

**ORIGINAL**

**BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

**REBUTTAL TESTIMONY OF**

**BRENDA J. KAHN**

**ON BEHALF OF**

**AT&T COMMUNICATIONS OF THE SOUTHERN STATES, INC. and  
MCI WORLDCOM**

**Docket No. 990649-TP**

**July 31, 2000**

DOCUMENT NUMBER-DATE

**09162 JUL 31 8**

FPSC-RECORDS/REPORTING

1 Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS AND  
2 PRESENT POSITION.

3 A. My name is Brenda J. Kahn. I am employed by AT&T  
4 as District Manager, Connectivity Cost, Price and  
5 Planning Division in the Local Services and  
6 Access Management organization. My business  
7 address is 900 Routes 202/206, Bedminster, New  
8 Jersey.

9  
10 Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS  
11 PROCEEDING AND FOR WHAT PURPOSE?

12  
13 A. I am testifying on behalf of AT&T Communications  
14 of the Southern States, Inc. and MCI WorldCom,  
15 Inc.

16  
17 Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL  
18 BACKGROUND?

19  
20 A. I have two Economics degrees, a Bachelor of Arts  
21 in 1969 from Queens College and a Ph.D. in 1978  
22 from Columbia University. I have published an  
23 article in the Journal of Regulatory Economics  
24 entitled " The Effects of Regulation and  
25 Competition on the Price of AT&T Intrastate

1 Telephone Service." I have also published an  
2 article entitled "The Impact of IntraLATA  
3 Competition on Local Exchange Company Prices" in  
4 a book entitled "Economic Innovations in Public  
5 Utility Regulation." I am also a member of the  
6 steering committee for the Rutgers University  
7 Advanced Workshop in Regulation and Public  
8 Utility Economics and have been a regular  
9 presenter and discussant at academic regulatory  
10 conferences.

11  
12 **Q. PLEASE DESCRIBE YOUR WORK EXPERIENCE AT AT&T.**

13 A. From August 1978 to June 1982, I was employed as  
14 a Staff Manager in the WATS Rate Planning Group  
15 responsible for the development, implementation  
16 and support of quantitative studies used to  
17 support interstate and intrastate tariff filings.  
18 I joined the Strategic Pricing and Decision  
19 Support Group in the Marketing Department of AT&T  
20 in November 1982, and was responsible for  
21 developing and supporting demand analysis models  
22 for AT&T Switched Network services. In October  
23 1983, I joined the Marketing Plans Implementation  
24 Group where I had revenue and demand forecasting  
25 responsibilities for existing and new services.

1 In May 1989, I joined State Government Affairs  
2 and was responsible for access charge and  
3 regulatory reform analysis of the intrastate  
4 telecommunications markets in New York and New  
5 England states. In January 1993, I joined Access  
6 Management and was responsible for interstate and  
7 intrastate access charge management with  
8 particular emphasis on local exchange companies  
9 in the Northeast Region. In January 1996 I was  
10 promoted to District Manager in the Local  
11 Services Division where I was responsible for  
12 supervising a group which analyzed the costs of  
13 local exchange service. The group has expertise  
14 in the HAI Model (including former versions of  
15 the Hatfield Model), the Benchmark Cost Proxy  
16 Model and other local exchange cost models and  
17 methods that have been developed. In my current  
18 position, I supervise a group responsible for  
19 minimizing the leased costs incurred to offer  
20 AT&T local services.

21

1 Q. HAVE YOU APPEARED BEFORE STATE REGULATORY  
2 AGENCIES?

3 A. Yes. I have appeared on rate, cost and access  
4 charge matters in Louisiana, Maine, Maryland,  
5 Massachusetts, Mississippi, Missouri, Nevada, New  
6 York, Tennessee and Vermont proceedings.

7  
8 Q. PLEASE DESCRIBE THE IMPORTANCE OF SETTING SUB-  
9 LOOP RECURRING AND INTERCONNECTION RATES  
10 PROPERLY.

11 A. Rates must be set properly in order to ensure  
12 facilities-based competition will occur. This  
13 goal is highlighted in the following statements  
14 from the FCC's UNE Remand Order<sup>1</sup> regarding subloop  
15 unbundling, which encompasses the intrabuilding  
16 network cable and network terminating wire  
17 elements in the BellSouth filing, along with  
18 several others.<sup>2</sup>

19  
20 Paragraph 205 states, "We find that the lack of  
21 access to unbundled subloops materially

---

<sup>1</sup> Third Report and Order and Fourth Further Notice of Proposed Rulemaking, released 11/5/1999, FCC 99-238

<sup>2</sup> Third Report at paragraph 206.

1           diminishes a requesting carrier's ability to  
2           provide service that it seeks to offer. We also  
3           conclude that access to subloop elements is  
4           likely to be the catalyst that will allow  
5           competitors, over time, to deploy their own  
6           complementary subloop facilities, and eventually  
7           to develop competitive loops." Paragraph 216  
8           specifically mentions multi-dwelling units,  
9           saying that, "In particular, a facilities-based  
10          provider's ability to offer service in a multi-  
11          unit building or campus may be severely impaired  
12          if it must install duplicative inside wiring."  
13          Also, at paragraph 219, the FCC states that,  
14          "Access to unbundled subloop elements allows  
15          competitive LECS to self provision part of the  
16          loop, and thus, over time, to deploy their own  
17          loop facilities, and eventually to develop  
18          competitive loops. If requesting carriers can  
19          reduce their reliance on the incumbent by  
20          interconnecting their own facilities closer to  
21          the customer, their ability to provide service  
22          using their own facilities will be greatly  
23          enhanced, thereby furthering the goal of the 1996  
24          Act to promote facilities-based competition."

As demonstrated below, BellSouth's claimed cost for Intrabuilding Network Cable and Network Terminating Wire elements exceed forward-looking economic costs and otherwise conflict with the FCC's UNE Remand Order. Accordingly, BellSouth's cost proposals should be rejected.

**Q. PLEASE DESCRIBE INTRABUILDING NETWORK CABLE (INC).**

**A.** Intrabuilding Network Cable, as described by BellSouth and alternatively known as riser cable, represents "the distribution facility inside a subscriber's building or between buildings on one customer's same premises. INC will include the facility from the cross connect device in the building equipment room up to and including the end-user's point of demarcation." Apparently BellSouth plans to install a 25 pair cross connect panel near BellSouth's cross-connect device on which the riser cable will be accessed. BellSouth technicians will interconnect ALEC

1 facilities at this cross connect panel to  
2 BellSouth's riser cable.

3

4 **Q. PLEASE DESCRIBE NETWORK TERMINATING WIRE.**

5 A. Network terminating wire is copper wiring that is  
6 used to extend circuits from a building entrance  
7 terminal to an individual customer's point of  
8 demarcation. Access to network terminating wire  
9 was previously addressed in an arbitration  
10 proceeding between MediaOne Florida  
11 Telecommunications, Inc. and BellSouth (Order No.  
12 PSC-99-2009-FOF-TP in Docket 990149-TP).

13

14 **Q. WHAT IS BELL SOUTH'S PROPOSED RECURRING CHARGE FOR**  
15 **2-WIRE INTRABUILDING NETWORK CABLE?**

16 A. BellSouth proposes to charge a monthly recurring  
17 rate of \$3.90 for 2-wire Intrabuilding Network  
18 Cable. This charge represents 22% of the charge  
19 BellSouth proposes for the entire 2-wire loop,  
20 even though intrabuilding network cable accounts  
21 for only a hundred or so feet of a loop that on  
22 average extends for thousands of feet.

1 Q. WHAT IS BELLSOUTH'S PROPOSED RECURRING CHARGE FOR  
2 4-WIRE INTRABUILDING NETWORK CABLE?

3 A. BellSouth proposes to charge a monthly recurring  
4 rate of \$7.38 for 4-wire Intrabuilding Network  
5 Cable.

6

7 Q. DO YOU AGREE WITH BELLSOUTH'S PROPOSED CHARGES  
8 FOR 2-WIRE AND 4-WIRE INTRABUILDING NETWORK  
9 CABLE?

10 A. No. The proposed charges conflict with the  
11 recent FCC UNE Remand Order and should be  
12 rejected. The proposal assumes that BellSouth  
13 will install a 25 pair cross connect panel in the  
14 building equipment room in order to provide a  
15 designated interconnection location for riser  
16 cable and also to provide a test point for  
17 service surveillance and maintenance. In  
18 addition, BellSouth will require cross  
19 connections from this panel to BellSouth's  
20 existing cross connect device already located in  
21 the building equipment room. This additional  
22 terminal is shown as point II.A (or point II.B)  
23 in Exhibit BK-1.

24

The proposed requirement to build an additional panel flatly conflicts with the FCC's UNE Remand order that calls for a single point of interconnection. "Although we do not amend our rules governing the demarcation point in the context of this proceeding, we agree that the availability of a single point of interconnection will promote competition. To the extent there is not currently a single point of interconnection that can be feasibly accessed by a requesting carrier, we encourage parties to cooperate in any configuration of the network necessary to create one. If parties are unable to negotiate a reconfigured single-point of interconnection at multi-unit premises, we require the incumbent to construct a single point of interconnection that will be fully accessible and suitable for use by multiple carriers." [Emphasis added]. FCC's UNE Remand Order, at ¶226.

BellSouth's proposal, in contrast, calls for additional equipment to be built and paid for by ALECs, while continuing to allow BellSouth to maintain a direct connection to the existing

1 basement terminals. Such an approach is not  
2 competitively neutral and does not satisfy the  
3 FCC requirement for a single point of  
4 interconnection. Exhibit BK-2 provides a diagram  
5 depicting a single point of interconnection in a  
6 building equipment room that is competitively  
7 neutral and does satisfy the FCC requirement for  
8 a single point of interconnection. The diagram  
9 in Exhibit BK-2 represents the appropriate INC  
10 elements that BellSouth should have used when  
11 establishing a monthly recurring price for  
12 intrabuilding network cable.

13

14 **Q. DID THE FLORIDA COMMISSION PREVIOUSLY ADDRESS THE**  
15 **ISSUE OF A SINGLE POINT OF INTERCONNECTION FOR**  
16 **SUB-LOOP UNBUNDLING?**

17 **A.** Yes, on October 14, 1999 (Order No. PSC-99-2009-  
18 FOF-TP in Docket 990149-TP) and prior to the  
19 FCC's order, the Florida Commission concluded  
20 that network security and control problems  
21 associated with a single point of interconnection  
22 were too daunting a challenge for them to approve  
23 at that time.

**Q. DID THE GEORGIA COMMISSION ADDRESS THE ISSUE OF A SINGLE POINT OF INTERCONNECTION FOR SUB-LOOP UNBUNDLING?**

A. Yes, on December 28, 1999 (Order in Docket No. 10418-U) and after the FCC's order, the Georgia Commission concluded that there were appropriate procedures that could be implemented that adequately addressed network security and control problems associated with a single point of interconnection. The Georgia Commission concluded that an ALEC may use its own technicians to perform the interconnections as long as the ALEC assumed the full liability for its actions and for any adverse consequences that could result.

**Q. DO YOU SUPPORT THE NOTION OF FULL INDEMNIFICATION FOR ADVERSE CONSEQUENCES ASSOCIATED WITH THE ACTIONS OF ALEC TECHNICIANS?**

A. In principle, we would support such a notion.

1 Q. HOW DOES BELLSOUTH ARRIVE AT THEIR PROPOSED COST  
2 FOR 2-WIRE INC?

3

4 In the BellSouth cost study, three elements are  
5 identified that cause BellSouth to incur material  
6 investment of \*\*\*BEGIN PROPRIETARY XXXXXXXX END  
7 PROPRIETARY\*\*\* per pair to provide 2-Wire INC.  
8 This amount consists of: Intrabuilding network  
9 cable investment of \*\*\*BEGIN PROPRIETARY XXXXXXXX  
10 END PROPRIETARY\*\*\* is incurred for the riser  
11 cable material; investment in building entrance  
12 terminals of \*\*\*BEGIN PROPRIETARY XXXXXXXX END  
13 PROPRIETARY\*\*\*; and investment in building  
14 distribution terminals of \*\*\*BEGIN PROPRIETARY  
15 XXXXXXXX END PROPRIETARY\*\*\*.

16

17

18 BellSouth takes the material investments totaling  
19 \*\*\*BEGIN PROPRIETARY XXXXXXXX END PROPRIETARY\*\*\*  
20 from the BSTLM and grosses it up to \*\*\*BEGIN  
21 PROPRIETARY XXXXXXXX END PROPRIETARY\*\*\* to  
22 account for inflation and installation.  
23 BellSouth then applies an annualized expense to

1 investment factor of **\*\*\*BEGIN PROPRIETARY XXXXXXXX**  
2 **END PROPRIETARY\*\*\*** in establishing a monthly  
3 recurring volume insensitive 2-Wire INC charge of  
4 **\*\*\*BEGIN PROPRIETARY XXXXXXXX END PROPRIETARY\*\*\***  
5 per pair. This is added to the volume sensitive  
6 charge of \$0.4591 to arrive at a total 2-Wire INC  
7 Charge of \$3.90 per pair.

8

9 Q. DO YOU AGREE WITH THE INVESTMENTS THAT BELLSOUTH  
10 HAS DEVELOPED FOR THE 2-WIRE INC COST?

11

12 A. In principle, we agree that intrabuilding network  
13 cable investment is incurred. However, the  
14 investment calculated by BellSouth is overstated  
15 by at least **\*\*\*BEGIN PROPRIETARY XXXXXXXX END**  
16 **PROPRIETARY\*\*\***

17

18 Q. WHAT IS YOUR BASIS FOR THIS AMOUNT?

19

20 A. I used restated investments developed by Mr.  
21 Pitkin and Mr. Donovan for Field Codes 12c and  
22 52c. The rationale for their investment  
23 restatement is described in their testimony.

24

1 Q. IS THIS THE FULL EXTENT OF BELLSOUTH'S OVERSTATED  
2 INVESTMENT?

3

4 A. No. Even though we believe BellSouth's costing  
5 approach drastically overstates the costs for  
6 building terminals, we cannot adjust BellSouth's  
7 investment in building entrance terminals and  
8 building distribution terminals. The limited  
9 documentation that BellSouth has provided  
10 indicates that BellSouth includes two terminals  
11 in the building equipment room. At this time we  
12 can only guess whether Bell's existing terminal  
13 is the building entrance terminal or the building  
14 distribution terminal.

15

16 Q. WHAT WOULD YOU RECOMMEND BE DONE TO ELIMINATE ANY  
17 ADDITIONAL EQUIPMENT AND CROSS CONNECTIONS THAT  
18 BELLSOUTH IS PROPOSING TO CHARGE THE ALECS?

19 A. Our costing approach would correct BellSouth's  
20 cost study by removing the investment associated  
21 with additional equipment and cross connections  
22 that BellSouth does not incur when it provided  
23 access to riser cable for itself. As a matter of

1 policy, ALECs should be allowed to cross connect  
2 directly to existing BellSouth basement terminal  
3 equipment. We recognize that in some cases,  
4 BellSouth may perform this function, although we  
5 believe that ALEC technicians should be allowed  
6 to perform the cross connections.

7  
8 In order to actually implement the single point  
9 of Interconnection approach, replacement  
10 equipment or additional equipment may be  
11 required. Whatever the physical solution,  
12 additional charges could legitimately be included  
13 in monthly recurring charges for INC to  
14 accommodate the added functionality of being able  
15 to interconnect multiple carriers at a single  
16 point. This inclusion of additional costs does  
17 not mean that we believe additional equipment is  
18 required for ALECs to interconnect to BellSouth  
19 in most cases, but is included only to account  
20 for the possibility that additional equipment may  
21 be required. This approach differs drastically  
22 from BellSouth's costing approach under which  
23 ALECs pay for fully duplicative, extremely  
24 underutilized equipment in monthly recurring

1 rates, as well as pay for unneeded cross  
2 connections by Bell technicians in non-recurring  
3 rates.

4

5 Q. DESCRIBE WHAT ADJUSTMENTS YOU WOULD MAKE TO  
6 BELLSOUTH'S 2-WIRE INTRABUILDING NETWORK CABLE  
7 RECURRING COST STUDY, IF WE ASSUME THAT THE  
8 BUILDING DISTRIBUTION TERMINAL INSTALLED  
9 INVESTMENT OF \*\*\* BEGIN PROPRIETARY XXXXXXXX END  
10 PROPRIETARY\*\*\* REPRESENTS THE COST OF THE FULLY  
11 DUPLICATIVE AND UNDERUTILIZED EQUIPMENT YOU JUST  
12 DESCRIBED.

13

14 A. First of all, we would remove the duplicative  
15 investments for the building distribution  
16 terminal. Secondly, we would use the investments  
17 from the restated BSTLM run that Mr. Pitkin and  
18 Mr. Donovan referenced in their testimony (pg 25)  
19 that reflect installed material cost of building  
20 entrance terminal and intrabuilding network  
21 cable. This results in an installed investment  
22 of \*\*\*BEGIN PROPRIETARY XXXXX END PROPRIETARY\*\*\*  
23 per pair, rather than the \*\*\*BEGIN PROPRIETARY

1 XXXXXXXXX END PROPRIETARY\*\*\* figure developed by  
2 BellSouth. Next, we would apply a corrected  
3 monthly expense factor of \*\*\*BEGIN PROPRIETARY  
4 XXXXXXXX END PROPRIETARY\*\*\* to the installed  
5 investment.

6 This results in a monthly volume insensitive  
7 economic cost of \*\*\*BEGIN PROPRIETARY XXXXX END  
8 PROPRIETARY\*\*\*. The final adjustment would be to  
9 remove the subscriber line testing expense since  
10 we believe that all testing would be done by the  
11 ALEC. This would remove \*\*\*BEGIN PROPRIETARY  
12 XXXXXXXX END PROPRIETARY\*\*\* from the volume  
13 sensitive NTW cost. The resulting 2-Wire INC  
14 charge would be \$0.5661 per pair per month,  
15 rather than the \$3.90 figure proposed by  
16 BellSouth.

17

18 Q. HOW WOULD YOU ADJUST BELLSOUTH'S 4-WIRE  
19 INTRABUILDING NETWORK CABLE STUDY?

20 A. I would use the same methodology as I did for the  
21 2-wire INC adjustments. My proposed recurring  
22 price for 4-wire INC is \$0.9691.

23

1 Q. DESCRIBE WHAT ADJUSTMENTS YOU WOULD MAKE TO  
2 BELLSOUTH'S 2-WIRE AND 4-WIRE INTRABUILDING  
3 NETWORK CABLE NON-RECURRING COST STUDIES.

4 A. BellSouth's non-recurring cost studies for 2-wire  
5 and 4-wire intrabuilding network cable assume  
6 that a BellSouth technician must connect and  
7 perform a turn-up test for all cross connections  
8 at a building equipment terminal including those  
9 cross connections associated with ALEC customers.  
10 This is unnecessary and duplicative. The ALEC  
11 technician can make the connections and perform a  
12 turn-up test just as readily as a BellSouth  
13 technician. Therefore, all of the network  
14 activities identified in BellSouth's non-  
15 recurring cost study are eliminated. The only  
16 non-recurring work activity still remaining is  
17 associated with the service order for this UNE.  
18 As described in Jeff King's testimony the  
19 appropriate NRC for this service order is \$0.4316  
20 for both 2-wire and 4-wire INC.

21

1 Q. WHAT IS THE PROPOSED MONTHLY RECURRING CHARGE FOR  
2 NETWORK TERMINATING WIRE?

3 A. BellSouth proposes to charge a monthly recurring  
4 rate of \$.4591 per pair for Network Terminating  
5 Wire. This charge is comprised of \*\*\*BEGIN  
6 PROPRIETARY XXXXXX END PROPRIETARY\*\*\* associated  
7 with subscriber line testing expense and \*\*\*BEGIN  
8 PROPRIETARY XXXXXX END PROPRIETARY\*\*\* of cable  
9 expense.

10

11 Q. DID THE FLORIDA COMMISSION PREVIOUSLY APPROVE A  
12 \$.60 CHARGE FOR NETWORK TERMINATING WIRE?

13 A. Yes, in the MediaOne arbitration with BellSouth,  
14 a \$.60 monthly recurring charge was established.

15

16 Q. IS THE \$.4591 MONTHLY RECURRING CHARGE FOR NTW  
17 REASONABLE?

18 A. We do not understand why the subscriber line  
19 testing expense is reasonable when the ALEC  
20 technicians will perform the testing. In  
21 principle, it is appropriate to charge for the  
22 network cable expense, but it is unclear whether  
23 BellSouth applied appropriate depreciation lives,

1 cost of the capital, etc. BellSouth must  
2 demonstrate that the appropriate forward looking  
3 inputs were used to establish the network cable  
4 costs and not fall back on embedded cost  
5 analyses. Since these same charges are included  
6 in the calculation of intrabuilding network  
7 cable, the same concerns apply to INC charges as  
8 well.

9  
10 **Q. WHAT NON-RECURRING CHARGES DOES BELLSOUTH PROPOSE**  
11 **FOR NETWORK TERMINATING WIRE?**

12 **A.** BellSouth is proposing a \$60.93 per pair non-  
13 recurring charge. This charge is comprised of  
14 several components. A charge of **\*\*\*BEGIN**  
15 **PROPRIETARY XXXXXXXX END PROPRIETARY\*\*\*** for  
16 garden terminals and cross connect panels and  
17 cabling in a BellSouth wiring closet inside a  
18 multi-tenant building that would be used  
19 exclusively by ALECs is included. The remainder  
20 of the charge is associated with labor costs to  
21 support service inquiry and various network  
22 connection activities.

23

1 Q. ARE THESE APPROPRIATE NON-RECURRING CHARGES FOR  
2 NETWORK TERMINATING WIRE?

3 A. The only appropriate non-recurring charge for  
4 network terminating wire that BellSouth has  
5 identified is the charge associated with the  
6 service ordering for this UNE function. This  
7 charge is described in AT&T/MCI WorldCom witness  
8 Jeff King's testimony and is \$0.4316.

9  
10 Q. WHY IS THE NON-RECURRING CHARGE FOR ADDITIONAL  
11 GARDEN TERMINALS AND CROSS CONNECT PANELS  
12 INAPPROPRIATE?

13 A. The charge violates the FCC's requirement for a  
14 single point of interconnection for use by  
15 multiple carriers including BellSouth. In order  
16 to actually implement the single point of  
17 interconnection approach, replacement equipment  
18 or additional equipment may be required.  
19 Whatever the physical solution, additional  
20 charges could legitimately be included in monthly  
21 recurring charges for NTW for any replacement  
22 garden terminals or cross connect panels inside  
23 wiring closets to accommodate the added

1            functionality of being able to interconnect  
2            multiple carriers at a single point. This  
3            inclusion of additional costs does not mean that  
4            we believe additional equipment is required for  
5            ALECs to interconnect to BellSouth in most cases,  
6            but is included only to account for the  
7            possibility that additional equipment may be  
8            required. This approach differs drastically from  
9            BellSouth's costing approach under which ALECs  
10           pay for fully duplicative, extremely  
11           underutilized equipment in non-recurring rates of  
12           **\*\*\*BEGIN PROPRIETARY XXXXXXXX END PROPRIETARY\*\*\***  
13           for redundant garden terminals and cross connect  
14           panels in wiring closets.

15

16           **Q. WERE YOU ABLE TO QUANTIFY THE EXTENT OF THE**  
17           **DUPLICATION IN ANY OF THIS EQUIPMENT?**

18           **A.** Yes. BellSouth identified that a newly installed  
19           100 pair garden terminal with less than 6 feet of  
20           cross connecting cable would be about **\*\*\*BEGIN**  
21           **PROPRIETARY XXXX END PROPRIETARY\*\*\***. If we  
22           assume a fill factor of 56%, the per pair  
23           investment for a 100 pair garden terminal becomes

1           **\*\*\*BEGIN PROPRIETARY XXXXXXXXXXXXXXXXXXXXXXXXXXXX END**  
2           **PROPRIETARY\*\*\***. The conversion of the investment  
3           to a monthly recurring cost yields a monthly  
4           recurring rate of \$0.1009.  
5           BellSouth used a **\*\*\*BEGIN PROPRIETARY XXXXXXXX END**  
6           **PROPRIETARY\*\*\*** investment cost for a garden  
7           terminal and assumed that the fill factor would  
8           be **\*\*\*BEGIN PROPRIETARY XXX END PROPRIETARY\*\*\***.  
9           Clearly the underutilization of investment is  
10          built into the BellSouth non-recurring charge.  
11          Moreover, BellSouth assumed that an additional  
12          garden terminal would be constructed for the sole  
13          use of ALECs rather than assuming that the garden  
14          terminal would be shared by all. If the garden  
15          terminal were to be shared by all, BellSouth  
16          would have developed a monthly recurring charge.  
17          This monthly recurring charge would be similar to  
18          what BellSouth included for the garden terminal  
19          in the establishment of a complete UNE loop.  
20

1 Q. HAS GTE PROPOSED PRICES IN THIS PROCEEDING FOR  
2 INTRABUILDING NETWORK CABLE?

3

4 A. Yes. However, GTE has not provided any basis for  
5 their proposed prices.

6

7

8 Q. WHAT PRICES DO YOU PROPOSE FOR INTRABUILDING  
9 NETWORK CABLE IN GTE'S TERRITORY?

10

11 A. I propose that we use the same prices that we are  
12 proposing for BellSouth.

13

14 Q. PLEASE SUMMARIZE YOUR TESTIMONY.

15 A. Proper pricing of sub-loops has been recognized  
16 as a vital ingredient to spur competition. The  
17 FCC has provided substantial guidance to the  
18 states that was unavailable at the time the  
19 Florida Commission established network  
20 terminating wire prices. We have recommended  
21 sub-loop unbundling methods and procedures that  
22 the Florida Commission should adopt to bring the

1           benefits of competition to Florida consumers, be  
2           they located in homes, garden apartments or high-  
3           rise buildings. As a facility-based carrier that  
4           plans to offer local telephony through its  
5           Florida cable plant, AT&T is concerned that  
6           network safety and reliability not be compromised  
7           in a multi-carrier environment. Full  
8           indemnification for careless actions is an  
9           alternative and acceptable penalty to complete  
10          denial of a carrier's rights to joint  
11          interconnection.

12        Q.    DOES THIS CONCLUDE YOUR TESTIMONY?

13        A.    Yes.
