**In Re: Interconnection Agreement between Sprint Communications Company
Limited Partnership and BellSouth Telecommunications, Inc.**

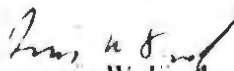

Dear Ms. Bayo:

Please find enclosed for filing, an original and fifteen copies of Amendment Number 1 to Interconnection Agreement as negotiated and executed between Sprint Communications Company Limited Partnership ("Sprint") and BellSouth Telecommunications, Inc. ("BellSouth").

This filing is being made jointly on behalf of Sprint and BellSouth. Pursuant to Section 252(e)(1) of the Telecommunications Act of 1996, we respectfully request that the Commission approve the Amendment to the Interconnection Agreement.

We are enclosing an extra copy of this transmittal letter. We ask that you please acknowledge receipt thereon and return to the undersigned in the enclosed, stamped and self-addressed envelope. Thank you for your assistance.

Sincerely,

Benjamin W. Fincher

AMENDMENT NUMBER 1

THIS AMENDMENT NUMBER 1 ("Amendment") by and between Sprint Communications Company L.P. ("Sprint") and BellSouth Telecommunications, Inc. ("BellSouth") (collectively the "Parties") amends the July 1, 1997 interconnection agreement between the Parties.

WHEREAS, effective July 1, 1997 the Parties entered into an interconnection agreement providing arrangements to facilitate interconnection of their respective facilities in order to provide telecommunications services within the State of Florida;

WHEREAS, the Parties desire to amend said interconnection agreement,

NOW, THEREFORE, in consideration of the mutual provisions contained herein the Parties agree to amend their July 1, 1997 interconnection agreement as follows:

1. Paragraphs 12.1, 12.2, and 12.3 are deleted in its entirety and the following new Paragraphs 12.1 - 12.4 are inserted in lieu thereof:
 - 12.1 In providing Services and Elements, BellSouth will provide Sprint with the quality of service BellSouth provides itself and its end-users. BellSouth's performance under this Agreement shall provide Sprint with the capability to meet standards or other measurements that are at least equal to the level that BellSouth provides or is required to provide by law or its own internal procedures. BellSouth shall satisfy all service standards, measurements, and performance requirements set forth in the Agreement and the measurements specified in Attachment 12 of this Agreement. Any conflict between the standards, measurements, and performance requirements BellSouth provides itself and the standards, measurements, and performance requirements set forth in the Service Quality Measurements in Attachment 12 shall be resolved in favor of the higher standards, measurements and performance.
 - 12.2 The Parties acknowledge that the need will arise for changes to the Service Quality Measurements specified in Attachment 12 during the term of this Agreement. Such changes may include the addition or deletion of measurements or a change in the performance standard for any particular metric, as well as the provision of target performance levels, as set forth in Attachment 12. Unless otherwise specified in Attachment 12, the parties agree to review all measurements on a quarterly basis to determine if any changes are appropriate, and may include the provision to Sprint of any additional measurements BellSouth may provide itself.
 - 12.3 The Parties agree to monitor actual performance on a monthly basis and, if the Parties conclude it is required, develop a process improvement plan to improve quality of service provided as measured by the performance measurements, if necessary. Such a plan shall be developed where BellSouth's performance falls below either the level of performance it provides itself or the level of performance required in Attachment 12.
 - 12.4 BellSouth shall, beginning no later than July 15, 1998, submit monthly reports to Sprint with respect to each Service Quality Measurement identified in Attachment 12 that details (1) BellSouth performance provided to BellSouth's retail operations or retail analogs; (2) BellSouth performance for any BellSouth subsidiary or affiliate operating as an ALEC in Florida; (3) BellSouth performance for Sprint; and (4) BellSouth performance for ALECs in the aggregate. Said reports will include the underlying supporting data, including raw numeric values and measurements and methodologies.
1. The attached Exhibit 1 is incorporated into the July 1, 1997 interconnection agreement as Attachment 12 as if fully set out therein.
2. Except as amended as hereinabove set forth, the July 1, 1997 interconnection agreement is hereby ratified and affirmed in its entirety.

3. This Amendment is effective this 15th day of July, 1998.

Regional Performance Reports**

PRE-ORDERING AND ORDERING OSS

| | |
|---------------------------------|--|
| Function: | Average Response Interval for Pre-Ordering and Ordering Legacy Information & OSS Interface Availability |
| Measurement Overview: | <p>As an initial step of establishing service, the customer service agent must establish such basic facts as availability of desired features, likely service delivery intervals, the telephone number to be assigned, product and feature availability, and the validity of the street address. Typically, this type of information is gathered from the supporting OSS's while the customer (or potential customer) is on the telephone with the customer service agent. This information may be gathered via stand-alone pre-order inquiries or as part of the ordering function. Pre-ordering/ordering activities are the first contact that a customer may have with a CLEC. This measure is designed to monitor the time required for the CLEC interface systems to obtain from legacy systems the pre-ordering/ordering information necessary to establish and modify service. This measurement also captures the availability percentages for the BST systems that the CLEC uses during pre-ordering and ordering. Comparison to BST results allow conclusions as to whether an equal opportunity exists for the CLEC to deliver a comparable customer experience.</p> |
| Measurement Methodology: | <p>1. Average OSS Response Interval = $\text{Sum} ((\text{Date \& Time of Legacy Response}) - (\text{Date \& Time of Request to Legacy})) / (\text{Number of Legacy Requests During the Reporting Period})$</p> <p>The response interval for retrieving pre-order/order information from a given legacy is determined by summing the response times for all requests (contracts) submitted to the legacy during the reporting period and then dividing by the total number of legacy requests for that day. The response interval starts when the client application (LENS for CLECs; RNS for BST) submits a request to the legacy system and ends when the appropriate response is returned to the client application. The number of legacy accesses during the reporting period that take less than 2.3 seconds and the number that take more than 6 seconds are also captured.</p> <p>Definition: Average response time for accessing legacy data associated with appointment scheduling, service & feature availability, address verification, request for Telephone Numbers (TNs), and Customer Service Records (CSRs).</p> <p>2. OSS Interface Availability = $(\text{Actual Availability}) / (\text{Scheduled Availability}) \times 100$</p> <p>Definition: Percent of time OSS interface is actually available compared to scheduled availability. Availability percentages for CLEC interface systems and for all legacy systems accessed by them are captured.</p> |

ORDERING

| | |
|---------------------------------|---|
| Function: | Ordering |
| Measurement Overview: | <p>When a customer calls their service provider, they expect to get information promptly regarding the progress on their order(s). Likewise, when changes must be made, such as to the expected delivery date, customers expect that they will be immediately notified so that they may modify their own plans. The order status measurements monitor, when compared to applicable BST results, that the CLEC has timely access to order progress information so that the customer may be updated or notified when changes and rescheduling are necessary.</p> |
| Measurement Methodology: | <p>1. Percent Flow-through Service Requests = $\sum (\text{Total of Service Requests that flow-through to the BST OSS}) / (\text{Total Number of valid Service Requests delivered to BST OSS}) \times 100$.</p> <p>Definition: <u>Percent Flow-through Service Requests</u> measures the percentage of orders submitted electronically that utilize BSTs' OSS without manual (human) intervention.</p> <p>Methodology:</p> <ul style="list-style-type: none"> • Mechanized tracking for flow-through service requests and manual SOER error audit reports (3/31/98). Mechanized tracking for SOER errors and flow-through (4/30/98). • BST mechanized order tracking. <p>2. Percent Rejected Service Requests = $\sum (\text{Total Number of Rejected Service Requests}) / (\text{Total Number of Service Requests Received}) \times 100$.</p> <p>Definition: <u>Percent Rejected Service Requests</u> is the percent of total orders received rejected due to error or omissions.</p> <p>Methodology:</p> <ul style="list-style-type: none"> • Manual tracking for non flow-through service requests • Mechanized tracking for flow-through service requests • BST retail report not applicable. <p>3. Reject Interval = $\sum [(\text{Date and Time of Service Request Rejection}) - (\text{Date and Time of Service Request Receipt})] / (\text{Number of Service Requests Rejected in Reporting Period})$. Requests are provided based on four (4) hour increments within a 24 hour period, along with the percent greater than 24 hours.</p> <p>Definition: <u>Reject Interval</u> is the average reject time from receipt of service order request to distribution of rejection.</p> <p>Methodology:</p> <ul style="list-style-type: none"> • Non-Mechanized Results are based on actual data from all orders. • Mechanized Results are based on actual data for all orders from the OSS. • BST retail report not applicable. |

Service Quality Measurements Regional Performance Reports

PROVISIONING

| | |
|--------------------------|---|
| Function: | Average Completion Interval and Order Completion Interval Distribution |
| Measurement Overview: | <p>The "average completion interval" measure monitors the time required by BST to deliver integrated and operable service components requested by the CLEC, regardless of whether resale services or unbundled network elements are employed. When the service delivery interval of BST is measured for comparable services, then conclusions can be drawn regarding whether or not CLECs have a reasonable opportunity to compete for customers. The "order completion interval distribution" measure monitors the reliability of BST commitments with respect to committed due dates to assure that CLECs can reliably quote expected due dates to their retail customer. In addition, when monitored over time, the "average completion interval" and "percent completed on time" may prove useful in detecting developing capacity issues.</p> |
| Measurement Methodology: | <p>1. Average Completion Interval = $\sum [(\text{Completion Date \& Time}) - (\text{Order Issue Date \& Time})] / (\text{Count of Orders Completed in Reporting Period})$</p> <p>2. Order Completion Interval Distribution = $\sum (\text{Service Orders Completed in "X" days}) / (\text{Total Service Orders Completed in Reporting Period}) \times 100$</p> <p>The actual completion interval is determined for each order processed during the reporting period. The completion interval is the elapsed time from BST receipt of a syntactically correct order from the CLEC to BST's actual order completion date. Elapsed time for each order is accumulated for each reporting dimension. The accumulated time for each reporting dimension is then divided by the associated total number of orders completed within the reporting period.</p> <p>The distribution of completed orders is determined by first counting, for each specified reporting dimension, the total numbers of orders completed within the reporting interval and the interval between the issue date of each order and the completion date. <i>D&F orders where the CLEC serves as the agent for the end-user are included in this measurement.</i> For each reporting dimension, the resulting count of orders completed for each specified time period following the issue date is divided by the total number of orders completed with the resulting fraction expressed as a percentage.</p> <p>Definition: Average time from issue date of service order to actual order completion date</p> <p>Methodology:</p> <ul style="list-style-type: none"> • Mechanized metric from ordering system |

PROVISIONING

| | |
|---------------------------------|---|
| Function: | Held Order Interval Distribution and Mean Interval |
| Measurement Overview: | When delays occur in completing CLEC orders, the average period that CLEC orders are held for BST reasons, pending a delayed completion, should be no worse for the CLEC when compared to BST delayed orders. |
| Measurement Methodology: | <p>1. Mean Held Order Interval = $\sum (\text{Reporting Period Close Date} - \text{Committed Order Due Date}) / (\text{Number of Orders Pending and Past The Committed Due Date})$ for all orders pending and past the committed due date.</p> <p>This metric is computed at the close of each report period. The held order interval is established by first identifying all orders, at the close of the reporting interval, that both have not been reported as "completed" via a valid completion notice and have passed the currently "committed completion date" for the order. <i>Held orders due to end-user reasons are included and identified in this report.</i> For each such order the number of calendar days between the committed completion date and the close of the reporting period is established and represents the held order interval for that particular order. The held order interval is accumulated by the standard groupings, unless otherwise noted, and the reason for the order being held, if identified. The total number of days accumulated in a category is then divided by the number of held orders within the same category to produce the mean held order interval.</p> <p>2. Held Order Distribution Intervals</p> <p>(# of Orders Held for ≥ 90 days) / (Total # of Orders Pending But Not Completed) X 100.</p> <p>(# of Orders Held for ≥ 15 days) / (Total # of Orders Pending But Not Completed) X 100.</p> <p>This "percentage orders held" measure is complementary to the held order interval but is designed to reflect orders continuing in a "non-completed" state for an extended period of time. Computation of this metric utilizes a subset of the data accumulated for the "held order interval" measure. All orders, for which the "held order interval" equals or exceeds 90 or 15 days are counted, unless otherwise noted as an exclusion. The total number of pending and past due orders are counted (as was done for the held order interval) and divided into the count of orders held past 90 or 15 days.</p> <p>Definition: Average time orders continue in a "non complete" state for an extended period of time.</p> <p>Methodology:</p> <ul style="list-style-type: none"> • Mechanized metric from ordering system. |

| Function: | Installation Timeliness, Quality & Accuracy |
| Measurement Overview: | The "percent missed installation appointments" measure monitors the reliability of BST commitments with respect to committed due dates to assure that CLECs can reliably quote expected due dates to their retail customer as compared to BST. Percent Provisioning Troubles within 30 days of Installation measures the quality and accuracy of installation activities. |
| Measurement Methodology: | <p>1. Percent Missed Installation Appointments = $\frac{\sum (\text{Number of Orders missed in Reporting Period})}{(\text{Number of Orders Completed in Reporting Period})} \times 100$</p> <p>Percent Missed Installation Appointments is the percentage of total orders processed for which BST is unable to complete the service orders on the committed due dates. <i>Missed Appointments caused by end user reasons will be included and reported separately.</i></p> <p>Definition: Percent of orders where completion's are not done by due date. See "Exclude Situations" for orders not included in this measurement</p> <p>Methodology:</p> <ul style="list-style-type: none"> • Mechanized metric from ordering system <p>2. % Provisioning Troubles within 30 days of Installation = $\frac{\sum (\text{Trouble reports on Services installed } \leq 30 \text{ days following service order(s) completion})}{(\text{All Installations a calendar month})} \times 100$</p> <p>Definition: Measures the quality and accuracy of completed orders</p> <p>Methodology:</p> <p>Mechanized metric from ordering and maintenance systems.</p> <p>3. Percent Order Accuracy = $\frac{(\sum \text{Orders Completed w/o error})}{(\sum \text{Orders Completed})} \times 100.$</p> <p>Definition: Measures the accuracy and completeness of BST provisioning service by comparing what was ordered and what was completed.</p> <p>Methodology:</p> <p>Non-Mechanized Results are based on an audit of a statistically valid sample Mechanized Results are based on an audit of a statistically valid sample</p> |

|---------------------------------|---|
| Function: | Average Completion Notice Interval |
| Measurement Overview: | The receipt of a completion notice by the CLEC from BST informs the carrier that their formal relationship with a customer has begun. This is useful to the CLEC in that it lets them know that they can begin with activities such as billing the customer for service. |
| Measurement Methodology: | <p>1. $\text{Average Completion Notice Interval} = \frac{\Sigma(\text{Date \& Time of Notice of Completion}) - (\text{Date \& Time of Work Completion})}{(\text{Number of Orders Completed in Reporting Period})}$</p> <p>Definition: The Completion Notice Interval is the elapsed time between the BST reported completion of work and the issuance of a valid completion notice to the CLEC. There is no equivalent BST Retail Measurement.</p> |

MAINTENANCE & REPAIR

| | |
|---------------------------------|--|
| Function: | OSS Response Interval |
| Measurement Overview: | <ul style="list-style-type: none"> This measure is designed to monitor the time required for the CLEC interface system to obtain from BST's legacy systems the information required to handle maintenance and repair functions. This measure also addresses the availability of the OSS interface for repair and maintenance. |
| Measurement Methodology: | <p>1. . OSS Interface Availability = (Actual Availability)/(Scheduled Availability) X 100</p> <p>Definition: This measure shows the percentage of time the OSS interface is actually available compared to scheduled availability. Availability percentages for the CLEC and BST interface systems and for legacy systems accessed by them are captured.</p> <p>Methodology: Mechanized reports from OSSs.</p> <p>2 OSS Response Interval = Access Times in Increments of Less Than or Equal to 4 Seconds, Greater Than 4 Seconds but Less Than or Equal to 10 Seconds, Less Than or Equal to 10 Seconds, Greater Than 10 Seconds, or Greater Than 30 Seconds.</p> <p>Definition: Response intervals are determined by subtracting the time a request is submitted from the time the response is received. Percentages of requests falling into the categories listed above are reported, along with the actual number of requests falling into those categories. This measure provides a method to compare BST and CLEC response times for accessing the legacy data needed for maintenance & repair functions.</p> <p>Methodology: Mechanized reports from OSSs.</p> |

MAINTENANCE & REPAIR

| | |
|---------------------------------|---|
| Function: | Customer Trouble Report Rate |
| Measurement Overview: | This measure can be used to establish the frequency (rate) of customer trouble reports and employed to compare CLEC with BST results. |
| Measurement Methodology: | <p>1. Customer Trouble Report Rate = (Count of Initial and Repeated Trouble Reports in the Current Period) / (Number of Service Access Lines in Service at End of the Report Period) X 100. Note: Local Interconnection Trunks are reported only as total troubles.</p> <p>The Customer Trouble Report Rate is computed by accumulating the number of maintenance initial and repeated trouble reports during the reporting period. The resulting number of trouble reports are divided by the total number of "service access lines" existing for CLECs and BST respectively at the end of the report period.</p> <p>Definition: Initial and repeated customer direct or referred troubles reported within a calendar month (Where cause is not in: customer premises equipment, inside wire, or carrier equipment) per 100 lines/circuits in service.</p> <p>Methodology: Mechanized metric for trouble reports and lines in service.</p> |

| Function: | Quality of Repair & Time to Restore |
|--------------------------|---|
| Measurement Overview: | This measure, when collected for both the CLEC and BST and compared, monitors that CLEC maintenance requests are cleared comparably to BST maintenance requests. |
| Measurement Methodology: | <p>3. Maintenance Average Duration = (Total Duration Time from the Receipt to the Clearing of Trouble Reports) / (Total Out of Service Troubles)</p> <p>4. Percent Repeat Troubles within 30 Days = (Total Repeated Trouble Reports within 30 Days) / (Total Troubles) X 100</p> <p>5. Out of Service (OOS) > 24 Hours = (Total Troubles OOS > 24 Hours) / (Total OOS Troubles) X 100</p> <p>Definition: For Out of Service Troubles (no dial tone, cannot be called or cannot call out): the percentage of troubles cleared in excess of 24 hours.</p> <p>For Percent Repeat Trouble Reports within 30 Days: Trouble reports on the same line/circuit as a previous trouble report within the last 30 calendar days as a percent of total troubles reported.</p> <p>For Average Duration: Average time from the receipt of a trouble until the trouble is cleared.</p> <p>Methodology: Mechanized metric from maintenance database(s).</p> |

BILLING

| | |
|---------------------------------|--|
| Function: | Invoice Accuracy & Timeliness |
| Measurement Overview: | The accuracy of billing invoices delivered by BST to the CLEC must provide CLECs with the opportunity to deliver bills at least as accurate as those delivered by BST. Producing and comparing this measurement result for both the CLEC and BST allows a determination as to whether or not parity exists. |
| Measurement Methodology: | <p>1. Invoice Accuracy = $[(\text{Total Local Services Billed Revenues during current month}) - (\text{Total Adjustment Revenues during current month}) / \text{Total Local Services Billed Revenues during current month}] \times 100$ This measure provides the percentage accuracy of the billing invoices for a CLEC by dividing the difference between the total billed revenue and total adjustment revenues by the total billed revenues during the current month.</p> <p>2. Mean Time to Deliver Invoices = $\sum (\text{Invoice Transmission Date}) - (\text{Date of Scheduled Bill Cycle Close}) / (\text{Count of Invoices Transmitted in Reporting Period})$ This measure provides the mean interval for billing invoices. CRIS-based invoices should be delivered within six (6) workdays, and CABS-based invoices should be delivered within eight (8) calendar days.</p> <p>Objective: Measures the percentage of accuracy and mean interval for timeliness of billing records delivered to CLECs in an agreed upon format</p> |

| | |

BILLING

| | |
|---------------------------------|--|
| Function: | Usage Data Delivery Accuracy, Timeliness & Completeness |
| Measurement Overview: | The accuracy of usage records delivered by BST to the CLEC must provide CLECs with the opportunity to deliver bills at least as accurate as those delivered by BST. Producing and comparing this measurement result for both the CLEC and BST allows a determination as to whether or not parity exists. |
| Measurement Methodology: | <p>1. Usage Data Delivery Accuracy = (Total number of usage data packs sent during current month) - (Total number of usage data packs requiring retransmission during current month) / Total number of usage data packs sent during current month</p> <p>This measurement captures the percentage of recorded usage and recorded usage data packets transmitted error free and in an agreed upon format to the appropriate CLEC, as well as a parity measurement against BST Data Packet Transmission.</p> <p>2. Usage Data Delivery Completeness = (Total number of Recorded usage records delivered during the current month that are within thirty (30) days of the message(usage record) create date) / (Total number of Recorded usage records delivered during the current month)</p> <p>This measurement provides percentage of recorded usage data (BellSouth recorded and usage recorded by other carriers) processed and transmitted to the CLEC within thirty (30) days of the message (usage record) create date. A parity measure is also provided showing completeness of BST messages processed and transmitted via CMDS.</p> <p>3. Usage Data Delivery Timeliness = (Total number of usage records sent within six(6) calendar days from initial recording/receipt) / (Total number of usage records sent)</p> <p>This measurement provides percentage of recorded usage data(BellSouth recorded and usage recorded by other carriers) delivered to the appropriate CLEC within six (6) calendar days from initial recording. A parity measure is also provided showing timeliness of BST messages processed and transmitted via CMDS.</p> <p>Objective: The purpose of these measurements is to demonstrate the level of quality and timeliness of processing and transmission of both types of usage data (BellSouth recorded and usage recorded before other carriers) to the appropriate CLEC.</p> <p>Methodology: The usage data will be mechanically transmitted to the CLEC data processing center once daily. Timeliness and completeness measures are reported on the same report.</p> |

OPERATOR SERVICES: TOLL ASSISTANCE AND DIRECTORY ASSISTANCE (Toll, DA)

| | |
|---------------------------------|--|
| Function: | Speed to Answer Performance |
| Measurement Overview: | The speed of answer delivered to CLEC retail customers, when BST provides Operator Services with Toll Assisted Calls or Directory Assistance on behalf of the CLEC, must be substantially the same as the speed of answer that BST delivers to its own retail customers, for equivalent local services. The same facilities and operators are used to handle BST and CLEC customer calls, as well as inbound call queues that will not differentiate between BST & CLEC service. |
| Measurement Methodology: | <p>1. Average Speed to Answer (Toll) = $\Sigma (\text{Total Call Waiting Seconds}) / (\text{Total Calls Served})$</p> <p>2. Percent Answered within "X" Seconds (Toll) = Derived by converting the Average Speed to Answer (Toll) using BellCore Statistical Answer Conversion Tables, to arrive at a percent of calls answered in less than ten seconds.</p> <p>3. Average Speed to Answer (DA) = $\Sigma (\text{Total Call Waiting Seconds}) / (\text{Total Calls Served})$</p> <p>4. Percent Answered within "X" Seconds (DA) = Derived by converting the Average Speed to Answer (DA) using BellCore Statistical Answer Conversion Tables, to arrive at a percent of calls answered in less than twelve seconds.</p> <p>Definition: Measurement of the average time in seconds calls wait before answer by a Toll or DA operator and the percent of Toll or DA calls that are answered in less than a predetermined time frame.</p> <p>Methodology: The Average Speed to Answer for Toll and DA is provided today from monthly system measurement reports, taken from the centralized call routing switches. The "Total Call Waiting Seconds" is a sub-component of this measure, which BellSouth systems calculate by monitoring the total number of calls in queue throughout the day multiplied by the time (in seconds) between monitoring events. The "Total Calls Served" is the other sub-component of this measure, which BellSouth systems record as the total number of calls handled by Operator Services Toll or DA centers.</p> <p>The Percent Answered within ten and twelve seconds measurement for Toll and DA is derived by using the BellCore Statistical Answer Conversion Tables, to convert the Average Speed to Answer measure into a percent of calls answered within ten/twelve seconds. The BellCore Conversion Tables are specific to the defined parameters of work time, # of operators, max queue size and call abandonment rates.</p> <p>Current BellSouth call center switch technology and business operations do not provide mechanized measurements differentiating between human versus machine call answer processing methods.</p> |

E911

| | |
|---------------------------------|---|
| Function: | Timeliness and Accuracy |
| Business Implications: | <ul style="list-style-type: none"> • BellSouth's goal is to maintain 100% accuracy in the E911 database for all its CLEC resale and retail customers by correctly processing all orders for E911 database updates. The 911 database update process ensures that the CLEC's updates are handled in parity with BST's updates. BST uses Network Data Mover (NDM) to transmit both CLEC resale and BST retail E911 updates to SCC (third party E911 database vendor) once per day for the entire region. No processing distinctions are made between CLEC records and BST records. These updates are processed within 24 hours. • CLECs ordering unbundled switching and facility-based CLEC E911 providers are responsible for the accuracy of their data that is input into the E911 database. Facilities-based CLEC record updates are transmitted by the CLEC directly to SCC without any BST involvement. • When BST retail or resale records experience errors in SCC's system, the errors are not returned to BST for correction. Instead, SCC handles and corrects all errors within 24 hours for both CLEC resale records and BST retail records. • BellSouth through its E911 third party vendor provides accuracy and timeliness measurements for BST and its CLEC resale customers. In addition, BellSouth through its E911 third party vendor provides an accuracy and timeliness report for CLECs ordering unbundled switching and facilities-based CLECs. |
| Measurement Methodology: | <p>1. $E911 \text{ Timeliness} = \frac{\sum (\text{Number of Confirmed Orders}) - (\text{Number of Orders missed in Reporting Period})}{(\text{Number of Orders Confirmed in Reporting Period})} \times 100$</p> <p>Definition: Measures the percentage of E911 database updates within a 24-hour period.</p> <p>Methodology: Mechanized metric from ordering system</p> <p>2. $E911 \text{ Accuracy} = \frac{\sum (\text{Total number of SOIR orders for E911 updates}) - (\text{Total number of Service Order Interface Records (SOIRs) with errors generated from Daily TN activity (based on the E911 Local Exchange Carrier Guide for Facility-Based Providers)})}{(\text{Total number of SOIR orders for E911 updates})} \times 100$</p> <p>Definition: Measures the percentage of accurate 911 database updates</p> <p>Methodology: Mechanized metric from ordering system</p> |

TRUNK GROUP PERFORMANCE

| | |
|---------------------------------|--|
| Function: | Interconnection Trunk Performance |
| Measurement Overview: | In order to ensure quality service to the CLECs as well as protect the integrity of the BST network, BST collects traffic performance data on the trunk groups interconnected with the CLECs as well as all other trunk groups in the BST network. |
| Measurement Methodology: | <p>1. Comparative Trunk Group Service Summary: Provides comparative measurements of the trunk groups which exceed the blocking threshold during their busy hours, as well as the total number of trunk groups measured</p> <p>2. Trunk Group Service Report: Contains the service performance results of all final trunk groups (both BST administered trunk groups and CLEC administered trunk groups) between Point of Termination (POT) and BST tandems or end offices, by region, by CLEC, CLEC Aggregate, and BST aggregate.</p> <p>Specifically measures the total number of trunk groups, number of trunk groups measured, and the number of trunk groups which exceed the blocking threshold during their busy hours.</p> <p>3. Trunk Group Service Detail: Provides a detailed list of all final trunk groups between POTs and BST end offices or tandems (A-end and Z-end for BST Local trunks) including the actual blocking performance when blocking exceeds the measured blocking threshold. The blocking performance includes the observed blocking number for a particular Trunk Group Serial Number (TGSN).</p> <p>Blocking thresholds for all trunk groups are 3%, except BST CTTG, which is 2%.</p> <p>Measured Blocking = [(Total number of Blocked Calls)/(Total number of Attempted Calls)] X 100</p> |

Collocation

| | |
|---------------------------------|---|
| Function: | Response Interval, Provisioning Interval and Timeliness for Providing Collocation Space to a CLEC in a BellSouth Central Office. |
| Measurement Overview: | Collocation is the placement of customer-owned equipment in BellSouth Central Offices for interconnecting to BellSouth's tariffed services and unbundled network elements. BellSouth offers both Virtual and Physical Collocation and will report its performance on these offerings separately. The milestones in the process for which measurements will be provided is: the average time to respond to a request after we have the complete application; the average time between receiving the bona fide firm order until the space is turned over to the CLEC; and the percentage of due dates on firm orders missed. |
| Measurement Methodology: | <p>1. Average Response Time = $\sum (\text{Request Response Date \& Time}) - (\text{Request Submission Date \& Time}) / \text{Count of Request submitted in Reporting Period}$.</p> <p>Definition: Measures the average time from the receipt of a complete and accurate Collocation Request (including receipt of Application Fees) to the date BellSouth responds in writing.</p> <p>Methodology: Manual</p> <p>2. Average Arrangement Time = $\sum (\text{Date \& Time Collocation Arrangement is Complete}) - (\text{Date \& Time Order for Collocation Arrangement submitted}) / \text{Total Numbers of Collocation Arrangements Completed during Reporting Period}$.</p> <p>Definition: Measures the Average Time from the receipt of complete and accurate Firm Order (including Fees) to date BellSouth completes the Collocation Arrangement [Called "BellSouth complete date". Assumes space and construction complete and network infrastructure complete.]</p> <p>Methodology: Manual</p> <p>3. % of Due Dates Missed = $(\text{Number of Orders not completed w/i ILEC committed Due Date during reporting period}) / (\text{Number of Orders scheduled for completion in reporting period}) \times 100$.</p> <p>Definition: Measures the percent of Collocation space request, including construction and network infrastructure, that are not complete on the due date.</p> <p>Methodology: Manual</p> |

Appendix B: Glossary of Acronyms and Terms

| | | |
|----------|------------------|--|
| A | ACD | Automatic Call Distributor - A service that provides status monitoring of agents in a call center and routes high volume incoming telephone calls to available agents while collecting management information on both callers and attendants. |
| | AGGREGATE | Sum total of all items in like category, e.g. CLEC aggregate equals the sum total of all CLECs' data for a given reporting level. |
| | ASR | Access Service Request - A request for access service terminating delivery of carrier traffic into a Local Exchange Carrier's network. |
| | ATLAS | Application for Telephone Number Load Administration System - The BellSouth Operations System used to administer the pool of available telephone numbers and to reserve selected numbers from the pool for use on pending service requests/service orders. |
| | ATLASTN | ATLAS software contract for Telephone Number |
| B | BILLING | The process and functions by which billing data is collected and by which account information is processed in order to render accurate and timely billing. |
| | BOCRIS | Business Office Customer Record Information System - A front-end presentation manager used by BellSouth organizations to access the CRIS database. |
| | BRC | Business Repair Center - The BellSouth Business Systems trouble receipt center which serves large business and CLEC customers. |
| | BST | BellSouth Telecommunications, Inc |
| C | CKTID | A unique identifier for elements combined in a service configuration |
| | CLEC | Competitive Local Exchange Carrier |
| | CMDS | Centralized Message Distribution System - BellCore administered national system used to transfer specially formatted messages among companies. |
| | COFFI | Central Office Feature File Interface - A BellSouth Operations System database which maintains Universal Service Order Code (USOC) information based on current tariffs. |
| | COFIUSOC | COFFI software contract for feature/service information |
| | CRIS | Customer Record Information System - The BellSouth proprietary corporate database and billing system for non-access customers and services. |
| | CRSACCTS | CRIS software contract for CSR information |
| | CSR | Customer Service Record |
| | CTTG | Common Transport Trunk Group - Final trunk groups between BSI & Independent end offices and the BSI access tandems. |

In Re: Interconnection Agreement between Sprint Metropolitan Networks, Inc.
and BellSouth Telecommunications, Inc.

Dear Ms. Bayo:

Please find enclosed for filing, an original and fifteen copies of Agreement, as negotiated and executed, between Sprint Communications Company Limited Partnership ("Sprint", successor to Sprint Metropolitan Networks, Inc. "SMNI") and BellSouth Telecommunications, Inc. ("BellSouth"), in which the parties agree to terminate that interconnection agreement between SMNI and BellSouth and substitute, in lieu thereof, that interconnection agreement between Sprint and BellSouth.

This filing is being made jointly on behalf of Sprint and BellSouth. Pursuant to Section 252(e)(1) of the Telecommunications Act of 1996, we respectfully request that the Commission approve the Amendment to the Interconnection Agreement.

We are enclosing an extra copy of this transmittal letter. We ask that you please acknowledge receipt thereon and return to the undersigned in the enclosed, stamped and self-addressed envelope. Thank you for your assistance.

Sincerely,

Benjamin W. Fincher

DOCUMENT NO. 98-1082-7P

09361 AUG 27 1998

AGREEMENT

THIS AGREEMENT is entered into on this 15th day of July, 1998, between Sprint Communications Company Limited Partnership ("Sprint") and BellSouth Telecommunications, Inc. ("BellSouth"), (collectively the "Parties") in order to (1) terminate that certain interconnection agreement, as described herein, between Sprint Metropolitan Networks, Inc. ("SMNI", an affiliate and predecessor of Sprint) and BellSouth and (2) substitute in lieu thereof, that certain interconnection agreement, as described herein, between Sprint and BellSouth.

WITNESSETH:

WHEREAS, SMNI and BellSouth entered into an interconnection agreement, properly executed on March 13, 1997, effective retroactively to January 1, 1997, providing for interconnection arrangements in the State of Florida; and

WHEREAS, Sprint and BellSouth entered into an interconnection agreement, properly executed on July 1, 1997, effective July 1, 1997, providing for interconnection arrangements in the State of Florida; and

WHEREAS, SMNI was dissolved as a corporate entity on October 24, 1997; and

WHEREAS, SMNI's Alternative Local Exchange Company ("ALEC") certificate number 4390, issued by the Florida Public Service Commission, was transferred to Sprint and cancelled; and

WHEREAS, all Florida ALEC operations formerly conducted by SMNI are now conducted by Sprint pursuant to its ALEC certificate number 4732;

WHEREAS, the parties agreed under Paragraph 1 of that certain Compromise and Settlement Agreement, properly executed on May 15, 1998, that within 60 days of May 15, 1998, the interconnection agreement between SMNI and BellSouth, as described herein above, would be terminated and the parties would be bound by the terms and conditions of that interconnection agreement, as described herein above, between Sprint and BellSouth;

NOW, THEREFORE, in consideration of the mutual provisions contained herein and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, Sprint and BellSouth hereby covenant and agree as follows:

1. That certain interconnection agreement between SMNI and BellSouth, that became effective January 1, 1997, and as described herein above, is terminated in all respects and effective July 15, 1998, is no longer valid and binding between the parties.

2. That effective July 15, 1998, in lieu of the SMNI/BellSouth interconnection agreement described in paragraph 1 above, the parties agree to substitute, and be bound by, the terms and conditions of that certain interconnection agreement between Sprint and BellSouth, effective July 1, 1997 and as described herein above.

3. This Agreement shall be binding upon the Parties hereto, as well as their successors and assigns.

4. Each person who signs this Agreement in a representative capacity warrants that he or she is duly authorized to do so.

IN WITNESS WHEREOF, the parties have duly executed this Agreement on the day and year above written.
