BEFORE THE PUBLIC SERVICE COMMISSION

PREPARED DIRECT TESTIMONY

OF

JOHN B. RAMIL

Q. Please state your name, address, occupation and employer.

A. My name is John B. Ramil. My business address 702 North Franklin Street, Tampa, Florida 33602. I am employed by Tampa Electric Company in the position of Vice President-Energy Services & Planning.

Q. Please provide a brief outline of your educational background and business experience.

A. I was educated in the private schools of Tampa, Florida. I graduated from the University of South Florida in June of 1978 with a Bachelor of Science degree in Engineering. I am a registered professional Engineer in the State of Florida.

I joined Tampa Electric Company in March of 1976 as a cooperative education student and began full-time employment with the Company in June of 1978. I was responsible for various engineering assignments prior to

DOCKET NO. 970171-EU

J4233 APR 25 1978

FPSC-RECORDS/REPORTING

1 being promoted to Manager, Environmental Planning in 1982.

2
3 From June 1984 until April 1994 when I was promoted to my
4 present position, I held the positions of: Manager,
5 Generation Planning; Manager, Fuel Planning and Operations;
6 Assistant Director, Power Resource Planning; and Director,
7 Resource Planning. Currently I am Vice President - Energy
8 Services, responsible for the company's customer service,
9 energy services, bulk power and planning functions.

10
11 Q. Have you testified previously before the Florida Public
12 Service Commission ("FPSC" or "the Commission")?

13
14 A. Yes. I have testified on behalf of Tampa Electric in a
15 number of proceedings before this Commission. I testified
16 in Docket No. 870001-EI, having to do with Tampa Electric's
17 off-system sales, Big Bend unit 4 power sales contract
18 modifications, and the appropriate fuel prices for dispatch
19 and interchange pricing. I submitted direct and rebuttal
20 testimony in Docket No. 870408-EI in support of Tampa
21 Electric's request for approval of its proposed non-firm
22 load methodology and annual targets. I also testified in
23 support of determinations of need for the Hardee Power
24 Station, Docket No. 880309-EI and Tampa Electric's Polk
25 Unit One, Docket No. 910883-EI. In addition, I testified

1 on the subject of as-available energy payments to
2 cogenerators and small power producers, Docket No. 880001-
3 EI and in the Commissions annual planning hearing, Docket
4 No. 880004-EU. I testified on issues related to system
5 planning, fuel inventory planning, wholesale sales,
6 acquisitions and system construction in the company's last
7 rate case, Docket No. 920324-EI. I testified in Docket No.
8 930676-EI, regarding the proposed construction of 69kV
9 transmission facilities to serve the Cities of Fort Meade
10 and Wauchula. Most recently, I testified in Docket No.
11 960001-EI, on the wholesale fuel issue in the August Fuel
12 Adjustment hearing.

13

14 Q. What is the purpose of your testimony?

15

16 A. The purpose of my testimony is to outline the Company's
17 proposed retail regulatory treatment for the wholesale
18 sales and to demonstrate that this proposal is consistent
19 with well established economic theory, past commission
20 precedents and sound public policy.

21

22 Q. Why is making wholesale sales important to Tampa Electric
23 Company?

24

25 A. Making cost effective wholesale sales which provide

1 revenues greater than the incremental cost of making such
2 sales is good for the Company's retail customers as well as
3 its shareholders. Since its 1985 rate case, when this
4 Commission gave the Company an incentive to keep retail
5 prices down by increasing wholesale revenue, the Company
6 worked hard to optimize those sales. The current and
7 anticipated levels of such wholesale revenue has been one
8 of several significant variables that this Company has
9 managed resulting in reduced prices to customers in spite
10 of the pressure of increasing costs. Retail customers
11 benefit through low prices and stockholders benefit in the
12 increase in probability of the Company earning its allowed
13 rate of return.

14
15 Q. Mr. Ramil, please give a brief description of the Tampa
16 Electric wholesale sale to the Florida Municipal Power
17 Agency.

18
19 A. Tampa Electric will provide firm base load capacity to the
20 Florida Municipal Power Agency (FMPA) from December 16,
21 1996 through March 15, 2001. The capacity to be supplied
22 will begin with 35 megawatts through 1997, increasing to
23 150 megawatts in 2000. Ms. Branick will describe this
24 wholesale sale to FMPA in detail.

25

- 1 Q. Mr. Ramil, please give a brief description of the wholesale
2 sale between Tampa Electric and the City of Lakeland.
3
- 4 A. Tampa Electric will provide 10 megawatts of peaking
5 capacity to the City of Lakeland (Lakeland) from November
6 4, 1996 through September 30, 2006. Ms. Branick will
7 describe this wholesale sale to Lakeland in detail.
8
- 9 Q. How do the characteristics of these sales differ from the
10 characteristics of other wholesale sales made from Tampa
11 Electric's system?
12
- 13 A. The most significant difference between the FMPA and
14 Lakeland sales with the previous sales reviewed by this
15 Commission is the dynamic market environment in which these
16 sales were made. For example, in the 1980's and early
17 1990's, when the firm base load Big Bend Station sales were
18 made, the market price for base load capacity was
19 approximately equal to Tampa Electric's average system
20 embedded cost. Thus, the non-fuel revenues received from
21 these contracts were approximately equal to the cost
22 allocated to the wholesale jurisdiction. Since that time,
23 several things have occurred. The Florida wholesale market
24 currently has some capacity and ample energy available at
25 low prices, and out-of-state power marketers have become

1 active players in the wholesale market. The combination of
2 these factors has created a "buyers market" for capacity and
3 energy. Buyers are faced with more wholesale power options
4 than ever before and are in a position to secure
5 competitive prices that are lower than previous years.
6 Tampa Electric was able to compete successfully in the
7 market to meet the needs of FMPA and Lakeland reliably and
8 at a competitive price. The prices, while above the
9 incremental costs, are below the Company's average embedded
10 costs.

11
12 The FMPA and Lakeland agreements also differ from the bulk
13 of Tampa Electric's previous wholesale sales because they
14 contain a provision for supplemental service and are made
15 from a different mix of resources. The vast majority of our
16 existing wholesale sales come from our units at Big Bend
17 Station. The FMPA sale is the only wholesale transaction
18 by Tampa Electric that is served by individual units from
19 both Tampa Electric's Big Bend Station and its Gannon
20 Station. The Lakeland sale is a wholesale transaction
21 supplied from all of Tampa Electric's generating resources.

22
23 Q. What makes Tampa Electric's wholesale sales such as those
24 to FMPA and Lakeland competitive with other sales in the
25 wholesale market?

1 A. Tampa Electric's system has low incremental fuel costs for
2 most hours of the day. Over ninety percent of Tampa
3 Electric's generation comes from low-cost, coal-fired
4 generation. Thus, coal is on the margin a significant
5 portion of the time enabling a sale priced from these types
6 of units to dispatch well in the buying utility's system.
7 Ms. Branick's testimony will discuss Tampa Electric's
8 incremental costs in more detail.

9
10 Q. How should the revenues and costs associated with Tampa
11 Electric's wholesale sale to FMPA and Lakeland be treated
12 for retail regulatory purposes?

13
14 A. Tampa Electric Company proposes the following regulatory
15 treatment for these sales:

16
17 1. These sales should not be separated either in the
18 traditional system average cost manner or in a manner
19 which recognizes market pricing as it has been done
20 before.

21
22 Fuel Treatment:

23 2. The Fuel and Purchase Power Cost Recovery Clause (Fuel
24 Clauses) should be credited with an amount equal to
25 system incremental fuel costs.

Specified Non-Fuel Revenues:

3. The Environmental Cost Recovery Clause (ECRC) should be credited with an amount equal to incremental costs for SO₂ allowances.
4. Revenues associated with variable operating and maintenance costs should be credited above the line to the company's operating revenues.
5. Transmission revenues should be credited to the company's operating revenues above the line.

Remaining Non-Fuel Revenues:

6. The remaining sale proceeds should be divided 50/50 between retail rate payers through the Fuel Clause and the company as an addition to operating revenues.

Q. Why do you propose the system incremental fuel and SO₂ allowance cost be credited to the clauses?

A. As Ms. Branick will discuss in more detail, by assessing a cost equal to the incremental fuel and SO₂ allowance costs and crediting these costs to the Fuel and Purchased Power Cost Recovery Clause and the Environmental Cost Recovery Clause, any impact on making these sales on the retail customer has been eliminated. This would not be the case if system average fuel cost, which includes fixed fuel

1 costs, were credited to the fuel clause, provided system
2 average fuel cost and system incremental fuel cost were not
3 equal for the time period over which the calculations were
4 made. This would also not be the case if the fuel revenues
5 from the sale were credited through the fuel clause. As
6 explained by Ms. Branick, crediting to the retail fuel
7 clause the system incremental fuel costs incurred to serve
8 the wholesale sales ensures that retail fuel charges are no
9 higher than they would be had the sale not been made.

10
11 **Q.** Please explain your proposal for the crediting of sale
12 revenues to cover transmission and incremental variable
13 operating and maintenance costs?

14
15 **A.** The Federal Energy Regulatory Commission (FERC) Orders 888
16 and 889 require a utility to charge itself for the use of
17 its transmission system identically to the way it would
18 charge any other user of its transmission system and to
19 account for this revenue stream separately. Transmission
20 revenues associated with wholesale sales were either
21 separated (for separated sales), or revenue credited (for
22 wheeling revenues from cogenerator use of the transmission
23 system) in Tampa Electric's last rate case, Docket No.
24 920324-EI. Therefore, to operate in keeping with the
25 direction of FERC Order 888 and 889, Tampa Electric should

1 credit the transmission revenues, above the line for
2 regulatory purposes just like it would do for transmission
3 revenues from a cogenerator or other third-party.
4

5 Tampa Electric proposes to record, above the line, variable
6 operating and maintenance expense revenues to cover the
7 variable operating and maintenance costs associated with
8 the sale. Since these costs are not currently being borne,
9 through the cost recovery clauses, by the retail ratepayer,
10 it would be inappropriate to return these revenues to the
11 ratepayer through a clause mechanism.
12

13 Q. What are the ratepayer benefits associated with Tampa
14 Electric's proposal?
15

16 A. Ratepayer benefits are as follows: Customers will recognize
17 immediate benefits from their 50% share of the proceeds by
18 the proposed credit through the clauses, and will also
19 realize the benefits of the 50% credited to operating
20 revenues in two ways. First, these revenues will indeed
21 enhance the potential for refunds during the term of Tampa
22 Electric's current rate Stipulation. Secondly, these sales
23 will contribute to lowering the revenue requirement in
24 Tampa Electric's next rate proceeding, or in postponing
25 altogether a need for a rate case. In addition, the

1 proposal on the treatment of our fuel costs ensures there
2 will be no fuel impact to ratepayers as discussed above.
3
4 **Q.** What would the effect be of treating these sales in the
5 same manner as Tampa Electric's Big Bend sales which are
6 separated at system average embedded costs?
7
8 **A.** The FMPA and Lakeland sales are incremental or opportunity
9 sales. Tampa Electric has no obligation to wholesale
10 customers to make these kinds of sales and would only do so
11 in those cases where net benefits accrue to the general
12 body of ratepayers and the Company's shareholders are not
13 harmed. As Dr. Bohi has explained, separating FMPA and
14 Lakeland sales on an average cost basis, would create a
15 tremendous disincentive to Tampa Electric to make these
16 types of sales in the future and would not be consistent
17 with sound economic theory. The resulting loss of benefits
18 to our general body of ratepayers under that treatment
19 would be in no one's best interest.
20
21 The impact of separating the rate base portion of these
22 sales at system average embedded cost over the term of the
23 sales, would lower retail non-fuel revenue requirements by
24 \$71.1 million, present value. The total non-fuel revenues
25 from the sales are projected to be \$14.8 million, present

1 value. Thus, a \$56.3 million present value of revenue
2 requirements deficit would be left for the company.
3 Imposing this revenue requirement deficit on the
4 shareholders would be unfair under any circumstances, but
5 would be especially unreasonable given the provisions of
6 the comprehensive stipulation under which Tampa Electric is
7 currently operating puts extremely tight constraints on the
8 company's earnings. The ratepayer would enjoy the
9 artificially high benefits from these transactions through
10 separation at higher than the actual revenues from the
11 sales while the shareholders would be left with no way to
12 meet the revenue requirement deficit associated with
13 meeting the market price.

14

15 Q. In the September 25, 1996 stipulation between Tampa
16 Electric, Office of Public Counsel and FIPUG, reference is
17 made to the regulatory treatment of existing and future
18 wholesale sales. What is the impact of this reference on
19 the treatment of the FMPA and Lakeland agreements?

20

21 A. Upon the filing of the September 25, 1997 stipulation the
22 Commission staff pointed out that it believed that a sale
23 from the Polk Power Station might warrant different
24 treatment than the treatment afforded other sales in the
25 stipulation. Consequently, an amendment to the stipulation

1 was negotiated and approved by the Commission which
2 provided that the Commission would review the treatment of
3 any wholesale sale from the Polk Power Station. Like a
4 potential sale from the Polk Power Station, the FMPA and
5 Lakeland sales are different sales and therefore require
6 review for appropriate regulatory treatment. The
7 Commission recognized the potential for a difference in
8 regulatory treatment in sales of this type in Order No.
9 PSC-97-0262-FOF-EI issued March 11, 1997. As per that
10 order, if a utility can demonstrate that there are net
11 economic benefits to retail ratepayers associated with
12 sales like FMPA and Lakeland, then costs other than system
13 average embedded costs could be credited to the retail
14 clauses.

15
16 **Q.** Has the Commission acted in line with the premise set forth
17 in Dr. Bohi's testimony and your proposal in determining
18 regulatory treatment of Tampa Electric's sales in the past?
19

20 **A.** Yes. In the company's 1985 rate order, the Commission
21 reduced the retail revenue requirement by \$37 million based
22 on Tampa Electric's existing sale of capacity and energy to
23 Florida Power & Light Company. In this proceeding, the
24 Commission challenged the company to make up the deficit in
25 revenue requirements by making up to \$37 million in

1 wholesale sales. The Commission treated the wholesale sales
2 by allowing the company to credit 100% of the non-fuel
3 revenue from such sales above the line in the retail
4 jurisdiction. Apparently as a recognition of the wholesale
5 market, in 1987, the Commission approved a proposal by the
6 company to credit fuel revenues based on the incremental
7 fuel cost from off system sales to the retail customer fuel
8 adjustment clause. In the company's 1992 rate case, the
9 Commission separated certain of the company's wholesale
10 sales at system average cost, certain others at unit
11 embedded cost, while still other sales were not separated
12 from the retail jurisdiction. For those sales that were not
13 separated from the retail jurisdiction, in some cases,
14 revenues were shared 80/20 and in other cases revenues were
15 flowed 100% to retail customers. There are good, sound
16 policy reasons for this. Tampa Electric is not similarly
17 situated compared with other utilities in the state. Its
18 generation system, its retail customer mix, its service
19 territory geographics, its cost structure, its regulatory
20 situation, the types of sales it is capable of making
21 within FERC guidelines are now and have been in the past,
22 very different than other utilities.

23
24 Tampa Electric urges the Commission to continue its policy
25 of reviewing regulatory treatment of wholesale sales on a

- 1 case-by-case basis. Different sales have different costs
2 and benefits. We all should take the time and effort in
3 this proceeding to look at these unique and extremely
4 beneficial sales in detail and make every effort to do the
5 right thing both for the retail customers and the company.
6
- 7 Q. Based on Commission precedent, how should the Commission
8 regard your proposal for the FMPA and Lakeland Agreements?
9
- 10 A. To the extent the Commission has assessed wholesale sales
11 on a case-by-case basis with a view towards encouraging
12 those sales which are consistent with both ratepayer
13 benefits and market realities, I would submit that our
14 proposal for the FMPA and Lakeland sales is entirely
15 consistent with past Commission precedent and should be
16 adopted in these proceedings.
17
- 18 Q. Will the Commission's treatment of the Lakeland and FMPA
19 and wholesale sales have an impact on Tampa Electric's
20 refund obligation approved by the Commission in Docket No.
21 960409-EI?
22
- 23 A. No, the obligation is not affected in any way, however,
24 under certain circumstances, the amount of any potential
25 1999 refund could be increased by the existence of the

1
2
3
4
5

21
22

sales and Tampa Electric's proposal on the treatment for the sales. Tampa Electric has guaranteed a total of \$50 million in refunds under the most recent stipulation approved by the Commission in Docket No. 960409-EI. Only if the 60/40 sharing provision above 11.75% return on equity of the stipulation yields more than \$25 million in 1998, will there be an additional refund in 1999. In the unlikely event that a 1999 refund occurs, the existence of sales combined with the Tampa Electric's proposal to credit certain revenues from the FMPA and Lakeland sales above the line for regulatory purposes would serve to increase the 1999 refund.

Q. Does this conclude your testimony?

A. Yes, it does.
