REPORTING

August 2, 1999

Mrs. Blanca S. Bayó
Director, Division of Records and Reporting
Florida Public Service Commission
2540 Shumard Oak Boulevard
Tallahassee, FL 32399-0850

Re: Docket No. 990691-TP (ICG Arbitration)

Dear Ms. Bayó:

Enclosed please find the original and fifteen copies of BellSouth Telecommunications, Inc.'s Direct Testimony of D. Daonne Caldwell, Ronald M. Pate, David L. Thierry and Alphonso J. Varner, which we ask that you file in the above-referenced matter.

A copy of this letter is enclosed. Please mark it to indicate that the original was filed and return the copy to me. Copies have been served to the parties shown on the attached Certificate of Service.

Sincerely,

Michael P. Goggin

1 **BELLSOUTH TELECOMMUNICATIONS, INC.**

2 **DIRECT TESTIMONY OF D. DAONNE CALDWELL**

3 **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

4 **DOCKET NO. 990691-TP**

5 **AUGUST 2, 1999**

6

7 **Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.**

8

9 A. My name is D. Daonne Caldwell. My business address is 675 W. Peachtree St.,
10 N.E., Atlanta, Georgia. I am a Director in the Finance Department of BellSouth
11 Telecommunications, Inc. (hereinafter referred to as "BellSouth" or "the
12 Company"). My area of responsibility relates to economic costs.

13

14 **Q. PLEASE PROVIDE A BRIEF DESCRIPTION OF YOUR EDUCATIONAL
15 BACKGROUND AND WORK EXPERIENCE.**

16

17 A. I attended the University of Mississippi, graduating with a Master of Science
18 Degree in mathematics. I have attended numerous Bell Communications
19 Research, Inc. ("Bellcore") courses and outside seminars relating to service cost
20 studies and economic principles.

21

22 My initial employment was with South Central Bell in 1976 in the Tupelo,
23 Mississippi, Engineering Department where I was responsible for Outside Plant
24 Planning. In 1983, I transferred to BellSouth Services, Inc. in Birmingham,
25 Alabama, and was responsible for the Centralized Results System Database. I

1 moved to the Pricing and Economics Department in 1984 where I developed
2 methodology for service cost studies until 1986 when I accepted a rotational
3 assignment with Bellcore. While at Bellcore, I was responsible for development
4 and instruction of the Service Cost Studies Curriculum including courses such as
5 "Concepts of Service Cost Studies", "Network Service Costs", "Nonrecurring
6 Costs", and "Cost Studies for New Technologies". In 1990, I returned to
7 BellSouth and was appointed to a position in the cost organization, which is now a
8 part of the Finance Department, with the responsibility of managing the
9 development of cost studies for transport facilities, both loop and interoffice. My
10 current responsibilities encompass testifying in cost-related dockets, cost
11 methodology development, and the coordination of cost study filings.

12

13 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

14

15 A. The purpose of my testimony is to present the cost study results for the network
16 capabilities requested in the ICG Telecom Group, Inc. ("ICG") Petition for
17 Arbitration for which rates have not already been established by the Florida Public
18 Service Commission ("Commission"). Additionally, I describe the underlying cost
19 methodology used in this study. Attached to this testimony, as Exhibit DDC-1 is
20 BellSouth's cost study. Since the study contains proprietary information, release
21 of the entire study to any party requires enforcement of nondisclosure agreements.
22 Included in the study are an executive overview, a summary of results, element
23 descriptions, factor development, TELRIC Calculator^{©1} input and outputs, and

24

25

¹© Copyright 1997

1 investment development work papers with the proprietary information redacted.

2 BellSouth witness, Mr. Al Varner, addresses the rates BellSouth is proposing.

3

4 **Q. WHAT ARBITRATION ISSUE DOES THE COST STUDY ADDRESS?**

5

6 A. Issue #3 asks if BellSouth should be required to make packet-switching
7 capabilities available as unbundled network elements ("UNEs"). The cost study
8 conducted for this arbitration determines the Total Service Long Run Incremental
9 Cost ("TSLRIC")² plus shared and common costs for packet-switching capabilities
10 based on a frame relay architecture.

11

12 **Q. WHAT TYPES OF COSTS ARE REFLECTED IN THE COST STUDY?**

13

14 A. The cost study reflects both recurring and nonrecurring costs. Recurring costs
15 include both capital and non-capital costs. Capital costs are associated with the
16 purchase of an item of plant, i.e., an investment. They consist of depreciation, cost
17 of money, and income tax. Non-capital recurring costs are expenses associated
18 with the use of an investment. These operating expenses consist of plant-specific

19

20

² The Florida Public Service Commission initially set the foundation for cost methodology in its December 31, 1996 Order PSC-96-1579-FOF-TP. This Order established Total Service Long Run Incremental Cost ("TSLRIC") as the appropriate methodology for determining the costs associated with network capabilities. However, this Order also states that the Commission does not "believe there is a substantial difference between the TSLRIC cost of a network element and the TELRIC cost of a network element." (Page 24) In fact, this Order further allows the consideration of joint and common costs in setting rates. (Page 33) By the definitions outlined in Order PSC-96-1579-FOF-TP, the combination of TSLRIC plus shared (joint) and common costs equates to the Federal Communication Commission's (FCC) definition of economic costs (TELRIC plus a reasonable allocation of forward-looking joint and common costs). BellSouth's cost study filed in this docket develops TSLRIC plus shared and common costs.

1 expenses, such as maintenance, ad valorem taxes and gross receipts taxes.
2
3 Nonrecurring costs are one-time expenses associated with provisioning, installing
4 and disconnecting the network capability. These costs include three major
5 categories of activity: engineering, connect and test, and technician travel time³.
6

7 **Q. IS BELLSOUTH'S COST STUDY CONSISTENT WITH THE FEDERAL**
8 **COMMUNICATIONS COMMISSION'S ("FCC's") COSTING**
9 **METHODOLOGY?**

10
11 A. Yes. BellSouth's cost study is consistent with the FCC's costing methodology as
12 set forth in FCC Rule 51.505 (Forward-looking economic cost) which defines the
13 FCC's cost methodology for Unbundled Network Elements ("UNEs"). Pursuant to
14 the FCC's rules, such costs must be developed using an efficient network
15 configuration that uses the existing location of the Incumbent Local Exchange
16 Carrier's ("ILEC's") wire centers. Further, the costs should be developed using a
17 forward-looking cost of capital and economic depreciation rates, and a reasonable
18 allocation of forward-looking common costs is appropriate. The forward-looking
19 economic costs may not include embedded costs, retail costs, opportunity costs or
20 revenues to subsidize other services.

21
22 **Q. WHAT COST METHODOLOGY IS USED IN THE COST STUDY?**
23

24

25 ³ Service order and service inquiry are also typically considered as nonrecurring work activities.
 However, the Commission has decided to include the costs related to these activities in a separate
 docket.

1
2 A. The cost study is based on the methodology accepted by this Commission in Order
3 No. PSC-98-0604-FOF-TP in Docket Nos. 960757-TP, 960833-TP and 960846-TP
4 dated April 29, 1998. This Order established rates for numerous network
5 capabilities, ranging from 2-Wire Analog Loop Distribution to Physical
6 Collocation. On page 12 of the Order, the Commission ordered rates that "cover
7 BellSouth's Total System (Service) Long-run Incremental Costs (TSLRIC) and
8 provide some contribution toward joint and common costs."

9
10 **Q. PLEASE PROVIDE SOME BACKGROUND TO ORDER NUMBER PSC-**
11 **98-0604-FOF-TP.**

12
13 A. On November 13, 1997, BellSouth filed cost studies to support prices that this
14 Commission had previously established as interim rates. The studies were filed
15 electronically with complete documentation. With these studies, BellSouth
16 introduced a new cost model, the TELRIC Calculator©. The TELRIC
17 Calculator© converts material prices and labor work times to cost. The
18 Commission accepted the TELRIC Calculator© as a viable model to determine the
19 TSLRIC plus shared and common costs associated with network capabilities.
20 However, the Commission did make adjustments to the inputs filed by BellSouth.

21
22 **Q. ARE THE ADJUSTMENTS TO BELLSOUTH'S INPUTS ORDERED BY**
23 **THE COMMISSION IN ORDER NO. PSC-98-0604-FOF-TP**
24 **INCORPORATED IN THE COST STUDY RESULTS FILED IN EXHIBIT**
25 **DDC-1?**

1

2 A. Yes. The input adjustments, relevant to the cost elements in this proceeding, are
3 included. The cost studies in Exhibit DDC-1 include the Commission-ordered cost
4 of money, depreciation lives, tax factors, and shared and common factors.

5

6 **Q. PLEASE ELABORATE ON THE ADJUSTMENTS BELLSOUTH MADE**
7 **IN EXHIBIT DDC-1 TO FULFILL THE RECOMMENDATIONS MADE IN**
8 **ORDER PSC-98-0604-FOF-TP.**

9

10 A. I will address each of the adjustments made in this filing and reference the
11 appropriate discussion from the Order. However, BellSouth's adherence to these
12 modifications should not be construed as acceptance of these adjustments. In
13 particular the Commission's reduction in the cost of capital from BellSouth's
14 proposed 11.25% to 9.9% does not adequately compensate BellSouth.
15 Notwithstanding, BellSouth's objections to certain provisions of the Order, Exhibit
16 DDC-1 follows the intent of each Commission adjustment. However, where
17 appropriate, the input has been updated to reflect the 1998-2000 study period.

18

19 **Cost of Capital** – On page 29, the Commission ruled that “BellSouth’s overall
20 cost of capital is 9.9%. This number falls out from the capital structure of 60%
21 equity and 40% debt, a forward-looking cost of debt of 6.7% and a cost of equity
22 of 12%”. The 9.9% overall cost of capital was utilized in this filing.

23

24 **Depreciation** – BellSouth incorporated the Commission Approved Projection
25 Lives outlined in Table III and the net salvage values contained in Table IV of the

1 Order.

2

3 **Taxes** – The Order ruled that Florida-specific tax factors are to be applied when
4 they are available.⁴ This filing included the following Florida-specific tax factors: a
5 combined state and federal income tax factor of 38.57%, a gross receipts factor of
6 1.37%, and an ad valorem factor of .85%. These values reflect an update to the
7 1998-2000 time frame.

8

9 **Shared and Common Costs** – The Commission established the wholesale
10 common cost factor as 5.12%⁵ and recalculated the shared cost factors, Table VII.
11 These values were based on a reduction in the network operating expenses as
12 discussed on pages 59-60 of the Order. Additionally, the Commission felt it
13 appropriate to exclude the shared component from the labor rate. The values
14 determined by the Commission are reflected in this filing, both in the factors and in
15 the labor rates. In the study, BellSouth used the version of BellSouth's Shared and
16 Common model that the Florida Staff adjusted in Order No. PSC-98-0604-FOF-
17 TP.

18

19 **Local Carrier Service Center (“LCSC”) Costs** – This Commission ruled that
20 “BellSouth’s LCSC costs are a component of its OSSs and therefore they must be
21 excluded from recovery in these proceedings.”⁶ Thus, all LCSC costs have been
22 excluded from these studies. Additionally, all costs related to service order

23

24

⁴ Order at page 44.

25 ⁵ Order at page 45.

⁶ Order at page 165.

1 processing and service inquiry, regardless of the work group performing the
2 activity, have been excluded. However, these are legitimate costs that BellSouth
3 will incur in providing unbundled packet switching to ICG.

4

5 **Disconnect Costs** – the Order states that disconnect costs will be assessed at the
6 time of disconnect.⁷ Disconnect costs were studied as separate rate elements and
7 are included in this filing.

8

9 Additionally, the Order instructed BellSouth to recalculate the work time estimates
10 used to determine the nonrecurring costs associated with provisioning the network
11 capabilities. Since the elements presented in this filing are new items, the time
12 estimates considered in BellSouth's study reflect BellSouth expert estimates.

13

14 It is important to remember that even though the Commission made a number of
15 input modifications; they accepted the TELRIC Calculator© as an appropriate
16 means of determining BellSouth's costs associated with making an investment and
17 with provisioning a network capability.

18

19 **Q. PLEASE SUMMARIZE YOUR TESTIMONY.**

20

21 A. The cost study filed in this proceeding determines Florida-specific TSLRIC plus
22 shared and common costs for the network capabilities requested by ICG. The costs
23 were developed using the basic study methodology and approved input values

24

25

⁷ Order at page 69.

1 previously authorized by this Commission in Order No PSC-98-0604-FOF-TP.

2

STUDY METHODOLOGY**

STATEMENT OF PURPOSE

On May 27, 1999 ICG Telecom Group, Inc. filed a Petition for Arbitration with the Florida Public Service Commission (FPSC). BellSouth Telecommunications, Inc. (hereinafter referred to as BellSouth or the Company) is filing cost studies for the requested UNEs for which the FPSC has not previously established permanent rates. Included in this document is a Total Service Long Run Incremental Cost (TSLRIC) study, including shared and common costs, which complies with orders and regulations set forth by the FPSC.

FLORIDA DOCKET NO 990691-TP
SECTION 2
STUDY METHODOLOGY

TOTAL SERVICE LONG RUN INCREMENTAL COST (TSLRIC)

The basis for TSLRIC studies is a forward-looking incremental cost methodology. This Long Run Incremental Cost (LRIC) methodology incorporates forward-looking technology placement and deployment guidelines in order to represent the costs incurred by an efficient firm to produce a level of output. Only costs which are directly caused by the particular item being studied are included in a LRIC analysis. Volume sensitive and volume insensitive costs, the combination of which are typically called Total Service Long Run Incremental Costs (TSLRIC), are identified to develop the direct costs caused by providing the particular service being studied.

There are two generic types of costs which have been studied: recurring and nonrecurring.

RECURRING COSTS

The monthly costs resulting from capital investments deployed to provision network elements are called recurring costs. Recurring costs include capital and operating costs. Capital costs include depreciation, cost of money and income tax. Operating costs include the expenses for maintenance, ad valorem and other taxes and represent ongoing costs associated with upkeep of the initial capital investment. Gross receipts tax (which includes municipal license taxes and PSC fees) is added.

The first step in developing recurring TSLRIC studies is to determine the forward-looking network architectures that, when deployed, represent the most efficient way to provision the network element. Material prices for the cables and associated equipment are gathered. Next, account specific Telephone Plant Indices are applied, when necessary, to trend material prices to the base study period. Because telecommunications equipment and plant placements are typically "lumpy", utilization factors are applied to the material prices in order to represent BellSouth's forward looking actual utilization of the plant. When multiple vendors are used, it is necessary to determine the average material price for a typical element by Uniform System of Accounts - Field Reporting Code (USOA-FRC), i.e., the plant account. Inflation Factors, by plant account code, are then applied to the material prices to trend the base year material price to leveled amounts that are valid for a three year planning period. In order to convert the material prices to installed investments, account specific inplant loadings are applied to material prices. The inplant loadings include engineering and installation labor (both BellSouth and vendor), exempt material and sales taxes.

FLORIDA DOCKET NO 990691-TP
SECTION 2
STUDY METHODOLOGY

Supporting equipment and power loadings are added, as appropriate to specific investment accounts. Next, supporting structure investments for land, building, poles and conduit are developed. These supporting structure investments are identified by their relationship to the respective item of plant being supported. For example, the pole investment is developed by applying a pole loading against the aerial cable investment.

1998 - 2000 level TSLRIC Annual Cost Factors are used to calculate the direct cost of capital, plant specific expenses and taxes. Account specific factors for each USOA-FRC are applied to investments by account code, yielding an annual cost per account code. Account specific shared cost factors and the common cost allocation factor are applied to produce forward-looking TSLRIC plus shared and common costs. The gross receipts tax factor is also applied.

The generic steps for developing recurring cost can be summarized as shown below. The unique technical characteristics and physical makeup of each service cost element must be taken into consideration.

Step 1: Determine the forward looking network designs (architectures) which will be used in deployment of the network element.

Step 2: Determine current material prices for the items of plant used in each design. Material prices are obtained from BellSouth contracts with various vendors.

Step 3: Apply material Telephone Plant Indices (TPIs) as appropriate to determine the base year material prices. Material TPIs estimate the changes in material prices over time.

Step 4: Adjust the material prices for utilization to account for spare capacity using a reasonable projection of actual total usage.

Step 5: Weight the material prices, as appropriate, to determine the average material price for a typical element by USOA-FRC, i.e., plant account.

Step 6: Apply material inflation factors, referred to as levelization factors, to the material prices to convert the utilized base year material prices to material prices representative of a three year planning period.

Step 7: Apply inplant loadings to the levelized material prices to convert the material prices to an installed investment, which includes the cost of material, engineering labor and installation labor.

FLORIDA DOCKET NO 990691-TP
SECTION 2
STUDY METHODOLOGY

Step 8: Apply support loadings to the investments to determine investments for support equipment and power, land, buildings, poles and conduit as appropriate.

Step 9: Convert the investments by FRC to annual costs by applying account specific TSLRIC annual cost factors to the various investments. The annual cost factors calculate the capital costs (depreciation, cost of money, and income tax) and operating expenses (plant specific expense, ad valorem taxes, and other taxes). Add the annual costs for the various FRCs. Next divide by 12 to determine the direct monthly cost.

Step 10: Apply the shared cost (account specific) factors. Then apply the gross receipts tax factor.

Step 11: Apply the common cost allocation factor to determine the TSLRIC plus shared and common costs.

NONRECURRING COSTS

Nonrecurring costs are one-time expenses associated with provisioning, installing and disconnecting an unbundled network element. The specific elements studied for this filing are the provisioning and disconnecting of an unbundled network element.

Examples of the work activities in each of these categories are as follows:

Engineering - Assign cable and pair; design circuit; order plug-in;
perform translations in the switch

Connect and Test - Install circuit; test circuit; disconnect

Technician Travel Time - Travel to the customer's premises

The first step in developing nonrecurring costs is to determine the cost elements associated with the unbundled network element. These cost elements are then described by the individual activities required to provision the cost element.

Individuals identify which activities are applicable. Subject matter experts identify the amount of time required to perform the task and also determine the probability that the activity will occur. Provisioning costs are developed by multiplying the work time for each work function by the labor rate for the work group performing the function.

Utilizing work functions, work times, and labor rates, disconnect costs are calculated in the same manner as the installation costs.

**FLORIDA DOCKET NO 990691-TP
SECTION 2
STUDY METHODOLOGY**

The generic steps for developing nonrecurring costs are summarized in the following steps:

- Step 1: Determine the cost elements to be developed.
- Step 2: Define the work functions.
- Step 3: Establish work flows.
- Step 4: Determine work times for each work function.
- Step 5: Develop labor costs for each work function (labor rate x work time).
- Step 6: Accumulate work function costs to determine the total nonrecurring costs for each cost element. Add gross receipts tax. The result is TSLRIC.
- Step 7. Apply the Common Cost Allocation factor to determine the TSLRIC plus common costs.

In compliance with the regulations adopted by the FPSC in Order No. PSC-98-0604-FOF-TP, service order activity expenses are not included in the nonrecurring costs included in this filing.

The TELRIC Calculator© is a model developed by BellSouth to produce long run incremental cost studies. The model was designed to accept variable inputs that are applied according to a user controlled matrix and can produce TSLRIC studies as well as TELRIC studies. The TELRIC Calculator© was used to produce the studies included in this filing.

FLORIDA DOCKET NO 990691-TP
SECTION 3
DESCRIPTION OF MODELS AND PRICE CALCULATORS

1. TELRIC Calculator©

The TELRIC Calculator© consists of three Microsoft Excel templates. The templates consist of twenty-one sheets each, eight for receiving input data and thirteen for calculations. All templates perform calculations in exactly the same manner and differ only in the number of decimal places displayed. It should be noted that no rounding is done in any of the sheets. The TELRIC Calculator©, developed to produce TELRIC studies, can also be used to produce TSRIC studies.

The TELRIC Calculator© User Interface takes information from the default data sources or from the user modified sources and inputs them into the appropriate template depending on the cost element selected. Investments are entered by Field Reporting Code (FRC), Sub Field Reporting Code (Sub-FRC), and cost element number into the sheet called "Investments". The sub-FRC is used by the TELRIC Calculator© to determine the appropriate application of factors and loadings, which are applied based on a matrix contained in the sheet called "Factor Matrix". Factors and loadings are placed by FRC on the sheet labeled "Factors". Recurring and nonrecurring work times are placed by function and Job Function Code (JFC) or Payband into the sheets labeled "Recurring Labor" and "Nonrecurring Labor", respectively. Other recurring and nonrecurring expenses are entered by description into the sheet called "Additives". Lastly, direct labor rates are placed by JFC or Payband into the sheet called "Labor Rates".

The inputs then flow automatically through the "calculator" portions of the template. These sheets are labeled TELRIC Recurring Summary, INVEST-VS, INVEST-VI, LBPC-VS, LBPC-VI, FRCTELRIC-VS, FRCTELRIC-VI, RECEXP, TELRIC NRC Summary A, NR-NR, TELRIC NRC Summary B, NR-1A, and NR-IS. The function and detail of these sheets are outlined in the following narrative.

TELRIC Calculator© Recurring Worksheets

Investment Development (Excluding Land, Building, Pole, & Conduit)
Investment development begins in the worksheets INVEST-VS and INVEST-VI, where volume sensitive and volume insensitive investments by FRC and sub-FRC flow from the input sheets. The inflation factors, inplant loadings and supporting equipment and/or power loadings are applied, if applicable. As stated previously, the application of these factors/loadings is driven by a matrix contained within the template. If the factor/loading is not applicable to the FRC and sub-FRC, the investment is multiplied by the default value of one. All

FLORIDA DOCKET NO 990691-TP
SECTION 3
DESCRIPTION OF MODELS AND PRICE CALCULATORS

calculations are detailed above each cell. These investments flow to the Land, Building, Pole, & Conduit Development sheet and to the Recurring Cost Development sheet.

Land, Building, Pole, & Conduit Investment Development

Investments from the Investment Development sheets flow into the sheets LBPC-VS and LBPC-VI. These worksheets apply land, building, pole, and conduit loadings to the investments. Land, building, pole, and conduit investments carried from the Investment Development sheets are multiplied by a factor of one. If one or all of these factors do not apply to an FRC, excluding land, building, pole, and conduit FRCs, the factor defaults to zero. The results are then summed and totaled at the top of the sheet and flow to the next sheet. All calculations are detailed above each cell.

Recurring Cost Development

The investments from the Investment Development and the Land, Building, Pole, and Conduit Investment Development sheets are summed to the FRC level and flow into the sheets called FRCTELRIC-VS and FRCTELRIC-VI. These sheets apply depreciation, cost of money (COM), income tax, plant specific, and ad valorem tax factors to the investments. If a factor does not apply, the default is zero. These results are then summed to produce direct cost. All calculations are detailed above each cell. The shared cost factor is applied to the investments to produce shared cost and then added to direct cost to produce TSLRIC plus shared cost. If the input investments are annual investments, these resulting costs are divided by twelve to produce monthly costs and the results then flow to the summary sheet.

Recurring Labor Expense Development

Recurring labor work times flow to the worksheet called RECEXP. The times are associated with a work function and a JFC or Payband. The associated direct labor rates, determined by the JFC or Payband, are applied to the work times to produce direct expenses. These expenses flow to the summary sheet. All calculations are detailed above each cell.

Recurring Cost Development

Recurring direct costs from sheets FRCTELRIC-VS and FRCTELRIC-VI, recurring direct expenses from sheet RECEXP, and other expenses from the input sheet "Additives" flow to the sheet called TSLRIC Recurring Summary. All costs and expenses are summed to a total cost. This cost is then multiplied by Gross Receipts Tax and Common Cost factors to obtain the volume sensitive and volume insensitive recurring costs. These two costs are summed to produce TSLRIC plus shared and common costs.

FLORIDA DOCKET NO 990691-TP
SECTION 3
DESCRIPTION OF MODELS AND PRICE CALCULATORS

All, some, or none of the previously described recurring cost development sheets will be included with a cost element, depending on their applicability.

TELRIC Calculator© Nonrecurring Worksheets

Nonrecurring Cost Development

Installation and disconnect work times by work function and JFC or Payband flow from the input sheet "Nonrecurring Labor" to the three nonrecurring cost development sheets called NR-NR, NR-1A, and NR-IS. The three sheets exist to accommodate different types of nonrecurring charge structures. The sheet NR-NR develops cost for a single nonrecurring charge, the sheet NR-1A develops cost for charges which are first and additional, and the sheet NR-IS develops cost for charges which are initial and subsequent. Only one of these three sheets is populated with actual work times for a cost element; the other sheets receive work time values of zero. The cost development methodology is the same for all three sheets.

The TELRIC Calculator© User Interface calculates the disconnect factor and places this factor into the "Factors" input sheet which causes it to flow to the three nonrecurring cost development sheets. Disconnect factors are used to develop the present value of a labor cost that will take place in the future. The interface develops this factor by first locating the factor associated with the study midpoint date in the working database. The end-point date is then determined by adding the cost element life, in months, to the midpoint date. The factor associated with this date is then divided by the midpoint factor. If there is no cost element life indicated (i.e., value equals zero), the disconnect factor is one.

To develop the direct cost, the appropriate direct labor rate for the JFC or Payband is applied to the installation and disconnect work times for each function to produce the install cost and the disconnect cost. The costs then flow to the appropriate summary sheet. All calculations are detailed above each cell.

FLORIDA DOCKET NO 990691-TP
SECTION 3
DESCRIPTION OF MODELS AND PRICE CALCULATORS

Nonrecurring Cost Development

Nonrecurring direct costs from sheets NR-NR, NR-1A, NR-IS, and other expenses from the input sheet "Additives" flow to the sheets called "TELRIC NRC Summary A" and "TELRIC NRC Summary B". The first sheet summarizes a single nonrecurring cost; the second sheet summarizes first and additional costs or initial and subsequent costs. Costs and expenses are summed to a total cost. This cost is then multiplied by Gross Receipts Tax and Common Cost factors to produce the Nonrecurring TSLRIC plus shared and common costs.

Depending on the structure of the nonrecurring cost, only two of the cost development sheets will be included with a cost element. The sheets NR-NR and TELRIC NRC Summary A will be included with the single cost structure. The sheets NR-1A and TELRIC NRC Summary B will be included with the first and additional cost structure. The sheets NR-IS and TELRIC NRC Summary B will be included with the initial and subsequent cost structure. The previously described nonrecurring cost development sheets will not be included with a cost element for which nonrecurring costs are not applicable.

2. Capital Cost Calculator

The Capital Cost Calculator is a Visual Basic model designed by BellSouth. It was developed in order to provide BellSouth with an open, understandable and easily verifiable process which could be used to calculate annual capital cost factors. The calculator produces depreciation, cost of money and income tax factors which are applied to investments to calculate the capital costs. See Section 4, Annual Cost Factors, for discussion of depreciation, cost of money and income tax factors.

The Capital Cost Calculator provides the user with the ability to use and modify a set of input variables. The input variables are: debt ratio, cost of money, debt interest rate, corporate income tax rate, net salvage ratio and economic life of assets. The calculator is designed with on-screen instructions and options which allow the user to view or modify the input section and view or print the calculations. Calculations are automatic when input variables are modified. Explanatory notes are included in each column heading and footnotes are included at the bottom of the calculations.

The input variables used in this filing are those established by the Florida Public Service Commission in Order No. PSC-98-0604-FOF-TP.

FLORIDA DOCKET NO 990691-TP
SECTION 3
DESCRIPTION OF MODELS AND PRICE CALCULATORS

They are:

Percent equity	60%
Percent debt	40%
Cost of equity	12%
Cost of debt	6.7%
Overall Cost of Money	9.9%

ILLUSTRATIVE CAPITAL COST CALCULATIONS:

The following is an illustrative calculation of capital costs, the inputs, and resulting capital cost factors:

**CAPITAL COST ILLUSTRATIVE CALCULATION - UNDERGROUND CABLE
METALLIC 5C**

Inputs:

$$\begin{array}{ll} r = \text{Debt Ratio} = .40 & i = \text{Composite Cost of Money} = .1125 \\ i_d = \text{Debt Interest Rate} = .0650 & n = \text{Periods} = 12 \\ t = \text{Composite Income Taxes} = .3857 & \text{Net Salvage} = -.08 \\ \text{Economic Life} = 12 \text{ Years} & \end{array}$$

1) Calculate Annuity of a Present Amount (A/P):

$$A/P = \frac{i(1+i)^n}{(1+i)^n - 1}$$

$$A/P = \frac{.1125(1+.1125)^{12}}{(1+.1125)^{12} - 1}$$

A/P = .1558662) Calculate Present Worth of Net Salvage (S_{pw}):

$$S_{pw} = \frac{\text{Net Salvage}}{(1+i)^n}$$

$$S_{pw} = \frac{-0.08}{(1+.1125)^{12}}$$

$$S_{pw} = -.022258$$

FLORIDA DOCKET NO 990691-TP
SECTION 3
DESCRIPTION OF MODELS AND PRICE CALCULATORS

- 3) Calculate PHI factor:

$$\Phi = \frac{t}{1-t} \times \left(1 - \frac{r(i_d)}{i}\right)$$

$$\Phi = \frac{.3857}{1-.3857} \times \left(1 - \frac{.40(.0650)}{.1125}\right)$$

$$\Phi = .482762$$

- 4) Calculate Depreciation Expense Factor:

Depreciation Expense Factor = (1 - Net Salvage)/Economic Life

Depreciation Expense Factor = (1 - (-.08))/12

Depreciation Expense Factor = .090000

- 5) Calculate Cost of Money Factor:

Cost of Money Factor=Annuity of a Present Amount X (1- S_{pw}) - Depreciation
Exp Factor

Cost of Money Factor = .155866 X (1 - (-.022258)) - .090000

Cost of Money Factor = .069335

- 6) Calculate Income Tax Factor:

Income Tax Factor = Cost of Money Factor X PHI Factor

Income Tax Factor = .069335 X .482762

Income Tax Factor = .033472

- 7) Summary of Capital Cost Factors:

Depreciation Expense Factor	.090000
Cost of Money Factor	.069335
Income Tax Factor	<u>.033472</u>
Total Capital Cost Factors	.192807

DESCRIPTION OF MODELS AND PRICE CALCULATORS**

3. Shared and Common Cost Model

The Shared and Common Cost Model used in this filing, is the version developed by the Florida Public Service Commission Staff and used by the Commission as the basis for the Shared and Common Allocation factors established in Order No. PSC-98-0604-FOF-TP. It includes all adjustments considered necessary by the Commission.

**FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS**

BELLSOUTH REGION TELEPHONE PLANT INDEXES

The BellSouth Region Telephone Plant Indexes (TPIs) are used in cost studies to estimate the change in the material price and/or installed investment from one year to a future year. The TPIs are price indexes which measure the relative changes in the prices BellSouth pays for the construction of telephone plant between specific periods of time. A TPI is an average of prices, or of price relatives at specific points or periods of time, constructed for a specific purpose. It should also be noted that TPI forecasts are forecasts of price changes of equipment that is being installed. They are not intended to be forecasts of technology changes or productivity improvements.

Joel Popkin and Company, as BellSouth consultants, assists BellSouth's Network Department with the development of the TPIs. In general, the methodology uses econometric techniques to establish a mathematical relationship between the historical movement in each of the labor and materials components that make up the TPIs and the historical movement in the explanatory variables. The explanatory variables are usually aggregate measures of the U.S. economy, such as price deflators from the national income and product accounts, the U.S. union wage rate, copper prices and other macroeconomic variables. What these economic techniques provide is a systematic, quantifiable statement of what has happened in the past. Use of those relationships implicitly makes the assumption that history will more or less repeat itself. It is important to re-estimate the relationships as new index values are added each year.

A summary of Labor TPIs and TPIs by account is included in Appendix A.

INVESTMENT INFLATION FACTORS

Over the life of an investment, inflation causes fluctuations in the forward-looking investment amount. The investment amount should be levelized over the time period in which the study results will be used (i.e., over the planning period). Investment inflation factors by account are used to trend plant investment in base year dollars to a levelized amount that is valid for a specific planning period of either two or three years as appropriate. The investment inflation factors are the cumulative average of the years projected inflation rates from the BellSouth Region TPIs. When the base year investment amount is multiplied by the investment inflation loading, the result is a forward-looking investment that is representative for the appropriate planning period.

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

A worksheet showing the development of the leveled Investment Inflation Factors used in these studies is included in Appendix A.

INPLANT LOADINGS

The InPlant Loading adds engineering and installation labor and miscellaneous equipment to the material price and/or vendor installed price; that is, the InPlant Loading converts the material price to an installed investment. The installed investment is the dollar amount that is recorded in the capital accounts. InPlant loadings are account specific and are developed for each of the nine states. There are two types of implant loadings used in these studies: 1) Material Loading, 2) Telco Loading. The Material Loading is applied to a material price and the Telco Loading to the vendor installed investment. The data sources are the 1997 State and Local Sales Taxes and the Resource Tracking Analysis and Planning (RTAP) System.

A summary of the InPlant Loadings used in these studies and worksheets showing their development is included in Appendix A.

SUPPORTING EQUIPMENT AND POWER LOADINGS

Supporting Equipment and Power Loadings are used to calculate the incremental investment associated with such items as power equipment, distributing frames, ladders, tools, and test sets required to support an additional dollar of central office (CO) investment. When central office investment is multiplied by the Supporting Equipment and Power Loadings, the investment is then loaded for the amount of dollars for support and power equipment.

The Supporting Equipment and Power Loadings are developed from investment data obtained from a 1997 Central Office Monthly Allocation Process (COMAP) extract for power, which identifies two types of supporting investment: 1) equipment that supports an entire central office (9C0); and 2) equipment that supports only a particular field reporting code (FRC) but supports all items of that FRC within that central office (9D0). 9C0 equipment includes the following: all types of power equipment used to provide current for central office equipment; distributing frames that are used to distribute circuits to more than one type of COE (typically the first frames that a cable is connected to when it leaves the cable vault and enters the CO); miscellaneous capitalized equipment that cannot be directly associated with COE in a single FRC (i.e., ladders and some types of aisle lighting); and capitalized tools and test sets that can be used for several

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

types of COE (e.g., an oscilloscope can be used to test any COE equipment that uses alternating current). Nine D0 (9DO) equipment includes the following: dedicated distributing frames used to supply circuit connections to only one type of COE (e.g., specialized distributing frames used to connect to circuit testing, alarm, and conditioning equipment); specialized tools and test sets (i.e., tools and test sets that have been specially designed by the manufacturer to perform tests on a very narrow range of COE).

A summary worksheet showing the development of Supporting Equipment and Power Loadings is included in Appendix A.

LAND AND BUILDING LOADINGS

Land and Building Loadings are translators used to determine the amount of investment in land and building that is to be associated with the central office and computer investment in each TSLRIC study. When central office investment is multiplied by the land and building loadings, the investment is then loaded for the amount of land and buildings associated with central office investment.

The land loading for central office equipment is developed by comparing the investments in land that are associated with central office equipment and the investments in that central office equipment. A ratio is then developed that allows each dollar of central office investment to include a fraction of the land investment. The building loading is developed by comparing the investments in buildings that house central office equipment for the provision of service and the investments in that central office equipment. A ratio is then developed that allows each dollar of central office investment to include a fraction of the building investment. The Land and Building Loadings for Computer use the same methodology.

The regulated investment dollars used in developing these factors are taken from the Investment Over Accumulated Depreciation for June and December, 1997. The projected view of 1998 through 2000 received from Network is based on plant additions less retirements and is added to the 1997 cumulative historical year. The investments are averaged to get to midyear (MDY) amounts. Current Cost Factors are applied to 1997 MDY only. Averaged projected net additions for 1998 through 2000 are added to represent the current forward looking period. The investments for the three years are then summed and divided by three to obtain the average investment.

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

The 1998 through 2000 land and building average projected investments are multiplied by the percent of land and building associated with central office equipment, and each is respectively divided by the average total central office equipment to derive the loadings. The Land and Building Loadings for computers are similarly calculated.

Worksheets showing the development of Land and Building Loadings used in these TSLRIC studies are included in Appendix A.

POLE AND CONDUIT LOADINGS

Pole and conduit loadings are translators used to determine the amount of investment in poles and conduit that is to be associated with aerial and underground cable investment in the TSLRIC studies. When the aerial cable investment is multiplied by the pole loading, the investment is loaded for the amount of pole investment associated with aerial cable. When the underground cable investment is multiplied by the conduit loading, the investment is loaded for the amount of conduit investment associated with underground cable.

The pole loading is developed by comparing the investment in poles to the investment in aerial cable. A ratio is then developed that allows each dollar of aerial cable investment to include a fraction of the pole investment. The conduit loading is developed by comparing the investment in conduit to the investment in underground cable. A ratio is then developed that allows each dollar of underground cable investment to include a fraction of the conduit investment.

The regulated investment dollars used in developing these factors are taken from the Investment Over Accumulated Depreciation for June and December, 1997. The projected view of 1998 through 2000 received from Network is based on plant additions less retirements and is added to the 1997 cumulative historical year. The investments are averaged to get to midyear (MDY). Current Cost factors are applied to 1997 MDY only. Averaged projected net additions for 1998 through 2000 are added to represent the current forward looking period. The investments for the three years are then summed and divided by three to obtain the average investment. The pole loading is developed by dividing the average pole investment by the average aerial cable investment. The conduit loading is developed by dividing the average conduit investment by the average underground cable investment.

A worksheet showing the Pole and Conduit Loadings development is included in Appendix A.

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

ANNUAL COST FACTORS

GENERAL

Annual cost factors are translators used to determine the amount of recurring cost for one year associated with acquiring and using a particular piece of investment. Annual cost factors were developed for each category of plant investment for each state. When the dollar amount for a particular piece of investment is multiplied by the annual cost factor for that particular category of plant investment, the product reflects the annual recurring cost incurred by the company for that particular piece of investment. There are basically two types of cost associated with investment: capital related costs and operating related costs.

The initial purchase price of plant equipment and any installation costs are paid with a combination of investor supplied funds and retained earnings. The investors who provide the "loan" may be either bondholders or stockholders. The plant placed must be able to generate enough revenues to cover capital costs associated with its placement and usage. Capital related costs consist of three major categories: depreciation, cost of money, and income tax. The capital related cost factors are developed using the Capital Cost Calculator, which uses various financial data and plant investment characteristics to compute the annual capital costs by category of plant.

Plant investments must also be maintained to provide for continuing operations. Ordinary repairs and maintenance, as well as rearrangements and changes, are necessary costs for all categories of plant (except land) in order to provide proper service. These maintenance costs, as well as ad valorem taxes and other taxes must be covered by the revenues received from the use of the asset. The operating related cost factors are developed using various spreadsheets, which basically compute the annual operating related costs by category of plant, and divide that amount by the investment in that category of plant.

CAPITAL RELATED COSTS

DEPRECIATION - the allocation of the initial plant investment over the years service provided by the plant. Depreciation is determined by the total investment, less net salvage, divided by the estimated life of the investment. Depreciation lives and salvage values used in this filing were established by the Florida Public Service Commission in Order No. PSC-98-0604-FOF-TP.

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

COST OF MONEY - the annual cost to the firm of the debt and equity on capital invested in the business. This annual cost is determined in the financial market as it represents the investors' expected return on their investment. The cost of money used in this filing was established by the Florida Public Service Commission in Order No. PSC-98-0604-FOF-TP.

INCOME TAX - the composite of income taxes paid to the Federal and Florida State governments based on the taxable net income of the company. The tax factors used in this filing were established by the Florida Public Service Commission in Order No. PSC-98-0604-FOF-TP.

OPERATING RELATED COSTS

PLANT SPECIFIC EXPENSE - the expense required to keep existing telephone plant, circuits, and service up to standards, as well as rents paid for facilities. This includes trouble clearing, rearrangements, and replacing defective elements.

AD VALOREM AND OTHER TAX - tax levied by city and county governments based on the assessed value of property. This includes property taxes, capital stock taxes, and other taxes.

FACTOR DEVELOPMENT - CAPITAL COST

Depreciation is the allocation of the initial plant investment over the years of service provided by the plant. The straight-line method requires that the difference between gross investment and net salvage be spread ratably over the life of the plant. The straight-line depreciation expense rate is calculated as follows:

$$\frac{\text{Initial Investment} - (\text{Gross Salvage} - \text{Cost of Removal})}{\text{Life of Investment}}$$

Cost of money is the amount of money which must be paid to investors for the use of investor supplied funds. This amount to be paid investors is the annual cost to the company of the debt and equity capital invested in the company. Cost of money is determined in part by the financial market and, as it represents

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

the investors' expected return on their investment, and may differ considerably from the actual earnings a company generates. The overall cost of money rate provided by BellSouth Treasury depends on the cost of equity financing, the cost of debt financing, and the debt to equity ratio of the capital structure of the company. The overall cost of money used in this study is 9.9%.

Income tax expense is the federal and Florida state taxes levied on "taxable income." For income tax purposes, what is considered gross income and what expenses are deductible are defined by laws and codes. The income tax factor is developed using the PHI factor. The PHI factor assumes that tax depreciation equals book depreciation (i.e., no depreciation-related tax timing differences), but dividends paid to stockholders are not tax deductions (nor are they accounting expenses). Interest paid to bondholders is a booked expense and deductible for income tax purposes. A company must pay income taxes on the equity portion of return, but the debt portion is tax-exempt. The PHI factor is calculated as follows:

$$\Phi = \frac{\text{Composite Income Tax Rate}}{1 - \text{Composite Income Tax Rate}} \times (1 - \frac{\text{Debt Ratio} \times \text{Debt Rate}}{\text{Cost of Money Rate}})$$

Capital Cost Calculator Model calculations are included in Appendix A.

FACTOR DEVELOPMENT - OPERATING RELATED

PLANT SPECIFIC EXPENSE

The plant specific expense factor, which includes the cost of material used and direct labor, is a ratio developed to reflect the expenses for plant category by the respective investment. The factor also includes maintenance-type expenses for existing plant that cannot be directly assigned to a given plant category, such as transmission power, when applicable. Certain amounts have been excluded from the appropriate categories of plant, specifically: subsequent Right To Use fees and service order activity-related expense. These costs are excluded because: 1) they should be separately identified for each service, or 2) they should be included in nonrecurring cost studies. The maintenance expenses used in calculating the Plant Specific Expense Factors include those associated with the following types of operations:

- (a) inspecting and reporting on the condition of plant investment to determine the need for repairs, replacements, rearrangements and changes

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

- (b) performing routine work to prevent trouble
- (c) replacing items of plant other than retirement units
- (d) rearranging and changing the location of plant not retired
- (e) repairing material for reuse
- (f) restoring the condition of plant damaged by storms, floods, fire and other casualties (other than the cost of replacing retirement units)
- (g) inspecting after repairs have been made
- (h) only salaries, wages and expense associated with plant craft and work reporting engineers, as well as their immediate supervision and office support.

The plant specific expense factors are developed in personal computer spreadsheets. The factors are based on three years of projected expense and investment data. The 1997 expenses used in the study were pulled from the Cost Separations System (CSS). Rent expense is excluded from building expense; net rent (rent revenue less rent expense) is included in pole and conduit expenses. Projected view data was obtained from the Finance Budget Group for the expenses for 1998 through 2000 and spread based on actual expenses. Right To Use and service order-related expenses were excluded from the study because such expenses are recovered in a direct manner rather than through the use of a factor. The 1998 through 2000 projected expense amounts are averaged to represent the projected annual expense.

The investment dollars are 1997 actuals and projected 1998 through 2000 from Network. The 1997 dollars were taken from the Investment Over Accumulated Depreciation Report for mid and end of year and adjusted by applying a current cost to book cost ratio. The projected investments are based on plant additions less retirements. The projected net additions for each year are added to 1997 adjusted investment to arrive at the total projected investment. The projected investments for 1998 - 2000 are then summed and divided by three to obtain the average annual investment. Expenses are then divided by the investments, resulting in the unloaded plant specific expense factors. Power expense loadings are then added to the factors for central office equipment investment. These plant specific expense factor calculations result in a factor for each

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

category of plant representative of the average expense per investment expected in the future for each plant category.

Worksheets showing the development of the Plant Specific Expense Factors used in these studies are included in Appendix A.

AD VALOREM AND OTHER TAXES

The ad valorem and other tax factor is an effective tax factor furnished by the BellSouth Tax Department. The BellSouth Tax Department develops the factor by calculating the ratio of certain tax expense to the telephone plant in service, as follows:

$$\frac{\text{Accounts } 7240.1000 + 7240.3000 + 7240.9000}{\text{Telephone Plant in Service}}$$

Account 7240.1000 includes taxes levied upon the assessed value of property.

Account 7240.3000 includes taxes levied upon the value or number of shares of outstanding capital stock, upon invested capital, upon rate of dividends paid, etc.

Account 7240.9000 includes other non-income, non-revenue taxes such as municipal license taxes, state privilege taxes, state self-insurer's tax, etc.

A summary of ad valorem and other tax and gross receipts tax factors used in these studies is included in Appendix A.

GROSS RECEIPTS TAX FACTOR

Some states and municipalities tax the revenues that a company receives from services provided within the state/municipality. The taxes may be designed to fund such things as PSC fees, franchise taxes, license taxes, or other similar items, but because the taxes are levied on the basis of revenues, they are commonly referred to as a gross receipts tax. Unlike some taxes that are billed to the customer and flowed through to the taxing authority, a gross receipts tax is a cost of doing business to BellSouth.

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

The BellSouth Tax Department provides the effective tax rate at which BellSouth is charged by the taxing authority and that rate is "grossed up" to reflect the following formula:

$$\frac{\text{GROSS RECEIPTS TAX RATE}}{(1 - \text{GROSS RECEIPTS TAX RATE})}$$

A summary of ad valorem and other tax and gross receipts tax factors used in these studies is included in Appendix A.

LABOR RATES

Labor rates for specific work groups are developed annually based on extracts of previous year's data from the Financial Processor. This extract collects labor expense and hours and a PC application processes the information to produce labor rates. During processing, the actual costs for a given work group are accumulated by expenditure type (e.g., direct labor productive, premium, other employee, etc.). These actual costs are divided by the actual hours (classified productive hours for plant and engineering work groups and total productive hours for cost groups) reported by work group to determine the basic rates. A factor from the BellSouth Region TPIs is applied to inflate these rates to the study period 1998 - 2000.

LABOR RATE COMPONENTS:

The following are various cost components that make up labor rates:

DIRECT SALARIES AND WAGES

1. **Direct Labor - Productive (EXPENDITURE TYPE CODE (EXTC) KP1)**
Identifies the cost of the actual straight time wages paid to occupational work reporting employees during the month for regularly scheduled time and overtime spent performing productive work. Also includes the costs of salaries paid to management employees when performing productive work. Classified and unclassified productive hours are used as the basis for Direct Labor Costs.
2. **Direct Labor - Premium (EXTC KP2)**
Identifies the cost of the actual wages paid to occupational work reporting employees during the month for premium hours.

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

3. **Direct Labor - Other Employee (EXTC KP3)**
Identifies the cost of the actual wages and salaries paid to occupational work reporting employees during the month for allowances and special differentials, merit awards, wage adjustments, team incentive awards, pay in lieu of vacation, etc.
4. **Direct Labor - Annualized Holidays, Vacations and Excused Days (EXTC KP5)**
Identifies the cost of a monthly prorata share of payments to be made over the year to occupational work reporting employees for accrued costs of holidays, vacations, and excused days.
5. **Direct Administration (EXTC KP6)**
Identifies the costs of salaries paid during the month to the first level of supervision responsible for supervising occupational work reporting employees, and salaries and wages paid to employees and immediate supervisors who perform basic office services for occupational work reporting employees. Also included are the wages paid to occupational work reporting employees loaned to perform supervisory or clerical functions.
6. **Plant Other Work Equipment - Salaries and Wages (EXTC CQR)**
Identifies the salary and wage portion of the costs associated with other work equipment used by Facilities and Network Services employees (4XX0-9).
7. **Plant Motor Vehicle - Salary and Wage Distribution (EXTC CQM)**
Identifies the salary and wage portion of the plant motor vehicle expenses for construction, removal or plant specific operations expense accounts based on the classified productive hours of the labor groups using the motor vehicles.

OTHER DIRECT

1. **Direct Labor - Other Costs (EXTC KP4)**
Identifies the costs incurred during the month for office, traveling and other costs of Facilities and Network Services employees whose wage and salary costs are direct labor or direct administration.
2. **Direct Other Costs – Telcordia Technologies Billing (EXTC KP8)**
Identifies the costs incurred during the month for Telcordia Technologies billing costs of Facilities and Network Services employees whose wage and salary costs are direct labor or direct administration.

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

3. **Plant Other Work Equipment - Benefits (EXTC CQS)**
Identifies the benefit costs associated with other work equipment used by Facilities and Network Services employees (4XX0-9).
4. **Plant Other Work Equipment - Rents (EXTC CQK)**
Identifies the rent costs associated with other work equipment used by Facilities and Network Services employees (4XX0-9).
5. **Plant Other Work Equipment - Other Expenses (EXTC CQL)**
Identifies the other expense costs associated with other work equipment used by Facilities and Network Services employees (4XX0-9).
6. **Plant Motor Vehicle - Benefit Distribution (EXTC CQN)**
Identifies the benefit portion of the plant motor vehicle expenses for construction, removal or plant specific operations expense accounts based on the classified productive hours of the labor groups using the motor vehicles.
7. **Plant Motor Vehicle - Rent Distribution (EXTC CQP)**
Identifies the rent portion of the plant motor vehicle expenses for construction, removal or plant specific operation expense accounts based on the classified productive hours of the labor groups using the motor vehicle.
8. **Plant Motor Vehicle - Other Costs Distribution (EXTC CQQ)**
Identifies the other cost portion of the plant motor vehicle expenses for construction, removal or plant specific operations expense accounts based on the classified productive hours of the labor groups using the motor vehicle.
9. **Benefits (EXTC KPL)**
Identifies the costs of the payroll related benefits and taxes for active Facilities and Network Services employees. These costs include pension accruals; company matching portion of savings plan; dental, medical, and group insurance plan reimbursements; and company portion of social security and unemployment payroll taxes.

TOTAL PRODUCTIVE HOURS

1. **Classified Productive Hours**
Hours of work reporting employees which are reported to final accounting classifications.

FLORIDA DOCKET NO 990691-TP
SECTION 4
INPUTS - LOADINGS AND FACTORS

2. Unclassified Productive Hours

The working hours of plant work reporters devoted to activities of such a general nature as to not be assignable to specific accounting classifications. Unclassified activities include: attending conferences or meetings (including travel time) which are general in nature; attending first aid classes or safety meetings; paid time spent on union activities; paid time spent on quality of work life activities; time spent in a classroom (including travel time) for general or job specific training; and other unclassified activities such as attending assessment centers. This time will be work reported to special purpose function codes (SPFCs).

Labor Rate worksheets are included in Appendix A.

SHARED AND COMMON COST ALLOCATION FACTORS

The Shared and Common Cost Model used in this filing, is the version developed by the Florida Public Service Commission Staff and used by the Commission as the basis for the Shared and Common Allocation factors established in Order No. PSC-98-0604-FOF-TP. It includes all adjustments considered necessary by the Commission.

**FLORIDA DOCKET NO 990691-TP
SECTION 5
UNBUNDLED NETWORK ELEMENT (UNE) STUDIES**

INTRODUCTION

This section contains a description of cost elements and an overview of the study process. Additionally, inputs and workpapers are provided.

The study included in this filing is based on a three (3) year study period (1998 - 2000). All long run costs associated with providing the cost elements are identified and included in the TSLRIC study.

The following spreadsheet contains a listing of the unbundled network cost elements provided in this filing package. Each cost element is represented by a designated cost element number that is referenced throughout the study.

Following this spreadsheet is the narrative describing the elements, study technique, and specific study assumptions. After the narrative are the TELRIC Calculator© outputs. Following the outputs, Microsoft Excel spreadsheets containing the inputs and workpapers are included.

Element Description

In general, Frame Relay is a connection-oriented packet mode technology based on X.25 standards. With Frame Relay, data is taken from the end-device terminal, packaged into variable length frames, and transported through the network on predefined logical channels. Frame Relay currently offers one version, Permanent Virtual Circuits (PVC) that allows the user to set-up a series of point-to-point virtual circuits through the network.

One of the basic components of Unbundled Packet Switching for Frame Relay is the user network interface, or port, that provides the end user (the ALEC) connection to the Fast Packet switched network. These ports are available at line

**FLORIDA DOCKET NO 990691-TP
SECTION 5
UNBUNDLED NETWORK ELEMENT (UNE) STUDIES**

rates of 56Kbps, 64Kbps, 1.536Mbps, and 44.210Mbps. Elements N.1.1 through N.1.4 correspond to these various port speeds.

Data Link Connection Identifier (DLCI) (element number N.1.5) provides an address by which a Frame Relay data links can be identified and mapped together to provide an end-to-end permanent virtual circuit.

Committed Information Rate (CIR) is a feature that allows the ALEC to select a sustained throughput under normal conditions. CIR is offered at various rates as reflected in elements N.1.6 through N.1.20.

A Feature Change Charge (element N.1.21) applies whenever a change is made (at the ALEC's request) to a single optional feature within a single network configuration on a single switch.

Service may be transferred to a new customer at the same location upon prior written concurrence by the new customer. This does not constitute a disconnect of service or a discontinuance of an existing arrangement. (Element N.1.22)

Elements N.1.199 through N.1.599 contain the disconnect costs.

Study Technique

Microsoft Excel spreadsheets were used to develop the UNE material prices and/or investments for these UNEs. To develop recurring costs, each element was analyzed to determine the required components, the utilization levels, and the appropriate quantities. These items were used to develop the utilized unit material prices. To develop nonrecurring costs, network personnel familiar with the provisioning of the elements, provided time estimates by job function code.

Specific Study Assumptions

- Costs of the card are allocated between the port and the CIR (80%/20%).
- The right-to-use fees (RTU) are developed on a per port basis and are amortized over five years using an annual interest rate of 9.9%. (The 9.9% corresponds to the cost of capital established in the UNE Order.)

TELRIC INPUT FORM - RECURRING EXPENSES DATA**Instructions:**

1. Use this worksheet to record recurring non-labor expenses to be input into the TELRIC calculations.
2. All amounts shown are per unit (e.g., per call, per loop, per MOU).
3. Input data, by Cost Element, leaving no blank lines. On next row after last line of data, type END in Cost Element Column.
4. All data on this form should be cell-referenced to study workpapers.
5. Do NOT change columns, headings, sheet name.

State	Element #	Cost Recurring (Limited to 25 characters)	Recurring

TELRIC INPUT FORM - MATERIAL/INVESTMENT DATA

Instructions:

1. Use this worksheet to record material and/or investments to be input into the TELRIC calculations.
2. All amounts shown are per unit (e.g., per call, per loop, per MOU).
3. Input data, by Cost Element, leaving no blank lines. On next row after last line of data, type END in Cost Element Column.
4. All data on this form should be cell-referenced to study workpapers.
5. Do NOT change columns, headings, sheet name.

**FLORIDA DOCKET NO. 990691-TP
APPENDIX A
LOADINGS AND FACTOR WORKSHEETS**

The following worksheets showing the calculations associated with loadings and factors development discussed in Section 4 are included in this appendix.

1. TPIs
2. Levelized Inflation Factors
3. Inplant Factors – Outside Plant
4. Inplant Factors – COE
5. Plug-in Factors
6. Hard-wired Factors
7. Supporting Equipment & Power Loadings
8. Plant Specific Expense Factors
9. Land and Building Loading Factors
10. Pole and Conduit Loadings
11. Capital Cost Model Calculations
12. Ad Valorem & Other Taxes
13. State n& Federal Income Taxes
14. Labor Rates
