TARIFF FORMAT

- A. Sheet Numbering - Sheet numbers appear in the upper-right corner of the sheet. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between existing sheets with whole numbers, a decimal is added. For example, a new sheet added between Sheets 34 and 35 would be Sheet 34.1.
- B. Sheet Revision Numbers - Revision numbers also appear in the upper-right corner of the sheet. These numbers are used to determine the most current sheet version on file with the Commission. For example, 4th Revised Sheet 34 cancels 3rd Revised Sheet 34.
- C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level of coding.

The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new sheets are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (\*). There will be no other symbols used on this sheet if these are the only changes made to it (i.e., the format, etc., remains the same, just revised revision levels on some sheets). The tariff user should refer to the latest check sheet to find out if a particular sheet is the most current sheet on file with the Commission.

SECTION 3 - DESCRIPTION OF SERVICE AND RATES

3.1 Timing of Calls

The customer's monthly usage charges are based upon the total number of minutes use by the customer and the service options subscribed to. Usage begins when the called party picks up the receiver, (i.e. When two-way communications, often referred to as "conversation time" is possible.). When the called party picks up is determined by hardware answer supervision in which the local telephone company sends a signal to the switch or the software utilizing audio tone detection. When software answer supervision is employed, up to sixty (60) seconds of ringing is allowed before it is billed as usage of the network. A call is terminated when the calling or called party hangs up. There are no charges incurred for uncompleted calls.

3.2 Start of Billing

For billing purposes, the start of service is the day following acceptance by the customer of Carrier's service or equipment. The end of service date is the day on which service was discontinued.

3.3 Interconnection

Service furnished by Carrier may be interconnected with services or facilities of other authorized communications common carriers and with private systems, subject to the technical limitations established by Carrier. Interconnection with the facilities or services of other carriers shall be under the applicable terms and conditions of other carriers' tariffs.

3.4 Terminal Equipment

Carrier's service may be used with or terminated in customer provided terminal equipment or customer provided communication systems, such as teleprinters, handsets, or data sets. Such terminal equipment shall be furnished and maintained at the expense of the customer. The Customer is responsible for all costs at his premises, including customer personnel, wiring, electrical power, and the like incurred in his use of carrier's service. Carrier may, upon written notice, require the use of protective equipment at the customer's expense. If this fails to produce satisfactory quality and safety, Carrier may, upon written notice, terminate the customer's service.

3.5 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between rate centers associated with the originating and terminating points of the call.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. The company uses the rate centers and associated vertical and horizontal coordinates currently used within the telephone industry.

Formula: 
$$\sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$

3.6 Minimum Call Completion Rate

The customer can expect a call completion rate of 99% of calls attempted during peak use periods for all Feature Group D (1+) services.

3.7 Hearing or Speech Impaired Persons

Rates for calls are reduced for residence or single-line business customers who meet the following requirements:

A. The customer is certified to the Company as having a hearing or speech impairment that prevents telephone voice communications.

B. The customer uses a telecommunications device for the deaf (TDD) or other non-voice equipment for telecommunications.

C. The customer provides a written application to the Company for reduced rates.

D. The customer designates to the Company one telephone number associated with that customer's service and telecommunications device.

Intrastate toll message rates for hearing and speech impaired persons meeting the above requirements shall be Evening rates for daytime calls and Night rates for evening and night calls.

The 800 service offered by Carrier is available to customers as a stand-alone offering.

Carrier will accept a prospective 800 service customer's request for up to ten (10) 800 telephone numbers and will reserve such number(s) on a first come first serve basis.
