ORIGINAL  
FILE COPY

Re: Fuel and Purchased Power Cost Recovery Clause  
with Generating Performance Incentive Factor;  
FPSC Docket No. 960001-EI

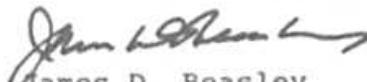

Dear Ms. Bayo:

Enclosed for filing in the above docket, on behalf of Tampa Electric Company, are the original and fifteen (15) copies of Prepared Rebuttal Testimony of John B. Ramil.

Please acknowledge receipt and filing of the above by stamping the duplicate copy of this letter and returning same to this writer.

Thank you for your assistance in connection with this matter.

Sincerely,

  
James D. Beasley

ATTORNEY

1 wrong. His recommendation that incremental fuel pricing is  
2 not appropriate sales other than "economy" transactions and  
3 other short-term transactions is based on an irrational  
4 distinction between short-term and long-term off-system  
5 sales. This approach would deny retail customers the  
6 overall benefits that can be derived from longer term  
7 transactions. I describe how Mr. Larkin's recommendation  
8 incorrectly isolates the consideration of longer term off-  
9 system sales transactions in the context of the fuel clause  
10 alone and ignores the total economic benefits these  
11 transactions provide. I take issue with Mr. Larkin's  
12 contention that competition is the only reason incremental  
13 fuel pricing might be used in pricing off-system sales.  
14 Finally, I show Tampa Electric's ratepayers are receiving  
15 benefits today from separated sales priced at incremental  
16 fuel prices through lower base rates and increased deferred  
17 revenues.

18  
19 Q. Is it necessary for the Commission to issue a policy  
20 regarding the effect of certain wholesale sales on retail  
21 fuel cost recovery for Tampa Electric Company?

22  
23 A. No. In the fuel hearing held in August of 1987, the  
24 Commission reviewed and approved the use of spot coal  
25 prices for fuel pricing of off-system sales. In the final

1 order from that fuel hearing, Order No. 18136 for Docket  
2 Nos. 870001-EI, 870002-EI and 870003-EI, the Commission  
3 recognized the appropriateness of spot coal as the price  
4 basis for economic dispatch of units and as the price basis  
5 for avoided cost payments to cogenerators for both Florida  
6 Power Corporation (FPC) and Tampa Electric. Additionally,  
7 the Commission approved the concept of spot coal pricing  
8 for both short-term off-system sales and for the remaining  
9 term of the unit sale to Florida Power & Light from Big  
10 Bend Unit 4. The considerations which warranted the  
11 Commission's approval of the use of incremental fuel  
12 pricing of unit power sales in the 1987 proceeding remain  
13 valid today. Tampa Electric has made new sales priced on  
14 this basis ever since and has credited the retail fuel  
15 clause accordingly in each biannual fuel hearing. These  
16 practices were thoroughly reviewed in connection with all  
17 of Tampa Electric's off-system sales transactions in Tampa  
18 Electric's 1992 rate case. At that time, the Commission  
19 did not change the fuel pricing and treatment of long-term  
20 sales.

21  
22 Q. Do you agree with Mr. Larkin's assertions regarding the  
23 type of sales for which incremental pricing is appropriate?  
24

25 A. Yes, in part and no, in part. I agree with Mr. Larkin's

1       assertion that incremental fuel pricing is appropriate for  
2       "economy" and other short-term transactions. As Mr. Larkin  
3       recognizes, ratepayers of both the selling utility and the  
4       purchasing utility realize benefits through the sharing of  
5       resources. However, Mr. Larkin has created an artificial  
6       distinction between the sale of electricity on a short-term  
7       or daily basis and longer term off-system sales which are  
8       separated for rate making purposes. Longer term off-system  
9       sales are also beneficial to the system. Therefore, no  
10      artificial limitation should be adopted as policy which  
11      would hinder the use of incremental fuel pricing for one  
12      type of beneficial transaction, (i.e. long-term off-system  
13      sales), but not for another.

14  
15    Q.   Mr. Larkin states that a longer term off-system sale cannot  
16       be an economy transaction. Do you agree with his  
17       assertion?

18  
19    A.   No, I do not. On page 5, line 6 through 8, Mr. Larkin has  
20       added qualifiers to the concept of "economy transaction"  
21       which are erroneous and irrelevant. The term of an off-  
22       system sale of capacity and energy is irrelevant as long as  
23       that transaction provides an economic benefit over that  
24       term. Further, economy broker transactions often occur  
25       during on-peak hours so, clearly, Mr. Larkin's qualifier

1 that economy transactions can occur only during off-peak  
2 hours is in error. All off-system sales should be judged  
3 on their total economic benefits which are dependent on  
4 system economics and the specifics of each transaction. A  
5 policy which would arbitrarily require different fuel  
6 pricing and treatment of off-system transactions based on  
7 the term of the contract or Mr. Larkin's other qualifiers  
8 would be wrong and could result in loss of potential  
9 benefits provided by longer term transactions.

10  
11 Q. Is it appropriate for Mr. Larkin to characterize the sale  
12 of capacity and energy from a unit at a fuel price below  
13 average fuel cost as a "subsidized" sale?

14  
15 A. No, it is not. Mr. Larkin has made several errors in his  
16 characterization. First, he implicitly assumes that  
17 pricing fuel based on average cost guarantees that there  
18 will not be an adverse effect on the retail fuel adjustment  
19 clause. Every customer's transaction, whether retail or  
20 wholesale, affects the fuel adjustment clause differently  
21 based on their usage characteristics compared with the  
22 system generation curve. For example, FPC purchases 50  
23 MW's from Tampa Electric on Tampa Electric's All-  
24 Requirements ("AR-1") wholesale tariff. The fuel pricing  
25 and fuel clause separation for this AR-1 sale is based on

1 system average fuel costs. However, since FPC uses this  
2 purchase as an intermediate purchased power resource, it  
3 takes energy primarily at times on, or near, Tampa  
4 Electric's system peak. Since incremental fuel costs at  
5 these times are generally greater than the system average  
6 fuel revenues collected from Florida Power Corporation,  
7 this sale would be considered "subsidized" or "non economic"  
8 by Mr. Larkin. Mr. Larkin's concerns are with long-term  
9 sales priced at less than average fuel costs. Here is an  
10 example where a sale is priced at system average but by Mr.  
11 Larkin's fuel clause only criteria, this sale is non-  
12 economic. The point is that Tampa Electric follows the  
13 correct methodology for all of its sales. Credits to the  
14 fuel clause should be accounted for on a consistent basis  
15 and should reflect only the actual fuel revenues received  
16 from off-system sales.

17  
18 This leads to the second error in Mr. Larkin's  
19 characterization which involves measuring the value of an  
20 off-system sale based only its impact on the fuel clause.  
21 Continuing with the FPC example above, Tampa Electric  
22 receives significant capacity and non-fuel energy revenues  
23 from the sale of system capacity under the AR-1 tariff.  
24 These additional revenues, taken into consideration along  
25 with the impact of the sale on system average fuel cost,

1           make the transaction beneficial to retail ratepayers and  
2 Tampa Electric's system as a whole. In fact, Tampa  
3 Electric's retail customers are currently enjoying the  
4 benefits of the FPC sale through lower base rates because  
5 that sale was part of the separation of rate base and  
6 expenses to the wholesale jurisdiction that reduced retail  
7 revenue requirements in Tampa Electric's last base rate  
8 case in 1992.

9  
10 Q. Mr. Larkin asserts that the presence of competition drives  
11 the need for incremental fuel pricing in off-system sales  
12 of capacity and energy. Do you agree?

13  
14 A. Yes, in part. Undoubtedly, competition is shaping the  
15 wholesale power market. However, Mr. Larkin's scenario of  
16 two local utilities competing to serve a third utility is  
17 outdated. There are many more competitors in the wholesale  
18 market today and they are aggressively marketing power to  
19 utilities in Florida, frequently basing their pricing on  
20 incremental fuel costs.

21  
22 Nevertheless, where I particularly disagree with Mr. Larkin  
23 is his assertion that only competition drives the need for  
24 incremental fuel cost pricing. For instance, just as the  
25 Commission approved spot coal pricing for economic dispatch

1 of Tampa Electric's generation resources in 1987,  
2 purchasing utilities can require spot coal pricing to  
3 increase the dispatchability of their purchased capacity  
4 resources. Additionally, many purchasing utilities are  
5 willing to assume greater risk by purchasing energy based  
6 on spot coal prices on the prospect that if spot coal  
7 prices stay low, the sale will dispatch more. Should coal  
8 markets change and spot prices exceed the average price of  
9 coal, such wholesale customers risk having to pay fuel  
10 prices above average. This fuel revenue would then be  
11 credited to the retail fuel adjustment clause and thereby  
12 lower the retail average fuel cost. I doubt OPC or Mr.  
13 Larkin would recommend that average fuel cost be credited  
14 back to the retail fuel adjustment clause in this scenario.  
15

16 Q. Mr. Larkin questions the designation of a wholesale  
17 customer as an incremental transaction. What are your  
18 thoughts regarding his position?  
19

20 A. Mr. Larkin states that the designation of a new customer as  
21 an incremental customer is not justified from an economic  
22 standpoint. This is incorrect in the case of off-system  
23 sales. Providing capacity and energy to wholesale  
24 customers, in contrast to retail customers, is not a legal  
25 obligation of Tampa Electric. Whether or not wholesale

1 transactions should be made depends upon on whether or not  
2 the overall effect is beneficial. Therefore, the  
3 designation as incremental is appropriate.  
4

5 As a incremental customer, the use of spot coal pricing for  
6 the determination of incremental costs is appropriate.  
7 Tampa Electric purchases less coal under long-term contract  
8 minimums than is required by the generation needs of its  
9 retail customers alone. To the extent that Tampa Electric  
10 elects to serve one of these discretionary wholesale  
11 customers from a coal-fired unit, the appropriate fuel  
12 pricing for that sale is spot coal. This appropriately  
13 represents the incremental costs of making the sale and  
14 does not represent a price "concession" as Mr. Larkin states  
15 in his testimony.  
16

17 Q. Mr. Larkin disagrees with your testimony that retail  
18 ratepayers benefit from wholesale sales through the  
19 contribution to fixed costs. Please describe why Mr.  
20 Larkin's disagreement with your testimony is incorrect.  
21

22 A. It is indisputable that Tampa Electric's ratepayers are  
23 currently enjoying the benefits of Tampa Electric's  
24 participation in the wholesale bulk power market. For  
25 example, the jurisdictional revenue requirement used to set

1 Tampa Electric's retail base rates is approximately \$9.0  
2 million lower than it otherwise would have been if rate  
3 base and expenses were not separated from the retail  
4 jurisdiction to reflect transactions with incremental fuel  
5 pricing. Comparing this \$9.0 million dollar annual revenue  
6 requirement reduction to the estimated \$1.1 million fuel  
7 clause impact in 1995 clearly shows that retail ratepayers  
8 are currently enjoying the positive benefits of this type  
9 of transaction year after year. In fact, retail ratepayers  
10 are enjoying approximately eight times as much positive  
11 benefit as they are absorbing negative fuel impact.

12  
13 While it is true that retail rates do not change  
14 instantaneously with the addition, or loss of a separated  
15 sale, these sales nevertheless should not be discouraged  
16 through an arbitrary regulatory treatment as proposed by  
17 Mr. Larkin. Each of these sales contributes revenues to  
18 cover fixed costs which would otherwise be placed on retail  
19 customers.

20  
21 In addition, as I stated in my direct testimony in this  
22 proceeding, Tampa Electric is currently operating under a  
23 regulatory treatment where the benefits to our customers  
24 from incremental off-system sales are even more immediate  
25 and direct than is normally the case. First, the

1 separation of rate base and expenses for surveillance  
2 report purposes is adjusted monthly according to the  
3 current level of actual MW and MWH of separated sales  
4 compared to the level included in the last projected test  
5 year under which current base rates were set. Thus, when  
6 an additional sale is made, additional rate base and  
7 expenses are carved out of the retail jurisdiction raising  
8 the reported return on equity. Next, owing to the deferred  
9 revenue plan that the company, the Office of Public Counsel  
10 and the Florida Industrial Power Users Group agreed to, and  
11 which the Commission approved first for 1995 and then for  
12 the period 1996 - 1998, this increased return on equity  
13 results in increased deferred revenues and potential  
14 refunds.

15  
16 Q. Is Mr. Larkin correct that the contribution to fixed cost  
17 derived from separated off-system sales flows directly to  
18 shareholders?

19  
20 A. No, he is not. Beyond the impact on return on equity,  
21 Tampa Electric's current deferred revenue plans for the  
22 years 1995 and 1996 through 1998 are providing timely  
23 benefits to the retail ratepayers. For example, Tampa  
24 Electric deferred approximately \$50 million in revenue from  
25 1995 based on the deferred revenue plan approved on May 20,

1 1995. Had Tampa Electric's rate base and expenses  
2 associated with all separated wholesale sales not been  
3 separated in 1995, those deferred revenues would have been  
4 reduced by approximately \$29 million.

5  
6 Q. Do you agree with Mr. Larkin that all utilities will adopt  
7 the procedure of pricing off-system sales at incremental  
8 fuel costs?

9  
10 A. No, I do not agree. First, Tampa Electric received  
11 approval for incremental fuel cost pricing of unit sales in  
12 the 1987 fuel hearing. This approval may not apply to  
13 other utilities.

14 Second, the economics of other utilities may not make this  
15 option beneficial. I believe there are differences between  
16 Tampa Electric's generation resources and those of the  
17 other utilities in the state. Because of these  
18 differences, the other utilities may not be able to price  
19 fuel at their incremental cost and be able to make sales  
20 which are both attractive in the market place and  
21 beneficial to their retail customers. Therefore, it is  
22 possible that other utilities in the state may not be in  
23 the position to make off-system sales proposals similar to  
24 those offered by Tampa Electric.

25

1 Q. What should be the Commission's expectation with respect to  
2 such sales by other utilities?  
3  
4 A. To the extent incremental fuel cost pricing can be used by  
5 other utilities to make off-system sales that might not  
6 otherwise be made and such sales are beneficial to the  
7 retail customers, they should be encouraged to make this  
8 type of transaction. By maximizing the use and the  
9 efficiency of generation resources, these companies and  
10 their ratepayers will benefit in the end. There is no  
11 rational reason for the Commission to issue a policy which  
12 will discourage utilities from executing off-system sales  
13 agreements that provide total economic benefits to their  
14 customers and their system. Such a policy would not only  
15 harm the selling utility's retail customers, but it would  
16 also disadvantage the purchasing utility's customers since  
17 they would be denied the benefits of an economic purchase.  
18  
19 Q. Does this conclude your testimony?  
20  
21 A. Yes it does.  
22  
23  
24  
25
