

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

 In the Matter of : DOCKET NO. 970001-EI
 :
 Fuel and purchased power :
 cost recovery clause and :
 generating performance :
 incentive factor. :

VOLUME 3

Pages 292 through 466

PROCEEDINGS: HEARING

BEFORE: CHAIRMAN JULIA L. JOHNSON
 COMMISSIONER SUSAN F. CLARK
 COMMISSIONER JOE GARCIA

DATE: Thursday, August 14, 1997

TIME: Commenced at 9:30 a.m.

PLACE: Betty Easley Conference Center
 Room 148
 4075 Esplanade Way
 Tallahassee, Florida

REPORTED BY: JOY KELLY CSR, RPR
 Chief, Bureau of Reporting
 H. RUTHE POTAMI, CSR, RPR
 Official Commission Reporters

APPEARANCES:

(As heretofore noted.)

DOCUMENT NUMBER - DATE

08401 AUG 20 97

FPSC-RECORDS-REPORTING

2 (Transcript follows in sequence from
3 Volume 2.)

4 CHAIRMAN JOHNSON: Did we move into the
5 record the testimony for the stipulated items?

6 MS. PAUGH: Not yet. We need to do that.

7 Staff requests that all of the testimony for
8 stipulated items and the exhibits be moved into the
9 record.

10 CHAIRMAN JOHNSON: Is there a motion?

11 COMMISSIONER CLARK: So moved.

12 COMMISSIONER GARCIA: Second.

13 CHAIRMAN JOHNSON: There's a motion and a
14 second. Show it so moved without objection.

FLORIDA POWER CORPORATION
DOCKET No. 970001-EI

Fuel and Capacity Cost Recovery
Final True-up Amounts for
October 1996 through March 1997

DIRECT TESTIMONY OF
JOHN SCARDINO, JR.

1 Q. Please state your name and business address.

2 A. My name is John Scardino, Jr. My business address is Post Office Box
3 14042, St. Petersburg, Florida 33733.

4

5 Q. By whom are you employed and in what capacity?

6 A. I am employed by Florida Power Corporation (Florida Power or the
7 Company) in the capacity of Vice President and Controller. In addition,
8 I also hold the position of Vice President and Controller of Florida
9 Progress Corporation, the holding company of Florida Power
10 Corporation.

11

12 Q. Have the duties and responsibilities of your position with the Company
13 remained the same since you last testified in this proceeding?

14 A. Yes.

15

16 Q. What is the purpose of your testimony?

1 A. The purpose of my testimony is to describe the Company's Fuel Cost
2 Recovery Clause final true-up amount for the period of October 1996
3 through March 1997, and the Company's Capacity Cost Recovery
4 Clause final true-up amount for the same period.

5
6 Q. Have you prepared exhibits to your testimony?

7 A. Yes, I have prepared a three-page true-up variance analysis which
8 examines the difference between the estimated fuel true-up and the
9 actual period-end fuel true-up. This variance analysis is attached to my
10 prepared testimony and designated Exhibit No. 14 (JS-1). Also
11 attached to my prepared testimony and designated Exhibit No. 15
12 (JS-2) are the Capacity Cost Recovery Clause true-up calculations for
13 the October 1996 through March 1997 period. Also, I will sponsor the
14 applicable Schedules A1 through A9 for the period to date through
15 March 1997, which have been previously filed with the Commission
16 and are also attached to my prepared testimony for ease of reference
17 and designated as Exhibit No. 16 (JS-3).

18
19 Q. What is the source of the data which you will present by way of
20 testimony or exhibits in this proceeding?

21 A. Unless otherwise indicated, the actual data is taken from the books and
22 records of the Company. The books and records are kept in the regular
23 course of business in accordance with generally accepted accounting
24 principles and practices, and provisions of the Uniform System of
25 Accounts as prescribed by this Commission.

FUEL COST RECOVERY

1
2 **Q. What is the Company's jurisdictional ending balance as of March 31,**
3 **1997 for fuel cost recovery?**

4 **A. The actual ending balance as of March 31, 1997 for true-up purposes**
5 **is an underrecovery of \$89,565,627**

6
7 **Q. How does this amount compare to the Company's estimated ending**
8 **balance included in the April 1997 through September 1997 period?**

9 **A. When the estimated underrecovery of \$88,684,203 to be collected**
10 **during the period of April 1997 through September 1997 is taken into**
11 **account, the final true-up attributable to the six-month period ended**
12 **March 31, 1997 is an underrecovery of \$881,424.**

13
14 **Q. How was the final true-up ending balance determined?**

15 **A. The amount was determined in the manner set forth on Schedule A2**
16 **of the Commission's standard forms previously submitted by the**
17 **Company on a monthly basis but adjusted to remove the recoverable**
18 **costs incurred by Florida Power associated with the recalculation of the**
19 **firm energy price to Lake Cogen Limited which amounted to \$5.4**
20 **million on a retail basis and is subject to approval in Docket 961477.**

21
22 **Q. What factors contributed to the period-ending jurisdictional**
23 **underrecovery of \$89.6 million as shown on your Exhibit No. 14 (JS-1)?**

24 **A. The primary reason for the fuel cost underrecovery was the**
25 **unavailability of the Crystal River 3 nuclear plant (CR3). This and other**

1 factors contributing to the underrecovery are summarized on Sheet 1
2 of 3. The actual jurisdictional kwh sales were lower than the original
3 estimate by 278,531,661 KWH. This decrease in KWH sales,
4 attributable to abnormally mild weather, resulted in lower jurisdictional
5 fuel revenues of \$5.2 million, and lower fuel expense. The \$68.5
6 million unfavorable variance in jurisdictional fuel and purchased power
7 expense was primarily attributable to the replacement fuel cost
8 resulting from the extended CR3 outage and the settlement energy
9 payment made to Pasco Cogen.

10
11 When the differences in jurisdictional revenues and jurisdictional fuel
12 expenses are combined, the net result is an underrecovery of \$75.3
13 million related to the October 1996 through March 1997 time period.
14 Other variances not directly related to the period include \$12.2 million
15 underrecovery of prior period costs and \$2.1 million in interest. This
16 results in the actual ending underrecovery balance of \$89.6 million, as
17 of March 31, 1997.

- 18
19 **Q. Please explain the components shown on Exhibit No. 14 (JS-1),**
20 **Sheet 2 of 3 which produced the \$72.3 million unfavorable system**
21 **variance from the projected cost of fuel and net purchased power**
22 **transactions.**
- 23 **A. Sheet 2 of 3 shows an analysis of the system variance for each energy**
24 **source in terms of three interrelated components: (1) changes in the**
25 **amount (MWH's) of energy required; (2) changes in the heat rate, or**

1 efficiency, of generated energy (BTU's per KWH); and (3) changes in
2 the unit price of either fuel consumed for generation (\$ per million BTU)
3 or energy purchases and sales (cents per KWH).

4
5 **Q. What effect did these components have on the system fuel and net**
6 **power variance for the true-up period?**

7 **A.** As can be seen from Sheet 2 of 3, variances in the amount of MWH
8 requirements from each energy source (column B) combined to produce
9 a cost increase of \$58.8 million. I will discuss this component of the
10 variance analysis in greater detail below.

11
12 The heat rate variance for each source of generated energy (column C)
13 did not produce a material variance.

14
15 A cost increase of \$13.5 million resulted from the price variance
16 (column D), which was caused by a number of factors detailed on lines
17 1 through 17 of Sheet 2 of 3, of exhibit (JS-1). The most significant
18 factors contributing to the unfavorable variance were increased oil and
19 gas prices. Increased oil prices resulted from increased market demand
20 for oil to replenish the industry's low inventories. Increased gas prices
21 were attributable to the unusually cold winter in the northern United
22 States. A favorable variance of \$3 million resulted from avoiding spent
23 nuclear fuel disposal payments due to the extended outage of CR3.
24 Another factor contributing to the variance was the energy price true-
25 up for the period of August 1994 through September 1996 in the

1 Pasco Cogen QF contract interpretation settlement. This produced a
2 \$5.4 million unfavorable impact during this period. This change in the
3 energy calculation methodology was approved in Docket 961407-EQ.
4

5 **Q. Please explain the analysis shown on Sheet 3 of 3 of your Exhibit No.**

6 14 (JS-1).

7 A. The analysis on Sheet 3 of 3 attempts to identify the effect that
8 generation mix has on total net system fuel and purchased power cost.
9 Although this interrelationship is generally understood to exist, it is not
10 readily apparent from the individual variances contained in the
11 Commission "A" Schedules or in the analysis presented on Sheet 2 of
12 3. For example, a decrease in the MWH requirements of nuclear
13 generation shows up on Schedule A3 and on Sheet 2 of my exhibit as
14 a cost decrease of \$11.1 million. While this may be correct in
15 isolation, the true effect of decreased nuclear generation is obviously
16 a corresponding increase in the MWH requirements of a number of
17 other more costly energy sources. As seen on Sheet 3 of 3 Column D,
18 the result is a higher net system cost of \$60.7 million even if total
19 system MWH requirements remain unchanged.
20

21 In addition to the effect of variances in generation mix, this analysis
22 also attempts to identify the independent effect of the net variance in
23 total system MWH requirements from all energy sources combined
24 (internal and external). In this true-up period, for example, total system
25 requirements were lower than the original forecast by 340,184 MWH.

1 This led to lower net costs of \$6.8 million since the lower system load
2 decreases oil generation at a cost above the system average.

3
4 **Q. Please explain how this analysis was performed.**

5 A. The analysis on Sheet 3 of 3 is made in two steps. The first, captioned
6 "MWH RECONCILIATION," allocates the MWH variances for the
7 individual energy sources shown in column B among the primary causal
8 variances in columns C through H. Since the causal variances identified
9 in this analysis are not all inclusive, the amount of any residual over- or
10 under-allocation is shown in column I, "Unallocated Variances." The
11 second step, captioned "COST RECONCILIATION," assigns a dollar
12 value to the MWH variances identified in step 1. This is done by
13 allocating the cost variances identified in column B of Sheet 2 for each
14 energy source (and shown again in column B of Sheet 3) among the
15 causal variances based on the MWH's allocated to each in step 1. As
16 mentioned above, the allocation of individual MWH and cost variances
17 to the various causes of those variances is not intended to be all
18 inclusive or precise. It is intended to be a representative approximation
19 of the exceedingly complex cause and effect relationship existing
20 among the individual and total MWH variances and their related cost
21 variances.

22
23 **Q. What were the major contributors to the \$58.8 million cost increase**
24 **associated with the variance in MWH requirements?**

1 A. Lower than expected system requirements during the period contributed
2 to reduce the unfavorable variance by \$6.8 million. The remaining
3 \$65.6 million unfavorable increase is primarily caused by the use of
4 higher cost generation and purchased power primarily to replace nuclear
5 generation which resulted in approximately \$60.7 million of the total.

6
7 Q. Has Florida Power performed a more rigorous analysis to quantify the
8 actual replacement power costs attributable to the current extended
9 outage of CR3 for the October 1996 through March 1997 true-up
10 period?

11 A. Yes. CR3's replacement power costs were calculated for the true-up
12 period using PROMOD IV, the production costing model widely used
13 throughout the industry. Unlike the more typical PROMOD projections,
14 this analysis simulated the operation of the Florida Power system using
15 only actual data to determine replacement power costs, including actual
16 loads, plant maintenance, power purchases and sales, and fuel prices.
17 The methodology employed is identical to that used in previous
18 replacement power cost calculation performed by the Company and
19 accepted by this Commission. This analysis resulted in replacement
20 power costs for the true-up period of \$60.8 million, which is
21 coincidentally close to the amount determined by the less rigorous
22 employed for variance analysis purposes.

1 Q. Has Florida Power provided the Commission with information regarding
2 the cause and expected duration of the current extended outage of
3 CR3?

4 A. Yes. Following the February 1997 hearings in this docket, the
5 Commission directed that a separate spin-off docket be established to
6 review the current outage of CR3 (Docket No. 970261-EI). Shortly
7 thereafter on March 19, 1997, Florida Power filed a three-volume
8 Preliminary Report and appendices describing the cause of the outage
9 that began on September 2, 1996 and the circumstances that led to
10 the decision in October 1996 to extend the outage in order to make
11 certain equipment modifications in CR3's Engineered Safeguards
12 systems necessary to increase the unit's safety margins. The
13 Preliminary Report also described other outage activities that would
14 take place while these modifications are being performed, as well as an
15 estimated time line for CR3's return to service by the end of 1997. At
16 a workshop held on March 26, 1997, Florida Power made an oral
17 presentation on the Preliminary Report and responded to questions by
18 Staff. On April 14, 1997, Florida Power filed the prepared direct
19 testimony of five witnesses who further elaborated on the cause of the
20 extended outage and various related issues, with additional rebuttal
21 testimony to be filed on May 27, 1997. During this period Florida
22 Power has also responded to numerous interrogatories propounded by
23 Staff and Public Counsel and has submitted over 100,000 pages of
24 documents requested by the parties. Hearings have been scheduled in
25 the spin-off docket for June 26 and 27, 1997, at which time the

1 testimony and exhibits of the parties will be presented to the
2 Commission.

3
4 **Q. Does this six-month period's ending balance include any noteworthy**
5 **adjustments to fuel expense as shown on exhibit (JS-3), Schedule A2,**
6 **page 1 of 4, footnote to line 6b?**

7 **A. Yes, Exhibit No. 16 (JS-3) shows other jurisdictional adjustments to**
8 **fuel expense. Noteworthy adjustment include recovery of the**
9 **Company's Intercession City Gas Conversion Projects and the pass**
10 **through of Emission Allowance expense transactions.**

11
12 **Q. Did ratepayers benefit from the investment in the Intercession City Gas**
13 **Conversion projects previously approved by the Commission?**

14 **A. Yes. For this period, the estimated system fuel savings related to the**
15 **conversion of Units 7 & 9 are \$1,602,525. The total system**
16 **depreciation and return was \$320,031 resulting in a net system benefit**
17 **to ratepayers of \$1,282,494. The estimated system fuel savings**
18 **related to the conversion of Units 8 & 10 are \$1,176,469. The system**
19 **depreciation and return was \$228,865 resulting in a net system benefit**
20 **to ratepayers at \$947,604.**

21
22 **Q. Has the Company passed any sulfur dioxide emission allowance**
23 **transactions through the current or prior periods fuel adjustment**
24 **clause?**

1 A. Yes, in prior six-month fuel adjustment clause periods, the Company
2 has passed through \$749,499 of proceeds from the mandated EPA
3 Sulfur Dioxide Emission Allowance Auction as a credit to fuel expense.
4 This amount represents the auction proceeds for the years 1993
5 through 1996. Under the provisions of the Clean Air Act Amendments
6 (CAAA) of 1990 a percentage of Florida Power's allowances are
7 withheld each year to populate a pool of allowances which EPA offers
8 for sale at auction. Anyone can purchase but the real intent of the
9 allowance pool was to ensure that allowances would be available for
10 new units or new entrants to the energy market. Once these
11 allowances are sold, proceeds are returned to the company which
12 provided the allowances.

13
14 In the current six-month fuel adjustment clause period, the Company
15 included \$743,750 of expense for the purchase of 8,500 EPA Sulfur
16 Dioxide Emission Allowances. See (JS-3) Schedule A2, Page 1 of 4,
17 Footnote to Line 6b. Florida Power looked ahead to the 2000 and
18 beyond time period when we would need to hold sufficient allowances
19 to cover our emissions. Projecting a deficit, Florida Power entered the
20 SO2 market and purchased allowances at a price considerably below
21 the cost of other compliance options. To fund the purchase Florida
22 Power used the proceeds from the sale of allowances withheld. In the
23 future Florida Power may purchase additional allowances depending on
24 market conditions and the Company's SO2 compliance status.

1 **Q. Were there any other unusual costs included in the current true-up**
2 **period?**

3 A. Yes. In December 1996, Florida Power paid Procter and Gamble Paper
4 Products Company \$583,000 to assume approximately 6,000 Mcf per
5 day of firm natural gas transportation capacity via the Southern Natural
6 Gas and South Georgia Natural Gas interstate pipeline systems,
7 effective January 1, 1997. This amount was included in the cost of
8 gas to the Suwannee Plant in December.

9
10 **Q. What was Florida Power's rationale for terminating the Southern &**
11 **South Georgia Natural Gas contracts?**

12 A. Florida Power owned a total of approximately 10,000 Mcf per day of
13 firm transportation with fixed costs of approximately \$1,750,000 per
14 year for the Suwannee Plant. Based on current price and fuel
15 availability forecasts, Florida Power could lower its fuel costs by
16 terminating the contracts. 4,000 Mcf per day of the Southern and
17 South Georgia Natural Gas contract was swapped with the City of
18 Tallahassee for Florida Gas Transmission firm transportation, where it
19 may be more fully utilized. 6,000 Mcf was sold to Procter and Gamble.
20 Florida Power expects to save approximately \$600,000 during 1997 by
21 terminating the contracts, of which approximately \$216,000 has been
22 achieved during this true-up period. Additional savings are expected
23 annually beyond 1997.

1 Q. Has Florida Power confirmed the validity of using the "short cut"
2 method of determining the equity component of EFC's capital structure
3 for calendar year 1996?

4 A. Yes. Florida Power's Audit Services department has reviewed the
5 analysis performed by Electric Fuels Corporation (EFC). The revenue
6 requirements under a full utility-type regulatory treatment methodology
7 using the actual weighted average cost of debt and equity required to
8 support Florida Power business was compared to revenues billed using
9 equity based on 55% of net long term assets (short cut method). The
10 analysis showed that for 1996, the short cut method resulted in
11 revenues of \$273.1 million which were \$.3 million or .1% lower than
12 revenues under the full utility-type regulatory treatment methodology.
13 Florida Power continues to believe that this analysis confirms the
14 appropriateness of the short cut method.

15 16 CAPACITY COST RECOVERY

17 Q. What is the Company's jurisdictional ending balance as of March 31,
18 1997 for capacity cost recovery?

19 A. The actual ending balance as of March 31, 1997 for true-up purposes
20 is an underrecovery of \$2,826,552.

21
22 Q. How does this amount compare to the Company's estimated ending
23 balance to be included in the April 1997 through September 1997
24 period?

1 A. When the estimated overrecovery of \$1,247,824. to be refunded
2 during the period of April through September 1997 is taken into
3 account, the final true-up attributable to the six month period ended
4 March 1997 period is an underrecovery of \$4,074,376.

5
6 **Q. Is this true-up calculation consistent with the true-up methodology used**
7 **for the other cost recovery clauses?**

8 A. Yes. The calculation of the final net true-up amount follows the
9 procedures established by this Commission as set forth on Commission
10 Schedule A2 "Calculation of True-Up and Interest Provision" for the
11 Fuel Cost Recovery Clause but adjusted to remove the recoverable
12 costs incurred by Florida Power relating to the change in capacity rates
13 and the buyout payments to Lake Cogen Limited which amounted to
14 \$4.5 million which is subject to approval in Docket 961477.

15
16 **Q. What factors contributed to the actual period-end underrecovery of \$3**
17 **million?**

18 A. Exhibit No. 15 (JS-2), sheet 1 of 3, entitled "Capacity Cost Recovery
19 Clause Summary of Actual True-Up Amount", compares the summary
20 items from sheet 2 of 3 to the original forecast for the period. As can
21 be seen from sheet 1, the actual jurisdictional capacity cost revenues
22 were \$157,268 higher than forecast due to the kwh usage mix during
23 the period being different then estimated. Net capacity expenses were
24 \$3.2 million higher due to settlement payment to Pasco Cogen Limited

1 which were partially set-off by several cogenerators not meeting their
2 contractual capacity factors.

3
4 **Q. What was the impact of the settlement payments associated with
5 Pasco Cogeneration Limited in the actuals for the true-up period?**

6 **A.** The Company has included the costs associated with the Pasco Cogen
7 Limited settlement agreement of \$4 million in actual results for the true-
8 up period. This resulted from a change in the methodology in the
9 calculation of capacity payments and the buyout of the last 67 months
10 of the QF contract. The transaction was recorded in compliance with
11 the Commission's order in Docket 961407-EQ

12
13 **Q. Does this conclude your testimony?**

14 **A.** Yes, it does

FLORIDA POWER CORPORATION

DOCKET NO. 970001-EI

Re: GPIF Reward/Penalty Amount for
October 1996 through March 1997

**DIRECT TESTIMONY OF
DARIO B. ZULOAGA**

1 **Q. Please state your name and business address.**

2 **A. My name is Dario B. Zuloaga. My business address is P. O. Box 14042,**
3 **St. Petersburg, Florida 33733.**

4

5 **Q. By whom are you employed and in what capacity?**

6 **A. I am employed by Florida Power Corporation as a Principal Engineer in**
7 **Energy Supply, Performance Services.**

8

9 **Q. What are your responsibilities as Principal Engineer?**

10 **A. As a Principal Engineer, I am responsible for compiling and reporting**
11 **various operational statistics regarding the Company's generating**
12 **system. In particular, my duties include the preparation of the**
13 **information and material required by the Commission's GPIF mechanism.**

14

15

16

17

18

1 Q. What is the purpose of your testimony?

2 A. The purpose of my testimony is to describe the calculation of the
3 Company's Generation Performance Incentive Factor (GPIF) amount for
4 the period of October 1996 through March 1997. This was developed
5 by comparing the actual performance of the Company's seven GPIF
6 generating units to the approved targets set for these units prior to the
7 period.

8

9 Q. Do you have an exhibit to your testimony in this proceeding?

10 A. Yes, under my direction an exhibit (DBZ-1) has been prepared consisting
11 of the numbered sheets which are attached to my prepared testimony.
12 The exhibit contains the schedules required by the GPIF Implementation
13 Manual, which support the development of the incentive amount. I
14 have also included other data forms to supplement the required
15 schedules.

16

17 Q. What GPIF incentive amount have you calculated for this period?

18 A. I have calculated the Company's GPIF incentive amount to be a penalty
19 of \$255,522.00. This amount was developed in a manner consistent
20 with the GPIF Implementation Manual. Sheet 1 of my exhibit shows the
21 calculation of system GPIF points and the corresponding reward. The
22 summary of weighted incentive points earned by each individual unit
23 can be found on Sheet 3.

24

1 Q. How were the incentive points for equivalent availability and heat rate
2 calculated for the individual GPIF units?

3 A. The calculation of incentive points is made by comparing the adjusted
4 actual performance data for equivalent availability and heat rate to the
5 target performance indicators for each unit. This comparison is shown
6 on the Generating Performance Incentive Points Table found in my
7 exhibit Sheets 8 through 14.

8
9 Q. Why is it necessary to make adjustments to the actual performance
10 data for comparison with the targets?

11 A. Adjustments to the actual equivalent availability and heat rate data are
12 necessary to allow their comparison with the "target" Point Tables
13 exactly as approved by the Commission prior to the period. These
14 adjustments are described in the Implementation Manual and are further
15 explained by a Staff memorandum, dated October 23, 1981, directed
16 to the GPIF utilities. The adjustments to actual equivalent availability
17 concern primarily the differences between target and actual planned
18 outage hours, and are shown on Sheet 6 of my exhibit. The heat rate
19 adjustments concern the differences between the target and actual Net
20 Output Factor (NOF), and are shown on Sheet 7. The methodology for
21 both the equivalent availability and heat rate adjustments are explained
22 in the Staff memorandum.

23

- 1 Q. Have you provided the as-worked planned outage schedules for the
2 Company's GPIF units to support your adjustments to actual equivalent
3 availability?
- 4 A. Yes, Sheet 23 of my exhibit shows a comparison of target and actual
5 planned outage hours in bar-chart form. Sheets 24 and 29 present as-
6 worked critical path charts for each unit which experienced a planned
7 outage during the period.
- 8
- 9 Q. Does this conclude your testimony?
- 10 A. Yes.

FLORIDA POWER CORPORATION

DOCKET No. 970001-EI

GPIF Targets and Ranges for
October 1997 through March 1998DIRECT TESTIMONY OF
DARIO B. ZULOAGA

1 Q. Please state your name and business address.

2 A. My name is Dario B. Zuloaga. My business address is Post Office Box
3 14042, St. Petersburg, Florida 33733.

4
5 Q. By whom are you employed and in what capacity?

6 A. I am employed by Florida Power Corporation as a Principal Engineer in
7 Energy Supply, Performance Services.

8
9 Q. Have the duties and responsibilities of your position with the Company
10 remained the same since you last testified in this proceeding?

11 A. Yes, they have.

12

13 Q. What is the purpose of your testimony?

1 A. The purpose of my testimony is to present the development of the
2 Company's Generating Performance Incentive Factor (GPIF) targets and
3 ranges for the period of October 1997 through March 1998. This
4 development includes the targets and improvement/degradation ranges
5 for unit equivalent availability and unit average net operating heat rate
6 in accordance with the Commission's Generating Performance Incentive
7 Implementation Manual.

8
9 **Q. Do you have an exhibit to your testimony?**

10 A. Yes, I will sponsor an exhibit containing 78 pages, which consists of
11 the GPIF standard form schedules prescribed in the Implementation
12 Manual and supporting data, including unplanned outage rates, net
13 operating heat rates, and computer analyses and graphs for each of the
14 individual GPIF units, all of which are attached to my prepared
15 testimony.

16
17 **Q. Which of the Company's generating units have you included in the GPIF
18 program for the upcoming projection period?**

19 A. We have included the same units as were included for the current
20 period, Crystal River Units 1, 2, 4 and 5 and Anclote Units 1 and 2.
21 The Crystal River 3 Nuclear Unit is scheduled to be available for service

1 starting January 1, 1998. Therefore, we have reinstated Crystal River
2 3 as part of the GPIF units.

3
4 **Q. Have you determined the equivalent availability targets and**
5 **improvement/degradation ranges for the Company's GPIF units?**

6 **A. Yes, I have. This information is included in the Target and Range**
7 **Summary on page 3 of my exhibit.**

8
9 **Q. How were the equivalent availability targets developed?**

10 **A. The equivalent availability targets were developed using the**
11 **methodology established for the Company's GPIF units, as set forth in**
12 **Section 4 of the Implementation Manual. This method describes the**
13 **formulation of graphs based on each unit's historic performance data**
14 **for the four individual unplanned outage rates (i.e. forced, partial forced,**
15 **maintenance and partial maintenance outage rates), which in**
16 **combination constitute the unit's equivalent unplanned outage rate**
17 **(EUOR). From operational data and these graphs, the individual target**
18 **rates are determined by inspecting two years of twelve-month rolling**
19 **averages and the scatter of monthly data points during the two-year**
20 **period. The unit's four target rates are then used to calculate its**
21 **unplanned outage hours for the projection period. When the unit's**
22 **projected planned outage hours are taken into account, the hours**

1 calculated from these individual unplanned outage rates can then be
2 converted into an overall equivalent unplanned outage factor (EUOF).
3 Because factors are additive (unlike rates), the unplanned and planned
4 outage factors (EUOF and POF) when added to the equivalent
5 availability factor (EAF) will always equal 100%. For example, an EUOF
6 of 15% and a POF of 10% results in an EAF of 75%.

7
8 The supporting graphs and a summary table of all target and range rates
9 are contained in the section of my exhibit entitled "Unplanned Outage
10 Rate Tables and Graphs".

11
12 **Q. What is the target equivalent availability factor for Crystal River 3?**

13 **A.** The EAF target for Crystal River Unit 3 is 91.37%. Since no planned
14 outages are scheduled for the upcoming winter period, the unit's EUOR
15 and EUOF targets are both 8.63%.

16
17 The availability targets for the current period were developed after
18 removing from the historical data base, all forced outage hours
19 associated with the voluntary shutdown of the unit to address several
20 design issues related to backup safety systems, including the
21 emergency diesel generator.

22

1 Q. Please describe the method utilized in the development of the
2 improvement/degradation ranges for each GPIF unit's availability
3 targets.

4 A. In general, the methodology described in the implementation manual
5 was used. Ranges were first established for each of the four unplanned
6 outage rates associated with each unit. From an analysis of the
7 unplanned outage graphs, units with small historical variations in outage
8 rates were assigned narrow ranges and units with large variations were
9 assigned wider ranges. These individual ranges, expressed in terms of
10 rates, were then converted into a single unit availability range,
11 expressed in terms of a factor, using the same procedure described
12 above for converting the availability targets from rates to factors.

13
14 Q. Have you determined the net operating heat rate targets and ranges for
15 the Company's GPIF units?

16 A. Yes, I have. This information is included in the Target and Range
17 Summary on Page 3 of my exhibit.

18
19 Q. How were these heat rate targets and ranges developed?

20 A. The development of the heat rate targets and ranges for the upcoming
21 period utilized historical data from the past three comparable GPIF
22 periods, as described in the Implementation Manual. A "least squares"

1 computer program was used to curve-fit the heat rate data within
2 ranges having a 90% confidence level of including all data. The
3 computer analyses and data plots used to develop the heat rate targets
4 and ranges for each of the GPIF units are contained in the section of
5 my exhibit entitled "Average Net Operating Heat Rate Curves".
6

7 **Q. How were the GPIF incentive points developed for the unit availability
8 and heat rate ranges?**

9 A. GPIF incentive points for availability and heat rate were developed by
10 evenly spreading the positive and negative point values from the target
11 to the maximum and minimum values in case of availability, and from
12 the neutral band to the maximum and minimum values in the case of
13 heat rate. The fuel savings (loss) dollars were evenly spread over the
14 range in the same manner as described for the incentive points. The
15 maximum savings (loss) dollars are the same as those used in the
16 calculation of weighting factors.
17

18 **Q. How were the GPIF weighting factors determined?**

19 A. To determine the weighting factors for availability, a series of PROMOD
20 simulations were made in which each unit's maximum equivalent
21 availability was substituted for the target value to obtain a new system
22 fuel cost. The differences in fuel costs between these cases and the

1 target case determines the contribution of each unit's availability to fuel
2 savings. The heat rate contribution of each unit to fuel savings was
3 determined by multiplying the BTU savings between the minimum and
4 target heat rates (at constant generation) by the average cost per BTU
5 for that unit. Weighting factors were then calculated by dividing each
6 individual unit's fuel savings by total system fuel savings.

7
8 **Q. What was the basis for determining the estimated maximum incentive
9 amount?**

10 **A. The determination of the maximum reward or penalty was based upon
11 monthly common equity projections obtained from a detailed financial
12 simulation performed by the Company's Corporate Model.**

13
14 **Q. Does this conclude your testimony?**

15 **A. Yes.**

BEFORE THE PUBLIC SERVICE COMMISSION

FLORIDA POWER & LIGHT COMPANY

TESTIMONY OF R. SILVA

DOCKET NO. 970001-EI

MAY 20, 1997

- 1 Q. Please state your name and business address.
- 2 A. My name is Rene Silva and my business address is 9250 W. Flagler
3 Street, Miami, Florida 33174.
4
- 5 Q. Mr. Silva, would you please state your present position with
6 Florida Power and Light Company (FPL).
- 7 A. I am the Manager of Forecasting and Regulatory Response for the
8 Power Generation Business Unit of FPL.
9
- 10 Q. Mr. Silva, have you previously presented testimony in this
11 docket?
- 12 A. Yes, I have.
13
- 14 Q. Mr. Silva, what is the purpose of your testimony?
- 15 A. The purpose of my testimony is to report the actual performance for
16 the Equivalent Availability Factor (EAF) and Average Net Operating
17 Heat Rate (ANOHR) for the nineteen (19) generating units used to
18 determine the Generating Performance Incentive Factor (GPIF). I
19 have compared the actual performance of each unit to the targets

1 that were approved in Commission Order No. PSC-96-0353-FOF-EI
2 issued March 13, 1996, for the period April through September,
3 1996, and have performed the calculations prescribed by the GPIF
4 Rule based on this comparison. My testimony presents the result of
5 my calculations which is an incentive reward for the period.

6
7 **Q. Have you prepared, or caused to have prepared under your**
8 **direction, supervision or control, an exhibit in this proceeding?**

9 **A.** Yes, I have. It consists of one document. Page 1 of that document is
10 an index to the contents of the document.

11
12 **Q. What is the incentive amount you have calculated for the period**
13 **April, 1996 through September, 1996?**

14 **A.** I have calculated a GPIF reward incentive of \$ 5,801,940.

15
16 **Q. Please explain how the reward amount is calculated?**

17 **A.** The steps involved in making this calculation are provided in
18 Document No. 1. Page 2 of Document No. 1 provides the GPIF
19 Reward/Penalty Table (Actual) which shows an overall GPIF
20 performance point value of +6.2364 corresponding to a GPIF reward
21 of \$5,801,940. Page 3 provides the calculation of the maximum
22 allowed incentive dollars. The calculation of the system actual GPIF
23 performance points is shown on page 4. This page lists each unit,
24 the performance indicators (ANOHR and EAF), the weighing factors
25 and the associated GPIF points.

19

20

21

22

23

24

25

Page 5 is the actual EAF and adjustments summary. This page lists each of the nineteen (19) units, the actual outage factors and the actual EAF in columns 1 through 5. Column 6 is the adjustment for planned outage variation. Column 7 is the adjusted actual EAF, which is calculated on page 6, and Column 8 is the target EAF. Column 9 contains the Generating Performance Incentive Points for availability as determined from the tables submitted to and approved by the Commission prior to the start of the period. These tables are shown on pages 8 through 26.

Page 7 shows the adjustments to ANOHR. For each of the nineteen (19) units, it shows the target heat rate formula, the actual Net Output Factor (NOF) and the actual ANOHR in columns 1 through 4. Since heat rate varies with NOF, it is necessary to determine both the target and actual heat rates at the same NOF. This adjustment is to provide a common basis for comparison purposes and is shown numerically for each GPIF unit in columns 5 through 8. Column 9 contains the Generating Performance Incentive Points that have been determined from the table submitted for each unit and approved by the Commission prior to the beginning of the period. These tables are also shown on pages 8 through 26.

Q. Are there any changes to the targets approved through Commission Order No. PSC-96-0353-FOF-EI ?

- 1 A. No, the approved targets have not changed.
- 2
- 3 Q. Please explain the primary reason or reasons why FPL will be
- 4 rewarded under the GPIF for the April 1996, through September,
- 5 1996 period ?
- 6 A. The primary reason that FPL will receive a reward for the period
- 7 was that Turkey Point Nuclear Units 3 and 4 and St. Lucie Nuclear
- 8 Units 1 and 2 achieved better availability than was targeted.
- 9
- 10 Q. Please summarize the effect of FPL's nuclear unit availability on
- 11 the GPIF reward?
- 12 A. Turkey Point Unit 3 operated at an adjusted actual EAF of 97.0%,
- 13 compared to its target of 93.6%. This results in a +10.00 point
- 14 reward, which corresponds to a GPIF reward of \$1,096,668.
- 15
- 16 Turkey Point Unit 4 operated at an adjusted actual EAF of 85.5%,
- 17 compared to its target of 82.4%. This results in a +10.00 point
- 18 reward, which corresponds to a GPIF reward of \$965,585.
- 19
- 20 St. Lucie Unit 1 operated at an adjusted actual EAF of 61.1%,
- 21 compared to its target of 53.1%. This results in a +10.00 point
- 22 reward, which corresponds to a GPIF reward of \$1,393,907.
- 23

1 St. Lucie Unit 2 operated at an adjusted actual EAF of 93.8% ,
2 compared to its target of 84.2%. This results in a +10.00 point
3 reward, which corresponds to a GPIF reward of \$1,716,637.

4
5 The total GPIF reward due to the nuclear units' actual availability
6 performance is \$5,172,796.

7
8 **Q. Please summarize each nuclear unit's performance as it relates to**
9 **the ANOHR of the units.**

10 **A.** Turkey Point Unit 3 operated with an adjusted actual ANOHR of
11 11,115 BTU/KWH. This ANOHR is within the ± 75 BTU/KWH
12 deadband around the projected target, therefore there is no GPIF
13 reward or penalty.

14
15 Turkey Point Unit 4 operated with an adjusted actual ANOHR of
16 11,290 BTU/KWH, which is 94 BTU/KWH higher than the
17 projected target. This results in a -2.71 point penalty, which
18 corresponds to a GPIF penalty of \$77,124.

19
20 St. Lucie Unit 1 operated with an adjusted actual ANOHR of 10,887
21 BTU/KWH. This ANOHR is within the ± 75 BTU/KWH deadband
22 around the projected target, therefore there is no GPIF reward or
23 penalty.

24

1 St. Lucie Unit 2 operated with an adjusted actual ANOHR of 10,907
2 BTU/KWH, which was 88 BTU/KWH better than projected. This
3 results in a +1.49 point reward which corresponds to a GPIF reward
4 of \$26,328.

5

6 In total, the nuclear units' heat rate performance results in a GPIF
7 penalty of \$50,796.

8

9 Q. What is the total GPIF incentive reward for FPL's nuclear units?

10 A. \$5,122,000.

11

12 Q. Mr. Silva, would you summarize the performance of FPL's fossil
13 units?

14 A. Yes ten (10) of the fifteen (15) generating units performed better than
15 their availability targets, while the remaining five (5) units
16 performed worse than their targets. The combined fossil unit
17 availability performance results in a GPIF reward of \$796,975

18

19 Two (2) of the units operated with ANOHR's that were better than
20 their projected targets and six (6) units operated with ANOHR's that
21 were worse than their projected targets. The remaining seven (7)
22 units operated with ANOHR's that were within the +/- 75
23 BTU/KWH deadband around the projected targets and they will
24 receive no incentive reward or penalty. In total, the combined fossil
25 unit heat rate performance results in a GPIF penalty of \$117,035.

1

2

In total, the GPIF incentive reward for FPL's fossil units for the period of April through September, 1996 is \$679,940.

3

4

5

Q. Does this conclude your testimony?

6

A. Yes, it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

FLORIDA POWER & LIGHT COMPANY

TESTIMONY OF RENE SILVA

DOCKET NO. 970001-EI

June 23, 1997

1 Q Please state your name and address.

2 A. My name is Rene Silva. My business address is 9250 W. Flagler
3 Street, Miami, Florida 33174.

4

5 Q. By whom are you employed and what is your position?

6 A. I am employed by Florida Power & Light Company (FPL) as Manager
7 of Forecasting and Regulatory Response in the Power Generation
8 Business Unit.

9

10 Q. Have you previously testified in this docket?

11 A. Yes.

12

13 Q. What is the purpose of your testimony?

14 A. The purpose of my testimony is to present and explain FPL's
15 projections for (1) dispatch costs of heavy fuel oil, light fuel oil, coal

1 and natural gas, (2) availability of natural gas to FPL, (3) generating
2 unit heat rates and availabilities, and (4) quantities and costs of
3 interchange and other power transactions. These projected values were
4 used as input values to POWRSYM in the calculation of the proposed
5 fuel cost recovery factor for the period April through September, 1997.
6 In addition, my testimony describes the circumstances regarding FPL's
7 request to begin recovery, through the Capacity Cost Recovery Clause,
8 of approximately \$4.7 million per year associated with capacity
9 payments to be made to Jacksonville Electric Authority (JEA) during
10 the "St. Johns River Power Park energy suspension period".

11

12 **Q. Have you prepared or caused to be prepared under your**
13 **supervision, direction and control an Exhibit in this proceeding?**

14 **A. Yes, I have. It consists of pages 1 through 7 of Appendix I of this**
15 **filing.**

16

17 **Q. What are the key factors that could affect FPL's price for heavy**
18 **fuel oil during the October, 1997 through March, 1998 period?**

19 **A. The key factors are (1) demand for crude oil and petroleum products**
20 **(including heavy fuel oil), (2) non-OPEC crude oil production, (3) the**
21 **extent to which OPEC production matches actual demand for OPEC**

1 crude oil, (4) the price relationship between heavy fuel oil and crude
2 oil, and (5) the terms of FPL's heavy fuel oil supply and transportation
3 contracts.

4
5 In general, world demand for crude oil and petroleum products is
6 projected to continue to increase at a moderate rate through 1998 as
7 a result of continued economic growth in the Pacific Rim countries.

8
9 On the supply side, total non-OPEC crude oil production is projected
10 to rise slightly through 1998 due to increases in the North Sea and
11 Latin America. The balance of the projected increase in crude oil
12 demand is projected to be adequately met by a moderate increase in
13 OPEC production, in part due to the resumption of small quantities of
14 Iraqi exports .

15
16 Based on these factors crude oil prices, and consequently heavy fuel
17 oil prices, for the October, 1997 through March, 1998 period will be
18 only slightly higher than at present.

19
20 **Q. What is the projected relationship between heavy fuel oil and**
21 **crude oil prices during the October, 1997 through March, 1998**

1 **period?**

2 A. The price of heavy fuel oil on the U. S. Gulf Coast (1.0% sulfur) is
3 projected to be approximately 72% of the price of West Texas
4 Intermediate (WTI) crude oil.

5

6 **Q. Please provide FPL's projection for the dispatch cost of heavy fuel
7 oil for the October, 1997 through March, 1998 period.**

8 A. FPL's projection for the system average dispatch cost of heavy fuel
9 oil, by sulfur grade, by month, is provided on page 3 of Appendix I
10 in dollars per barrel.

11

12 **Q. What are the key factors that could affect the price of light fuel
13 oil?**

14 A. The key factors that affect the price of light fuel oil are similar to
15 those described above for heavy fuel oil.

16

17 **Q. Please provide FPL's projection for the dispatch cost of light fuel
18 oil for the period from October, 1997 through March, 1998.**

19 A. FPL's projection for the average dispatch cost of light oil, by sulfur
20 grade, by month, is shown on page 4 of Appendix I.

21

1 **Q. What is the basis for FPL's projections of the dispatch cost of**
2 **coal?**

3 **A.** FPL's projected dispatch cost of coal is based on FPL's price
4 projection of spot coal delivered to its coal plants.

5

6 For St. Johns River Power Park (SJRPP), annual coal volumes
7 delivered under long-term contracts are fixed on October 1st of the
8 previous year. For Scherer Plant, the annual volume of coal delivered
9 under long-term contracts is set by the terms of the contracts.
10 Therefore, the price of coal delivered under long-term contracts does
11 not affect the daily dispatch decision. The dispatch price of coal for
12 each coal plant is based on the variable component of the coal cost,
13 the projected spot coal price.

14

15 In the case of SJRPP, FPL began to blend petroleum coke with the
16 coal in order to reduce fuel costs, beginning in the spring of 1997. It
17 is anticipated that petroleum coke will represent 15% of the fuel blend
18 at SJRPP. The lower price of petroleum coke is reflected in the
19 weighted average price of fuel delivered to SJRPP.

20

21 **Q. Please provide FPL's projection for the dispatch cost of coal for**

1 **the October, 1997 through March, 1998 period.**

2 A. FPL's projected system average dispatch cost of coal, shown on page
3 5 of Appendix I, is about \$1.53 per million BTU, delivered to plant.

4

5 **Q. What are the factors that can affect FPL's natural gas prices**
6 **during the October, 1997 through March, 1998 period?**

7 A. In general, the key factors are (1) domestic natural gas demand and
8 supply, (2) natural gas imports, (3) heavy fuel oil prices and (4) the
9 terms of FPL's gas supply and transportation contracts.

10

11 Every year, between the months of April and October, natural gas
12 market inventories are built up as a reserve in preparation for peak
13 winter gas demand. The quantity of natural gas in inventory in April,
14 1997 - the start of the gas "injection" season - while lower than
15 average, was significantly higher than in April, 1996.

16

17 It is projected that by the end of October the inventory level will be
18 adequate to meet winter (1997-1998) demand for natural gas.
19 Consequently, gas prices for the October, 1997 through March, 1998
20 period are projected to be lower than during the same period a year
21 earlier.

1 Q. What are the factors that affect the availability of natural gas to
2 FPL during the October, 1997 through March, 1998 period?

3 A. The key factors are (1) the existing capacity of natural gas
4 transportation facilities into Florida, (2) the portion of that capacity
5 that is contractually allocated to FPL on a firm, "guaranteed" basis
6 each month and (3) the natural gas demand in the State of Florida.

7
8 The current capacity of natural gas transportation facilities into the
9 State of Florida is 1,455,000 million BTU per day (including FPL's
10 firm allocation of 455,000 to 480,000 million BTU per day during this
11 period, depending on the month). Total demand for natural gas in the
12 State during the period (including FPL's firm allocation) is projected
13 to be between 245,000 and 255,000 million BTU per day below the
14 pipeline's total capacity. This projected available pipeline capacity
15 could enable FPL to acquire and deliver additional natural gas, beyond
16 FPL's 455,000 to 480,000 million BTU per day of firm, "guaranteed"
17 allocation, should it be economically attractive, relative to other
18 energy choices.

19
20 Q. Please provide FPL's projections for the dispatch cost and
21 availability (to FPL) of natural gas for the October, 1997 through

- 1 **March, 1998 period.**
- 2 A. FPL's projections of the system average dispatch cost and availability
3 of natural gas are provided on page 6 of Appendix I.
4
- 5 **Q. Please describe how you have developed the projected unit**
6 **Average Net Operating Heat Rates shown on Schedule E4 of**
7 **Appendix II.**
- 8 A. The projected Average Net Operating Heat Rates were calculated by
9 the POWRSYM model. The current heat rate equations and efficiency
10 factors for FPL's generating units, which present heat rate as a
11 function of unit power level, were used as inputs to POWRSYM for
12 this calculation. The heat rate equations and efficiency factors are
13 updated as appropriate, based on historical unit performance and
14 projected changes due to plant upgrades, fuel grade changes, or results
15 of performance tests.
16
- 17 **Q. Are you providing the outage factors projected for the period**
18 **October, 1997 through March, 1998?**
- 19 A. Yes. This data is shown on page 7 of Appendix I.
20
- 21 **Q. How were the outage factors for this period developed?**

- 1 A. The unplanned outage factors were developed using the actual
2 historical full and partial outage event data for each of the units. The
3 historical unplanned outage factor of each generating unit was
4 adjusted, as necessary, to eliminate non-recurring events and recognize
5 the effect of planned outages to arrive at the projected factor for the
6 October, 1997 through March, 1998 period.
7
- 8 **Q. Please describe significant planned outages for the October, 1997
9 through March, 1998 period.**
- 10 A. Planned outages at our nuclear units are the most significant in
11 relation to Fuel Cost Recovery. Turkey Point Unit No.4 is scheduled
12 to be out of service for refueling beginning on September 8, 1997 and
13 until October 18, 1997, or eighteen days during the projected period.
14 St. Lucie Unit No.1 will be out of service for refueling beginning on
15 October 20, 1997 and until January 3, 1998, or seventy-five days
16 during the projected period. There are no other significant planned
17 outages during the projected period.
18
- 19 **Q. Are any changes to FPL's generation capacity planned during the
20 April through September, 1997 period?**
- 21 A. Yes. Net Summer Continuous Capability (NSCC) at Pt. Everglades

1 Unit No.4 will increase by 21 MW, from 385 MW to 406 MW, while
2 its Summer Peaking Capability (SPC) will increase by 16 MW, from
3 395 MW to 411 MW. This change had been previously projected to
4 occur during the April through September, 1997 period.

5

6 **Q. Are you providing the projected interchange and purchased power**
7 **transactions forecasted for October, 1997 to March, 1998?**

8 A. Yes. This data is shown on Schedules E6, E7, E8, and E9 of
9 Appendix II of this filing.

10

11 **Q. In what types of interchange transactions does FPL engage?**

12 A. FPL purchases interchange power from others under several types of
13 interchange transactions which have been previously described in this
14 docket: Emergency - Schedule A; Short Term Firm - Schedule B;
15 Economy - Schedule C; Extended Economy - Schedule X; Opportunity
16 Sales - Schedule OS; UPS Replacement Energy - Schedule R and
17 Economic Energy Participation - Schedule EP.

18 For services provided by FPL to other utilities, FPL has developed
19 amended Interchange Service Schedules, including AF (Emergency),
20 BF (Scheduled Maintenance), CF (Economy), DF (Outage), and XF
21 (Extended Economy). These amended schedules replace and supersede

1 existing Interchange Service Schedules A, B, C, D, and X for services
2 provided by FPL.

3

4 **Q. Does FPL have arrangements other than interchange agreements**
5 **for the purchase of electric power and energy which are included**
6 **in your projections?**

7 A. Yes. FPL purchases coal-by-wire electrical energy under the 1988
8 Unit Power Sales Agreement (UPS) with the Southern Companies.
9 FPL has contracts to purchase nuclear energy under the St. Lucie Plant
10 Nuclear Reliability Exchange Agreements with Orlando Utilities
11 Commission (OUC) and Florida Municipal Power Agency (FMPA).
12 FPL also purchases energy from JEA's portion of the SJRPP Units, as
13 stated above. Additionally, FPL purchases energy and capacity from
14 Qualifying Facilities under existing tariffs and contracts.

15

16 **Q. Please provide the projected energy costs to be recovered through**
17 **the Fuel Cost Recovery Clause for the power purchases referred**
18 **to above during the October, 1997 to March, 1998 period.**

19 A. Under the UPS agreement FPL's capacity entitlement during the
20 projected period is 913 MW from October, 1997 through March, 1998.
21 Based upon the alternate and supplemental energy provisions of UPS.

1 an availability factor of 100% is applied to these capacity entitlements
2 to project energy purchases. The projected UPS energy (unit) cost for
3 this period, used as input to POWRSYM, is based on data provided
4 by the Southern Companies. For the period, FPL projects the purchase
5 of 1,561,795 MWH of UPS Energy at a cost of \$29,129,990. In
6 addition, we project the purchase of 1,088,327 MWH of UPS
7 Replacement energy (Schedule R) at a cost of \$17,915,970. The total
8 UPS Energy plus Schedule R projections are presented on Schedule
9 E7 of Appendix II.

10

11 Energy purchases from the JEA-owned portion of the St. Johns River
12 Power Park generation are projected to be 1,388,436 MWH for the
13 period at an energy cost of \$20,691,410. FPL's cost for energy
14 purchases under the St. Lucie Plant Reliability Exchange Agreements
15 is a function of the operation of St. Lucie Unit 2 and the fuel costs to
16 the owners. For the period, we project purchases of 261,495 MWH
17 at a cost of \$958,900. These projections are shown on Schedule E7
18 of Appendix II.

19

20 In addition, as shown on Schedule E8 of Appendix II, we project that
21 purchases from Qualifying Facilities for the period will provide

1 3,625,783 MWH at a cost to FPL of \$66,825,038

2

3 **Q. How were energy costs related to purchases from Qualifying**
4 **Facilities developed?**

5 A. For those contracts that entitle FPL to purchase "as-available" energy
6 we used FPL's fuel price forecasts as inputs to the POWRSYM model
7 to project FPL's avoided energy cost that is used to set the price of
8 these energy purchases each month. For those contracts that enable
9 FPL to purchase firm capacity and energy, the applicable Unit Energy
10 Cost mechanism prescribed in the contract is used to project monthly
11 energy costs.

12

13 **Q. Have you projected Schedule A/AF - Emergency Interchange**
14 **Transactions?**

15 A. No purchases or sales under Schedule A/AF have been projected since
16 it is not practical to estimate emergency transactions

17

18 **Q. Have you projected Schedule B/BF - Short-Term Firm**
19 **Interchange Transactions?**

20 A. No commitment for such transactions had been made when projections
21 were developed. Therefore, we have estimated that no Schedule BF

1 sales or Schedule B purchases would be made in the projected period.

2

3

4 **Q. Please describe the method used to forecast the Economy**
5 **Transactions.**

6 A. The quantity of economy sales and purchase transactions are projected
7 based upon historic transaction levels, adjusted to remove non-
8 recurring factors.

9

10 **Q. What are the forecasted amounts and costs of Economy energy**
11 **sales?**

12 A. We have projected 814,436 MWH of Economy energy sales for the
13 period. The projected fuel cost related to these sales is \$19,169,883.
14 The projected transaction revenue from the sales is \$24,235,826.
15 Eighty percent of the gain for Schedule C is \$4,052,754 and is
16 credited to our customers.

17

18 **Q. In what document are the fuel costs of economy energy sales**
19 **transactions reported?**

20 A. Schedule E6 of Appendix II provides the total MWH of energy and
21 total dollars for fuel adjustment. The 80% of gain is also provided on

1 Schedule E6 of Appendix II.

2

3 **Q. What are the forecasted amounts and costs of Economy energy**
4 **purchases for the October, 1997 to March, 1998 period?**

5 A. The costs of these purchases are shown on Schedule E9 of Appendix
6 II. For the period FPL projects it will purchase a total of 2,392,872
7 MWH at a cost of \$45,368,580. If generated, we estimate that this
8 energy would cost \$52,804,756. Therefore, these purchases are
9 projected to result in savings of \$7,436,176.

10

11 **Q. What are the forecasted amounts and cost of energy being sold**
12 **under the St. Lucie Plant Reliability Exchange Agreement?**

13 A. We project the sale of 153,043 MWH of energy at a cost of \$621,700.
14 These projections are shown on Schedule E6 of Appendix II.

15

16 **Q. Are you presenting testimony related to the Capacity Cost**
17 **Recovery clause?**

18 A. Yes. Ms. Korel M. Dubin has filed testimony in which she addresses
19 FPL's request that it be authorized to collect, during the next
20 seventeen (17) years, approximately \$4.7 million per year associated
21 with future capacity payments to be made to JEA during the SJRPP

1 energy suspension period. My testimony describes the circumstances
2 that underlie FPL's request.

3

4 **Q. Why does FPL propose to recover, between 1998 and 2014,**
5 **capacity costs to be paid to JEA between 2015 and 2020?**

6 **A.** Because there is a mismatch between the period over which FPL
7 currently anticipates it will continue to receive energy from JEA's
8 ownership share of SJRPP, and the period over which FPL is
9 contractually required to make annual capacity payments to JEA.

10

11 **Q. Please explain this mismatch between capacity and energy under**
12 **the contract with JEA.**

13 **A.** FPL makes capacity payments to JEA at a rate necessary to pay off,
14 by the year 2020, bonds issued by JEA to finance SJRPP. The
15 magnitude of the annual capacity payment is not related to the
16 quantity of energy FPL receives each year. In fact, since SJRPP
17 provides a low-cost source of energy, the plant runs as much as
18 possible, and FPL takes as much of the plant's energy as it can each
19 year, while the capacity payment remains unaffected.

20

21 **Q. Why does this mismatch create a concern?**

1 A. Because the total quantity of energy FPL can take from JEA's
2 ownership share of SJRPP through the year 2020 is limited to
3 80,534,332 MWh. FPL is taking as much SJRPP energy as possible
4 currently, and we project that the energy limit will be reached in 2015.
5 Thereafter FPL will, consistent with the contract, continue making
6 capacity payments through 2020, but would receive no energy from
7 JEA's share of SJRPP ("SJRPP energy suspension").

8

9 **Q. How was this energy limit established?**

10 A. An Internal Revenue Service (IRS) ruling, which established the tax-
11 exempt status of the municipal bonds used to finance JEA's ownership
12 interest in SJRPP, stipulates that FPL shall not receive more than
13 twenty-five percent (25%) of the nameplate capacity of JEA's
14 ownership share of the plant over the life of the bonds. Under FPL's
15 contract with JEA, FPL will purchase 37.5% of energy produced by
16 JEA's share of the plant, based on a projected plant capacity factor of
17 approximately 67%. This is equivalent to 25% of the plant's total
18 capability.

19

20 **Q. Has SJRPP operated at the assumed 67% capacity factor?**

21 A. The plant has operated at a 88.2% capacity factor and as a result FPL

1 has received more low-cost energy during the first ten years of
2 operation than had been originally estimated. We project that the plant
3 will operate at an average capacity factor of 92% between 1998 and
4 2014. At that rate, the energy limit of 80,534,332 MWh imposed by
5 the IRS ruling will be reached in 2015.

6

7 **Q. Why doesn't FPL reduce the quantity of energy purchased from**
8 **JEA's share of SJRPP so that the energy limit would not be**
9 **reached until the bonds are paid?**

10 **A.** Because we would have to replace the energy not taken from SJRPP
11 with more expensive purchases or FPL generation, and as a result our
12 customers' costs would increase. In fact, our analysis shows that
13 operating SJRPP at a 67% capacity factor in order to reduce the
14 annual quantity of SJRPP energy purchases would increase energy
15 costs by about \$128 million on a net present value basis between 1998
16 and 2020. The net present value of the amount FPL is requesting to
17 collect is approximately \$40 million.

18

19 **Q. Would you please summarize your testimony?**

20 **A.** Yes. In my testimony I have presented FPL's fuel price projections
21 for the fuel cost recovery period of October, 1997 through March,

1 1998. In addition, I have presented FPL's projections for generating
2 unit heat rates and availabilities, and the quantities and costs of
3 interchange and other power transactions for the same period. These
4 projections were based on the best information available to FPL, and
5 were used as inputs to POWRSYM in developing the projected Fuel
6 Cost Recovery Factor for the October, 1997 through March, 1998
7 period.

8 My testimony also describes the circumstances underlying FPL's
9 request to begin to recover currently about \$4.7 million per year in
10 future SJRPP capacity costs through the Capacity Clause

11

12 **Q. Does this conclude your testimony?**

13 **A. Yes, it does.**

14

15

16

BEFORE THE PUBLIC SERVICE COMMISSION

FLORIDA POWER & LIGHT COMPANY

TESTIMONY OF R. SILVA

DOCKET NO. 970001-EI

JUNE 23, 1997

1 Q. Please state your name and business address.

2 A. My name is Rene Silva and my business address is 9250 W. Flagler Street,
3 Miami, Florida 33174.

4

5 Q. Mr. Silva, would you please state your present position with Florida
6 Power and Light Company (FPL).

7 A. I am the Manager of Forecasting and Regulatory Response for the Power
8 Generation Business Unit of FPL.

9

10 Q. Mr. Silva, have you previously had testimony presented in this docket?

11 A. Yes, I have.

12

13 Q. Mr. Silva, what is the purpose of your testimony?

14 A. The purpose of my testimony is to present the target unit average net
15 operating heat rates and target unit equivalent availabilities for the period
16 October, 1997 through September, 1998, for use in determining the
17 Generating Performance Incentive Factor (GPIF). The improvement and
18 degradation range for each performance indicator is also presented in this
19 testimony.

- 1 **Q. Mr. Silva could you please summarize what the FPL system targets are**
2 **for Equivalent Availability Factor (EAF) and Average Net Operating**
3 **Heat Rate (ANOHR).**
- 4 A. FPL projects a weighted system equivalent planned outage factor of 6.0%
5 and a weighted system equivalent unplanned outage factor of 6.1% which
6 yield a weighted system equivalent availability of 87.9%. This target
7 includes the refueling of two nuclear units during the October, 1997
8 through September, 1998 period. FPL also projects a weighted system
9 average net operating heat rate of 9277 BTU/KWH. As discussed later in
10 this testimony, these targets represent fair and reasonable values when
11 compared to historical data . FPL therefore requests that the targets for
12 these performance indicators and the respective improvement/degradation
13 ranges in my testimony be approved by the Commission .
14
- 15 **Q. Have you prepared, or caused to have prepared under your direction,**
16 **supervision or control, an exhibit in this proceeding?**
- 17 A. Yes, I have. It consists of one document. The first page of this document is
18 an index to the contents of the document. All other pages are numbered
19 according to the latest revisions of the GPIF Manual as approved by the
20 Commission.
21
- 22 **Q. Have you established target levels of performance for the units to be**
23 **considered in establishing the GPIF for FPL?**
- 24 A. Yes, I have. Document No. 1, pages 6 and 7 contain the information
25 summarizing the targets and ranges for unit equivalent availability and

1 average net operating heat rates for the sixteen (16) generating units which
2 FPL proposes to have considered. These sheets were prepared in
3 accordance with the latest revisions of the GPIF Manual, except that, for
4 consistency with previous GPIF filings, it is necessary to divide the format
5 of Sheet 3.505 of the GPIF Manual into two sheets. All of these targets
6 have been derived utilizing methodologies as adopted in Section 4,
7 Subsection 2.3 of the GPIF Manual.

8
9 **Q. Please summarize FPL's methodology for determining equivalent**
10 **availability targets?**

11 **A.** The GPIF Manual requires that the equivalent availability target for each
12 unit be determined as the difference between 100% and the sum of the
13 Planned Outage Factor (POF) and the Unplanned Outage Factor (UOF).
14 The POF for each unit is determined by the length of the planned outage
15 during the projected period. The GPIF Manual also requires that the sum of
16 the most recent twelve month ending average forced outage factor (FOF)
17 and maintenance outage factor (MOF) be used as the starting value for the
18 determination of the target unplanned outage factor (UOF). The UOF is
19 then adjusted to reflect recent monthly performance and known
20 modifications or changes in equipment.

21
22 For most units in the GPIF this adjustment is usually done for units which
23 had or are forecast to have planned outages. When a unit is in a planned
24 outage state the unit cannot incur an unplanned outage. For this reason,
25 when historical data, which contains a planned outage, is used for

1 developing targets, the UOF will be lower than if the unit had operated the
2 entire period. To account for this, the historical UOF is increased in
3 proportion to the planned outage duration for that period. Similarly, if a
4 unit is forecast to have a planned outage in the projection period the
5 adjusted historical UOF will be higher than it should because it will not be
6 exposed to unplanned outages for the entire period. In this case the UOF is
7 reduced in proportion to the forecast planned outage duration.

8
9 **Q. Mr. Silva, were the EAF targets for the GPIF units determined using**
10 **the methodology as described in the GPIF Operating Manual?**

11 **A. Yes.**

12
13 **Q. How did you select the units to be considered when establishing the**
14 **GPIF for FPL?**

15 **A. The sixteen (16) units which FPL proposes to use represent the top 81.0%**
16 **of the forecast system net generation for the October, 1997 through**
17 **September, 1998 period. These units were selected in accordance with the**
18 **GPIF Manual Section 3.1 using the estimated net generation for each unit**
19 **taken from the production costing simulation program, POWRSYM, which**
20 **forms the basis for the projected levelized fuel cost recovery factor for the**
21 **period.**

22
23 **Q. Mr. Silva, from the heat rate targets and equivalent availability range**
24 **projections, do FPL's generation performance targets represent a**
25 **reasonable level of efficiency?**

1 A. Yes. To fully appreciate why these targets are reasonable, and in some
2 cases ambitious, it would be necessary to discuss the development of both
3 the heat rate and availability targets for each of the sixteen (16) units in the
4 GPIF. However, a less rigorous approach of comparing weighted system
5 values of these targets to actual values for prior periods will provide a
6 valuable insight into the appropriateness of the targets.

7 Q. Does this conclude your testimony?

8 A. Yes, it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**FLORIDA POWER & LIGHT COMPANY****TESTIMONY OF R. L. WADE****DOCKET NO. 970001-EI****June 23, 1997**

1 **Q. Please state your name and address.**

2 A. My name is Robert L. Wade. My business address is 700 Universe
3 Boulevard, Juno Beach, Florida 33408.

4

5 **Q. By whom are you employed and what is your position?**

6 A. I am employed by Florida Power & Light Company (FPL) as Director,
7 Business Services in the Nuclear Business Unit.

8

9 **Q. Have you previously testified in this docket?**

10 A. Yes, I have.

11

12 **Q. What is the purpose of your testimony?**

13 A. The purpose of my testimony is to present and explain FPL's
14 projections of nuclear fuel costs for the thermal energy (MMBTU) to
15 be produced by our nuclear units and costs of disposal of spent

1 nuclear fuel. Both of these costs were input values to POWRSYM for
2 the calculation of the proposed fuel cost recovery factor for the period
3 October 1997 through March 1998.

4

5 **Q. What is the basis for FPL's projections of nuclear fuel costs?**

6 A. FPL's nuclear fuel cost projections are developed using energy
7 production at our nuclear units and their operating schedules,
8 consistent with those assumed in POWRSYM, for the period October
9 1997 through March 1998.

10

11 **Q. Please provide FPL's projection for nuclear fuel unit costs and
12 energy for the period October 1997 through March 1998.**

13 A. FPL projects the nuclear units will produce 114,468,963 MBTU of
14 energy at a cost of \$0.333 per MMBTU, excluding spent fuel disposal
15 costs for the period October 1997 through March 1998. Projections
16 by nuclear unit and by month are provided on Schedule E-4 of
17 Appendix II.

18

19 **Q. Please provide FPL's projections for nuclear spent fuel disposal
20 costs for the period October 1997 through March 1998 and what
21 is the basis for FPL's projections.**

1 A. FPL's projections for nuclear spent fuel disposal costs are provided
2 on Schedule E-2 of Appendix II. These projections are based on
3 FPL's contract with the U.S. Department of Energy (DOE), which sets
4 the spent fuel disposal fee at 1 mill per net Kwh generated minus
5 transmission and distribution line losses.

6

7 **Q. Please provide FPL's projection for Decontamination and**
8 **Decommissioning (D&D) costs to be paid in the period October**
9 **1997 through March 1998 and what is the basis for FPL's**
10 **projection.**

11 A. FPL's projection of \$5.42M for D&D costs to be paid during the period
12 October 1997 through March 1998 is included on Schedule E-2 of
13 Appendix II.

14

15 **Q. Are there currently any unresolved disputes under FPL's nuclear**
16 **fuel contracts?**

17 A. Yes. As reported in prior testimonies, there are two unresolved
18 disputes.

19

20 The first dispute is under FPL's contract with DOE for final disposal
21 of spent nuclear fuel. FPL, along with a number of electric utilities,

1 has filed suit against DOE over DOE's denial of its obligation to
2 accept spent nuclear fuel beginning in 1998. A July 23, 1996, ruling
3 by the U.S. Court of Appeals for the District of Columbia said that
4 DOE is required by the Nuclear Waste Policy Act to take title and
5 dispose of spent nuclear fuel from nuclear power plants beginning on
6 January 31, 1998. DOE declined to seek further review of the
7 decision, which was remanded to DOE for further proceedings. On
8 December 17, 1996, DOE advised the electric utilities that it would
9 not begin to dispose of spent nuclear fuel by the unconditional
10 deadline.

11

12 In response to DOE's letter, FPL, other electric utilities, and state
13 utility commissions filed suit on January 31, 1997 in the U.S. Court of
14 Appeals for the District of Columbia requesting that the court
15 authorize the utilities to suspend payments into the Nuclear Waste
16 Fund (NWF) until DOE performs on its unconditional obligation to
17 take title to and dispose of spent nuclear fuel.

18

19 On May 7, 1997, the utilities filed a petition for a writ of mandamus
20 that (1) DOE comply with its statutory obligation and begin disposing
21 of spent nuclear fuel by January 31, 1998 or in the alternative, direct
22 DOE to develop a program that will enable the agency to begin

1 disposing of spent nuclear fuel by January 31, 1998; (2) declaring
2 that the utilities are relieved of the obligation to pay into the NWF and
3 are authorized to place NWF collections into escrow until DOE
4 disposes of the spent nuclear fuel; (3) prohibiting DOE from
5 suspending the contracts with the utilities or from taking any other
6 adverse action under the contracts; and (4) declaring that the
7 suspension of fee payments will not adversely affect the utilities as to
8 timing, manner, or further cost disposal entitlements by reason of
9 such suspension of fee payments. DOE must file a response to the
10 petition on June 6, 1997. The utilities may then reply to DOE's
11 response ten days thereafter.

12
13 Secondly, FPL is currently seeking to resolve a price dispute for
14 uranium enrichment services purchased from the United States (U.S.)
15 Government, prior to July 1, 1993. FPL's contract for enrichment
16 services with the U.S. Government calls for pricing to be calculated
17 in accordance with "Established DOE Pricing Policy". Such policy
18 had always been one of cost recovery, which included costs related
19 to the Decontamination and Decommissioning (D&D) of DOE's
20 enrichment facilities. However, the Energy Policy Act of 1992 (The
21 Act) requires utilities to make separate payments to the U.S. Treasury
22 for D&D, starting in Fiscal Year 1993. FPL has been making such

1 payments. Therefore, D&D should not have been included in the
2 price charged by DOE for deliveries during Fiscal Year 1993, and the
3 price should have been reduced accordingly. FPL filed a claim with
4 the DOE Contracting Officer on July 14, 1995, for a refund for such
5 deliveries. On October 13, 1995, the DOE Contracting Officer
6 officially rejected FPL's claim. On October 11, 1996, FPL, along with
7 five other U.S. utilities and one foreign entity, appealed DOE's
8 rejection of the Fiscal Year 1993 overcharge claim with the U.S. Court
9 of Federal Claims.

10
11 On December 12, 1996, the Court of Federal Claims granted the
12 unopposed motion of all parties to suspend the overcharge
13 proceeding pending the outcome of an appeal to the U.S. Court of
14 Appeals for the Federal Circuit in Barseback Kraft AB v. United
15 States, where the appellants are seeking to recover overcharges for
16 uranium enrichment services under identical contract provisions to
17 those at issue in FPL's overcharge claim. Oral argument was held in
18 the Barseback case on May 7, 1997, and a decision could be issued
19 during the summer of 1997. FPL will reevaluate the validity of its
20 overcharge claim upon issuance of a final decision in the Barseback
21 case.

22

1 Meanwhile, in a related case, Yankee Atomic Electric Company had
2 been challenging the legality of the United States to impose the D&D
3 fees. On May 6, 1997, a panel of the U.S. Court of Appeals for the
4 Federal Circuit held that the D&D special assessment was lawful
5 under the Energy Policy Act. United States v. Yankee Atomic Electric
6 Co. A lower court had ruled that the D&D special assessment was
7 unlawful. Yankee has until June 20, 1997 to determine whether to
8 seek review from the full panel of the Federal Circuit. FPL will
9 continue to follow this case and will take actions, as appropriate,
10 consistent with the outcome of the appeal.

11

12 **Q. Does this conclude your testimony?**

13 **A. Yes, it does.**

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**FLORIDA POWER & LIGHT COMPANY****TESTIMONY OF KOREL M. DUBIN****DOCKET NO. 970001-EI****May 20, 1997**

1 **Q. Please state your name, business address, employer and**
2 **position.**

3 **A.** My name is Korel M. Dubin, and my business address is 9250 West
4 Flagler Street, Miami, Florida, 33174. I am employed by Florida Power
5 & Light Company (FPL) as a Principal Rate Analyst in the Rates and
6 Tariff Administration Department.

7

8 **Q. Please state your education and business experience.**

9 **A.** I received a Bachelor of Arts in Political Science from Emory University
10 in 1980 and in 1982 I received a Master of Business Administration
11 from Barry University. In June 1982, I joined Florida Power & Light
12 Company's Fossil Fuel Section of the Fuel Resources Department.
13 My responsibilities included administration of fuel supply and
14 operations contracts, development of procurement procedures and
15 research and analysis of transportation options and by-product sales.

1 After holding positions of increasing responsibility in the Fuel
2 Resources Department (1982-1985) and Rates and Research
3 Department (1985 -1991), I joined the Regulatory Affairs Department
4 as a Coordinator in July 1991 where I was primarily responsible for the
5 coordination of the Company's Fuel, Oil Backout, Capacity,
6 Environmental Cost Recovery Clause and Generating Performance
7 Incentive Factor (GPIF) filings.

8
9 In April 1997 I became Principal Rate Analyst in the Rates and Tariff
10 Administration Department where I am primarily responsible for the
11 development and support of the Company's Fuel, Capacity and
12 Environmental Cost Recovery Clause and GPIF Filings.

13

14 **Q. What is the purpose of your testimony in this proceeding?**

15 A. The purpose of my testimony is to present the schedules necessary
16 to support the actual Fuel Cost Recovery Clause (FCR) Net True-Up
17 amount for the period October 1996 through March 1997. The Net
18 True-Up for FCR is an overrecovery, including interest, of
19 \$13,141,163. I am requesting Commission approval to include this
20 true-up amount in the calculation of the FCR factor for the period
21 October 1997 through March 1998.

1 **Q. Have you prepared or caused to be prepared under your**
2 **direction, supervision or control an exhibit in this proceeding?**

3 A. Yes, I have. It consists of Appendix I which contains the FCR related
4 schedules. FCR Schedules A-1 through A-13 for the October 1996
5 through March 1997 period have been filed monthly with the
6 Commission, are served on all parties and are incorporated herein by
7 reference.

8
9 **Q. What is the source of the data which you will present by way of**
10 **testimony or exhibits in this proceeding?**

11 A. Unless otherwise indicated, the actual data is taken from the books
12 and records of FPL. The books and records are kept in the regular
13 course of our business in accordance with generally accepted
14 accounting principles and practices, and provisions of the Uniform
15 System of Accounts as prescribed by this Commission.

16
17 **Q. Please explain the calculation of the Net True-up Amount.**

18 A. Appendix I, page 3, entitled "Summary of Net True-Up Amount" shows
19 the calculation of the Net True-Up for the six-month period October
20 1996 through March 1997, an overrecovery of \$13,141,163, which I
21 am requesting be included in the calculation of the Fuel Cost
22 Recovery Factor for the period October 1997 through March 1998.
23 The calculation of the true-up amount for the period follows the
24 procedures established by this Commission as set forth on

1 Commission Schedule A-2 "Calculation of True-Up and Interest
2 Provision".

3
4 The actual End-of-Period underrecovery for the six-month period
5 October 1996 through March 1997 of \$50,449,989 shown on line 1,
6 less the estimated/actual End-of-Period underrecovery for the same
7 period of \$63,591,152 shown on line 2 that was included in the
8 calculation of the Fuel Cost Recovery Factor for the period April 1997
9 through September 1997, results in the Net True-Up for the six-month
10 period October 1996 through March 1997 shown on line 3, an
11 overrecovery of \$13,141,163.

12

13 **Q. Have you provided a schedule showing the variances between**
14 **actuals and estimated/actuals?**

15 A. Yes. Appendix I, page 4, entitled "Calculation of Final True-up
16 Variances" shows the actual fuel costs and revenues compared to the
17 estimated/actuals for the period October 1996 through March 1997.

18

19 **Q. What was the variance in fuel costs?**

20 A. As shown on Appendix I, page 4, line A7, actual fuel costs on a Total
21 Company basis were \$7.1 million lower than the estimated/actual
22 projection. The Fuel Cost of Power Sales are \$13.2 million lower than
23 projected. This variance is offset by a \$3.6 million decrease in the
24 Fuel Cost of System Net Generation, a \$1.9 million decrease in the

1 Fuel Cost of Purchased Power, an \$8.4 million decrease in the Energy
2 Payments to Qualifying Facilities and a \$5.8 million decrease in
3 Energy Cost of Economy Purchases.

4
5 The decrease in the Fuel Cost of Power Sold was primarily due to
6 lower than projected opportunity sales due to mild weather. The
7 decrease in the Fuel Cost of System Net Generation was primarily due
8 to a decrease in natural gas prices due to warmer than anticipated
9 weather and higher gas inventory levels throughout the winter. The
10 decrease in the Fuel Cost of Purchased Power was due to lower than
11 projected UPS purchases from Southern Company due to mild
12 weather. The decrease in Energy Payments to Qualifying Facilities
13 was due to lower than expected deliveries from Indiantown
14 Cogeneration Limited (ICL), Cedar Bay and Florida Crushed Stone
15 contracts. The decrease in Energy Cost of Economy Purchases was
16 due to reduced availability of low cost economy energy due to cold
17 weather in the southeast region.

18
19 **Q. What was the variance in retail (jurisdictional) Fuel Cost**
20 **Recovery revenues?**

21 **A.** As shown on line D1, actual jurisdictional Fuel Cost Recovery
22 revenues, net of revenue taxes, were \$5.9 million higher than the
23 estimated/actual projection. This increase was due to higher
24 jurisdictional kWh sales. Jurisdictional sales were 257,001,059 kWh

1 (0.7%) higher than the estimated/actual projection.

2

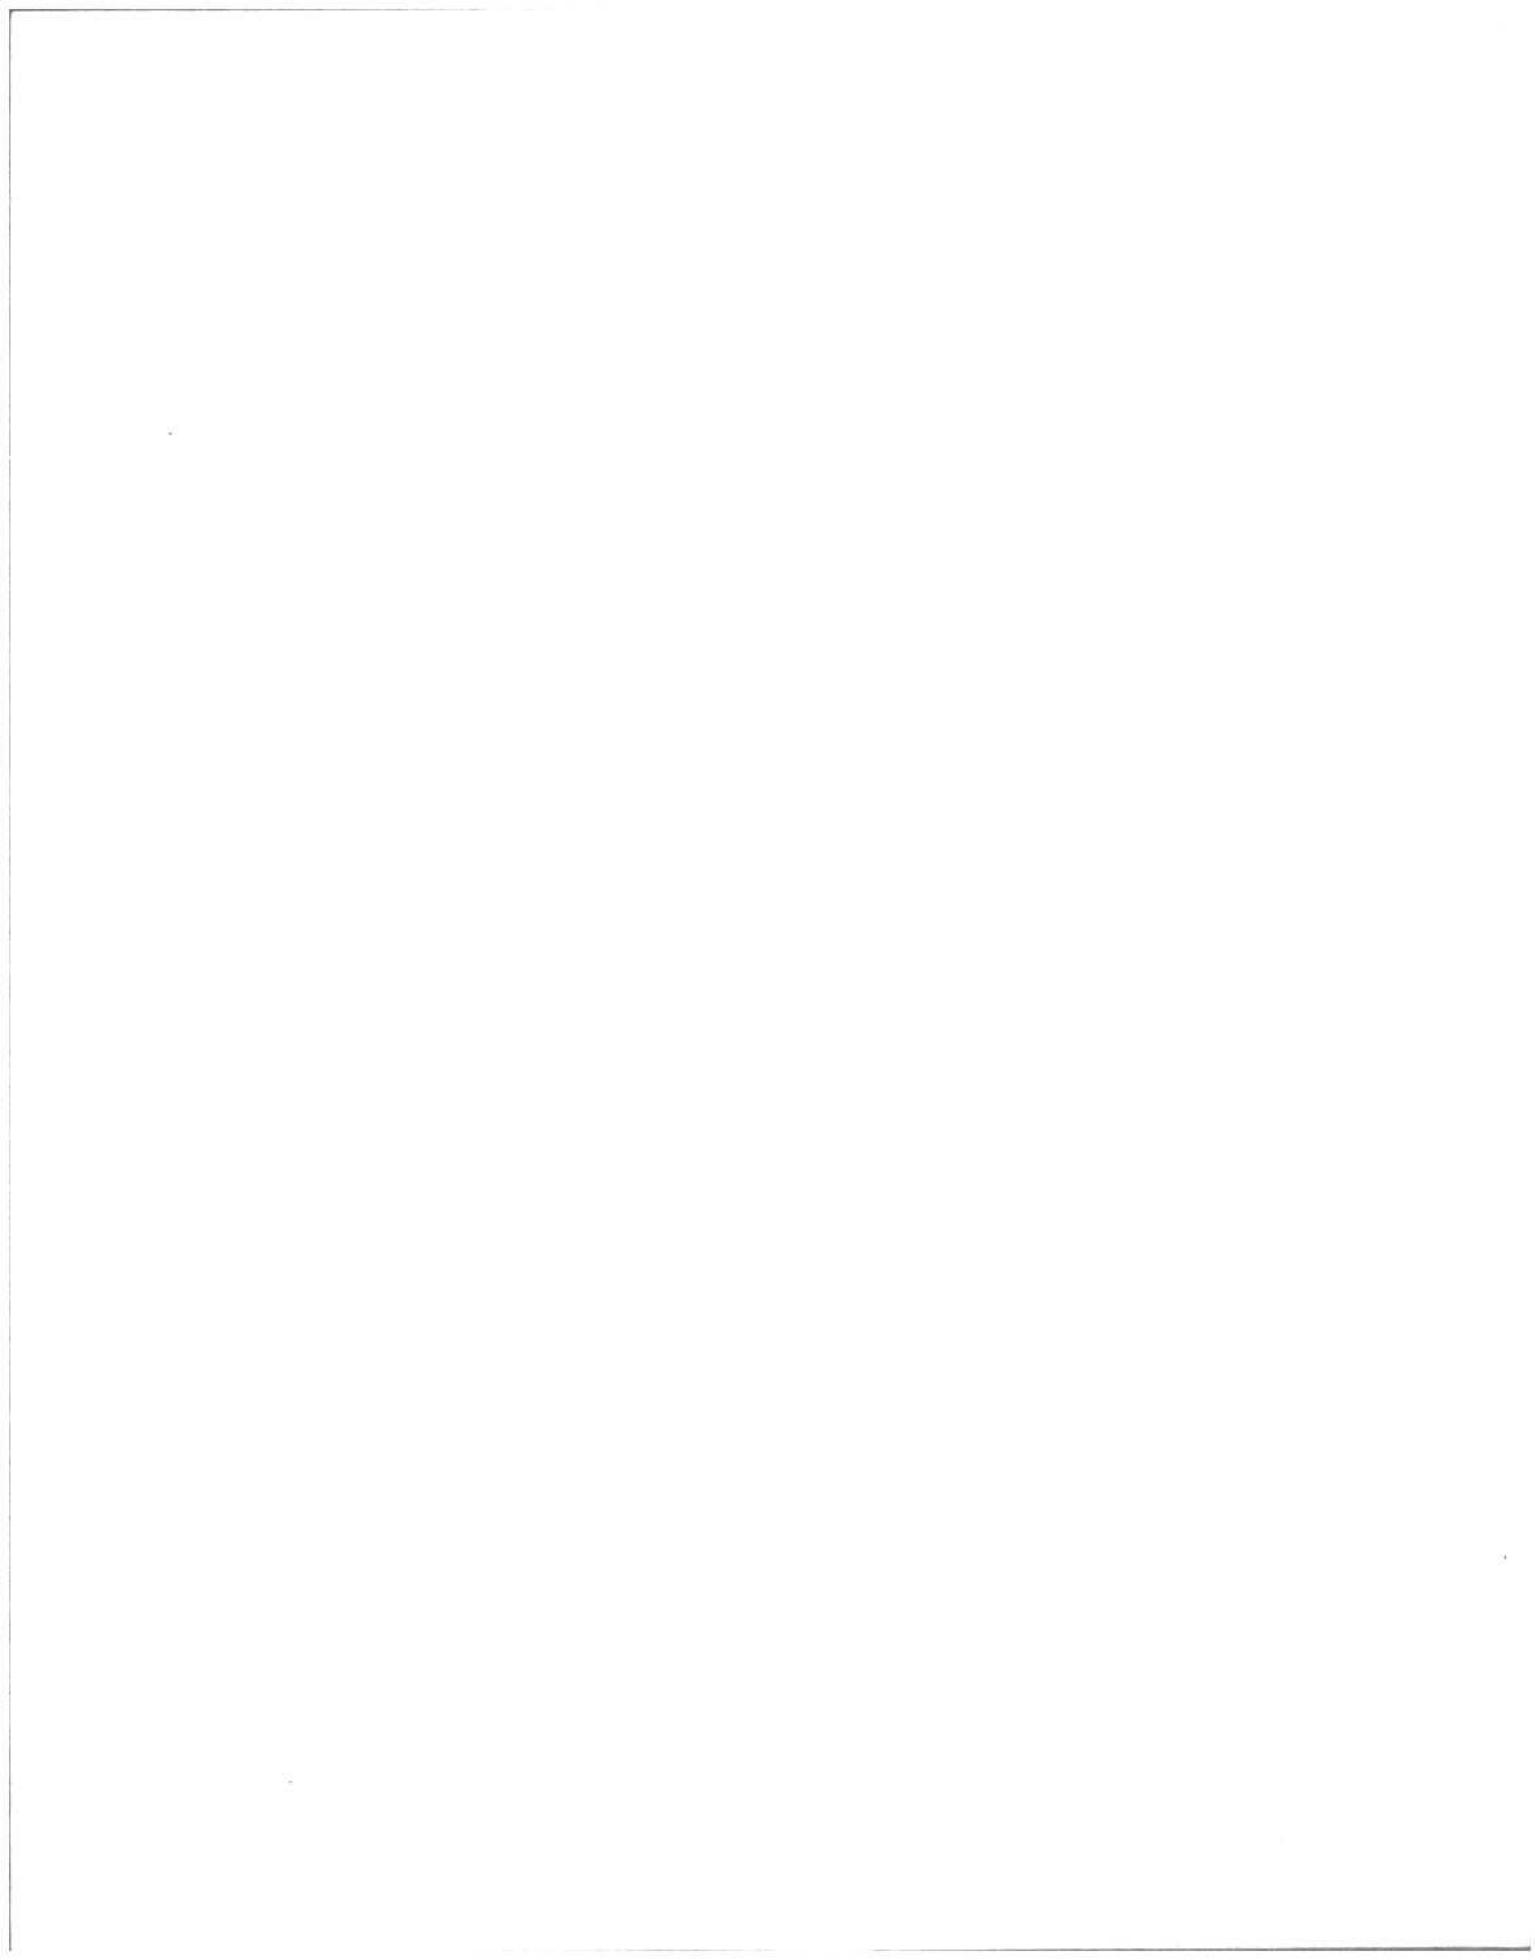

3 **Q. How is Real Time Pricing (RTP) reflected in the calculation of the**
4 **Net True-up Amount?**

5 A. In the determination of Jurisdictional kWh sales, only kWh sales
6 associated with RTP baseline load are included, consistent with
7 projections (Appendix 1, page 4, Line C3). In the determination of
8 Jurisdictional Fuel Costs, revenues associated with RTP incremental
9 kWh sales are included as 100% Retail (Appendix 1, page 4, Line
10 D4c) in order to offset incremental fuel used to generate these kWh
11 sales.

12

13 **Q. Does this conclude your testimony?**

14 A. Yes, it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

FLORIDA POWER & LIGHT COMPANY

TESTIMONY OF KOREL M. DUBIN

DOCKET NO. 970001-EI

June 23, 1997

1 **Q. Please state your name and address.**

2 A. My name is Korel M. Dubin and my business address is 9250 West
3 Flagler Street, Miami, Florida 33174.

4

5 **Q. By whom are you employed and in what capacity?**

6 A. I am employed by Florida Power & Light Company (FPL) as Principal
7 Rate Analyst in the Rates and Tariff Administration Department.

8

9 **Q. Have you previously testified in this docket?**

10 A. Yes, I have.

11

12 **Q. What is the purpose of your testimony?**

13 A. The purpose of my testimony is to present for Commission review and
14 approval the fuel factors for the Company's rate schedules for the
15 period October 1997 through March 1998 and the capacity payment
16 factors for the Company's rate schedules for the period October 1997
17 through September 1998. The calculation of the fuel factors is based
18 on projected fuel cost and operational data as set forth in Commission

1 Schedules E1 through E10, H1 and other exhibits filed in this
2 proceeding and data previously approved by the Commission. I am
3 also providing projections of avoided energy costs for purchases from
4 small power producers and cogenerators and an updated ten year
5 projection of Florida Power & Light Company's annual generation mix
6 and fuel prices.

7

8 In addition, my testimony presents the schedules necessary to support
9 the calculation of the Estimated/Actual True-up amounts for the Fuel
10 Cost Recovery Clause (FCR) for the period April 1997 through
11 September 1997 and the Capacity Cost Recovery Clause(CCR) for
12 the period October 1996 through September 1997.

13

14 **Q. Have you prepared or caused to be prepared under your**
15 **direction, supervision or control an exhibit in this proceeding?**

16 **A.** Yes, I have. It consists of various schedules included in Appendices
17 II and III. Appendix II contains the FCR related schedules and
18 Appendix III contains the CCR related schedules.

19

20 FCR Schedules A-1 through A-13 for April 1997 and May 1997 have
21 been filed monthly with the Commission, are served on all parties and
22 are incorporated herein by reference.

23

24 **Q. What is the source of the data which you will present by way of**

1 **testimony or exhibits in this proceeding?**

2 A. Unless otherwise indicated, the actual data is taken from the books
3 and records of FPL. The books and records are kept in the regular
4 course of our business in accordance with generally accepted
5 accounting principles and practices and provisions of the Uniform
6 System of Accounts as prescribed by this Commission.

7

8

FUEL COST RECOVERY CLAUSE

9

10 **Q. What is the proposed levelized fuel factor for which the Company**
11 **requests approval?**

12 A. 1.643¢ per kWh. Schedule E1, Page 3 of Appendix II shows the
13 calculation of this six-month levelized fuel factor. Schedule E2, Page
14 10 of Appendix II indicates the monthly fuel factors for October 1997
15 through March 1998 and also the six-month levelized fuel factor for the
16 period.

17

18 **Q. Has the Company developed a six-month levelized fuel factor for**
19 **its Time of Use rates?**

20 A. Yes. Schedule E1-D, Page 8 of Appendix II provides a six-month
21 levelized fuel factor of 1.734¢ per kWh on-peak and 1.607¢ per kWh
22 off-peak for our Time of Use rate schedules.

23

24 **Q. Were these calculations made in accordance with the procedures**

1 **previously approved in this Docket?**

2 A. Yes, they were.

3

4 **Q. What adjustments are included in the calculation of the six-**
5 **month levelized fuel factor shown on Schedule E1, Page 3 of**
6 **Appendix II?**

7 A. As shown on line 29 of Schedule E1, Page 3, of Appendix II the
8 **estimated/actual fuel cost overrecovery** for the April 1997 through
9 September 1997 period amounts to \$14,618,648. This
10 **estimated/actual overrecovery** for the April 1997 through September
11 1997 period plus the final overrecovery of \$13,141,163 for the October
12 1996 through March 1997 period results in a total overrecovery of
13 \$27,759,811. This amount, divided by the projected retail sales of
14 37,770,170 MWH for October 1997 through March 1998 results in a
15 decrease of 0.0735¢ per kWh before applicable revenue taxes. In his
16 testimony for the Generating Performance Incentive Factor, FPL
17 Witness R. Silva calculated a reward of \$5,801,940 for the period
18 ending September 1996, one half (\$2,900,970) of which is being
19 applied to the October 1997 through March 1998 period. This
20 \$2,900,970 divided by the projected retail sales of 37,770,170 MWH
21 during the projected period, results in an increase of 0.0077¢ per kWh,
22 as shown on line 33 of Schedule E1, Page 3 of Appendix II.

23

24 **Q. Please explain the calculation of the FCR Estimated/Actual True-**

1 **up amount you are requesting this Commission to approve.**

2 A. Schedule E1-B, Page 5 of Appendix II shows the calculation of the
3 FCR Estimated/Actual True-up amount. The calculation of the
4 estimated/actual true-up amount for the period April 1997 through
5 September 1997 is an overrecovery, including interest, of \$14,618,648
6 (Column 7, lines C7 plus C8). This amount, when combined with the
7 Final True-up overrecovery of \$13,141,163 (Column 7, line C9a)
8 deferred from the period October 1996 through March 1997,
9 presented in my Final True-up testimony filed on May 20, 1997, results
10 in the End of Period overrecovery of \$27,759,811 (Column 7, line
11 C11).

12
13 This schedule also provides a summary of the Fuel and Net Power
14 Transactions (lines A1 through A7), kWh Sales (lines B1 through B3),
15 Jurisdictional Fuel Revenues (line C1 through C3), the True-up and
16 Interest Provision (lines C4 through C10) for this period, and the End
17 of Period True-up amount (line C11).

18
19 The data for April 1997 and May 1997, columns (1) and (2) reflects the
20 actual results of operations and the data for June 1997 through
21 September 1997, columns (3) through (6), are based on updated
22 estimates.

23

24 The variance calculation of the Estimated/Actual data compared to the

1 original projections for the April 1997 through September 1997 period
2 is provided in Schedule E1-B-1, Page 6 of Appendix II.

3
4 As shown on line A5, the variance in Total Fuel Costs and Net Power
5 Transactions is \$26.4 million or a 3.1% decrease. This variance is
6 mainly due to an approximate \$12.0 million decrease in the Fuel Cost
7 of System Net Generation as shown on line A1a and an approximate
8 \$12 million decrease in Energy Payments to Qualifying Facilities as
9 shown on line A3b.

10
11 The decrease in the Fuel Cost of System Net Generation was primarily
12 due to a reduction in natural gas and heavy oil prices due to milder
13 than anticipated weather. The decrease in Energy Payments to
14 Qualifying Facilities was primarily due to lower than expected
15 deliveries from Indiantown Cogeneration Limited (ICL), Cedar Bay and
16 Florida Crushed Stone contracts.

17
18 The true-up calculations follow the procedures established by this
19 Commission as set forth on Commission Schedule A2 "Calculation of
20 True-Up and Interest Provision" filed monthly with the Commission.

21
22 **Q. Several issues were raised at the Prehearing Conference on**
23 **February 5, 1997, and deferred by Order No. PSC-97-0180-PHO-EI,**
24 **in connection with FERC's Order 888 requirement that investor**

1 base rates (line 8) plus a net overrecovery of \$10,479,736 (line 9).
2 The net overrecovery of \$10,479,736 reflects actual costs for January
3 1997 through May 1997 and revised estimates for June 1997 through
4 September 1997. Actual costs for the period October 1996 through
5 December 1996 were included in the CCR midcourse correction filed
6 on January 16, 1997 and approved by the Commission in Order No.
7 PSC-97-0359-FOF-EI issued on March 31, 1997.

8

9 **Q. Is FPL requesting recovery of any additional costs through the**
10 **CCR?**

11 A. Yes. FPL is requesting that it be authorized to collect, during the next
12 seventeen (17) years, approximately \$4.7 million per year associated
13 with future capacity payments to be made to Jacksonville Electric
14 Authority (JEA). FPL is requesting to collect this annual amount,
15 because there is a mismatch between the period over which FPL
16 currently anticipates it will continue to receive energy from JEA's
17 ownership share of SJRPP, and the period over which FPL is
18 contractually required to make annual capacity payments to JEA. Mr.
19 Rene Silva's testimony describes the circumstances that underlie
20 FPL's request.

21

22 **Q. Please explain the SJRPP energy suspension issue.**

23 A. An Internal Revenue Service (IRS) ruling, which established the tax
24 exempt status of the municipal bonds used to finance JEA's ownership

1 interests in SJRPP stipulates that FPL shall not receive more than
2 twenty-five (25%) of the nameplate capacity of JEA's ownership share
3 of the plant over the life of the bonds. According to FPL's contract
4 with JEA, FPL agreed to purchase 37.5% of energy produced by
5 JEA's share of the plant, based on a projected plant capacity factor of
6 approximately 67%. This is equivalent to 25% of the plant's total
7 capability. Since commercial operation in 1987, the plant has run at
8 a higher capacity factor than projected and, therefore, FPL's
9 customers have received more energy from SJRPP in the early years
10 than originally anticipated. When FPL reaches the 25% limit, which
11 has been calculated to be 80,534,332 mWh, based on the nameplate
12 rating times the life of the bonds, FPL will be suspended from taking
13 energy until the bonds are paid off. FPL is taking as much SJRPP
14 energy as possible currently, and we project that the energy limit will
15 be reached in 2015. Thereafter FPL will, consistent with the contract,
16 continue making capacity payments through 2020, but would receive
17 no energy from JEA's share of SJRPP ("SJRPP energy suspension").

18

19 **Q. How was the \$4.7 million per year amount to be recovered**
20 **through the CCR determined?**

21 A. Municipal bonds are used to finance JEA's ownership share of
22 SJRPP. FPL makes capacity payments based on debt service
23 amortization over the life of the bonds. When FPL reaches the
24 25% limit, which has been calculated to be 80,534,332 mWh,

1 based on the nameplate rating times the life of the bonds, FPL
2 will be suspended from taking energy until the bonds are paid off.
3 Based on the average capacity factor for the last five years, FPL
4 has projected that the 80,534,332 mWh limit will be reached in
5 2015. Based on FPL's debt service forecast, from 2015 through
6 2020, FPL is obligated to pay \$80 million in capacity payments.
7 An annual accrual of \$4.7 million collected through the Capacity
8 Cost Recovery Clause over the 17 year period, from 1998
9 through 2015, results in the recovery of the \$80 million needed
10 to make the capacity payments to JEA during the energy
11 suspension period from 2015 through 2020. FPL proposes to
12 update the debt service forecast as well as the five year average
13 capacity factor each year in FPL's Capacity Cost Recovery filing,
14 therefore, the accrual amount will change each year.

15
16 The \$4.7 million annual payment for the SJRPP energy
17 suspension payments will be recorded as a liability on FPL books
18 when received from the customers. FPL proposes to pay the
19 customers a return on the liability until all amounts are paid to
20 JEA during the suspension period. The methodology used to
21 calculate the return requirements to the customer is the same that
22 is being used in determining the return on assets in the Fuel Cost
23 Recovery Clause. For the 12 month period ending September

1 30, 1998, expenses recoverable through the CCR will be reduced
2 by approximately \$291,000, to reflect the return requirements on
3 the suspension payments received during the same period
4 (Appendix III, page 3, line 4b).

5
6 **Q. What is the basis for requesting recovery of costs associated**
7 **with this issue through the Capacity Cost Recovery Clause now?**

8 A. FPL is requesting that \$4.7 million annually associated with the SJRPP
9 energy suspension be recovered through the CCR beginning in 1998
10 because there is a mismatch between the period over which FPL
11 currently anticipates it will continue to receive energy from JEA's
12 ownership share of SJRPP, and the period over which FPL is
13 contractually required to make annual capacity payments to JEA.
14 FPL is requesting to collect this annual amount from 1998 through
15 2014 so that in the years 2015 through 2020, when FPL will receive no
16 energy from JEA's ownership share of SJRPP, FPL's customers would
17 not pay capacity charges.

18
19 For these reasons, FPL believes that it is appropriate to bring this
20 issue forward for Commission consideration and approval at this time.

21

22 **Q. Please describe Page 4 of Appendix III.**

23 A. Page 4 of Appendix III calculates the allocation factors for demand and
24 energy at generation. The demand allocation factors are calculated

1 by determining the percentage each rate class contributes to the
2 monthly system peaks. The energy allocators are calculated by
3 determining the percentage each rate contributes to total kWh sales,
4 as adjusted for losses, for each rate class.

5

6 **Q. Please describe Page 5 of Appendix III.**

7 A. Page 5 of Appendix III presents the calculation of the proposed
8 Capacity Payment Recovery Clause (CCR) factors by rate class.

9

10 **Q. Please explain the calculation of the CCR Estimated/Actual True-
11 up amount you are requesting this Commission to approve.**

12 A. The Estimated/Actual True-up for the period October 1996 through
13 September 1997 is an overrecovery, including interest, of \$10,479,736
14 (Appendix III, page 6, line 7). Appendix III, pages 6 and 7 show the
15 calculation supporting the CCR Estimated/Actual True-up amount.

16

17 **Q. Is this true-up calculation consistent with the true-up
18 methodology used for the other cost recovery clauses?**

19 A. Yes it is. The calculation of the true-up amount follows the procedures
20 established by this Commission as set forth on Commission Schedule
21 A2 "Calculation of True-Up and Interest Provision" for the Fuel Cost
22 Recovery clause.

23

24 The resulting overrecovery of \$10,479,736 has been included in the

1 calculation of the Capacity Cost Recovery factor for the period
2 October 1997 through September 1998.

3

4 **Q. Please explain the calculation of the Interest Provision.**

5 A. Appendix III, pages 9 and 10, show the calculation of the interest
6 provision and follows the same methodology used in calculating the
7 interest provision for the other cost recovery clauses, as previously
8 approved by this Commission.

9

10 The interest provision is the result of multiplying the monthly average
11 true-up amount (line 4) times the monthly average interest rate (line 9).
12 The average interest rate for the months reflecting actual data is
13 developed using the 30 day commercial paper rate as published in the
14 Wall Street Journal on the first business day of the current and
15 subsequent months. The average interest rate for the projected
16 months is the actual rate as of the first business day in June 1997.

17

18 **Q. Have you provided a schedule showing the variances between**
19 **the Estimated/Actuals and the Original Projections?**

20 A. Yes. Appendix III, page 11, shows the Estimated/Actual capacity
21 charges and applicable revenues compared to the original projections
22 for the period.

23

24 **Q. What is the variance related to capacity charges?**

1 A. As shown in Appendix III, page 11, line 5, the variance related to
2 capacity charges is a \$2.0 million decrease. This variance is primarily
3 due to a \$2.8 million decrease in Cypress Settlement payments and
4 a \$0.6 million decrease in projected revenues from capacity sales.
5 The decrease in Cypress Settlement payments was primarily due to
6 differences in the timing of payments. The decrease in expected
7 revenues from capacity sales is primarily due to the original
8 projections being adjusted to reflect more current market trends.

9

10 **Q. What is the variance in Capacity Cost Recovery revenues?**

11 A. As shown on line 10, Capacity Cost Recovery revenues, net of
12 revenue taxes, are now estimated to be \$3.5 million higher than
13 originally projected.

14

15 **Q. What effective date is the Company requesting for the new
16 factors?**

17 A. The Company is requesting that the new FCR factors become
18 effective with customer billings on cycle day 3 of October 1997 and
19 continue through Customer billings on cycle day 2 of March 1998 and
20 that the new CCR factors become effective with customer billings on
21 cycle day 3 of October 1997 and continue through cycle day 2 of
22 September 1998. This will provide for 6 months of billing on the FCR
23 factors and 12 months of billing on the CCR factors for all our
24 customers.

1

2 **Q. What will be the charge for a Residential customer using 1,000**
3 **kWh effective October 1997?**

4 A. The total residential bill, excluding taxes and franchise fees, for 1,000
5 kWh will be \$74.34. The base bill for 1,000 residential kWh is \$47.46,
6 the fuel cost recovery charge from Schedule E1-E, Page 9 of
7 Appendix II for a residential customer is \$16.46, the Conservation
8 charge is \$2.62, the Capacity Cost Recovery charge is \$6.74, the
9 Environmental Cost Recovery charge is \$.31 and the Gross Receipts
10 Tax is \$.75. A Residential Bill Comparison (1,000 kWh) is presented
11 in Schedule E10, Page 40 of Appendix II.

12

13 **Q. Does this conclude your testimony.**

A. Yes, it does.

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION
DOCKET NO. 970001-EI
CONTINUING SURVEILLANCE AND REVIEW OF
FUEL COST RECOVERY CLAUSES OF ELECTRIC UTILITIES

Direct Testimony of
George M. Bachman
On Behalf of
Florida Public Utilities Company

- 1 Q. Please state your name and business address.
- 2 A. George M. Bachman, 401 South Dixie Highway, West Palm Beach, FL
3 33401.
- 4 Q. By whom are you employed?
- 5 A. I am employed by Florida Public Utilities Company.
- 6 Q. Have you previously testified in this Docket?
- 7 A. Yes.
- 8 Q. What is the purpose of your testimony at this time?
- 9 A. I will briefly describe the basis for the computations that were
10 made in the preparation of the various Schedules that we have
11 submitted in support of the October 1997 - March 1998 fuel cost
12 recovery adjustments for our two electric divisions. In addition,
13 I will advise the Commission of the projected differences between
14 the revenues collected under the levelized fuel adjustment and the
15 purchased power costs allowed in developing the levelized fuel
16 adjustment for the period April 1997 - September 1997 and to
17 establish a "true-up" amount to be collected or refunded during
18 October 1997 - March 1998.
- 19 Q. Were the schedules filed by your Company completed under your
20 direction?
- 21 A. Yes.
- 22 Q. Which of the Staff's set of schedules has your company completed
23 and filed?

1 A. We have filed Schedules E1, E1A, E1-B, E1B-1, E2, E7, E8 and E10
2 for Marianna and Fernandina Beach. They are included in Composite
3 Prehearing Identification Number GMB-3.

4 These schedules support the calculation of the levelized fuel
5 adjustment factor for October 1997 - March 1998. Schedule E1-B
6 shows the Calculation of Purchased Power Costs and Calculation of
7 True-Up and Interest Provision for the period April 1997 -
8 September 1997 based on 2 Months Actual and 4 Months Estimated
9 data.

10 Q. In derivation of the projected cost factor for the October 1997 -
11 March 1998 period, did you follow the same procedures that were
12 used in the prior period filings?

13 A. Yes.

14 Q. Why has the GSLD rate class for Fernandina Beach been excluded from
15 these computations?

16 A. Demand and other purchased power costs are assigned to the GSLD
17 rate class directly based on their actual CP KW and their actual
18 KWH consumption. That procedure for the GSLD class has been in use
19 for several years and has not been changed herein. Costs to be
20 recovered from all other classes is determined after deducting from
21 total purchased power costs those costs directly assigned to GSLD.

22 Q. How will the demand cost recovery factors for the other rate
23 classes be used?

24 A. The demand cost recovery factors for each of the RS, GS, GSD and
25 OL-SL rate classes will become one element of the total cost
26 recovery factor for those classes. All other costs of purchased
27 power will be recovered by the use of the levelized factor that is
28 the same for all those rate classes. Thus the total factor for each
29 class will be the sum of the respective demand cost factor and the

1 levelized factor for all other costs.

2 Q. Please address the calculation of the total true-up amount to be
3 collected or refunded during the October 1997 - March 1998.

4 A. We have determined that at the end of September 1997 based on two
5 months actual and four months estimated, we will have under-
6 recovered \$10,203 in purchased power costs in our Marianna
7 division. Based on estimated sales for the period October 1997 -
8 March 1998, it will be necessary to add .007834¢ per KWH to collect
9 this under-recovery.

10 In Fernandina Beach we will have under-recovered \$65,586 in
11 purchased power costs. This amount will be collected at .04134¢
12 per KWH during the October 1997 - March 1998 period. Page 3 and 12
13 of Composite Prehearing Identification Number GMB-3 provides a
14 detail of the calculation of the true-up amounts.

15 Q. Looking back upon the October 1996 - March 1997 period, what were
16 the actual End of Period - True-Up amounts for Marianna and
17 Fernandina Beach, and their significance, if any?

18 A. The Marianna Division experienced an over-recovery of \$359,886 and
19 Fernandina Beach Division over-recovered \$145,789. The amounts
20 both represent fluctuations of less than 10% from the total fuel
21 charges for the period and are not considered significant variances
22 from projections.

23 Q. What are the final remaining true-up amounts for the period October
24 1996 - March 1997 for both divisions?

25 A. In Marianna the final remaining true-up amount was an over-recovery
26 of \$132,028. The final remaining true-up amount for Fernandina
27 Beach was an over-recovery of \$46,124.

28 Q. What are the estimated true-up amounts for the period of April 1997
29 - September 1997?

1 A. In Marianna, there is an estimated under-recovery of \$142,231.
2 Fernandina Beach has an estimated under-recovery of \$111,710.

3 Q. What will the total fuel adjustment factor, excluding demand cost
4 recovery, be for both divisions for the period
5 October 1997 - March 1998?

6 A. In Marianna the total fuel adjustment factor as shown on Line 33,
7 Schedule E1, is 2.402¢ per KWH. In Fernandina Beach the total fuel
8 adjustment factor for "other classes", as shown on Line 43,
9 Schedule E1, amounts to 2.685¢ per KWH.

10 Q. Please advise what a residential customer using 1,000 KWH will pay
11 for the period October 1997 - March 1998 including base rates
12 (which include revised conservation cost recovery factors) and fuel
13 adjustment factor and after application of a line loss multiplier.

14 A. In Marianna a residential customer using 1,000 KWH will pay \$67.08,
15 an increase of \$2.38 from the previous period. In Fernandina Beach
16 a customer will pay \$65.20, a decrease of \$.15 from the previous
17 period.

18 Q. Does this conclude your testimony?

19 A. Yes.

25

1 GULF POWER COMPANY

2 Before the Florida Public Service Commission

3 Prepared Direct Testimony of

4 Michael F. Oaks

Docket No. 970001-EI

Date of Filing: May 20, 1997

5 Q. Please state your name and business address.

6 A. My name is Michael F. Oaks and my business address is 500 Bayfront
7 Parkway, Post Office Box 1151, Pensacola, Florida 32520-0328.

8

9 Q. By whom are you employed and in what capacity?

10 A. I am the Compliance and Fuel Supply Supervisor at Gulf Power
11 Company.

12

13 Q. Mr. Oaks, will you please describe your education and experience?

14 A. I graduated from Belhaven College in Jackson, Mississippi, in 1977 with a
15 Bachelor of Science Degree in Chemistry. I joined Gulf Power Company
16 in 1977 as a Chemist. Since then, I have held various positions with the
17 Company, including Water Chemistry Specialist, Water Quality Specialist,
18 Environmental Affairs Specialist, Environmental Audit Administrator, and
19 Compliance Administrator. I was promoted to my present position in May
20 1996.

21

22 Q. What are your duties as Fuel Supply Supervisor?

23 A. I supervise and administer the Company's fuel procurement,
24 transportation, budgeting, contract administration, and quality control to

25

1 ensure the generating plants are provided high quality fuel supply at the
2 lowest practical cost.

3

4 Q. Mr. Oaks, have you previously testified before this Commission?

5 A. Yes. I have presented testimony to this Commission.

6

7 Q. Mr. Oaks, what is the purpose of your testimony in this docket?

8 A. The purpose of my testimony is to summarize Gulf Power Company's fuel
9 expenses and to certify that these expenses were properly incurred
10 during the period October 1996 through March 1997. Also, it is my intent
11 to be available to answer any questions that may arise among the parties
12 to this docket concerning Gulf Power Company's fuel expenses.

13

14 Q. Have you prepared an exhibit that contains information to which you will
15 refer in your testimony?

16 A. Yes. I have prepared an exhibit consisting of one schedule.

17

18 Counsel: We ask that Mr. Oak's exhibit consisting of one schedule be
19 marked as Exhibit No. 26 (MFO-1).

20

21 Q. During the period October 1, 1996, through March 31, 1997, how did Gulf's
22 actual fuel expenses compare with the budget or projected expenses?

23 A. Gulf's actual fuel expense was \$94,997,793 as compared with the
24 projected amount of \$97,740,994, or under our estimate by 2.81%. Gulf's
25 total net system generation was 4,672,294 MWH compared to the

1 projected generation of 5,069,150 MWH or 7.83% less than predicted.
2 The resulting total fuel cost per KWH generated was 2.0332¢/KWH or
3 5.45% over the projected amount of 1.9282¢/KWH.
4

5 Q. How much spot coal did Gulf Power Company purchase during the period
6 ending March 31, 1997?

7 A. Gulf purchased 791,205 tons or 39% of its supply from the spot coal
8 market. My Schedule 1 of Exhibit No. 26 (MFO-1) consists of a list
9 of contract and spot coal suppliers for the period ending March 31, 1997.
10

11 Q. How did the projected purchase cost of coal compare with the actual
12 cost?

13 A. For the period, Gulf's total cost of coal purchased was 2.7% higher than
14 projected.
15

16 Q. Should Gulf's fuel purchase cost for the period be accepted as
17 reasonable and prudent?

18 A. Yes. Gulf's coal purchases were either from long term contracts or the
19 competitive spot market. Coal vendors are selected by procedures
20 designed to assure a deliverable quantity of acceptable quality coal for a
21 specific term at the lowest available delivered cost. Gulf has
22 administered the provisions of these contracts and purchase orders
23 appropriately. All of Gulf's oil purchases were from oil vendors selected
24 by open bids to ensure the most economical price of oil.
25

1 Q. Mr. Oaks, does this conclude your testimony?

2 A. Yes.

Docket No. 970001-EI

Before me the undersigned authority, personally appeared Michael F. Oaks, who being first duly sworn, deposes, and says that he is the Compliance and Fuel Supply Supervisor at Gulf Power Company, a Maine corporation, and that the foregoing is true and correct to the best of his knowledge, information, and belief. He is personally known to me.

Michael F. Oaks
Compliance and Fuel Supply Supervisor

Sworn to and subscribed before me this 13th day of May 1997.

Notary Public, State of Florida at Large

Commission Number:

Commission Expires:

1 GULF POWER COMPANY

2 Before the Florida Public Service Commission

3 Prepared Direct Testimony of

4 Michael F. Oaks

Docket No. 970001-EI

Date of Filing: June 18, 1997

5 Q. Please state your name and business address.

6 A. My name is Michael F. Oaks and my business address is 500 Bayfront
7 Parkway, 500 Bayfront Parkway, Pensacola, Florida 32520-0328.

8

9 Q. By whom are you employed and in what capacity?

10 A. I am the Compliance and Fuel Supply Supervisor at Gulf Power
11 Company.

12

13 Q. Mr. Oaks, will you please describe your education and experience?

14 A. I graduated from Belhaven College in Jackson, Mississippi, in 1977 with a
15 Bachelor of Science Degree in Chemistry. I joined Gulf Power Company
16 in 1977 as a Chemist. Since then, I have held various positions with the
17 Company, including Water Chemistry Specialist, Water Quality Specialist,
18 Environmental Affairs Specialist, Environmental Audit Administrator, and
19 Compliance Administrator. I was promoted to my present position in May
20 1996.

21

22 Q. What are your duties as Fuel Supply Supervisor?

23 A. I supervise and administer the Company's fuel procurement,
24 transportation, budgeting, contract administration, and quality control to

25

1 ensure the generating plants are provided an adequate low cost fuel
2 supply with minimal operational problems.

3

4 Q. Are you the same Michael F. Oaks who has previously submitted
5 testimony in this proceeding?

6 A. Yes.

7

8 Q. Mr. Oaks, what is the purpose of your testimony in this docket?

9 A. The purpose of my testimony is to support Gulf Power Company's
10 projection of fuel expenses for the period October 1, 1997, to March 31,
11 1998 and to be available to answer any questions that may occur
12 concerning the Company's fuel procurement procedures.

13

14 Q. Have you prepared an exhibit that contains information to which you will
15 refer in your testimony?

16 A. Yes. I have prepared an exhibit consisting of one schedule. Schedule 1
17 of my exhibit is a tabulation of projected and actual fuel cost for the past
18 ten years. The purpose of this schedule is to illustrate the accuracy of our
19 short term projections of fuel expenses.

20

21 COUNSEL: We ask that Mr. Oaks' exhibit, consisting of one schedule,
22 be marked as Exhibit No. 27 (MFO-2).

23

24

25

1 Q. Has Gulf Power Company made any changes to its methods in this period
2 for projecting fuel cost?

3 A. No.
4

5 Q. Will there be any major changes in Gulf's fuel purchasing program during
6 this period?

7 A. Yes. Gulf Power Company's long term contract with Peabody
8 COALSALES is subject to a market review opener. Effective February 1,
9 1998, the contract price will either go to a market adjusted delivered price,
10 or if COALSALES does not agree to the matching price, the contract will
11 be terminated. If the contract is renewed, our annual obligation will
12 resume at 1.9 million tons per year. If the contract is terminated, Gulf will
13 be seeking a similar quantity of coal from other sources.
14

15 Q. How much spot market coal does Gulf Power project it will purchase
16 during the October 1997 through March 1998 period?

17 A. We are projecting the purchase of approximately 408,095 tons on the spot
18 market. This represents approximately 17% of our projected purchase
19 requirements.
20

21 Q. Mr. Oaks, does this conclude your testimony?

22 A. Yes.

GULF POWER COMPANY

Before the Florida Public Service Commission
Direct Testimony of
M. W. Howell
Docket No. 970001-EI
Date of Filing: May 20, 1997

1
2
3
4
5
6 Q. Please state your name, business address and occupation.

7 A. My name is M. W. Howell, and my business address is 500
8 Bayfront Parkway, Pensacola, Florida 32520. I am
9 Transmission and System Control Manager for Gulf Power
10 Company.

11
12 Q. Have you previously testified before this Commission?

13 A. Yes. I have testified in various rate case,
14 cogeneration, territorial dispute, planning hearing,
15 fuel clause adjustment, and purchased power capacity
16 cost recovery dockets.

17
18 Q. Please summarize your educational and professional
19 background.

20 A. I graduated from the University of Florida in 1966 with
21 a Bachelor of Science Degree in Electrical Engineering.
22 I received my Masters Degree in Electrical Engineering
23 from the University of Florida in 1967, and then joined
24 Gulf Power Company as a Distribution Engineer. I have
25 since served as Relay Engineer, Manager of Transmission,

1 Manager of System Planning, Manager of Fuel and System
2 Planning, and Transmission and System Control Manager.
3 My experience with the Company has included all areas of
4 distribution operation, maintenance, and construction;
5 transmission operation, maintenance, and construction;
6 relaying and protection of the generation, transmission,
7 and distribution systems; planning the generation,
8 transmission, and distribution system additions; bulk
9 power interchange administration; overall management of
10 fuel planning and procurement; and operation of the
11 system dispatch center.

12 I am a member of the Engineering Committees and
13 the Operating Committees of the Southeastern Electric
14 Reliability Council and the Florida Reliability
15 Coordinating Council, and have served as chairman of the
16 Generation Subcommittee of the Edison Electric Institute
17 System Planning Committee. I have served as chairman or
18 member of many technical committees and task forces
19 within the Southern electric system, the Florida
20 Electric Power Coordinating Group, and the North
21 American Electric Reliability Council. These have dealt
22 with a variety of technical issues including bulk power
23 security, system operations, bulk power contracts,
24 generation expansion, transmission expansion,
25 transmission interconnection requirements, central

1 dispatch, transmission system operation, transient
2 stability, underfrequency operation, generator
3 underfrequency protection, and system production
4 costing.

5
6 Q. What is the purpose of your testimony in this
7 proceeding?

8 A. I will summarize Gulf Power Company's purchased power
9 recoverable costs for energy purchases and sales that
10 were incurred during the October 1, 1996 through March
11 31, 1997 recovery period. I will then compare these
12 actual costs to their projected levels for the period
13 and discuss the primary reasons for the differences.

14 I will also summarize the actual capacity expenses
15 and revenues that were incurred during the October 1,
16 1995 through September 30, 1996 recovery period, compare
17 these figures to their projected levels, and discuss the
18 reasons for the differences.

19
20 Q. During the period October 1, 1996 through March 31,
21 1997, what was Gulf's actual purchased power recoverable
22 cost for energy purchases and how did it compare with
23 the projected amount?

24 A. Gulf's actual total purchased power recoverable cost for
25 energy purchases, as shown on line 12 of Schedule A-1,

1 was \$8,942,360 for 578,612,017 KWH as compared to the
2 projected amount of \$5,499,969 for 314,210,000 KWH. The
3 actual cost per KWH purchased was 1.5455 ¢/KWH as
4 compared to the projected 1.7504 ¢/KWH, or 12% below the
5 projection. This significantly lower price is why the
6 amount of energy purchased was 84% over the projection
7 amount.

8
9 Q. What were the events that influenced Gulf's purchase of
10 energy?

11 A. During the recovery period, the availability of lower
12 cost pool energy due to higher than budgeted nuclear and
13 hydro generation on the Southern electric system allowed
14 Gulf to purchase more energy at a significantly lower
15 unit price than was forecasted in order to meet its load
16 obligations.

17
18 Q. During the period October 1, 1996 through March 31,
19 1997, what was Gulf's actual purchased power fuel cost
20 for energy sales and how did it compare with the
21 projected amount?

22 A. Gulf's actual total purchased power fuel cost for energy
23 sales, as shown on line 18 of Schedule A-1, was
24 \$16,219,536 for 1,027,729,884 KWH as compared to the
25 projected amount of \$21,122,000 for 1,081,922,000 KWH.

1 This resulted in a variance below budget of \$4,902,464,
2 or 23%. The actual fuel cost per KWH sold was 1.5782
3 ¢/KWH as compared to 1.9523 ¢/KWH, or 19% below the
4 projection.

5

6 Q. What were the events that influenced Gulf's sale of
7 energy?

8 A. The same higher availability of more lower cost pool
9 energy that increased our purchases also supplanted some
10 sales that Gulf was expected to make in the forecast.
11 Therefore, Gulf sold less energy, and at a lower unit
12 price.

13

14 Q. How are Gulf's net purchased power fuel costs affected
15 by Southern electric system energy sales?

16 A. As a member of the Southern electric system power pool,
17 Gulf Power participates in these sales. Gulf's
18 generating units are economically dispatched to meet the
19 needs of its territorial customers, the system, and
20 off-system customers.

21 Therefore, Southern system energy sales provide a
22 market for Gulf's surplus energy and generally improve
23 unit load factors. The cost of fuel used to make these
24 sales is credited against, and therefore reduces,
25 Gulf's fuel and purchased power costs. Overall, Gulf's

1 Total Fuel and Net Power Transactions for the recovery
2 period, as shown on line 20 of Schedule A-1, were only
3 7% over budget.
4

5 Q. During the period October 1, 1995 through September 30,
6 1996, how did Gulf's actual net purchased power capacity
7 transactions compare with the net projected
8 transactions?

9 A. The net projected purchased power capacity transactions
10 for the October 1, 1995 through September 30, 1996
11 recovery period were established as a result of the
12 hearings in Docket No. 950001-EI held in August 1995. I
13 testified that the projected net purchased power
14 capacity cost for the October 1, 1995 through September
15 30, 1996 recovery period was \$10,499,074. The actual
16 net capacity cost was \$10,741,967. This represents an
17 increase in cost of \$242,893, or 2% more than projected.
18

19 Q. Please explain the reasons for this capacity cost
20 difference.

21 A. This relatively small difference is basically due to a
22 slight increase in Gulf's load responsibility component
23 of the IIC capacity equalization calculation. This
24 increase resulted in Gulf being responsible for sharing
25 a slightly higher percentage of system reserves.

1 The capacity cost forecast for October 1, 1995
2 through September 30, 1996 called for IIC transactions
3 only, but we actually purchased 19 Megawatts of capacity
4 from the Monsanto Company beginning in June, 1996. This
5 capacity, however, simply caused a reduction in IIC
6 capacity purchases, so the purchase was not a factor in
7 the slight overall capacity cost increase.

8 As I testified in Docket No. 960001-EI, the
9 Monsanto capacity purchase, which amounts to \$62,202 per
10 month for 19 megawatts of capacity, was previously
11 authorized for cost recovery by the Commission in Docket
12 No. 921167-EU. This purchase was not included in my
13 capacity cost projection for the October 1, 1995 through
14 September 30, 1996 recovery period because the contract
15 did not require a final commitment from Monsanto for the
16 supply of this capacity until well past the August, 1995
17 hearing which established Gulf's capacity cost forecast.
18 Of course, Monsanto did not begin receiving capacity
19 payments until after it made a firm commitment to
20 deliver capacity onto Gulf's system.

21
22 Q. Does this conclude your testimony?

23 A. Yes.

24

 Comm. No: CC 362703

1 GULF POWER COMPANY

2 Before the Florida Public Service Commission
3 Prepared Direct Testimony of
4 Susan D. Cranmer
5 Docket No. 970001-EI
6 Fuel and Purchased Power Capacity Cost Recovery
7 Date of Filing: May 20, 1997

8 Q. Please state your name, business address and occupation.

9 A. My name is Susan Cranmer. My business address is 500
10 Bayfront Parkway, Pensacola, Florida 32501. I hold the
11 position of Assistant Secretary and Assistant Treasurer
12 of Gulf Power Company. In this position, I am
13 responsible for supervising the Rates and Regulatory
14 Matters Department.

15 Q. Please briefly describe your educational background and
16 business experience.

17 A. I graduated from Wake Forest University in
18 Winston-Salem, North Carolina in 1981 with a Bachelor of
19 Science Degree in Business and from the University of
20 West Florida in 1982 with a Bachelor of Arts Degree in
21 Accounting. I am also a Certified Public Accountant
22 licensed in the State of Florida. I joined Gulf Power
23 Company in 1983 as a Financial Analyst. Prior to
24 assuming my current position, I have held various
25 positions with Gulf including Computer Modeling Analyst,

1 Senior Financial Analyst, and Supervisor of Rate
2 Services.

3 My responsibilities include supervision of: tariff
4 administration, cost of service activities, calculation
5 of cost recovery factors, the regulatory filing function
6 of the Rates and Regulatory Matters Department, and
7 various treasury activities.

8

9 Q. Have you prepared an exhibit that contains information
10 to which you will refer in your testimony?

11 A. Yes, I have.

12 Counsel: We ask that Ms. Cranmer's Exhibit
13 consisting of four schedules be
14 marked as Exhibit No. 29 (SDC-1).

15

16 Q. Are you familiar with the Fuel and Purchased Power
17 (Energy) True-up Calculation for the period of October
18 1996 through March 1997 and the Purchased Power Capacity
19 Cost True-up Calculation for the period of October 1995
20 through September 1996 set forth in your exhibit?

21 A. Yes. These documents were prepared under my
22 supervision.

23

24

25

1 Q. Have you verified that to the best of your knowledge and
2 belief, the information contained in these documents is
3 correct?

4 A. Yes, I have.

5

6 Q. What is the amount to be refunded or collected through
7 the fuel cost recovery factor in the period October 1997
8 through March 1998?

9 A. An amount to be collected of \$3,165,271 was calculated
10 as shown in Schedule 1 of my exhibit.

11

12 Q. How was this amount calculated?

13 A. The \$3,165,271 was calculated by taking the difference
14 in the estimated October 1996 through March 1997 under-
15 recovery of \$2,698,394 as approved in Order No.
16 PSC-97-0359-FOF-EI, dated March 31, 1997 and the actual
17 under-recovery of \$5,863,665 which is the sum of lines 7
18 and 8 shown on Schedule A-2, page 2 of 3, Period-to-date
19 of the monthly filing for March 1997.

20

21 Q. Ms. Cranmer, you stated earlier that you are responsible
22 for the Purchased Power Capacity Cost True-up
23 Calculation. Which schedules of your exhibit relate to
24 the calculation of these factors?

25 A. Schedules CCA-1, CCA-2, and CCA-3 of my exhibit relate

1 to the Purchased Power Capacity Cost True-up Calculation
2 for the period October 1995 through September 1996.

3

4 Q. What is the amount to be refunded or collected in the
5 period October 1997 through September 1998?

6 A. An amount to be collected of \$201,368 was calculated as
7 shown in Schedule CCA-1 of my exhibit.

8

9 Q. How was this amount calculated?

10 A. The \$201,368 was calculated by taking the difference in
11 the estimated October 1995 through September 1996 over-
12 recovery of \$374,156 as approved in Order No.

13 PSC-96-1172-FOF-EI, dated September 19, 1996 and the
14 actual over-recovery of \$172,788 which is the sum of
15 lines 11 and 12 under the total column of Schedule
16 CCA-2.

17

18 Q. Please describe Schedules CCA-2 and CCA-3 of your
19 exhibit.

20 A. Schedule CCA-2 shows the calculation of the actual over-
21 recovery of purchased power capacity costs for the
22 period October 1995 through September 1996. Schedule
23 CCA-3 of my exhibit is the calculation of the interest
24 provision on the over-recovery. This is the same method
25 of calculating interest that is used in the Fuel and

1 Purchased Power (Energy) Cost Recovery Clause and the
2 Environmental Cost Recovery Clause.

3

4 Q. Ms. Cranmer, does this complete your testimony?

5 A. Yes, it does.

AFFIDAVIT

STATE OF FLORIDA)
)
COUNTY OF ESCAMBIA)

Docket No. 970001-EI

Before me the undersigned authority, personally appeared Susan D Cranmer, who being first duly sworn, deposes, and says that she is the Assistant Secretary and Assistant Treasurer of Gulf Power Company, a Maine corporation, that the foregoing is true and correct to the best of her knowledge, information, and belief. She is personally known to me.

Susan D. Cranmer
Susan D. Cranmer
Assistant Secretary and Assistant Treasurer

Sworn to and subscribed before me this 16th day of May
1997.

Linda C. Webb
Notary Public, State of Florida at Large

LINDA C. WEBB
Notary Public - State of FL
Comm. Exp: May 31, 1998
Comm. No: CC 362763

1 GULF POWER COMPANY

2 Before the Florida Public Service Commission
3 Prepared Direct Testimony of
4 Susan D. Cranmer
5 Docket No. 970001-EI
6 Fuel and Purchased Power Cost Recovery
7 Date of Filing: June 23, 1997

8 Q. Please state your name, business address and occupation.

9 A. My name is Susan Cranmer. My business address is 500
10 Bayfront Parkway, Pensacola, Florida 32520-0780. I hold
11 the position of Assistant Secretary and Assistant
12 Treasurer for Gulf Power Company.

13 Q. Please briefly describe your educational background and
14 business experience.

15 A. I graduated from Wake Forest University in
16 Winston-Salem, North Carolina in 1981 with a Bachelor of
17 Science Degree in Business and from the University of
18 West Florida in 1982 with a Bachelor of Arts Degree in
19 Accounting. I am also a Certified Public Accountant
20 licensed in the State of Florida. I joined Gulf Power
21 Company in 1983 as a Financial Analyst. Prior to
22 assuming my current position, I have held various
23 positions with Gulf including Computer Modeling Analyst,
24 Senior Financial Analyst, and Supervisor of Rate
25 Services.

1 My responsibilities include supervision of: tariff
2 administration, cost of service activities, calculation
3 of cost recovery factors, the regulatory filing function
4 of the Rates and Regulatory Matters Department, and
5 various treasury activities.

6

7 Q. Have you previously filed testimony before this
8 Commission in Docket No. 970001-EI?

9 A. Yes, I have.

10

11 Q. What is the purpose of your testimony?

12 A. The purpose of my testimony is to discuss the
13 calculation of Gulf Power's fuel cost recovery factors
14 for the period October 1997 through March 1998. I will
15 also discuss the calculation of the purchased power
16 capacity cost recovery factors for the period October
17 1997 through September 1998.

18

19 Q. Are you familiar with the Fuel and Purchased Power Cost
20 Recovery Clause Calculation for the period of October
21 1997 through March 1998?

22 A. Yes, these documents were prepared under my supervision.

23

24

25

1 Q. Have you verified that to the best of your knowledge and
2 belief, the information contained in these documents is
3 correct?

4 A. Yes, I have.

5 Counsel: We ask that Ms. Cranmer's Exhibit
6 consisting of fifteen schedules,
7 be marked as Exhibit No. 30 (SDC-2).
8

9 Q. Ms. Cranmer, what has Gulf calculated as the true-up to
10 be applied in the period October 1997 through March
11 1998?

12 A. The true-up for this period is an increase of
13 .0994¢/kwh. This includes a final true-up under-
14 recovery for the October 1996 through March 1997 period
15 of \$3,165,271. As shown on Schedule E-1A, it also
16 includes an estimated true-up under-recovery of \$857,475
17 for the current period. The resulting under-recovery is
18 \$4,022,746.
19

20 Q. What has been included in this filing to reflect the
21 GPIF reward/penalty for the period of October 1996
22 through March 1997?

23 A. This is shown on Line 32b of Schedule E-1 as an increase
24 of .0003¢/kwh, thereby rewarding Gulf by \$11,349.
25

- 1 Q. Ms. Cranmer, what is the levelized projected fuel factor
2 for the period October 1997 through March 1998?
- 3 A. Gulf has proposed a levelized fuel factor of 2.131¢/kwh.
4 It includes projected fuel and purchased power energy
5 expenses for October 1997 through March 1998 and
6 projected kwh sales for the same period, as well as the
7 true-up and GPIF amount. The proposed levelized fuel
8 factor also includes the special recovery amount
9 associated with the Air Products special contract. The
10 calculation of the special recovery amount is presented
11 on Schedule E-12 of my exhibit. The levelized fuel
12 factor has not been adjusted for line losses.
13
- 14 Q. Ms. Cranmer, how were the line loss multipliers used on
15 Schedule E-1E calculated?
- 16 A. They were calculated in accordance with procedures
17 approved in prior filings and were based on Gulf's
18 latest mwh Load Flow Allocators.
19
- 20 Q. Ms. Cranmer, what fuel factor does Gulf propose for its
21 largest group of customers (Group A), those on Rate
22 Schedules RS, GS, GSD, OSIII, and OSIV?
- 23 A. Gulf proposes a standard fuel factor, adjusted for line
24 losses, of 2.157¢/kwh kwh for Group A. Fuel factors for
25

1 Groups A, B, C, and D are shown on Schedule E-1E. These
2 factors have also been adjusted for line losses.

3

4 Q. Ms. Cranmer, how were the time-of-use fuel factors
5 calculated?

6 A. These were calculated based on projected loads and
7 system lambdas for the period October 1997 through March
8 1998. These factors included the GPIF, true-up, and
9 special contract recovery cost amounts and were adjusted
10 for line losses. These time-of-use fuel factors are
11 also shown on Schedule E-1E.

12

13 Q. How does the proposed fuel factor for Rate Schedule RS
14 compare with the factor applicable to September and how
15 will the change affect the cost of 1000 kwh on Gulf's
16 residential rate RS?

17 A. The current fuel factor for Rate Schedule RS applicable
18 to September 1997 is 2.180¢/kwh compared with the
19 proposed factor of 2.157¢/kwh. For a residential
20 customer who uses 1000 kwh in October 1997, the fuel
21 portion of the bill will decrease from \$21.80 to \$21.57.

22

23 Q. Ms. Cranmer, has Gulf updated its estimates of the
24 as-available avoided energy costs to be shown on COG1 as
25 required by Order No. 13247 issued May 1, 1984, in

1 Docket No. 830377-EI and Order No. 19548 issued June 21,
2 1988, in Docket No. 880001-EI?

3 A. Yes. A tabulation of these costs is set forth in
4 Schedule E-11 of my Exhibit SDC-2. These costs
5 represent the estimated averages for the period from
6 October 1997 through September 1999.

7

8 Q. Ms. Cranmer, you stated earlier that you are responsible
9 for the calculation of the purchased power capacity cost
10 (PPCC) recovery factors. Which schedules of your
11 exhibit relate to the calculation of these factors?

12 A. Schedule CCE-1, including CCE-1a and CCE-1b, and
13 Schedule CCE-2 of my exhibit relate to the calculation
14 of the PPCC recovery factors for the period October 1997
15 through September 1998.

16

17 Q. Please describe Schedule CCE-1 of your exhibit.

18 A. Schedule CCE-1 shows the calculation of the amount of
19 capacity payments to be recovered through the PPCC
20 Recovery Clause. Mr. Howell has provided me with Gulf's
21 projected purchased power capacity transactions under
22 the Southern Company Intercompany Interchange Contract
23 (IIC), Gulf's contract with Monsanto Chemical Company,
24 and certain short-term market capacity transactions.
25 Gulf's total projected capacity payments for the period

1 October 1997 through September 1998 are purchases of
2 \$1,841,669. The jurisdictional amount is \$1,773,874.
3 For the period, Gulf's requested recovery before true-up
4 is the difference between the jurisdictional projected
5 purchased power capacity costs and the approved
6 adjustment for former capacity transactions embedded in
7 current base rates. This adjustment amount was fixed in
8 Order No. PSC-93-0047-FOF-EI, dated January 12, 1993, as
9 an embedded credit of \$1,678,580, or \$1,652,000 net of
10 revenue taxes. Thus, the projected recovery amount to
11 be collected through the PPCC recovery factors in the
12 period October 1997 through September 1998 is
13 \$3,425,874. This amount is added to the total true-up
14 amount to determine the total purchased power capacity
15 transactions to be recovered through the factors to be
16 applied in the period.

17

18 Q. What has Gulf calculated as the purchased power capacity
19 factor true-up to be applied in the period October 1996
20 through September 1997?

21 A. The true-up for this period is an increase of \$523,967
22 as shown on Schedule CCE-1a. This includes \$0 final
23 capacity cost true-up amount for October 1995 through
24 September 1996 because the actual over-recovery for that
25 period was incorporated into the mid-course correction

1 filed November 21, 1996. It includes an estimated over-
2 recovery of \$2,791,701 for the period October 1996
3 through September 1997, less \$3,315,668 estimated over-
4 recovery related to the same period but already
5 reflected in the factors approved in the mid-course
6 correction which was effective January 1, 1997.

7

8 Q. What methodology was used to allocate the capacity
9 payments to rate class?

10 A. As required by Commission Order No. 25773 in Docket
11 No. 910794-EQ, the revenue requirements have been
12 allocated using the cost of service methodology used in
13 Gulf's last full requirements rate case and approved by
14 the Commission in Order No. 23573 issued October 3,
15 1990, in Docket No. 891345-EI. Although the capacity
16 payments in that cost of service study were allocated to
17 rate class using the demand allocator based on the
18 twelve monthly coincident peaks projected for the test
19 year, for purposes of the PPCC Recovery Clause, Gulf has
20 allocated the net purchased power capacity costs to rate
21 class with 12/13th on demand and 1/13th on energy. This
22 allocation is consistent with the treatment accorded to
23 production plant in the cost of service study used in
24 Gulf's last rate case.

1 Q. How were the allocation factors calculated for use in
2 the PPCC Recovery Clause?

3 A. The allocation factors used in the Purchased Power
4 Capacity Cost Recovery Clause have been calculated using
5 the 1995 load data filed with the Commission in
6 accordance with FPSC Rule 25-6.0437. The calculations
7 of the allocation factors are shown in columns A through
8 I on Page 1 of Schedule CCE-2.

9

10 Q. Please describe the calculation of the cents/kwh factors
11 by rate class used to recover purchased power capacity
12 costs.

13 A. As shown in columns A through D on page 2 of Schedule
14 CCE-2, the 12/13th of the jurisdictional capacity cost
15 to be recovered is allocated to rate class based on the
16 demand allocator, with the remaining 1/13th allocated
17 based on energy. The total revenue requirement assigned
18 to each rate class shown in column E is then divided by
19 that class's projected kwh sales for the twelve-month
20 period to calculate the PPCC recovery factor. This
21 factor will be applied to each customer's total kwh to
22 calculate the amount to be billed each month.

23

24

25

1 Q. What is the amount related to purchased power capacity
2 costs recovered through this factor that will be
3 included on a residential customer's bill for 1000 kwh?

4 A. The purchased power capacity costs recovered through the
5 clause for a residential customer who uses 1000 kwh
6 would be \$.54.

7

8 Q. When does Gulf propose to collect these new fuel charges
9 and purchased power capacity charges?

10 A. The fuel factors will apply to October 1997 through
11 March 1998 billings beginning with Cycle 1 meter
12 readings scheduled on October 1, 1997 and ending with
13 meter readings scheduled on March 31, 1998. The
14 capacity factors will apply to October 1997 through
15 September 1998 billings beginning with Cycle 1 meter
16 readings scheduled on October 1, 1997 and ending with
17 meter readings scheduled on September 29, 1998.

18

19 Q. Ms. Cranmer, does this complete your testimony?

20 A. Yes, it does.

21

22

LINDA C. WEBB
Notary Public-State of FL
Comm. Exp: May 31, 1998
Comm. No: CC 382703

1 GULF POWER COMPANY
2 Before the Florida Public Service Commission
3 Direct Testimony of
4 G. D. Fontaine
5 Docket No. 970001-EI
6 Date of Filing May 20, 1997

7 Q. Please state your name, address and occupation.

8 A. My name is George D. Fontaine, my business address is
9 Post Office Box 1151, Pensacola, Florida 32520, and my
10 position is Performance Test Specialist for Gulf Power
11 Company.

12
13 Q. Please describe your educational and business
14 background.

15 A. I received my Bachelor of Mechanical Engineering Degree
16 from Auburn University in 1980. Following graduation,
17 I joined Gulf Power Company as an Associate Engineer at
18 the Scholz Electric Generating Plant, and as I
19 previously stated, my current position is Performance
20 Test Specialist. I am also a registered Professional
21 Engineer in the State of Florida.

22
23 Q. Mr. Fontaine, have you previously testified in this
24 Docket?

25 A. Yes, sir.

1 Q. Mr. Fontaine, what is the purpose of your testimony in
2 this proceeding?

3 A. The purpose of my testimony is to present GPIF results
4 for Gulf Power Company for the period of October 1,
5 1996, through March 31, 1997.

6

7 Q. Mr. Fontaine, have you prepared an exhibit that
8 contains information to which you will refer in your
9 testimony?

10 A. Yes, Sir, I have prepared an exhibit consisting of five
11 schedules.

12

13 Q. Mr. Fontaine, was this exhibit prepared by you or under
14 your direction and supervision?

15 A. Yes, it was.

16

17 Counsel: We ask that Mr. Fontaine's exhibit be
18 marked for identification as exhibit 31 (GDF-1).

19

20 Q. Mr. Fontaine, before reviewing the GPIF Results for
21 Gulf's units, is there any information which has been
22 supplied to the Commission pertaining to this GPIF
23 period which requires amendment?

24 A. Yes, some corrections need to be made to the actual
25 unit performance data which was submitted monthly to

1 the Commission during this period. These corrections
2 are based on discoveries made during our final review
3 to determine the accuracy of this information prior to
4 this proceeding. The Actual Unit Performance Data
5 tables on pages 14 to 19 of Schedule 5 incorporate
6 these changes. The data contained on these tables is
7 the data upon which the GPIF calculation was made.
8

9 Q. Mr. Fontaine, would you now review the Company's
10 equivalent availability results for the period?

11 A. Actual equivalent availability and adjusted actual
12 equivalent availability figures for each of the
13 Company's GPIF units are shown on page 13 of Schedule
14 5. Pages 3 through 8 of Schedule 2 contain the
15 calculations for the adjusted actual equivalent
16 availabilities.

17 A calculation of GPIF availability points based on
18 these availabilities and the targets established by
19 Commission Order PSC-96-1172-FOF-EI is on page 9 of
20 Schedule 2. The results are: Crist 6, -10.00 points;
21 Crist 7, +3.75 points; Smith 1, +7.78 points; Smith 2,
22 +10.00 points; Daniel 1, +10.00 points, and Daniel 2,
23 +7.37 points.
24
25

1 Q. Mr. Fontaine, what were the heat rate results for the
2 period?

3 A. The detailed calculation of the actual average net
4 operating heat rates for the Company's GPIF units is on
5 pages 2 through 7 of Schedule 3. These heat rate
6 figures have not at this point been adjusted in
7 accordance with GPIF procedures for load and other
8 factors to the bases of their targets.

9 As was done for the prior GPIF periods, and as
10 indicated on pages 8 through 13 of Schedule 3, the
11 target setting equations were used to adjust actual
12 results to the target bases. These equations,
13 submitted in June 1996, are shown on page 15 of
14 Schedule 3.

15 As calculated on page 16 of Schedule 3, the
16 adjusted actual average net operating heat rates
17 correspond to GPIF unit heat rate points of: +3.54 for
18 Crist 6, +5.00 for Crist 7, +5.71 for Smith 1, +9.58
19 for Smith 2, -8.90 for Daniel 1, and -10.00 for Daniel
20 2.

21
22
23
24
25

1 Q. Mr. Fontaine, what number of Company points were
2 achieved during the period, and what reward or penalty
3 is indicated by these points according to the GPIF
4 procedure?

5 A. Using the unit equivalent availability and heat rate
6 points previously mentioned, along with the adjusted
7 weighting factors, the Company points would be +0.13 as
8 indicated on page 2 of Schedule 4. This calculates to
9 a reward in the amount of \$11,349.

10

11 Q. Mr. Fontaine, would you please summarize your
12 testimony?

13 A. Yes, Sir. In view of the adjusted actual equivalent
14 availabilities, as shown on page 9 of Schedule 2, and
15 the adjusted actual average net operating heat rates
16 achieved, as shown on page 16 of Schedule 3, evidencing
17 the Company's performance for the period, Gulf
18 calculates a reward in the amount of \$11,349 as
19 provided for by the GPIF plan.

20 Q. Mr. Fontaine, does this conclude your testimony?

21 A. Yes, Sir.

22

23

24

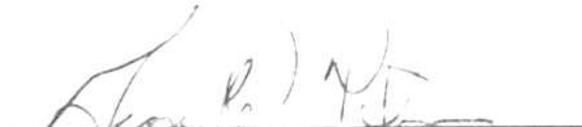

25

AFFIDAVIT

COUNTY OF ESCAMBIA)

Docket No. 970001-EI

Before me the undersigned authority, personally appeared George D. Fontaine, who being first duly sworn, deposes, and says that he is the Performance Test Specialist of Gulf Power Company, a Maine Corporation, and that the foregoing is true and correct to the best of his knowledge, information, and belief. He is personally known to me.

George D. Fontaine
Performance Test Specialist

Sworn to and subscribed before me this 15th day of May, 1997.

Notary Public, State of Florida at Large

1 GULF POWER COMPANY
2 Before the Florida Public Service Commission
3 Direct Testimony of
4 G. D. Fontaine
5 Docket No. 970001-EI
6 Date of Filing June 23, 1997

- 7 Q. Please state your name, address and occupation.
- 8 A. My name is George D. Fontaine, my business address is
9 500 Bayfront Parkway, Pensacola, Florida 32520, and my
10 position is Performance Test Specialist for Gulf Power
11 Company.
- 12 Q. Please describe your educational and business
13 background.
- 14 A. I received my Bachelor of Mechanical Engineering Degree
15 from Auburn University in 1980. Following graduation,
16 I joined Gulf Power Company as an Associate Engineer at
17 the Scholz Electric Generating Plant, and as I
18 previously stated, my current position is Performance
19 Test Specialist. I am also a registered Professional
20 Engineer in the State of Florida.
- 21
- 22 Q. Have you previously testified in this Docket?
- 23 A. Yes. I have presented testimony regarding the
24 Generating Performance Incentive Factor (GPIF)
25 periodically for the past several years.

1 Q. What is the purpose of your testimony in this
2 proceeding?

3 A. The purpose of my testimony today is to present GPIF
4 targets for Gulf Power Company for the period of October 1,
5 1997 through March 31, 1998.

6

7 Q. Have you prepared an exhibit that contains information
8 to which you will refer in your testimony?

9 A. Yes, I have prepared an exhibit consisting of three
10 schedules.

11

12 Q. Was this exhibit prepared by you or under your
13 direction and supervision?

14 A. Yes, it was.

15

16 Counsel: We ask that Mr. Fontaine's exhibit be
17 marked for identification as exhibit 32 (GDF-2).

18

19 Q. Which units does Gulf propose to include under the GPIF
20 for the subject period?

21 A. We propose that Crist Units 6 and 7, Smith Units 1 and
22 2, and Daniel Units 1 and 2 continue to be the
23 Company's GPIF units.

24

25

1 Q. What are the target heat rates Gulf proposes to use in
2 the GPIF for these units for the performance period
3 October 1, 1997 through March 31, 1998?

4 A. I would like to refer you to Page 32 of Schedule 1 of
5 my exhibit where these targets are listed.

6

7 Q. How were these proposed target heat rates determined?

8 A. In every case they were determined according to the
9 GPIF implementation manual procedures for Gulf.

10 Page 2 of Schedule 1 shows the target average net
11 operating heat rate equations for the proposed GPIF
12 units, and pages 4 through 29 of Schedule 1 contain the
13 weekly historical data used for the statistical
14 development of these equations.

15 Pages 30 and 31 of Schedule 1 present the calculations
16 which provide the unit target heat rates from the
17 target equations.

18

19 Q. Were the maximum and minimum attainable heat rates for
20 each proposed GPIF unit, indicated on page 32 of
21 Schedule 1, calculated according to the appropriate
22 GPIF implementation manual procedures?

23 A. Yes.

24

25

1 Q. What are the proposed target, maximum and minimum,
2 equivalent availabilities for Gulf's units?

3 A. The target equivalent availabilities and their ranges
4 are listed on page 4 of Schedule 2.

5

6 Q. How are these target equivalent availabilities
7 determined?

8 A. The target equivalent availabilities were determined
9 according to the standard GPIF implementation manual
10 procedures for Gulf, and are presented on page 2 of
11 Schedule 2.

12

13 Q. How were the maximum and minimum attainable equivalent
14 availabilities determined for each unit?

15 A. The maximum and minimum attainable equivalent
16 availabilities, which are presented along with their
17 respective target availabilities on page 4 of Schedule
18 2, were determined per GPIF manual procedures for Gulf.

19

20 Q. Mr. Fontaine, has Gulf completed the GPIF minimum
21 filing requirements data package?

22 A. Yes, we have completed the required data. Schedule 3
23 of my exhibit contains this information.

24

25

1 Q. Mr. Fontaine, would you please summarize your
2 testimony?

3 A. Yes. Gulf asks that the Commission accept:

4 1. Crist Units 6 and 7, Smith Units 1 and 2 and Daniel
5 Units 1 and 2, for inclusion under the GPIF for the
6 period of October 1, 1997 through March 31, 1998.

7

8 2. The target, maximum attainable, and minimum
9 attainable average net operating heat rates, as
10 proposed by the Company and as shown on page 32 of
11 Schedule 1 and also page 5 of Schedule 3 of my
12 exhibit.

13

14 3. The target, maximum attainable, and minimum
15 attainable equivalent availabilities, as proposed
16 by the Company and as shown on Page 4 of Schedule
17 2 and also page 5 of Schedule 3 of my exhibit.

18

19 4. The weekly average net operating heat rate least
20 squares regression equations, shown on page 2 of
21 Schedule 1 and also pages 18 through 23 of
22 Schedule 3 of my exhibit, for use in adjusting the
23 six-month actual unit heat rates to target
24 conditions.

25

1 Q. Mr. Fontaine, does this conclude your testimony?

2 A. Yes, Sir.

Docket No. 970001-EI

Before me the undersigned authority, personally appeared George D. Fontaine, who being first duly sworn, deposes, and says that he is the Performance Test Specialist of Gulf Power Company, a Maine Corporation, and that the foregoing is true and correct to the best of his knowledge, information, and belief. He is personally known to me.

 George D. Fontaine
 Performance Test Specialist

Sworn to and subscribed before me this 16th day of
June, 1997.

 Notary Public, State of Florida at Large

1 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2 PREPARED DIRECT TESTIMONY

3 OF

4 GEORGE A. KESELOWSKY

5
6 Q. Will you please state your name, business address, and
7 employer?
8

9 A. My name is George A. Keselowsky and my business address is
10 Post Office Box 111, Tampa, Florida 33601. I am employed
11 by Tampa Electric Company.
12

13 Q. Please furnish us with a brief outline of your educational
14 background and business experience.
15

16 A. I graduated in 1972 from the University of South Florida
17 with a Bachelor of Science Degree in Mechanical
18 Engineering. I have been employed by Tampa Electric
19 Company in various engineering positions since that time.
20 My current position is that of Senior Consulting Engineer
21 -Production Engineering.
22
23
24
25

1 Q. What are your current responsibilities?

2

3 A. I am responsible for testing and reporting unit
4 performance, and the compilation and reporting of
5 generation statistics.

6

7 Q. What is the purpose of your testimony?

8

9 A. My testimony presents the actual performance results from
10 unit equivalent availability and station heat rate used to
11 determine the Generating Performance Incentive Factor
12 (GPIF) for the period October 1996 through March 1997. I
13 will also compare these results to the targets established
14 prior to the beginning of the period.

15

16 Q. Have you prepared an exhibit with the results for this six
17 month period?

18

19 A. Yes. Under my direction and supervision an exhibit has
20 been prepared entitled, "Tampa Electric Company, October
21 1996 - March 1997, Generating Performance Incentive Factor
22 Results" consisting of 28 pages that was filed with this
23 testimony (Have identified as Exhibit GAK-1).

24

25

- 1 Q. Have you calculated the results of Tampa Electric Company
2 for its performance under the GPIF during this period?
3
- 4 A. Yes I have. This is shown on page 4 of my exhibit. Based
5 upon + 0.512 GPIF points, the result is a reward amount of
6 \$96,660 for the period.
7
- 8 Q. Please proceed with your review of the actual results for
9 the October 1996 - March 1997 period.
10
- 11 A. On page 3 of my exhibit, the actual average common equity
12 for the period is shown on line 8 as \$1,118,087,092. This
13 produces the maximum penalty or reward figure of \$2,258,102
14 as shown on line 15, page 3, and also page 2 of my exhibit.
15
- 16 Q. Would you please explain how you arrived at the actual
17 equivalent availability results for the six units included
18 within the GPIF?
19
- 20 A. Yes I will. Operating data on each of our operating units
21 is filed monthly with the Florida Public Service Commission
22 on the Actual Unit Performance data form. Additionally,
23 outage information is reported to the Commission on a
24 monthly basis. A summary of this data for the six months
25 provides the basis for the GPIF.

1 Q. Are the equivalent availability results shown on page 6,
2 column 2, directly applicable to the GPIF table?

3
4 A. Not exactly. Adjustments to equivalent availability may be
5 required as noted in section 4.3.3 of the GPIF Manual. The
6 actual equivalent availability including the required
7 adjustment is shown on page 6 of my exhibit. The necessary
8 adjustments as prescribed in the GPIF Manual are further
9 defined by a letter dated October 23, 1981, from Mr. J.H.
10 Hoffsis of the Commission's Staff. The adjustments for
11 each unit are as follows:

12
13 Gannon Unit No. 5

14 On this unit, 336 planned outage hours were originally
15 scheduled to fall within the Winter 1996 period. Due to a
16 revision of the outage schedule 604.9 planned outage hours
17 were accomplished within the Winter 1996 period.
18 Consequently, the actual equivalent availability of 63.8%
19 is adjusted to 68.3%, as shown on page 7 of my exhibit.

20
21 Gannon Unit No. 6

22 On this unit, 336 planned outage hours were originally
23 scheduled to fall within the Winter 1996 period. Actual
24 planned outage activities required 413.2 hours.
25 Consequently, the actual equivalent availability of 79.1%

1 is adjusted to 80.6%, as shown on page 8 of my exhibit.

2

3 Big Bend Unit No. 1

4 On this unit 600 planned outage hours were originally
5 scheduled to fall within the Winter 1996 period. Due to a
6 revision of the outage schedule 404.8 planned outage hours
7 were required. Consequently, the actual equivalent
8 availability of 75.0% is adjusted to 71.3% as shown on page
9 9 of my exhibit.

10

11 Big Bend Unit No. 2

12 On this unit 505 planned outage hours were originally
13 scheduled to fall within the Winter 1996 period. Actual
14 planned outage activities required 460.3 hours.
15 Consequently, the actual equivalent availability of 79.5%
16 is adjusted to 79.6% as shown on page 10 of my exhibit.

17

18 Big Bend Unit No. 3

19 On this unit 744 planned outage hours were originally
20 scheduled to fall within the Winter 1996 period. Due to a
21 revision of the outage schedule, the outage was moved to
22 begin after the end of the period, and no planned outage
23 hours fell within the period. Consequently, the actual
24 equivalent availability of 83.5% is adjusted to 69.2% as
25 shown on page 11 of my exhibit.

1 Big Bend Unit No. 4

2 This unit was not scheduled to have a planned outage during
3 the Winter 1996 period. Due to a revision of the outage
4 schedule, a planned outage was moved forward and was
5 accomplished within the period. Consequently, the actual
6 equivalent availability of 82.7% was adjusted to 93.7% as
7 shown on page 12 of my exhibit.

8

9 Q. How did you arrive at the applicable equivalent
10 availability points for each unit?

11

12 A. The final adjusted equivalent availabilities for each unit
13 are shown on page 6, column 4, of my exhibit. This number
14 is entered into the respective Generating Performance
15 Incentive Point (GPIP) Table for each particular unit on
16 pages 21 through 26. Page 4 of my exhibit summarizes the
17 equivalent availability points to be awarded or penalized.

18

19 Q. Would you please explain the heat rate results relative to
20 the GPIP?

21

22 A. The actual heat rate and adjusted actual heat rate for
23 Gannon and Big Bend Station are shown on page 6 of my
24 exhibit. The adjustment was developed based on the
25 guidelines of section 4.3.6 of the GPIP Manual. This

1 procedure is further defined by a letter dated October 23,
2 1981, from Mr. J.H. Hoffsis of the FPSC Staff. The final
3 adjusted actual heat rates are also shown on page 5 of my
4 exhibit. This heat rate number is entered into the
5 respective GPIF table for the particular unit, shown on
6 pages 21 through 26. Page 4 of my exhibit summarizes the
7 weighted heat rate and equivalent availability points to be
8 awarded.

9
10 **Q.** Were any additional adjustments to heat rate required?

11
12 **A.** In order to assure compatability of data, Big Bend Unit 3
13 heat rates have been calculated in the standard fashion,
14 without scrubber power. This methodology has been reviewed
15 and approved by the PSC staff, to be employed until there
16 is sufficient operational history with the scrubber to meet
17 target preparation guidelines.

18
19 **Q.** Does this assure that the Big Bend 3 heat rate for the
20 period is appropriate for comparison to its target and
21 meets GPIF criteria?

22
23 **A.** Yes.

24
25

1 Q. What is the overall GPIF for Tampa Electric Company during
2 this six month period?

3

4 A. This is shown on page 28 of my exhibit. Essentially, the
5 weighting factors shown on page 4, column 3, plus the
6 equivalent availability points and the heat rate points
7 shown on page 4, column 4, are substituted within the
8 equation. This resultant value, +0.512, is then entered
9 into the GPIF table on page 2. Using linear interpolation,
10 a reward amount of \$96,660 is calculated.

11

12 Q. Does this conclude your testimony?

13

14 A. Yes, it does.

15

16

17

18

24

25

1 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2 PREPARED DIRECT TESTIMONY

3 OF

4 GEORGE A. KESELOWSKY

5
6 Q. Will you please state your name, business address, and
7 employer?

8
9 A. My name is George A. Keselowsky and my business address is
10 Post Office Box 111, Tampa, Florida 33601. I am employed
11 by Tampa Electric Company.

12
13 Q. Please furnish us with a brief outline of your educational
14 background and business experience.

15
16 A. I graduated in 1972 from the University of South Florida
17 with a Bachelor of Science Degree in Mechanical
18 Engineering. I have been employed by Tampa Electric
19 Company in various engineering positions since that time.
20 My current position is that of Senior Consulting Engineer
21 - Energy Supply Engineering.

22
23 Q. What are your current responsibilities?

24
25 A. I am responsible for testing and reporting unit

1 performance, and the compilation and reporting of
2 generation statistics.

3

4 Q. What is the purpose of your testimony?

5

6 A. My testimony presents Tampa Electric Company's methodology
7 for determining the various factors required to compute the
8 Generating Performance Incentive Factor (GPIF) as ordered
9 by this Commission.

10

11 Q. Have you prepared an exhibit showing the various elements
12 of the derivation of Tampa Electric Company's GPIF formula?

13

14 A. Yes, I have prepared, under my direction and supervision,
15 an exhibit entitled "Tampa Electric Company, Generating
16 Performance Incentive Factor" October 1997 - March 1998,
17 consisting of 34 pages filed with the Commission on
18 June 23, 1997. (Have identified as Exhibit GAK-2). The
19 data prepared within this exhibit is consistent with the
20 GPIF Implementation Manual previously approved by this
21 Commission.

22

23

24

25

1 Q. Which generating units on Tampa Electric Company's system
2 are included in the determination of your GPIF?

3

4 A. Six of our coal-fired units are included. These are:
5 Gannon Station Units 5 and 6; and Big Bend Station Units 1,
6 2, 3, and 4.

7

8 Q. Will you describe how Tampa Electric Company evolved the
9 various factors associated with the GPIF as ordered by this
10 Commission?

11

12 A. Yes. First, the two factors to be used, as set forth by
13 the Commission Staff, are unit availability and station
14 heat rate.

15

16 Q. Please continue.

17

18 A. A target was established for equivalent availability for
19 each unit considered for this period. Heat rate targets
20 were also established for each unit. A range of potential
21 improvement and degradation was determined for each of
22 these parameters.

23

24

25

1 Q. Would you describe how the target values for unit
2 availability were determined?

3
4 A. Yes I will. The Planned Outage Factor (POF) and the
5 Equivalent Unplanned Outage Factor (EUOF) were subtracted
6 from 100% to determine the target equivalent availability.
7 The factors for each of the 6 units included within the
8 GPIF are shown on page 5 of my exhibit. For example, the
9 projected EUOF for Big Bend Unit One is 13.0%. The Planned
10 Outage Factor for this same unit during this period is
11 7.7%. Therefore, the target equivalent availability for
12 this unit equals:

13
14
$$100\% - [(13.0\% + 7.7\%)] = 79.3\%$$

15
16 This is shown on page 4, column 3 of my exhibit.

17
18 Q. How was the potential for unit availability improvement
19 determined?

20
21 A. Maximum equivalent availability is arrived at using the
22 following formula.

23
24
25

1 Equivalent Availability Maximum

2
$$EAF_{MAX} = 100\% - [0.8 (EUOF_1) + 0.95 (POF_1)]$$

3
4 The factors included in the above equations are the same
5 factors that determine target equivalent availability. To
6 attain the maximum incentive points, a 20% reduction in
7 Forced Outage and Maintenance Outage Factors (EUOF), plus
8 a 5% reduction in the Planned Outage Factor (POF) will be
9 necessary. Continuing with our example on Big Bend Unit
10 One:

11
12
$$EAF_{MAX} = 100\% - [0.8 (13.0\%) + 0.95 (7.7\%)] = 82.3\%$$

13
14 This is shown on page 4, column 4 of my exhibit.
15

16 Q. How was the potential for unit availability degradation
17 determined?

18
19 A. The potential for unit availability degradation is
20 significantly greater than is the potential for unit
21 availability improvement. This concept was discussed
22 extensively and approved in earlier hearings before this
23 Commission. Tampa Electric Company's approach to
24 incorporating this skewed effect into the unit availability
25 tables is to use a potential degradation range equal to

1 twice the potential improvement. Consequently, minimum
2 equivalent availability is arrived at via the following
3 formula:

4
5 Equivalent Availability Minimum

6
$$EAF_{MIN} = 100\% - [1.4 (EUOF_T) + 1.10 (POF_T)]$$

7
8 Again, continuing with our example of Big Bend Unit One,

9
10
$$EAF_{MIN} = 100\% - [1.4 (13.0\%) + 1.1 (7.7\%)] = 73.3\%$$

11
12 Equivalent availability MAX and MIN for the other five
13 units is computed in a similar manner.

14
15 Q. How do you arrive at the Planned Outage, Maintenance Outage
16 and Forced Outage Factors?

17
18 A. Our planned outages for this period are shown on page 19 of
19 my exhibit. A Critical Path Method (C.P.M.) for each major
20 planned outage which affects GPIF is included in my
21 exhibit. For example, Big Bend Unit 3 is scheduled for an
22 annual maintenance outage November 1 to November 21, 1997.
23 There are 504 planned outage hours scheduled for the winter
24 1997 period, and a total of 4369 hours during this 6 month
25 period. Consequently, the Planned Outage Factor for Unit 3

1 at Big Bend is $504/4369 \times 100\%$ or 11.5%. This factor is
2 shown on pages 5 and 17 of my exhibit. Big Bend Unit 1 has
3 a planned outage factor of 7.7% as does Big Bend Unit 2.
4 Big Bend Units 3 and 4 have planned outage factors of
5 11.5%, as does Gannon Unit 5. Gannon Unit 6 has a planned
6 outage factor of 1.1%.

7
8 **Q.** How did you arrive at the Forced Outage and Maintenance
9 Outage Factors on each unit?

10
11 **A.** Graphs of both of these factors (adjusted for planned
12 outages) vs. time are prepared. Both monthly data and 12
13 month moving average data are recorded. For each unit the
14 most current, March 1997, 12 month ending value was used as
15 a basis for the projection. This value was adjusted up or
16 down by analyzing trends and causes for recent forced and
17 maintenance outages. All projected factors are based upon
18 historical unit performance, engineering judgment, time
19 since last planned outage, and equipment performance
20 resulting in a forced or maintenance outage. These target
21 factors are additive and result in a EUOF of 13.0% for Big
22 Bend Unit One. The Equivalent Unplanned Outage Factor
23 (EUOF) for Big Bend Unit One is verified by the data shown
24 on page 15, lines 3, 5, 10 and 11 of my exhibit and
25 calculated using the formula:

1
2
3
4
5
6
7
8
9
10
11
12
13
14
15
16
17
18
19
20
21
22
23
24
25

$$\text{EUOF} = \frac{(\text{FOH} + \text{EFOH} + \text{MOH} + \text{EMOH})}{\text{Period Hours}} \times 100$$

or

$$\text{EUOF} = \frac{(400 + 168)}{4369} \times 100 = 13.0\%$$

Relative to Big Bend Unit One, the EUOF of 13.0% forms the basis of our Equivalent Availability target development as shown on sheets 4 and 5 of my exhibit.

Q. Please continue with your review of the remaining units.

Big Bend Unit One

A. The projected EUOF for this unit is 13.0% during this period. This unit will have a planned outage this period and the Planned Outage Factor is 7.7%. This results in a target equivalent availability of 79.3% for the period.

Big Bend Unit Two

The projected EUOF for this unit is 12.6%. This unit will have a planned outage during this period and the Planned Outage Factor is 7.7%. Therefore, the target equivalent availability for this unit is 79.7%.

15
16
17
18
19
20
21
22
23
24
25

Big Bend Unit Three

The projected EUOF for this unit is 14.4%. This unit will have a planned outage this period and the Planned Outage Factor is 11.5%. Therefore, the target equivalent availability for this unit is 74.1%.

Big Bend Unit Four

The projected EUOF for this unit is 7.4%. This unit will have a planned outage during this period and the Planned Outage Factor is 11.5%. This results in a target equivalent availability of 81.1% for the period.

Gannon Unit Five

The projected EUOF for this unit is 11.1%. This unit will have a planned outage during this period and the Planned Outage Factor is 11.5%. Therefore, the target equivalent availability for this unit is 77.3%.

Gannon Unit Six

The projected EUOF for this unit is 10.5%. This unit will have a planned outage during this period and the Planned Outage Factor is 1.1%. Therefore, the target equivalent availability for this unit is 88.4%.

1 Q. Would you summarize your testimony regarding Equivalent
2 Availability Factor (EAF), Equivalent Unplanned Outage
3 Factor (EUOF) and Equivalent Unplanned Outage Rate (EUOR)?
4

5 A. Yes I will. Please note on page 5 that the GPIF system
6 weighted Equivalent Availability Factor (EAF) equals 78.2%.
7 This target compares very favorably to previous GPIF
8 periods when compared on a common planned outage factor
9 basis. These targets represent an outstanding level of
10 performance for our system.
11

12 Q. As you graph and monitor Forced and Maintenance Outage
13 Factors, why are they adjusted for planned outage hours?
14

15 A. This adjustment makes these factors more accurate and
16 comparable. Obviously, a unit in a planned outage stage or
17 reserve shutdown stage will not incur a forced or
18 maintenance outage. Since our units are usually base
19 loaded, reserve shutdown is generally not a factor. To
20 demonstrate the effects of a planned outage, note the EUOR
21 and EUOF for Gannon Unit Six on page 14. During the months
22 of October through February, EUOF and EUOR are equal. This
23 is due to the fact that no planned outages are scheduled
24 during these months. During the month of March, EUOR
25 exceeds EUOF. The reason for this difference is the

1 scheduling of a planned outage. The adjusted factors apply
2 to the period hours after planned outage hours have been
3 extracted.

4
5 Q. Does this mean that both rate and factor data are used in
6 calculated data?

7
8 A. Yes it does. Rates provide a proper and accurate method of
9 arriving at the unit parameters. These are then converted
10 to factors since they are directly additive. That is, the
11 Forced Outage Factor + Maintenance Outage Factor + Planned
12 Outage Factor + Equivalent Availability = 100%. Since
13 factors are additive, they are easier to work with and to
14 understand.

15
16 Q. Has Tampa Electric Company prepared the necessary heat rate
17 data required for the determination of the Generating
18 Performance Incentive Factor?

19
20 A. Yes. Target heat rates as well as ranges of potential
21 operation have been developed as required.

22
23 Q. How were these targets determined?

24
25 A. Net heat rate data for the three most recent winter

1 periods, along with the PROMOD III program, formed the
2 basis of our target development. Projections of unit
3 performance were made with the aid of PROMOD III. The
4 historical data and the target values are analyzed to
5 assure applicability to current conditions of operation.
6 This provides assurance that any periods of abnormal
7 operations, or equipment modifications having material
8 effect on heat rate can be taken into consideration.

9
10 **Q.** The accomplishment of scrubbing the flue gas from Big Bend
11 Unit 3 requires an additional amount of station service
12 power. How do you plan to address the associated effect to
13 net heat rate for GPIF purposes?

14
15 **A.** The change in heat rate for this unit resulting from increased
16 utilization of the Unit 4 scrubber can be quantified, but the
17 operational history is short of GPIF guidelines. The target for
18 Big Bend 3 has, therefore, been developed in the standard
19 fashion using data without scrubber power. In order to assure
20 compatibility with this target, scrubber power will be removed
21 prior to calculating Unit 3 heat rate for the subsequent True-Up
22 process. This method has been reviewed and approved by the PSC
23 Staff to be employed until there is sufficient history to meet
24 target preparation guidelines. Successful implementation of this
25 innovation to maximize the potential of existing plant

1 equipment, represents a major cost savings and a significant
2 benefit for our customers.

3
4 Q. Have you developed the heat rate targets in accordance with
5 GPIF guidelines?

6
7 A. Yes.

8
9 Q. How were the ranges of heat rate improvement and heat rate
10 degradation determined?

11
12 A. The ranges were determined through analysis of historical
13 net heat rate and net output factor data. This is the same
14 data from which the net heat rate vs. net output factor
15 curves have been developed for each unit. This information
16 is shown on pages 26 through 31 of my exhibit.

17
18 Q. Would you elaborate on the analysis used in the
19 determination of the ranges?

20
21 A. The net heat rate vs. net output factor curves are the results
22 of a first order curve fit to historical data. The standard
23 error of the estimate of this data was determined, and a factor
24 was applied to produce a band of potential improvement and
25 degradation. Both the curve fit and the standard error of the

1 estimate were performed by computer program for each unit. These
2 curves are also used in post period adjustments to actual heat
3 rates to account for unanticipated changes in unit dispatch.
4

5 Q. Can you summarize your heat rate projection for the winter
6 1997 period?
7

8 A. Yes. The heat rate target for Big Bend Unit 1 is 10,084
9 Btu/Net kwh. The range about this value, to allow for
10 potential improvement or degradation, is ± 237 Btu/Net kwh.
11 The heat rate target for Big Bend Unit 2 is 9,961 Btu/Net
12 kwh with a range of ± 345 Btu/Net kwh. The heat rate target
13 for Big Bend Unit 3 is 9,680 Btu/Net kwh, with a range of
14 ± 362 Btu/Net kwh. The heat rate target for Big Bend Unit
15 4 is 10,025 Btu/Net kwh with a range of ± 315 Btu/Net kwh.
16 The heat rate target for Gannon Unit 5 is 10,378 Btu/Net
17 kwh with a range of ± 392 Btu/Net kwh. The heat rate target
18 for Gannon Unit 6 is 10,692 Btu/Net kwh with a range of
19 ± 393 Btu/Net kwh. A zone of tolerance of ± 75 Btu/Net kwh
20 is included within the range for each target. This is
21 shown on page 4, and pages 7 through 12 of my exhibit.
22
23
24
25

1 Q. Do you feel that the heat rate targets and ranges in your
2 projection meet the criteria of the GPIF and the philosophy
3 of this Commission?

4

5 A. Yes I do.

6

7 Q. After determining the target values and ranges for average
8 net operating heat rate and equivalent availability, what
9 is the next step in the GPIF?

10

11 A. The next step is to calculate the savings and weighting
12 factor to be used for both average net operating heat rate
13 and equivalent availability. This is shown on pages 7
14 through 12. Our PROMOD III cost simulation model was used
15 to calculate the total system fuel cost if all units
16 operated at target heat rate and target availability for
17 the period. This total system fuel cost of \$114,813,500 is
18 shown on page 6 column 2.

19

20 The PROMOD III output was then used to calculate total
21 system fuel cost with each unit individually operating at
22 maximum improvement in equivalent availability and each
23 station operating at maximum improvement in average net
24 operating heat rate. The respective savings are shown on
25 page 6 column 4. After all the individual savings are

1 calculated, column 4 is totaled: \$4,133,500 reflects the
2 savings if all units operated at maximum improvement. A
3 weighting factor for each parameter is then calculated by
4 dividing individual savings by the total. For Big Bend
5 Unit Two, the weighting factor for equivalent availability
6 is 5.22% as shown in the right hand column on page 6.
7 Pages 7 thru 12 show the point table, the Fuel
8 Savings/(Loss), and the equivalent availability or heat
9 rate value. The individual weighting factor is also shown.
10 For example, on Big Bend Unit Two, page 10, if the unit
11 operates at 82.6% equivalent availability, fuel savings
12 would equal \$215,700 and 10 equivalent availability points
13 would be awarded.

14
15 The Generating Performance Incentive Factor Reward/Penalty
16 Table on page 2 is a summary of the tables on pages 7
17 through 12. The left hand column of this document shows
18 the Tampa Electric Company's incentive points. The center
19 column shows the total fuel savings and is the same amount
20 as shown on page 6, column 4, \$4,133,500. The right hand
21 column of page 2 is the estimated reward or penalty based
22 upon performance.

23
24
25

1 Q. How were the maximum allowed incentive dollars determined?

2

3 A. Referring to my exhibit on page 3, line 8, the estimated
4 average common equity for the period October 1997 - March
5 1998 is shown to be \$1,157,214,571. This produces the
6 maximum allowed jurisdictional incentive dollars of
7 \$2,351,688 shown on line 15.

8

9 Q. Is there any other constraint set forth by this Commission
10 regarding the magnitude of incentive dollars?

11

12 A. Yes. Incentive dollars are not to exceed fifty percent of
13 fuel savings. Page 2 of my exhibit demonstrates that the
14 maximum allowed incentive dollars have been reduced to meet
15 this constraint.

16

17 Q. Do you wish to summarize your testimony on the GPIF?

18

19 A. Yes. To the best of my knowledge and understanding, Tampa
20 Electric Company has fully complied with the Commission's
21 directions, philosophy, and methodology in our
22 determination of Generating Performance Incentive Factor.
23 The GPIF for Tampa Electric Company is expressed by the
24 following formula for calculating Generating Performance
25 Incentive Points (GPIP):

$$\begin{aligned}
1 \quad \text{GPIP} &= (0.0146 \text{ EAP}_{\text{GN5}} + 0.0101 \text{ EAP}_{\text{GN6}} \\
2 &+ 0.0416 \text{ EAP}_{\text{BB1}} + 0.0522 \text{ EAP}_{\text{BB2}} \\
3 &+ 0.0798 \text{ EAP}_{\text{BB3}} + 0.0398 \text{ EAP}_{\text{BB4}} \\
4 &+ 0.0740 \text{ HRP}_{\text{GN5}} + 0.1185 \text{ HRP}_{\text{GN6}} \\
5 &+ 0.1067 \text{ HRP}_{\text{BB1}} + 0.1614 \text{ HRP}_{\text{BB2}} \\
6 &+ 0.1522 \text{ HRP}_{\text{BB3}} + 0.1491 \text{ HRP}_{\text{BB4}})
\end{aligned}$$

7 Where:

8 GPIP = Generating performance incentive points.

9 EAP = Equivalent availability points awarded/deducted for
10 Units 5 and 6 at Gannon and Units 1, 2, 3 and 4 at
11 Big Bend.

12 HRP = Average net heat rate points awarded/deducted for
13 Units 5 and 6 at Gannon and Units 1, 2, 3 and 4 at
14 Big Bend.

15
16 Q. Have you prepared a document summarizing the GPIF targets
17 for the October 1997 - March 1998 period?

18
19 A. Yes. The availability and heat rate targets for each unit
20 are listed on attachment "A" to this testimony entitled
21 "Tampa Electric Company GPIF Targets, October 1, 1997
22 - March 31, 1998".

23

24

25

1 Q. Do you wish to sponsor an exhibit consisting of estimated
2 unit performance data supporting the fuel adjustment?

3

4 A. Yes I do. (Have identified as Exhibit GAK-3).

5

6 Q. Briefly describe this exhibit.

7

8 A. This exhibit consists of 23 pages. This data is Tampa Electric
9 Company's estimate of the Unit Performance Data and Unit Outage
10 Data for the October 1997 - March 1998 period.

11

12 Q. Does this conclude your testimony?

13

14 A. Yes.

1 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2 PREPARED DIRECT TESTIMONY

3 OF

4 CHARLES R. BLACK

5
6 Q. Please state your name, address, occupation and employer.

7
8 A. My name is Charles R. Black. My mailing address is P.O.
9 Box 111, Tampa, Florida 33601, and my business address is
10 702 North Franklin Street, Tampa, Florida 33602. I am Vice
11 President-Energy Supply of Tampa Electric Company.

12
13 Q. Mr. Black, please furnish a brief outline of your
14 educational background and business experience.

15
16 A. I graduated from the University of South Florida in August,
17 1973 with a Bachelor of Science degree in Engineering,
18 majoring in Chemical Engineering. I am a registered
19 Professional Engineer licensed in the State of Florida. I
20 began my career with Tampa Electric Company in September
21 1973 as a staff engineer in the Production Department.
22 Between 1973 and 1989, I held various engineering and
23 management positions in the Production Department, Power
24 Plant Engineering Department, and the Budget Department.
25 In March of 1989, I joined our affiliated company, TECO

1 Power Services as Director of Engineering and Construction.
2 In December of 1990, I was elected Vice President of
3 Engineering and Construction. In December of 1991, I
4 returned to Tampa Electric as Vice President of Project
5 Management. In November of 1996, I was elected to my
6 current position as Vice President-Energy Supply.

7
8 Q. Will you describe some of the responsibilities of your
9 present position?

10
11 A. As Vice President - Energy Supply, I am responsible for the
12 engineering, operation, maintenance, and construction of
13 the power production facilities including safety of
14 personnel and equipment, security, training, control of
15 costs, and various personnel and administrative functions.
16 I am also responsible for environmental matters and fuel
17 procurement.

18
19 Q. Please state the purpose of your testimony.

20
21 A. The purpose of my testimony is to report to the Commission
22 the actual 1996 costs of Tampa Electric's affiliated coal
23 and coal transportation transactions compared to the
24 benchmark prices calculated in accordance with Order No.
25 20298 (coal transportation) and Order No. PSC-93-0443-FOF-

1 EI ("Order No. 93-0443") (coal). I conclude that the 1996
2 prices paid by Tampa Electric to its affiliates TECO
3 Transport and Trade and Gatliff Coal are reasonable and
4 prudent.

5

6 Q. Have you prepared an exhibit which you sponsor in this
7 proceeding?

8

9 A. Yes. Exhibit No. (CRB-1) titled "Exhibit of Charles R.
10 Black", consisting of 2 documents, was prepared under my
11 direction and supervision.

12

13 AFFILIATED COAL AND COAL TRANSPORTATION PRICES

14 Q. Were Tampa Electric's actual affiliated coal transportation
15 prices for 1996 at or below the transportation benchmark?

16

17 A. Yes, they were. This is reflected in Document No. 1 of my
18 exhibit.

19

20 Q. Were Tampa Electric's actual 1996 affiliated coal prices at
21 or below the benchmark as established in Order No. 93-0443?

22

23 A. Yes, they were. This is reflected in Document No. 2 of my
24 exhibit.

25

1 Q. Please summarize your testimony.

2

3 A. My testimony justifies the prices paid for coal and coal
4 transportation by Tampa Electric Company in 1996 to its
5 affiliated suppliers, Gatliff Coal and TECO Transport and
6 Trade. I demonstrate that the average prices for the year
7 1996 for all coal and coal waterborne transportation
8 services were at or below the appropriate benchmark
9 calculations as directed by Order No. 20298 and Order No.
10 93-0443 of this Commission. Therefore, Tampa Electric
11 should recover its payments for coal and coal
12 transportation made during 1996.

13

14 Q. Does this conclude your testimony?

15

16 A. Yes, it does.

17

18

19

20

21

22

23

24

25

1 **MS. PAUGH:** One final matter. The briefing
2 date has been set for September 19th, 1997, for briefs
3 on Issues 9 through 12.

4 **MR. WILLIS:** Chairman Johnson, we had
5 requested at the prehearing conference, and I renew
6 that request today, that an opportunity be also
7 provided to file a reply brief, which could be done a
8 week after the filing of the initial brief.

9 And I think that that's important because it
10 will help both the Commission and the Staff to frame
11 the issue so that we make sure that we meet each other
12 with our various arguments, and that something is not
13 placed in the brief that cannot be responded to.

14 So I think that that would be a better
15 procedure for us to follow in this proceeding. And it
16 will help you clarify and sharpen the issues that you
17 will be deciding, and it will be helpful to all of us.

18 **CHAIRMAN JOHNSON:** Okay. I don't remember
19 that at the prehearing, but Staff, any comments?

20 **MS. PAUGH:** We don't object to reply briefs
21 being filed.

22 **CHAIRMAN JOHNSON:** I think it would be
23 helpful so we can -- what about the schedule? You're
24 suggesting a week after --

25 **MR. WILLIS:** It could be done the next

1 Friday, the 26th.

2 MR. STONE: May I ask for leave to make that
3 ten days filing because of the mailing so that -- if
4 they are filed on Friday, we won't get ours until
5 Monday. And that's our concern about that. So if we
6 could make it ten days that would be the Monday -- ten
7 days after the 19th. I guess the 29th.

8 MR. WILLIS: We could handle it that way or
9 we could also agree to file the briefs by Federal
10 Express overnight.

11 CHAIRMAN JOHNSON: Staff, what is your
12 preference?

13 MS. PAUGH: Staff has no preference. It's
14 up to the parties.

15 CHAIRMAN JOHNSON: Does anyone object to the
16 ten days?

17 MR. WILLIS: We do not object to it. I
18 just --

19 COMMISSIONER JOHNSON: We'll go with the ten
20 days.

21 MR. WILLIS: Okay.

22 CHAIRMAN JOHNSON: Any other matters?

23 MS. PAUGH: None from Staff.

24 CHAIRMAN JOHNSON: Very well. This hearing
25 is adjourned. Thank you very much.

1 (Thereupon, the hearing was recessed at
2 3:50 p.m., and reconvened at 4:05 p.m. Present were
3 Chairman Johnson, Commissioner Clark, Commissioner
4 Garcia, Leslie Paugh and Roberta Bass, and the
5 following proceedings were had:)

6 **CHAIRMAN JOHNSON:** We're going to go back on
7 the record.

8 There were several issues that were
9 stipulated in the 01 docket.

10 **MS. PAUGH:** That is correct, Madam Chairman.

11 **CHAIRMAN JOHNSON:** Issue 1 through 8 and 14
12 through 23.

13 **COMMISSIONER CLARK:** I move we accept the
14 stipulation.

15 **CHAIRMAN JOHNSON:** Is there a second?

16 **COMMISSIONER GARCIA:** I second.

17 **CHAIRMAN JOHNSON:** Show them then approved
18 without objection. Are there any other matters to
19 come before us?

20 **MS. PAUGH:** No, Madam Chairman.

21 **CHAIRMAN JOHNSON:** Okay. Then this hearing
22 is adjourned. Thank you.

23 (Thereupon, the hearing concluded at
24 4:07 p.m.)

25
