SECTION 3 - BASIC SERVICE DESCRIPTIONS AND RATES

3.1 Timing of Calls

3.1.1 When Billing Charges Begin and End For Phone Calls

The customer's usage charge is based on the actual usage of the Company's network. Call timing begins when a valid connection, as determined by the return of hardware or software answer supervision, is established between the calling telephone and the called telephone station. When software answer supervision is employed, up to sixty (60) seconds of ringing is allowed before timing starts.

Call timing ends when the calling station "hangs up", thereby releasing the network connection. If the called station "hangs up" and the calling station does not, chargeable times ends when the network connection is released by automatic timing equipment in the telephone network or by the Company operator.

3.1.2 Billing Increments

The billing increments for each service is set forth in the individual product rate section.

3.1.3 Per Call Billing Charges

Billing will be rounded up to the nearest penny for each call.

3.1.4 Uncompleted Calls

There shall be no charges for uncompleted calls.
