SECTION 3 - DESCRIPTION OF SERVICE

3.1 Timing of Calls

- 3.1.1 Long distance usage charges are based on the actual usage of TCCF's network. The Company will determine that a call has been established when the called party's station answers. When the station answers is determined by hardware answer supervision, through which the local telephone company sends a signal to indicate an answer. A call is terminated when either party hangs up.
- 3.1.2 Minimum billed call duration and billing increments differ from product to product. Product-specific information is included 4.0 Rate Schedules.
- 3.1.3 Usage is measured and rounded to the next higher increment for billing purposes.
- 3.1.4 There is no billing applied for incomplete calls.

SECTION 3 - DESCRIPTION OF SERVICE, CONT.

3.2 Minimum Call Completion Rate

TCCF relies upon its underlying carrier to provide a call completion rate (number of calls completed/number of calls attempted) of not less than 90% during peak use periods for all FGD services ("1+" dialing).

3.3 TCCF's Direct Dialed Long Distance Service

TCCF's direct dialed long distance service is offered for switched outbound calling (direct dial or travel card) within the state of Florida. Calls are billed in six second increments, with an 18 second minimum. Calls are not time-of-day or mileage sensitive.

3.4 TCCF's 800 Service

TCCF's 800 service is an inbound 800 switched service that is non-mileage sensitive, measured service. Usage is billed in 6 second increments, with an 18 second minimum call duration.

SECTION 3 - DESCRIPTION OF SERVICE, CONT.

3.4 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

Step 1 - Obtain the "V" and "H" coordinates for the serving wire center of the Customer's switch and the destination point.

Step 2 - Obtain the difference between the "V" coordinates of each of the serving wire centers. Obtain the difference between the "H" coordinates.

Step 3 - Square the differences obtained in Step 2.

Step 4 - Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5 - Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6 - Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$
