JAMES A. MCGEE
SENIOR COUNSEL

May 19, 1994

Ms. Blanca S. Bayo, Director
Division of Records and Reporting
Florida Public Service Commission
101 East Gaines Street
Tallahassee, FL 32399-0870

Re: Docket No. 940001-EI

Dear Ms. Bayo:

Enclosed for filing in the subject docket are fifteen copies each of the prepared direct testimony and exhibits of Karl H. Wieland and William C. Micklon, on behalf of Florida Power Corporation.

Please acknowledge your receipt of the above filing on the enclosed copy of this letter and return to the undersigned. Thank you for your assistance.

Very truly yours,

James A. McGee

CERTIFICATE OF SERVICE

Docket No. 940001-EI

I HEREBY CERTIFY that a true copy of Florida Power Corporation's prepared direct testimony of Karl H. Wieland and William C. Micklon, has been furnished to the following individuals by U.S. Mail this 19th day of May, 1994:

Matthew M. Childs, Esquire
Steel, Hector & Davis
215 South Monroe, Suite 601
Tallahassee, FL 32301-1804

G. Edison Holland, Jr., Esquire
Jeffrey A. Stone, Esquire
Beggs and Lane
P. O. Box 12950
Pensacola, FL 32576-2950

Lee L. Willis, Esquire
James D. Beasley, Esquire
Macfarlane Ausley Ferguson
& McMullen
P. O. Box 391
Tallahassee, FL 32302

Robert S. Goldman, Esquire
Messer, Vickers, Caparello

DOCKET NO. 940001-EI

FINAL TRUE-UP AMOUNT
OCTOBER 1993 THROUGH MARCH 1994

DIRECT TESTIMONY
AND EXHIBITS OF

KARL H. WIELAND

For Filing May 20, 1994

FLORIDA POWER CORPORATION

DOCKET NO. 940001-EI

Re: Fuel Cost Recovery and Capacity Cost Recovery
Final True-up Amounts for
October 1993 through March 1994

DIRECT TESTIMONY OF KARL H. WIELAND

Q. Please state your name and business address.

A. My name is Karl H. Wieland. My business address is P. O. Box 14042, St. Petersburg, Florida 33733.

Q. By whom are you employed and in what capacity?

A. I am employed by Florida Power Corporation as Director of Business Planning.

Q. Have the responsibilities of your position with the Company remained the same since you last testified in this proceeding?

A. Yes.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to describe the Company's Fuel Cost Recovery Clause final true-up amount for the period of October 1993 through March 1994, and the Company's Capacity Cost

Recovery Clause final true-up amount for the period of October 1993 through March 1994.

Q. Have you prepared exhibits to your testimony?

A. Yes, I have prepared a three-page true-up variance analysis which examines the difference between the estimated fuel true-up and the actual period-end fuel true-up. This variance analysis is attached to my prepared testimony and designated exhibit (KHW-1). Also attached to my prepared testimony and designated exhibit (KHW-2) are the Capacity Cost Recovery Clause true-up calculations for the October 1993 through March 1994 period. In addition, I will sponsor Schedules A1 through A12 for the month of September, 1994 (period-to-date), which have been previously filed with the Commission and are also attached to my prepared testimony for ease of reference.

Q. What is the source of the data which you will present by way of testimony or exhibits in this proceeding?

A. Unless otherwise indicated, the actual data is taken from the books and records of Company. The books and records are kept in the regular course of business in accordance with generally accepted accounting principles and practices, and provisions of the Uniform System of Accounts as prescribed by this Commission.

FUEL COST RECOVERY

Q. What is the Company's final true-up amount for fuel cost recovery?

A. The fuel true-up balance as of March 31, 1994 is an under-recovery of $106,703. When the estimated over-recovery of $4,967,508 to be collected during the current period is taken into account, the final net true-up amount attributable to the October 1993 through March 1994 period is an under-recovery of $5,074,211.

Q. How was the final true-up amount determined?

A. The amount was determined in the manner set forth on Schedule A2 of the Commission's standard forms previously submitted by the Company on a monthly basis.

Q. What factors contributed to the period-ending under-recovery of $106,703?

A. The factors contributing to the under-recovery are summarized on Sheet 1 of my exhibit (KHW-1). It is the net result of changes in projected costs on one hand, and changes in projected revenues on the other. The total system cost of fuel and net power transactions for the period was $9.4 million lower than projected, which was the combined effect of a $9.7 million decrease in jurisdictional costs and a $0.3 million increase in wholesale costs. Jurisdictional fuel revenues were $5.9 million higher than projected due to higher than projected sales. The combination of lower jurisdictional costs and

higher jurisdictional revenues resulted in an over-recovery of $15.6 million attributable to the October 1993 through March 1994 period. Other variances not directly attributable to the period, primarily a $15.6 million revenue deficit from the prior period true-up, result in the total true-up under-recovery of $106,703, as of March 31, 1994.

Q. Please explain the components shown on Sheet 2 of your exhibit which produced the $(9.4) million system variance from the projected cost of fuel and net power transactions.

A. Sheet 2 of my exhibit (KWH-1) shows an analysis of this system variance for each energy source in terms of three interrelated components: (1) changes in the amount (MWh's) of energy required; (2) changes in the heat rate, or efficiency, of generated energy (BTU's per kWh); and (3) changes in the unit price of either fuel consumed for generation ($ per million BTU) or energy purchases and sales (cents per kWh).

Q. What effect did these components have on the system fuel and net power variance for the true-up period?

A. As can be seen from Sheet 2, variances in the amount of MWh requirements from each energy source (column B) combined to produce a cost decrease of $1.7 million. I will discuss this component of the variance analysis in greater detail below.

The heat rate variance for each source of generated energy (column C) produced a net cost decrease of $0.3 million. Lower than anticipated heat rates for oil generating units were the largest component of the cost variance. On the Company's Schedule A3, all BTU's for light oil are included in the light oil heat rate computation. However since no kWh generation is associated with light oil consumed at steam plants, the resulting heat rate shown on A3 is distorted. In order to compute the true heat rate variance, light oil consumed at steam units is shown separately on line 23 of Sheet 2.

A cost reduction of $7.3 million resulted from the price variance (column D), which was caused by a number of factors detailed on lines 1 through 26 of Sheet 2. The main factor was lower than projected prices for oil. Higher prices for power purchased from qualifying facilities was balanced by higher prices for power sales.

Q. What is the purpose of the analysis captioned "Reconciliation of Variances in MWh Requirements," shown on Sheet 3 of your exhibit?

A. The analysis on Sheet 3 is an attempt to identify the effect that variances in the MWh requirements of certain energy sources have on the MWh variances of other energy sources. Although this interrelationship is generally understood to exist, it is not readily apparent from the individual variances contained in the A Schedules

or in the analysis on Sheet 2. For example, an increase in the MWh requirements of nuclear generation shows up on Schedule A3 and on Sheet 2 of my exhibit as a cost increase. While this may be correct in isolation, the true effect of increased nuclear generation is obviously a corresponding decrease in the MWh requirements of a number of other more costly energy sources, primarily oil. The result is a lower net system cost even if total system MWh requirements remain unchanged.

In addition to this effect of variances in generation mix, the analysis also attempts to identify the independent effect of the net variance in total system MWh requirements from all energy sources combined. In this true-up period, for example, total system requirements were higher than the original forecast by 17,981 MWh. This would have led to higher net costs even if the mix of generation had not changed, since the higher system load increases oil generation at a cost above the system average.

Q. Please explain how this analysis was performed.

A. The analysis on Sheet 3 is made in two steps. The first, captioned "MWh Reconciliation," allocates the MWh variances for the individual energy sources shown in column B among the primary causal variances in columns C through H. Since the causal variances identified in this analysis are not all inclusive, the amount of any residual over- or under-allocation is shown in column I, "Unallocated

Variances." The second step, captioned "Cost Reconciliation," assigns a dollar value to the MWh variances identified in step 1. This is done by allocating the cost variances identified in column B of Sheet 2 for each energy source (and shown again in column B of Sheet 3) among the causal variances based on the MWh's allocated to each in step 1.

As mentioned above, the allocation of individual MWh and cost variances to the various causes of those variances is not intended to be all inclusive or precise. It is intended to be a representative approximation of the exceedingly complex cause and effect relationship existing among the individual and total MWh variances and their related cost variances.

Q. What were the major contributors to the $1.7 million cost decrease associated with the variance in MWh requirements?

A. Higher nuclear generation during the period reduced costs by $2.6 million. Cost increases were caused by lower coal generation ($0.8 million) and lower amounts of power purchases ($0.5 million). Other factors combined to reduce costs by an additional $0.5 million.

Q. In Order No. PSC-92-0776-FOF-EI, issued August 10, 1992 in Docket No. 860001-EI-G, the Commission ordered an annual test to confirm the validity of using a "short cut" method of determining

the equity component of EFC's capital structure. Has Florida Power made that test for calendar year 1993?

A. Yes. Florida Power's Internal Audit Department has reviewed an analysis performed by EFC which compares EFC's revenue requirements under a full utility-type regulatory treatment methodology using the actual weighted average cost of debt and equity required to support FPC business with revenues billed using equity based on 55% of net long-term assets (the short-cut method). The analysis, which is being made available for review by Staff and Public Counsel, showed that for 1993 the short-cut method resulted in revenues which were $99,228, or .04%, higher than revenues under the full utility-type regulatory calculation. Florida Power believes that this analysis confirms the appropriateness of continued use of the 55% value in the short-cut calculation.

CAPACITY COST RECOVERY

Q. What is the Company's final true-up amount for capacity cost recovery?

A. Exhibit (KHW-2), sheet 1, entitled "Calculation of Final True-Up Amount" records the costs and revenues associated with the Capacity Cost Recovery Clause for the period October 1993 through March 1994. The capacity cost recovery true-up balance as of March 31, 1994 is an over-recovery of $2,313,050.

Q. Is this true-up calculation consistent with the true-up methodology used for the other cost recovery clauses?

A. Yes it is. The calculation of the true-up amount follows the procedures established by this Commission as set forth on Commission Schedule A2 "Calculation of True-Up and Interest Provision" for the Fuel Cost Recovery Clause.

Q. What factors contributed to the period-end over-recovery of $2,313,050?

A. Exhibit (KHW-2), Sheet 1, entitled "Summary of Final True-Up Amount", compares the summary items from Sheet 2 to the original forecast for the period. As can be seen from Sheet 1, actual capacity cost revenues were $2.8 million lower than forecast for the period. The major factor contributing to this variance was the one-month postponement in implementing the capacity cost recovery factor for the period to coincide with a change in the Company's base rates. The continued use of the lower factor from the previous period in October 1993 resulted in a revenue shortfall. Jurisdictional capacity costs were $2.6 million lower than forecast because Seminole Fertilizer did not exercise an option to increase contract output from 15 to 25 MW.

Q. What is the Company's net true-up amount for capacity cost recovery?

A. When the estimated over-recovery of $2,382,955 to be collected during the current period is subtracted from the period-end true-up of $2,313,050, the final net true-up amount attributable to the October 1993 through March 1994 period is an under-recovery of $69,905.

Q. Does this conclude your testimony?

A. Yes.

Notes:
The Capacity Cost Recovery True-up and interest calculation is consistent with the procedures established by the Commission as set forth on Schedule A-2, "Calculation of True-Up and Interest Provision" for the Fuel Cost Recovery Clause.

FLORIDA POWER CORPORATION
CAPACITY COST RECOVERY CLAUSE
TRUE-UP CALCULATION
FOR THE PERIOD OCTOBER 1993 THROUGH MARCH 1994

Florida Power Corporation
Docket 940001-EI
Witness: K.H. Wieland____(KHW-2)
Exhibit No.
Sheet 2 of 3

Description	(a) October	(b) November	(c) December	(d) January	(e) February	(f) March	(g) 6 Months Cumulative
Base Production Level Capacity Charges:							
1. UPS Purchase (200 MW)	$0	$0	$0	$2,412,726	$2,381,063	$2,401,581	$7,195,370
2. Schedule E (82/200 MW) for March it is 100%	650,740	650,740	650,740	0	0	1,597,303	3,549,523
3. Mulberry Energy - QF	0	0	0	0	0	0	0
4. Royster Phosphates - QF	0	0	0	0	0	0	0
5. Seminole Fertilizer Qualifying Facility	277,200	277,200	266,410	266,846	281,076	278,797	1,647,529
6. Schedule F Capacity Sales	0	0	0	0	0	0	0
7. Subtotal - Base Level Capacity Charges	$927,940	$927,940	$917,150	$2,679,572	$2,662,139	$4,277,681	$12,392,422
8. Base Production Jurisdictional Responsibility (1)	93.005%	93.005%	93.005%	93.005%	93.005%	93.547%	93.192%
9. Base Level Jurisdictional Capacity Charges	$863,031	$863,031	$852,995	$2,492,136	$2,475,922	$4,001,642	$11,548,757
Intermediate Production Level Capacity Charges:							
10. UPS Purchase (0 MW)	$0	$0	$0	$0	$0	$0	$0
11. Schedule E (318/0 MW)	2,523,613	2,523,613	2,523,613	1,597,303	1,597,303	0	10,765,445
12. Schedule F Capacity Charges	0	0	0	0	0	0	0
13. TECO Power Purchase	$471,367	$471,367	$471,367	$471,367	$471,367	$471,367	2,828,202
14. Bay County Qualifying Facility	78,230	76,230	76,230	76,230	86,060	81,290	472,270
15. Dade County Qualifying Facility	519,010	479,010	439,010	479,010	571,230	505,240	2,992,510
