Ms. Connie Kummer, Chief  
Bureau of Electric Rates  
Florida Public Service Commission  
2540 Shumard Oak Boulevard  
Tallahassee, FL 32399-0850

RE: Load Research Data Filing

960482-EI

Dear Ms. Kummer:

Attached to this letter are ten (10) copies of FPL's filing to comply with the requirements of Rule 25-6.0437, Subsection 7, F.A.C. The attached information is based on rate load research data collected during the period of December 29, 1994 through December 28, 1995.

A waiver to extend the date for filing this load research study from April 29, 1996 to August 30, 1996 was approved by the Florida Public Service Commission in Order No. PSC-96-0593-FOF-EI, Docket No. 960482-EI. As indicated in the same order, Docket No. 960482-EI shall be closed upon the filing of the study.

Please acknowledge receipt of this filing by stamping the duplicate copy of this letter. If you have any questions or require additional information about this filing, please call Josefina Yespica at (305) 552-2194 or me at (305) 552-2365.

Sincerely,

*Rosemary Morley*  
Rosemary Morley

## I Executive Summary

The purpose of this load research study is to comply with the requirements of section (7) of the Florida Public Service Commission's Rule 25-6.0437, Cost of Service Load Research, which is quoted below:

### 25-6.0437 Cost of Service Load Research.

(1) **Applicability.** This rule shall apply to all investor owned electric utilities over which the Commission has jurisdiction and which had gross annual retail sales of 500 GWH or more in 1983.

(2) **Purpose.** The primary purpose of this rule is to require that load research that supports cost of service studies used in ratemaking proceedings is of sufficient precision to reasonably assure that tariffs are equitable and reflect the true costs of serving each class of customer. Load research data gathered and submitted in accordance with this rule will also be used by the Commission in evaluating proposed and operating conservation programs, for research, and for other purposes consistent with the Commission's responsibilities.

(3) **Sampling Plan.** All utilities subject to this rule shall, within 90 days of the effective date of this rule, submit to the Commission a proposed load research sampling plan. The plan shall provide for sampling all rate classes that account for more than 1 percent of a utility's annual retail sales. The plan shall provide that all covered rate classes shall be sampled within two years of the effective date of this rule. The sampling plan shall be designed to provide estimates of the summer and winter peak demand by class and the averages of the 12 monthly coincident peaks for each class within plus or minus 10 percent at the 90 percent confidence level. Any utility subject to this rule may apply to the Commission to waive the requirements hereof for any specific covered rate class.

(4) **Review of Proposed Plan.** Except where a utility has requested a formal ruling by the Commission, within 90 days after submission, the Commission's Electric and Gas Department shall review each utility's plan to determine whether it satisfies the criteria set forth in subsection (3) above and shall notify the utility in writing of its decision accepting or rejecting the proposed sampling plan. If a proposed plan is rejected, the written notice of rejection shall state clearly the reasons for rejecting the proposed plan. If a utility's proposed plan is rejected, the utility shall submit a revised sampling plan to the Commission within 60 days after receiving the notice of rejection. Where a utility has requested staff review of its sampling plan and the plan has been rejected, the utility may petition the Commission for approval of the plan. If a utility has not submitted a satisfactory sampling plan within 6 months following the submission of the initially proposed plan, the Commission may prescribe by order a sampling plan for the utility.

(5) **Use of Approved Sampling Plan.** The approved sampling plan shall be used for all load research performed for cost of service studies and other studies submitted to the Commission until a new sampling plan is approved by the Commission.

(6) **Revised Sampling Plans.** Each utility subject to this rule shall submit a current, revised sampling plan to the Commission no less than every two years after the initial sampling plan is approved. Any new or revised plan shall be developed using data from the utility's most current load research to determine the required sampling plan to achieve the precision required in subsection (3) of this rule. New or revised plans shall be reviewed by the Commission pursuant to subsection (4) of this rule.

(7) **Load Research Data to be Reported.** Each utility subject to this rule shall perform a complete load research study in accordance with the specifications of this rule by December 31, 1985, and no less often than every two years thereafter. Each utility shall, within 120 days following completion of the study, submit to the Commission the results of each load research study completed after the effective date of this rule. This submission shall include the hourly load data described in subsection (8) for the residential class. The load research results of each study shall be submitted on a form prescribed by the Commission.

(8) **Hourly Data to be Available Upon Request.** Each utility subject to this rule shall make available within 90 days of a request by the Commission the estimated hourly demands by class for all 8760 hours in the year derived from this load research.

The following table lists the rate schedules included in this report and shows annual retail sales and average population data for each rate class.

Rate Schedules, Annual Sales and Average Population (Listed in Percentage of Sales Order)

Rate Classes Included in This Report	1995 Annual Retail Sales		Average Monthly Population
	MWh	Percent	
RS(T)-1 Residential Service, RS-1 & RST-1	40,515,136	53.137%	3,092,638
GSD(T)-1 General Service Demand, GSD-1 & GSdT-1	17,339,829	22.742%	72,186
GSLD(T)-1 General Service Large Demand 1, 500 to 1,999 kW, GSLD-1 & GSLDT-1	6,836,974	8.967%	1,915
GS(T)-1 General Service Non-Demand, GS-1 & GST-1	4,766,672	6.252%	308,947
CILC-1D Commercial/Industrial Load Control, Distribution	2,307,635	3.027%	300
GSLD(T)-2 General Service Large Demand 2, 2000 kW and greater, GSLD-2 & GSLDT-2	1,399,717	1.836%	85
CILC-1T Commercial/Industrial Load Control, Transmission	1,084,665	1.423%	12

For purposes of this study, the Time-of-Use rate classes were combined with their associated Non-Time-of-Use classes. For example, GS-1 and GST-1, both General Service Non-Demand rate classes, were analyzed as one class - see GS(T)-1 above.

The studies for the RS(T)-1, GS(T)-1, GSD(T)-1, and GSLD(T)-1 rate classes are based on samples, due to the population sizes. The other rate classes included in this report are 100% metered with recording meters for billing purposes and therefore do not require statistical sampling.

In accordance with section (3) of Rule 25-6.0437, the RS(T)-1, GSD(T)-1, and GSLD(T)-1 samples were designed to provide the required estimates within plus or minus 10 percent error at the 90 percent confidence level. The GS(T)-1 sample was designed to provide the above required accuracy for all estimates but the winter peak demand, given a Florida Public Service Commission (FPSC) approved waiver to relax the winter peak demand estimate accuracy from 10 percent to 12 percent.

---

## II. Sampling Methodology

This section summarizes the key elements of the load research sampling methodology used in this study.

### Metering of Sample Members

The sampled customer's conventional kilowatt-hour meter was replaced with a solid-state survey recording device to monitor electricity demand usage. The data from these recording devices was translated, and acceptable data was processed on the LODESTAR® computer system. Load data was analyzed on a fiscal month basis to derive the average load data and related information contained in this report.

### Selection of Replacements

In order to maintain the randomness of the sample, every effort was made to include the customers originally selected. In situations where it became absolutely impossible to include the original customer, a replacement was picked from a list of alternates which were randomly selected at the same time the original sample was drawn. The selected replacement was the first available alternate on the list within the same stratum and district as the original sample. See Section IV of this report for a summary of replacements by sampled rate class.

### Installation Procedures

Customers with an ongoing diversion investigation or a location where current diversion is discovered upon meter change out are excluded from the sample.

When necessary, special equipment is ordered so that the selected customers remain in the test.

Kilowatt-hour meters are replaced with recording meters without notifying the customers. This policy is in place in order to minimize rejection since no additional rewiring is necessary to install the research meter. The recording meter captures the same billing information as a kilowatt-hour meter.

Responsible meter personnel may declare a selected location unsuitable if it appears that the recording equipment cannot be installed at the location. If it is declared unsuitable, the reasons why the installation can not be made are communicated to the load research personnel in the Cost of Service Section of the Rates and Tariff Administration Department. In turn the Cost of Service Section provides the field personnel with a replacement from the list of alternates that was generated at the time the sample was selected.

A thirty (30) day waiting period is observed before a sample is replaced due to inactivity. The replacement sample is obtained from the list of alternates that was generated at the time the initial sample was selected.

Rate class changes are monitored continuously. If a change is observed, the sample is replaced immediately.

---

### Extrapolation Technique

The *combined ratio* technique is currently used at FPL for the sampled rate classes (RS(T)-1, GS(T)-1, GSD(T)-1, and GSLDT-1). The methodology involves multiplying the mean demand for the sample times the ratio of the rate class stratification variable (energy, demand, etc.) to the sample mean stratification variable to obtain the class demand estimate from the samples.

### III. Sampling Plans

The sampling plans for this load research study were filed with the Florida Public Service Commission (FPSC) on November 30, 1992 for the RS(T)-1, GS(T)-1, GSD(T)-1 and GSLD(T)-1 Rate Schedules. The plans were implemented after approval was received from the FPSC.

Solid state meters (SSDR's) for billing purposes were already in place for the 100% SSDR metered rate classes. For the sampled rate classes (RS(T)-1, GS(T)-1, GSD(T)-1 and GSLD(T)-1) samples were selected and recording meters were installed on the electric services of the sample members. Most of the recording meters were in place by December 29, 1993 for the RS(T)-1 customers, and by December 29, 1992 for the GS(T)-1, GSD(T)-1 and GSLD(T)-1 customers. Formal data collection began at these dates and continues for three years. Before each study group is removed, a new study group is installed. The data used in this report covers the fiscal months of 1995 (December 29, 1994 through December 28, 1995).

#### GS(T)-1 General Service Non-Demand Rate Class Sampling Plan (GS-1 & GST-1)

A two-dimensional stratification technique was used for the GS(T)-1 Rate Class. The technique involved stratification using a summer and winter peak month billed kWh. August 1991 and January 1992, the most recent seasonal peaks prior to the commercial study sample design, were used. The customer population was divided into cells (or strata) based on whether their energy use was "high" for both peak months, "low" in both months, "high:low" or "low:high". When a customer in the class population had a datum value for only one of the stratification months, they were placed in the "high:high" or "low:low" cell depending on whether their single value was high or low. The Dalenius-Hodges procedure, applied to the billed energy data for the two peak months, yielded the cell boundaries.

Stratum	Strata Break Point <sup>1</sup>	Population Size	Sample Points	Stratum Weight
1	Low winter:Low summer	189,591	241	0.72279
2	Low winter:High summer	15,611	30	0.05952
3	High winter:Low summer	9,724	30	0.03707
4	High winter:High summer	47,377	155	0.18062
Total		262,303	456	1.00000

Date Sample Plan Developed: 09-30-92

#### GSD(T)-1 General Service Demand Rate Class Sampling Plan (GSD-1 & GSDT-1)

A one-dimensional stratification technique was used for the GSD(T)-1 Rate Class. The technique involved

---

<sup>1</sup> Low Winter: 0 - 1600 kWh; Low Summer: 0 - 2200 kWh; High Winter: 1601 kWh & above; High Summer: 2201 kWh & above

stratification using an annual monthly mean maximum customer demand. The customer population was divided into cells (or strata) based on the Dalenius-Hodges procedure, applied to billed demand data.

Stratum	Strata Break Point	Population Size	Sample Points	Stratum Weight
1	20 to 30 kW	27,954	30	0.41913
2	31 to 50 kW	16,616	30	0.24913
3	51 to 80 kW	9,380	30	0.14064
4	81 to 200 kW	9,147	39	0.13715
5	201 to 499 kW	3,598	37	0.05395
Total		66,695	166	1.00000

Date Sample Plan Developed: 09-30-92

**GSLD(T)-1 General Service Large Demand 1 Rate Class Sampling Plan (GSLD-1 & GSLDT-1)**

A one-dimensional stratification technique was used for the GSLD(T)-1 Rate Class. The technique involved stratification using an annual monthly mean maximum customer demand. The customer population was divided into cells (or strata) based on the Dalenius-Hodges procedure, applied to billed demand data.

Stratum	Strata Break Point	Population Size	Sample Points	Stratum Weight
1	500 to 510 kW	480	30	0.29091
2	511 to 740 kW	614	30	0.37212
3	741 to 1,100 kW	359	30	0.21758
4	1,101 to 1,999 kW	197	30	0.11939
Total		1,650	120	1.00000

Date Sample Plan Developed: 09-30-92

---

**RS(T)-1 Residential Service Rate Class Sampling Plan (RS-1 & RST-1)**

A two-dimensional stratification technique was used for the RS(T)-1 Rate Class. The technique involved stratification using a summer and winter peak month billed kWh. August 1991 and January 1992, the most recent seasonal peaks prior to the residential study sample design, were used. The customer population was divided into cells (or strata) based on whether their energy use was "high" for both peak months, "low" in both months, "high:low" or "low:high". When a customer in the class population had a datum value for only one of the stratification months, they were placed in the "high:high" or "low:low" cell depending on whether their single value was high or low. The Dalenius-Hodges procedure, applied to billed energy data for the two peak months, yielded the cell boundaries.

Stratum	Strata Break Point <sup>2</sup>	Population Size	Sample Points	Stratum Weight
1	Low winter:Low summer	1,550,888	166	0.62100
2	Low winter:High summer	256,812	38	0.10293
3	High winter:Low summer	159,194	30	0.06374
4	High winter:High summer	530,529	97	0.21243
Total		2,497,423	331	1.00000

Date Sample Plan Developed: 09-30-92

#### IV. Replacements

The replacements shown below include periodic replacements during the period of December 29, 1992 through December 28, 1995 for GS(T)-1, GSD(T)-1, and GSLD(T)-1; and December 29, 1993 through December 28, 1995 for RS(T)-1. The replacements were obtained from the original computer generated random selection list for each sampled rate class. Each list consisted of 10 sample customers for each customer needed per stratum per district.

	Sample Size	Replacements
General Service Non-Demad [GS(T)-1]	456	115
General Service Demad [GSD(T)-1]	166	25
General Service Large Demad [GSLD(T)-1]	120	32
Residential [RS(T)-1]	331	71

---

<sup>2</sup> Low Winter: 0 - 1100 kWh; Low Summer: 0 - 1700 kWh; High Winter: 1101 kWh & above; High Summer: 1701 kWh & above

---

## V. Results and Statistical Accuracy Achieved

This section contains the estimated class demands for the coincident and non-coincident peaks from January through December 1995 for all the rate classes included in this report. Also included in this section for the sampled rate classes are the 90% confidence intervals around the monthly peak demands and their percent relative accuracy. The averages of the twelve monthly coincident peaks, their 90% confidence intervals, and their relative accuracies are computed for the twelve month period ending December 1995. The statistics shown were obtained using the LODESTAR® computer programs.

The winter system peak occurred on February 9, 1995 during the hour ending at 8:00 AM and the summer system peak occurred on June 9, 1995 during the hour ending at 5:00 PM.

The target level of statistical accuracy of plus or minus 10% error [12% for GS(T)-1] at the 90% confidence level for the system winter peak, system summer peak, and the average of the twelve monthly coincident peaks was met for all sampled rate classes.

VI. Residential Service Hourly Load Data

This section contains the estimated hourly demands for the RS(T)-1 rate class for all 8760 hours of the year 1995, derived from this load research study.

The data listed below is listed in the EEI format. Each line contains 12 hours of load data, in mega-watts, starting in the third column at hour ending 1:00. The first column is the date, and the second indicates AM or PM.

		1:00	2:00	3:00	4:00	5:00	6:00	7:00	8:00	9:00	10:00	11:00	12:00
