Re: Docket No. 990649-TP  
Investigation into Pricing of Unbundled Network Elements

Dear Ms. Bayo:

Please find enclosed for filing in the above matter an original and 15 copies of the Surrebuttal Testimonies of Michael J. Doane, Dennis B. Trimble and David G. Tucek on behalf of GTE Florida Incorporated. Service has been made as indicated on the Certificate of Service. If there are any questions regarding this matter, please contact me at 813-483-2617.

Sincerely,

*Anthony P. Gillman*

*Kimberly Caswell*

**ORIGINAL**

**BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

In re: Investigation into Pricing of )  
Unbundled Network Elements )  
\_\_\_\_\_ )

Docket No. 990649-TP

**SURREBUTTAL TESTIMONY OF  
MICHAEL J. DOANE**

**ON BEHALF OF  
GTE FLORIDA INCORPORATED**

**OCTOBER 15, 1999**

DOCUMENT NUMBER-DATE

12607 OCT 15 8

FPSC-RECORDS/REPORTING

1 **GTE FLORIDA INCORPORATED**

2 **SURREBUTTAL TESTIMONY OF MICHAEL J. DOANE**

3 **DOCKET NO. 990649-TP**

4  
5 **Q. PLEASE STATE YOUR FULL NAME AND BUSINESS ADDRESS.**

6 A. My name is Michael J. Doane. My business address is 88 Kearny  
7 Street, Suite 1300, San Francisco, CA 94108.

8  
9 **Q. DID YOU PREVIOUSLY PROVIDE DIRECT AND REBUTTAL**  
10 **TESTIMONY BEFORE THIS COMMISSION IN THE CURRENT**  
11 **DOCKET?**

12 A. Yes. I provided direct and rebuttal testimony on the approach the  
13 Commission should use if it proceeds with UNE deaveraging in the  
14 absence of retail rate rebalancing.

15  
16 **Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?**

17 A. My testimony responds to the Rebuttal Testimonies of AT&T and MCI  
18 witness Ankum, Rhythms Links witness Geis, Florida Digital Network  
19 witness Senatore, Sprint witness Sichtler, and Covad and Rhythms  
20 Links witness Murray.

21  
22 **Q. PLEASE SUMMARIZE THE POSITIONS EXPRESSED BY THESE**  
23 **WITNESSES.**

24 A. These witnesses advocate that in establishing deaveraged prices for  
25 unbundled network elements ("UNEs"), the Commission should not

1 consider any factor other than a UNE's total element long run  
2 incremental cost ("TELRIC"), plus a "reasonable" allocation of  
3 forward-looking common costs. (Throughout my testimony, I refer to  
4 this approach as "TELRIC pricing.") They assert TELRIC pricing  
5 promotes competition and economic efficiency. The witnesses also  
6 contend that GTE's proposal to deaverage UNE rates is an attempt  
7 to needlessly limit and delay competitive entry.

8  
9 **Q. PLEASE SUMMARIZE YOUR RESPONSE TO THESE CLAIMS.**

10 **A.** My testimony demonstrates that these witnesses' claims regarding the  
11 procompetitive effects of TELRIC pricing are both unsubstantiated  
12 and wrong from an economic standpoint. I also demonstrate that,  
13 contrary to their assertions, GTE's proposal is the *only* method that  
14 encourages--rather than limits--the entry of efficient providers.

15  
16 In a constructive manner, GTE offered two methods by which to  
17 implement UNE deaveraging without undue delay. Under the first  
18 proposal, the Commission would rebalance retail rates to reflect the  
19 underlying costs of service, and UNE rates would be geographically  
20 deaveraged in conformance with the rebalanced retail rates.  
21 Simultaneous rebalancing of retail and wholesale rates would  
22 eliminate arbitrage opportunities that limit competition. However, if  
23 the Commission declines to adopt this approach, it could opt for  
24 GTE's alternative proposal, which maintains existing retail rates, while  
25 immediately deaveraging UNE rates. To bring the benefits of

1 competition to consumers throughout Florida, this approach requires  
2 an adjustment charge on UNE prices to reflect the fact that retail rates  
3 do not correspond to their underlying costs. In the absence of such  
4 a charge, the provision of universal service would be threatened as  
5 new entrants would have the incentive to target high-margin (primarily  
6 business) customers and ignore residential customers generally,  
7 particularly those located in rural areas.

8  
9 **Q. HOW HAVE YOU ORGANIZED YOUR TESTIMONY?**

10 A. I have organized my testimony around the witnesses' claims  
11 regarding: (1) the alleged benefits of TELRIC pricing and (2) the  
12 alleged problems concerning GTE's deaveraging adjustment charge  
13 ("DAC") proposal.

14  
15 **I. An Economic Analysis of the Witnesses'**

16 **TELRIC Pricing Proposal**

17  
18 **Q. ON WHAT GROUNDS DO THE WITNESSES ARGUE UNE PRICES**  
19 **SHOULD BE DEAVERAGED BASED SOLELY ON TELRIC?**

20 A. In general, the witnesses allege TELRIC pricing will promote  
21 competition and economic efficiency. However, they draw this  
22 conclusion with no supporting economic analysis. For example,  
23 without analysis, Ms. Senatore alleges: "Pricing on the basis of  
24 TELRIC costs will encourage efficiency rather than monopolistic  
25 complacency, will enable market entry for competitive companies, and

1 will send the right signals." (Senatore RT at 8; see also Sichtler RT at  
2 10; Geis RT at 9; Murray RT at 14.)

3  
4 **Q. HOW DO YOU RESPOND TO THE CLAIM THAT TELRIC PRICING**  
5 **PROMOTES COMPETITION AND ECONOMIC EFFICIENCY?**

6 A. In response to this general claim, I analyze in detail the allegations  
7 put forward by Dr. August Ankum, as he sets forth a list of claims  
8 encompassing those of other witnesses. Dr. Ankum claims:

9  
10 Prices set at [TELRIC]:

- 11 -- generate results consistent with competitive market
- 12 outcomes;
- 13 -- create the appropriate price signals that will promote
- 14 overall economic welfare in Florida;
- 15 -- induce efficient market entry by ALECs;
- 16 -- are not discriminatory

17 (Ankum RT at 4.)

18  
19 **Q. PLEASE RESPOND TO DR. ANKUM'S CLAIM THAT TELRIC**  
20 **PRICES "GENERATE RESULTS CONSISTENT WITH**  
21 **COMPETITIVE MARKET OUTCOMES."**

22 A. As a threshold matter, it should be recognized that Dr. Ankum offers  
23 literally no testimony supporting this claim. Instead, he takes on the  
24 straw man argument that UNE prices should not recover historic  
25 inefficiencies because that would be inconsistent with the results of

1 competitive markets. This argument is a straw man because no party  
2 to this proceeding has put forward a methodology for establishing  
3 UNE prices that recover historic inefficiencies. Moreover, Dr. Ankum  
4 has failed to offer any evidence that such historic inefficiencies in local  
5 exchange carriers' costs exist. Indeed, the fact that GTE has  
6 operated under a price-cap plan since 1996 and made its last rate  
7 case filing in 1992 strongly suggests that it is operating efficiently,  
8 since cost inefficiencies reduce profits.

9  
10 Dr. Ankum appears to take the position that TELRIC prices mimic  
11 those observed in competitive markets, which he observes generally  
12 produce prices that "gravitate toward economic costs." From this he  
13 concludes that the Commission can achieve the competitive market  
14 outcome by simply establishing UNE prices equal to TELRIC. This  
15 approach is misguided for several reasons.

16  
17 First, the fallacy of Dr. Ankum's logic was explained coherently by  
18 Justice Stephen Breyer in his separate statement in *Iowa Utilities*  
19 *Board*. Commenting on the FCC's TELRIC pricing approach, Justice  
20 Breyer stated:

21  
22 For competition, according to the FCC, tends to  
23 produce prices that reflect forward-looking  
24 replacement costs, not actual historical costs.  
25 But this argument does not show that the Act

1                   compels the use of the FCC's system over any  
2                   other. How could it? *The competition that the*  
3                   *Act seeks is a process, not an end result*; and a  
4                   regulatory system that imposes through  
5                   administrative mandate a set of prices that tries  
6                   to mimic those that competition would have set  
7                   does not become any less a regulatory process,  
8                   nor any more the competitive one.

9  
10                   *AT&T Corp. v. Iowa Utils. Bd.*, 119 S. Ct. 721, 751 (1999)  
11                   (Justice Breyer concurring in part and dissenting in part)  
12                   [emphasis added].

13  
14                   As Justice Breyer observed, Dr. Ankum's standard is  
15                   inherently circular and thoroughly regulatory. TELRIC  
16                   prices are hypothetical constructs resulting from  
17                   engineering cost models that do not and cannot reflect  
18                   the dynamic nature of the competitive process. A prime  
19                   example of why the TELRIC approach fails to capture  
20                   this dynamic competitive process is vividly illustrated by  
21                   the fact that TELRIC prices are calculated on the  
22                   unrealistic assumption that local exchange carriers  
23                   rebuild their capital from scratch (except for the location  
24                   of their existing wire centers) at the end of each period.  
25                   In the real world, firms economize by replacing capital

1                   when it is profitable to do so, i.e., when the operating  
2                   cost savings exceed the capital investments for new  
3                   plant on a present value basis.

4

5                   For this reason, Professor Alfred Kahn has observed:

6

7                   In a world of continuous technological progress,  
8                   it would be irrational for firms to constantly  
9                   update their facilities in order *completely* to  
10                  incorporate today's lowest-cost technology, as  
11                  though starting from scratch, the moment those  
12                  costs fell below prevailing market prices.  
13                  Investments made today, totally embodying the  
14                  most modern technology available currently,  
15                  would instantaneously be outdated tomorrow  
16                  and, in consequence, fail over their lifetime to  
17                  earn a return sufficient to justify the investments  
18                  in the first place.

19

20                  (Alfred E. Kahn, *Letting Go: Deregulating the Process of*  
21                  *Deregulation*, Michigan State Utilities papers, 1998, at 91  
22                  [emphasis in original].)

23

24                  Finally, while Dr. Ankum is correct that prices in competitive markets  
25                  tend toward economic costs, he incorrectly asserts economic costs

1 equal TELRIC. How can they? Economic costs include opportunity  
2 costs, *i.e.*, the value of the resource in its best alternatives use. Of  
3 course, the value of these alternative uses change constantly in  
4 competitive markets. But TELRIC prices by their nature are the end  
5 result of static engineering cost models and cannot reflect the realities  
6 of the competitive process.

7

8 **Q. HOW DO YOU RESPOND TO DR. ANKUM'S CLAIM THAT PRICES**  
9 **SET AT TELRIC "CREATE THE APPROPRIATE PRICE SIGNALS**  
10 **THAT WILL PROMOTE OVERALL WELFARE IN FLORIDA"?**

11 A. Dr. Ankum begins with the noncontroversial proposition that prices  
12 that reflect economic costs enable consumers and suppliers to make  
13 consumption decisions that lead to optimal results. He asserts that  
14 UNE prices based on retail rates will cause market participants to  
15 make buying decisions based on false information about the true  
16 costs produced by these services. He therefore concludes that such  
17 UNE prices will diminish overall economic welfare.

18

19 Dr. Ankum is correct in observing that retail rates are not based on  
20 economic costs. Instead, retail rates reflect this Commission's policy  
21 decisions regarding the trade-off between economic efficiency and  
22 equity goals, such as the provision of universal service. However, as  
23 demonstrated in my Direct Testimony, this does not imply UNE prices  
24 should fail to consider the retail rate structure. In fact, such a failure  
25 would reduce overall welfare in Florida. UNE prices should

1 encourage efficient entry. That is, entry should be encouraged in all  
2 markets where the entrant can provide the "non-bottleneck" services  
3 at lower costs than the incumbent. TELRIC pricing, however, denies  
4 entry by efficient firms in some markets and permits entry of inefficient  
5 firms in others.

6  
7 A simple numerical example demonstrates this point. Consider an  
8 ILEC that offers two services, residential and business local exchange  
9 service. For simplicity, assume each service requires an ILEC-  
10 provided UNE (e.g., a loop) and a self-provisioned input (e.g., retail  
11 marketing). Suppose the incremental costs of the loop and retail  
12 marketing are \$12 and \$3, respectively, and do not vary by type of  
13 customer. Further assume the retail price of residential service  
14 equals \$14 and the retail price of business service equals \$35. Now  
15 consider the economic consequences when the price of a loop is set  
16 equal to TELRIC. As shown in Table One below, an equally efficient  
17 entrant (i.e., an entrant with the same marketing costs as the ILEC)  
18 would not find it profitable to serve residential customers.

19  
20 **TABLE ONE**  
21 **TELRIC PRICING DENIES EFFICIENT ENTRY**

23	Residential rate	\$14
24	<i>Less</i>	
25	TELRIC UNE Rate	\$12

1	Retail Marketing costs	\$ 3
2	<i>Equals</i>	
3	Profit margin	-\$ 1

4

5 In contrast, as shown in Table Two, a less efficient entrant (*i.e.*, an  
 6 entrant with retail marketing costs double those of the ILEC) would  
 7 find it profitable to serve business customers.

8

9

**TABLE TWO**

10

**TELRIC PRICING ENCOURAGES INEFFICIENT ENTRY**

11

12	Business rate	\$35
13	<i>Less</i>	
14	TELRIC UNE Rate	\$12
15	Retail Marketing costs	\$ 6
16	<i>Equals</i>	
17	Profit margin	\$17

18

19 These two examples demonstrate that the imposition of TELRIC  
 20 prices distorts the CLEC's entry decision, contrary to Dr. Ankum's  
 21 apparent belief.

22

23 Of course, economic efficiency would be enhanced if retail prices  
 24 were rebalanced to reflect their underlying costs and UNE rates were  
 25 adjusted accordingly to promote efficient entry. Indeed, this is GTE's

1 primary proposal, as Mr. Trimble has explained.

2

3 **Q. HOW DO YOU RESPOND TO DR. ANKUM'S CLAIM THAT PRICES**  
4 **SET AT TELRIC "INDUCE EFFICIENT MARKET ENTRY BY**  
5 **ALECS"?**

6 A. The above examples clearly illustrate that this claim is without merit.  
7 TELRIC pricing (1) encourages CLECs to invest in their own facilities  
8 when it is more economical for the ILEC to provide the service and (2)  
9 destroys the incentive of CLECs to invest in their own facilities when  
10 it is more economical for them to provide the service than the ILEC.

11

12 Dr. Ankum appears to consider the case in which the resulting UNE  
13 price under GTE's proposal exceeds the stand-alone cost of the  
14 entrant, and the entrant's stand-alone cost is greater than GTE's  
15 TELRIC. (Ms. Murray takes a similar view at page 13 of her Rebuttal  
16 Testimony.) In this case, Dr. Ankum observes the entrant would have  
17 the incentive to construct its own (higher cost) facilities rather than  
18 lease them at TELRIC prices from the ILEC. However, this claim  
19 misconstrues GTE's pricing proposal. To ensure competitive  
20 neutrality, the DAC (equal to \$17 in the above example for business  
21 customers) must be non-bypassable. When this is the case, the  
22 entrant will bypass GTE's facilities if and only if its stand-alone cost is  
23 lower than GTE's TELRIC, *i.e.*, it is a more efficient provider.

24

25

1       **Q.    HOW DO YOU RESPOND TO DR. ANKUM'S CLAIM THAT PRICES**  
2       **SET AT TELRIC ARE NOT DISCRIMINATORY?**

3       A.    As a threshold matter, Dr. Ankum provides no economic analysis to  
4       support this assertion. He simply asserts in a two-sentence answer  
5       that "any costs that deviate [from TELRIC], particularly those that are  
6       greater, are discriminatory." (Ankum RT at 6.) In contrast to Dr.  
7       Ankum's unsupported assertion, my Direct Testimony provides a  
8       detailed economic analysis demonstrating that, to the contrary,  
9       TELRIC prices are discriminatory whenever the retail rates contain  
10      implicit support, which is certainly the case in Florida. My testimony  
11      presented Professor Baumol's proof of this principle, which he calls  
12      the "Level-Playing Field Theorem." Not surprisingly, Dr. Ankum, as  
13      well as all other witnesses testifying on behalf of CLECs, did not even  
14      attempt to rebut this finding for the simple fact that it is correct.

15  
16      TELRIC pricing is discriminatory because it creates subsidies for  
17      entrants at the expense of the ILECs. No competitive firm could offer  
18      services that contain subsidies for competitors, and thus encourage  
19      free-riding on its facilities, and still remain financially viable. By  
20      forcing the ILEC to accept prices that would never be agreed to by a  
21      competitive firm, TELRIC pricing places the ILEC at a competitive  
22      disadvantage relative to its competitors. The discriminatory impact on  
23      ILECs of TELRIC pricing is undeniable.

24  
25

1       **Q.     DR. ANKUM ASSERTS THAT THE ACT APPEARS TO “PROHIBIT**  
2       **THE RECOVERY OF HISTORIC AND UNECONOMIC COSTS.”**  
3       **PLEASE COMMENT.**

4       **A.     First, Dr. Ankum appears to equate “historic” and “uneconomic” costs.**  
5       **However, he offers no evidence as to why any ILEC’s historic costs**  
6       **are uneconomic. Dr. Ankum apparently believes that when the output**  
7       **of an engineering cost model produces “forward-looking costs” lower**  
8       **than the actual costs an ILEC incurred to build and maintain its local**  
9       **exchange network, the difference between “historic” and TELRIC**  
10      **costs should be deemed “uneconomic” and non-recoverable. An**  
11      **economic analysis of Dr. Ankum’s position demonstrates the error in**  
12      **his logic.**

13  
14      As indicated above, firms in competitive markets do not replace their  
15      capital from scratch at the end of each period. Rather, firms  
16      economize by replacing capital when it is profitable to do so. Thus,  
17      the fact that there is a difference between an ILEC’s actual costs and  
18      TELRIC does not mean that this difference is accounted for by  
19      “uneconomic” costs. That difference, rather, represents capital that  
20      was efficiently purchased and should not on economic grounds be  
21      replaced at the present time with new capital investments.

22  
23      Second, Section 252(d)(1)(A) of the Act does not prohibit recovery of  
24      actual costs, as Dr. Ankum suggests. Because historic costs are  
25      evaluated in rate-of-return proceedings, Dr. Ankum assumes these

1 costs cannot be included in UNE rates. Such a reading of the Act  
2 would violate the "reasonable profit" provision because a firm must  
3 recover all its costs before any profit can be earned. A more sensible  
4 reading of this section of the Act is that it simply requires that UNE  
5 prices be established without conducting a rate of return proceeding.  
6

7 **Q. DR. ANKUM ASSERTS THAT TELRIC PRICING PROVIDES ILECS**  
8 **WITH A NORMAL PROFIT BECAUSE THE METHODOLOGY**  
9 **INCLUDES THE COST OF CAPITAL. PLEASE COMMENT.**

10 A. There are two problems with his assertion. First, Dr. Ankum implicitly  
11 assumes that CLECs will fail to maximize their profits by not utilizing  
12 both resale services and UNEs. However, when the retail structure  
13 is such that the resale rate for a service is less than the associated  
14 UNE cost, CLECs, of course, will choose to enter via resale. In  
15 contrast, when the UNE cost is less than the resale rate, CLECs will  
16 choose to enter via UNEs. There is evidence in this proceeding that  
17 precisely this entry pattern will be utilized by CLECs. Mr. Eric Geis,  
18 testifying on behalf of Rhythms Links, stated that in addition to leasing  
19 UNEs: "Through partnerships with other carriers and purchase of  
20 resold services, Rhythms will be able to provide the customer with a  
21 full suite of telecommunication services." (Geis RT at 3.) This pattern  
22 of entry (which was discussed in my Direct and Rebuttal Testimonies  
23 and in the articles attached to my Direct Testimony) ensures that  
24 TELRIC pricing will not allow the ILEC to earn a normal profit. In  
25 particular, when CLECs utilize resale entry in this example, the ILEC

1 incurs costs not covered by the resale rate. Dr. Ankum's TELRIC  
2 pricing proposal includes no provision for recovering these costs and,  
3 as such, does not allow the ILEC to earn a normal profit.

4  
5 Moreover, even if CLECs failed to maximize their profits by utilizing  
6 resold services in combination with UNEs, and instead only leased  
7 UNEs, Dr, Ankum's assertion would still be false when the output of  
8 an engineering cost model yields "forward-looking costs" less than the  
9 ILEC's actual total costs. Providing a firm a return on capital in the  
10 TELRICs hardly compensates it for the loss it incurs in this situation.

11

12 **Q. DO ANY OF THE WITNESSES ARGUE THAT TELRIC PRICING**  
13 **PRODUCES AN OUTCOME DIFFERENT THAN A "LEVEL**  
14 **PLAYING FIELD"?**

15 A. Yes. Ms. Senatore states: "The monopoly position of the ILEC  
16 warrants a different treatment than if a level playing field truly existed."  
17 (Senatore RT at 6.) Thus, Ms. Senatore advocates prices based on  
18 "forward-looking costs" which she freely admits are less than market  
19 prices. Ms. Senatore's statements can only be interpreted as a direct  
20 request for an entry subsidy. Obviously, if forward-looking costs are  
21 less than market prices, by definition they cannot be compensatory.

22

23 **Q. MS MURRAY STATES THAT TELRIC PRICING WILL NOT**  
24 **UNDERMINE THE ILEC'S ABILITY TO PROVIDE UNIVERSAL**  
25 **SERVICE. PLEASE COMMENT.**

1 A. On page 13 of her rebuttal testimony, Ms. Murray acknowledges that  
2 deaveraged prices that prevent uneconomic bypass “enhance the  
3 incumbent’s ability to provide universal service.” But having identified  
4 the correct objective, Ms. Murray nevertheless claims that  
5 deaveraging UNE prices on the basis of TELRIC deters uneconomic  
6 bypass. It can be easily demonstrated that her analysis is wrong.

7  
8 Consider the example below in which a statewide average TELRIC  
9 price of \$12 is established for a UNE. Further assume that the ILEC’s  
10 deaveraged TELRIC equals \$10.

11 **TABLE THREE**

12 **TELRIC PRICING ENCOURAGES INEFFICIENT ENTRY**

13

14	Business rate	\$35
15	<i>Less</i>	
16	Statewide Average	
17	TELRIC UNE Rate	\$12
18	ILEC’s Retail Marketing Costs	\$6
19	<i>Equals</i>	
20	Profit margin	\$17

21  
22 Ms. Murray’s point is that an entrant having costs of \$11 would  
23 engage in uneconomic bypass of the UNE. For this reason, she  
24 advocates a geographically deaveraged price to deter uneconomic  
25 bypass of this UNE.

1           However, Ms. Murray fails to consider the effect her proposal has on  
2           economic bypass generally. In particular, an entrant leasing the UNE  
3           at the geographically deaveraged price of \$10 and facing the \$35  
4           retail rate can be substantially less efficient than the ILEC in the  
5           provision of the other inputs required for that service. In the example  
6           above, a CLEC would find it profitable to enter even if its retailing  
7           costs were as much as \$25 (*i.e.*, approximately four times those of the  
8           incumbents). Thus, Ms. Murray's proposal exacerbates the incentive  
9           of the CLECs to engage in uneconomic bypass because it increases  
10          the profit margin or opportunity for arbitrage.

11  
12          In sum, Ms. Murray recognizes the critical importance of preventing  
13          uneconomic bypass so as to enhance the incumbent's ability to  
14          provide universal service, but she advances a proposal that provides  
15          an even greater incentive for uneconomic bypass. Moreover, Ms.  
16          Murray offers no rebuttal of my Direct Testimony which demonstrated  
17          that the DAC is the only mechanism that prevents uneconomic  
18          bypass when the ILEC's retail rate structure contains implicit support  
19          for universal service.

20  
21          **Q.    MS. MURRAY ASSERTS THAT TELRIC PRICING SATISFIES THE**  
22          **NONDISCRIMINATION STANDARD IN THE ACT. PLEASE**  
23          **COMMENT.**

24          A.    Ms. Murray correctly recognizes that the nondiscrimination standard  
25          is satisfied when competitors are treated in a competitively neutral

1 manner. However, she states incorrectly that competitive neutrality  
2 is achieved by TELRIC pricing because, in her opinion, that is the  
3 implicit price the incumbent charges itself when it uses the same  
4 functionality to provide retail services.

5  
6 As discussed in my Direct Testimony, competitive neutrality is  
7 achieved when incumbents are not favored in the final-product market  
8 over entrants or the reverse. Contrary to Ms. Murray's assertion,  
9 TELRIC pricing fails to satisfy this objective when the retail rate  
10 structure contains implicit support (see the Level Playing Field  
11 Theorem in Professor Baumol's article, attached to my Direct  
12 Testimony). Any so-called transfer price is irrelevant to the  
13 determination as to whether a UNE price is competitively neutral.

14  
15  
16 Using the above example, suppose the "retail division" of the ILEC  
17 pays a transfer price of \$29 to the "wholesale division" for the UNE  
18 even if CLECs pay the \$12 TELRIC price. Ms. Murray would  
19 conclude that the \$29 transfer price discriminates against the ILEC  
20 since it exceeds the TELRIC. But this is incorrect since the transfer  
21 price simply shifts revenues from one "division" of the ILEC to another  
22 and does not competitively disadvantage the ILEC. Similarly, if the  
23 ILEC's so-called transfer price was \$12 for the UNE and the CLEC's  
24 price was \$29, this would not competitively disadvantage the CLEC  
25 because the retail price is \$35. An equally efficient entrant would

1 have the same profit margin as the ILEC, given the \$17 of common  
2 costs allocated to the ILEC's retail rate.

3  
4  
5 **II. An Economic Analysis of the Witnesses'**

6 **Criticisms of the DAC**

7  
8 **Q. DR. ANKUM STATES GTE'S DAC PROPOSAL SHOULD NOT BE**  
9 **ADOPTED BECAUSE IT (1) RESULTS IN PRICES FOR UNES**  
10 **THAT DEVIATE FROM ECONOMIC COSTS; (2) IGNORES CLECS'**  
11 **NON-RECURRING CHARGES; (3) DOES NOT TAKE INTO**  
12 **ACCOUNT ILECS' RETAIL PRICING FLEXIBILITY; AND (4)**  
13 **REINCARNATES OF THE EFFICIENT COMPONENT PRICING**  
14 **RULE. PLEASE COMMENT.**

15 **A.** Dr. Ankum's response to the proposed DAC completely ignores the  
16 economic analysis provided in my Direct Testimony regarding the  
17 benefits of the proposal. In particular, he makes no attempt to rebut  
18 my evidence that the DAC is the only mechanism that ensures  
19 deaveraging of UNEs will achieve the Commission's goals of  
20 promoting competitive entry in all markets while preserving universal  
21 service.

22  
23 Dr. Ankum's statement that the resulting UNE prices deviate from  
24 economic costs stems from his incorrect notion of economic costs. As  
25 noted above, TELRIC prices are simply hypothetical constructs

1 resulting from the engineering cost models that are devoid of dynamic  
2 market conditions. Competitive prices will not tend to be equated to  
3 the lowest cost of duplicating service with the most recent technology.  
4 Thus, while Dr. Ankum correctly asserts that prices in competitive  
5 markets tend toward economic costs, he incorrectly asserts economic  
6 costs equal TELRIC.

7  
8 Dr. Ankum is correct that the DAC ignores the CLEC's nonrecurring  
9 charges. This is entirely appropriate because these charges  
10 represent additional costs incurred by the ILEC that are caused by the  
11 CLEC's request for service. Economic efficiency requires that the  
12 CLEC generate cost savings sufficient to cover these additional costs.  
13 These costs should not be subtracted from the DAC because that  
14 would constitute an entry subsidy.

15  
16 Dr. Ankum's criticism that the DAC ignores the potential  
17 consequences of GTE's retail pricing flexibility is based on a  
18 misunderstanding of the DAC mechanism. That mechanism takes  
19 into account GTE's retail price. If that price falls, commensurate  
20 reductions in the DAC are passed on to CLECs.

21  
22 Finally, Dr. Ankum incorrectly asserts that GTE's DAC proposal a  
23 reincarnation of the ECPR rule rejected by FCC. The FCC's version  
24 of ECPR differs from the DAC in that it assumes the retail prices  
25 remain fixed, as do the corresponding UNE prices. As the FCC

1 stated "the ECPR does not provide any mechanism for moving prices  
2 toward competitive levels; its simply takes prices as given." (FCC  
3 Local Competition Order, Docket 96-98, at para. 709 (1996).) This is  
4 not how the DAC works. As retail prices adjust over time in response  
5 to competitive forces, the DAC changes commensurately.  
6  
7

8 **Q. MS. MURRAY ASSERTS THAT GTE'S DAC PROPOSAL IS**  
9 **UNDESIRABLE BECAUSE IT WOULD SEVERELY REDUCE THE**  
10 **PRESSURE ON AN ILEC TO REDUCE RETAIL PRICES TO**  
11 **COSTS. PLEASE COMMENT.**

12 A. Ms. Murray fails to appreciate the full nature of GTE's deaveraging  
13 proposal. If this Commission chooses to move retail prices closer to  
14 cost to promote economic efficiency, it can accomplish that goal by  
15 rebalancing GTE's retail rates and aligning GTE's retail and wholesale  
16 rate structures. This approach would enhance the efficient allocation  
17 of resources at the retail level and ensure competitively neutral UNE  
18 prices. However, should the Commission choose to maintain the  
19 current retail rate structure, that choice would be undermined by Ms.  
20 Murray's deaveraging proposal. Ms. Murray is correct in her  
21 assessment that the arbitrage created by her proposal would force  
22 rates toward costs, but in doing so it would result in one of two  
23 possible outcomes: (1) the Commission's policy goal of promoting  
24 universal service would be adversely affected, given the need to  
25 increase basic rates or (2) the ILEC will be unable to remain solvent,

1 given that price reductions will occur in some markets, but rates are  
2 not permitted to rise in others to cover the shortfall.

3  
4 **Q. MS. MURRAY ASSERTS THAT GTE'S DAC PROPOSAL IS**  
5 **UNNECESSARY BECAUSE (1) GTE WILL HAVE AMPLE TIME TO**  
6 **RID ITSELF OF INEFFICIENT COSTS AND (2) GTE HAS THE**  
7 **OPTION TO REQUEST INTERIM UNIVERSAL SERVICE RELIEF.**  
8 **(MURRAY RT AT 26.) PLEASE COMMENT.**

9 A. Ms. Murray's first argument implicitly assumes that GTE has  
10 "inefficient costs." This statement, however, is offered without a  
11 scintilla of evidence. Moreover, as noted above, Ms. Murray ignores  
12 the fact that GTE has operated under a price cap mechanism since  
13 1996 and, as she is aware, the company has the economic incentive  
14 to operate efficiently. Ms. Murray offers no evidence that ILECs have  
15 made imprudent investments or that the Commission has been  
16 derelict in its duty to protect ratepayers from such inefficient  
17 investments.

18  
19 Ms. Murray's second argument ignores the fact that GTE has  
20 proposed a mechanism in this proceeding to remove the implicit  
21 support embodied in retail rates. This is GTE's first proposal which  
22 Ms. Murray and other witnesses have rejected as unnecessarily  
23 delaying competitive entry. The DAC proposal would not entail any  
24 delay or require the initiation of a new Commission hearing to  
25 establish support for universal service. The DAC could be initiated

1 immediately. Moreover, as Mr. Trimble discusses, interim, company-  
2 specific measures cannot effect the kind of comprehensive, industry-  
3 wide solution that is necessary to achieve competitive neutrality.

4

5 **Q. FINALLY, MS. MURRAY ASSERTS THAT GTE'S DAC PROPOSAL**  
6 **IS UNWORKABLE BECAUSE IT LINKS UNE PRICES TO THE**  
7 **PRICES OF BUNDLED WHOLESALE SERVICES. PLEASE**  
8 **COMMENT.**

9 A. Ms. Murray is of the opinion that one should accept the negative  
10 consequences of uneconomic entry (which she admits elsewhere in  
11 her testimony is detrimental to universal service) because it is too  
12 cumbersome to prevent the problem. She provides a laundry list of  
13 possible complications without offering any constructive proposal for  
14 dealing with the problem. The Commission should recognize that the  
15 DAC is a valuable mitigation device. If implemented it will serve to  
16 broaden the scope of competition in Florida and lessen the adverse  
17 consequences of arbitrage. A workable DAC, as a practical matter,  
18 would specify separate charges for residential and business  
19 customers based on average purchase patterns and would vary  
20 geographically based on observed cost differences. Such an  
21 approach, while not perfectly tailored to the usage patterns of  
22 individual customers, will yield substantial competitive benefits.

23

24 **Q. HAS AT&T ARGUED ELSEWHERE THAT UNE PRICES SHOULD**  
25 **BE LINKED TO RETAIL RATES, AS YOU RECOMMEND?**

1       A.    Yes.  In a notice of *ex parte* communication before the California  
2           Public Utilities Commission (“CPUC”), AT&T stated that an adjustment  
3           to proposed TELRIC UNE prices was required if “Californians are ever  
4           to enjoy the innovative services and competitive prices that only  
5           competition can bring.” (AT&T Letter to Commissioner Josiah L.  
6           Neeper, CPUC, Aug. 26, 1999.)  AT&T stated that UNE-based  
7           competition would not happen unless proposed TELRIC UNE rates  
8           were adjusted to take into account the universal service support  
9           embodied in residential retail rates.  AT&T’s concern with the  
10          proposed TELRIC UNE rates was that they did not enable the  
11          company to profitably serve residential customers.  Therefore, AT&T  
12          requested that the CPUC reduce the costs of the “UNE platform” to  
13          take into account retail rates.  Moreover, AT&T stated that this  
14          adjustment would not violate Section 252(d)(1)(A) of the Act.

15  
16          AT&T’s proposal recognized explicitly the importance of taking the  
17          ILEC’s retail rate structure into account when establishing rates for  
18          unbundled network elements.  Their reason for doing so was  
19          straightforward: retail rates in California are not cost based.  Instead,  
20          as is the case in Florida, they reflect that Commission’s policy goals  
21          regarding affordability and the provision of universal service.  As  
22          noted above, when this situation exists, TELRIC UNE rates will  
23          exceed retail prices in some markets (*e.g.*, residential) and will be  
24          below retail prices in other markets (*e.g.*, business).  As AT&T  
25          correctly observed, this problem is corrected by adjusting TELRIC

1           UNE prices to account for universal service support implicit in retail  
2           rates. Of course, this adjustment must be applied symmetrically: it  
3           requires a downward adjustment when TELRIC exceeds the retail  
4           rate (less avoided retailing costs) and an upward adjustment when  
5           TELRIC is less than the retail rate (less avoided retailing costs).  
6           AT&T's *ex parte* communication with the CPUC reinforces this finding.

7

8           **Q.    DOES THIS CONCLUDE YOUR TESTIMONY?**

9           A.    Yes.
