resistance Appliance & Oil Heating Replacement Program helps to alleviate the need to cut and cap services thereby retaining existing gas customers?**

Answer: As in the answer to question 15, reactivating a service line before the

William Troy Rendell
March 5, 1991
Page 7

five year mandated timeframe for removal under state law would save the cost of labor and material to remove the line. (Sott)

21. Provide the titles of the "Gulf Power Company publications" referenced on page 4 of WFNG proposed conservation programs.

Answer: "Consuming Energy in the Eighties", a reference guide to the economical use of electricity, published by Gulf Power Company in 1986. (Sott)

22. Explain the difference, if any, in the types of appliances eligible under the Gas Appliance Energy Savings Payback (ESP) Program, as opposed to the Home Builder, Electric Resistance Replacement, or the Water Heater Retention programs.

Answer: The ESP program pays only for pilotless ignition ranges, dryers, central furnaces and deluxe energy mizer type water heaters, when replacing electric or "standard" gas and/or pilot type appliances. The Home Builders Program pays no ESP. It is for new and/or completely remodeled homes and calls for all appliances and other features to meet the existing State Energy Code minimums. ESP is paid in addition to the Electric Replacement Program when the appliance is of a pilotless type which exceeds the minimum standards set forth by the State Energy Efficiency Code for Building Construction. The ESP is not paid under the Water Heater Retention Program unless the water heater replacement is of the deluxe energy mizer type. (Sott)

23. Does WFNG have any procedures in place, such as bidding, for selecting contractors and/or builders participating under the Home Builder Program?

Answer: All builders constructing natural gas homes are eligible to receive incentives under this program, as long as the home being constructed meets the Energy Point Index for new construction under Section 9 of the Florida Energy Efficiency Code. (Sott)

24. The Cost/Benefit evaluations for West Florida Natural Gas ratepayers assume that natural gas service lines will be a direct expense to the program. Why

is this an appropriate assumption and how does it change your analysis from one that treats service lines as a capital expenditure?

Answer: In an effort to be conservative on the ratepayers Cost/Benefits, natural gas service lines were assumed to be a direct expense to the program. Our actual practice is to capitalize service lines; if these costs were removed, it would only serve to make the Benefit/Cost ratio greater. (Arnold)

- 25. Provide an explanation as to why it was assumed that beginning with 1991, the number of appliances added annually under the residential Electric Resistance Appliance and Oil Heating Replacement Program will increase. (Attachment 2-1, p.18) Have there been any improvements to attract more eligible customers than in the past?**

Answer: The improvement to the program that will attract more participants is the increased dollar amount of the incentive payments. (Sott)

- 26. For the Attachment 2-A, page 18, provide a breakdown of the number of appliances installed by appliance type for each year's total.**

Answer: The breakdown of the number of appliances installed by appliance type for each year's total follows on attachment D. (Arnold)

- 27. Why does the residential Home Builder Program builder incentive payments only cover 63% of the added costs for installing natural gas appliances?**

Answer: 100% of the average costs for contractors in our area are paid by the program. However, installation costs in our area averaged only 63% of the State's average. Costs in our area are anticipated to continue below the Florida average. (Sott)

- 28. Are seasonal (heating only) customers disconnected or gas service turned off during the summer months?**

Answer: WFNG has no "summer cut" program. The Company is making every effort to convince customers that the more of the major four appliances (heaters, water heaters, ranges and dryers) added to the household, the greater the

William Troy Rendell
March 5, 1991
Page 9

customer will save in his overall utility bills and in energy. (Sott)

29. **Was the "Average Natural Gas Therm consumption per appliance" used for the calculation of the cost/benefit analysis or the projected therm usage by specific appliance used?**

Answer: The "Average Natural Gas Therm consumption per appliance" was used. (Arnold)

30. **Table 3 on page 48 shows KW Displaced remaining constant after 1997, while water heaters displaced increases. Provide an explanation for this discrepancy.**

Answer: The Table on page 48 should show water heaters displaced increasing. An error in the formula made them remain constant. A corrected page 48 is included as attachment E. (Arnold)

If you have any further questions, please give me a call.

Sincerely,

Patti Smith
Controller

In addition to the above total, \$500 has been allocated to personnel costs for Legal and Professional Fees, and \$1,350 is included to cover a portion of the conservation clerk's salary.

For the remainder of the program years we just increased the 1991 total by the escalation % .

1991	23,550 + 500 + 1350 = 25,400
1992	25,400 + 6% = 26,924
1993	26,924 + 6% = 28,539
1994	28,539 + 6% = 30,252
1995	30,252 + 6% = 32,067
1996	32,067 + 6% = 33,991
1997	33,991 + 6% = 36,030
1998	36,030 + 6% = 38,192
1999	38,192 + 6% = 40,484
2000	40,484 + 6% = 42,913
Total for Program	334,792

RANGE	75		5		375
DRYER	75		5		375
TOTAL FOR 1991	310		20		1,550

In addition to the above total, \$125 has been allocated to personnel costs for Legal and Professional Fees, and \$125 is included to cover a portion of the conservation clerk's salary.

For the remainder of the program years we just increased the 1991 total by the escalation % .

1991	1,550 + 125 + 125 =	1,800
1992	1,800 + 3% =	1,854
1993	1,854 + 3% =	1,910
1994	1,910 + 3% =	1,967
1995	1,967 + 3% =	2,026
1996	2,026 + 3% =	2,087
1997	2,087 + 3% =	2,149
1998	2,149 + 3% =	2,214
1999	2,214 + 3% =	2,280
2000	2,280 + 3% =	2,349
Total for Program		20,635

ATTACHMENT B

WATER HEATER LOAD RETENTION PROGRAM

	# UNITS	X	LOAD BONUS	=	TOTAL
WATER HEATER	315		\$20		6,300
CENTRAL HEAT	0		0		0
RANGE	0		0		0
DRYER	0		0		0
TOTAL FOR 1991	<u>315</u>		<u>20</u>		<u>6,300</u>

In addition to the above total, \$250 has been allocated to personnel costs for Legal and Professional Fees, and \$250 is included to cover a portion of the conservation clerk's salary.

For the remainder of the program years we just increased the 1991 total by the escalation % .

1991	$6,300 + 250 + 250 = 6,800$
1992	$6,800 + 3\% = 7,004$
1993	$7,004 + 3\% = 7,214$
1994	$7,214 + 3\% = 7,431$
1995	$7,431 + 3\% = 7,653$
1996	$7,653 + 3\% = 7,883$
1997	$7,883 + 3\% = 8,120$
1998	$8,120 + 3\% = 8,363$
1999	$8,363 + 3\% = 8,614$
2000	$8,614 + 3\% = 8,872$

Total for Program 77,954

ATTACHMENT B

GAS SPACE CONDITIONING ALLOWANCE PROGRAM

To determine the personnel costs for 1991 we took the projected first year tons installed and multiplied it by the corresponding load bonus amount.

$$1991 \quad 265 \times 20 = 5,300$$

In addition to the above total, \$250 has been allocated to personnel costs for Legal and Professional Fees, and \$250 is included to cover a portion of the conservation clerk's salary.

*Note: We changed the first years tons installed from 212 to 265; however, we forgot to change the personnel costs to reflect this change.

For the remainder of the program years we just increased the 1991 total by the escalation % .

1991	5,300 + 250 + 250 = 5,800
1992	5,800 + 25% = 7,250
1993	7,250 + 25% = 9,063
1994	9,063 + 25% = 11,328
1995	11,328 + 25% = 14,160
1996	14,160 + 25% = 17,700
1997	17,700 + 25% = 22,125
1998	22,125 + 25% = 27,657
1999	27,657 + 25% = 34,571
2000	34,571 + 25% = 43,213
Total for Program	192,867

ATTACHMENT B

Commercial Electric Appliance Resistance Program

To determine the personnel costs for 1991 we took the average KW for each water heater being replaced and multiplied it by the first year total projected water heaters displaced times the corresponding load bonus amount.

$$(25 \times 120) \times 5 = 15,000$$

In addition to the above total, \$250 has been allocated to personnel costs for Legal and Professional Fees, and \$500 is included to cover a portion of the conservation clerk's salary.

For the remainder of the program years we just increased the 1991 total by the escalation % .

1991	15,000 + 250 + 500 = 15,750
1992	15,750 + 3% = 16,223
1993	16,223 + 3% = 16,709
1994	16,709 + 3% = 17,210
1995	17,210 + 3% = 17,727
1996	17,727 + 3% = 18,259
1997	18,259 + 3% = 18,806
1998	18,806 + 3% = 19,371
1999	19,371 + 3% = 19,952
2000	19,952 + 3% = 20,550

Total for Program 180,556

CONSERVATION PROGRAM POLICY

Attachment C

1. **Sales order or receipt must be attached to the conservation form when it is submitted for approval.**
2. **Attach one of the following:**
 - a. **Copy of service order confirming service line has been run, with original signature of construction supervisor.**
 - b. **Print-screen of existing account.**
3. **The above forms will be held by the salesman until the work is complete. At that time they will be submitted to the General Manager for approval.**
4. **The General Manager will check the following before approval.**
 - a. **Above forms are attached**
 - b. **Receipt is valid**
 - c. **(Builders only) Check folder for duplicate payment.**
5. **After approval by the General Manager, the forms are not to be returned to the salesman. They are to be sent directly to Cindy Arnold in Accounting.**
6. **All checks will be mailed directly to the customer. Accounts payable will be alert for P.O. boxes, and similar addresses. When a new builder is set up, Accounts payable will verify by phone the mailing address.**
7. **Accounting will spot check endorsements on cancelled checks.**
