INTRALATA TOLL DIALING PARITY PLAN

As required by the Federal Communications Commission, this IntraLATA Toll Dialing Parity Plan describes how MediaOne Florida Telecommunications, Inc. (MediaOne) offers dialing parity (presubscription) for the placement of intraLATA toll calls by its customers in Florida. In an order released March 23, 1999, the FCC required all LECs (who have not already done so) to file such a plan with the state regulatory agency not later than April 22, 1999.¹

MediaOne began providing intraLATA toll dialing parity on April 22, 1999. Its customers have full "2-PIC" capability, which allows them to select one carrier to provide their interLATA long distance service and a second carrier to provide their intraLATA toll service. IntraLATA toll calls placed by dialing "1" plus the telephone number will be carried by the customer's presubscribed intraLATA toll provider.

In selling its services to new customers, MediaOne does not automatically assign customers' intraLATA toll traffic to itself. MediaOne's sales representatives inform new customers of MediaOne's intraLATA offerings, but advise them that they may select another provider. Upon customer request, MediaOne's representatives read a list of then-available providers (but not necessarily all such providers). Customers who decline to select a presubscribed intraLATA toll provider must utilize a "dial around" call pattern ("1010XXX") to place intraLATA toll calls.

Alternative 1: In providing service within Florida, MediaOne associates with the Jacksonville LATA (LATA 452) and the Southeast LATA (LATA 460).

¹ *Implementation of the Local Competition Provisions of the Telecommunications Act of 1996*, CC Dkt. No. 96-98 (March 23, 1999).
