Tallahassee, FL 32399-0850

Re: Lake Utility Services, Inc.
Docket No. 960444-WU

Dear Ms. Bayó:

Enclosed for filing on behalf of Lake Utility Services, Inc. in the above referenced docket are the original and 15 copies of the direct testimony of Mark Kramer, Donald Rasmussen, and Frank Seidman.

Copies have been provided to the parties on the attached service list.

Very truly yours,

Richard D. Melson

Before the
Florida Public Service Commission

Docket No. ~~960444~~-WU

In the Matter of

Application for rate increase and
for increase in service availability
charges in Lake County by
Lake Utility Services, Inc.

Direct Testimony of

Mark F. Kramer
Manager, Regulatory Matters

for

Lake Utility Services, Inc.

July 11, 1997

DOCUMENT NUMBER-DATE

~~06969~~ JUL 11 5

FPSC-RECORDS/REPORTING

1 **Q. Can you state your name and business address for the**
2 **record?**

3 A. Yes. My name is Mark Kramer. My business address is 2335
4 Sanders Road, Northbrook, Illinois 60062.

5
6 **Q. What is your occupation?**

7 A. I am Manager, Regulatory Matters for Utilities, Inc. ("UI") and
8 its subsidiaries, including Lake Utility Services, Inc. ("LUSI").

9
10 **Q. Please summarize your professional background.**

11 A. I have been employed by Utilities, Inc. since 1992. Since that
12 time I have been involved in many phases of rate-making in
13 several regulatory jurisdictions. I am a Certified Public
14 Accountant. I graduated from University of Illinois at Urbana-
15 Champaign in 1989 with a Bachelor's of Science Degree in
16 Accountancy. I had three years of public accounting
17 experience prior to joining Utilities, Inc. I graduated from Lake
18 Forest Graduate School of Management, Lake Forest, IL in
19 1997 with a Masters of Business Administration. I have
20 attended the NARUC Utility Rate Seminar and several
21 independently sponsored seminars.

22

1 **Q. Please explain your job responsibilities with Utilities, Inc.**

2 A. Utilities, Inc. has approximately 50 wholly owned subsidiaries
3 engaged in the water and/or wastewater utility service
4 business in 15 different states. Those states are Florida,
5 Georgia, Illinois, Indiana, Louisiana, Maryland, Mississippi,
6 Nevada, New Jersey, North Carolina, Ohio, Pennsylvania,
7 South Carolina, Tennessee and Virginia. Through those
8 subsidiaries Utilities, Inc. owns and operates more than 250
9 utility systems serving over 150,000 customers.

10

11 I am responsible for rate-making activities for individual
12 companies within the group, including LUSI.

13

14 **Q. What is the purpose of your testimony?**

15 A. The purpose of my testimony is to explain to the Commission
16 why LUSI has protested certain portions of the Proposed
17 Agency Action (PAA) Order that established uniform rates and
18 service availability charges for our systems in Lake County.
19 My testimony will identify the portions of the PAA Order with
20 which we disagree and will show why some of the
21 Commission's adjustments are inappropriate.

22

1 **Background**

2
3 **Q. Before you get to these accounting issues, would you**
4 **please describe LUSI's current service territory?**

5 A. LUSI is a water only utility and is a wholly owned subsidiary of
6 Utilities, Inc. Utilities, Inc. began serving areas of Lake County
7 in 1982 when Utilities, Inc. of Florida purchased a water utility
8 serving an area south of the City of Clermont, known as
9 Clermont I.

10
11 Between 1984 and 1991, the utility acquired a number of
12 small systems in Lake County and extended its service
13 territory to reach additional areas.

14
15 In 1991 the corporate structure was reorganized so that all of
16 the systems in Lake County came under Lake Utility Services,
17 Inc. From 1993-1995, the utility has experienced continued
18 expansion, particularly in the South Clermont area.

19
20 Today, LUSI serves 18 subdivisions in Lake County. These 18
21 subdivisions form six separate systems and are served by a
22 total of 12 water treatment plants consisting of 16 wells and
23 related hydropneumatic storage tanks.

As of December 31, 1995, the end of the approved test year in this proceeding, the company was serving about 915 customers in Lake County.

Q. Please describe the history of these six systems.

A. Clermont I As I previously stated, in 1982 Utilities, Inc. acquired a small utility serving an area south of the City of Clermont, known as Clermont I. Beginning in 1986, land that previously had been used for citrus groves but had succumbed to several freezes was becoming available for residential land development. Several additional subdivisions were created, including the Lake Ridge Club and Amber Hills. These small developments, although new formations, were contiguous to Clermont I and provided logical extensions of the service area. As I discuss in more detail below, these three small systems were interconnected in 1992-1995.

Clermont II In 1984, we acquired the utility system serving the Clermont II subdivision, which was a small area close to, but not contiguous to Clermont I. The system serving this area is not currently interconnected with any other system.

Oranges In 1986, new utilities were formed to serve two new subdivisions south of Lake Ridge -- The Oranges, and Vistas. These two systems were acquired by Utilities, Inc. in 1986 and 1987, respectively and were interconnected in 1992 - 1995.

Highland Point In the five year period between 1986-1990 four subdivisions west of Lake Susan and the Oranges began receiving service from our utility. The four, Highland Point, Crescent West, Crescent Bay, and Lake Crescent Hills, formed the core of what has become a larger regional system. In November 1992, LUSI's service territory was amended to include additional territory in this area near Crescent Bay. From 1993 to 1995, LUSI extended its facilities to serve the Preston Cove subdivision and several additional developments known collectively as the South Clermont Region. The four water systems serving this area were interconnected in 1992-1995.

Lake Saunders Acres LUSI acquired the system serving Lake Saunders Acres in 1991. This system is not interconnected.

1 Four Lakes In 1990, LUSI acquired the system serving Four
2 Lakes. This system is not interconnected with any of LUSI's
3 other systems.

4

5 **Q. What prompted LUSI to seek a "uniform rate" adjustment?**

6 A. Over the past several years, and in conjunction with its
7 expansion to serve new areas, LUSI has engaged in a program
8 to physically interconnect the aforementioned small
9 independent systems. Because of the initial independent
10 status of the utilities, different rate structures exist. There are
11 currently three different rate structures within the service area
12 involved in this proceeding resulting from the interconnection
13 of old and new systems. The difference in rates prompted
14 inquiries from customers.

15

16 On February 8, 1995, the Florida Public Service Commission
17 Staff sent a letter to LUSI requesting we file a rate
18 restructuring application within sixty days. Although LUSI
19 wanted to postpone a rate case until the interconnection
20 project was complete, LUSI acquiesced to the Staff's request.

21

22 **Q. Please describe LUSI's main extension and interconnection**
23 **program.**

1 A. In the early 1990s, LUSI became aware of three potential
2 customer groups in need of service -- new developments in the
3 South Clermont area, residential customers whose wells had
4 become contaminated, and other residential customers in the
5 area around the subdivisions served by LUSI. the main
6 extension and interconnection program was necessary for LUSI
7 to be able to offer safe, reliable and efficient service to these
8 groups.

9

10 **Q. Why was it necessary to interconnect the existing**
11 **systems?**

12 A. Florida Department of Environmental Protection Rule 62-
13 555.315 limits to one hundred fifty the number of connections
14 that can be served by a single well. Adding a second well to
15 serve a small development that grows larger than 150
16 connections can be quite costly. By interconnecting nearby
17 systems, however, two or more wells can be combined to serve
18 a greater number of customers in a more efficient and reliable
19 manner. This enables the utility not only to serve growth in
20 existing areas, but also provides a base to support extensions
21 to nearby areas requiring service at a reasonable cost.

22

1 This type of interconnection and expansion program moves
2 toward a regional system. The company believes that such
3 regionalization is consistent with DEP and PSC desires not to
4 encourage the proliferation of "small" systems. A regional
5 system increases the reliability of service, while providing a
6 more efficient infrastructure and operations staff.

7

8 **Q. Please provide some additional background on the three**
9 **customer groups that LUSI's main extension program was**
10 **designed to serve.**

11 A. The first group consists of developers in the area. LUSI
12 became aware of several significant residential communities
13 that were being considered for development in the South
14 Clermont Area, and in close proximity to the existing LUSI
15 service area. LUSI is consistently working with developers in
16 order to promote growth in the county. LUSI added territory in
17 1988 that further advanced LUSI's goal of a regional system.
18 The plans included funding from developers that were eager to
19 build in the county. As I have previously mentioned, the DEP
20 rule that limits the number of connections that can be served
21 by a single well was inhibiting many developers, as the cost of
22 a second well was often prohibitive. LUSI's interconnection
23 program provided an attractive, economical alternative for

1 developers. Consequently, by working in conjunction with
2 local developers, LUSI's extension program has enabled the
3 continued development of new subdivisions in the desirable
4 Clermont area.

5
6 Second, the Department of Environmental Protection (DEP)
7 identified numerous residential well sites scattered throughout
8 the area south of Clermont that had become contaminated
9 from citrus fumigants. The contamination left several homes
10 without potable water. As a stop-gap measure, the State was
11 providing filters and disinfecting systems for these wells.
12 Those residences affected were in close proximity to LUSI's
13 facilities. LUSI's extension program provided the affected
14 residences with a safe, clean source of water. Furthermore,
15 LUSI provided the only long term solution to the contamination
16 problem.

17
18 Third, there was a need for a central water system to serve
19 residences in the areas around the subdivisions served by
20 LUSI. Many of the residences are located along mains that
21 LUSI had installed to serve new developments and residences
22 with contaminated well sites. These residents have benefited

1 from the interconnection program by having a safe, reliable
2 water system available.

3

4 **Q. Why did LUSI decide to wait until the interconnection**
5 **project was complete to file a rate proceeding?**

6 A. Although LUSI has not earned an adequate return on its
7 investment and can substantiate a rate increase, one major
8 factor has influenced the company to postpone any action.
9 Our interconnection and investment program is not complete.
10 Consequently, we foresee the need for additional investment in
11 the near future. However, presently we cannot precisely
12 forecast the cost of the upgrades, the cost of the additions, or
13 anticipate developer contributions.

14

15 **Q. Why did LUSI protest the PAA Order?**

16 A. LUSI protested the PAA Order for several reasons. First, the
17 proposed determination of utility plant in service understates
18 actual plant in service.

19

20 Second, the proposed determination of the amount of non-used
21 and useful plant substantially exaggerates the level of non-
22 used and useful plant which understates rate base.

1
2
3
4
5

10
11
12
13
14
15
16
17
18
19
20
21
22

Third, the proposed determination of contributions in aid of construction (CIAC) to be deducted from rate base is overstated.

Fourth, the proposed determination of rate case expense assumed there was no protest to the Proposed Agency Action (PAA) Order. Consequently, rate case expense is understated.

Fifth, the proposed determination of fall-out issues, including margin reserve, depreciation, accumulated depreciation, amortization, accumulated amortization, revenue requirement and monthly rates, as they are affected by the items one through four listed above, must be adjusted accordingly.

Sixth, the proposed service availability charges should be calculated on a basis consistent with the determination of the aforementioned items.

Except for these six areas covered by the protest, LUSI accepts the Commission's decisions contained in the PAA Order.

1 **Q. Are you sponsoring any exhibits in this proceeding?**

2 A. Yes. I am sponsoring the revised accounting minimum filing
3 requirements (MFRs) and Billing Analysis for the test year
4 ending December 31, 1995 that were submitted to the
5 Commission on July 9, 1996. In addition, I am sponsoring the
6 volume of Cost Allocation that was submitted to the
7 Commission on June 3, 1996.

8
9 I have also prepared and attached to my testimony the
10 following revised financial schedules:

11
12 Exhibit ___ (MFK-1) Schedule of Rate Base
13 Exhibit ___ (MFK-2) Adjustments to Rate Base
14 Exhibit ___ (MFK-3) Schedule of Water Plant in Service
15 Exhibit ___ (MFK-4) Schedule of Used & Useful
16 Exhibit ___ (MFK-5) Schedule of U&U - Distrib. Mains
17 Exhibit ___ (MFK-6) Schedule of Operations
18 Exhibit ___ (MFK-7) Adj. to Operating Statement
19 Exhibit ___ (MFK-8) Schedule of Rate Case Expense
20 Exhibit ___ (MFK-9) Schedule of Depreciation
21 Exhibit ___ (MFK-10) Capital Structure
22 Exhibit ___ (MFK-11) Schedule of Rates

- 1 Exhibit ___ (MFK-12) Service Availability Charge Calc.
2 Exhibit ___ (MFK-13) Calculation of CIAC for SAC
3 Exhibit ___ (MFK-14) Rate Schedule - SAC

4
5 The schedules "Schedule of Rate Base", Exhibit ___ (MFK-1)
6 and "Schedule of Operations" Exhibit ___ (MFK-6) starts with
7 the adjusted test year figures as shown in the revised MFRs.
8 The next two columns show the adjustments made by the PAA
9 Order which LUSI does not contest (Uncontested Adjustments),
10 and the "Company Adjusted Test Year" which results from
11 these adjustments. These are the figures that the utility
12 believes should be used as a basis for setting rates.

13
14 In order to highlight the issues covered by the protest, two
15 additional columns show the portion of the adjustments
16 contained in the PAA Order that LUSI does not believe are
17 appropriate (Commission Contested Adjustments) and the
18 resulting "Commission Adjusted Test Year" which formed the
19 basis for the PAA Order.

20
21 The remainder of my testimony addresses the six contested
22 areas of the PAA Order.

1

2 **Plant in Service**

3

4 **Q. The Staff proposed reducing plant in service by \$103,440.**

5 **Do you agree with this adjustment?**

6 A. No, I do not. In the company's revised MFRs, average test year
7 plant in service was reported as \$1,946,058. The PAA Order
8 made adjustments totaling \$103,440 to this amount.

9

10 The utility accepts a portion of these adjustments totaling
11 \$71,261. This produces a revised average test year plant in
12 service of \$1,874,797. This is \$32,179 more than the amount
13 determined in the PAA Order.

14

15 **Q. What is the reason for this \$32,179 difference?**

16 A. First, the PAA Order removed \$27,943 from utility plant in
17 service for the Lake Saunders Water Plant on the grounds that
18 it was not supported by original documentation. The company
19 subsequently located an invoice that it was previously unable
20 to provide to the Staff during their field audit. The invoice
21 indicates that Mr. Charlie Squibb, the initial developer, paid
22 Carmichael Enterprises \$17,053 to install the water system at

1 Lake Saunders Acres. The invoice is attached as Exhibit ____
2 (MFK-15).

3

4 The remaining \$15,126 in dispute is due to what the company
5 believes are unsupported adjustments. Although the
6 schedules to the PAA Order include additional reductions in
7 Plant in Service for \$15,126, no detail or explanation is given
8 for the adjustment, either in the PAA Order or in the
9 supporting Staff recommendation.

10

11 Based on these items, the adjusted average test year balance of
12 plant in service is \$1,874,797. Individual account balances
13 are detailed on the attached Exhibit ____ (MFK-3).

14

15 **Used & Useful Plant**

16

17 **Q. Have you calculated a level of non-used and useful plant**
18 **that differs from Staff's calculation of non-used and**
19 **useful?**

20 A. Yes. Based on the Staff's methodology, Mr. Seidman's
21 testimony, and Mr. Rasmussen's testimony I have calculated
22 non-used and useful plant of \$17,265 for the average test year
23 ended December 31, 1995.

1

2 **Q. How does your used and useful calculation differ from that**
3 **contained in the PAA Order?**

4 A. There are three major differences:

5

6 First, the company has separately identified the
7 interconnecting transmission mains which should be
8 considered 100% used and useful.

9

10 Second, the company has identified all remaining transmission
11 and distribution lines in subdivisions as 100% used and useful
12 because the lines are totally contributed by developers.

13

14 Third, the company has applied the used and useful
15 percentages developed by Mr. Seidman to the account balances
16 for supply treatment, pumping and storage plant.

17

18 **Q. Please explain how using Staff's methodology results in a**
19 **non-used and useful adjustment for interconnecting**
20 **transmission mains different than calculated by Staff.**

21 A. According to Staff, the transmission mains which served to
22 interconnect plants would be considered 100 percent used and
23 useful. The Staff, however, did not accept the utility's

1 workpapers that separated the transmission mains that
2 interconnect systems from those mains that are located within
3 individual systems. Consequently, the PAA Order allotted no
4 mains for the interconnection of the system.

5

6 **Q. Have you separated the transmission mains that**
7 **interconnect the systems from those located within the**
8 **systems in the attached revised filing?**

9 A. Yes.

10

11 **Q. Please explain how you performed the separation.**

12 A. Every invoice related to transmission mains was pulled from
13 the company's historical records and reviewed to determine the
14 location and purpose of the main. A listing of those invoices
15 which relate to interconnecting mains is attached to Mr.
16 Rasmussen's testimony as Exhibit ___ (DR-3). In addition to
17 these invoices, Exhibit ___ (DR-3) lists the capitalized time
18 recorded for the company's personnel to work on the
19 interconnection projects.

20

21 **Q. Has the Staff had an opportunity to examine the invoices**
22 **listed on Exhibit ___ (DR-3)?**

1 A. Yes. The FPSC Staff Auditor, Mr. Douse audited all of LUSI's
2 plant invoices from the beginning of time through the test year
3 during his field audit. Transmission mains represent over 60%
4 of the company's total plant, and consequently occupied a
5 significant portion of his audit time.

6

7 **Q. What is the total amount spent on interconnecting the**
8 **individual systems?**

9 A. Through the end of the test year, December 31, 1995, LUSI
10 spent \$901,181 on interconnecting transmission mains. The
11 portion of the company's investment is 100% used and useful.

12

13 **Q. What is the Used and Useful percentage used by the**
14 **company for transmission and distribution mains within**
15 **the individual systems?**

16 A. The company believes that the mains within each system are
17 one hundred percent used and useful since all the mains were
18 contributed.

19

20 **Q. Why should the mains within an individual system be**
21 **considered 100% used and useful?**

1 A. In each individual system the mains were contributed. If the
2 mains were not considered 100% used and useful a system
3 could unfairly be determined to have negative rate base.

4
5 For instance, assume a system serves a potential of 100
6 customers, but only serves 45 today. The mains cost \$50,000
7 to install and the corresponding CIAC balance is \$50,000.
8 When establishing rate base, the Staff would record used and
9 useful plant of \$22,500, and CIAC of \$50,000 resulting in
10 negative rate base of \$27,500 even though the utility has not
11 been imprudent with its investment.

12
13 Under this scenario, which exists in the LUSI systems, the
14 utility is penalized for accepting contributed mains serving a
15 growing area. Consequently, Exhibit ___ (MFK-3) utilizes the
16 proper 100% used and useful percentage for account 331.4
17 Transmission Mains.

18
19 **Q. If the Commission rejects this approach and wants to**
20 **compare lots served to total lots, then what calculation**
21 **should be used?**

22 A. The attached Exhibit ___ (MFK-5) details the lots served and
23 potential lots to be served in each subdivision. Exhibit ___

1 (MFK-4) then calculates a used and useful percentage for each
2 system based on the ratio of lots served to total lots. Let me
3 emphasize that because the mains have been 100%
4 contributed, and thus represent "prepaid CIAC", I believe these
5 calculated percentages are not the figures that should be used
6 for ratemaking purposes.

7

8 **Q. How did you determine the used and useful percentages for**
9 **plant capacities?**

10 A. The attached Exhibit ___ (MFK-4) lists the used and useful
11 percentages determined by Mr. Seidman for each individual
12 system. The non-used and useful percentage is then applied to
13 account 307.2 Wells and Springs, 311.2 Pumping Equipment,
14 and 320.3 Water Treatment Equipment on Exhibit ___ (MFK-3).

15

16 **Contributions in Aid of Construction**

17

18 **Q. The PAA Order increased CIAC by \$197,429. Do you agree**
19 **with this level of adjustment?**

20 A. No. The company concurs with only \$115,543 of the \$197,429
21 increase in CIAC. This results in a difference of \$81,886.

22

1 **Q. Why does the company disagree with the adjustment in**
2 **the PAA Order?**

3 A. There are three issues in which the company disagrees with
4 the treatment of CIAC in the PAA Order.

5

6 First, the company has been able to locate an invoice
7 supporting payment of \$16,500 to Mr. Frank Logenbach, the
8 developer for the Vista Subdivision. The invoice is attached as
9 Exhibit ___ (MFK-16). Since the company was initially unable
10 to produce proof of payment, the Staff increased CIAC by the
11 payment required in the initial contract.

12

13 Second, the Staff removed \$16,923 of plant in service in
14 Highland Pointe due to lack of supporting documentation.
15 When the company initially booked the acquisition of Highland
16 Pointe, the plant in service was offset by CIAC. Consequently,
17 if the Staff believes it is proper to remove the plant in service, a
18 corresponding decrease to CIAC should be made.

19

20 Third, the company erroneously recorded an acquisition
21 adjustment without prior approval from the Commission. In
22 response to Staff Data Request No. 13, the company indicated
23 that no extraordinary circumstances exist to necessitate an

1 adjustment. The Staff agreed, and removed the acquisition
2 adjustment. Although the Staff removed the acquisition
3 adjustment in theory, they increased CIAC by an identical
4 amount, effectively maintaining the acquisition adjustment.
5 The fact that the acquisition adjustment was recorded
6 erroneously is ignored by the Staff without sufficient
7 justification. Staff increased CIAC \$48,463 related to this
8 issue.

9
10 In total, the company disagrees with a total of \$81,886 in Staff
11 CIAC adjustments related to the above items.

12

13 **Rate Case Expense**

14

15 **Q. Does rate case expense need to be adjusted?**

16 A. Yes. When the Staff calculated rate case expense, they
17 assumed there would be no protest to the Proposed Agency
18 Action (PAA) Order. Consequently, rate case expense is
19 understated. Attached as Exhibit ___ (MFK-8) is a schedule
20 detailing rate case expense through June 30, 1997, and the
21 estimated cost of rate case expense through the issuance of a
22 final Order.

1

2 **Q. How were future estimates for rate case expense**
3 **determined?**

4 A. Future legal expenses are the result of a conversation with our
5 counsel, Mr. Richard Melson. According to Mr. Melson, his
6 estimate is based on his previous involvement with similar
7 cases.

8

9 Consulting fees are estimated by Mr. Seidman based on the
10 amount of time to prepare his schedules through June 30,
11 1997 and an estimate for his involvement through the
12 remainder of this case.

13

14 Capitalized time is an estimate for my time through the
15 conclusion of this case. I have estimated that I will spend
16 approximately 100 hours from July 1, 1997 through the
17 issuance of an Order.

18

19 Miscellaneous expenses are estimated based on historical
20 dollar amounts for copying, mailing, and travel expenses.

21

22 **Q. What is the total cost you estimate for rate case expense?**

1 A. The cost of the current proceeding, which is detailed in the
2 attached Exhibit ___ (MFK-8) is \$98,057.

3

4 In addition, in Docket 950232-WU, the company filed for a rate
5 restructuring in deference to the Staff's requests. A settlement
6 was approved in Order No. PSC-96-1228-FOF-WU, but no
7 vehicle for recovery of the company's cost to participate in the
8 proceedings was granted. The Commission determined in this
9 proceeding that \$17,706 is the proper amount to be amortized
10 related to Docket No. 950232-WU.

11

12 The cost of the current proceeding and Docket Number
13 950232-WU combine for a total cost of \$115,763 in rate case
14 expense.

15

16 **Revenue Requirement**

17

18 **Q. Is there "fall out" from the revised plant in service, non-**
19 **used and useful, CIAC, and rate case expense?**

20 A. Yes. Margin reserve, depreciation, accumulated depreciation,
21 amortization, accumulated amortization, interest expense, the
22 revenue requirement and monthly rates are all affected. The
23 attached Exhibit ___ (MFK-1) Schedule of Water Rate Base,

1 Exhibit ___ (MFK-6) Schedule of Operations, and Exhibit ___
2 (MFK-10) Capital Structure incorporate these changes.

3

4 **Q. When were the rates, presently in effect for LUSI,**
5 **authorized by the Commission?**

6 A. Except for periodic inflation adjustments, the rates for Amber
7 Hill, Clermont I, Clermont II, Crescent West, Highland Point,
8 Lake Ridge Club, The Oranges, The Vistas and Lake Crescent
9 Hills were set prior to LUSI assuming ownership in 1982 and
10 prior to Commission jurisdiction.

11

12 **Q. What are the rates you propose?**

13 A. The "Rates Prior to Filing", "Commission Approved Interim
14 Rates", the rates "Utility Requested in Filing", the rates
15 approved in the "Commission PAA Order" and the "Utility
16 Requested Final" rates are shown in table format on the
17 attached Exhibit ___ (MFK-11).

18

19 **Service Availability Charges**

20

21 **Q. Do the aforementioned issues have an impact on the**
22 **requested service availability charges (SAC)?**

1 A. Yes. Attached is Exhibit ___ (MFK-12) which calculates the
2 range between the minimum and maximum SAC allowed by
3 the FPSC rules.

4

5 In addition to changes to plant in service and CIAC levels, the
6 calculation utilizes Mr. Seidman's findings regarding the
7 number of equivalent residential customers at capacity.

8

9 **Q. Based on the revised calculations of the SAC, does the**
10 **utility's initial SAC request fall between the minimum and**
11 **maximum recommended by the FPSC guidelines?**

12 A. Yes. The utility's request for a plant capacity charge of \$600
13 and main extension charge of \$600 results in CIAC at build out
14 within the parameters dictated by Rule 25-30.580 (1) (a) and
15 Rule 25-30.580 (1) (b).

16

17 **Q. How do the proposed charges compare to those currently**
18 **being charged and those approved in the Commission PAA**
19 **Order?**

20 A. Attached is Exhibit ___ (MFK-14) which shows in tabular form
21 the present fees, the Commission PAA Order fees, as well as
22 the fees requested in the utility's filing.

1

2 **Q. The PAA Order states that the combined plant capacity**
3 **and main extension charges requested by the company**
4 **were only \$540 per ERC. Why is the company now**
5 **requesting a combined charge of \$1,200 per ERC?**

6 A. In its initial filing, the company requested a combined service
7 availability charge of \$1,200 based on its calculation that it
8 could efficiently serve 1,250 ERCs at build out based on the
9 sum of the rated capacities of the individual systems.

10

11 The company was subsequently informed by the Staff that it
12 believed the interconnected systems could efficiently serve
13 more than twice the number of connections (2,681 ERCs), than
14 could be served by the individual systems operated
15 independently.

16

17 At the Staff's request, the company updated its service
18 availability charge calculation using the Staff's methodology for
19 the calculation of ERCs at design capacity. It was that
20 updated calculation which produced a combined service
21 availability charge of \$540 per ERC.

22

1 **Q. Was this the charge that was approved in the PAA Order?**

2 A. No. The PAA Order approved a service availability charge of
3 only \$223 per ERC.

4

5 **Q. What steps has the company taken since the date of the**
6 **PAA Order to calculate an appropriate service availability**
7 **charge?**

8 A. In conjunction with his used and useful analysis, the company
9 asked its consultant, Mr. Frank Seidman, to calculate the
10 number of future ERCs that can be served by existing capacity
11 and the number of years to build out of existing capacity. That
12 information is shown in Mr. Seidman's Exhibit ___ (FS-7).

13

14 Based on this information from Mr. Seidman, the company has
15 recalculated the minimum and maximum service availability
16 charges and has determined that its initial proposal for a
17 combined charge of \$1,200 per ERC is within the minimum
18 and maximum charge that would be suggested by the PSC's
19 service availability charge guidelines. Accordingly, the
20 company is reinstating its original request for a uniform charge
21 of \$1,200 per ERC, consisting of a \$600 plant capacity charge
22 per ERC and a \$600 main extension charge per ERC.

1

2 **Q. Are there any other issues regarding the SAC that should**
3 **be considered when calculating a SAC for LUSI?**

4 A. Yes. There are two issues that are unique to LUSI and the
5 calculation of its SAC.

6

7 First, LUSI agreed to assist the Florida Department of Health in
8 their effort to provide potable water to citizens that were
9 affected by EDB contamination.

10

11 Second, LUSI has several outstanding developer contracts in
12 which the terms will cause a negative impact to the utility
13 depending on the approved SAC. While having different SACs
14 in different areas may appear inequitable to current customers,
15 the Commission approved charges were integral in the
16 negotiation of developer contracts. An approved SAC below the
17 currently approved fee structure would negatively impact the
18 utility.

19

1 *The State of Florida Payment*

2

3 **Q. Could you please elaborate further on how LUSI's effort to**
4 **assist the Florida Department of Health has an impact on**
5 **the calculation of the SAC?**

6 A. Yes. The catalyst for one of the company's main extension
7 projects was the Florida Department of Health's objective to
8 provide central water service to all residents that were
9 obtaining their water from wells that have been contaminated
10 by EDB. To accomplish this task, the Florida Department of
11 Health requested the utility to extend its mains, at no cost to
12 the utility, to serve the customers. The utility did so. The
13 project cost \$460,000, which was paid for by the State of
14 Florida.

15

16 Despite the Department of Health's attempt to make the utility
17 whole, the FPSC Staff's calculation of SACs treated this project
18 identical to any other contribution. Thus, the State of Florida's
19 payment is included in the percentage of maximum CIAC
20 allowable by the utility when calculating the SAC under the
21 Staff's methodology.

22

1 **Q. How has the utility treated this payment from the**
2 **Department of Health in the calculation of the service**
3 **availability charge?**

4 A. In the calculation of the service availability charge, the total
5 amount of the payment received from the Department of
6 Health is removed from gross plant and contributions in aid of
7 construction. The effect is to calculate the fee as if the
8 company never undertook the extensive interconnection
9 program for the Department of Health. Thus, the company will
10 not be negatively impacted from its decision to participate in
11 the effort to assist citizens that have been plagued by EDB
12 contamination.

13

14 **Q. Does any governmental entity other than the Department**
15 **of Health treat this payment differently than a normal**
16 **contribution?**

17 A. Yes. For tax purposes, the Internal Revenue Service treated
18 the payment as cost free capital to the utility and therefore no
19 tax liability was realized for the payment. Prior to a change in
20 the tax law in June, 1996, all contributions were taxable for
21 utility companies.

22

1 **Q. If the Commission were to rule that the payment received**
2 **from the State of Florida was CIAC for the purpose of**
3 **determining the SAC, would the company's proposed SAC**
4 **result in a contribution level higher than the 75 percent**
5 **maximum required by Rule 25-30.580 (1) (a), Florida**
6 **Administrative Code?**

7 A. No. Even if the payment were included in CIAC for purposes of
8 determining the SAC, the company's investment would support
9 a maximum SAC of \$1,600, which is well above the company's
10 requested charge of \$1,200.

11

12 *Developer Contracts*

13

14 **Q. How were the rates determined for the newer subdivisions**
15 **such as Crescent Bay, Preston Cove, and South Clermont**
16 **Area?**

17 A. The rates for Crescent Bay were established by the
18 Commission in an original certificate proceeding based on
19 1988 construction and operating costs which were reviewed by
20 Staff.

21

22 Effective April 2, 1993, in order No. PSC-92-1369-FOF-WU, the
23 Commission approved rates that apply to Preston Cove and the

1 South Clermont Area. The rates approved were those approved
2 for the Crescent Bay customers.

3

4 **Q. Were service availability charges also established in order**
5 **No. PSC-92-1369-FOF-WU?**

6 A. Yes. Similar to the establishment of rates, the Commission
7 approved the same charges that applied in Crescent Bay.

8

9 **Q. Was any indication given why this level of charges was**
10 **approved?**

11 A. Yes. According to the Staff's analysis the charges approved for
12 the Crescent Bay system, which include reasonable plant
13 capacity and main extension charges, will accomplish the goal
14 of future customers paying their pro rata share of the cost of
15 the lines and treatment plant necessary to provide them
16 service. The Staff's analysis stated in Docket No. 920174-WU
17 that, "These charges will serve to increase the utility's level of
18 CIAC (contributions in aid of construction), thus keeping the
19 utility's rate base at a lower level for ratemaking purposes."

20

21 **Q. Are you aware of any occurrences that would cause the**
22 **Staff's original conclusion to be in error, or requiring**
23 **adjustment?**

1 A. No, I am not. In fact, LUSI has operated on the presumption
2 that these proposed charges would remain in effect until LUSI
3 decided to file a rate case proceeding or requested an
4 adjustment in its service availability charges.

5

6 **Q. When LUSI was planning its main extension program, did**
7 **the Staff or Commission indicate that service availability**
8 **charges might change?**

9 A. No. Several developer agreements were negotiated with the
10 tariffed tap fees in mind. Many factors influence the
11 negotiations of an agreement with a developer. Some of the
12 factors are flexible, such as developer's contributions.
13 However, some are not, including water plant capacity and the
14 Florida Public Service Commission's approved service
15 availability charges.

16

17 LUSI reasonably assumed that these SACs would not be
18 *reduced* in any area, as long as the CIAC level remained within
19 statutory parameters.

20

21 A reduction in the tariffed charge would put LUSI in a
22 disadvantageous position. The effect is to reduce the future
23 contributions from a specific development. Furthermore, the

1 reduction in contributions will ultimately increase rates to all
2 LUSI customers under the uniform rate structure.

3

4 **Q. Are there any other reasons that the proposed SACs will**
5 **result in less CIAC than the current fee structure?**

6 A. Yes. Many of the old contracts approved by the PSC require
7 the utility to reimburse service availability charges to the
8 developer. Also, many of the charges are specifically capped by
9 the agreement. Obviously, the PSC could override the existing
10 contracts, but I do not believe that is the purpose of this
11 proceeding.

12

13 Conversely, the areas with the most recently approved SACs
14 pay tap-in fees in order to reduce LUSI's investment in the
15 system. These fees ultimately ensure lower rates for all of
16 LUSI's customers.

17

18 **Allowance for Funds Prudently Invested**

19

20 **Q. Are there any issues that the Staff has alluded to during**
21 **this rate case that you would like to address?**

22 A. Yes. The Staff alleges that, "LUSI may have incorrectly
23 collected AFPI charges for some of its customers." The

1 company has since received data requests investigating the
2 matter.

3

4 **Q. Is this the first time that the Staff has investigated this**
5 **matter?**

6 A. No. In 1993, this issue was first addressed initiated by a
7 complaint lodged by a developer against LUSI regarding our
8 rates and charges. The developer of Royal View Estates, Mr.
9 Preben Olesen questioned the application of our tariff in
10 specified areas. The matter was investigated by FPSC
11 Regulatory Analyst Charlotte Hand and Ms. Billie Messer from
12 the Bureau of Economic Regulation of the FPSC.

13

14 The result of the investigation was that the company was
15 properly applying its tariff approved in Order No. PSC-92-
16 1369-FOF-WU, as it applied to new areas and was properly
17 collecting AFPI charges in accordance with its tariff.

18

19 **Q. Does this conclude your testimony?**

20 A. Yes it does.

Adjustments to Operating Statements
Test Year Ended 12/31/95

Operating Revenues

a) To reflect proposed increase	\$ 9,176
b) To remove AFPI charges	\$ (32,912)
c) To remove Advances booked as revenue	\$ (35,000)
d) To reflect billing adjustments	\$ 12,410
	<u>\$ (46,326)</u>

O & M Expenses

a) To reduce expenses of power and chemical for unaccounted for water	\$ (3,048)
b) To reflect repression adjustment	\$ (3,254)
c) To reflect annual amortization of legal fees, LUSI v. Clermont	\$ 11,474
d) To reflect adjustment of rate case expense	\$ 1,182
e) To remove non-utility insurance premium	\$ (741)
f) To remove refundable security deposit	\$ (275)
g) To reduce unsupported expenses	\$ (751)
	<u>\$ 4,587</u>

Depreciation Expense Net of CIAC Amortization

To reflect the effect of adjustment to plant in service, U&U, and CIAC	<u>\$ 5,627</u>
--	-----------------

Amortization of Acquisition Adjustment

To remove amort exp associated with Acquisition Adjustment	<u>\$ 2,175</u>
--	-----------------

Taxes Other Than Income Taxes

a) To remove RAFs related to revenue adjustments	\$ (2,086)
b) To remove tax bill unrelated to utility property bill	\$ (1,481)
c) To remove property taxes for non-U&U plant	\$ (117)
d) To remove payroll taxes associated with capitalized salaries	\$ (1,532)
	<u>\$ (5,216)</u>

Income Taxes

Income taxes associated with adjusted test year income	<u>\$ (12,904)</u>

RE: Vistas Subdivision/DER Permit

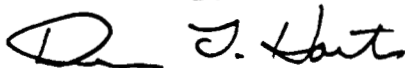

6/12/89

Dear Jim:

Please find enclosed, a copy of the permit that was just issued by DER for the water treatment plant and distribution system of the Vistas Subdivision. Pursuant to your agreement with Mr. Longenbach, please now issue the check to him for the \$16,500, as an initial cash payment for construction and installation of the water distribution system of the Vistas. Would you please make the check payable to Mr. Longenbach and send it to my office to be placed in an escrow account I have set up for payment of expenses of the project.

If you should have any questions regarding this, please do not hesitate to contact me.

Sincerely,

Dennis L. Horton

9. Contractor shall provide Utility with operating and all other information reasonably required repair the Facilities after construction.

ARTICLE III

Payment to Contractor for Faci

Utility and Contractor recognize that the Facilities are to be installed in phases or sections over a period of several years, depending upon the rate of housing construction within the Service Area by builders and developers. Utility and Contractor acknowledge that inflation and the related costs of Facilities construction in subsequent years will be difficult to project. Accordingly, the parties hereto agree to the following construction cost for the installation of the Facilities by Contractor for Utility:

1. An initial cash payment of \$16,500 at such time as the water supply and storage system as described herein is complete and operational and providing service thereby;
2. Additional purchase payments for the construction and installation of the water distribution facilities throughout the Service Area in the amount of \$260 for each and every water customer attaching to the Facilities and taking service thereby.
3. Utility hereby agrees to act as Contractor's agent in the collection of water tap-on or connection fees from customers connecting to the Facilities within the Service Area and receiving service thereby, reimbursing said fees to the Contractor. Utility shall have no right or interest in the water connection fees so collected.
4. Deferred purchase payments and connection fee reimbursements will be made by Utility to Contractor semiannually, based upon the number of utility customers connected and connection fees collected by the Utility during the preceding six-month period.
