DOCUMENT NUMBER-DATE

06486 JUN 168

1135-RECORDS/HEPORTING

GTE Telephone Operations South Area

One Tampa City Center Post Office Box 110, MC Tampa, Florida 33601-0110 June 9, 1993

Mr. Walter D'Haeseleer, Director Division of Communications Florida Public Service Commission 101 East Gaines Street Tallahassee, Florida 32399-0865

Dear Mr. D'Haeseleer:

. . . . . .

Enclosed are four (4) copies of the following pages from our General Services Tariff:

### Index

32nd Revised Index Page 4

### Section A10

1st Pevised Contents Page 2 Original Pages 72 through 77

This proposed tariff filing offers a new service entitled Frame Relay Service (FRS). Frame Relay Service is a "fast packet" network service that permits the transmission of data at speeds from 56 Kbps to 1.544 Mbps using Permanent Virtual Connections (PVCs). PVCs are logical circuits that define a specific one-way path for data sent by the customer to another location. These circuits are virtual because they are established in software tables and do not tie up capacity when not in use. This also allows multiple PVCs to be defined over a single access line, thereby providing a single access line the capability to transmit data to multiple destinations. This capability represents a significant advantage over traditional point-to-point arrangements.

It would be appreciated if you would handle this filing with the Commissioners and members of the Staff, as appropriate, for approval.

Acknowledgement, date of receipt, and authority number of this filing are requested. A duplicate letter of transmittal is enclosed for this purpose.

Sincerely

Beverly Y. Menard Regional Director -External Affairs (FL)

EXHIBIT A

### Limitations and Special Conditions;

GTE Florida plans to make Frame Relay Service available throughout the Tampa Market Area upon approval of this tariff filing.

The customer must provide information regarding intended use of the service sufficient to permit the Telephone Company to furnish and maintain the service ordered and assure that tariff regulations are followed.

### III) Customer Benefits / Impact:

Frame Relay Service will offer customers:

- Reduced network costs
- Bandwidth sharing
- Reduced network complexity
- Improved performance

The ability to link multiple destinations and share bandwidth over a single access line will significantly reduce network costs and simplify the network for the customer. Because of the reduced overhead and processing performed by Frame Relay switched as compared to X.25 packet switches, throughput is increased and delay is reduced for users of FRS.

### IV) Market Assessment / Product Strategy:

The proliferation of PCs and workstations, the growing number of computer applications requiring high speed communications, and the availability of error-free high speed transmission lines have created a demand for new methods of wide area networking. This demand is for a data transmission service that provides high speed, low delay, and resource sharing. Frame Relay Service addresses these requirements.

Frame Relay Service provides a cost effective and efficient means to connect Local Area Networks (LANs) and provide remote to host communications. The variable length frames are ideal for transporting the "bursty" data traffic from these sources.

The target markets for Frame Relay Service are small, medium, and large customers with a need to interconnect multiple locations at higher speeds, some of whom are currently served by digital private line facilities. The following industries appear to be strong target market segments: finance, health care, aerospace, retail, utilities, government (Federal and State), transportation, insurance, wholesale, professional business services, education, and discrete manufacturing.

### V) Forecasting Methodology;

Market research consisted of secondary research performed by GTE and primary research performed by Quantum Electronic Database (QED), an independent market research and torecasting firm whose data forecasts were purchased by GTE. The QED forecasts were expressed in terms of a nationwide demand for Frame Relay in the 1990's. These numbers were then analyzed and brought down to a state and central office level by GTE's Demand Analysis and Forecasting department.

### VI) Pricing Methodology:

As is shown on the attached cost support, the prices proposed by GTE for Frame Relay Service provide contribution over the long run incremental cost of the service.

### VII) Rate Structure:

Frame Relay Service includes the following rate elements:

Frame Relay Access Line:

The Frame Relay Access Line provides the dedicated digital connection from the customer premise to the Frame Relay network.

Frame Relay Port:

The Frame Relay Port provides the switching capability of the Frame Relay network. The first PVC is included in this rate element. Under this offering, the customer can be connected through the switching system anywhere within the Tampa Market Area. Initially only the 56 Kbps and 1.544 Mbps access classes will be offered.

PVC-

PVCs are logical circuits that define a specific one-way path for data sent by the customer to another location. Multiple PVCs may be assigned to a single Frame Relay Port, allowing the capability to transmit data to numerous destinations.

### EXHIBIT B RATE DEVELOPMENT FRAME RELAY ACCESS LINE

The following pages detail the rate development for the Frame Relay Access Line. The proposed rates and margin of contribution are shown on page 1. A cost analysis is shown on page 2.

### EXHIBIT C RATE DEVELOPMENT FRAME RELAY PORT

The following pages detail the rate development for a Frame Relay Port - 1.544 Mbps. The proposed rates and margin of contribution are shown on page 1. A cost analysis is shown on pages 2 through 6. The total resource investments were submitted to the LAPP (EXHIBIT I) to determine a monthly revenue requirement.

### EXHIBIT D RATE DEVELOPMENT FRAME RELAY PVC

The following pages detail the rate development for a Frame Relay PVC. The proposed rates and margin of contribution are shown on page 1. A cost analysis is shown on page 2. The total resource investments were submitted to the LAPP (EXHIBIT I) to determine a monthly revenue requirement.

**EXHIBIT D**

### EXHIBIT H CONTRIBUTION ANALYSIS

The following pages detail the Contribution Analysis for Frame Relay Service. A summary of the margin of contribution for each proposed rate element is detailed in the rate development exhibit for that element. A contribution analysis summary based on the forecast for the first five years of service is provided on page 1 with details for each rate element shown on page 2. The following calculations were used:

Annualized Monthly Recurring Revenue = (Year N Forecast) \* Monthly Recurring Charge)

\* (12 Months)

\* (12 Months

Annualized Monthly Recurring Cost = (Year N Forecast) \* (Monthly Recurring Cost) \*
(12 Months)

(12 Month

Annualized Non-Recurring Revenue = {(Year N Forecast) - (Year N-1 Forecast)} \*
(Non-Recurring Charge)

Annualized Non-Recurring Cost = {(Year N Forecast) - (Year N-1 Forecast)} \*
(Non-Recurring Investment)

% Contribution (Margin) = {(Revenue) - (Cost)} / (Cost)

### A10. DIGITAL METWORK SERVICES

### A10.8 FRAME RELAY SERVICE

### .1 General

- a. Frame Relay Service (FRS) is a "fast packet" network service that permits the transmission of data at speeds from 56 Kbps to 1,544 Mbps using Permanent Virtual Circuits (PVCs).
- b. Permanent Virtual Circuits (PVCs) are logical circuits that define a specific one-way path for data sent by the customer to another location. These circuits are virtual because they are established in software tables and do not tie up capacity when not in use. This also allows multiple PVCs to be defined over a single access line, thereby providing a single access line the capability to transmit data to multiple destinations.
- c. In the operation of Frame Relay Service, Customer Premises Equipment (CPE), such as routers, encapsulate arriving data into variable length frames. These frames contain information identifying which PVC in the network should be used to forward the frame to the proper destination. The CPE then sends the frame into the frame Relay network. The frame Relay switch reads identifying information and routes the frame to the proper destination based on a pre-established PVC.
- d. The statistical multiplexing Frame Relay switches are able to provide shared network resources to end users of this service.
- e. Frame Relay Service conforms to Consultative Committee for International Telegraph and Telephone (CCITT) and American National Standards Institute (ANSI) standards set forth in technical publications listed in this tariff under Reference to Technical Publications.
- f. Frame Relay Service, as provided for in this Tariff section, is offered for intraLATA use only.
- g. The regulations and rates specified herein are in addition to the applicable regulations and rates specified in other sections of this Tariff.
- h. The rates and charges set forth for Frame Relay Service provide for the furnishing of service where suitable facilities are available.

### .2 Regulations

a. Explanation of Terms

Customer Designated Location (CDL) - The geographic location designated by the customer at which an access component of the customer's service is first considered to enter the Company's network.

Frame - A sequence of contiguous bits delimited by beginning and ending flag sequences.

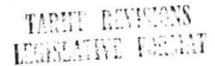

Frame Relay Access Line (FRAL) - Frame Relay Access Lines provide access to the Frame Relay Service (FRS) Network, connecting customer facilities at the Network Interface with a corresponding Frame Relay Port.

Local Area Network (LAN) - A network permitting the interconnection and intercommunication of a group of computers, primarily for the sharing of resources such as data storage devices and printers.

transmission of sequenced data packets through the network that allows simultaneous

Network Interface (NI) - The point at which a customer's data transmission first enters the network supporting frame Relay Service is the Network Interface (NI). It is the point of interconnection between Company communications facilities and customer terminal equipment.

#### A10. DIGITAL METWORK SERVICES

### A10.8 FRAME RELAY SERVICE (Continued)

### .2 Regulations (Continued)

- d. Frame Relay is provided to the customer in the form of the Frame Relay Access Line and the Permanent Virtual Connection (PVC). The Frame Relay Access Line forms the local access component which provides the customer access to the customer's serving central office and a primary address associated specifically with that customer. The Logical Link consists of the Frame Relay network and the interoffice transport and facilities from the customer's Serving Central Office to the Frame Relay Office(s).
- e. GTE Florida does not undertake to originate data, but offers the use of its service components, where available, to customers for the purpose of transporting customer-originated data.

### .3 Obligations of the Customer

- a. The customer's Frame Relay compatible terminal equipment has the responsibility for error correction. Frame Relay Service (FRS) nodes may discard frames with errors and may discard frames when the network supporting FRS is in a state of congestion.
- b. Where Frame Relay Service is available for use in connection with communications systems or equipment provided by a customer or user, the operating characteristics of such systems or equipment shall be such as not to interfere with any services offered by GTE Florida. Such use is subject to the further provisions that the equipment provided by the customer or user does not endanger the safety of GTE Florida employees or the public; damage, harm, require change in or alteration of the equipment or other services of GTE Florida; interfere with the proper operation of GTE Florida's equipment or otherwise injure the public in its use of GTE Florida services. Upon notice from GTE Florida that the equipment provided by the customer or user is causing, or is likely to cause, such hazard or interference, the customer shall take such steps as shall be necessary to remove or prevent such hazard or interference.
- c. The customer, upon request, shall furnish such information as may be required to permit GTE florids to design and maintain the Frame Relay Service it offers and to assure that the service arrangement is in compliance with the regulations contained herein.
- d. It shall be the responsibility of the customer to ensure the continuing compatibility of the customer-provided equipment that is used in conjunction with the Frame Relay Service. The CPE shall be in compliance with rules and regulations as specified in Section ATS of this tariff.
- e. The customer shall be responsible for obtaining permission for GTE Florida agents or employees to enter the premises of the customer at any reasonable hour for the purpose of installing, inspecting, repairing, or, upon termination of the service, removing the service components of GTE Florida.
- f. The customer shall be responsible for the payment of a nonrecurring Trouble Isolation Charge as found in Section A15.4 of this tariff for each repair visit to a premises of the customer or the premises of any other customer where the service difficulty or trouble results from the use of equipment or service components provided by the customer.
- g. The Customer may only use a Frame Relay Access Line with Frame Relay Service.

### .4 Obligations of the Telephone Company

- a. The responsibility of GTE Florida shall be limited to furnishing network equipment suitable for Frame Relay Service and to the maintenance and operation of such equipment in a manner proper for such service. Subject to this responsibility, GTE Florida shall not be responsible for the through transmission of signals generated by the customer-provided equipment or system, or for the quality of, or defects in, such transmission or the reception of signals by such equipment or systems.
- b. GTE Florida shall not be responsible for installation, operation or maintenance of any terminal equipment, data unit or communications system provided by a customer or user. GTE florida is not responsible for adapting Frame Relay Service to the technological requirements of any specific customer equipment.
- c. When a customer orders a Permanent Virtual Connection (PVC) which is relayed to other Local Exchange Carriers, Interexchange Carriers or other Frame Relay networks, GTE Florida will provide advisory assistance as a part of the establishment of this PVC.

#### A10. DIGITAL METWORK SERVICES

### A10.8 FRAME RELAY SERVICE (Continued)

- .4 Obligations of the Telephone Company (Continued)
  - d. GTE Florida shall not be responsible to the customer or user if changes in any of the equipment, operations or procedures of GTE Florida used in the provision of Frame Relay Service render any facilities provided by the customer or user obsolete or require modification or alteration of such equipment or system or otherwise affect its use or performance, provided GTE Florida has met any applicable information disclosure requirements otherwise required by law.
  - e. GTE Florida undertakes the responsibility to maintain and repair the service which it furnishes. Network equipment installed by GTE Florida on the customer's premises shall be and remain the property of GTE Florida. The customer or user may not rearrange, disconnect, remove, attempt to repair, remote test, or interface with any network equipment installed by GTE Florida without prior written consent by GTE Florida.
  - f. GTE Florida, by written notice to the customer, may immediately discontinue the furnishing of Frame Relay Service without incurring liability upon nonpayment of any sum due to GTE Florida or a violation of any condition governing the furnishing of service.
  - g. GTE Florida has the service responsibility up to and including the network interface.

### .5 Rates and Charges

- a. The minimum contract period for Frame Relay Service is six months.
- After the minimum contract period lapses, Frame Relay Service may be maintained on a month-tomonth basis.
- c. A subsequent order to add Frame Relay Access Line(s) and/or Port Connection and Switching to an existing installation will be for a minimum contract period of six months.
- d. A customer may access frame kelay Service (FRS) via a frame Relay Access Line or via Company-provided, digital, private line facilities. If a customer utilizes private line facilities, or private line transport with a frame Relay Access Line, to access FRS, the associated regulations, rates and charges for such private line facilities shall apply in addition to the rates and charges associated with the FRS elements.
- e. A customer utilizing private line facilities to access FRS would not incur a nonrecurring charge, or monthly rate for a Frame Relay Access Line, but would incur all other monthly rates and nonrecurring charges normally associated with the ordering, installation and provisioning of Frame Relay Service.
- f. The total number of Frame Relay Permanent Virtual Connections (FR-PVCs) purchased determines the rate category for all FR-PVCs. For example, if 15 FR-PVCs are subscribed, then all PVCs will be rated at the monthly rate for 11 to 20 PVCs since 15 fails into that range.
- g. When a customer subsequently orders additional FR-PVCs, the sum total of all FR-PVCs subscribed to by the Customer shall be used to determine the customer's FR-PVC monthly rate category for all FR-PVCs then subscribed.
- h. When a customer orders additional PVCs or changes PVC assignments on a given FRS port after the initial port installation, the Frame Relay PVC nonrecurring charge shall apply.
- i. Service Rearrangements
  - (1.) Service rearrangements are changes to existing (installed) services which do not result in a change in the physical location of the network interface. (Changes in the physical location of the network interface are treated as moves and are described and charged for as set forth herein.)
    - (a.) Additions to Service
      - (.1) With the exception of Frame Relay Permanent Virtual Connections (PVCs), when service elements are added to an existing service, the added elements must meet the minimum period requirements associated with the service to which they are added.
- (.2) When PVCs are added to an existing Frame Relay Service, the minimum period for the added PVCs is one month.

### A10.8 FRAME RELAY SERVICE (Continued)

### .5 Rates and Charges (Continued)

### i. Service Rearrangements (Continued)

### (1.) (Continued)

### (c.) Administrative Changes

- (.1) Administrative changes to existing service will be made without charge(s) to the customer. Administrative changes are as follows:
  - Change of customer name, i.e., the customer or record does not change but rather the customer of record changes its name, e.g., XYZ Company to XYZ Communications,
  - Change of customer premises address when the change of address is not a result of a physical relocation of facilities,
  - Change in billing data (name, address, or contact name or telephone number),
  - Change of customer contact name or telephone number, and
  - Change of customer service element identification.

### j. Rate Elements

### (.1) Frame Relay Access Line (FRAL)

A nonrecurring charge and monthly rate, both based on the speed of the port connection (i.e., 56 Kbps or 1.544 Mbps), apply per port for each physical connection to the network supporting Frame Relay Service (FRS).

### (.2) Frame Relay Port (FRP)

A monthly rate, based on the speed of the port connection (i.e., 56 Kbps or 1.544 Mbps) and the number of unidirectional PVCs assigned to the port, applies per port for each frame Relay Access Line or digital private line connection to the network supporting FRS.

### (.3) Frame Relay PVC (FR-PVC)

- (.a) A nonrecurring charge and a monthly rate apply for each unidirectional PVC. A monthly rate based on the speed of the port connection (i.e., 56 Kbps or 1.544 Mbps) and the number of unidirectional PVCs assigned to the port, applies per port.
- (.b) A nonrecurring charge applies for each subsequent order of PVC(s) to be added to PVC assignment(s) changed on an existing FRS.

|      |  | Nonrecurring.<br>Charge | GSEC      | Monthly  | GSEC             |
