Docket No. 930256-WS

October 19, 1993

Alternative Recommendation: Recommendation that Sanlando's petition for limited proceeding to implement water conservation plan should be approved. The water gallonage rates per 1,000 gallons per month for all customers should be: \$.355 for 0 to 10,000 gallons; \$.50 for 10,000 to 20,000 gallons; \$.65 for 20,000 to 30,000 gallons; and \$.85 over 30,000 gallons. Sanlando should file monthly reports of water revenues collected by the utility in excess of water revenues at current rates to be placed in the designated escrow account for the purpose of financing the installation of the effluent transmission system, payment of regulatory assessment fees and income taxes related to those revenues. The utility should also be required to file a proposed charge to the golf courses prior to the implementation of effluent transmission. Prior to the last phase of construction, the utility should file a plan on the disposition of the approved increasing block rate design and excess funds produced by the water conservation rates.

APPROVED - Staff was directed to look at the effect of the block rates on the utility's earnings and to develop an annual adjustment mechanism as appropriate.

Issue 2: Recommendation that, if no timely protest is filed, the docket should be closed. If the Commission approves the alternative recommendation, the rates should become effective for meters read on or after 30 days from the stamped approved tariff sheets, provided the tariffs are consistent with the Commission's decision, the proposed customer notice is adequate, and the escrow account is properly established. The docket should be closed.
